**D. folliculorum**, var. **o'vis**, Megnin. (L. *ovis*, a sheep.) A variety found in the sheep and inhabiting the Meibomian glands of the palpebral border of the eyelids.

**Demodicidae.** (*Demodex*.) A Family of the Order *Acarida*, which includes the Genus *Demodex*.

**Demography.** (ἄνθρωπος, the people; γραφία, to write.) The science or study of peoples, in their collective capacity.

**D., dynamic.** (δύναμις, power.) The section of the science which treats of the collective physiology of peoples, comprehending the proportions of marriages and births, mortality, migration, and such like.

**D., static.** (στατική, statics.) The section which treats of the collective anatomy of peoples, and takes cognisance of the absolute and

relative numbers of the sexes at different ages, and such like facts.

**Demoivre's hypothesis.** A hypothesis respecting the duration of human life, formed by Demoivre, and thus expressed: Of eighty-six persons born, one dies every year, till all are extinct. The remainder of eighty-six years, at every age, Demoivre called the complement of life. (Hoblyn.)

**Demology.** (ἰσχυρός, λόγος, an account.) Same as *Demography*.

**Demonia.** See *Demonomania*.

**Demonolatry.** (Δαίμων, a demon; λατρεία, worship.) A form of insanity in which the patient worships a demon or the devil.

**Demonomania.** See *Demonomania*.

**Demonopathy.** (Δαίμων, demon; πάθος, affection.) *Demonomania*.

**Demonstrator.** (L. *demonstrator*, one who points out; from *de*; *monstro*, to show.) One who exhibits. The index finger.

**D. of anatomy.** One who exhibits the parts of the human body. A teacher of practical anatomy.

**Demotivus lapsus.** (L. *demoreo*, to move away; *lapsus*, a fall.) Ancient term for sudden death. A kind of poetical expression, literally meaning the downward-moving fall.

**Démours.** A French surgeon, born 1702; died 1793.

**D., membrane of.** A synonym of *Descemet, membrane of*.

**Demulcent.** (L. *demulceo*, to shake down, and so to soften. F. *adoucesant*; G. *bessnftigend, lindend*.) Term applied to medicines of a mucilaginous or oily consistence, which protect against the action of acrid matters by involving their acrimony in a mild and viscid substance; such are barley water, linseed tea, dates.

**Demusculate.** (L. *de*, from; *musculus*, a muscle. F. *decharné*.) Emaciated, devoid of flesh.

**Denarcotize.** (L. *de*, from; *narcotin*.) To deprive of narcotin.

**Denarius.** (L. *deni*, by tens.) Name of a Roman weight, equal to the seventh part of an ounce. Also a Roman coin marked with the letter X, to signify ten asses. Its value was a little less than eightpence.

**Dendraspis.** (Δένδρον, a tree; ἄσπις, an asp.) A genus of poisonous snakes found in South Africa.

**Dendriform.** (Δένδρον, a tree; L. *forma*, shape. F. *dendriforme*; G. *baumartig*.) Tree-like.

**Dendrites.** (Δένδρον, a tree or plant. F. *dendrite*; G. *Dendrit, Baumstein*.) Term for any figure of a vegetable substance observed in fossils and minerals.

**Dendritic.** (Δένδρον, a plant or shrub. F. *dendritique*.) Of, or belonging to, a shrub; shrub like.

**D. synovitis.** See *Synovitis, dendritic*.

**D. vegetation.** A term applied to the appearance exhibited by villous cancer; and also to the filamentous formations known as arachnoid tufts, and to villous incrustations of the pleura, and other serous membranes.

**Dendrocela.** (Δένδρον; κοιλία, the bowels.) A Section of the Order *Turbellaria*, Class *Platybrintha*, having a ramified digestive cavity having only one external opening, the mouth, and terminating in a caecum; the body

is soft, broad, and covered by vibratile cilia; these worms live in water or moist places, and some are parasitic on Holothuræ.

**Dendrodentine.** (*Δένδρον; dentine.*) The form of branched dentine which is seen in compound teeth. It is produced by the interblending of the dentine, enamel, and cement.

**Dendrography.** (*Δένδρον, a tree; γράφω, to write. F. and G. dendrographie.*) A history or treatise on trees.

**Dendroid.** (*Δένδρον, a tree or shrub; εἶδος, likeness. F. dendroïde; G. baumartig, baumförmig.*) Resembling a tree or shrub; arborescent. Applied to various objects having this resemblance.

**Dendrolibanus.** (*Δένδρον, a tree; λίβανος, frankincense. F. rosmarin ordinaire; G. Rosmarin.*) A name for the *Rosmarinus officinalis*, or common rosemary.

**Dendrolichenes.** (*Δένδρον, a tree; λειχην, the lichen. F. dendrolichène.*) Applied to an Order of the *Lichenes* which have the appearance of dendroid expansions.

**Dendrolite.** (*Δένδρον, a tree or shrub; λίθος, a stone.*) Term for a petrified shrub.

**Dendrology.** (*Δένδρον, a tree; λόγος, a discourse. F. and G. dendrologie.*) A treatise on trees and shrubs.

**Dendrostyle.** (*Δένδρον; στύλος, a pencil.*) A term for each of the pillars by which the syndendrium is suspended from the umbrella in the Rhizostomidae.

**Denervatio.** (*L. de, from; nervus, a tendon.*) A synonym of *Aponuevrosis*.

Also, the same as *Enervation*.

**Dengue.** (Probably a Spanish reproduction of the English synonym *Dandy*.) An infectious eruptive fever, commencing suddenly, remitting, and liable to relapse, accompanied by severe pain in the head and eyeballs, with swelling and pain in the muscles and joints, which are prone to shift suddenly from one joint to the other; by catarrhal symptoms, sore throat, congested conjunctivæ, and swollen submaxillary glands. There is an initial erysipeloid redness and swelling of the face, but the true eruption commences on the third day, is of short duration, twenty-four to forty-eight hours, and is followed by desquamation; this eruption varies in appearance, sometimes it is like a scarlatinal blush, and sometimes more like that of measles; these forms may be combined, and may be accompanied by papules, vesicles, or pustules. There is great prostration and debility. The intervals, remissions, and relapses may continue over some weeks; the cachexia and arthritic pains are liable to be protracted; the convalescence is tedious, but the disease is rarely fatal. It occurs epidemically and sporadically in India, Burmah, Persia, Thibet, Arabia, Egypt, and other parts of Africa, North and South America, and the West Indies; and is said to attack the lower animals.

**D. fever.** Same as *Dengue*.

**Denguis.** The Latinised form of *Dengue*.

**Deni.** (*L. deni, by tens.*) In Botany, ten together.

**Deniach.** Deniach is a village in Swabia, at the entrance of the Black Forest. The waters contain carbonic acid, carbonate of iron, carbonate of lime, sulphate of magnesia, and carbonate of soda.

**Denigrate.** (*L. denigro, to blacken thoroughly.*) Blackened.

**Denigration.** (*L. denigratio, from deni-*

*gro, to blacken thoroughly. G. Schwärzung.*) A blackening; a synonym of *Melasma*.

The act of becoming black, as in cases of sphacelus, and sugillation.

**Denis-lès-Blois.** France; Département de Loir-et-Cher. An athermal bicarbonated chalybeate water, containing a little free carbonic acid and hydrogen sulphide. Used in anæmic conditions.

**Denitrate.** (*L. de, from; nitric acid.*) To remove nitric acid from a compound.

**Denitration.** (Same etymon.) The removal of nitric acid.

**Dens.** (*L. dens, allied to Sans. dantas; Gr. δένος; the root is said to be Sans. ad; Gr. εἶδ; L. ed; and the word to be shortened from idens, from edo, to eat. F. dent; G. Zahn.*) A tooth.

Also, applied to certain plants from the supposed resemblance of some part or parts of them to the teeth of animals.

**D. caballinus.** (*L. caballus, a horse. F. jusquiam; G. Bilsenkraut.*) A name for *Hyoscyamus*, or henbane.

**D. canis.** (*L. canis, a dog.*) A name for the *Erythronium dens caninus*, or dog's tooth violet.

**D. epistrophei.** (*Mod. L. epistropheus, the second vertebra; see Epistropheus.*) The odontoid process of the second vertebra.

**D. leonis.** (*L. leo, a lion. F. dent de lion; G. Löwenzahn.*) The tooth of the lion. Another name for the plant *Leontodon taraxacum*, or dandelion.

**D. proliifer.** (*L. prolis, offspring; fero, to bear.*) A term used by Bartholin for a supernumerary tooth, which appears to grow upon a primitive or parent tooth; it is an osteoma of the tooth.

**D. sapien'tiæ.** (*L. sapientia, wisdom.*) The last permanent molar, or wisdom tooth.

**Dense.** (*L. densus, thick. Gr. πυκνός; F. dense; L. denso; G. dicht.*) Close, containing much matter in small volume, because of the close approximation of the molecules.

In Botany, closely packed, as of flowers in a panicle.

**Densiflorous.** (*L. densus, thick; flus, a flower. F. densiflore; G. dichtblütig.*) Having closely packed flowers.

**Densifolious.** (*L. densus; folium, a leaf. F. densifolié; G. dichtblättrig.*) Having thick or closely packed leaves.

**Densimeter.** (*L. densus; μέτρον, a measure.*) An apparatus for determining the specific gravity of a liquid, especially when in small quantity. It is like an ordinary hydrometer with a cup on the top of the stem, which has a mark indicating the measure of a cubic centimetre of water; it is so made as to sink when empty to a mark at the bottom of the stem, and another mark is made on the stem at the place to which the instrument sinks when the cup is filled with distilled water; the space between these marks is graduated into twenty, and a similar graduation is continued to the top of the stem. The specific gravity of a fluid placed in the cup may thus be calculated.

**Densipennate.** (*L. densus, thick; penna, a feather.*) Thickly feathered. Applied to such parts of the skin of birds as are well covered with feathers.

**Densirostrate.** (*L. densus; rostrum, a beak. F. densirostre; G. dichtschnabelig.*) Having a thick beak.

**Density.** (*L. densitas, thickness. F.*

# DENTAGOGUM—DENTAL.

*densité*; G. *Dichtigkeit*.) The condition of closeness, or compactness.

**D., electric.** See *Electric density*.

**D., relative.** The density of a substance as compared with some other substance. The same as *Specific gravity*.

**Dentago'gum.** (L. *dens*, a tooth; ἄγω, to carry off.) A tooth forceps.

**Dent'agra.** (L. *dens*, a tooth; ἄγρα, a seizure.) A name for odontalgia, or toothache.

Also (F. *davier*, *dentagre*; G. *Zahnzange*), a name given to an instrument for extracting teeth; a kind of forceps, or tooth-key.

**Dental.** (L. *dens*, a tooth. F. *dentaire*.) Of, or belonging to, the teeth.

**D. arches.** (F. *arcades dentaires*; G. *Zahnkühlbogen*.) The arches formed by the range of alveoli in each jaw, and including the teeth and gums.

**D. artery, ante'rior.** A branch of the infraorbital artery in the infraorbital canal. It supplies the incisor and canine teeth, and the antrum. It anastomoses with the posterior dental artery.

**D. artery, infe'rior.** (L. *inferior*, lower. F. *artère dentaire inférieure*; G. *Unterkieferarterie*.) A branch of the internal maxillary artery given off whilst this is in contact with the ramus of the jaw. It descends between the ramus and the internal lateral ligament, enters the dental foramen with the dental nerve, and supplies the teeth of the lower jaw. It gives off the mylohyoid branch.

**D. artery, poste'rior.** The same as *D. artery, infe'rior*.

**D. artery, super'ior.** (L. *superior*, upper. F. *artère alvéolaire*; G. *Oberkieferarterie*.) A branch of the internal maxillary artery which is given off as it is about to enter the sphenomaxillary fossa. It descends on the outer surface of the tuberosity with a small branch of the superior maxillary nerve, and supplies the upper molar and bicuspid teeth, the gums, and the lining membrane of the antrum.

**D. bone.** Same as *Dentary bone*.

**D. bulb.** A conical enlargement which appears at the bottom of the dental follicle in the process of development of the tooth. It becomes the tooth pulp, and the dentine is formed by its outermost cells. The enamel fits over it like a cap.

**D. canal, ante'rior.** (L. *anterior*, in front.) A small branch of the infraorbital canal running in the front wall of the antrum and conveying the anterior dental vessels and nerve to the incisor and canine teeth of the upper jaw.

**D. canal, infe'rior.** (L. *inferior*, lower. F. *conduit dentaire*; G. *Zahnkanal*.) The bony canal in the lower jaw leading from the inferior dental foramen towards the mental foramen with which it communicates; it is the canal through which the inferior dental vessels and nerve pass to the interior of the teeth.

**D. canal's, poste'rior.** (L. *posterior*, hinder.) Several canals leading from openings on the posterior convex surface of the superior maxillary bone, which transmit the posterior dental vessels and nerves.

**D. cap'sule.** (L. *capsula*, a small box.) The *D. follicle*.

**D. caries.** (L. *caries*.) Decay of the teeth. It is said by Coleman to commence from without as a small whitish opaque spot on the enamel. In its progress it assumes a fawn colour. The outlines

of the enamel rods and the transverse markings become more distinct than normal. After a time the dentine becomes involved and soon breaks down, the canalliculi increase in size, and become filled with granules which stain with carmine, and are mingled with micrococci and leptothrix filaments. Carious dentine has a strong acid reaction. Inflammation follows exposure of the pulp, which is accompanied by pain. The condition exhibited in many cases may be closely simulated by placing the teeth in an acid, and also in a saccharine solution.

**D. cartilage.** The slightly notched, dense tissue on the biting margins of the gums of infants prior to dentition.

**D. cavity.** (F. *cavité dentaire*; G. *Zahnhöhle*.) A cavity in the interior of the teeth in which is situated the dental pulp. The *Pulp cavity*.

**D. con'sonants.** See *Consonants, dental*.

**D. engine.** An instrument for filing and polishing the teeth used by dentists. It resembles a drill, and gives a rapid rotatory movement to a small corundum wheel or point.

**D. excavator.** (L. *excavo*, to hollow out.) An instrument for the removal of the decayed part of a tooth preparatory to the operation of filling.

**D. fol'licle.** (L. *folliculus*, a little bag. F. *follicule dentaire, odontothèque*.) A membranous follicle, formed of a double lamina, in which each tooth is contained before it issues from the alveolus, and which, consequently, aids in the formation of the alveolo-dental periosteum, and of the membrane that envelops the pulp of the teeth. The dental follicles are lodged in the substance of the jaws.

**D. fora'men, infe'rior.** (L. *foramen*, an opening; *inferior*, lower.) An opening at the middle of the inner surface of the angle of the lower jaw leading into the inferior dental foramen.

**D. force'ps.** See *Tooth forceps*.

**D. for'mula.** (L. *formula*, a form, a rule.) A system of notation by which the number of the teeth, and their position in each jaw, can be recognised. Thus, the dental formula for the second dentition of the cat is I<sub>3</sub> C<sub>1</sub> PM<sub>3</sub> M<sub>1</sub>, which signifies three incisors above and below on each side of the jaws, one canine on each side of each jaw, three premolars on each side of the upper jaw, and two on each side of the lower jaw, and one true molar above and below on each side. Similarly D<sub>1</sub><sub>3</sub> DC<sub>1</sub> DM<sub>3</sub> refers to the milk dentition, and states briefly the deciduous incisors, canines, and molars respectively.

**D. gan'grene.** Caries of the teeth.

**D. germ.** (L. *germen*, a bud.) The rudiment of the tooth, consisting of the dental sac, the dental papilla, and the enamel organ.

**D. groove, prim'itive.** A furrow, formed by two ridges which appear on the lower border of the upper jaw about the third month of foetal life, in which the teeth are developed.

**D. groove, sec'ondary.** The superficial portion of the primitive dental groove, according to Goodsir, which remains open when the deeper part is closed in, and which gives origin to the ten anterior permanent teeth.

**D. let'ters.** See *Letters, dental*.

**D. mir'ror.** A small plate of polished metal, or of silvered glass, mounted on a stem, and used for the examination of the back parts of

the teeth, by reflection, when introduced into the mouth.

**D. nerve, anterior.** (L. *anterior*, the front.) A branch of the superior maxillary nerve, which leaves that trunk in the floor of the orbit and, descending by the anterior dental canal in front of the antrum, supplies the incisor and bicuspid canine teeth, and a part of the lower meatus of the nose.

**D. nerve, inferior.** (L. *inferior*, lower.) The largest of the three branches into which the inferior maxillary nerve divides. It lies beneath the external pterygoid muscle external to the gustatory nerve; it then lies on the internal pterygoid and internal lateral ligament, and enters the dental foramen of the inferior maxilla, and extends to the mental foramen, where it divides into an incisor and a labial branch. It gives off a branch to the mylohyoid muscle and the dental branches which supply the molar and bicuspid teeth.

**D. nerve, inferior, lesser.** One of the roots of the inferior dental nerve arising from the trunk of the inferior maxillary nerve, which occasionally remains separate from the rest of the nerve in the inferior dental canal.

**D. nerve, posterior.** (L. *posterior*, that which is behind.) A branch of the superior maxillary nerve. It gives off some small branches to the gums and buccinator muscle, it then enters a canal in the bone, and supplies the molar teeth and the lining membrane of the antrum. It communicates with the anterior dental branch.

**D. neuralgia.** (Νεύρῳν, a nerve; ἄλγος, pain.) Toothache.

**D. osteoma.** (Osteoma.) An outgrowth from a tooth, consisting sometimes of cement at the root, sometimes of enamel-covered dentine from the crown.

**D. papilla.** (L. *papilla*, a small teat. G. *Zahnpapille*.) The primary rudimentary tooth as it appears in a *D. follicle* or *D. sac*; also called *D. bulb*. It consists of an internal layer rich in blood-vessels, and subsequently containing nerves, and of a fine, non-vascular outer layer invested by the membrana præformativa of Raschkow; the non-vascular layer consists of cells 35 to 54  $\mu$  in length, and 4.5 to 10  $\mu$  in width, provided with a vesicular nucleus enclosing one or many nuclei, and from them the dentine is formed.

**D. process.** (G. *Zahnfortsatz*.) A synonym of the *Alveolar process*.

**D. pulp.** (L. *pulpa*, solid flesh. F. *pulpe dentaire*; G. *Zahnküm.*) The *Tooth pulp*.

**D. sac.** A term applied to the *D. follicle* when, in process of growth, it has become closed; it consists of connective tissue, the external layer of which is firm and compact, and the inner layer much softer.

**D. sheath.** Same as *Dental sheath*.

**D. system.** The assemblage of teeth.

**D. tubuli.** Undulating tubes, radiating from the pulp cavity of a tooth to the enamel, in the substance of the dentine. They are occupied by a rod of protoplasm. They frequently branch. See *Dentine* and *Dental canaliculi*.

**D. tumour.** See *Dental tumour*.

**D. vein, anterior.** A vein which accompanies the anterior dental artery, communicates in front with the facial vein, and terminates behind in the alveolar plexus of veins, which corresponds with the offsets of the internal maxillary artery in the speno-maxillary fossa.

**D. vein, inferior.** A vein which collects blood from the teeth of the lower jaw, and, passing from the inferior dental foramen, joins the internal maxillary vein.

**D. vein, superior.** A vein made up from branches ramifying on the surface of the upper jaw, which joins the internal maxillary vein.

**Dentalis.** (L. *dens*, a tooth. F. *dentaire*; G. *zu den Zähnen gehörig*.) Pertaining to the teeth.

**D. for'fex.** (L. *for'fex*, a pair of pincers.) Dental forceps.

**D. her'ba.** (L. *herba*, vegetation.) The henbane, *Hyoscyamus niger*, probably; because its smoke was considered good for the teeth.

**D. la'pis.** (L. *lapis*, a stone.) A name for the crust of earthy substance called tartar which forms round the teeth, especially those of the lower jaw.

**Dentalium.** (L. *dens*, a tooth. F. *dentale*; G. *Dentalie*, *Zahnschnecke*.) A Genus of the Order *Scaphopoda*, Class *Gastropoda*, so called from their shape; they were anciently used in ointments and plasters.

**Dentaria.** (L. *dens*, a tooth. F. *dentaire commune*; G. *Zahnkraut*.) A name for the *Anthemis pyrethrum*, from the appearance of its root; also for the *Plumbago europæa*, or toothwort.

Also, a Genus of the Nat. Order *Crucifera*.

**D. bulbif'era.** Linn. (L. *bulbus*, a bulb; *fero*, to bear.) A vulnerary and carminative.

**D. digita'ta.** Lam. (L. *digitus*, a finger.) An antiscorbutic.

**D. diphy'la.** (Δίς, twice; φύλλον, a leaf.) Root used as mustard.

**D. enneaphy'la.** Linn. (Ἐννεία, nine; φύλλον, a leaf.) Hab. Middle and Southern Germany. The rhizome, which contains no resinous receptacles, is branched, and contains much starch.

**D. heptaphy'la.** (Ἑπτὰ, seven; φύλλον, a leaf.) Root astringent.

**D. pentaphy'la.** Linn. (Πέντε, five; φύλλον, a leaf.) A vulnerary and carminative.

**D. pinna'ta.** Lamarek. (L. *pinnatus*, feathered.) A vulnerary, antiscorbutic, and carminative.

**Dentarius.** (L. *dens*, a tooth. F. *dentiste*; G. *Zahnarzt*.) Old name for a dentist.

**Dentarpaga.** (L. *dens*, a tooth; ἀπαΐω, to seize. F. *davier*, *dentagre*; G. *Zahnzange*.) Another name for the instrument called *Dent-agra*.

**Dentary.** (L. *dens*, a tooth.) Relating to a tooth, or the teeth.

**D. bone.** A term applied to a bone which, in all oviparous vertebrata with bony skeletons, covers the anterior and outer part of Meckel's cartilage, and carries all or most of the teeth when present.

**Dentata.** (L. *dentatus*, toothed.) Applied to the axis or second cervical vertebra, because it has a conspicuously prominent process like a tooth.

**Dentate.** (L. *dentatus*, toothed. F. *denté*; G. *gezähnt*.) Toothed, having teeth.

In Botany, the term is especially applied to leaf-edges the teeth of which project outwards and not towards the apex.

**D. body.** The *Corpus dentatum*.

**D. lam'ina.** (L. *lamina*, a plate.) See *Lamina dentata*.

**D. ligament.** Same as *Ligamentum dentulatum*.

**D. membrane.** The same as *Ligamentum denticulatum*.

**D. nucifcus.** The *Corpus dentatum*.

**D. vertebra.** A synonym of the *Azis*.

**Dentated.** Same as *Dentate*.

**D. suture.** See *Suture, dentated*.

**Dentately.** (*L. dentatus, toothed.*) In a dentate fashion.

**Dentation.** (*L. dentatus, toothed.*) The arrangement of teeth on a leaf or other plant structure.

Also, the same as *Dentition*.

**Denta'to-angulate.** (*L. dentatus; angulus, an angle. G. eckiggezähnt.*) In Botany, having angulate teeth.

**Denta'to-ciliate.** (*L. dentatus; cilium, an eyelash. G. wimperiggezähnt.*) In Botany, having a dentate margin with hairs.

**Denta'to-crenate.** (*L. dentatus; crena, a notch.*) In Botany, applied to the border of a leaf in which the dentations are somewhat rounded at the edges.

**Denta'to-serrate.** (*L. dentatus; serratus, saw-shaped. G. gezähntgesägt.*) In Botany, applied to teeth directed forwards and separated by rounded excavations.

**Denta'to-sinuate.** (*L. dentatus; sinuo, to bend. G. buchtiggezähnt.*) In Botany, having points like teeth on excavated borders.

**Dented.** (*L. dens, a tooth.*) A term for a leaf ending in a broad notch.

**Dentellaria.** (*L. dens, a tooth. F. dentellare commune.*) A name for the *Plumbago europæa*, or toothwort, from the appearance of its root.

**Dentelure.** (*L. dens, G. Sägezahn.*) An assemblage of small teeth like those of a saw, as on the edge of a leaf.

**Dentes.** Plural of *Dens*.

**D. acuti.** (*L. acutus, sharp. F. dents incisives; G. Schneidezähne.*) A name for the incisor teeth: the acute or sharp teeth.

**D. adversi.** (*L. adversus, opposite to. F. dents incisives; G. Schneidezähne.*) A name for the incisor teeth.

**D. angulares.** (*L. angularis, having corners. G. Eckzähne.*) The canine teeth.

**D. apparentes.** (*L. apparens, part. of apparere, to come in sight.*) The same as *D. habenula*.

**D. aperi.** (*L. aper, a boar.*) The tusks of the wild boar. A source of ivory.

**D. bicuspidati.** (*L. bis, twice; cuspis, a point. F. dents bicuspidés, les petites fausses molaires; G. zweispitzigen Backzähne.*) The bicuspid or premolar teeth; the first two grinder teeth on each side of each jaw, which are two-pointed.

**D. bleuspidés.** Same as *D. bicuspidati*.

**D. buccales.** (*L. bucca, the cheek.*) The molar teeth, from their situation.

**D. canini.** (*L. caninus, canine. G. Eckzähne, Spitzzähne, Hundzähne, Reisszähne.*) The canine teeth.

**D. columella' res.** (*L. columellaris, pillar-shaped. F. dentes canines; G. die Hunds-zähne.*) A name for the canine teeth, from their shape.

**D. clavales.** (*L. clavus, a nail.*) The molar teeth.

**D. eten'es.** (*Κτεís, a comb.*) The incisor teeth.

**D. cuspidati.** (*L. cuspis, a point.*) A synonym of the *Canine teeth*.

**D. decidui.** (*L. deciduus, temporary.*) The first or milk set of teeth.

**D. dichaster'es.** (*Διχαστήρες, from διχάς, half.*) The incisor teeth.

**D. gelassini.** (*Γελασσίνος, from γελῶ, to laugh.*) The incisor teeth, because they are shown during laughter.

**D. gomphi.** (*Γομφίος, a grinder tooth.*) The molar teeth.

**D. habenulæ.** (*L. habenula, dim. of habena, a thong.*) The teeth of the labium tympanicum of the lamina spiralis of the cochlea at the point of connection with the membrana basilaris.

**D. hippopotami.** (*G. Eckzähne des Nilpferdes.*) The canine teeth of the hippopotamus. Used as a source of ivory.

**D. incisivi.** (*L. incido, to cut through. G. Schneidezähne, Vorderzähne.*) The incisor teeth.

**D. incisores.** (*L. incido, to cut through. F. dents incisives; G. die Schneidezähne.*) A name for the four teeth in the fore part of each jaw; the cutting or incisor teeth.

**D. infantiles.** (*L. infantilis, infantile.*) The milk teeth.

**D. lactei.** (*L. lacteus, milky. F. dents caduques, dents de lait; G. die Milchzähne.*) A name for the primary, temporary, or milk teeth, or those of the child.

**D. lanlarii.** (*L. lanarius, lacerating.*) The canine teeth.

**D. maxillares.** (*L. maxilla, the jaw.*) The molar teeth.

**D. molares.** (*L. molaris, grinding. F. dents molaires; G. die Backenzähne.*) Name of the five posterior teeth of each side of each jaw; the grinder teeth.

**D. molares anteriores.** (*L. molaris; anterior, that which is in front.*) The bicuspid teeth.

**D. molares majores.** (*L. molaris; major, greater.*) The molar teeth.

**D. molares minores.** (*L. molaris; minor, less.*) The bicuspid teeth.

**D. molares posteriores.** (*L. molaris; posterior, that which is behind.*) The molar teeth.

**D. mordentes.** (*L. mordo, to bite.*) The canine teeth.

**D. oculares.** (*L. oculus, the eye.*) The canine or eye teeth.

**D. opsigoni.** (*Ὀψίγονος, late horn.*) The wisdom teeth or last permanent molars, because of their late appearance.

**D. permanentes.** (*L. permaneo, to remain.*) The permanent teeth.

**D. præmolares.** (*L. præ, in front of; molaris, grinding.*) The bicuspid teeth.

**D. primores.** (*L. primoris, the first.*) The milk or temporary teeth.

**D. proliferi.** See *Dens prolifer*.

**D. rasorii.** (*L. rasis, part. of rado, to scrape, to tear.*) The incisor teeth.

**D. sapientiæ.** (*L. sapientia, wisdom. F. dents de sagesse; G. die Weisheitszähne.*) Name for the last grinder teeth; because they come through the gums later than the rest, often not appearing till late in life; the wisdom teeth.

**D. serotini.** (*L. serotinus, backward.*) The wisdom teeth, from their late appearance.

**D. synchronis'teros.** (*Συγχρονιστήρ, a moderator.*) The wisdom teeth.

**D. sophronis'ti.** (Σώφρων, sensible.) The wisdom teeth.

**D. sophroretici.** (Σώφρων.) The wisdom teeth.

**D. tom'ici.** (Τομικός, for cutting.) The incisor teeth.

**D. triche'ci.** (L. *trichecus*, the walrus G. *Eckzähne des Walrosses*.) The canine teeth of the walrus. Used as a source of ivory.

**Dentic'eps.** (L. *dens*; *capiō*, to seize.) A tooth forceps.

**Dentic'le.** (L. *denticulus*, a little tooth.) A small tooth which, when combined with others, forms the compound tooth of the Cape anteater, *Orycteropus*.

Also, in Botany, a small tooth.

**Dentic'ola hominis.** (L. *dens*, a tooth; *colo*, to inhabit.) A loosely described infusorial animalcule found among the tartar of teeth.

**Dentic'ulate.** (L. *denticulus*, a little tooth. F. *denticulé*; G. *gezähnt*, *gezähntelt*.) Having little teeth. Applied to numerous objects having this resemblance or arrangement.

**D. body.** The *Corpus dentatum cerebelli*.

**D. lam'ina.** The upper surface of the peripheric margin of the lamina spiralis of the cochlea. It presents wedge-shaped teeth near the margin of the bony plate. Also called *Limbus laminae spiralis*.

**D. lig'ament.** See *Ligamentum denticulatum*.

**D. mus'cle.** The *Serratus magnus* muscle, from the digitated or denticulated origin.

**Dentic'ulated.** Same as *Denticulate*.

**Dentic'ulately.** (L. *denticulus*.) In a denticulate manner.

**Denticula'tion.** (L. *denticulus*.) The condition of having small teeth, as on the edge of a leaf.

**Denticula'to-spi'nous.** (G. *fein-gezähntdornig*.) Having fine tooth-like spines.

**Denticula'tum.** (L. *denticulus*.) The *Membrana dentata*.

**Denticulus.** (L. *denticulus*, dim. of *dens*, a tooth. G. *Zahnchen*, *Zahnschnitt*.) A small tooth.

**Dentidu'cum.** (L. *dens*, a tooth; *duro*, to draw. F. *davier*, *dentagre*; G. *Zahnzange*, *Zahnziehen*.) Another name for the instrument called *Dentagra*.

**Dent'ier.** (L. *dens*.) The French name for a complete set or arch of artificial teeth.

**D., doub'le.** A term applied to two arches or sets of artificial teeth for upper and lower jaw.

**D., sing'le.** A term applied to an arch or set of artificial teeth for one or other jaw.

**Dentification.** (L. *dens*; *facio*, to make.) The same as *Dentition*.

**Dentiform.** (L. *dens*; *forma*, form. F. *dentiforme*; G. *zahnförmig*.) Resembling a tooth in shape.

**D. fi'bres of membra'na tym'pani.** A set of fibres, largely confined to the posterior segment of the *membrana tympani*, arising near its periphery between the two layers of the *membrana propria*, and stretching to the manubrium of the malleus, where they divide into branches, which intertwine with the fibres of the *membrana propria*.

**Dentifrice.** (L. *dens*, a tooth; *frico*, to rub. F. *dentifrice*; G. *Zahnmittel*, *Zahnpulver*, *Zahnreinigungsmittel*.) Tooth powder. A name given to different powders and pastes proper for

cleansing the enamel of the teeth, and removing the tartar which covers them.

**Dentifricium.** Same as *Dentifrice*.

**D. absorb'ens.** Fr. Codex. (L. *absorbo*, to suck up. F. *poudre dentifrice absorbante*.) Carbonate of lime, hydrocarbonate of magnesia, powdered grey cinchona bark, of each 100 parts, oil of peppermint one part; mix.

**D. acidulum.** Fr. Codex. (L. *acidulus*, sourish. F. *poudre dentifrice acide*.) Bitartrate of potash, sugar of milk, of each 200 parts, red lac 20, and oil of peppermint 1; mix.

**D. cum carbo'nē.** (L. *cum*, with; *carbo*, charcoal. F. *poudre dentifrice au charbon*.) Wood charcoal 200 parts, powdered grey cinchona bark 100, oil of peppermint 1; mix.

**Dentig'erous.** (L. *dens*; *gero*, to carry. F. *dentigere*; G. *zahntragend*.) Containing, or bearing, a tooth, or teeth.

Also, bearing dentated teeth.

**D. cysts.** See *Cysts*, *dentigerous*.

**Dentile.** (L. *dens*, a tooth.) A term applied to a small sharp tooth-like projection on the border of a shell.

**Dentinal.** (*Dentine*.) Relating to the dentine of the teeth.

**D. canaliculi.** (L. *canaliculus*, a small channel. F. *canalicules dentaires*; G. *Zahn-röhrchen*.) The canals of the *Dentine*.

**D. canal's.** Same as *D. canaliculi*.

**D. cells.** See *Tooth pulp*.

**D. fi'bre.** (G. *Zahnfaser*.) Term applied to the protoplasmic contents of the dentinal canaliculi.

According to Klein, the dentinal fibres are processes of the cells lying just beneath the superficial cells of the pulp.

**D. glob'ules.** (L. dim. of *globus*, a sphere.)

A name given to spheroidal masses forming a kind of layer on the outer surface of the dentine. They are regarded by Waldeyer as calcified remains of the corpuscles lying in the interglobular spaces of Czermak.

**D. mem'brane.** Kölliker's term for the non-vascular cellular layer of the *D. papilla*.

**D. sheath of Neu'mann.** The layer of hard tissue which immediately surrounds the dentinal fibres prolonged from the protoplasmic cells of the pulp cavity of the tooth. The proper wall of the dentinal canaliculi.

**D. tecth.** Teeth resulting from the calcification of a dental papilla, in opposition to horny teeth.

**D. tubes.** Same as *D. canaliculi*.

**D. tumour.** An irregular outgrowth of dentine from some part of the tooth.

**Dentine.** (L. *dens*, a tooth. F. *dentine*, *ivoire*; G. *Zahnbein*, *Elfenbein*.) The bone-like substance composing the inner part of the body and neck, and nearly the whole of the fangs of the teeth in the human subject and many of the higher animals, giving to them their general shape. It is covered in the body of the tooth by the enamel; in the fangs by the cement. It is composed of a hard matrix or ground substance, consisting of a dense reticulation of organic material, impregnated with lime salts similar to those of bone. The matrix is traversed by long, fine, undulating branched anastomosing tubes, named the dentinal canals, which extend radially from the central hollow or pulp cavity of the tooth, and, becoming smaller towards the surface, terminate in the interglobular spaces of Czermak, or granular layer of Purkinje. The wall of each tube is composed

of the dentinal sheath of Neumann, and each contains a dentinal fibre of Tomes.

**Dentine** contains in 100 51 parts, 27.7 of organic matter, 72.06 of phosphate and carbonate of lime in a definite compound, according to Hoppe-Seyler ( $\text{Ca}_{10}\text{CO}_3\text{6PO}_4$ ), and .75 of manganese phosphate,  $\text{MgHPO}_4$ .

**D. cellulæ.** A synonym of *Odontoblasts*.

**D. of repair.** A deposit of hard, somewhat translucent, dentinal substance on the wall of the pulp cavity corresponding to a surface denudation of the dentine by removal of the enamel of a tooth.

**D., secundary.** A term which includes the *Osteodentine* of Owen, and the *D. of repair* of Salter.

**Dentinoid.** (*Dentine*; εἶδος, likeness.) Like *Dentine*.

**D. tumour.** A *Dental osteoma* arising from the crown of the tooth; so called from its structure being like dentine covered with enamel.

**Dentipes.** (*L. dens*, a tooth; *pes*, a foot. *F. dentipede*; *G. zahnfüssig*.) Having dentated feet.

**Dentiporous.** (*L. dens*; *porus*, a pore. *F. dentipore*; *G. zahnlöcherig*.) Having dentated pores.

**Dentirostrate.** (*G. zahnschnäblig*.) Having the characters of the *Dentirostris*.

**Dentirostres.** (*L. dens*, a tooth; *rostrum*, a beak. *F. dentirostre*; *G. Zahnschnubler*.) A Suborder of the Order *Passeres*, having the beak notched at the tip.

**Dentiscapium.** (*L. dens*, a tooth; *scalpo*, to scrape. *G. Zahnscheiter*.) Name of an instrument for scaling teeth.

**Dentist.** (*L. dens*, a tooth. *F. dentiste*; *G. Zahnarzt*.) The designation adopted by one who professes, specially, to clean, scale, and scrape the teeth of those who require such service; to stuff any that are partially, or extract those which are further decayed, and to supply the places of the latter by introducing natural or artificial teeth, from one to an entire set of various quality.

**Dentistry.** (*L. dens*, tooth.) Dental surgery. The art of the dentist.

**Dentition.** (*L. dentitio*, from *dentio*, to cut teeth. *F. dentition*; *G. Zahnausbruch*.) Term for the first appearing or cutting of the teeth in infancy; teething.

Also, the whole process of evolution of the teeth.

Also, the number, arrangement, and period of eruption of the teeth of an animal.

**D., deciduous.** (*L. deciduus*, falling off.) The condition of having teeth which last only a short time, to be replaced or not by permanent teeth.

**D., difficult.** A term for the disturbance of system which sometimes occurs during the growth and cutting of the milk teeth.

**D., first.** The appearance of the first, or deciduous, teeth. In man, the lower central incisors appear at the seventh month; the duration of eruption 1—10 days, pause 2—3 months. The upper central and lateral incisors appear at the ninth month; duration of eruption 4—6 weeks, pause 2 months. The lower lateral incisors appear at 12 months. The first molars at 14 months; duration of eruption 1—2 months, pause 4—5 months. The canines or cuspids

appear at 18 months; duration of eruption 2—3 months, pause 3—5 months. The second molars appear at 26 months, and the duration of eruption is from 3—5 months.

**D., milk.** The same as *D., first*.

**D., irregular.** The condition in which teeth vary in size, in form, in number, or in position, from the normal.

**D., permanent.** (*L. permaneo*, to stay to the end.) The condition of having teeth which last during the life of the animal.

**D., primary.** (*L. primus*, first.) See *D., first*.

**D., second.** The appearance of the second or permanent set of teeth. In man, the first molars appear at 6 years; the central incisors, lower jaw, at 7 years; central incisors, upper jaw, 8 years; lateral incisors, both jaws, lower preceding upper, 9 years. First bicuspid 10 years; second bicuspid 11 years. Cuspids 12 years; second molars 13 years; third molars at 17—20 years, or later.

**Dentitis.** A synonym of *Odontitis*.

**Dentium cortex.** (*L. dens*, a tooth; *cortex*, rind.) The enamel of the teeth.

**D. dolor.** (*L. dolor*, pain.) Toothache.

**D. nitior.** (*L. nitior*, brightness.) The enamel of the teeth.

**D. sculptura.** (*L. sculptura*, a cutting.) The act of lancing the gums.

**D. vacillan tia.** (*L. vacillo*, to sway to and fro.) Looseness of the teeth.

**Dentiva.** (*L. dens*. *G. Zahnfleisch*.) The gums.

**Dento.** (*L. dens*.) One whose teeth are prominent.

**Dentold.** (*L. dens*, a tooth; *Gr. εἶδος*, resemblance.) Like a tooth.

**Dentolingual.** (*L. dens*; *lingua*, the tongue.) Relating to the teeth and the tongue.

**D. consonants.** Those consonants which are sounded by applying the tongue to the teeth; such are *d*, *t*, and *s*.

**Denture.** (*F.* from *L. dens*, a tooth.) An entire or partial set of artificial teeth.

Also, the order in which the teeth are arranged.

**Denudate.** (*L. denudo*, to make bare. *F. dénudé*; *G. entblösst*.) Stripped; naked. Applied to plants whose flowers have no flower-cup.

Also, to polished surfaces, or those which are neither hairy nor rough.

Also, to those plants whose flowers appear before the leaves.

**Denudation.** (*L. denudo*, to make bare. *Gr. ἀνάνωσις*; *F. dénudation*; *G. Entblössung*.) Term for the act or process of laying bare any part.

**Denutrition.** (*L. de*, from; *nutritio*, to nourish.) The opposite to nutrition, being the molecular breaking down of tissue.

**Deobstruct.** (*L. de*, from; *obstruo*, to obstruct.) To remove obstructions, especially to the passage of fluids along the canals.

**Deobstruent.** (*L. de*, from; *obstruo*, to obstruct. *F. deobstruant, désopilant*; *G. eröffnend, abführend*.) Applied to medicines which have power to remove obstructions in the canals of the body.

**Deodand.** (*L. Deus*, God; *do*, to give.) Term for the fine or mulct which used to be imposed by the coroner on any inanimate object which, or on an irrational creature who, might have caused the death, sudden or violent, of a

person, by which it became given to God, or forfeited to the king for pious uses.

**De'odar.** The *Cedrus deodara*.

**D. pine.** The *Cedrus deodara*.

**Deod'orant.** (L. *de*, from; *odor*, smell.) Having power to destroy a smell.

**Deodorization.** (L. *de*, neg.; *odor*, a scent or smell.) Term for the act or process of correcting any foul or unwholesome effluvia, through the operation of chemical substances acting as deodorizing agents, as they are called.

**Deod'orize.** (L. *de*; *odor*.) To destroy a foul smell.

**Deod'orizer.** (L. *de*; *odor*.) A substance able to effect *Deodorization*.

**Deontology.** (Δείον, that which is binding; λόγος, a description.) A word introduced by Bentham to denote his doctrine of ethics, being the science of duties.

**D., medical.** (F. *déontologie médicale*.) The duties and rights of medical practitioners.

**Deoper'culate.** (L. *de*, from; *operculum*, a lid.) In Botany, used to denote those nusses in which the operculum does not separate spontaneously.

Also (G. *deckellos*), without an operculum.

**Deop'pilate.** (L. *de*, neg.; *oppilo*, to stop up. F. *désobstruant*, *désopilant*, *désopilatif*.) Having the power of removing obstructions, as aperient medicines.

**Deop'pulative.** Same as *Deop'pilate*.

**Deor'sum.** (L.) Downwards.

**Deoxidate.** (L. *de*, from; *oxygenium*, oxygen.) To deprive of oxygen.

**Deoxidation.** (Same etymon. F. *dés-oxydation*, *dés-oxygénation*; G. *Entsäuerung*.) Term for the act or process of driving off oxygen from any solid or liquid substance; reduction from the state of an oxide.

**Deoxidisation.** Same as *Deoxidation*.

**Deoxidise.** (Same etymon.) To deprive of oxygen.

**Deoxidisement.** (Same etymon.) The process of *Deoxidation*.

**Deoxy'genate.** (Same etymon.) To deprive of oxygen.

**Deoxygenation.** (Same etymon.) The act or process of depriving of oxygen.

**De'part.** (F. *départ*; *linquart*.) Old term for the refining or separating of gold from silver by means of aqua fortis; also called *quartation*. (Quincy.)

**Departition.** (L. *de*, from; *partio*, to divide.) Old term for the process of separating metals.

**Depas'cent.** (L. *de pasco*, to feed or eat up as beasts do. G. *weßfressend*.) Eating away; corroding. Applied formerly to phagedænic ulcers.

**Depau'perate.** (L. *de*, intens.; *paupero*, to make poor. G. *verarmt*.) Impoverished; as if starved; diminished in size for favourable conditions as to nourishment, and such like.

Also (G. *armblüthig*), having no, or few, flowers.

**Depen'dent.** (L. *dependeo*, to hang down. F. *dépendant*; G. *herabhängend*.) Hanging down.

**Deperdit'io.** (L. *deperdo*, to lose altogether. F. *avortement*; G. *Missgebären*, *Fehlgeburt*, *eine unzeitige Geburt*.) Old term for an abortion.

**Depet'igo.** (L. *de*, intens.; *petigo*, a

running tetter. F. *dartre*; G. *Herpes*, *Flechte*.) Old term for tetter, ringworm, or itch, where the skin is rough. (Quincy.)

**Dephlegm'.** Same as *Dephlegmate*.

**Dephleg'mate.** (L. *de*, from; *phlegma*, phlegm.) To perform the operation of *Dephlegmation*.

**Dephlegmation.** (L. *de*, from; *phlegma*, phlegm, a clammy humour of the body. F. *déphlegmation*; G. *Entwässerung*.) Term for the act or process of distilling off the water from chemical liquors; the part distilled off is the phlegm, and the weakest; the part left in the retort the strongest, and the chief product.

An old name for *Rectification*.

**Dephlogisticate.** (L. *de*, neg.; *phlogiston*.) To deprive of phlogiston.

**Dephlogisticated.** (L. *de*, neg.; *phlogiston*, the inflammable principle. F. *déphlogistiqué*.) Old term applied to bodies supposed to be deprived of phlogiston.

**D. air.** An old term, by the school of Stahl, for what is now known as oxygen gas; they supposed it to be common air deprived of phlogiston.

**D. marine acid.** A former name for *Chlorine*.

**Dephract'ic.** (L. *de*, from; *φράσσω*, to obstruct.) Same as *Deobstruct*.

**De'pilate.** (L. *de*, *depi*.) To deprive of, or to pluck out, the hair.

**Depila'tio.** (L. *de*; *pilus*, hair.) Loss of hair, alopecia, baldness. See *Depilation*.

**D. cap'itis.** (L. *caput*, the head.) Baldness of the head.

**Depila'tion.** (Same etymon. G. *Enthaarung*, *Abhaaren*.) Removal of the hair by chemical or mechanical means; by the aid of a *Depilatory*.

Also (G. *Kahlköpfigkeit*), the condition of baldness.

**Depilato'rium.** (F. *dépilatoire*.) A *Depilatory*.

**Depilatory.** (L. *de*, neg.; *pilus*, the hair. F. *dépilatif*; G. *haarvertilgung*.) An application which removes hair from the head or any part of the body. It may be mechanical, as in the case of a pitch plaster; or chemical, as in the case of lime or other caustic.

Also, having power to remove hair.

**D., Bottger's.** Sodium sulphide 1 part, creta precipitata 3, made into a paste with water.

**D., Bou'det's.** Sodium sulphide 3 parts, quicklime, in powder, 10. Mixed with water and applied as a paste for three or four minutes. It must then be scraped off.

**D., Cazenove's.** Quicklime 1 part, sodium subcarbonate 2, and lard 8.

**D., Colley's.** Quicklime 30 parts, nitre 4, sulphur 4, orpiment 12, soap lees 125; evaporate to the consistence of cream.

**D., Delcroix's.** Quicklime 30 parts, orpiment 4, powdered gum arabic 60; mix with water to a paste.

**D., Flenck's.** Orpiment 1 part, quicklime 16, starch 10. Apply as a paste with water.

**De'pilous.** (L. *depilis*; from *de*; *pilus*, hair.) Devoid of hair; hairless.

**Depla'nate.** (L. *deplano*, to level off.) Flattened, smoothened.

**Depletion.** (L. *depleo*, to empty out. F. *l'action de vider*; G. *Entleerung*.) The act or process of emptying; the diminution of the

# DEPLETIVE—DEPRESSOR.

quantity of the fluids of the living body. Applied to the use of those means which act through the medium of the circulation in reducing plethora or checking inflammation, as bloodletting, and saline purgatives, especially the former.

**Depletive.** (L. *depleo*.) Same as *Depletion*.

**Depletory.** (L. *depleo*. F. *dépletif*.) Having relation to, or producing, *Depletion*.

**Deplication.** (L. *de*, from; *placo*, to fold.) An unfolding or untwisting.

**Deplumate.** (L. *de*, from; *pluma*, a feather. G. *federlos*.) Without or having lost its feathers.

**Deplumation.** (L. *de*, neg.; *pluma*, a feather.) The stripping or falling off of feathers.

Old term for a disease of the eyelids which causes the eyelashes to fall off, (Gr. *πριλλωσις*), said by Aëtius, vii, 78, to consist of Madarosis and Sclerophthalmia.

**Depolarisation.** (F. *dépolarisation*.) The removing or destroying the polarity of a thing.

A term applied in Optics to the phenomena which are observed when a pencil of polarised light-rays is caused to traverse a double-refracting crystal, whereby if a Nicol's prism be used the ordinary and the extraordinary rays are both brought into sight; or if a thin film of crystal, such as selenite, be used, colours will appear, differing according to the thickness of the crystal, and depending on the interference with each other of the polarised rays.

Also, a term applied to the restoration to their original velocity of light-waves which have had their velocity changed through the influence of magnetism. It is accomplished by subjecting them to high electrical power, or to the influence of new light.

**Deposit.** (L. *depono*, to lay down.) That which has been thrown down, or has settled, as the solid parts from suspension in a fluid.

Also, an infiltration or collection of morbid matter in a structure or part.

**D.s., urinary.** See *Urinary deposits*.

**Deposition.** (L. *depositio*, from *depono*, to lay down. F. *déplacement*; G. *Niederlegen*.) A displacement, or putting aside of a thing.

Also (F. *abaissement*, *dépression*; G. *Niederdrückung*, *Niederziehung*), old term for the depressing of the lens in the operation of couching.

In chemical operations, the causing to settle of a solid from a mixture.

**Depositive.** (L. *depositus*, part. of *depono*.) An epithet used by Erasmus Wilson to express that condition of the inflamed corium in which plastic lymph is exuded into the tissue of the derma, so as to give rise to the production of small, hard elevations of the skin, or pimples. Under the term *depositive inflammation* of the derma he comprises *strophulus*, *lichen*, and *prurigo*.

**Depositum.** (L. *depositus*.) A deposit.

**Depравation.** (L. *depravatio*, a perverting; from *depravo*, to vitiate. F. *dépravation*; G. *Verderben*, *Verderbtheit*.) Term for a deterioration or change for the worse. Applied to the secretions or the functions of the body.

**Deprehensio.** (L. *deprehensio*, a seizing, from *deprehendo*, to take a man unawares. F. *catapèse*; G. *Katalepsis*, *Staarsucht*.) A former name for *Cataplexy*.

Also (L. *deprehendo*, to comprehend), an old term for *Diagnosis*.

**Depressants.** (L. *depressus*, part. of *deprimo*, to press down.) Sedatives.

**D.s., cerebral.** (L. *cerebrum*, the brain.) Remedies which diminish the action of the nerve substance of the cerebrum; such are cold, opium, chloral hydrate, and perhaps the bromides.

**D.s., spinal.** (L. *spina*, the spine.) Remedies which diminish the action of the spinal cord; such are conium, bromide of potassium, and cold.

**Depressed.** (L. *depressus*, part. of *deprimo*, to press down. F. *déprimé*; G. *niedergedrückt*.) Pressed down; as when the sides of a leaf are higher than the disc. Having the appearance of being flattened from above.

**Depressing.** (Same etymon.) Lowering, relaxing the tone of.

**Depressio.** Same as *Depression*.

**D. uteri.** (L. *uterus*, the womb.) An old term for the early stage or imperfect development of inversion of the uterus.

**Depression.** (L. *depressio*, from *deprimo*, to press down. F. *abaissement*, *dépression*; G. *Herabziehung*, *Niederziehung*, *Niederschlagung*, *Niedersinken*, *Niederdrücken*.) The state of a part which has fallen or is pressed down.

Also, a term for one of the operations for cataract.

Applied to the lowness of spirits of persons suffering under disease.

In Anatomy, a hollow or pit.

In Surgery, the condition of the surface of a fractured bone, especially of a skull bone, when it is crushed in.

**D., nervous.** A term applied in a loose fashion sometimes to a morbid fancy or melancholy, and sometimes to defective nerve force.

**D. of cataract.** See *Cataract*, *depression of*.

**D., vital.** A term which has been used to describe the fatal or very serious depression of the powers of life which are produced by a sudden shock, either physical or mental.

**Depressusculus.** (L. dim. of *depressus*, part. of *deprimo*, to press down.) Slightly depressed.

**Depresso-motor.** (L. *depressus*, pressed down; *motus*, motion.) Having power to lessen the activity of the motor centres. A term used to describe the action of such drugs as physostigma, the bromides, chloral, nitrate of amyl, lobelia, gelsemium, tobacco, hemlock, and such like, on the muscular system and its nerves.

**Depressor.** (L. *deprimo*, to press down. F. *abaisseur*, *dépresseur*; G. *niederziehende Muskeln*.) A presser down. A name applied to a muscle which draws or presses down the part on which it acts.

**D. alæ na'si.** (L. *ala*, a wing; *nasus*, the nose. F. *maxillo-alveolar*, *Chauss*; *abaisseur de l'aile du nez*.) This muscle arises from a depression of the upper jaw-bone above the roots of the second incisor and canine teeth; the fibres ascend to be inserted into the septum nasi and posterior part of the ala of the nose. It restores the ala nasi to its normal position after it has been dilated. It is supplied by the seventh nerve and by the facial artery.

**D. anguli oris.** (L. *angulus*, angle; *os*, the mouth. F. *maxillo-labial*, *Chauss*; *sous maxillo-labial*, *abaisseur de l'angle des lèvres*; G. *Niederzieher des Mundwinkels*.) A triangular

## DEPRESSORIUM—DEPURANT.

muscle arising from the oblique line on the outer surface of the lower jaw and passing upwards to the angle of the mouth. It draws the mouth downwards and outwards; it is supplied by the seventh nerve and by the facial and labial branch of the inferior dental artery.

**D. branchiostegorūm.** (*Branchiostegal.*) A muscle of fishes arising from the lower end of the ceratohyal bone, passing obliquely backward, and crossing its fellow to be inserted into the inferior branchiostegal ray. It regulates the size of the branchiostegal chamber.

**D. caudæ.** (*L. cauda*, a tail.) A large muscle of *Cetacea* arising in the thorax by tendinous slips from the ribs and adjoining transverse processes, and attached to the hæmal arches of the tail.

**D. clitoridis.** (*L. clitoris.*) A synonym of *Ischioacervosus*.

**D. coccygeus.** The *Sacrococcygeus inferior*.

**D. epiglottidis.** (*Epiglottis.*) A thin layer of muscular fibres contained in the fold of mucous membrane that bounds laterally the upper opening of the larynx. It arises from the front of the arytenoid cartilage, and, by a second origin, from the thyroid cartilage near the middle line. From these attachments the fibres radiate upwards, and are inserted into the border of the epiglottis. The lowermost fibres, which cover the top of the laryngeal pouch, and which are in relation with the arytenoid and thyro-arytenoid muscles, have been named by Hilton the aryteno-epiglottideus inferior.

**D. labii inferioris.** (*L. labium*, a lip; *inferior*, lowermost. *F. mentonnier-labial*, *mento-labial*, Chanss; *carré de menton*, *abaisseur de la lèvre inférieure.*) This muscle arises from a depression on the front of the lower jaw, and the fibres pass upwards to join the orbicularis oris. It depresses and everts the lower lip.

**D. labii inferioris proprius.** (*L. proprius*, special.) A synonym of *D. labii inferioris*.

**D. labii superioris alæque nasi.** A synonym of *D. alæ nasi*.

**D. labii superioris proprius.** (*L. superior*, upper; *proprius*, special. *G. Herabzieher der Unterlippe.*) A flat, thin muscle, of rhombic form, arising from the front of the lower jaw, between the mental protuberance and the mental foramen. It runs obliquely upwards and towards the middle line, to join the orbicularis oris. It draws the lower lip downwards. It is supplied by the fifth nerve.

**D. labiorum communis.** (*L. labium*, a lip; *communis*, common.) A synonym of *D. anguli oris*.

**D. mandibulæ.** (*L. mandibula*, the lower jaw.) A muscle of fishes arising from the coracoid part of the shoulder-girdle, and inserted into the middle of the mandible.

**D. nerve.** A nerve discovered by Cyon and Ludwig, the stimulation of which lowers the pressure of the blood. In the rabbit it arises by two roots, one coming from the vagus, the other from the superior laryngeal branch of the vagus, and runs by the side of the sympathetic to the thorax, where it joins with sympathetic filaments, and is distributed to the heart. After division electric stimulation of the peripheric stump is without effect, but applied to the proximal extremity gradually reduces the blood pressure in the arteries to one half or one third of

the normal amount. About fifteen beats of the heart take place before the maximum effect is observed. The pulsations of the heart are reduced in number, but after a time they rise to normal frequency. The nerve, it is probable, acts reflexly through the vagus.

**D. oculi.** (*L. oculus*, the eye.) A synonym of the *Rectus inferior oculi*.

**D. operculi.** (*L. operculum*, a cover.) A muscle of fishes arising from the alisphenoid and the pectoral bones, and inserted into the inner ridge of the opercular bone. (Owen.)

**D. palpebræ inferioris.** (*L. palpebra*, an eyelid; *inferior*, lower.) A fasciculus of the palpebraris muscle. Heister describes it separately, but it is not admitted now.

Also, a name given by Ecker to a few fibres of the levator bulbi oculi in Amphibians.

**D. septi mobilis narium.** (*L. mobilis*, movable.) Term applied to a few fibres of the orbicularis oris, which, ascending in the middle line, are attached to the septum of the nose.

**D. Sims's.** An instrument for depressing or holding back the anterior vaginal wall during the use of Sims's speculum. It consists of a light metal rod, one end fixed in a short broad handle, and the other terminating in an oval loop.

**D. supercilii.** (*L. supercilium*, an eyebrow.) A fasciculus of the orbicularis palpebrarum, which, arising from the ligamentum palpebrale mediale, radiates to the eyebrow.

**D., tongue.** A flattened metallic plate for depressing the tongue, in order to see the throat. The instrument is usually made double; two blades jointed by their ends and opening to a right angle.

**D. tympani.** (*Tympanum.*) A muscle of fishes arising from the basi- and alisphenoids, and expanding with diverging fibres to be inserted into the epi- and pretymppanic bones and into the entopterygoid. It depresses the tympanic bone and contracts the branchial cavity. (Owen.)

**D. urethræ.** The same as the *Constrictor vestibuli vaginæ*.

**Depressorium.** (*L. deprimo*, to depress. *F. depressoir.*) Old name for an instrument for depressing the dura mater after the operation of the trepan. (Quincy.)

**Depressus.** Same as *Depressed*.

**Deprimens.** (*L. deprimo*, to press down.) Pressing or pulling down. Same as *Depressing*.

**D. auriculæ.** (*L. auricula*, the auricle.) A synonym of the *Retractoris auris*.

**D. maxillæ biverter.** (*L. maxilla*, the jaw; *bis*, twice; *verter*, a belly.) The same as *Digastricus*.

**D. oculi.** A synonym of *Rectus inferior oculi*, so called from its action.

**Deprimientia.** (*L. deprimo*, to depress.) Sedatives.

**Deptford pink.** The *Dianthus armeria*, from the place where it grew.

**Depucelate.** To commit the act of *Depucelation*.

**Depucelation.** (*F. de*, out of; *pucelle*, a maid.) The depriving a female of her virginity.

**Depudication.** (*L. depudico*, to dishonour; from *de*, out of; *pudicus*, chaste.) Rape.

**Depurant.** (*Low L. depuro*, to purify or cleanse. *G. reinigend.*) Purifying; cleansing.

Applied to medicines, or to any kind of diet, that purifies the fluids of the body.

**Depurate.** (Low *L. depuro*; from *L. de*, intens.; *puro*, to purify.) To cleanse from impurities.

Also (*L. de*, neg.; *puro*), to make foul or impure.

**Depuration.** (Low *L. depuro*, to cleanse or purify. *F. depuration*, *depuration*; *G. Abschwammung*, *Reinigung*.) The act of depurating. Term for the act or process of clarifying a liquid; defecation. The removal of impurities from the humours or fluids of the body.

**Depurative.** (Same etymon.) A term applied to remedies which possess the action called *Depurant*; such are said to be sarsaparilla, dandelion, watercress, and such like.

Also (*L. de*, from, away; *pus*, matter), a term by Dickinson to describe a certain morbid change produced in the system by the removal of pus from it, that is, by a protracted purulent discharge. The term is especially applied to lardaceous or amyloid disease, of which he believes one of the great causes is the abstraction of pus from the blood by the process of suppuration.

**D. deposit.** A synonym of lardaceous deposit, by Dickinson, in recognition of its nature. See *Depurative*.

**D. disease.** A synonym of lardaceous disease, by Dickinson, in recognition of his theory of its mode of production. See *Depurative*.

**Depuratory.** (Low *L. depuro*, to cleanse or purify. *F. dépuratoire*; *G. reinigend*.) Having power to cleanse or purify.

Applied to certain diseases which were supposed to carry off impurities from the system, as skin diseases.

Also, applied to medicines, or diet, supposed to have the effect of purifying the fluids or humours of the body.

**D. excretions.** A term applied to the urine and products of respiration.

**D. fever.** See *Fever*, *depuratory*.

**D. organs.** The organs which serve for the excretion of effete matters, such as the kidneys.

**Depurgative.** (*L. depurgativus*, from *depurgo*, to clean out.) Actively purgative.

**Deradelphus.** (*Δέρην*, the neck; *ἀδελφός*, brother. *F. deradelphé*.) A double monocephalous monster, whose two trunks are united above the umbilicus, and separated below; they have four or three limbs, and but one head.

**Deraden.** (*Δέρην*; *ἄδην*, gland. *G. Halsdrüse*.) A gland in the neck.

**Deradenitis.** (*Δέρην*; *ἄδην*. *G. Halsdrüsenentzündung*.) Inflammation of the glands of the neck.

**Deradenon'eus.** (*Δέρην*; *ἄδην*; *ὄγκος*, a swelling. *G. Halsdrüseneschwulst*.) Enlargement of the glands of the neck.

**Deranencephalia.** (*Δέρην*; *ἄν*, neg.; *ἐγκεφαλος*, the brain.) A monstrosity in which only a small portion of the brain exists, resting on the cervical vertebrae. According to Is. G. St. Hilaire, a monstrosity characterised by the total absence of encephalon, and of the medulla spinalis into the cervical region.

**Deranged.** (*F. déranger*, to disarray.) In-sane.

**Dera'ngement.** (Same etymon.) Disturbance of regular course, disorder.

**D., mental.** (*L. mens*, the mind.) A term for the different forms of insanity.

**Derapospin'ris.** (*Δέρην*, the neck; *ἀπόσφιγξις*, a squeezing tight.) Same as *Auchenospinaxis*.

**Deratop'tera.** (*Δέρην*, the skin; *πτερον*, a wing. *F. deratoptère*; *G. hautflügelicht*.) Applied by Chirville to a Section of insects with simply coriaceous elytra, now called *Orthoptera*.

**Der'bia.** Old name for *Impetigo*, according to Fallopius, *de Ulcer.*, i, 23, p. 612, 613.

**Derbyshire neck.** A common term for the disease goitre, or bronchocele, on account of its being endemic in that county, and in other mountainous countries.

**Derencephalia.** Same as *Deranencephalia*.

**Derenceph'alus.** (*Δέρην*; *κεφαλή*, head.) A monster whose brain is in the condition called *Deranencephalia*.

**Derivant.** Same as *Derivative*.

**Derivantia.** (Same etymon.) Medicines which exert the influence called *Derivative*.

**Derivation.** (*L. derivatio*, from *derivo*, to drain, turn aside, or divert; from *de*, from; *rivus*, a river. *F. dérivation*; *G. Ableitung*.) Term formerly used for the drawing away of a disease from its original seat to another part of the body; blisters, rubefacients, and escharotic applications, as well as purgatives and local blood-letting, being said to act by derivation.

**D. wire.** The wire along which a derived electric current is drawn.

**Derivative.** (*L. derivo*, to turn aside, to drain. *F. dérivatif*; *G. ableitend*.) Having power to turn aside or convert, as it were, from one disease to another. Applied to certain medicines which were thought to act in this manner, as blisters, rubefacients, epispastics.

**D. bleeding.** A term applied to that method of treatment of a disease by bleeding when the blood is removed from a part of the body far away from the seat of the disease, as in bleeding from the toe in head affections.

**D. circulation.** Term applied to the direct communication which exists between arteries and veins in some parts of the body, so that all the blood does not necessarily pass through the capillaries of these parts.

**D. creation.** The secondary development or evolution of animals or plants from parents in contradistinction to the primary, instantaneous creation of living things.

**Derivatorius.** Same as *Derivative*.

**Derived.** (*L. derivo*.) Drawn from.

**D. albumins.** See *Albumins*, *derived*.

**D. current.** See *Current*, *derived*.

**D. proteids.** See *Proteids*, *derived*.

**Derm.** (*Δέρμα*, the skin.) The skin or outer covering of anything. A term for the true skin or corium.

In Botany, the inner living layer of the bark as distinguished from the outer dead portion.

**D. plate.** (*Δέρμα*.) A scute. A bony deposit or scale in the skin of an animal.

**Derma.** (*Δέρμα*, the skin. *F. derme*, *pau*; *G. Fell*, *Haut*, *Lederhaut*.) The true skin, or cutis vera. See *Skin*.

**Derma'd.** An adverbial term applied by Dr. Barclay to signify towards the *Dermal* aspect.

**Dermahæ'mal.** Same as *Dermohæmal*.

**Derm'al.** (*Δέρμα*, the skin. *F. mem-*

# DERMALGIA—DERMATITIS.

*braneur*; *G. hautig*.) Consisting of, or belonging to, the skin.

Applied by Dr. Barclay of Edinburgh in his proposed Nomenclature, when treating of the aspect common to the body and organs generally, as meaning towards the skin.

**D. aspect.** An aspect towards the skin or external surface (Barclay).

**D. bones.** Bony plates originating in the skin; they are developed from membrane.

**D. canal's.** The branched canals in the ectoderm of Porifera which communicate with the enteric cavity and open by the *D. pores*.

**D. glands.** The glands of the skin, of which the sudoriparous glands are the chief as depuratory organs.

**D. pores.** A term applied to the superficial openings of the *D. canals* of the *Porifera*.

**D. shields.** Osseous scutes formed in the skin in Ganoid and Silurid fishes, in certain Batrachia, as *Ceratophoris*, and *Chelonina*. In these last the ossification is a continuation of that which forms the ribs and spines of the vertebrae, but in the others the ossification is independent.

**D. skel'eton.** See *Skeleton, dermal*.

**Dermal'gia.** Same as *Dermatalgia*.

**Dermancyloproc'tia.** (*Δέρμα*; ἀγκύλη, a noose; πρωτόν, the anus.) Imperforation of the anus by means of a dermic or membranous extension.

**Dermaneu'ral.** Same as *Dermoneu'ral*.

**Dermanys'sus,** Dugés. (*Δέρμα*; νύσσω, to touch with a sharp point.) A Genus of the Order *Acaridea*, Class *Arachnida*.

**D. a vium,** De Geer. (*L. avis*, a bird. *G. Vogelmilch*.) A species inhabiting the crevices of perches in bird cages. It irritates the human skin.

**D. gallinæ,** De Geer. Inhabits poultry houses and pigeon cots; comes out at night, and sucks the blood of the birds. It attacks the human skin and produces a species of prurigo. It has also been observed in large numbers on a horse.

**D. hirun'dinis,** De Geer. (*L. hirundo*, a swallow.) Inhabits swallows' nests, but has not yet been seen on domestic animals.

**Dermaphyte.** Same as *Dermatophyte*.

**Dermaphyticide.** (*Δέρμα*; φυτόν, a plant; *L. cædo*, to kill.) A term applied to remedies which destroy the vegetable parasites of the skin, such as mercurial and sulphurous applications.

**Dermapos'tasis.** (*Δέρμα*; ἀπόστασις, a standing away from; a place where something is put away.) A skin disease depending on some other and constitutional disorder; such is a syphilitic eruption.

**Dermaptera.** (*Δέρμα*; πτερόν, a wing.) A synonym of *Euphyroptera*.

**Dermap'terous.** Belonging to, or like, the *Dermaptera*.

**Dermata.** Same as *Epidermata*.

**Dermatag'ra.** (*Δέρμα*; ἄγρα, a seizure.) Same as *Pellagra*.

**Dermatalgia.** (*Δέρμα*, the skin; ἄλγος, pain. *G. Hautschmerz*.) Term used for the disease neuralgia of the skin; pain of the skin.

**Dermataneuria.** (*Δέρμα*; ἄ, neg.; νεῦρον, a nerve.) Paralysis or loss of sensibility of the skin.

**Dermatapos'tasis.** (*Δέρμα*; ἀπόσ-

τασις, a standing away from.) A prominence or tumour of the skin.

**Dermataux'é.** (*Δέρμα*; αὐξή, increase. *G. Hautverdiekung*.) Increase or hypertrophy of the skin.

**Dermatempodis'mus.** (*Δέρμα*; ἐμπόδιος, a hindrance. *F. dermatempodisme*; *G. Hauterhinderung*.) Obstruction of the function of the skin.

**Dermathæ'mia.** (*Δέρμα*; αἷμα, blood.) Congestion of blood in the skin.

**Dermathypertrophy.** (*Δέρμα*; ὑπέρ, above; τροφή, nutrition.) Thickening of the structure of the skin.

**Dermatit'ria.** (*Δέρμα*; ἱατρεία, healing.) Healing of cutaneous diseases; treatment of diseases of the skin.

Also, the treatment of disease by means of remedies applied to or under the skin.

**Dermatic.** (*Δερματικός*, of skin.) Relating to, proceeding from, or composed of skin.

**Dermat'ica.** (*Δερματικός*, relating to the skin. *G. Hautmittel*.) A term applied to denote remedies which are useful in skin diseases, and also remedies which alter the secretions of the skin by increase, or diminution, or change of quality.

**Dermatine.** (*Δέρμα*.) Relating to the skin.

**Dermatit'is.** (*Δέρμα*. *G. Hautentzündung*.) Inflammation of the skin.

**D. ambustio'nis.** (*L. ambustio*, a burn.) Inflammation of the skin from a burn or scald.

**D. ambustio'nis bullo'sa.** (*L. bulla*, a bleb.) A burn or scald which has produced a blister.

**D. ambustio'nis erythemato'sa.** (*Ερυθμα*, a skin-redness.) A burn or scald which has only produced redness of the skin.

**D. ambustio'nis escharot'ica.** (*Εσχαρωτικός*, fit to form an eschar.) A burn which has produced complete destruction of skin.

**D. calor'ica.** (*L. calor*, heat.) Inflammation of the skin, produced by the action of, or the deprivation of, heat.

**D. circumscrip'ta.** (*L. circum*, around; *scribo*, to write.) Inflammation of the skin which are confined to a limited area.

**D. congelatio'nis.** (*L. congelatio*, a freezing.) Inflammation of the skin from frost-bite.

**D. contusifor'mis.** (*L. contusum*, a bruising; *forma*, likeness.) A term for *Erythema nodosum*, from its appearance.

**D. diffu'se.** (*L. diffusus*, spread out.) Inflammation of the skin spread over a large area.

**D. erythemato'sa.** (*Ερυθμα*, redness of the skin.) The superficial symptomatic inflammation of the skin which constitutes erysipelas.

**D. exfolia'cea.** (*L. exfolio*, to strip of leaves.) A synonym of *Pityriasis rubra*.

**D. exfoliati'va.** (*L. exfolio*, to strip of leaves.) Inflammation of the skin accompanied with excessive desquamation.

A non-febrile infectious disease observed in the Foundling Hospital at Prague has been called by this name; the skin was first dry, then erythematous, then exfoliating. Half those attacked died.

**D. idiopath'ica.** (*ἴδιος*, peculiar; πάθος,

affection.) Von Hebra's term for all inflammations of the skin which are caused by agents, of which the injurious effects are local, and not by some general disturbance of the system. It includes *D. traumatica*, *D. venenata*, and *D. calorica*.

**D. of nipple, malignant papillary.** See *Nipple, malignant papillary dermatitis of*.

**D. phlegmono'sa.** Same as *Erysipelas*, *phlegmonous*.

**D. symptomatica.** (Συμπτωματικός, casual.) A synonym of *Erysipelas*.

**D. traumatica.** (Τραυματικός, relating to wounds.) Inflammation of the skin produced by mechanical agencies.

**D. variolo'sa.** (*Variola*.) The inflammation of true skin and subcutaneous tissue which is the commencement of the smallpox pustule.

**D. venenata.** (*L. venenatus*, poisoned.) Inflammation of the skin produced by acrid or poisonous agents.

**Dermatobi'a.** (Δέρμα; βιώω, to live.) A Genus of the Family *Estridae*, Suborder *Brachycera*, Order *Diptera*.

**D. cyanoventris.** Meq. (*L. cyaneus*, dark blue; *venter*, the belly.) Habits like *D. noxialis*.

**D. noxialis.** Gaudet. (*L. noxialis*, injurious. *G. Menschenbieflye*.) Hab. America. The pear-shaped larva develops in the subcutaneous cellular tissue of the backs of cattle, where the female fly deposits her eggs.

**Dermatobranchia'ta.** (Δέρμα; βράγχια, the gills.) A section of the Order *Opisthobranchiata*, Class *Mollusca*. Marine molluscs breathing either entirely by the skin or by dorsal branchiae.

**Dermatocellulitis.** (Δέρμα, the skin; *cellulitis*.) Inflammation of the skin and subcutaneous areolar or cellular tissue.

**Dermatocolo'sis.** (Δέρμα; χόλος, bile.) Jaundice.

**Dermatochysis.** (Δέρμα; χύσις, a pouring out.) A synonym of *Anasarca*.

**Dermatocoptes.** Fürst. (Δέρμα; κόπτω, to strike, to pierce. *G. Saugmilch*.) A Genus of the Order *Acaridea*, living on serum, blood, and young epidermis scales. Head conical, with two projecting jaws, which are used to penetrate the skin; four pairs of legs with suckers, in the male, the fourth of which, however, are atrophied, whilst in the female the third and fourth are atrophied. Posterior end of the body with two processes, which are beset with bristles in the male, and are employed as organs of adhesion in coitus.

**D. communis.** Fürst. (*L. communis*, common. *G. gemeine Saugmilch*.) A species found on the horse, ox, and sheep.

**D. cuniculi.** Fürst. (*G. Ohrsaugmilch des Kaninchens*.) A species which inhabits the ear of the rabbit, and is apt to excite inflammation in the outer, middle, and even internal ear and brain.

**Dermatocrati'a.** (Δέρμα; κρατέω, to have power over.) The treatment of disease by means of remedies applied to the skin.

**Dermatodectes.** Gerl. (Δέρμα; δέκω, a biter.) A Genus of the Family *Sarcoptides*, Order *Acaridea*.

**D. communis.** The *Dermatocoptes communis*.

**D. e'qui.** Gerl. (*L. equus*, a horse.) The *Psoroptes longirostris*, Megn., or the *Dermatocoptes communis*, Fürst.

**Dermatod'es.** (Δερματώδες, like skin.) Same as *Dermatoid*.

**D. mor'bi.** (*L. morbus*, a disease.) Chronic cutaneous diseases.

**Dermatodyn'ia.** (Δέρμα; ὁδόνη, pain. *G. Hautschmerz*.) Pain in the skin.

**Dermatodyschro'i'a.** (Δέρμα; ὁδσ-χρόια, a bad colour.) Discoloration of the skin. (Hoblyn.)

**Dermatogen.** (Δέρμα; γεννάω, to produce. *G. Hautbildungsgevebe*.) A term applied to the first independent tissue formed in the development of the embryo plant, being the epidermic tissue.

**Dermatog'raphy.** (Δέρμα, the skin; γραφω, to write.) Term for a description of the skin.

**Dermatohæ'mia.** Same as *Dermat-hæmia*.

**Dermatoid.** (Δέρμα, the skin; εἶδος, likeness. *F. dermatöide*; *G. hautähnlich*, *hautartig*, *häutig*.) Resembling the skin.

**Dermatokelido'sis.** (Δέρμα; κηλί-δωσις, defilement.) Spottiness of the skin. (Hoblyn.)

**Dermatoleucas'mus.** (Δέρμα; λευ-κός, white.) Morbid whiteness of, or absence of colour from, the skin.

**Dermatologist.** One conversant with *Dermatology*.

**Dermatol'ogy.** (Δέρμα, the skin; λόγος, a discourse. *F. dermatologie*; *G. Hautlehre*.) The consideration of the skin, its nature, qualities, and diseases.

**Dermatol'ysis.** (Δέρμα; λύσις, a loosing.) A relaxed and pendulous condition of skin occurring under the eyelids and chin, in the cheeks, and the abdomen, in middle or old age. The connective tissue is dense and the neurilemma much thickened.

Also, used sometimes as a synonym of *Elephantiasis arabum*.

**Dermatoma.** (Δέρμα.) A form of perverted nutrition of the skin, accompanied with hypertrophy, as mole, naevus.

**Dermatomala'cia.** (Δέρμα; μαλακία, softness. *G. Hautweichung*.) Morbid softening of the skin.

**Dermatomelas'ma.** (Δέρμα; μέλας-μα, a livid spot.) See *Melanopathia*.

**D. suprarenal'é.** (*L. supra*, above; *ren*, the kidney.) Disease of the suprarenal bodies or adrenals; so called from the discoloration of skin which usually accompanies it.

**Dermatomyco'sis.** (Δέρμα; μύκης, a fungus.) Skin disease caused by the growth of a vegetable parasite, such as ringworm.

**Dermatoneu'ria.** (Δέρμα; νεύρον, a nerve. *G. Hautnervenleid*.) A term for nervous disease of the skin.

**Dermaton'oses.** (Δέρμα; νόσος, a disease.) A class of diseases of the skin of the Family *Eczematosen* of Fuchs. They are of different character, and are simple abnormalities of secretion.

**Dermatopath'i'a.** (Δέρμα; πάθος, affection. *G. Hautleiden*.) Cutaneous disease.

**Dermatopathol'ogy.** (Δέρμα; πᾶθ-ος, affection; λόγος, an account.) The doctrine of skin diseases.

**Dermatop'athy.** Same as *Dermatopathia*.

**Dermatoperiscleris'mus.** (Δέρμα; περί, around; σκληρός, hard.) Dryness and hardness of the skin.

**Dermatoperisclero'sis.** Same as *Dermatoperisclerismus*.

**Dermatophagoi'des.** (Δέρμα; φαγέω, to eat; εἶδος, likeness.) A Genus of the Order *Acaridea*.

**D. Scheremeteros'kii,** Bogdanoff. An acarid, very like the *Chorioptes spathiferus*, observed in Russia on the skin of persons suffering from herpes and with itch. It is probably an accidental parasite from some animal.

**Dermatophagus,** Fürst. A genus of Acarids found on the horse and ox, feeding on the epidermis scales. They are visible to the naked eye, have a blunt head, with two scissors-like jaws, external to which are three segmented palpi. A synonym of *Chorioptes*.

**D. bo'vis,** Fürst. (L. *bos*, an ox.) The *Chorioptes spathiferus*.

**Dermatophili.** (Δέρμα; φιλέω, to love.) A Family of the Order *Acarini*, according to an old arrangement, including the Genus *Demodex*.

**Dermatophilus.** (Δέρμα; φιλέω, to love. G. *Hautliebend*.) A name given to a louse, and to other skin vermin.

Also, a synonym of *Rhyncoprion*, or *Sarcopsylla*.

**Dermatophone.** (Δέρμα; φωνή, the voice.) A kind of flexible stethoscope, the two extremities of which are covered by a tight membrane of thin india-rubber. See *Dermatophony*.

**Dermatophonia.** Same as *Dermatophony*.

**Dermatoph'ony.** (Δέρμα; φωνή. F. *dermatophonie*; G. *Hautgeräusche*.) The murmur heard on listening by means of the dermatophone to the surface of the living body. It has been attributed to muscular contractions by Hering; according to Hüter, it is caused by the current of the blood in the capillaries; but late observations seem to show that the sound is to be heard in other and not living substances. It is affirmed that by this means it is possible to diagnose the presence of soft parts between the fractured ends of a bone and of a foreign body in a joint.

**Dermatophthal'mus.** (Δέρμα; ὀφθαλμός, the eye.) A synonym of *Lagophthalmus*.

**Dermatophy'ma.** (Δέρμα; φῦμα, a growth. G. *Hautgeschwulst*.) A tumour or outgrowth of the skin.

**Dermatophymata.** Plural of *Dermatophyma*.

**D. vene'rea.** (L. *Venus*, the goddess of love.) Condylomata.

**Dermatophy'sa.** (Δέρμα; φῦσα, a breath.) An Order of the Class *Arachnida* having no distinct breathing organs, the respiratory process being accomplished by the skin.

**Dermatophy'ta.** (Δέρμα; φυτόν, a plant.) Vegetable parasites of the skin.

**Dermatophy'tæ.** (Δέρμα; φυτόν, a plant.) An order of entaneous diseases, including those that depend on, or are characterised by, the presence of parasitic fungi. It is made to include *Porrigo* and *Sycosis*.

**Dermatophyt'ic.** (Same etymon. F.

*dermatophytique*.) Relating, or appertaining, to dermatophytes.

**Dermatoplas'ty.** (Δέρμα; πλάσσω, to form.) The remedying of skin defects by a plastic operation.

**Dermatopno'a.** (Δέρμα; πνοή, a breathing.) A term applied to abranchiata Mollusca, because they breathe by the skin.

**Dermatop'tera.** (Δέρμα; πτερών, a wing.) A synonym of *Hemiptera*, from the leathery character of their wings.

Also, a synonym of *Forficulide*.

**Dermatorrha'gia.** (Δέρμα; ῥαγή, from *ρῥηγμα*, to burst. G. *Hauthlutfluss*.) A discharge of blood from the skin; bloody sweat.

**Dermatorrhœ'a.** (Δέρμα; ῥοία, a flow.) A morbidly increased secretion from the skin; excessive perspiration.

**Dermatosclero'sis.** (Δέρμα; σκληρός, hard. G. *Hautverhartung*.) Hardness of the skin from induration of the subcutaneous areolar tissue. See also *Scleroderma*.

**Dermatoscrof'ula.** (Δέρμα; σcroftula.) Scrofulous disease of the skin. Same as *Dermatostroma*.

**Dermato'ses.** (Δέρμα.) Cutaneous diseases.

**Dermato'sis.** (Δέρμα.) A term applied to the formation of bony plates or scales in the skin.

**Dermatospas'mus.** (Δέρμα; σπασμός, spasm.) The condition called goose skin, *Cutis anserina*.

**Dermatostroma.** (Δέρμα; struma.) Scrofulous ulcers of the skin.

**Dermatosyphilis.** (Δέρμα; syphilis.) Syphilitic affections of the skin.

**Dermatotherape'ia.** (Δέρμα; θεραπεία, medical treatment.) The therapeutics and mode of treatment of skin diseases.

**Dermatot'omy.** Same as *Dermotomy*.

**Dermatot'rauma.** (Δέρμα; τραῦμα, a wound. F. *dermattraume*; G. *Hautwunde*.) Wound of the skin.

**Dermatotylo'ma.** (Δέρμα; τύλωμα, a callus.) Callosity.

**Dermatotylo'sis.** (Δέρμα; τύλωσις, a becoming callous.) The development of a callosity.

**Dermatoty'lus.** (Δέρμα; τύλος, callos.) A callosity.

**Dermatoxera'sia.** A synonym of *Xeroderma*.

**Dermatox'ys.** (Δέρμα; ὄξύς, sharp.) A sexually mature form of nematode worm.

**D. velig'era.** (L. *velum*, a veil; *gero*, to bear.) Found in the cæcum of *Lepus brasiliensis*.

**Dermatozo'a.** (Δέρμα; ζῶον, an animal.) Animal parasites of the skin, such as the louse, the demodex, and others.

**Dermatozo'æ.** (Same etymon.) Skin diseases produced by animal parasites, such as phthiriasis.

**Dermatozoön'oses.** (Δέρμα; ζῶον; νόσος, a disease.) Skin diseases caused by animal parasites.

**Dermatroph'ia.** (Δέρμα; ἀτροφία, a wasting away.) An atrophied condition of the skin.

**Dermecta'sia.** (Δέρμα; ἐκτasis, extension. F. *dermectasis*; G. *Hautausdehnung*.) Extension, expansion, or distension with relaxation, of the skin.

**Dermen'chysis.** (Δέρμα; ἐγγίω, to pour in. G. *Hautengussung*.) A term for the hypodermic administration of drugs.

**Dermestes.** (Δερμestēs, from δέρμα, skin; ἐσθίω, to clothe.) A Genus of the Sub-section *Clavicornia*, Section *Pentamera*, Order *Coleoptera*.

**D. lardarius.** (L. *lardarius*, belonging to pork. G. *Speckkafer*.) The hairy larva lives on ham and such like.

**Dermexanthē'sis.** (Δέρμα; ἐξάνθησις, an efflorescence.) The skin eruption of an exanthematous disease, such as scarlet fever.

**Dermic.** (Δέρμα. F. *dermien*.) Relating to the derma or skin.

**D. tissue.** The skin tissue, chiefly the papillary layer.

**D. tumours.** Outgrowths from the skin, such as condylomata and warts.

**Dermis.** (Δέρμα.) An old term for the skin.

Also (dim. of *derm*), the epidermis.

**Dermatitis.** (Δέρμα, the skin.) Inflammation of the skin.

**Dermobran'chiate.** (Δέρμα; βράγχια, gills.) A term applied to those molluscs in which the skin develops into branchiae. Same as *Dermatobranchiata*.

**Dermocymus.** (Δέρμα; κύμα, a foetus.) A term applied to a monster foetus which contains another within it.

**Dermodes.** Same as *Dermatodes*.

**Dermogastric canals.** (Δέρμα; γαστήρ, the stomach.) Same as *Dermal canals*; so-called in consequence of their opening both into the alimentary cavity and on the skin.

**Dermoglyphus.** (Δέρμα; γλύφω, to carve.) A Genus of the Order *Acaridea*. The species live on the feathers of birds.

**Dermog'raphy.** The same as *Dermatography*.

**Dermohæ'mal.** (Δέρμα; hæmal arch.) A term applied by Owen to the ventral fin rays of fishes, as indicating their relation to the hæmal arch.

**Dermohæ'mia.** (Δέρμα, the skin; αἷμα, blood.) Hyperemia or congestion of the skin.

**Dermoic.** Same as *Dermic*.

**Dermoid.** Same as *Dermatoid*.

**D. cysts.** See *Cysts*, *dermoid*.

**D. metamorphosis.** (Μεταμόρφωσις, a transformation.) The change which takes place in exposed surfaces of mucous membrane, when the epithelial surfaces become dry and like epidermis.

**D. sys'tem.** Bichat's term for the skin and its derivatives.

**Dermology.** (F. *dermologie*; G. *Hautlehre*.) Same as *Dermatology*.

**Dermomycosis.** (Δέρμα; μύκης, a fungus.) A term for skin disease produced by a fungus growing in the epidermis, as ringworm.

**Dermoneural.** (Δέρμα; neural arch.) A term applied by Owen to the dorsal fin rays of fishes, as indicating their relation to the neural arch.

**Dermonosolog'ia.** (Δέρμα, the skin; νόσος, disease; λόγος, a treatise. F. and G. *dermosonologie*.) A treatise on diseases of the skin.

**Dermophylla.** See *Tuyaya*.

**Dermophyllum.** (Δέρμα; φύλλον, a leaf.) The outer layer or ectoderm of the animal or vesicular *Blastoderm*.

**Der'mophyte.** (Δέρμα; φυτόν, a plant.) A parasitic vegetable growth on the skin.

**Dermophytic.** (Δέρμα; φυτόν. F. *dermophytique*.) Relating, or appertaining, to *Dermophytes*.

**Dermo-postfrontal.** (Δέρμα; L. *post*, behind; *frontal* bone.) A superficial scale of bone, in certain fishes and reptiles, over the posterior orbital region.

**Dermoptera.** (Δέρμα; πτερόν, a wing.) A synonym of *Galeopithecidæ*, from their flying membrane between the limbs.

**Dermopteri.** (Δέρμα; πτερόν, a wing.) A synonym of *Marsipobranchii*.

**Dermopterous.** (Δέρμα; πτερόν, a wing.) Having membranous or skin-like wings, as the bats.

**Dermopteryg'il.** (Δέρμα; πτερύγξ, a fin.) Same as *Dermopteri*.

**Dermorhynchus.** (Δέρμα, the skin; ρυγχός, a beak.) Having the beak covered by an epidermis.

**Dermoscl'rite.** (Δέρμα; σκληρός, hard.) A mass of calcareous or siliceous spicules in the outer layer of the tissue of some *Alcyonidae*.

**Dermoskeleton.** (Δέρμα, the skin; σκελετός, dried up.) The outer hard casing of an animal, being a development of the skin. See *Exoskeleton*.

**Dermostenosis.** (Δέρμα, the skin; στένωσις, a being straitened. G. *Hautverengerung*.) Term for the constriction of the skin.

**Dermostosis.** (Δέρμα; όστέον, a bone.) Ossification taking place in the fibrous tissue of the skin, leaving at most only a thin layer, on which the epidermis lies.

**Dermo-supraoccipital.** (Δέρμα; L. *supra*, above; *occipital* bone.) A dermal scute over the supraoccipital region, but not ossifying with the cartilage below.

**Dermosynovitis.** (Δέρμα; synovitis.) A term indicating inflammation of the skin, and of a bursa.

**D. planta'ris ulcero'sa.** (L. *planta*, the sole of the foot; *ulcerosus*, ulcerous.) Same as *D.*, *ulcerating*.

**D., ulcerating.** (F. *mal plantaire perforant*.) Same as *Perforating ulcer of the foot*.

**Dermosyphilides.** (Δέρμα; syphilis.) Syphilitic affections of the skin.

**Dermotomy.** (Δέρμα; τομή, incision.) The part of anatomy which treats of the structure of the skin.

**Dermotyl'osis.** (Δέρμα; τύλωσις, a making callous. F. *dermotylose*; G. *Hautverhärtung*.) General induration of the skin.

**Dermskel'eton.** Same as *Dermoskeleton*.

**Dermyperphlebo'sis.** (Δέρμα; ὑπερ, above; φλέψ, a vein. F. *dermyperphlebose*; G. *der venose Dermypertrophie*.) Too great vascularity of the skin.

**Dermypertroph'ia.** (Δέρμα; ὑπερ, τροφή, nutrition. F. *dermyperptrophie*; G. *Hautübernährung*.) Hypertrophy of the skin.

**Derod'ymus.** (Δέρν, the neck; δίδυμος, a twin.) Geoffroy St. Hilaire's term for a monstrosity having two heads, one abdomen, and one chest, with a vertebral column on each side, two arms and legs, and sometimes the rudiments of a third.

**Deron'cus.** (Δέρν, the neck; ὄγκος, a tumour. G. *Halsgeschwulst*.) Swelling of the neck.

**Dero'sne's salt.** A name for narcotin, because discovered by Derosne.

**Derospasmus.** (Δέρση, the neck; σπασμός, cramp. G. *Halshkrampf*.) Cramp of the neck.

**Derosphinx'is.** Same as *Auchenosphinxis*.

**Derotremata.** (Δέρση, the neck; τρήμα, a hole.) A Division of the Order *Urodela*, Class *Amphibia*, with one or two branchial openings in the neck, no external branchiae in the adult state, and biconcave vertebrae. Ex. *Mono-poma*.

**Der'ris.** A Genus of the Nat. Order *Leguminosae*.

**D. pinna'ta.** Lour. (L. *pinnatus*, feathered, pinnate.) Root used instead of arca nut.

**Der'tron.** (Δέρτρον, from δέρμα, a skin.) Old term applied by Foësius, in *Eccon*, p. 147, to the omentum and the peritoneum; also to the small intestine, by Lindenus on the authority of Cornarius. (Castellus.)

Also (Δέρτρον, a beak, a sharp point), the sharp tip of a bird's beak.

**Des.** An old name for eight ounces.

**Desaggregatio.** (L. *de*, down; *aggrego*, to add to.) The separation of parts by the action of a force which reduces to grains or dust.

**Desagulier's.** A French physicist of the early part of the eighteenth century.

**D.'s wheel.** A fan or wheel with vanes, enclosed in a box, which, on rotation, propels air, obtained by a tube entering at its centre, through a channel leading away from the box. Many modifications of it are used for ventilating purposes.

**Desanima'nia.** (L. *de*, down; *animus*, the mind; *mania*, madness. G. *Wuthlosur Wahnsinn*.) Mindless insanity.

**Desault.** A French surgeon, born 1744; died 1795.

**D.'s splint.** An apparatus used in fractures of the thigh. It consists of an outer long splint stretching beyond the pelvis and the foot respectively, an inner long splint, and an anterior splint. Extension is obtained by a perineal bandage at the upper end, and a foot bandage at the lower end.

**Descartes, René.** A French philosopher and mathematician, born at La Haye, in Touraine, in 1596; died at Stockholm in 1650.

**D.'s laws.** Two laws in regard to the refraction of a light-ray passing from one medium to another; that whatever be the incidence, the sine of the angle of incidence bears a constant ratio to the sine of the angle of refraction, the media being the same; and that the incident and the refracted rays are in the same plane, which is perpendicular to the surface separating the two media. These laws have also been attributed to a contemporary of Descartes, one Snell, but apparently incorrectly.

**Descemet.** A French physician born 1732, died 1810.

**D.'s mem'brane.** The posterior elastic lamina of the cornea. It is in contact anteriorly with the cornea proper, and is lined internally with a single layer of flattened, polygonal, nucleated cells. It is highly elastic, and when peeled off rolls up with the anterior convex surface inwards; its circumference breaks up into fibres, which partly form the pillars of the iris, and

partly join the eboroid and the sclerotic. Of late it has been said that there are stonata in the layer of cells leading to spaces between the fibres. It is developed from the mesoblast surrounding the optic cap.

**Descemeti'tis.** Inflammation of *Descemet's membrane*, characterised by discrete whitish spots on the posterior surface of the cornea.

**Descen'dens.** (L. *descendens*, part. of *descendo*, to move downward. F. *descendant*; G. *abwärtssteigend*.) Moving downwards.

**D. cau'dex.** (L. *caudex*, a stem.) Same as *Descending axis*.

**D. no'ni.** (L. *nonus*, ninth.) An important branch of the hypoglossal nerve. It arises from that trunk outside the carotid artery, and descends within, or sometimes on, the carotid sheath to the middle of the neck, where it is joined by the two communicating branches from the cervical nerves, and forms the *Ansa hypoglossi*. From the loop branches are given off to the omohyoid, sternohyoid, and sternothyroid muscles, and it occasionally gives a branch to the phrenic and cardiac nerves.

**Descending.** (Old F. *descendre*, from L. *descendo*, to go down; from *de*, down; *scando*, to clumb. G. *abwärtssteigend*.) Turning downwards.

**D. aor'ta.** See *Aorta, descending*.

**D. ax'is.** (L. *axis*, an axle-tree.) The primary root or radicle of a plant, in contradistinction to the ascending axis or stem.

**D. co'lon.** See *Colon, descending*.

**D. cur'rent.** Same as *Current, direct*.

**D. degenera'tion of sp'inal cord.** See *Degeneration of spinal cord, secondary*.

**D. neuritis.** See *Neuritis, descending*.

**D. sap.** See *Sap, descending*.

**Descen'sio.** Same as *Descensus*.

**Descenso'rium.** (L. *descendo*, to move downwards.) Name for the furnace or chemical apparatus in which distillation by descent is performed.

**Descen'sus.** (L. *descensus*, from *descendo*, to move downwards. F. *descente*; G. *Herabsteigen*.) A descent. A distillation *per descensum* is that which is performed by placing the fire upon and around the vessel or apparatus (termed *Descensorium*), the orifice of which is at the bottom.

In olden phraseology it meant the gentle and moderate motion of the body, or of the fluids, downwards.

**D. ovario'rum.** (L. *ovarius*, an egg-keeper.) An occurrence similar to the descent of the testicle, whereby the ovary escapes through the inguinal canal and may lodge in the labium of the vulva. See also *Ovum, descent of*.

**D. testiculo'rum.** (L. *testiculus*, a testicle.) See *Testicle, descent of*.

**D. uteri.** (L. *uterus*, the womb. G. *Gebärmutter-senkung*.) Prolapsus of the womb.

**Descent.** (Old F. *descente*, from L. *descensus*, from *descendo*.) A going down; an inclination downward; a passing from an ancestor to a successor; pedigree.

**D. of o'vum.** See *Ovum, descent of*, and *Descensus ovariorum*.

**D. of sap.** See *Sap, descent of*.

**D. of tes'ticle.** See *Testicle, descent of*.

**D. of womb.** See *Prolapsus of uterus*.

**D., the'ory of.** (G. *Descendenzlehre*.) The doctrine that all organisms have a common

origin, or proceed from a few similar forms, the existing variety resulting from the divergence and gradual modification of a part of their offspring. On this view the organisms originally, and perhaps even now, developed under favourable conditions are of extremely simple form and structure, typified in the Monera and Rhizopoda. A part of the progeny of these are stable or conservative, and preserve the parental character, but a part are labile or progressive, and undergo modifications under varying conditions. The multiplicity and variety of living forms is thus continually increasing, and this is in accordance with the paleontological fact that the fauna of the older periods of the history of the world are distinguished from the more recent by the absence of the more highly organised forms. In some instances, after the attainment of a certain stage of development and complexity of organisation, some of the members of a class may undergo degradation by the lack of use of organs, which there remain in a rudimentary state, or become altogether atrophied. Other members of a class, again, may, after becoming specially adapted for the condition under which they live, remain at the same line or grade of organisation as their antecessors.

**Des'champs, Jos. Fr. L.** A French surgeon, born 1740; died 1825.

**D's compressor.** An instrument for the direct compression of an artery.

**Desec'tus.** (L. *deseco*, to cut off.) A synonym of *Castrated*.

**Deses'sio.** (L. *desessus*, part. of *desidio*, to sit down.) The act of sitting on a night-chair, or close stool.

**Desfontai'neæ.** A synonym of *Gen'tianeæ*.

**Desh'ler's salve.** (After the proposer.) The *Crotalum resine compositum*.

**Desic'cant.** (L. *desicc*, to dry up; from *de*, intens.; *sicc*, to dry.) Having power to dry up, drying.

**Desiccant'ia.** (L. *desicc*, to dry up.) Those remedies which dry up the fluids of the body or of a part of it, and which check secretion.

**Desic'cate.** (L. *desicc*.) To dry up, to become dry.

**Desicca'tio.** (L. *desicc*, to dry up.) A desiccating, a drying.

**D. herba'rum.** (L. *herba*, grass.) The drying of plants.

**Desicca'tion.** (L. *desicc*, to dry up. F. *desiccation*; G. *Austrocknung*.) Term for the state or process of drying.

The term has also been used in the same sense as *Calcination*.

**Desic'cative.** (L. *desicc*, to dry up. F. *desiccatif*; G. *austrocknend*.) Having power to dry up. Applied to any medicine for drying up a wound or sore.

**Desinence.** (L. *desino*, to leave off.) A termination.

**Desinficien'tia.** (L. *dis*, apart; *inficio*, to infect.) Disinfectants.

**Desipien'tia.** (L. *de*, neg.; *sapientia*, wisdom. G. *Verstandeslosigkeit*.) Term for the foolish or incoherent talk of the sick when in a state of delirium.

**Desire.** (Old F. *desirer*; from L. *desidero*, to long for.) A longing or yearning for an object, material or immaterial, sensual or intellectual.

**D., vene'real.** (L. *Venus*, the goddess of love.) The longing for sexual intercourse.

**Des'ma.** (Δέσμα, a band.) A bandage; a ligament.

**Desmal'gia.** (Δεσμός, a bond; ἄλγος, pain.) Pain in the ligaments.

**Desmanoma'lia.** (Δεσμός, a band; ἀνωμαλία, dissimilarity. G. *Abweichung der Bänder*.) An anomalous or abnormal situation of a ligament.

**Desmalat'gia.** Same as *Desmalgia*.

**Desmatecta'sia.** Same as *Desmectasis*.

**Desmati'tis.** Same as *Desmitis*.

**Desmatopath'ia.** Same as *Desmopathy*.

**Desmatur'gia.** (Δέσμα, a band; ἔργον, work.) The doctrine of the application of bandages.

**Des'mē.** (Δέσμη, a bundle.) A handful.

**Desmec'tasis.** (Δεσμός, a ligament; ἔκτασις, extension. G. *Gelenkbandausdehnung*.) Lengthening or extension of a ligament.

**Desme'dion.** (Dim. of Δέσμη, a bundle.) A small bundle or fasciculus.

**Desmia'tus.** (Δεσμός, a bond; ἰστός, a web. G. *Bindegewebe*.) Name for a connecting tissue, as the cellular.

**Desmidia'ceæ.** (Δεσμός, a band.) A Family of the Order *Conjugata*, Class *Zygomycetæ*. The plants consist of free cells, containing green chlorophyll, seldom in chains or enveloped in zoogheia masses, symmetrical, generally divided by a furrow into two equal halves.

**Desmid'ion.** (Dim. of Δέσμη.) A small handful.

**Desmiog'nathus.** (Δέσμιος, bound; γνάθος, the jaw.) Geoffroy St. Hilaire's term for a double parasitic monstrosity, characterised by a supernumerary and imperfect head, which is attached to the neck of the chief fœtus by muscular and cutaneous connections, but not by bone.

**Desmiosperm'eæ.** (Δέσμιος, bound; σπέρμα, seed.) A division of the rose-spored Alga, having the spores in chains.

**Desmis'tus.** (Δεσμός, a bond; ἰστός, a web. G. *Bindegewebe*.) Name for a connecting tissue, as the cellular.

**Desmit'is.** (Δεσμός, a band.) Inflammation of ligaments.

**Desmobacte'ria.** (Δεσμός, a band; βακτήριον, a small staff. G. *Fadenbacterien*.) A Group of the Family *Bacteriaceæ*, Order *Schizomyces*, being filamentous bacteria forming longer or shorter chains by transverse division. It contains the genera *Bacillus* and *Vibrio*.

**Desmochauno'sis.** (Δεσμός; χαύνωσις, a making slack.) Relaxation of a ligament.

**Desmo'dium.** (Dim. of Δεσμός, a band.) A Genus of the Nat. Order *Leguminosæ*; so called because of the stamens being united to each other.

**D. ganget'icum.** De Cand. (*Ganges*.) Hab. India. Used by the natives as a febrifuge and antientarrhal remedy. It is a constituent of the much-used compound decoction called *Dasmula khatke*.

**D. heterophyll'um.** De Cand. ("Ετερος, other; φύλλον, a leaf.) The *D. triflorum*.

**D. triflo'rum.** De Cand. (L. *tres*, three; *flor*, a flower.) Hab. India. Fresh plant applied to indolent and unhealthy abscesses and sores.

**Desmodyn'ia.** (Δεσμός; δόδυνη, pain.) Pain in the ligamentous structures.

**Desmog'nathæ.** (Δεσμός, a band; γνάθος, the jaw.) A Division of the Class *Aves*, according to Huxley, having the maxillo-palatine bones united across the middle line, either directly or by the intermediation of ossifications in the nasal septum, and the vomer mostly small or absent.

**Desmograph'ia.** (Δεσμός, a bond; γράφω, to write.) A description of the ligaments.

**Desmog'raphy.** (Δεσμός; γράφω, to write.) A description of the ligaments.

**Des'moid.** (Δέσμη, a fasciculus or bundle; εἶδος, likeness. F. *desmoïde*; G. *sehenartig*.) Resembling a bundle.

Also, a synonym of *Fibroma*.

**D. carcino'ma.** A synonym of *Hodgkin's disease*; see also *Carcinoma, desmoid*.

**D. tis'sue.** The tissue of certain fibrous tumours which on section present numerous white glistening fibres intimately interwoven together, or arranged in bundles constituting circles or loops intercrossing each other.

**D. tu'mours.** A tumour containing, or consisting of, *D. tissue*.

Also, a synonym of *Fibroid tumour*.

**Desmolog'ia.** Same as *Desmology*.

**Desmology.** (Δεσμός, a band; λόγος, a discourse.) The anatomy of the ligaments of the body.

Also, a treatise on bandages.

**Desmonosolog'ia.** (Δεσμός, a bond; νόσος, disease; λόγος, a discourse.) Same as *Desmonosology*.

**Desmonosology.** (Δεσμός; νόσος, a disease; λόγος, an account.) The description of the diseases of the ligaments.

**Desmopath'ia.** (Δεσμός, a bond; πάθος, affection.) A term for an affection of a ligament.

**Desmopatholog'ia.** (Δεσμός, a bond; πάθος, affection; λόγος, a discourse.) Same as *Desmopathology*.

**Desmopathology.** (Δεσμός; πάθος, suffering; λόγος, an account.) The doctrine of diseases of ligaments.

**Desmop'athy.** (Δεσμός; πάθος, affection.) Disease of the ligaments.

**Desmophlog'ia.** (Δεσμός; φλογώω, to inflame.) Inflammation of ligaments.

**Desmophlogosis.** (Δεσμός; φλόγωσις, inflammation. G. *Gelenkbänderentzündung*.) Inflammation of the articular ligaments.

**Desmop'rion.** (Δεσμός; πρίων, a saw. G. *Kettensäge*.) A chain saw.

**Desmorrhex'is.** (Δεσμός; ῥήξις, a breaking.) Rupture of a ligament.

**Desmos.** (Δεσμός, from δέω, to bind.) Old name, used by Hippocrates, *de Fract. t. 60*, for a bandage.

Also, a ligament.

**Desmos'ticha.** (Δεσμός, a band; στίχος, a row.) A synonym of *Endocyclia*, in allusion to the row of ambulacral plates.

**Desmothorac'a.** (Δεσμός; θώραξ, the chest.) A Section of *Skeleto-heliozoaria*, having the skeleton formed of one spherical piece pierced with holes.

**Desmot'omy.** (Δεσμός; τομή, section.) The dissection of ligaments.

**Desmos.** (Δεσμός.) Ligamentous.

**Desmurg'ia.** (Δεσμός; ἔργω, to do.)

That part of surgery which relates to the treatment of disease or injury by bandages, ligatures, and such like applications.

**Desodoriferan'tia.** (L. *dis*, apart; *odor*, a smell; *fero*, to bear.) Same as *Deodorizers*.

**Desodorisan'tia.** Same as *Deodorizers*.

**Desorganisa'tio.** Same as *Disorganization*.

**Desoxida'tio.** Same as *Deoxidation*.

**Desoxycodine.**  $C_{18}H_{21}NO_2$ . An artificial derivative of pseudomorphin discovered by Wright in 1871.

**Desoxygena'tio.** (L. *de*, down; Gr. *ὄξύς*, sharp; *γίγνομαι*, to become.) The total or partial subtraction of the oxygen which enters into the composition of a substance.

**Desoxymorphin.**  $C_{17}H_{19}NO_2$ . An artificial derivative of hydrocotarnin discovered by Wright in 1871.

**Despair.** (Old F. *desperer*, from L. *despero*, to be hopeless. F. *désespérer*; G. *muthlosigkeit*.) A condition of distressful hopelessness; one of the most painful symptoms of some forms of melancholia.

**Despondency.** (L. *despondeo*, to promise, to give up.) The giving up of hope, melancholy.

**Des'pretz's law.** The dogma that conducted heat decreases in geometrical ratio as the distance from its source increases in arithmetical ratio.

**Despumate.** (L. *despumare*, to remove the froth. F. *despumer*; G. *abgeschäumt, gereinigt*.) Freed from froth and impurities; clarified; purified.

Also, to throw off foam or scum.

**Despumated.** (Same etymon.) Having undergone *Despumation*.

**D. hon'ey.** See *Mel despumatum*.

**Despumation.** (L. *despumare*, to remove the froth. F. *dépuration, despumation*; G. *Ab schäumen, Reinigung*.) Term for the act or process of clarifying any fluid by separation of the froth or other surface impurities; also, the act of throwing up froth.

**Desquama'tio.** See *Desquamation*.

**D. neonato'rurum.** (Low L. *neonatus*, new born.) The exfoliation of the mixed sebaceous secretion and epidermic scales, vernix caseosa, which sometimes occurs in the first week of infant life.

**Desquama'tion.** (L. *desquamatus*, part. of *desquamo*, to scale off; from *de*, away; *squama*, a scale. F. *desquamation*; G. *Ab schuppung, Ab splitterung*.) A peeling or scaling off. Term for the separation of laminae from bones, or of crusts or scales from the skin.

In Pharmacy, the removal of the tunics of a bulb.

**D. furfura'ceous.** (L. *furfur*, bran. G. *klein förmige Ab schuppung*.) Desquamation of the skin in small particles, like fine bran, as it occurs in measles.

**D. lamellar.** (L. *lamella*, a small plate.) The casting off from the skin of large flakes.

**D. mem'branous.** (L. *membrana*, a membrane.) Shedding of the skin in flakes, as it occurs in scarlet fever.

**D. of em'byonal epithe'rium.** See *Vernix caseosa* and *Desquamation neonatorum*.

**D. siliquous.** (L. *siliqua*, a pod.) The casting off from the skin of dried vesicles, empty by the absorption of their fluid contents.

**Desqua'mativo.** (Same etymon.) Relating to, or accompanied by, *Desquamation*.

**D. nephritis.** See *Nephritis, desquamative*.

**D. pneumo'nia.** See *Pneumonia, desquamative*.

**Desquamato'rium trepanum.** Old name for a trepan with which laminae from exfoliating bones were detached; also called *Exfoliativum trepanum*.

**Desquamatory.** (Same etymon.) An old form of trephine for removing exfoliations from bones.

**Destilla'tio.** (L. *destillatio*, from *destillo*, to trickle down. G. *Abtröpfeln*.) Same as *Distillation*.

Also, a synonym of *Coryza*, from the accompanying dropping from the nose.

**D. pectoris.** (L. *pectus*, the chest.) A synonym of *Catarrh*.

**D. per ascen'sum.** (L. *ascensus*, ascent.) Term applied to distillation effected in such a way that the vapours rise.

**D. per descen'sum.** (L. *descensus*, descent.) Term applied to distillation so effected that the vapours descend.

**D. per la'tus.** (L. *latus*, the side.) Term applied to distillation so effected that the vapour arising from the substance distilled passes through a number of horizontal spaces on its way to the receiver.

**D. uteri.** (L. *uterus*, the womb.) A synonym of *Leucorrhœa*.

**Destillation.** See *Distillation*.

**Destitutio.** (L. *destitutio*, a forsaking; from *desistio*, to leave alone.) Great poverty.

**D. of u'rine.** Good's term for an absence of the secretion of urine.

**Destructio.** (L. *destructio*, from *destruo*, to pull down.) A synonym of *Diphtheria*.

**Destructive.** (Old F. *destruire*, to destroy; from L. *destruo*, to pull down; from *de*, removal; *struo*, to pile up.) Causing destruction, ruinous.

**D. distilla'tion.** The decomposition of organic substances by distilling them at a high temperature.

**Destructiveness.** (L. *destruo*, to destroy.) Term for a faculty common to man and the lower animals, having its organ immediately above and extending a little backwards and forwards from the external meatus of the ear, corresponding to the squamous portion of the temporal bone; it produces the impulse attended with desire to destroy in general.

**Destrugesia.** A Genus of the Nat. Order *Capparidaceæ*.

**D. sca'brida.** (L. *scabridus*, rough.) A species said to supply the gum sapota of Chili.

**Desudation.** (L. *desudo*, to sweat much. F. *desudation*.) Term for excessive sweating; also, for the miliary eruption or *Sudamina* to which children are chiefly subject.

**Desulphurants.** (L. *de*, from; *sulphur*.) Substances the action of which is to remove sulphur by combining with it, such are carbon, iron, caustic alkalis.

**Desulphurate.** (L. *de*, from; *sulphur*.) To deprive of sulphur.

**Desulphuration.** (L. *de*; *sulphur*.) The act or process of depriving a body of sulphur.

**Desulphurisc.** Same as *Desulphurate*.

**Desurrec'tio.** (L. *desurgo*, to rise from table and go to stool.) The act of going to stool.

**Desvauxia'ceæ.** Bristleworts. A Nat. Order of the Alliance *Gymnales*, having several ovaries, sometimes consolidated, a pendulous ovule, one or two stamens, unicellular anthers, and a terminal embryo.

**Des'vres.** France, Département Pas-de-Calais. A chalybeate water, containing also sodium sulphate, calcium chloride, carbonate, and sulphate, and potassium chloride.

**Desymphysise.** (F. *desymphysier*.) To divide the symphysis pubis, as in the operation of *Symphysiotomy*.

**Detarium.** A Genus of the Nat. Order *Leguminosæ*.

**D. senegalen'se.** Gmel. Hab. Senegal. Fruit edible. A bitter variety is said to be poisonous.

**Detentio.** (L. *detentio*, a keeping back; from *detineo*, to hold thoroughly. F. *cataplexie*.) Old term for *Cataplexy*, in reference to the fixed attitude.

**D. palpebra'rum.** (L. *palpebra*, the eyelids.) A synonym of *Ankyloblepharon*.

**Detergent.** (L. *detergens*, part. of *detergeo*, to wipe off or cleanse. F. *détersif*, *détersif*; G. *abführend*, *reinigend*; Gr. *ῥαπτικός*.) Cleansing; formerly applied to any medicine which removes such humours as obstruct the vessels, according to the humoral pathologists; but latterly restricted to applications which cleanse wounds and ulcers, and promote healthy action.

**Deterioration.** (L. *deterioratus*, part. of *deterioro*, to make worse.) The process or state of being made worse.

**Determinate.** (Old F. *determiner*, from L. *determino*, to prescribe bounds. F. *déterminé*; G. *bestimmt*.) Limited in number or extent, fixed. Applied to branches and stems that commence or end abruptly.

**D. in'dores'cence.** Same as *Definite inflorescence*.

**Determination.** (L. *determino*.) The active direction to a part; as of blood to a special organ with increased vascular action.

Also, an old term in Botany for the prescribed or invariable habit of a plant as to its form.

Also, the act or process of settling the characters or species of a plant, or an animal, or a tissue.

**D., differen'tial.** (L. *differentia*, a difference.) The recognition or setting forth of the specific differences between two nearly allied organisms.

**D. of blood.** The same as *Hyperæmia, active*.

**D., specifi'c.** A synonym of *Diagnosis*.

**Determine.** (F. *déterminer*; from L. *determino*, to border off, to mark out.) To fix, to settle.

In Chemistry, the word is used in the sense of ascertaining the quantity of a constituent.

In Therapeutics, it is said of a medicine that it determines to the organ on which it acts.

**Detersive.** (F. *détersif*; from L. *detersus*, part. of *detergeo*, to cleanse.) Having power to cleanse.

**Detersoria.** (L. *detersus*, part. of *detergeo*.) Detergent remedies.

**Detersorium.** (L. *detersus*.) The room in the ancient baths in which the bather was cleansed, scraped, and dried.

**Detestatio.** (L. *de*, from; *testis*, a testicle.) Removal of the testicles.

**Detonating.** (L. *detono*, to thunder down.) Burning with a sudden noise.

**Detonation.** (L. *detono*, to thunder down. F. *détonation*; G. *Verpuffung*, *Aufkwallen*.) Term for instantaneous combustion with loud explosion; also the report itself.

**Detonisation.** Same as *Detonation*.

**Detonize.** (L. *detono*.) To explode, to cause to explode.

**Detractio.** (L. *detractio*, from *detraho*, to draw off. G. *Entziehung*.) A drawing off, a removal.

**D. sanguinis.** (L. *sanguis*, blood. G. *Blutentziehung*, *Aderlass*.) Bloodletting.

**Detractor.** (L. *detractor*; from *detraho*, to draw away.) One who, or that which, draws away. Old name for a muscle whose office is to draw the part to which it is attached away from some other part. Same as *Detransus*.

**D. auris.** (L. *auris*, the ear. G. *Niederzieher des Aussenhörs*.) The *Retrahens auris*.

**Detransus.** (L. *detransus*, part of *detraho*, to draw away.) Drawing away. Applied to a muscle, in the same sense as *Detractor*.

**D. quadratus.** (L. *quadratus*, square.) A name for the *Platysma myodes*.

**Detrital.** (L. *detritus*, from *detero*, to rub or wear away. F. *détritique*.) Worn out; wasted by the rubbing off of particles.

**Detrition.** (L. *detritus*, from *detero*. G. *Abreiben*.) The act of wearing away, the wasting of a tissue with sensible refuse; especially applied to the wearing down of teeth by use.

Also, a synonym of *Attrition*, *Trituration*, and *Excoriation*.

**Detritus.** (L. *detritus*, from *detero*. F. *détritus*.) A term for the waste substance formed by the action of large rivers on their banks.

Also, a term for the waste substance which results from ulcerative action.

**Detrun'cate.** (L. *detruncare*, to lop off.) To perform *Detruncation*.

**Detrun'cation.** (L. *detruncatio*, from *detruncare*, to lop off. G. *Abhauen*, *Stutzen*.) The cutting off of the body of the fetus during labour to get at the head, so as more easily to lessen its bulk for the purpose of delivery.

**Detrusion.** (L. *detrusio*, a thrusting down, from *detrudo*, to thrust away.) A thrusting down or from.

**D. of heart.** Displacement of the heart from hydrothorax, pneumothorax, emphysema, aneurysm, or tumour.

**Detrusor.** (L. *detrusus*, part of *detrudo*, to thrust away.) A thruster out. Applied to the muscular coat of the bladder, by the contractile power of which the urine is expelled.

**D. urinæ.** (L. *urina*, urine. G. *Harnaustreiber*.) The thruster out, or propeller of the urine. A name for the muscular coat of the bladder, or rather its anterior longitudinal fibres, as they formed a distinct muscle; also called *Constrictor vesicæ urinariæ*.

**Detrusorium.** (L. *detrudo*.) An instrument for pushing down into the stomach foreign bodies stuck in the pharynx.

**Detumes'cence.** (L. *detumesco*, to cease swelling, to subside. F. *détumescence*; G. *Abschwellen*, *Entschwellung*.) The subsidence of a swelling, or the absorption of a tumour.

**Deunx.** (L. *de*, a prefix signifying removal; *uncia*, a twelfth part of anything.)

Eleven twelfths. An old name for eleven ounces.

**Deu'rens fe'bris.** (L. *deuro*, to burn up; *febris*, a fever.) An old name for ardent fever; also called *Causus*.

**Deust'io.** (L. *deuro*.) A synonym of *Encausis*.

**Deutenceph'alon.** (Δεύτερος, the second; ἐγκέφαλον.) A synonym of *Thalamencephalon*.

**Deuteranœ'a.** (Δεύτερος, the second; ἀνοία, want of understanding.) A synonym of *Dementia*.

**Deuter'gia.** (Δεύτερος, the second; ἔργον, work.) The secondary or consecutive action of a remedy.

**Deuteria.** (Δευτερίας, from δεύτερος, second. F. *deuterie*.) Old name for a weak or second-rate wine, or wine mixed with water; also called *Lora*.

Also (Gr. δευτερία), the same as *Deuterion*. Also, the accidents caused by retention of, or adhesion of, the placenta.

**Deuterin'as.** Same as *Deuteria*.

**Deuterion.** (Δευτέριον, from δεύτερος, second.) Old term for the secundines or after-birth.

**Deuterology.** (Δεύτερος, the second; λόγος, a discourse.) A treatise on the nature, uses, and the connections of the after-birth.

**Deuteromerite.** (Δεύτερος; μέρος, a part.) A term applied to the hinder of the two divisions of which some of the Gregarinidæ are composed.

**Deuterome'sal.** (Δεύτερος, second; μέσος, the middle.) The second series of the middle; applied to the areolæ of the wings of insects having that position.

**Deuteropathia.** (Δεύτερος, second; πάθος, disease or suffering. F. *deutéropathie*; G. *Folgekrankheit*.) Applied to a sympathetic affection, or one consequent upon another, as if by consent, that is, where a second part suffers from the influence of the part originally affected.

**Deuteropathic.** (Δεύτερος; πάθος. F. *deutéropathique*; G. *deutéropathisch*.) Of, or belonging to, *Deuteropathia*.

**Deuteropathy.** Same as *Deuteropathia*.

**D. of the plas'ma.** Addison's term for a morbid condition of the blood plasma, induced by two separate conditions, both injuriously affecting it.

**Deuteropia.** (Δεύτερος; όπιον, poppy juice.) C<sub>20</sub>H<sub>27</sub>NO<sub>3</sub>. An artificial derivative of *Protopia*, discovered by Hesse in 1871. It has not yet been isolated.

**Deuteropine.** Same as *Deuteropia*.

**Deuteroplastosphæ'ria.** (Δεύτερος; πλαστός, formed; σφαίρα, a ball.) Baumgärtner's term for nuclear structures second in development to the primitive nuclei or *Protoplastosphæria*, from which the several tissues of the animal body take their origin.

**Deuterocopy.** (Δεύτερος; σκοπία, to look at.) A term for the condition called second sight.

**Deuterostom'ata.** (Δεύτερος; στόμα, a mouth.) A province of the animal kingdom, including those in which a second or adult mouth becomes developed in the place of the primary or embryonic oral opening. It comprises two sub-provinces, *Enterocæla* and *Schizocæla*.

Also, a division of the Subclass *Fernae*, in which the adult mouth is developed subsequently and separately from the original embryonic mouth.

**Deuteroxide.** Same as *Deutoxide*.

**Deuterozoid.** (Δεύτερος; ζῷον, an animal; εἶδος, likeness.) A secondary zooid, produced by internal budding from a protozooid which has no developed sexual organs.

**Deuteryle.** (Δεύτερος; ὕλη, stuff. G. *Nachstoff*.) The material produced by the further development of *Archyle*.

**Deuthydrog'uret.** (Δεύτερος; ὑδρογόν.) An old term for a compound containing two equivalents of hydrogen to one of another element.

**Deuto.** (Δεύτερος, second.) A prefix signifying two, or the second.

**Deutocarbole.** (F. *huile lourde*.) Heavy oil of gas works.

**Deutochloride.** (Δεύτερος.) A bichloride.

**Deutochloridum.** Same as *Deutochloride*.

**D. hydrarg'ryri.** The *Hydrargyri bichloridum*.

**Deutohydrog'uret.** (Δεύτερος.) Same as *Deuthydroguret*.

**Deutoioduretum.** (Δεύτερος.) A biniodide.

**D. hydrarg'ryri.** The *Hydrargyri iodidum rubrum*.

**Deutoplasm.** (Δεύτερος; πλάσμα, anything formed.) Term applied by Reichert to the food yolk of the meroblastic egg. The yellow yolk of the fowl's egg.

Also, a term to designate the special form of protoplasm which composes the granules seen in the centre of the protamoeba.

**Deutosclerous tissue.** (Δεύτερος; σκληρός, hard.) A term for osseous tissue; being the third section of Laurent's *Sclerous tissue*.

**Deutoscolex.** (Δεύτερος; σκώληξ, a worm.) A term by Van Beneden for the second larval or agamous form of digenetic animals, such as the Cestoda; the cysticerus of the Tæniæ.

**Deutoxide.** (Δεύτερος, second; oxide. F. *deutoxide*.) A term applied to a substance in the second stage of oxidation; with two equivalents of oxygen to one of some other body.

**Deutoxidum.** (Δεύτερος.) A binoxide or dioxide.

**D. hydrarg'ryri.** The *Hydrargyri binoxidum*.

**Deutsch-Kreuz.** Hungary; County Odenburg. An alkaline carbonated mineral water containing sodium and calcium carbonates, with a little iron; there is very little sodium sulphate and chloride. Used when a pure alkaline water is needed.

**Deutyl.** A synonym of *Ethyl*.

**Deutzia.** A Genus of the Nat. Order *Philadelphææ*.

**D. scabra.** (L. *scaber*, rough.) Inner bark used for poultices.

**Deux-louts.** France; Département des Landes, near Dax. A cold mild sulphur water.

**Devalgate.** (L. *de*, intens.; *valgus*, bow-legged.) Having bowed legs; bandy-legged.

**Devaporation.** (L. *de*, from; *vapor*, steam.) The reduction of steam or vapour to water or a liquid.

**Devehent.** (L. *devehens*, part. of *deveho*, to carry.) Carrying away, effluent.

**Development.** (F. *développeur*, to unfold; from Old F. *des*, apart; *voluper*, to wrap. F. *développement*; G. *Entwicklung*.) An unfolding.

In Biology, the organic changes which occur in a living germ and its several parts from its earliest life to its full maturity.

The unfertilised egg is a cell and consists of a mass of protoplasm, the yolk enclosed in most instances in a membrane, the vitelline membrane or zona pellucida, and containing a germinal vesicle, within which is the germinal spot. Either the whole or only a part of the yolk undergoes fission; the former type of egg is termed holoblastic, the latter meroblastic. Development commences in the unfertilised egg, but is soon arrested. Fertilisation is effected either through any part of the vitelline membrane or through a micropyle by the penetration of, and fusion with, the male elements or spermatozoa. More or less complete fission takes place, and the result is the formation of a mulberry-like mass, which is the morula stage, one or two vesicles, named directive corpuscles, remaining free. The outer cells of the morula become more defined and form the blastoderm, the central ones lose their sharp outline, and thus the blastula stage is reached. The blastoderm at first consists of only a single layer of cells, but subsequently two, an external, the epiblast, and an internal, the hypoblast, appear, and finally these are separated by a third, the mesoblast. The blastoderm, whilst consisting of epiblast only, is invaginated at one point, and the cavity thus formed is the primitive intestine, which is lined by the hypoblast, and the opening by which its cavity opens outwards is the blastopore. This stage is termed the gastrula. An invagination, or a growth of cells which subsequently becomes hollow, constituting the mesoderm takes place from the neck of the primitive intestine, and separates the epiblast from the hypoblast. The mesoderm itself divides into two layers, the outer of which attaches itself to the epiblast to form the somatopleure, whilst the inner joins the hypoblast and forms the splanchnopleure. The space between the two is named the coeloma or pleuroperitoneal cavity, and the coeloma stage, in which the developing ovum presents four layers, is attained. From the epiblast or ectoderm are formed the epidermis with its derivatives, the brain, spinal cord, and nervous system generally. From the mesoblast or mesoderm are developed the muscles, the connective tissues, the blood-vessels, and heart, the urogenital apparatus, the cutis, the serous membrane of the pleuroperitoneal cavity, and the wall of the intestine, with the exception of the epithelium. The epithelium of the intestine with the organs proceeding from it, as the thymus, the epithelium of the air passages, the liver, and pancreas, and the chorda dorsalis proceed from the hypoblast. The tendency to the formation of organs by a process of folding or involution, observable in the gastrula stage, is seen still more distinctly as development proceeds, the primary nerve tube, the various glands and the amnion being thus formed.

**D., arrest of.** See *Arrest of development*.

**D., contin'uous.** (L. *continuus*, hanging together.) A term which includes simple growth without change of form or texture; metamorphosis, and gemmation without fission.

**D., discontin'uous.** (L. *dis*, away;

*continuous*.) A term for gemmation with fission, including agamogenesis and gamogenesis.

**D., recurrent.** (L. *recurro*, to run back.) Same as *D., retrograde*.

**D., retrograde.** (L. *retro*, backward; *gradus*, a step.) A term applied to that form of growth in an animal in which the mature species appears to be of a lower type than the immature form.

**D. the'ory.** See *Evolution, theory of*.

**Developmental.** (Same etymon.) Relating to *Development*.

**D. disea'ses.** Same as *Metamorphici morbi*.

**Devertic'ulum.** Same as *Diverticulum*.

**Deviation.** (L. *devius*, out of the way; from *de*, apart; *via*, a way. G. *Ablenkung, Abweichung*.) A going out of the way; an unnatural condition as to form or course of an organ or part.

**D., angle of.** See *Angle of deviation*.

**D., organic.** A term which has been applied not only to displacements and distortions of organs, but also to monstrosities in general.

**D., u'terine.** (L. *uterus*, the womb.) Displacements and flexions of the womb.

**Devil.** (Sax. *deaful*; from L. *diabolus*; from Gr. *δαίμων*, from *διαβάλλω*, to slander.) The evil one, an evil spirit.

**D.'s apple.** The mandrake, *Mandragora officinalis*.

**D.'s bit.** The *Aletris farinosa*, the *Scabiosa succisa*, the *Liatris spicata*, and also the *Chamaelirion luteum*.

**D.'s bit scab'ious.** (F. *la scabieuse des bois, mors du diable*; G. *Abiss, Teufelsbiss*.) Common name for the *Scabiosa succisa*.

**D.'s bite.** Same as *D.'s bit*.

**D.'s dung.** (F. *assaftetida*; G. *Teufelsdreck*.) An old name for *Assafoetida*.

**D.'s guts.** (F. *épithyme*.) Common name for the *Cuscuta epithymum*, or dodder of thyme; the *Intestina diaboli*, from the resemblance of its stem to catgut, and its injurious qualities.

**D. in a bush.** (F. *nielle*; G. *Schwarzkümmel*.) A common name for the *Nigella Damascena*, or fennel-flower, from its horned capsules peering from a bush of finely-divided involucres. (Prior.)

**D.'s leaf.** The *Urtica urentissima*.

**D.'s milk.** A term for the Genns *Euphorbia*, from the acrid qualities of the milky sap.

**D.'s shoe'string.** The *Tephrosia virginiana*.

**Devilbit.** The *Feratrum viride*.

**Devirgination.** (L. *devirgino*, to violate; *de*, from; *virgo*, a virgin.) The loss of the signs of virginity from sexual connection; rape.

**Devisceration.** (L. *de*, from; *viscus*, the inner parts.) The removal of the abdominal viscera.

**Devitalise.** (L. *de*, from; *vitalis*, belonging to life.) To deprive of living.

**Devitrification.** (L. *de*, from; *vitrum*, glass; *facio*, to make.) The depriving glass of its transparency by subjecting it to a heat just short of the melting point and allowing it to cool slowly; by this means it becomes opaque like porcelain.

**Devive.** (L. *de*, away; *virus*, living.) To deprive of life.

**Devonshire colic.** See *Colic, Devonshire*.

**Dew.** (Sax. *deiw*. F. *rosée*; G. *Thau*.)

The aqueous vapour of the atmosphere condensed on objects which are cooler than it, a condition which generally results from nocturnal radiation; it is most copious when the atmosphere contains much vapour and when there is a little wind; and it is deposited most freely on bodies which have great radiating power.

**D. claws.** The inner digit of a dog's foot, which does not touch the ground; so called because it sweeps off the dew.

**D. lap.** The pendent fold of skin hanging from the throat of oxen, because it laps the dew when they are grazing.

**D. point.** The mean of the temperature at which dew is deposited and of the temperature at which it disappears; it is measured by an *Hygrometer*.

**Dew berry.** The *Rubus cæsius*.

**D., American.** The *Rubus procumbens*.

**D. plant.** (F. *la ronce bleue*; G. *Bucksheer-entrauch*.) Common name for the *Rubus cæsius*, or heath bramble.

**Dew try.** A corruption of *Datura*.

**Dexiocardia.** (Δεξιός, on the right side; καρδία, the heart.) The condition in which the heart is placed on the right side, either as a malformation or as a result of disease.

**Dexiotrope.** (Δεξιός; τρόπος, a turn.) A term signifying turning or turning to the right, as the spire of some shells.

**Dexis.** (Δήξις, a bite; from δάκνω, to bite.) An old term having the same meaning as *Degmus*.

**Dextans.** (L. *dextans*, ten twelfths; a contraction of *de*, from; *sextans*, a sixth part.) Old name for a weight of ten ounces; the pound containing twelve ounces.

**Dexterina.** Same as *Dextrin*.

**Dext'rine.** Same as *Dextrin*.

**Dextrad.** (L. *dexter*, on the right side.) Towards the *D. aspect*.

**D. aspect.** (L. *aspectus*, figure) Dr. Barclay's term for the lateral aspect from the mesial plane of the body towards the right.

**Dextral.** (L. *dexter*, on the right side.) Towards the right side, right handed.

**D. pre-em'inance.** (L. *præcimentia*, pre-eminence.) Term applied to the preference shown by most people to use the right hand, arm, and leg, rather than the left. The left side of the brain weighs about two drachms more than the right (Boyd), and the grey matter of the brain is heavier on the left than on the right side (Bastian). The arteries going to the left side of the brain are usually larger than those to the right, and the right arm is better supplied with blood, because the right subclavian rises nearer the heart than the left. Herdity and education have also an influence upon it.

**D. shells.** A term applied to those univalve shells in which the spiral curve is from left to right; this form constitutes by far the largest number.

**Dextrality.** (L. *dexter*.) The condition of *Dextral pre-eminence*.

**Dextrin.** (L. *dexter*. F. *dextrine*; G. *Dextrin, Stärkegemmi*.)  $C_6H_{10}O_5$ . A whitish or yellowish amorphous gummy mass obtained by heating gelatinous starch to 180° C. (356° F.) for two hours. It is also formed when dry potato starch is heated to 400° C. (752° F.) with a dilute acid. It is soluble in water, insoluble in alcohol and ether. It does not reduce an alkaline solution of copper; its solution turns the

plane of polarisation to the right. Dextrin is converted into glucose by continuing the boiling for a longer period. Dextrin, along with glucose, is also formed when diastase, as for instance in malt, is mixed with gelatinous starch at about 71° C. (159.8° F.). It exists in small quantities through the vegetable kingdom and in muscle.

**D., animal.** Glycogenic matter.

**D., hepatic.** (Ἡπατικός, belonging to the liver.) Glycogenic matter.

**Dextrina.** Same as *Dextrin*.

**D. iodata.** The *Amylum iodatum solutum*.

**D. saccharata.** (L. *saccharon*, a kind of sugar.) A synonym of *Syrupus dextrinae*.

**Dextrinic.** Relating to *Dextrin*.

**D. catalysis.** See *Catalysis dextrinica*.

**D. fermentation.** Same as *Catalysis dextrinica*.

**Dextrinum,** G. Ph. *Dextrin*. Potato starch 150 parts, and crystallised oxalic acid 4, are heated in a steam bath until starch can no longer be detected by iodine solution. The oxalic acid is then neutralised by precipitated carbonate of lime, the solution allowed to stand in a cool place for two days, then filtered, evaporated, and dried at a gentle heat. See *Dextrin*.

**Dextrocarvol.** (L. *dexter*.) The *Carvol* of the oils of caraway and anise; it differs from the carvol of spearmint, *Lævocarvol*, in that it deflects the plane of polarisation to the right.

**Dextroglucose.** (L. *dexter*, on the right; *glucose*.) Ordinary glucose, so called on account of its turning the plane of polarisation to the right.

**Dextrogyrate.** Same as *Dextrogyrous*.

**Dextrogyrous.** (L. *dexter*; *gyrus*, to turn round in a circle.) Causing to turn round to the right; applied to substances which turn the plane of polarisation to the right hand.

**Dextrorotatory.** (L. *dexter*; *roto*, to turn round like a wheel.) Revolving to the right.

**D. polarisation.** See *Polarisation, rotatory*.

**Dextroresal.** Same as *Dextrorese*.

**Dextrorese.** (L. *dextroresus*.) Towards the right hand, or relating to it.

In Botany, applied to stems which form a spiral turning from left to right from base to apex.

**Dextrose.** Grape sugar, or *Glucose*.

**Dextrotartaric acid.** (L. *dexter*, on the right side.) The ordinary form of tartaric acid, so called because it causes the plane of polarisation to deviate to the right. See *Tartaric acid*.

**Dextroversion.** (L. *dexter*; *verto*, to turn.) A turning to the right.

**D. of uterus.** (L. *uterus*, the womb.) A displacement of the womb, whereby its fundus is directed to the right and its cervix to the left of the median line.

**Dextrovolvulus.** (L. *dexter*, right; *volvo*, to turn.) Turning from left to right, as certain stems, and like all screws.

**Dhak tree.** The *Butea frondosa*.

**Dhatu'ra.** Same as *Datura*.

**Dholi.** The Indian name for the pigeon pea, the seed of *Cytisus cajanus*.

**Dhooma pitch.** The same as *Dammar pitch*. Obtained from the *Shorea robusta*, which is used for incense in India.

**Dhurra.** Indian millet, the seed of *Sorghum vulgare*.

**Di.** (Δίς, twice.) A prefix signifying two, or twice.

**Dia.** (Διά, through.) A prefix having various significations—through, asunder, utterly; it also acts as an intensive.

**Diabebos.** (Διαβιβάζομαι, to maintain strongly.) An old name for the *Astragalus*, and also for the *Malleolus*.

**Diabetes.** (Διαβήτης; from διά, through; βαίω, to go on. F. *diabète*; G. *Harnfluss*, *Harnruhr*.) A disorder characterised by the passage of a large quantity of urine containing glucose and accompanied by thirst and emaciation. It is of slow and quiet onset, and is not probably often observed in its earliest stage. The quantity of urine varies largely with the quantity of fluid drunk; generally it amounts to from eight to twelve pints in the twenty-four hours, but it may be little above normal, and it has been noted as high as forty pints; its sp. gr. is generally 1035 to 1050 or more, but sometimes it is very low; it contains less proportionate, but somewhat more actual, urea than healthy urine; the sugar ranges from twelve to thirty ounces daily; the urine is generally clear and straw-coloured, has a sweetish odour, and soon undergoes fermentation with the development of the yeast plant, *Saccharomyces cerevisia*, and the formation of acids, such as the lactic, butyric, formic, and acetic. Consequent on the loss of fluid there is great thirst, great dryness of skin and shrinking of tissue; and consequent on the excretion of sugar there is great waste of structure, producing emaciation, feebleness and quickness of pulse, shortness of breath, great debility, and great want of nerve force, so that no organ receives its proper stimulus, and the mental operations become sluggish and irritable. The disease generally runs a long course, and ends in death from coma, from breaking down of lung tissue, from bowel flux, or from asthenia. The body after death tells nothing positive as to the causation of the disease. Evidences of a certain amount of degradation of tissue are not uncommon, in the form of fatty degeneration of kidney epithelium, degeneration of intestinal mucous membrane, patches of gangrene, spots of tubercle, and minute softenings around the small arteries of the floor of the fourth ventricle, the olivary bodies, and their neighbourhood; and these last have been by some thought to be the causative agents of the disease, especially when taken in connection with the experiments which show that irritation of a part of the floor of the fourth ventricle will cause the passage of glucose in the urine. The action of the liver in regard to the disease has been much studied, and it has been shown that one of its faculties is the conversion of albuminous, starchy, and perhaps saccharine, matters into glycogen, which itself is readily transformed into glucose; connect this with the observation that the irritation of what is called the diabetic centre (see *Centre, diabetic*) produces disturbance of the hepatic circulation, and some connection between the two is easily surmised, but nothing positive is yet known. Gent and nervous troubles are believed to be factors in the causation of the disease.

Also, an old term for a siphon.

**D., alcoholic.** A form of diabetes which is supposed to be caused by excessive use of alcohol; it is said to be a cause of grave com-

plications when a person so suffering is subjected to a surgical operation or a wound.

**D. anglicus.** (*L. anglicus*, English.) The disease *Diabetes*.

**D. aquosus.** (*L. aquosus*, watery.) A synonym of *D. insipidus*, in reference to the excess of water.

**D. artificial.** (*L. artificialis*, belonging to art.) The glycosuria which is produced by irritating, in a healthy animal, the spot in the floor of the fourth ventricle called the diabetic centre.

**D. chylosus.** A synonym of *Chyluria*.

**D. decipiens.** (*L. part. decipio*, to deceive.) Term applied by Frank to a form of diabetes in which much sugar may be contained in the urine, at a particular period, without any increase in the quantity of the urine eliminated.

**D. emaciating.** (*L. emacio*, to make very lean. *F. diabète maigre*.) A term by Lanceraux for the form of diabetes which occurs suddenly, rapidly develops the characteristic symptoms, polydipsia, polyphagia, polyuria, glucosuria, and loss of genital power, and speedily terminates in death from pulmonary disease. In the cases examined there has been total destruction of the pancreas.

**D. fat ty.** (*F. diabète gras*.) A term by Lanceraux for the form which develops by slow degrees in persons of gouty tendency, with initiatory obesity, the characteristic symptoms slowly progressing, the sugar small and variable in quantity, and death occurring late after carbuncle, phlegmon, or gastric troubles, seldom with pulmonary affection.

**D. gastric.** (*Γαστήρ*, the stomach.) Diabetes which is supposed to have its origin in pathological conditions of the digestive apparatus.

**D. gastroenterogènes.** (*Γαστήρ; έντερον*, the intestine; *γένεσις*, an origin.) Diabetes produced by disturbance of the functions of the stomach and intestines.

**D. hepatogènes.** (*Ήπαρ*, the liver; *γένεσις*, an origin.) Diabetes produced by disturbance of the functions of the liver.

**D. inositus.** (*Inosite*.) A form in which inosite or muscle sugar takes the place of glucose in diabetic urine.

**D. insipidus.** (*L. insipidus*, tasteless. *F. diabète sucré*, *d. insipide*; *G. geschmacklos Harnruhr*.) A term which has been given to cases in which there are diuresis, thirst, and emaciation, but in which there is no sugar in the urine. It is said to be of a similar nature to glycosuria, and to be produced, like it, by irritation of the floor of the fourth ventricle. It has also been attributed to alcoholism, tuberculosis, excess of urea, and diseases of the brain. In some cases the kidneys have been found atrophied, or otherwise diseased. It is probable that several little-known forms of diuresis have been included under this term. See *Polyuria*.

**D. lacteus.** (*L. lacteus*, milky.) A synonym of *Chyluria*.

**D. mellitus.** (*L. mellitus*, like honey. *F. diabète sucré*; *G. Honigharnruhr, honigartige Harnruhr. Zuckerharnruhr*.) The disease described under *Diabetes*.

**D. nervous.** Diabetes which is supposed to have its origin in disturbed conditions of the central nervous system.

**D. neurogènes.** (*Νεύρον*, a nerve; *γένεσις*, an origin.) Diabetes produced by disturbance of some part of the central nervous system.

**D., phosphatic.** A term applied to those cases of *D. insipidus* in which there is an excess of phosphates in the urine.

**D., saccharine.** The disease described under *Diabetes*.

**D. spurius.** (*L. spurius*, false.) A synonym of *D. insipidus*.

**D., ureal.** (*Urea*.) A synonym of *D. insipidus*, from the notion of an excessive excretion of urea being its cause.

**D. verus.** (*L. verus*, true.) The disease *Diabetes*.

**Diabetic.** (*Διαβήτης*, the disease so called. *F. diabétique*.) Of, or belonging to, the disease *Diabetes*.

**D. acetonaemia.** See *Acetonaemia*.

**D. cataract.** See *Cataracta diabetica*.

**D. centre.** See *Centre, diabetic*.

**D. coma.** (*Κόμα*, deep sleep.) The coma which not infrequently causes, or is a mode of, death in diabetes. It generally comes on suddenly, and is accompanied by great coldness and great dyspnoea, without any unnatural sounds in the chest. It has been attributed to the presence of acetone in the blood, *Acetonaemia*; to exhaustion of nerve force; and to cardiac asthenia, each probably causing its own form.

**D. gangrene.** See *Gangrene, diabetic*.

**D. glycaemia.** See *Glycaemia, diabetic*.

**D. otitis.** Otitis supposed to depend on the presence of diabetes.

**D. sugar.** The sugar found in the urine in diabetes, called *Glucose*.

**Diabetical.** (Same etymon.) Same as *Diabetic*.

**Diabetometer.** (*Διαβήτης; μέτρον*, a measure.) A polarising apparatus by which the presence and the amount of sugar in the urine may be determined.

**Diabetophthisis.** (*Διαβαίνω*, to go with huge strides; *φθίσις*, consumption.) The form of acute phthisis, often called galloping consumption.

**Diabie, bruit de.** See *Bruit de diabie*.

**Diaboli intestinala.** (*L. diaboli*, the devil; *intestina*, the intestines.) See *Devil's guts*.

**Diabololeptics.** (*Διάβολος*, the devil; *λήψις*, a taking hold; from *λαμβάνω*, to seize.) Maudsley's term for those eccentrics who professed to have supernatural communications, but who themselves were not saintly, but rather wicked, persons.

**Diabolotaraché.** (*Διάβολος*, the devil; *ταραχή*, confusion.) A term for *Bruit de diabie*.

**Diabolothorybos.** (*Διάβολος; θόρυβος*, a noise.) A term for *Bruit de diabie*.

**Diabolus metallorum.** (*L. diaboli*, the devil; *metallum*, a metal.) An old epithet bestowed on *Stannum* or tin, because of the supposed intractability of its oxides.

**Diabotanium.** (*Διά*, through; *βοτανή*, a herb. *F. diabotanium*.) Old name (*Gr. εἰς βοτανών*) for a plaster composed of many herbs, described by Galen, *de C. M. per Gen.* vi, 2, used as a resolvent and suppurative.

**Diabrosis.** (*Διαβρωσις*, from *διαβιβρώσκω*, to eat up. *F. diabruse*; *G. Zarfressung*.) An old term for ulceration.

**Diabrotic.** (*Διαβρωτικός*, from *διαβιβρώσκω*, to eat through. *F. diabrotique*; *G. durchfressend*.) Erodent; eating through. Applied to medicines which erode the part on which they

are placed; some hold these as intermediate between escharotic and caustic substances.

**Diacadmiās.** Old name, used by Serapionus Largus, *Comp.* 212, for a plaster, the chief ingredient of which was *Culmar*.

**Diacalaminthes.** An old name for an antidote, the chief ingredient of which was *Culmar*.

**Diacanthous.** (Δίς, two; ἀκανθα, a spine. F. *diacanthē*; G. *Zweidornig*.) In Botany, having two spines under each leaf.

**Diacarcinon.** (Διά καρκίνου, from εἶς, through; καρκίνος, a crab. F. *diacarcinon*.) Old name, used by Galen, *de Simp. Fac.* xi, § *de Caneris Ustis*, for an antidote against the bite of a mad dog, prepared from the flesh of the crab.

**Diacarthami.** (Διά; *carthamus*.) An old purgative tablet containing the seeds of *Carthamus tinctorius*, colchicum, scammony, the root of *Ipomoea turpethum*, and ginger.

**Diacaryon.** (Διά, out of; κάρυον, a nut.) Old term, used by Galen, *de C. M. sec. Loc.* vi, 2, for an extract prepared with green nuts and honey.

**Diacassia.** (Διά, of or from; κασσία, cassia. F. *diacassia*.) Old name for an electuary made of cassia.

**Diacastorium.** (Διά, of or from; κάστωρ, castor.) Old name for a compound medicine, the principal ingredient of which is castor; it has been applied to two medicines.

**Diacatholicon.** (Διά; καθολικός, universal. F. *diacatholicon*.) Old term for a laxative electuary, from its general usefulness; originally prescribed by Nicolaus, made of senna leaves, pulp of cassia, and of tamarinds, roots of male fern and rhubarb, aniseed, liquorice root, sweet fennel, and sugar. (Quincy.)

**Diakasis.** (Διάκασις, from διακάω, to burn through.) Excessive, intense heat of body.

Also, the use of the actual cautery.

**Diacaustic.** (Διακαίω, to burn through. F. *diacautique*; G. *diakaustisch, durchhitzend*.) Very heating. Formerly applied to a double convex lens or burning glass, such having been used to cauterise parts.

**D. curve.** See under *Caustic*.

**Diacclatesson.** A Paracelsian term for a certain emetic preparation of mercury; applied also to a purging preparation of antimony. It is, besides, an alchemical term for quicksilver dissolved in alabaster; also called *Diatessadellon*.

**Diacenous.** (Διάκενος, quite empty.) Porous, like a sponge or pumice stone.

**Diacentaurium.** (Διά, of; κενταύριον, the centaur.) An old remedy containing centaury and other bitters.

**Diacetate.** (Δίς, twice; acetate.) A salt with two equivalents of acetic acid.

**Diacetin.** A substance formed by treating glycerin with acetic acid at a high temperature.

**Diacetyl carbamide.** CO(NH<sub>2</sub>)<sub>2</sub>. A product of the action of carbonyl chloride on urea at 50° C. (122° F.); it crystallises from hot alcohol in rhombic needles.

**D. urea.** Same as *D. carbamide*.

**Diachænum.** (Δίς, twice; ἀχæνιον. F. *diachane, diachne*.) A fruit composed of two achænia united by a common axis; also called *Crenocarp*.

**Diachalasis.** (Διαχάλασις, from διαχάω, to loosen.) Fracture with separation of

the bones of the skull, either through their substance or at the sutures.

**Diachalasma.** (Διαχάλασμα, an hiatus.) A cleft, a fissure.

**Diachalastic.** Relating to a *Diachalasis*.

**Diachalcitæos.** (Διά, through; χαλκίτις, colcothar.) A plaster like the *Diapalma*, in which colcothar is substituted for zinc sulphate.

**Diacheiris'mus.** (Διαχειρισμός, manipulation.) The preparation and dispensing of drugs; also, any manual operation.

**Diachelidonium.** (Διά, through; χελιδών.) A swallow; a preparation of swallows.

**Diachænum.** See *Diachænum*.

**Diachorema.** (Διαχώρημα, from διαχωρίζω, to go through.) Excrement, feces. Also, excreted matter in general.

**D. xysmatodes.** (Ξυσματώδης, from ξύσμα, scrapings; εἶδος, likeness.) A term applied to the pseudomembranous flocculi found in dysenteric and other stools, from their likeness to scrapings from, or shavings of, the mucous coat of the intestines.

**Diachoresis.** (Διαχώρησις, from διαχωρίζω.) The excretion of fecal matter.

**Diachoretic.** (Διαχωρητικός, from διαχωρίζω, to go through.) Promoting the excretion of feces; laxative.

**Diachoropsoriasis.** (Διαχωρίζω, to go through; ψωρίασις, a being rangy.) Diffuse, extensive psoriasis.

**Diachrisis.** (Διαχρίω, to anoint.) Inunction.

**Diachrisma.** (Διάχρισμα, from διαχρίω, to smear all over.) An ointment.

**Diachrista.** (Διαχρίω.) Medicines applied as abstersives to the velum palati, the palate itself, and the tongue, and probably also gargles.

**Diachylon.** (Διάχυλος, very juicy; from διά, through; χυλός, juice.) A term applied by Celsus Aurelianus to a kind of ointment containing vegetable juices.

Now used as a synonym of *Emplastrum plumbi*.

**D. compositum.** (L. *compositus*, compound.) White pitch, yellow wax, and turpentine, of each 96 grammes, melted together, and to it added and with it mixed ammoniacum, bdellium, sagapenum, and galbanum, of each 32 grammes, dissolved in alcohol, and evaporated to a soft consistence. Used as a resolvent and an agglutinative.

**D. cum gummi.** The *Emplastrum gummosum*.

**D. gum.** The *Emplastrum gummosum*.

**D. magnum cum gummi.** (L. *magnum*, great; *cum*, with; *gummi*, gum.) The *Emplastrum galbani compositum*.

**D. plaster.** The *Emplastrum plumbi*.

**D. simplex.** (L. *simplex*, simple.) The *Emplastrum plumbi*. It was originally made with decoction of gladiolus root, oil, mucilage, and litharge.

**D., white.** The *Emplastrum plumbi*.

**D., yellow.** The *Emplastrum gummosum*.

**Diachyma.** (Διά, through; χύμα, a liquid.) A synonym of *Parenchyma*, especially such as occupies the space between two surfaces, as in a leaf.

**Diachysis.** (Διάχυσις, from διαχίω, to

pour different ways.) Diffusion, as of fluid in a tissue.

**Diachytic.** (*διαχυτικός*, able to dissolve.) Having power to resolve swellings.

**Diachytophlogosis.** (*διαχυτικός*, from *διαχω*, to spread about; *φλόγωσις*, the burning heat of inflammation.) Diffuse inflammation.

**Diachyotos.** (*διά*; *χυτός*, made liquid.) An epithet of wine prepared from grapes that had been dried seven days and were pressed the eighth.

**Diacine'ma.** (*διακίνημα*.) An old term for dislocation.

**Diaclasia.** (*διά*, through; *κλάσις*, a breaking; from *κλάω*, to break.) A method of amputation, invented by Maisonneuve, in which the bone is first broken by an osteoclast, and an écraseur being applied, the soft parts are divided with a bistoury; the fragments of bone are then removed by torsion.

**Diaclasis.** (*διά*, through; *κλάσις*, a breaking.) Refraction of light rays.

**Diaclastic.** (Same etymon.) Relating to *Diaclasia*, or to *Diaclasis*.

**D. meth'od.** Same as *Diaclasia*.

**Diacl'ysis.** (*διακλύζω*, to wash through-out.) The same as *Diacl'ysmus*.

**Diacl'ysma.** (*διάκλυσμα*, a mouth-wash.) A lotion or wash for the mouth.

**Diacl'ysmus.** (*διακλυσμός*, from *διακλύζω*, to wash out.) A rinsing or cleansing, especially of the mouth.

**Diaccocyme'lon.** (*διά*, through; *κοκκύμλον*, a damson plum.) Same as *Diaprunum*.

**Diaco'chlacon.** (*διά*; *κόκλαξ*, a pebble.) An old term for milk in which red-hot blints have been cooled; it was used as a sudorific.

**Diaco'dion.** (*διά*, through; *κωδία*, a poppy head.) An old term for a syrup of poppy heads, the *Syrupus papaveris*.

**Diacolocyn'thidos.** (*διά*; *κολοκυνθίς*, colocynth.) An old drastic electuary containing colocynth.

**Diacolocyn'this.** (*διά*; *κολοκυνθίς*.) A preparation in which colocynth is the chief ingredient.

**Dia'copē.** (*διακοπή*, a gash, a cleft.) A cut, incision, fissure, or longitudinal fracture. It generally signifies an oblique incision made in the cranium by a sharp instrument, without the piece being removed.

**D. cran'ii.** (L. *cranium*, the head.) A splitting open of the bones of the head.

**Diacopræ'gia.** (*διά*, through; *κόπρος*, excrement; *αἶξ*, a goat.) An old name for a medicine containing goat's dung. Used in diseases of the spleen and parotid gland.

**Dia'coust'ic.** Relating to *Dia'coustics*.

**Dia'coustics.** (*διά*, through; *ἀκούω*, to hear.) That branch of physics which treats of the properties of sound refracted in its passage through media of different density.

**Diacra'nian jaw.** (*διά*; *κρανίον*, the skull. F. *machoire diacranienne*.) The lower jaw, because it is united to the skull only by a loose and mobile articulation.

**Dia'crante'ric.** (*διά*, through; *κραντήρης*, the wisdom teeth.) A term applied to describe the dentition of those snakes in which the posterior teeth are separated by longer intervals than the anterior.

**Diac'risés.** (*διακρίσις*, a separating.) A term applied to those diseases which are accompanied by alterations of the secretions or of the secreting organs.

**Diacris'ic.** (*διακρίσις*.) A term applied by Recamier to the twelfth of his sixteen senses, being the secretory or excretory sense.

**Diacrisi'ography.** (*διακρίσις*, separation; *γραφία*, to write.) A description of the organs of secretion.

**Diac'risis.** (*διακρίσις*, from *διακρίνω*, to separate one from the other.) A term for the act of separation or secretion.

Also, a critical evacuation.

Also, the separation or diagnosis of one disease from another by means of a recognition of its special crisis.

**Dia'critic.** (*διακριτικός*, able to distinguish.) That which distinguishes, distinctive. Same as *Diagnost'ic*.

**Dia'critica.** See *Dia'critic*.

**D. reme'dia.** See *Remedium dia'criticum*.

**D. sig'na.** See *Signum dia'criticum*.

**Dia'critic'al.** Same as *Dia'critic*.

**Dia'cro'cium.** (*διά*; *κρόκος*, saffron.) A collyrium containing saffron.

**Dia'cro'cu.** (*διά*; *κρόκος*, saffron.) The name of a dry collyrium in P. Egiueta, in which saffron is an ingredient.

**Dia'ctinism.** (*διά*, through; *ἄκτιν*, for *ἄκτις*, a ray.) The condition of transparency for chemical or actinic rays.

**Dia'cydonites.** Same as *Cydoniatum*.

**Diad.** An elementary atom, or a compound radicle, which is equivalent in combining powers to two atoms of hydrogen. Thus, one atom of barium replaces two of hydrogen in sulphuric acid, H<sub>2</sub>SO<sub>4</sub>, forming BaSO<sub>4</sub>. The chief elementary diads are barium, calcium, copper, iron, lead, magnesium, manganese, mercury, nickel, oxygen, sulphur, strontium, tin, and zinc. Amongst the compound diads are the whole series of the olefines and oxygenated radicles corresponding to the general formula C<sub>n</sub>H<sub>2n</sub>N<sub>2</sub>O<sub>2</sub>.

**Diadaph'nidon.** (*διά*; *θαφνίς*, a laurel-berry.) The name of a drawing plaster prepared from bay berries, employed to promote suppuration.

**Diad'elph.** A plant of the Class *Diadelphica*.

**Diad'elphia.** (*δίς*, twice; *ἀδελφός*, a brother. G. *Zweibruderschaft*.) The seventeenth class of plants, according to Linnæus' system, being those in which the stamens are united into two groups.

**Diad'elphian.** (Same etymon.) Relating to the *Diad'elphia*.

**Diad'elphic.** (Same etymon.) Relating to, or arranged as, the *Diad'elphia*.

**Diad'elphous.** (Same etymon. G. *zweibrüderig*.) Having stamens, as in the *Diad'elphia*.

**Diad'e'ma.** (*διάδημα*, a fillet.) A head bandage in the form of a fillet or coronet.

**Diad'ermiatri'a.** (*διά*, through; *έρμα*, skin; *ιατρεία*, medical treatment.) The endemic method of treating disease.

**Diad'ex'is.** (*διάδειξις*.) Same as *Diadoche*.

**Diad'ochē.** (*διαδοχή*, a taking from; from *διαδέχομαι*, to receive one from another. G. *Übergang, Aufeinanderfolge*.) The exchange of one disease into another of different form or character and in a different situation.

**Diad'osis.** (Διάδοσις, a distribution; from *ἐκδίδωμι*, to give from hand to hand.) The distribution of nutritive material throughout the body.

Also, the decline of a disease.

**Diædœ'us.** (Δίς, twice; αἰδοῖα, the parts of generation.) A monstrosity whose organs of generation and urinary bladder are double.

**Diæ'resis.** (Διαίρεσις, a dividing. G. *Zertheilung*.) A division of parts from a wound, or burn; a solution of continuity, produced by mechanical means.

**D. un'guis.** (L. *ungula*, a hoof, a claw.) A falling off of the nails.

**Diæ'retic.** (Διαίρετικός, dividing, dissolving; from *διαίρειν*, to take one from another.) An old term for a caustic.

**Diæ'ta.** (L. *dicta*, a mode of living prescribed by the physicians; from Gr. *διαίτα*, a way of living.) Diet.

**D. car'nis.** (L. *caro*, flesh.) Meat diet.

**D. jur'is.** (L. *jus*, broth.) Soup diet.

**D. jus'culi.** (L. *jusculum*, soup.) Soup diet.

**D. lac'tea.** (L. *lactens*, of milk.) Milk diet.

**D. lac'tis.** (L. *lac*, milk.) Milk diet.

**D. sic'ca.** (L. *siccus*, dry.) Diet containing as small a proportion as possible of liquid food, for the relief of dropsy, polyuria, obesity, excessive secretion of milk, and such like.

**Diæ'tema.** (Διαίτημα, food.) Diet; also rules of life in all physical matters.

**Diæ'tetica.** (Διαίτητικός, relating to diet.) Same as *Dietetics*.

**Diæ'tetici mor'bi.** (L. *diæticus*, relating to diet; *morbus*, a disease.) Diseases induced by irregular, insufficient, excessive, or improper diet.

**Diageotrop'ic.** (Διά, through; γή, the earth; *τρέπω*, to turn.) Term applied to the parts of plants which exhibit *Diageotropism*.

**Diageotropism.** (Διά, γή, the earth; *τρέπω*, to turn.) Term applied by Darwin to the assumption by the organs of plants of a position more or less transverse to the radius of the earth.

**Diaglau'cium.** The name of a collyrium recommended by Scribonius Largus. It is thus named from glaucium, the juice of the *Papaver spinosum*, according to Dioscorides.

**Diagnose.** To form a *Diagnosis*.

**Diagno'sis.** (Διάγνωσις, a distinguishing; from *διά*, between; *γνώσις*, knowledge; from *γινώσκω*, to know. F. *diagnose*; G. *Diagnose*, *Unterscheidung*, *Untersuchung*.) The distinguishing of things, the noting of symptoms whereby a disease or a plant or other object may be known for what is, and not another.

Also, the short condensed account of the characters of an object by which it may be accurately determined.

**D., anatom'ical.** (Ανατομικός.) A diagnosis in which the exact anatomical condition of the affected part can be ascertained.

**D., differen'tial.** (L. *differe*, to separate.) The distinguishing of one disease from another somewhat like it by a consideration of their several symptoms.

**D., patholog'ical.** (Παθολογικός, of diseases.) The determination of the nature of a disease or lesion.

**D., phys'ical.** (Φυσικός, natural.) The discrimination of diseases by such physical signs

as can be observed by the senses, whether unaided or aided by instruments, such as the thermometer.

**D., symptomatic.** (Συμπτωματικός, casual.) A diagnosis which has to content itself with a statement of a symptom, or set of symptoms, without being able to accomplish a determination of the morbid cause; as when, in many cases, one has to speak of jaundice or neuralgia.

**D., topograph'ical.** (Τοπογραφία, the description of a place.) The determination of the seat or position of a disease or lesion.

**Diagnost'ic.** (Διαγνωστικός, able to distinguish. F. *diagnostique*.) That which is characteristic; that which relates to *Diagnosis*.

**D. signs.** See *Signs*, *diagnostic*.

**Diagnosticate.** Same as *Diagnose*.

**Diagnostica'tion.** Same as *Diagnosis*.

**Diagnost'ics.** The principles of *Diagnosis*.

**Diagogo'metrum.** (Διαγωγή, a carrying across; μέτρον, a measure. G. *Zeitungs-messer*.) Same as *Diagometer*.

**Diagometer.** (Διάγω, to carry over; μέτρον, a measure.) An instrument, invented by Rousseau, to determine the electric conductivity of substances. It consists of a dry electric pile of very feeble tension, connected with a needle freely moving on a pivot over a scale; the substance to be examined is introduced into the circuit. It is especially used for testing the purity of olive oil, the conducting power of which for electricity is feeble.

**Diagometerum.** See *Diagometer*.

**Diag'on'al.** (Διά, through; γωνία, an angle.) A right line drawn between two opposite angles of a four-sided figure.

**D. posit'ion.** A term employed by Andral to denote that position, half on the back and half on the side, which persons with pleurisy find to be the least distressing.

**Diag'onous.** (Διά; γωνία, an angle.) In Botany, having four corners.

**Diagram.** (L. *diagramma*; from *εἰδ-γραμμή*, that which is marked out by lines; from *εἰδγράφω*, from *εἶδ*, across; *γράφω*, to write.) An illustrative figure composed of lines.

**D., flo'ral.** (L. *flos*, a flower.) A linear drawing showing the position and number of the parts of a flower as seen on transverse section.

**Diagryd'ium.** A synonym, or perhaps a false spelling, of *Dacrydium*.

Also, a synonym of *Scammony*.

**D. cydonia'tum.** (L. *cydonia*, a quince.) A pharmaceutical preparation, obtained by inspissating and drying, by means of heat, two parts of scammony and one of quince juice. It was formerly used as an energetic purgative.

**D. glycyrrhiza'tum.** (Γλυκύρριζα, liquorice.) An analogous preparation to the *D. cydoniatum*, containing extract of liquorice in place of quince juice.

**D. sulphura'tum.** Scammony which has been exposed to the vapour of burning sulphur.

**Diaheliotropism.** (Διά, through; ἥλιος, the sun; *τρέπω*, to turn.) The assumption by the organs of plants of a position more or less transverse to the light and induced by it.

**Diahermodactylum.** (Διά, through; ἑρμωδιόπτεκος, hermodactyl.) An old purgative containing *Hermodactyl*.

**Diahy'dric.** (Διά, ἕδωρ, water.) Through water; a term applied by C. J. Williams to tho

percussion note obtained from an organ separated from the parietes by a layer of fluid.

**Diaion.** Same as *Diaidum*.

**Diaireos.** (*Διά; ἱρις*, the iris.) An old remedy or antidote containing iris root.

**Diaium.** (*Διά; ἴωv*, the violet.) A troche of which violet flowers formed the chief ingredient.

**Dialago'um.** (*Διά; λαγώς*, a hare.) An old decoction remedy containing hare's dung.

**Dialeim'ma.** (*Διάλειμμα*, an interval; from *διαλείπω*, to leave an interval.) Old term, used by Galen, for the intermission of a fever.

**Dialeipsis.** (*Διάλειψις*, an interval.) Same as *Dialypsis*.

**Dialeipy'ra.** (*Διάλειπω*, to leave an interval; *πύρ*, fever.) Intermittent fever.

Also, an apyretic interval.

**Dialem'ma.** Same as *Dialeim'ma*.

**Dialep'sis.** (*Διάληψις*, a separating; from *διαλαμβάνω*, to seize.) A term employed by Hippocrates to indicate the spaces left between the turns of a bandage.

**Dialib'anum.** (*Διά*, through; *λίβανος*, the frankincense tree.) An old medicine containing frankincense.

**Dialipsis.** (*Διάλειψις*, from *διαλείπω*, to intermit.) The period of apyrexia or intermission of fevers or other disease.

**Dialium.** A Genus of the Nat. Order *Leguminosæ*.

**D. indicum.** (*L. indicus*, Indian.) A leguminous plant yielding the tamarind plum, the pulp of the pod of which is eaten, and is more delicate in flavour than that of the tamarind.

**D. nitidum.** Gmll. and Perr. (*L. nitidus*, shining.) Hab. Senegal. Endocarp juicy, esculent.

**Diallyl.** ( $C_3H_5$ )<sub>2</sub>. A volatile fluid, the hydrocarbon of the allyl series.

**D. sulphide.** ( $C_3H_5$ )<sub>2</sub>S. Oil of garlic.

**Dial'oës.** (*Διά; αλόη*, the aloes.) An old purgative containing aloes.

**Dialose.** Payen's term for the mucilage of the *Gymnocladus chinensis*, used in China for washing purposes.

**Dialthæ'a.** (*Διά; ἀλθαία*, the marsh-mallow.) An ointment of marsh-mallow.

**Dialur'ic acid.**  $C_4H_4N_2O_4$ . Obtained by passing hydrogen sulphide through a boiling solution of alloxan. It crystallises in needles, and when exposed to the air becomes red, and is converted into alloxantin by the absorption of oxygen.

**Dialycarp'el.** (*Διαλύω*, to loose one from another; *carpel*. F. *dialycarpelle*.) An ovary or fruit with ununited carpels.

**Dialycarp'ous.** (*Διαλύω; καρπός*, fruit.) Having the gynœcium, or fruit, consisting of separate carpels.

**Dialypetal'ous.** (*Διαλύω; πέταλον*, a flower leaf.) Having the petals separate; same as *Polypetalous*.

**Dialyphyll'ous.** (*Διαλύω; φύλλον*, a leaf.) Having separate leaves.

**Dialyse.** (*Διάλυσις*, a separating; from *διαλύω*, to loose one from another.) To separate by *Dialysis*.

**Dialysed.** (Same etymon.) Having undergone the process of *Dialysis*.

**D. iron.** See *Ferrum dialysatum*.

**Dialysep'alous.** (*Διαλύω; sepal*.) Having the sepals distinct; same as *Polysep'alous*.

**Dialyser.** (*Διάλυσις*, a separating.) A vessel formed of a sheet of parchment paper or animal membrane stretched over a hoop for the performance of *Dialysis*. This vessel contains the mixture of crystalloids and colloids, and is made to float in a dish of pure water. Under these conditions the crystalloids pass out from the dialyser into the pure water, whilst the colloids are left behind.

**Dialyses.** (*Διάλυσις*.) Cullen's order of diseases or injuries consisting of a solution of continuity.

**Dialysis.** (*Διάλυσις*, from *διαλύω*, to loose one from another.) The process of separation of crystalloid from colloid bodies in solution. The compound containing crystalloids and colloids is placed in a dialyser, and the dialyser is allowed to float on pure water. Diffusion at once commences, the crystalloids passing out of the dialyser into the water, whilst the colloids remain behind. The rate of diffusion increases with the temperature, and within certain limits is proportional to the strength of the solution. Most of the poisons are crystalloids, and can be separated from the usual constituents of food by this means. See *Dissociation*.

Also, an old term for weakness of the muscles of the limbs.

Also, a solution of continuity.

**D., ga'seous.** (*Gas*.) The passage of gases through porous substances, such as a thin plate of unglazed earthenware or a slice of artificially compressed graphite or a cake of dry plaster of Paris. The velocities of diffusion of different gases are inversely proportional to the square roots of their densities.

**Dialystamin'ous.** (*Διαλύω; stamen*.) Having separate, distinct stamens.

**Dialytic.** (*Διαλυτικός*; from *διαλύω*.) Relating or pertaining to *Dialysis*; relaxing.

**Diamagnetic.** Pertaining to *Diamagnetism*.

**D. bod'ies.** The chief diamagnetic bodies are phosphorus, antimony, bismuth, cadmium, copper, gold, silver, arsenic, lead, mercury, tin, zinc, and most solid, liquid, and gaseous substances.

**D. polar'ity.** See *Polarity, diamagnetic*.

**Diamagnetism.** (*Διά*, through; *μαγνήτις*, magnet.) The force which causes certain bodies, such as copper, when under the influence of magnetism, to assume a position at right angles to the magnetic meridian, that is, along the equatorial line from east to west; it is supposed to be a polar force.

**Diamarena'tum.** (*Διά*, through; *L. amarus*, bitter.) An old name of a confection made of bitter cherries pulped and mixed with sugar and aromatics.

**Diamargarit'on.** (*Διά; μαργαρίτης*, a pearl.) An old antidote containing pearls.

**Diamase'ma.** (*Διάμασημα*, that which is chewed.) A masticatory.

**Diamaste'ma.** Same as *Diamase'ma*.

**Diam'ba.** A name in Western Africa of the *Cannabis indica*.

**Diam'bar.** (*Διά*, through; *amber*.) An old stomachic and cordial containing amber, musk, and other aromatics.

**Diam'bræ species.** See *Species di-ambrae*.

**Diamel'on.** (*Δια; μήλον*, a quince.) The name of a composition containing quinces.

**Diamesosteomy'ces.** (*Διάμισος*,

midway between; *ὀστέον*, a bone; *μύκης*, a fungus.) Osteoid sarcoma originating in the centre of a bone, between the outer and the inner surface of a long bone.

**Diameter.** (F. *diamètre*; from L. *diametros*; from Gr. *διαμέτρος*, from *διαμετρέω*, to measure through. G. *Durchmesser*.) A straight line drawn through the centre of a circle so as to divide it into two equal parts; also a similar line of division through any figure or object.

**D. Bandelocquii.** The external conjugate diameter of the pelvis.

**D.s. cranial.** See *Cranial diameters*, adult, and *C. diameters, fetal*.

**D. Deventeril.** The same as *D.*, oblique of the pelvis.

**D. of Deventer.** The oblique diameter of the pelvis.

**D.s. of pelvis.** See *Pelvis, diameters of*.

**D.s. of the foetal head.** See *Cranial diameters, fetal*.

**Diametrical pupil.** The condition of the pupil which is left when an upward iridectomy is made at the time of extraction of cataract, a downward iridectomy having been performed some weeks previously.

**Diamide.** Bases derived from a double molecule of ammonia by the replacing of a part or the whole of its hydrogen by oxygenated radicles.

**Diamines.** Bases derived from a double molecule of ammonia by the replacing of the whole or a part of the hydrogen by bivalent alcohol radicles.

**Diamisynos.** (*Διά; μίσυν*, a vitriolic earth.) An old remedy containing *Misy*.

**Diammonia.** Term for the double molecule of ammonia, from which diamines and diamides are obtained by substitution.

**Diamnes.** An old term for an involuntary discharge or incontinence of urine, used by Johannes Anglicus.

**Diamond.** (F. *diamant*, from L. *adamans*, from Gr. *ἀδάμας*, a very hard metal. I. *diamante*; G. *diamant*.) A precious stone. It is composed of carbon crystallised into a regular octohedron, or cube, or an allied form. It is usually colourless and transparent, but is sometimes yellowish, bluish, or pinkish. It is the hardest substance known, infusible in the absence of air; heated to whiteness in oxygen it burns and yields carbonic acid gas. It was formerly supposed to possess cordial properties.

**D. fig.** The *Mesembryanthemum crystallinum*, in allusion to the glittering, jewel-like vesicles with which it is covered.

**D.-shaped.** Shaped like a rhombus; which is also called a diamond.

In Botany, somewhat lozenge-shaped, with two acute and two obtuse angles.

**Diamoron.** (*Διά, through; μῶρον*, a mulberry.) A syrup mentioned by Galen, *de C. M. sec. Loc.* vi, 1, composed of syrup and mulberry juice; it was used as a gargle in sore throat.

**Diamorpheæ.** (*Δία, through; μορφή*, form.) A Suborder of the Nat. Order *Crassulaceæ*. The carpels are coherent into a plurilocular capsule.

**Diamorphosis.** (*Διαμόρφωσις*, a forming. G. *Ausbildung, Gestaltung*.) The building up of a body to its proper form.

**Diamoschu.** (*Διά; μόσχος*, musk.) The name of an antidote containing musk.

**Diamoto'sis.** (*Διαμότωσις*, from *διαμώω*, to put in lint; from *διά; μότος*, lint.) The introduction of a teat, or of lint, into a wound or sinus.

**Diamyl.**  $C_{10}H_{22}$ .  $Amyl (C_5H_{11})$  in a free or isolated condition.

**D. ether.** The same as *Amyl ether*.

**Diamylene.**  $C_{10}H_{20}$ . A hydrocarbon belonging to the olefine series, obtained by the action of strong sulphuric acid on amyl alcohol, or on amylene. Sp. gr. 0.7777 at 0° C. Boiling point 165° C. (329° F.)

**Diana.** (L. *Diana*, an Italian divinity, identical with *Άρτεμις*, the moon-goddess, or *Luna*.) A synonym of *Luna*, the alchemical name of silver.

**Dianancasmos.** (*Διαναγκασμός*, from *διαναγκάζω*, to coerce.) The setting of a broken limb, or the reduction of a dislocation.

Also, a term for an old instrument intended to straighten a spinal curvature.

**Dianther.** A plant of the Class *Dianthia*.

**Dianthrae.** (*Δίς*, double; *άνήρ*, a male.) An order of hypogynous plants (Prantl and Vines). Flowers actinomorphic, usually 2- or 4-merous, rarely 5-merous; stamens and carpels always 2, alternate; ovary bilocular, with a single style; 2 ovules in each loculus; leaves commonly decussate, exstipulate. Ex. *Oleaceæ, Jasmineæ*.

**Dianthria.** (*Δίς*, twice; *άνήρ*, a male.) A Linnean class of plants, comprising those which have hermaphrodite flowers with two stamens.

**Dianthrian.** (Same etymon.) Having two stamens.

**Dianthric.** (Same etymon.) Relating to the *Dianthra*.

**Dianthrous.** (Same etymon.) Having two stamens.

**Dianella.** A Genus of the Nat. Order *Liliaceæ*.

**D. odorata.** (L. *odoratus*, part. of *odoro*, to perfume.) A plant containing benzoin or an analogous substance. The roots are made into fragrant pastilles.

**Diane'matous.** (*Δίς*, twice; *νήμα*, a thread.) In Botany, applied to an anther having two filaments.

**Diangelospermæ.** (*Δίς; άγγειον*, a vessel; *σπέρμα*, seed.) Plants with two seed-vessels.

**Diangiospermous.** (*Δίς*, two; *άγγειον*, a vessel; *σπέρμα*, seed. G. *mit zwei Samenkapseln*.) Having two seed-vessels.

**Diangious.** (*Δίς*, two; *άγγειον*, a vessel. G. *mit zwei Gefässe*.) Having two vessels.

**Dianœa.** (*Διάνοια*, a thought; from *διά, through; νοός*, the mind.) Deliberation, consideration, thought.

**Dianoëma.** (*Διανόημα*, a notion) A fancy of a sick person.

**Dianœologia.** (*Διάνοια*, thought; *λόγος*, a discourse.) Hamilton's term for that department of philosophy which treats of the dianœtic faculties.

**Dianœtic.** (*Διανοητικός*, capable of thought, thinking.) Capable of thought. A term applied by Hamilton to denote the operation of the discursive, elaborative, or comparative faculty.

**Diantherous.** (*Δίς*, twice; *anther*. G.

*mit zwei Staubbeuteln.*) Having two antheriferous stamens.

**Dianthon.** (Διά, through; ἄνθος, a flower.) An antidote, described by Myrepsus, consisting of aromatic and stimulating substances.

**Dianthus.** (Δίς; ἄνθος, a flower.) Having or bearing two flowers.

**Dianthum.** Same as *Dianthon*.

**Dianthus.** (Διαθής, double-flowering; or εἶος, divine; ἄνθος, a flower.) A Genus of the Nat. Order *Caryophyllaceæ*.

**D. arenarius.** Linn. (*L. arenarius*, relating to sand.) Marden pink. Hab. North Europe. Used as *D. caryophyllus*.

**D. armeria.** Linn. Deptford pink. Hab. Europe. Used as *D. caryophyllus*.

**D. barbatus.** Linn. (*L. barbatus*, bearded.) Hab. Europe. Used as *D. caryophyllus*.

**D. carthusianorum.** Linn. (*F. willet des chartreux*.) Hab. Europe. Used as *D. caryophyllus*.

**D. caryophyllus.** Linn. (Καρυόφυλλον, the clove tree. *F. willet giroflee, α. rouge*.) Clove pink; gilliflower; carnation. The flowers were formerly in repute as cephalic, cardiac, and antispasmodic, but are now only employed in syrup as a vehicle for other medicines.

**D. superbus.** Linn. (*L. superbus*, splendid.) Fringed pink. Hab. Europe. Used as *D. caryophyllus*.

**Dianicum.** (Διά; *L. nux*, a nut.) Same as *Diacaryon*.

**Diapædesis.** A false spelling of *Diapedesis*.

**Diapalma.** A plaster composed of emplastrum simplex 800, and white wax 50 grammes, mixed with sulphate of zinc 25 grammes dissolved in a little water. It is desiccative, emollient, resolvent, detersive, and cicatrising. Mixed with a quarter of its weight of olive oil, it acquires the consistence of an ointment, and forms the cerate of diapalma.

**Diapasma.** (Διάπασμα, from διαπάσσω, to sprinkle.) A scented powder, for sprinkling over the body, or part of it.

**Diapedesis.** (Διαπήδησις, a leaping through; from διαπηδάω, to leap across, to ooze through. *G. Durchsickerung, Durchschützen*.) A term used by Galen, *de Cras. Sympt.* iii, 2, for the passing of serous blood through the thin coats of vessels.

Also, a term for bloody sweat.

Also, in late times, applied to the escape of both red and white corpuscles from the blood-vessels, without any visible rupture of their walls. The escape of the red corpuscles occurs as the result of an arrest of the current of blood in the veins. The augmented tension thus produced first leads to the effusion of plasma, and then the blood corpuscles, after being squeezed till all shape is lost, are passed out as a fluid mass, though they may afterwards resume their original form. The escape of the colourless corpuscles occurs during inflammation when the small arteries and veins are dilated and the current through them is slow. The white corpuscles first adhere to the sides of the vessels, and then by amoeboid movement make their way either through the protoplasmic walls of the vessels or through stomata into the tissues, where they form pus corpuscles.

**Diapedetic.** Relating to *Diapedesis*.

**Diapeg'ma.** (Διάπηγμα, a cross-beam.) An old name for an instrument for fastening the legs together.

**Diapensia.** A Genus of the Nat. Order *Diapensiaceæ*.

**D. cortusa.** (Cortusi, a Paduan botanist.) The *Sanicula europæa*.

**Diapensia cææ.** A class of plants closely allied to *Ericaceæ*. Ovary three-celled; embryo filiform, with short cotyledons; anthers not opening by pores. Small shrubs, chiefly found in the northern parts of Europe and America. According to Lindley it is an Order of the Alliance *Gentianales*.

**Diapent'ë.** (Διά, through; πέντε, five.) An old medicine composed of five ingredients; it consisted of ivory shavings added to the *Diatessaron*.

**Diapentes.** Same as *Diapentë*.

**Diaphane.** (Διαφαίνω, to show through.) An investing cortical membrane of a sac or cell. (*Imp. Diet.*)

**Diaphaneity.** (Διαφάνεια, transparency; from διαφαίνω, to show through. *G. Durchsichtigkeit*.) The quality of that which is diaphanous; transparency.

**Diaph'anes.** Same as *Diaphanous*.

**Diaphanic.** Same as *Diaphanous*.

**Diaphanocyanometer.** (Διαφανής, transparent; κυανός, blue; μέτρον, a measure.) An instrument for ascertaining the transparency of the free atmosphere and of the blue of the heavens.

**Diaphanometer.** (Διαφαίνω, to show through; μέτρον, a measure.) An instrument by Saussure for examining and appreciating the differences of the diaphaneity of the atmosphere at different periods.

**Diaphanoscope.** (Διαφανής, seen through; σκοπέω, to observe.) An instrument consisting of a double glass tube, one within the other; the inner one containing a galvanic-coustic copper plate connected with a galvanic battery; and the space between the tubes connected by a tube with a reservoir, which supplies it with a constant stream of cold water, by which the heat is kept down when the platinum plate is white hot. The instrument is so arranged that it may be introduced into the vagina, when the abdominal wall will be seen to be translucent and the dark uterine will be distinctly observed.

**Diaphanoscopy.** (Διαφανής; σκοπέω.) A term applied by Lazarewitch to the exploration of the genital organs by means of an electric light introduced into the vagina in a glass tube. See *Diaphanoscope*.

**Diaph'anos.** (Διαφανής, seen through; from διαφαίνω, to show through. *F. diaphane; I. diafano; G. durchscheinend, durchsichtig*.) Allowing light rays to pass through. Same as *Transparent*.

**Diaphemet'ric.** (Διά; ἄφη, touch; μέτρον, measure.) Relating to the measurements of the tactile sensibility of parts.

**D. compasses.** An instrument, consisting of a pair of compasses with a graduated scale, used for the same purpose as the *Æsthesiometer*.

**Diaphlyxis.** (Διά; φέω, to bubble up.) In Galen's *Exegesis* it means effusions or ebullitions; also, an affusion, or moistening any part.

**Diaphœnicon.** (Διά, through; φωνή, a date.) An old name, used by Galen, *ad Glaucon*, i, 14, for an electuary containing dates, scammony, ginger, black pepper, mace, canella,

turbith root, rue, seeds of *Daucus creticus*, and tunnel seeds.

Also, for a plaster containing dates.

**Diaphonesis.** Same as *Diaphonia*.

**Diaphonia.** (*Διαφωνία*, discord.) The disagreement of medical men at the bedside of a patient.

**Diaphonic.** Relating to *Diaphonics*.

**Diaphonics.** (*Διάφωσις*, a sound.) The science of refracted sound waves.

**Diaphora.** (*Διαφορά*, difference; from *διαφορεύω*, to spread abroad.) The differences which distinguish diseases.

Also, a corruption of food in the stomach.

**Diaphoresis.** (*Διαφώρησις*, from *διαφορεύω*, to carry across, to throw off by perspiration. F. *diaphorèse*; G. *Haftausdünstung*, *Schweisstreibung*, *Durchschwitzung*.) Sweating, especially that produced by artificial means.

**Diaphoretic.** (*Διαφωρητικός*, from *διαφορεύω*. F. *diaphorétique*; G. *ausdünstungbefördernd*, *schweisstreibend*.) Promoting sweating.

**D. antimony.** The *Antimonium diaphoreticum*.

**D. fever.** See *Fever*, *diaphoretic*.

**D. mineral.** (F. *minéral diaphorétique*; G. *schweisstreibender Spiessglanz*.) The *Antimonium diaphoreticum*.

**Diaphoretical.** Same as *Diaphoretic*.

**Diaphoretics.** (Same etymon. F. *diaphorétiques*.) Remedies or means which increase the activity of the sweat glands.

**D., nau'seate.** (L. *nausea*, to be sick.) Those diaphoretics which are supposed to produce sweating by producing nausea and consequent relaxation of the skin; they are tartar emetic, ipecacuanha, and the like.

**D., refrigerant.** (L. *refrigero*, to make cool.) Those diaphoretics which are supposed to act by depressing cardiac and arterial action when in excess without producing nausea; such are aconite and veratrum viride.

**D., sedative.** (L. *sedo*, to cause to sit, to allay.) Those diaphoretics which decrease the flow of blood to the skin; such are antimony and ipecacuanha.

**D., simple.** Those diaphoretics which are supposed to act by a special action on the sudorific glands; such are jaborandi, spirit of nitrous ether, and the like.

**D., stimulant.** (L. *stimulo*, to rouse up.) Diaphoretics which increase the flow of blood to the skin; such are warmth, alcohol, ammonia, and spirit of nitrous ether.

**Diaphoreticum.** A *Diaphoretic*.

**D. jovialē.** (L. *Jovis*, Jupiter, an old name of tin.) The *Antihæticum Poterii*.

**D. martialē antimōnium.** The *Antimonium diaphoreticum martialē*.

**Diaphoremtric.** (*Διαφορά*, difference; *μέτρον*, a measure.) Same as *Diaphremetric*.

**Diaphragm.** (*Διάφραγμα*, a partition wall; from *ἐπιβάριον*, to barricade. F. *diaphragme*; G. *Scheidewand*, *Zwischenschwand*.) A partition, or division wall.

In Anatomy (G. *Zwerchfell*, *Zwerchmuskell*), the septum, muscular at the circumference, tendinous in the centre, parting the chest from the abdomen. Its muscular fibres arise from the posterior part of the ensiform cartilage and the inner surface of the cartilages of the six lower ribs, from the ligamentum arcuatum externum and internum, from the upper and lower margins

of the bodies of the first three lumbar vertebrae and the corresponding intervertebral substances on each side by two crura, the right being larger and reaching farther down than the left; and are inserted into the circumference of the central tendon. The openings in the diaphragm are: one, muscular, for the œsophagus and vagi nerves; a second, tendinous, for the vena cava; a third, tendinous, for the aorta, with the thoracic duct and vena azygos; and apertures for the splanchnic nerves through the crura. The sympathetic nerve lies behind it. The convexly arched upper surface is in contact on each side with the pleura and near the centre with the pericardium. The lower surface is concave and covered for the most part by peritoneum. In contact with it on the right side are the liver and kidney, and on the left side the stomach, spleen, and left kidney. The crura are crossed by the pancreas, and support the solar plexus and semilunar ganglia. The diaphragm is supplied by the phrenic nerves, and by filaments from the sympathetic plexuses around the phrenic arteries, and by the superior and inferior phrenic arteries; the nerves ramify chiefly on the inferior surface. It is the principal agent in effecting inspiration. In this act, from being strongly arched, it becomes only slightly vaulted or nearly flat.

The diaphragm forms a complete partition between the chest and the abdomen in all mammals; it is absent or forms an incomplete partition in all other vertebrate animals. In the camel it contains a sesamoid bone, in the porpoise it has no central tendon. It is probably formed by gradual growth from the posterior and lateral regions of the embryo, but its exact mode of origin is not yet known.

In Electricity, a porous vessel separating the fluid or solid in which the positive element is placed from that in contact with the negative element.

In Optics, a circular perforated partition in the body of a microscope or a telescope, or in the object-glass or eye-piece or other apparatus, to cut off the outer rays of light.

**D., arches of.** The *Ligamentum arcuatum externum* and the *L. arcuatum internum*.

**D., cen'tral ten'don of.** (F. *ligament centré du diaphragme*.) The strong aponeurosis occupying the centre of the diaphragm, into which the muscular fibres are inserted; it is of a trefoil shape, having three lobes or alae, of which the right is the largest and the left the smallest.

**D., cru'ra of.** (L. *crus*, a leg. F. *piliers du diaphragme*; G. *Leidenschienkel*, *Zwerchschienkel*.) The thick muscular processes constituting the vertebral origin of the diaphragm; they are inserted into the concave posterior margin of the central tendon of the diaphragm. The innermost fibres of the crura decussate in front of the opening for the aorta and enclose the opening for the œsophagus.

**D. cur'rents.** Electric currents caused by forcing a liquid through a porous diaphragm.

**D. eye'piece.** An arrangement of shutters moved by milled heads in the eye-piece of a microscope, whereby any space or part of the field may be outlined for the purpose of fixing the attention on it or directing the attention of another to it.

**D., graduating.** A diaphragm for the microscope or telescope, so arranged with movable shutters that by their opening or closing an

# DIAPHRAGMA—DIAPIA.

aperture of any required size for the transmission of light may be obtained.

**D., inflammation of.** See *Diaphragmitis*.

**D., neural'gia of.** Neuralgia affecting the phrenic nerve. It is characterised by pain attacking some part of the origin, course, or distribution of the phrenic, and the pain may radiate to the shoulder, neck, and lower jaw. There are usually several painful points, as the spinous processes of the upper cervical vertebrae, the phrenic nerve itself, the line of attachment of the diaphragm, and a point over the cartilage of the third rib. It may arise from cold or be concomitant with angina pectoris, Basedow's disease, or hepatic affections. Respiratory activity is impaired or inhibited.

**D., paralysis of.** (*Παράλυσις*, paralysis.) A condition of infrequent occurrence caused by injury to the phrenic nerve from wounds or tumours, or occurring in the course of progressive muscular atrophy, or of diaphragmitis, pleurisy, or peritonitis. It is known by the drawing inwards of the epigastrium and hypochondria during inspiration.

**D., pel'vic.** See *Diaphragma pelvis*.

**D., pil'ars of.** Same as *D., crura of*.

**D., plate.** A circular metallic plate, perforated with a series of variously shaped and sized holes, some with a central stop, placed under the stage of a microscope and capable of rotation, so that rays of light may be cut off to any amount and in any part of the field.

**D., spasm of, clonic.** (*Clonic*.) The condition mainly constituting *Hiccough*.

**D., spasm of, tonic.** (*Tonic*.) A continuous spasmodic contraction of the muscle producing great distress and dyspnoea, with expansion and immobility of the lower part of the chest and protrusion of the epigastrium, such as occurs in tetanus and strychnism.

**Diaphrag'ma.** The *Diaphragm*.

**D. auris.** (*L. auris*, the ear.) A synonym of *Membrana tympani*.

**D. cer'ebri.** (*L. cerebrum*, the brain.) A synonym of the *Tentorium cerebelli*.

**D. na'rium.** (*L. naris*, the nostrils.) A synonym of the *Septum narium*.

**D. oris.** (*L. os*, the mouth.) Meyer's term for the two *Mulohyoid muscles*.

**D. pel'vis.** (*L. pelvis*.) A term for the *Levator ani* and *coccygeus* muscles of both sides conjoined.

**D. pharyngis.** (*Φάρυγξ*, the throat.) The *Velum pendulum palati*.

**D. sellæ.** (*L. sella*, a saddle.) See *Hyphoses*.

**D. ventriculorum latera'lium cer'e-bri.** (*L. ventriculus*, a ventricle; *lateralis*, lateral; *cerebrum*, the brain.) A synonym of the *Septum lucidum*.

**Diaphragmal'gia.** (*Διάφραγμα*; ἄλγος, pain. *G. Zwerchfellschmerz*.) Pain in the diaphragm.

**Diaphragmaposte'ma.** (*Διάφραγμα*; ἀπόστημα, a deep-seated abscess. *G. Zwerchfellabscess*.) An abscess of the diaphragm.

**Diaphragmatal'gia.** The same as *Diaphragmalgia*.

**Diaphragmataposte'ma.** Same as *Diaphragmapostema*.

**Diaphragmatelco'sis.** Same as *Diaphragmelcosis*.

**Diaphragmatic.** (*Διάφραγμα*.) Of, or belonging to, the *Diaphragm*.

**D. arterics.** A synonym of *Phrenic arteries*.

**D. gan'gion.** See *Phrenic ganglion*.

**D. gout.** A term given by *Butler* to *Angina pectoris*.

**D. her'nia.** Protrusion of part of the abdominal contents into the chest through the diaphragm, or through some of the natural openings in the muscle, or through accidental defects or wounds in it. See *Hernia, diaphragmatic*.

**D. nerve.** Same as *Phrenic nerve*.

**D. pleurisy.** See *Pleurisy, diaphragmatic*.

**D. plex'us.** Same as *Phrenic plexus*.

**D. ring.** (*F. anneau diaphragmatic*.) *Chaussier's* name for the irregularly quadrilateral aperture by which the vena cava inferior passes through the diaphragm to the heart.

**D. veins.** Same as *Phrenic veins*.

**Diaphragmatit'is.** Same as *Diaphragmitis*.

**Diaphrag'matocele.** (*Διάφραγμα*; κύλη, a tumour. *G. Zwerchfellbruch*.) A synonym of *Diaphragmatic hernia*.

**Diaphragmelco'sis.** (*Διάφραγμα*; ἔλκος, ulceration. *G. Zwerchfellgeschwür*.) Ulceration of the diaphragm.

**Diaphragmit'is.** (*Διάφραγμα*. *F. diaphragmatite*; *G. Zwerchfellentzündung*.) Inflammation of the diaphragm; a rare disease, and probably seldom seen except in connection with inflammation of surrounding structures, such as the pleura, pericardium, and peritoneum. It is accompanied by pain, especially on movement of the muscle, and shallow thoracic breathing.

**Diaphrag'mocele.** Same as *Diaphragmatocele*.

**Diaphragmodyn'ia.** (*Διάφραγμα*; ὄδυς, pain.) Pain felt in the diaphragm.

**Diaphratton hymen.** (*Διαφράττωρ*, from διαφράττω, to barricade; ὑμήν, a thin skin.) The mediastinum.

**D. membra'na.** (*L. membrana*, a membrane.) The mediastinum.

**Diaphrax'is.** Same as *Diaphragm*.

**Diaphth'ora.** (*Διαφθορά*, ruin, corruption; from διαφθείρω, to destroy utterly. *G. Verderbniß*.) An old term for the corruption of anything, especially the death and decomposition of the fœtus in the womb.

Also, the putrefaction of the food in the stomach.

**Diaphylac'tic.** (*Διαφυλακτικός*, from διαφυλάσσω, to preserve.) An old term used by *Galen* in the same sense as *Prophylactic*.

**Diaphy'sis.** (*Διάφυσις*, a growing through, a point of separation between; from διαφύω, to grow between. *F. diaphyse*; *G. Zwischenwachsen*.) An interspace, an interstice, a fissure; that which separates two parts.

In Anatomy, the shaft of a long bone, as distinct from the two extremities; being that part which is formed from the primary centre of ossification.

Also, according to *Paré*, a ligament of the knee-joint, probably the crucial ligament.

Also, a term for the nodes of the stem of the *Graminacæ*, according to some; and for the internodes, according to others.

Also, an occasional prolongation of the centre of an inflorescence or a flower.

**Diap'ia.** (*Διά*, through; πύον, pus.) A

synonym, according to some, of *Diapyesis* or *Suppuration*.

Also (Gr. *δαί*; *ὤψ*, the eye), according to others, a term for long-sightedness, in opposition to *Myopia*.

**Diapisellæum.** (*δαί*; *πίσσα*, pitch; *έλαιον*, oil.) An old remedy made with oil of pitch.

**Diaplasis.** (*διάπλασις*, a putting into shape; from *διαπλάσσω*, to form.) A term for formation, conformation.

Also, used by *Galen de Tract.* i, 1, for the reduction of a dislocation, or the replacing of a fractured bone in its natural position.

**Diaplasma.** (*διάπλάσμα*; from *διαπλάσσω*, to plaster over.) A term used by *Dioscorides* for an unction or fomentation applied to the whole or part of the body.

**Diaplasumus.** (*διαπλάσμος*.) Same as *Diaplasis*.

**Diaplastic.** (*δαί*; *πλαστικός*, fit for moulding.) Of the nature of a *Diaplasma*.

**Diapné.** Same as *Diamnes*.

**Diapneusis.** (*διάπνευσις*, an exhaling; from *διαπνέω*, to blow through.) Same as *Diapnoë*.

**Diapnoë.** (*διαπνοή*, from *διαπνέω*, to breathe through.) An insensible perspiration, or gentle moisture on the skin; used by *Galen*, *Comment. in Hippocr. de Sal. Diet.* t. 2, fin.

Also, a term for expiration.

**Diapnoëa.** (*διάπνοια*.) Same as *Diapnoë*.

**Diapnog'enus.** (*διαπνοή*, perspiration; *γεννώ*, to produce. G. *Hautausdünstungsmacheud*.) Producing perspiration.

**D. apparatus.** (L. *apparatus*, implements.) The sudoriparous glands, from their function.

**Diapnoïc.** (*διαπνοή*.) Producing a moderate perspiration.

**Diapophysial.** Relating to, or consisting of, a *Diapophysis*.

**Diapophysis.** (*δαί*, apart; *ἀπόφυσις*, an offshoot.) Term applied in *Owen's* typical vertebra to a pair of exogenous segments of the neural arch situated between the neurapophysis and neural spines.

In the cervical vertebrae of man and other mammals it is represented by the posterior part of the ring enclosing the vertebral artery; in the dorsal vertebrae by the transverse process; in the lumbar and sacral vertebrae by short processes of the centrum.

**Diaporema.** (*διαπόρημα*, from *διαπορέω*, to be in difficulty.) An old term, used by *Hippocrates*, *de Rat. Vict. in Acut.*, for anxiety, anguish, and restless tossing of the body.

**Diaprasium.** (*δαί*, through; *πράσιον*, horchound.) An old remedy containing horchound.

**Diaprunum.** (*δαί*; *προῦνον*, a plum. G. *Flaumelaterge*.) An old name of an electuary containing prunes, polypody, liquorice, violet flowers and seeds, berberry fruit, red roses, sandal wood, and sugar. Used as a laxative.

**D. compositum.** (L. *compositus*, compounded.) Eight parts of scammony mixed with 190 of *Diaprunum*.

**D. resolutivum.** (L. *resolvo*, to loosen.) The *D. compositum*.

**D. simplex.** (L. *simplex*, simple.) The compound described as *Diaprunum*.

**Diapso'ricum.** (*δαί*; *ψώρα*, the itch.) The name of a medicine for the itch or scurvy.

**Diapter'nes.** (*δαί*; *πτέρνα*, the heel.) A medicine made of the heels of animals and cheese.

**Diaptero'sis.** (*δαί*; *πτερόν*, a feather.) The cleaning of the ears with a feather.

**Diapye'ma.** (*διαπύημα*.) An old term for *Suppuration*.

**Diapye'mata.** (*διαπύημα*, suppuration.) Medicines which promote suppuration.

**Diapye'sis.** (*διαπύεσις*.) Suppuration.

**D. oculi.** (L. *oculus*, the eye.) A synonym of *Hyporrhoe*.

**Diapye'tica.** (*διαπυητικός*.) Things which promote suppuration.

**Diarr'mia.** (*διάρρῳ*, to flow through; *αἷμα*, blood. F. *diarrhée*.) A pathological condition, said to be common in sheep, in which the globules of the blood are diminished in quantity, the blood itself thinner, and transuding through the coats of the vessels into the cavities. (Dun-glison.)

**Diaria.** (L. *dies*, a day.) A fever lasting one day only.

**Diarmaticum.** (*δαί*, through; *αρωματικός*, aromatic.) An old remedy containing various aromatics.

**Diarrhagë.** (*διάρρηγῆ*, from *διαρήγνυμι*, to break through.) A convulsion; also a fracture.

**Diarrh'e'a.** A false spelling of *Diarrhœa*.

**Diarrhetic.** Same as *Diarrhœal*.

**Diarrhodom'eli.** (*δαί*, through; *ρόδον*, a rose; *μέλι*, honey.) An old remedy made of agaric, pepper, honey, scammony, and the juice of roses.

**Diarrhodon.** (*δαί*; *ρόδον*.) An old name for powders and confections in which roses formed an ingredient, along with such other things as sandal wood, canella, and Armenian bole; and for several collyria mentioned by *Galen*, *de C. M. sec. Loc.* iv, 7, containing roses.

**Diarrhœ'a.** (*διάρρῳ*, from *διάρρῳ*, to flow through. F. *diarrhée*, *dévolement*; L. *diarrea*; S. *diarrea*; G. *Bauchfluss*, *Durchfall*, *Durchlauf*.) A too frequent evacuation of too fluid feces, accompanied or not by pain.

**D. ablactatorum.** (L. *ablacto*, to leave to suckle.) The diarrhœa occasionally produced by change of food when a child is being weaned.

**D. adiposa.** (L. *adiposus*, fatty. F. *gras-fondure*.) Discharge of fat by the stools; a condition which has not infrequently been found associated with cancer of the pancreas or duodenum.

**D. al'ba.** (L. *albus*, white.) A form of epidemic diarrhœa occurring in Barbadoes in which the evacuations are white and milky.

Also, a term applied to any form of diarrhœa in which there is no colour in the feces.

Also, the same as *D. hili*.

**D. aquosa.** (L. *aquosus*, watery.) Hoffman's term for diarrhœa in which the stools are very thin and watery.

**D. arthritica.** (*αρθριτικός*, gouty.) The so-called gon in the abdomen.

**D. biliosa.** (L. *biliosus*, full of bile.) Diarrhœa depending on, or accompanied by, a profuse discharge of disordered bile.

**D., cachectic.** (*καχεξία*, a bad habit of body.) A term applied to the chronic diarrhœa of tropical countries in its later stages, when the

## DIARRHŒA.

group of symptoms called *Cachexia* make their appearance.

**D. carno'sa.** (*L. carnosus*, fleshy.) Dysentery, in which the evacuations contain desby-looking matters.

**D., catarrhal.** (*L. catarrhus*, a catarrh.) Diarrhœa depending on a catarrhal condition of the intestinal mucous membrane, whether simple as from chill or irritation, or specific as in the course of eruptive fevers.

**D. catarrho'sa.** (*L. catarrhus*.) Same as *D., catarrhal*.

**D., cholera'ic.** (*Cholera*.) A severe form of diarrhœa in which symptoms resembling those of malignant cholera are present, such as cramps in the limbs, cold surface, bluish lips, sighing breathing, and other signs of collapse; it is the form which frequently affects children, and especially in the hot weather.

**D. cholera'ica.** A term for *Cholera morbus*.

**D., cholera'iform.** Same as *D., cholera'ic*.

**D., chronic.** (*L. chronicus*, lingering.) A term applied to any form of diarrhœa which has become moderate and long continued, but specially used to denote the form of diarrhœa common in India and the tropics, which, beginning without acute symptoms, often causes death from anæmia and exhaustion. The motions are at first not very relaxed, of a yellowish or drab colour, containing little mucus, and often ejected with force; gradually they get thinner and paler until they come to look like chalk and water, sometimes they contain blood. The tongue loses its epithelium and becomes red, shining, and aphthous, or pale and soft; there is not generally much pain, and the appetite may be large but capricious. Anæmic symptoms soon develop, anasarca results, scorbutic symptoms appear, and death occurs from asthenia, sometimes in coma, sometimes in convulsion, sometimes in syncope.

**D. chylo'sa.** (*Chyle*.) A term for chronic diarrhœa in which the motions are very pale, consisting of unabsorbed chyle or profuse secretion from the mucous follicles.

**D., chylous.** Same as *D., chylosa*.

**D., colliquative.** (*L. colliquescere*, to become liquid.) Diarrhœa so severe and watery as to produce collapse.

**D., congestive.** (*Congestion*.) Diarrhœa depending on a congested condition of the intestinal mucous membrane, often produced by chill.

**D. crapulo'sa.** (*L. crapulosus*, caused by drink.) Diarrhœa from overmuch or indigestible food. Diarrhœa in which undigested food is passed, and by which it is supposed to be caused.

**D. cruenta.** (*L. cruentus*, bloody.) Diarrhœa in which the evacuations are bloody.

**D. cum apepsia.** (*L. cum*, with; *Gr. a*, neg.; *πίπτω*, to concoct.) A synonym of *Lientery*.

**D. dentition'ium.** (*L. dentio*, to cut teeth.) Diarrhœa occurring in infants during dentition; in some cases perhaps from the swallowing of the saliva, which is often so freely secreted at that time.

**D., dysenteric.** (*Dysentery*.) A term applied to those cases of severe diarrhœa in which the feces are mixed with bloody mucus.

**D. dyspep'tica.** (*Δύς*, badly; *πίπτω*, to concoct.) Same as *Lientery*.

**D. erythemo'ides.** (*Ερυθρμα*, redness of skin; *εἶδος*, likeness.) Diarrhœa which is supposed to depend on an erythematous condition of the mucous membrane of the intestine.

**D., fæculent.** (*L. fæces*, dregs.) Ordinary diarrhœa in which the stools are chiefly composed of liquid feces.

**D. fu'sa.** (*L. fusus*, part. of *fundo*, to pour out.) Good's term for feculent diarrhœa, or feculent looseness.

**D. hepatic'a.** (*Ἡπατικός*, affected in the liver.) Bilious diarrhœa.

**D., hill.** A term applied by Alexander Grant to a disease of the Indian hill stations, in which, between daylight and breakfast, and again in the evening, loose, pale, drab or muddy grey, frothy stools are passed, at first feculent, subsequently yeasty, pulsatious, or hienteric; there is considerable disturbance of the liver and probably some malarial taint.

**D., infantile.** (*L. infans*, a child.) The diarrhœa which attacks infants, and is usually caused by some error in diet; it is a frequent accompaniment of the act of weaning. It is a great cause of mortality among infants in poor districts of a town. Collapse rapidly supervenes, and the mortality is great, especially in the summer.

**D., inflam'matory.** A term which includes cases of diarrhœa in which there is inflammation of the intestinal mucous membrane and its glands; the stools are often watery, often mucous, with fibrinous flakes and sometimes with blood, the tongue is reddish, the abdomen tender, with pricking or gnawing pains, and tenesmus, and there is much exhaustion.

**D. ingesto'rum.** (*L. ingero*, to put into.) A synonym of *Lientery*.

**D. intermit'tent.** (*L. intermitto*, to break off for a time.) A form of diarrhœa which has been observed by Rothe; it was accompanied by pains, was rebellious to ordinary treatment, occurred in attacks possessing marked periodicity, and was cured by quinine.

**D. in urina.** (*L. in*, in; *urina*, urine.) A synonym of *Diabetes*.

**D., irritative.** (*L. irrito*, to provoke.) Diarrhœa depending upon the irritation of the intestinal mucous membrane by indigestible or undigested food, disordered secretions, entozoa, cathartics, poisons, and other matters.

**D. lenteria.** See *Lientery*.

**D. lenterica.** See *Lientery*.

**D. mucosa.** (*L. mucosus*, mucous.) Diarrhœa depending on irritation, congestion, or inflammation of the intestinal mucous membrane.

**D., nerv'ous.** (*L. nervus*, a nerve.) Diarrhœa produced by mental worry or emotion, by direct irritation of the intestinal nerves or their nerve centres, or by reflex irritation, as in teething.

**D. noctur'na.** (*L. nocturnus*, belonging to the night.) A diarrhœa which occurs chiefly in the middle of the night, as often happens in intestinal tuberculousis.

**D. pancreat'ica.** (*Pancreas*.) Term formerly applied to a form of diarrhœa supposed to be due to undue activity of the pancreatic gland. If applied at all, it should be more properly used to indicate those cases in which fat is passed unchanged in consequence of failure of the secretion of the gland.

**D., phthis'ical.** The diarrhœa which occurs in the course of pulmonary phthisis, and

which depends, for the most part, on ulceration of the intestines.

**D., premonitory.** (*L. premonitorius*, that which gives previous warning.) A term applied to the relaxed condition of bowels which usually precedes an attack of malignant cholera.

**D., prodromic.** (*Πρόδρομος*, a fore-runner.) Term applied to the diarrhoea which in epidemics of cholera frequently precedes the occurrence of choleraic diarrhoea or malignant cholera.

**D. purulenta.** (*L. purulentus*, full of pus.) Evacuation of pus by the bowels.

**D. sanguinolenta.** (*L. sanguinolentus*, bloody.) Discharge of blood by stool.

**D. serosa.** (*L. serum*, the watery part of blood.) Good's term for serous looseness of bowel, the dejections almost entirely liquid and limpid.

**D. stercoralis.** (*L. stercor*, dung.) Same as *D. feculent*.

**D. stercoraria.** (*L. stercorarius*, belonging to dung.) Same as *D. feculent*.

**D., sudoral.** (*L. sudorus*, dripping with sweat.) Diarrhoea associated with a disturbance of the functions of the skin, preventing the secretion of the sweat.

Also, a term applied to a diarrhoea which is supposed to depend upon what is called the herpetic diathesis, and to alternate with, or accompany, skin eruptions of this nature.

**D., summer.** Same as *Cholera, summer*.

**D. tubularis.** (*L. tubulus*, a small pipe.) Good's term for a form of diarrhoea in which the dejections consist more or less of membrane-like tubes, whitish, viscous, and inodorous.

**D. urino'sa.** (*L. urina*, urine.) A synonym of *Diabetes*.

**D., vicarious.** (*L. vicarius*, substituted.) Diarrhoea which is a substitute for some suppressed or arrested secretion, as when the kidney or the skin has ceased to act.

**Diarrhoeal.** (*Διάρροια*. *F. diarrhœique*.) Relating to diarrhoea.

**Diarrhœic.** (*Διάρροια*.) Relating to, or affected with, *Diarrhoea*.

**Diarrhœic's chesis.** (*Διάρροια*; *ἔσχω*, to check.) The arresting of a diarrhoea.

**Diarrhœophthisis.** (*Diarrhoea*; *phthisis*. *G. Auszehrung von Durchfall*.) Term for diarrhœic tabes, or wasting.

**Diarrhœtic.** Same as *Diarrhœic*.

**Diarrhœicus.** Pertaining to *Diarrhoea*.

**Diarrhœicæ.** (*Διάρροια*.) The interstices between the circuntolutions of bandages.

**Diarthrodial.** Relating to *Diarthrosis*.

**D. articulation.** A joint constructed in the manner called *Diarthrosis*.

**D. cartilages.** The cartilages which cover the joint-ends of bones.

**Diarthrosis.** (*Διάρθρωσις*, a movable articulation; from *εἰά*, through; *ἄρθρωσις*, an articulation.) A form of joint which admits of motion in every direction, as the shoulder-joint, and most of the other joints of the body; it consists of two or more bones in apposition by their extremities, which are covered with cartilage, and connected by ligaments lined with synovial membrane.

**D. of contiguity.** A division of diarthroses, according to Bichat, being diarthroses properly so called.

**D. of continuity.** A division of diarthroses, according to Bichat, in which two bones

are connected with each other by a ligamentous structure which allows of motion, as in the case of the bodies of the vertebrae. Otherwise called *Amphiarthrosis*.

**D., planiform.** (*L. planus*, flat; *forma*, shape.) The same as *Arthrodia*.

**D., rotatory.** (*L. roto*, to turn a thing round.) An articulation in which the movement is limited to rotation, the joint being formed by a pivot-like process turning within a ring, as in the case of the head of the radius, or by a ring turning around a pivot, as in the articulation between the odontoid process of the axis and the atlas.

**D., synarthrodial.** (*Σύν*, with, together with; *ἄρθρωσις*, a joint.) A term for the form of amphiarthrosis represented by the carpal joints.

**Diarthrotic.** (*Διάρθρωτικός*.) Relating to *Diarthrosis*.

**D'iary.** (*L. dies*, a day.) Daily.

**D. fever.** A fever lasting one day; also called *Ephemera*.

**Diasaponium.** (*Διά*, through; *σάπων*, soap.) An old name for an ointment containing soap.

**Diasatyr'ion.** (*Διά*, through; *σατύριον*, an oreolis.) An old term for an electuary containing the oreolis root; supposed to be aphrodisiac.

**Diaschysis.** (*Διάσχις*, division.) A splitting, a division.

**Diascilium.** (*Διά*; *σκίλλα*, a squill.) An old name of oxymel and vinegar of squills.

**Diascin'cus.** (*Διά*; *σκίγγος*, a species of lizard.) An old term for mithridate, because of its containing the bellies of snakes.

**Diascordium.** *Fr. Codex.* (*Διά*; *σκόρδιον*, the water germander. *F. electuaire diascordium*.) Dried leaves of *teucrium scordium* 60, red rose 20, bistort root 20, gentian 20, tormentil 20, berberry fruit 20, ginger 10, long pepper 10, cinnamon 40, dictamnus of Crete 20, benzoin in tears 20, galbanum 20, gum arabic 20, prepared Armenian bole 80, extract of opium 10, mellitum rosatum 1300, Malaga wine 200 grammes. Evaporate the honey of roses to a weight of 1000 grammes, and whilst it is hot add the opium dissolved in the wine, and then mix intimately the other materials reduced to a fine powder. One gramme contains 6 milligrammes, .006, of extract of opium.

**D. Fracastor'ii.** Same as *Diascordium*.

**Diasena.** Same as *Diasenna*.

**Diasenna.** (*Διά*; *senna*.) Old name for the electuary or confection of senna.

**Diasericos.** (*Διά*; *σερικός*, silken.) Old name for a remedy of which silk was an ingredient. (Hooper.)

**Diasmyrnum.** (*Διά*; *σμέρινα*, myrrh.) An old name for a collyrium containing myrrh, mentioned by Galen.

**Diasostic.** (*Διασωστικός*, able to bring safe through; from *εἰσάγω*, to keep safe.) Relating to the preservation of health.

**Diasostics.** (Same etymon.) The laws of, and rules for, the preservation of health; hygiene.

**Diaspasis.** (*Διάσπασις*, a tearing asunder. *G. Zerrei'sung*.) A splitting, a tearing.

**Diaspas'ma.** (*Διάσπασμα*.) A rent, a gap.

**Diasper'maton.** (*Διά*, through; *σπέρ-*

μα, seed.) Old name (Gr. διασπέρματον), applied by Galen, *de C. M. per Gen.* vii, 7, to a kind of cataplasma composed of seeds, chiefly of fenugreek.

**Diasphagē.** (Διασφαγή, a cleft.) The interval between two branches of a vein.

**Diasphyxis.** (Διάσφυξις, from διά, through, σφύζω, to throbb.) An old name for the pulsation of an artery.

**Diasporogenesis.** (Διά; σπόρος, seed; γένεσις, birth.) Jäger's term for a mode of multiplication of Hydrae; they become resolved into numerous corpuscles, which assume the appearance of Amœbæ, and ultimately develop into new Hydrae.

**Diastalsis.** (Διάστασις, an arranging.) The distinguishing of different things one from another.

**Diastaltic.** (Διασταλτικός, from διά, through; στέλλω, to place, to start.) A term applied by Marshall Hall to the actions termed reflex, inasmuch as they take place through the spinal cord.

**D. action.** Marshall Hall's term for the action which takes place by means of the *D. arc*, consisting of the reception of an impression by the end of a sensitive nerve, its recognition by a nervous centre, and its transmission through a motor nerve to a muscle.

**D. arc.** Marshall Hall's term for the receptive termination of a sensory or efferent nerve, the centre to which it passes, the afferent nerve thence proceeding and its muscular terminals.

**D. nervous system.** Marshall Hall's term for the spinal nervous system.

**Diastasmia.** (Διάστασις, separation; αἷμα, blood. F. *diastasmie*.) A pathological condition characterised by a separation of the elements of the blood globules; the fibrin and albumen separating also from the colouring matter, while the fibrin attaches itself to the valves of the heart; a condition observed by Delafond in the horse.

**Diastase.** (Διάστασις.) A nitrogenous ferment formed from the gluten of a seed or bud during germination. Its physical properties are not known, for it has not yet been obtained pure. It has the capacity of changing starch into dextrin and glucose; it can be dissolved in water and glycerine, but is not taken up by alcohol. One part of diastase can convert 200,000 parts of starch into dextrin; the action takes place slowly in the cold, most rapidly at 60° C.—75° C. (140°—167° F.) The power is lost at the temperature of boiling water. It is also lost by drying. It is found throughout the vegetable kingdom, in the infusoria, and in the pancreatic and salivary secretions of the higher animals, as well as in the liver, bile, blood, chyle, kidneys, urine, brain, and gastro-intestinal mucous membrane in small quantities.

**D., animal.** A term by Mialhe and Payen for *Ptyalin*.

**D., pancreatic.** The same as *Amyloptasin*.

**D., salivary.** The same as *Ptyalin*.

**Diastasis.** (Διάστασις, a standing aloof, separation; from διάστημα, to set in different places. F. *diastase*; I. *diastasi*; G. *Auseinanderweichen*.) A division into two parts, a separation.

Applied to the separation of bones naturally touching or near to each other, as the separation of the cranial bones in hydrocephalus, or of the

radius from the ulna in consequence of extreme stretching or extension of the ligaments, or a similar condition of the bones of a joint short of dislocation.

Also, the space between the fractured ends of a bone when it becomes sensible.

Also, an effort to vomit.

**D., purulent.** Separation of the adjacent ends of an epiphysis and the diaphysis of a bone from destruction of the intermediate cartilage in cases of purulent periostitis, pyæmia, and suppurative synovitis.

**Diastasium.** Same as *Diastase*.

**D. vegetabilé.** The same as *Diastase of barley*.

**Diastatecephlogia.** (Διαστατικός, separative; ἐκφλέγω, to set on fire.) An old name for discrete smallpox. See *Ecephlogie*.

**Diastatic.** (Διαστατικός.) Relating to separation.

**D. ferment.** A ferment capable of converting starch into sugar.

**Diasteaton.** (Διά, through; στίαρ, fat.) An old name for an ointment made of the fat of the hog, stag, goose, and hen.

**Diastema.** (Διάστημα, a distance, a difference; from διάστημα, to separate.) A separation, an interstice, an interval. A synonym of *Diastasis*.

Also, that which marks the composition of bodies.

Also, the interval during which the physician leaves his patient.

Also, the interval of a disease during which a change is wont to occur.

Also, an old name for the female pudendum.

Also, the interval which, in some animals, exists between two teeth; especially between the canines and the molars.

**Diastematelytria.** (Διάστημα; ἔλκτρον, a sheath, the vagina.) A congenital longitudinal division or fissure of the vagina.

**Diastematencephalia.** (Διάστημα; ἐγκέφαλος, the brain.) The condition of a cleft brain.

**Diastemata.** (Διάστημα.) A term employed by Breschet for a congenital fissure in the mesial line of the body.

**Diastematocaulia.** (Διάστημα; καυλός, a stalk.) In Teratology, a longitudinal division of the trunk.

**Diastematocheilia.** (Διάστημα; χείλος, the lip.) In Teratology, a longitudinal division or fissure of the lip.

**Diastematocrania.** (Διάστημα; κρανίον, the cranium.) In Teratology, a longitudinal division of the cranium.

**Diastematocystia.** (Διάστημα; κύστις, bladder.) In Teratology, an abnormal fissuring of the urinary bladder.

**Diastematogastria.** (Διάστημα; γαστήρ, the stomach.) In Teratology, an abnormal longitudinal division of the stomach.

**Diastematoglossia.** (Διάστημα; γλῶσσα, tongue.) In Teratology, a longitudinal fissure of the tongue.

**Diastematognathia.** (Διάστημα; γνάθος, jaw.) In Teratology, an abnormal fissure of jaw.

**Diastematome'tria.** (Διάστημα; μήτρα, the womb.) In Teratology, an abnormal fissuring of the womb.

**Diastatomyelia.** (Διάστημα; μυελός, marrow.) In Teratology, a condition in

which the lateral halves of the spinal cord are separated from one another by fissure, either for their whole extent or partially.

**Diastematopyelia.** (Διάστημα; πύελος, the pelvis.) In Teratology, an abnormal mesial fissure of pelvis.

**Diastematorachia.** (Διάστημα; ῥάχης, spine.) In Teratology, an abnormal mesial fissure of the spine.

**Diastematorrhinia.** (Διάστημα; ῥίς, the nose.) In Teratology, an abnormal fissure of the nose in the mesial line.

**Diastematostaphylia.** (Διάστημα; σταφυλή, uvula.) In Teratology, a division of the palate; cleft palate and uvula.

**Diastematosternia.** (Διάστημα; στήρνον, the sternum.) In Teratology, abnormal mesial division of the sternum.

**Diastementeria.** (Διάστημα; έντερον, intestine.) In Teratology, an abnormal longitudinal fissuring of the intestine.

**Dias'toîē.** (Διαστολή, a drawing asunder; from διαστέλλω, to put asunder, to open. F. *diastole*; G. *Ausdehnung, Erweiterung*.) A dilatation, especially applied to the dilation of a contractile cavity.

**D., arterial.** (Αρτηρίαι, the arteries.) The expansion or passive relaxation of the arteries which results from the increased quantity of blood driven into them by the contraction of the ventricles.

**D., auricular.** (Αυρίε.) The period of passive dilatation of the auricles. Its duration is four fifths or five sixths of the entire cycle of the heart's action.

**D., cardiac.** (Καρδία, the heart.) The period of relaxation of the heart. That period of one complete revolution of the heart's action during which the blood is entering the cavities of the heart. It is generally regarded as a passive dilatation, the blood being forced onwards into the cavities by the elasticity of the walls of the distended veins, but many consider that there is an active dilatation of the walls of the auricles and ventricles, which therefore exert a suction power over the blood. If the whole cycle be estimated at 1.130 sec., the duration of the diastole is .679 sec. It may be induced by stimulation of the vagus nerve; and if the stimulation of the vagus be sufficiently strong the heart stops in diastole.

**D., ventricular.** (Ventricle.) The period of the heart's action during which blood is entering the ventricles. It occupies a little more than one half of the whole cycle.

**Diastoleus.** (Διαστολεύς.) An old name for a dilator of wounds, and also for a speculum oris.

**Diastolic.** (Διαστέλλω, to draw asunder.) Belonging to the diastole of the heart.

**D. in pulse.** Same as *Backstroke*.

A similar stroke is sometimes felt at the second left interspace close by the sternum when there is solid lung over the pulmonary artery, or when the lung has receded, or when there is high pressure within the artery.

**D. murmurs.** See *Murmurs, diastolic*.

**D. thrill.** A vibration felt by the hand over the heart during the ventricular diastole; it is of very rare occurrence, but a basic thrill has been noticed in cases of aortic insufficiency in non-anæmic persons, and also in violent palpitation, after sudden and severe loss of blood, and in extreme anæmia, and sometimes over the

place of impulse of an aortic aneurysm. Diastolic thrill over the mitral orifice, when occurring towards the end, is included in the term *Præ-systolic thrill*.

**Diastomotrîs.** (Διαστομοτρίς.) An old term for a dilating instrument for any purpose.

**Diastrem'ma.** (Διάστρεμμα, from διαστρίφω, to distort.) A distortion, as of the face, through muscular cramp; a dislocation; a sprain.

**Dias'trophē.** (Διαστροφή.) Same as *Diastremma*.

**Diastrophyllous.** (Διαστρίφω, to distort; φύλλον, a leaf.) Having leaves gracefully turned to the sides.

**Diasulphuris.** (Διά, through; sulphur.) An old term for remedies containing sulphur.

**Diatartari.** (Διά; tartar.) An old remedy containing cream of tartar.

**Diat'asis.** (Διάτασις, tension; from διατείνω, to stretch out.) The extension and counter-extension of a limb for the reduction of a fracture.

**Diatatic.** (Διατατικός, on the stretch.) Relating to strong extension and counter-extension.

**Diatecolithum.** (Διά, through; τηκόλιθος, dissolving stones.) An old antidote containing the Jew's stone, *Judaicus lapis*.

**Diatere'tic.** (Διατηρητικός, from διατηρῶ, to watch closely.) Capable of preserving. Formerly applied to medicines preservative of health and preventive of disease.

**Diatessadelton.** See *Diacellatesson*.

**Diates'saron.** (Διά, through; τίσσαρες, four. F. *diatessarou*.) Old name for a medicine of gentian and *Aristolochia rotunda* roots, laurel berries, and myrrh, made into a confection with honey and extract of juniper; anciently used as alexipharmic. Gr. *διατεσσαράων*, mentioned by Paulus Ægineta, iii, 77, Adams's Transl., vol. iii, p. 654.

Also, the name of a plaster in former use, mentioned by Galen, *de C. M. per Gen.* v, 14. See *Diapente*.

**Diates'sarum.** Same as *Diatessarou*.

**Diatet'tigon.** (Διά, through; τέττιξ, a grasshopper. F. *diatetigon*.) Old name for a medicine of which grasshoppers formed an ingredient; used as a nephritic.

**Diatet'tigum.** Same as *Diatet'tigon*.

**Diathermal.** Same as *Diathermanous*.

**Diathermancy.** (Διά, through; θερμαίνω, to warm.) The capability of transmitting radiant heat. It bears the same relation to radiant heat that transparency does to light.

**Diatherman'eity.** Same as *Diathermancy*.

**Diather'manism.** (Διά; θερμαίνω.) The doctrine of the transmission of radiant heat.

**Diathermanous.** (Διά, through; θερμαίνω, to warm.) Term applied to substances which allow radiant heat to pass through them with more or less facility. If the radiant heat of an Argand lamp be estimated at 100, a plate of rock salt 3.62 mm. in thickness will allow 92 to pass, a similar plate of rock crystal 57, of Iceland spar and rock alum 12, and of sulphate of copper nothing.

**Diatherman'sis.** (Διαθερμαίνω, to warm through. G. *das Durchstrahlen der Wärme*.) The transit of the rays of heat.

**Diathermic.** Same as *Diathermanous*.  
**Diathermometer.** (Διά; θερμῶν, heat; μέτρον, a measure.) An instrument designed to measure the thermal resistance of a body by registering the amount of transmitted heat.

**Diatheses.** Plural of *Diathesis*.

**D., common.** Same as *D., non-specific*.

**D., general.** Diatheses affecting the whole body.

**D., heteromorphous.** (ἑτερος, other; μορφή, form.) Bazin's term for those diatheses which tend to the production of structures not natural to the animal body, such as tuberculous and cancerous diatheses.

**D., homomorphous.** (ὁμοιος, like; μορφή.) Bazin's term for those diatheses which tend to the formation of structures resembling the natural, such as calcareous and hemorrhagic diatheses.

**D., inflam'matory.** Bazin's term for such diatheses as the purulent and gangrenous.

**D., non-specific.** (L. *non*, not; *specificus*, forming a particular kind.) Diatheses such as the rheumatic, gouty, and serofulous.

**D., specific, non-virulent.** (L. *specificus*; *non*, not; *virulentus*, poisonous.) A group which includes diatheses characterised by the formation of new tissue, such as the lymphatic and cancerous diatheses.

**D., specific, virulent.** (L. *specificus*; *virulentus*, poisonous.) A term applied to such diatheses as the syphilitic.

**Diathetic.** Same as *Diathetic*.

**D., hyper trophy.** See *Hypertrophy*, *diathetic*.

**Diathesis.** (Διάθεσις, a placing in order, a condition; from διατίθημι, to arrange. F. *diathèse*; G. *Anlage*, *Beschaffenheit*, *Krankheitsanlage*.) Term for a particular state or disposition of the body, of hereditary origin, or acquired as the result of some morbid influence, whereby it becomes liable to certain special affections or diseases, which may attack in different manner different organs, but which are always the same in essence. It is a morbid constitution which frequently exhibits itself in minor deviations from health short of the development of actual disease.

The word has also been used by the disciples of Rasori's doctrine of *Stimulus* and *Contrastimulus*, to denote the morbid condition resulting from excess of stimulus or of contrastimulus, and which lasts, and even increases, for long after its cause has ceased to act.

**D., acquired.** A diathesis acquired subsequently to birth, as the syphilitic.

**D., aneurys'mal.** (Ανεύρυσμα, an aneurysm.) A term applied to the condition of arteries which leads to the formation of aneurysm, as evidenced by its existence in several of the vessels.

**D., arthritic.** (Ἀρθρίτις, gout.) Same as *D., gouty*.

**D., asthenic.** (Ἀσθενικός, weakly.) The enfeebled and anemic condition of body which tends to the development of disease characterised by want of power.

**D., calculous.** (L. *calculus*, a small stone.) The condition of body which tends to the production of urinary and other concretions.

**D., cancerous.** The condition of body, often hereditary, sometimes acquired, as in trau-

matic malignancy, tending to the formation of cancer or other such-like malignant diseases.

**D., cyst'ic oxide.** Same as *Cystinuria*.

**D., darts.** The condition of body leading to the development of the diseases included under the term *Dartre*.

**D., diabetic.** (Διαβήτης, diabetes.) A certain neurotic condition of body which is supposed to conduce to the development of diabetes.

**D., furunc'ular.** (L. *furunculus*, a boil.) A term for a condition of system produced by the breathing of the odour of putrefying animal matter, in which the eruption of boils and pustules is marked.

**D., gangrenous.** (Γάγγραινα, gangrene.) The morbid disposition of the body which renders common the occurrence of gangrene after injury or inflammation, such as the condition induced by diabetes or ergotism.

**D., gouty.** (Gout.) The condition of body which tends to the development of gout or gouty manifestations; it is closely connected with the *D., uric*.

**D., hemorrhag'ic.** See *Hæmatophilia*.

**D., herpet'ic.** Same as *Herpetism*.

**D., inflam'matory.** The condition of body leading to inflammation, being that also called *Plethora*.

**D., innate.** (L. *innatus*, inborn.) A diathesis or morbid tendency transmitted from a parent.

**D., lith'ic.** (Λίθος, a stone.) Same as *D., uric*.

**D., local.** (L. *locus*, a place.) A term which has been applied to a supposed morbid tendency developed only at the diseased place or part without constitutional affection.

**D., lymphatic.** (Lymphatic.) A condition of body which tends to the development of engorgement and hypertrophy of the lymphatic glands.

**D., melanot'ic.** The condition of body leading to the growth of *Melanosis*.

**D., nerv'ous.** (L. *nerva*, a nerve.) A term used to denote the condition of body which tends to the development of disorders of the nervous system, such as hysteria and neuralgia.

**D., neurotic.** (Νεύρον, a nerve.) Same as *D., nervous*.

**D., original.** Same as *D., innate*.

**D., os'seous.** (L. *os*, a bone.) The condition of body which tends to the production of osteoma, and of ossification of cartilage, and to the calcification of arterial walls.

**D., oxal'ic.** (Oxalic acid.) The condition of body which tends to the deposit of crystals of oxalate of lime in the urine; it generally occurs in persons in whom the nervous system has been exhausted by worry or venery.

**D., palu'dal.** (L. *palus*, a swamp.) The condition of body which results from living in a malarious district, whereby intermittent fevers are produced, and other diseases, especially neuroses, are induced to take on an intermittent form.

**D., par'tial.** Same as *Diathesis, local*.

**D., phlogis'tic.** (Φλογιστός, inflammable.) A morbid condition of the body which arises when any considerable inflammation exists, in consequence of which an inflammation is readily produced in other parts beside that first affected, according to Cullen.

**D., phosphat'ic.** (Phosphate.) The condition of body which tends to the deposit of

phosphatic salts in the urine, it usually occurs in weak persons with nervous exhaustion.

**D., puerperal.** (L. *puerpera*, a lying-in woman.) The condition of body belonging to the puerperal condition, closely resembling *D., purulent*.

**D., purulent.** An old term for the state or condition of the body tending to the occurrence of abscesses in different parts. The condition now called *Pyæmia* and *Septicæmia*.

**D., rachitic.** (*Rachitis*.) The condition of body, generally acquired, which produces rickets.

**D., rheumatic.** (*Rheumatism*.) The condition of body tending to the development of rheumatism; it is suggested that it is an error of digestion or assimilation in which some organic acid, as lactic, is produced.

**D., scorbutic.** (*Scorbutus*.) The condition of body acquired by errors in diet and hygiene, which leads to the development of *Scurvy*.

**D., scrofulous.** (*Scrofula*.) The condition of body which causes the development of scrofulous diseases. See *Scrofulosis*.

**D., spasmodic.** (*Σπασμὸς*, a drawing, a spasm.) A general term for an irritable weakness of nervous constitution, in which, if there be not positive disease, there is the well-prepared ground of disease. (Hoblyn.)

**D., sthenic.** (*Σθένος*, strength.) The condition of body which tends to inflammatory and active diseases.

**D., strumous.** (*Struma*.) Same as *D., scrofulous*.

**D., syphilitic.** (*Syphilis*.) The condition of body induced by constitutional syphilis, whether acquired or hereditary, which favours any local disease occurring in the body during its existence.

**D., tubercular.** (*Tubercle*.) The condition of body tending to the deposit of tubercle in different organs of the body.

**D., typhoid.** (*Typhoid*.) A term in France for influenza in the horse.

**D., ulcerous.** (L. *ulcus*, an ulcer.) The cachectic condition of body which tends to the development of ulcers of the skin, mucous membranes, and other parts of the body.

**D., uric.** (*Uric acid*.) The condition of body which tends to the formation of uric acid and urates; it generally occurs in persons of a florid and robust appearance having a family or personal history of gout or rheumatism, and not infrequently of some scaly or herpetic skin affection.

**D., varicose.** (L. *varix*, a dilated vein.) A term applied to the condition of body which conduces to the production of varicose veins and hæmorrhoids.

**D., verminous.** (L. *verminosus*, full of worms.) An old term for a supposed habit of body which conduces to the development of intestinal worms.

**Diathesisation.** (*Διάθεσις*.) The rendering general or systemic of an originally local disease; as the development into pyæmia of a simple abscess.

**Diathetic.** (F. *diathétique*, *diathésique*.) Relating or appertaining to a *Diathesis*.

**D. diseases.** Diseases which are supposed to depend upon the morbid condition of body called a *Diathesis*.

Also, a synonym of *Constitutional diseases*.

**Diatomæceæ.** (*Διά*, through; *τομή*, section.) A Family of the Order *Conjugatæ*, Class *Zygosporææ*. Microscopic unicellular vegetable organisms, occurring isolated or in groups of definite form, usually enclosed in a gelatinous investment, the cells exhibiting more or less regular geometrical outlines, and enclosed by a membrane which is often impregnated with silice, and separated into valves, named frustules. Reproduction is by spores formed after conjugation of the cells, or by zoospores formed from the cell contents, or by division. Also called *Bacillariaeææ*.

**Diatomææ.** (*Διά*, through; *τομή*, a section.) A Suborder of *Diatomæææ*. The cell membrane impregnated with silice, valvular, containing a brown colouring matter.

**Diatomæic.** (*Διά*, twice; *άτομος*, an atom.) Consisting of two atoms.

**Diatomin.** The brownish-yellow colouring matter of the *Diatomæææ*.

**Diatomous.** (*Διά*, through; *τίμνω*, to cut.) Cleavable throughout; a term applied to crystals with one distinct diagonal cleavage.

**Diatragacanthum.** (*Διά*, through; *τραγάκαθα*, tragacanth. F. *diatragacanthæ*.) Old name for a demulcent medicine made of tragacanth, gum arabic, starch, sugar, liquorice, and the seeds of cucumber, melon, pumpkin, gourd, and white poppy; it is simplified in the *Pulvis tragacanthæ compositus*.

**Diatresis.** (*Διάτρησις*, from *διά*; *τετραίνω*, to perforate.) Perforation.

**Diatrimma.** (*Διάτριμμα*, from *δια*; *τριβω*, to rub.) Chafing.

**Diatrion piperæon.** (*Διά τριών πιπέριων*, of three peppers.) Old name, Gr. anal. used by Galen, *de San. Tu.* iv, 5, for a medicine or stomachic confection made from three kinds of pepper, the long, the white, and black.

**Diatriptor.** (*Διατριβω*, to rub between.) An écraseur furnished with a wire instead of a chain.

**Diatritarii.** (*Διάτριτος*, lasting for a period of three days. F. *diuturnité*.) The methodic physicians, who enjoined an abstinence of three days' duration, after which they gave the approved medicines and food; that is on the fourth day, and afterwards on the sixth, eighth, and tenth. See *Diatritos*.

**Diatritos.** (*Διάτριτος*, from *διά*, through; *τρίς*, three.) Old term for a period of three days. Formerly applied to the like period during which the *Diatritarii*, or methodic physicians, enjoined abstinence; it is also applied to the third day in particular.

**Diatrium.** (*Διά*, through; *τρίς*, three. F. *diatrium*.) Old name for a medicine composed of three simple ingredients.

**D. santalorum.** Old name for an antidote made of three species of sandal wood; used as a diaphoretic.

**Diatrypsis.** (*Διατρυσία*, to bore through.) The form of cranial suture in which button-like projections of one bone are received into button-hole-like clefts in the neighbouring bone; as seen in some parts of the frontal and sphenoid sutures.

**Diaulos.** (*Διά*, twice; *αὐλή*, a court.) A gymnastic exercise in which the person runs a straight to-and-fro course.

**Diavoletti.** (Ital.) Name for lozenges made of cocoa and the most pungent aromatic substances. Used as an aphrodisiac.

**Diavoli'ni.** Same as *Diavoletti*.  
**Diaxylo'oes.** (*Διά*, through; *ξύλα*, the lignum aloes.) Old name for a medicine of which the lignum aloes was an ingredient.

**Diazo'a.** (*Διά*, through; *ζῶον*, an animal. G. *Scheidungsthiere*.) Burmeister's term for a class of animals including Apsecta, Radiata, and Mollusca.

**Diazo'ma.** (*Διάζωμα*, from *διαζώννυμι*, to bind around. F. *diazoma*.) An old name, used by C. Hoffmannus, in *Comm. ad. Gal. n.* 201, 238, for the diaphragm.

**Diazos'ma.** (*Διάζωσμα*, from *διαζώννυμι*.) Same as *Diazoma*.

**Diazos'ter.** (*Διαζωστήρ*, from *διαζώννυμι*, to bind around. F. *diazoster*.) Old name for the twelfth vertebra of the spinal column; because a belt girding the body is usually placed over it (Gorreaus).

**Dibasic.** (*Δίς*, twice; *βάσις*, a base.) Having two atoms of base.

**Diboth'ria.** (*Δίς*; *βοθρίον*, a small pit.) A Family of the Order *Cestoda*; they are jointed worms, with two opposite suckers on a flat head, and seldom hooks. Ex. *Bothriocephalus*.

**Diboth'ridous.** (*Δίς*, two; *βοθρίον*, a dimple.) Having two dimples.

**Dibothriorrhynchus.** (*Δίς*; *βοθρίον*; *ρύγχος*, a snout.) A larval form of cestode worm. Body short, saciform, compressed, non-articulate, terminating behind in a small exsertile tubercle; head wedge-shaped, provided with a lateral fossette on its two larger faces, and with a globular trumpet bristling with hooks at the extremity of each.

**D. abditus.** Leidy. (L. *abdo*, to conceal.) Found encapsuled in the liver of *Hippoglossus maximus*.

**D. excisus.** Diesing. (L. *excido*, to cut out.) Found in the abdominal cavity of *Trigla luvula*.

**D. gracilis.** Diesing. (L. *gracilis*, slender.) Found in the intestines of *Ammodytes cicerulus*.

**D. lingatula.** Diesing. (L. *dim.* of *lingua*, the tongue.) Found in the abdomen of *Læmarcus borealis*.

**D. mulli barba'ti.** Diesing. Found in the stomach and pyloric appendices of *Mullus barbatus*.

**D. scolec'ius.** Diesing. (*Σκώληξ*, a worm.) Found in the muscles of *Scyllium catulus*.

**D. toda'ri.** Delle Chiaje. Found beneath the peritoneum of *Lobigo todarus*.

**Diboth'rium.** (*Δίς*, twice; *βοθρίον*, *dim.* of *βοθρος*, a pit.) Rudolphi's term for *Bothriocephalus*.

**D. corda'tum.** The *Bothriocephalus cordatus*.

**D. hi'ans.** The *Bothriocephalus hiatus*.

**D. la'tum.** The *Bothriocephalus latus*.

**Dibranchia'ta.** (*Δίς*, twice, double; *βράγχια*, the gills of a fish.) An Order of the Class *Cephalopoda*, having two branchie, each with a branchial heart at the base; they have no external shell, and possess eight or ten arms with suckers.

**Dibranch'iate.** (*Δίς*; *βράγχια*.) Having two branchie or gills.

**Dibranch'ious.** (*Δίς*, twice; *βράγχια*.) Having two branchie or gills.

**Dibrommethane.**  $\text{CH}_2\text{Br}_2$ . Obtained, along with bromoform, by acting on methyl

bromide with bromine at  $150^\circ \text{C}$ . ( $302^\circ \text{F}$ .); it boils at  $80^\circ \text{C}$ . to  $82^\circ \text{C}$ . ( $176^\circ \text{F}$ . to  $179.6^\circ \text{F}$ .), has a specific gravity of 2.0844, and a vapour density of 5.95.

**Dibu'tyl.** (*Δίς*; *butyl*.)  $\text{C}_4\text{H}_9$ .  $\text{C}_4\text{H}_9$ . A synonym of the paraffin octane, on the supposition that it consists of two molecules of butyl.

**D. e'ther.** Same as *D. oxide*.

**D. oxide.** ( $\text{C}_4\text{H}_9\text{O}$ ). Obtained by the action of butyl iodide on sodium ethylate. It boils at  $140.5^\circ \text{C}$ . ( $284.9^\circ \text{F}$ .), and has a sp. gr. of .784.

**Dibutyl'amine.**  $\text{NH}(\text{C}_4\text{H}_9)_2$ . A bye-product in the preparation of valerianic acid by the action of alcoholic potash on butyl cyanide.

**Dibutyr'al'din.**  $\text{C}_8\text{H}_{17}\text{NO}$ . An organic base obtained by acting on butyric aldehyde by alcoholic ammonia; from it, by dry distillation, paraconia, isomeric with conia, has been produced.

**Dicac'odyl.**  $(\text{CH}_3)_2\text{As}_2$ . The radical of the dimethylarsine compounds, obtained by heating cacodyl chloride with zinc. It is a heavy, clear, mobile, strongly-refracting, very irritating, poisonous, and inflammable liquid.

**Dicarbonate.** (*Δίς*, twice.) Same as *Bicarbonate*.

**Dicarp'ellary.** (*Δίς*; *carpel*.) Applied to a gynoecium which is composed of two carpels only.

**Dicarp'ous.** (*Δίς*; *καρπός*, fruit.) Having double fruit.

**Dicel'is.** (*Δίς*, twice; *κηλίς*, spot.) A sexually mature form of nematoid worm.

**D. fila'ria.** Dujard. (L. *filum*, a thread.) Found in the testes of *Lumbricus terrestris*.

**Dicel'uphous.** (*Δίς*; *κέλυφος*, bark. G. *doppelschuldig*.) Having a double shell, as occurs in some eggs.

**Dicen'tra.** (*Δίς*; *κέντρον*, a spur.) A Genus of the Nat. Order *Fumariaceæ*.

**D. canadensis.** De Cand. Squirrel corn, colic weed, turkey corn. Hab. North America. The flowers have the odour of hyacinth. It has been given internally in syphilis, and applied externally in syphilis and gonorrhœa. The tubers are known as *Corydalis*.

**D. cuculla'ris.** (L. *cucullus*, a hood.) Used as an anthelmintic and emmenagogue.

**D. exim'ia.** De Cand. (L. *eximius*, excellent.) Hab. North America. Used as *D. canadensis*.

**D. formo'sa.** Berkh. (L. *formosus*, beautiful.) The *D. eximia*.

**Dicentrocephalus.** (*Δίς*, twice; *κέντρον*, a sharp point; *κεφαλή*, the head.) A larval form of nematoid worm.

**D. crina'lis.** Wedl. (L. *crinis*, hair.) Found in the pyloric appendices of *Lophus piscatorius*.

**Dicepha'lium.** (*Δίς*, twice; *κεφαλή*, the head.) A better form of *Diccephalum*.

**Diceph'alous.** (*Δίς*; *κεφαλή*.) Having two heads.

In Botany, applied to an ovary with a divided summit.

**Diceph'alus.** (*Δίς*; *κεφαλή*. G. *Doppelkopf*.) A monster with two heads.

**D. dibra'chius.** (*Δίς*; *βραχίον*, the arm.) A two-headed monstrosity with two arms only.

**D. dibra'chius diau'chenos.** (*Δίς*, twice; *αὐχὴν*, the neck.) A two-headed monstrosity with two arms and a neck for each head.

**D. dibra'chius monau'chenos.** (*Μόν-*

os, single; *ἀνχίν*, the neck.) A two-headed monstrosity with two arms and one apparent neck.

**D. heterocephalus.** (*ἑτερος*, other; *κεφαλή*, the head.) A double-headed monster in which the heads are of unequal size.

**D. tetrabrachius.** (*τέτρα*, four; *βραχίον*, the arm.) A two-headed monstrosity with four arms.

**D. tribrachius.** (*τρίς*, thrice; *βραχίον*.) A two-headed monstrosity with three arms.

**D. tripus.** (*τρίς*; *πούς*, a foot.) A two-headed monstrosity with three feet only.

**Dic'eras.** (*δίσ*, twice; *κίρας*, a horn.) Same as *Ditrachyeras*.

**Dic'erate.** (*δίσ*; *κίρας*, a horn.) Having two horns.

**Dic'eros.** (Same etymon.) A Genus of the Nat. Order *Scrophulariaceae*.

**D. cochinchinensis.** Lour. Hab. Cochinchina. A herb eaten as a salad.

**Dic'eros.** (*δίσ*; *κίρας*, a horn.) Having two tentacles.

**Dichal'cum.** An ancient weight of two areoli. (Goraeus.)

**Dicha'sium.** (*διχαίζω*, to divide into two.) In Botany, a form of definite inflorescence, in which the primary and secondary axes divide dichotomously. Same as *Cyme*, *biparous*.

**Dichas'tasis.** (*διχαίζω*, to part asunder.) Spontaneous fission or subdivision.

**Dichasteres.** (*διχαίζω*, to divide. F. *dents incisives*; G. *die Schneidzähne*.) Old name for the incisors, or cutting teeth.

**Dichas'tic.** (*διχαίζω*.) Capable of undergoing *Dichastasis*.

**Dichen'terotomy.** (*δίχα*, double; *εντέρον*, an intestine; *τομή*, incision.) Name for a double-armed enterotomy.

**Dicherocephalus.** (*δίχα*; *ἑτερος*, other; *κεφαλή*, the head.) Same as *Dicephalus heterocephalus*.

**Dichiton'idæ.** (*δίσ*; *χίτων*, a frock.) A synonym of *Aseidoidea*, in reference to the complete separation of the outer and inner integuments, except at the apertures.

**Dichlamy'deous.** (*δίσ*, twice, or double; *χλαμύς*, a short cloak, or cape.) Applied to plants in the flowers of which there are two whorls of leaf-like organs, a calyx and a corolla; or a double perianth.

**Dichlorac'etal.**  $C_2H_4Cl_2(OC_2H_5)_2$ . A compound obtained by the action of chlorine on alcohol of sp. gr. 0.8. Boiling point  $180^\circ C$ ; sp. gr. 1.383 at  $14^\circ C$ .

**Dichloracetic acid.**  $C_2H_2Cl_2O_2$ . Produced, along with monochloroacetic acid, by the action of chlorine and iodine on boiling acetic acid. It is a caustic liquid, boiling at  $189^\circ C$ .— $194^\circ F$ . ( $372.2^\circ F$ .— $375.8^\circ F$ .) and when heated giving off suffocating vapours.

**Dichlorac'etone.**  $C_2H_2Cl_2O$ . Formed when acetone is saturated with chlorine. It is, when purified, an ethereal smelling liquid, boiling at  $120^\circ C$ . ( $248^\circ F$ .) and having a vapour density of 4.32.

**Dichloral'dehyde.**  $CHCl_2.CHO$ . Obtained by the distillation of dichloroacetate with strong sulphuric acid.

**Dichloral'lylene.** The radicle allylene,  $C_3H_4$ , in which two atoms of hydrogen are replaced by two of chlorine. Not isolable.

**Dichlorethane.**  $C_2H_4Cl_2$ . Two isomeric forms are known:  $\alpha$  dichlorethane, or

*Ethylene dichloride*; and  $\beta$  dichlorethane, or *Ethylidene chloride*; both are anæsthetic.

**Dichloroethylamine.**  $NC_2H_4Cl_2$ . A strongly refracting, golden yellow liquid, obtained by heating an aqueous solution of ethylamine with chlorine. It boils at  $88^\circ C$ . to  $89^\circ C$ . ( $190.4^\circ F$ . to  $194.2^\circ F$ .)

**Dichlorhydrin.**  $C_2H_4.OH.Cl_2$ . Two compounds formed by the substitution of two atoms of chlorine for two hydroxyl groups in the triatomic alcohol glycerine. One of these possesses a symmetrical formula, the other is misymmetrical.

Also, see under *Chlorhydrins*.

**Dichloride.** (*δίσ*, twice; *chlorine*.) A substance containing two molecules of chlorine to one of base.

**D. of allylene.**  $C_3H_4Cl_2$ . An oily liquid obtained by the action of phosphoric chloride on acrolein ( $C_3H_4O$ ). Sp. gr. 1.170 at  $27.5^\circ C$ ; boiling point  $84.4^\circ C$ . Also called dichloroacrolein.

**Dichlormethane.**  $CH_2Cl_2$ . A synonym of *Methylene dichloride*.

**Dichogam'ia.** See *Dichogamy*.

**Dichogamous.** (*δίχα*, in two; *γάμος*, marriage. G. *zweihug, getrenntlich*.) In Botany, applied to unisexual plants in which the male and female organs become mature at different times.

**Dichogamy.** (*δίχα*, in two; *γάμος*, marriage. G. *Doppelhe*.) Term applied to that condition of unisexual plants in which the male and female organs mature their products at different periods. Fecundation is believed to be effected in these cases by insects, which carry the ripe pollen of one plant to the mature gynaecium of another.

**Dichondræa.** A Suborder of the Nat. Order *Convulvaceae* having the carpels distinct, a basilar style, a valvate preduration, and non-milky juice.

**Dichophy'ia.** (*δίχα*, in two; *φύω*, to grow.) Old term for a condition of the hairs in which they split and become forked.

**Dichoprion.** (*δίχα*; *πρίων*, a saw.) A double saw which can cut through a bone from both sides.

**Dichop'sis gut'ta**, Benth. The *Isosandra gutta*, Hooker.

**Dichopterous.** (*δίχα*, double; *πτέρον*, a wing. G. *zweiflügelig*.) Having ent or emarginate wings.

**Dichotomous.** (*δίχα*, in two; *τίμνω*, to cut. F. *dichotome*; G. *gabelförmig, gabelspaltig, gezweithalt, zweitheilig*.) Twice divided; bifurcate; doubly-forked; dividing by pairs continuously.

**D. branch'ing.** See *Ramification*, *dichotomous*.

**D. cyme.** (*Cyme*.) In Botany, a form of definite inflorescence, in which the secondary axes are produced in pairs, each axis ending in a single flower.

**D. divis'ion.** Term applied to branches or flower-stalks which constantly divide into two, the direct apex of each branch ceasing to develop.

**D. peduncle.** (L. *pedunculus*, a foot-stalk.) A peduncle arising from the angle formed by two branches of a dichotomous axis.

**Dichotomy.** (*δίχα*; *τέμνω*.) A mode of branching of a stem in which the axis constantly divides into two, the growth of the direct apex ceasing.

Also, applied to modes of classification, or

forms of reasoning, which proceed regularly by two branches or sections.

**D., bifurcate.** (L. *bis*, twice; *furca*, a fork.) The form in which both the branches grow equally.

**D., bos trychoid.** (Βόστροχος, a lock of hair; εἶδος, likeness.) Term applied to a symposium when the weaker limbs of each bifurcation are given off successively from the same side, as in *Adiantum pedatum*.

**D., cincinnal.** (Κίκινος, a curl of hair.) The same as *D., scorpioid*.

**D., false.** The development of two lateral axes in different directions, with nearly equal vigour, and more vigorously than the primary axis, which soon ceases to grow.

**D., hellicoid.** (Ἑλῆξ, a spiral; εἶδος, likeness.) The same as *D., bos trychoid*.

**D., scorpioid.** (Σκορπιοειδής, scorpion-like.) Term applied to a symposium in which the weaker limb of each bifurcation is given off alternately on the right and left sides.

**D., sympodial.** (Σύν, with; πούς, a foot.) The form in which at each bifurcation one branch becomes more developed than the other.

**D., true.** The division of a growing stem into two parts at the apex.

**Dichroa.** (Δίς, twice; χρώα, colour.) A Genus of the Nat. Order *Lythraceæ*.

**D. febrifuga.** Lour. (L. *febris*, fever; *fugo*, to put to flight.) Hab. China. A purgative and emetic. Used as a febrifuge.

**Dichroic.** (Δίς, twice; χρώα, colour.) Exhibiting the phenomena of *Dichroism*.

**Dichroism.** (Δίς, twice; χρώα, colour.) A property possessed by some bodies of exhibiting a different colour according as they are viewed by reflected or transmitted light, depending in crystals upon the angle which the direction of the vibrations of the light-rays forms with the optic axis of the crystal. Thus chloride of palladium appears of a deep red colour along the axis, and vivid green when viewed at right angles to the axis. Bile, again, sometimes appears of a pure transparent green by ordinary daylight when seen in layers of two or three centimeters thick; whilst if viewed by strong sun-light in a thickness of five or six centimeters it is red. Chlorophyll presents the same contrast of colours in a very marked manner.

**Dichroites.** See *Dichrous*.

**Dichromatic.** (Δίχρμος, two-coloured. G. *zweifärbig*, *doppelfärbig*.) Two-coloured. Exhibiting the phenomena of *Dichroism*.

**Dichromatism.** The same as *Dichroism*.

**Dichromic acid.**  $H_2Cr_2O_7$ . The acid corresponding to potassium dichromate, only known as an anhydride,  $CrO_3$ .

**Dichromic vision.** Same as *Dichroism*.

**Dichromus.** (Δίχρμος, two-coloured.) The *Verbena officinalis*.

**Dichronous.** (Δίς; χρόνος, time.) In Botany, having two periods of growth in the year.

**Dichrophyte.** (Δίχρμος, forked; φυτόν, a plant.) A term applied to a plant having bifurcated anthers.

**Dichroscope.** (Δίς, twice; χρώα, colour; σκόπεω, to see.) An instrument con-

sisting of an achromatised double-image prism of Iceland spar fixed in a tube having a small square hole at one end, which is at the focal distance of a lens inserted into the other. On looking through the lens the hole appears double, and if a crystal be inserted into the hole the images appear of different colours, which permits the *ir* dichroism to be tested.

**Dichrostachys.** (Δίς; χρώα, colour; σταχυς, an ear of wheat.) A Genus of the Nat. Order *Leguminosæ*.

**D. cinerea.** W. and Arnold. (L. *cinereus*, ash coloured.) Hab. India. Bruised young shoots applied to the eyes in ophthalmia.

**Dichrous.** (Δίς, two; χρώα, colour. G. *Zweifärbig*.) Of two colours.

**Diciatria.** (Δίκη, justice; ιατρία, the art of medicine. G. *gerichtliche Medicin*.) Legal medicine, medical jurisprudence.

**Dicincho'nia.** Same as *Dicincho'nin*.

**Dicin'chonin.**  $C_{40}H_{48}N_4O_2$ . A derivative of quino'idin.

**Dicksonia.** (Dickson, a Scottish botanist.) A Genus of the Nat. Order *Filices*. From the caudex of some of the species silky hairs are obtained, which are used as a styptic.

**Diclapodous.** (Δίς, two; πούς, a foot.) Applied by Latreille to those of the *Crustacea* which have the two anterior feet and appendages divided into two branches at the extremity.

**Diclesium.** (Δίς, twice; κλείσις, closure.) A simple fruit consisting of a seed adherent to the hardened and persistent base of the corolla.

**Diclibothrium.** (Δικλίσ, folding or fastened both ways; βόθρος, a pit.) A Genus of ectoparasitic trematodes, of the monogenetic kind, comprising a single species.

**D. armatum.** Dies. (L. *armatus*, armed.) Found in the branchiae of *Acipenser stellatus*. The generic name was established by Leuckart, but the same parasite has been placed under *Heracotyle* by Nordmann, and under *Polystoma* by Dujardin.

**Diclidostosis.** (Δικλίσ, a double folding; ὀστέον, a bone.) Ossification of the valves, as of the heart.

**Diclidostotic.** (Δικλίσ; ὀστέον.) Pertaining to *Diclidostosis*.

**Diclinate.** (Δίς; κλίωω, to make to slope.) A term applied to a crystal in which two of the axes are obliquely inclined.

**Diclines.** (Δίς, twice; κλίση, a bed.) A Division of the Subclass *Petaloidæ*, Class *Monocotyledones*, in which the flowers are usually unisexual, perianth absent, or consisting of a few scales.

**Diclinia.** (Δίς, twice; κλίση, a bed. G. *Diklinie*, *Zweibettigkeit*.) The separation of the two sexes, each of which appears as a distinct individual.

**Diclinic.** Same as *Diclinate*.

**Diclinismus.** Same as *Diclinia*.

**Diclinous.** (Δίς, twice; κλίση, a bed. G. *zweibettig*, *getrenntgeschlechtig*.) Applied to plants that are each of one sex only, or in which the sexes are distinct in different individual flowers.

Also, the same as *Diclinate*.

**Diclis.** (Δικλίσ, folding two ways; from *εἰς*; κλίωω, to make to bend.) A valve.

**Diclisia.** (Δίς; κλείσις, a closure.) A

simple fruit composed of one seed united to the hardened and persistent base of the corolla.

**Diclonous.** (Δίς; κλών, a young shoot.) Having two offshoots or processes.

**Dicoc'cous.** (Δίς, twice; κόκκος, a berry. F. *dicocque*; G. *zweikornig*, *zweikörnig*.) Having two capsules united, one cell in each.

**Dicoc'cus.** (Same etymon.) A fruit consisting of two coeci united to each other by their inner faces.

**Dicochemi'a.** (Δίκη, justice; χημεία, chemistry.) Forensic chemistry, such as the detection of poisons.

**Dicochirurgia** (Δίκη; χειρουργία, surgery.) Forensic surgery, legal surgery.

**Dicce'lous.** (Δίς; κοίλος, hollow.) Having two cavities.

**Diconchin'in.** Same as *Diconchinin*.

**Dicon'chinin.**  $C_{40}H_{46}N_2O_3$ . An alkaloid of cinchona bark, in many of its reactions resembling conchium.

**Dicoryphus.** (Δίς; κορυφή, the crown of the head.) A monster with a double vertex or cranium.

**D. dihypogast'ricus.** (Δίς; ὑπό, under; γαστήρ, the belly.) A double monstrosity united only in the upper part of the trunk.

**Dicoto'in.**  $C_{11}H_{13}O_{11}$ . A substance obtained by heating cotton repeatedly with boiling water; it occurs in crystalline plates, and is an anhydride of cotton.

**Dicotyle'don.** (Δίς, twice; κοτυληδών, a cotyledon. F. *dicotyledon*; G. *Dicotyledonen*.) A plant of the Class *Dicotyledones*.

**Dicotyled'ones.** (Same etymon. F. *dicotyledones*; L. *dicotyledone*; S. *dicotyledonos*; G. *Dicotyledonen*.) A Class of the Subkingdom *Phanerogamia*, or flowering plants with stems (when woody), having pith and bark separated by a compact layer of wood, which, in perennial plants, receives annual additions on the outside, beneath the bark; leaves with ribs mostly distributed in a netted pattern, and generally diminishing in size as they branch; parts of the floral circles mostly five or four, or some multiple of these numbers, rarely three; embryo with a pair of cotyledons and a radicle, which is developed into a tap-root in germination. The typically complete floral formula, supposing the parts to be uncomplicated by adhesions, irregular growth, multiplication, or other conditions, is  $S5 P5 A5 G5$ , in regular alternation. The dicotyledones have been subdivided into apetalae, monopetalae, and polypetalae, and each of them again into those with hypogynous stamens, those with epigynous stamens, and those with unisexual and dichinous flowers.

**Dicotyle'donous.** (Same etymon. F. *dicotyledon*; G. *Zweisammlappig*.) Of, or belonging to, the *Dicotyledones*.

**D. em'bro.** This is usually more or less oval, and is composed of two nearly equal cotyledons, between which is enclosed a small axis, the upper part of which is the plumule, the lower the radicle, and the point of junction the caulicle or tigella. The cotyledons are sometimes absent, as in *Cuscuta*, and sometimes increased in number to ten or more.

**D. germin'ation.** (L. *germino*, to germinate.) This may take place either below or on the surface of the soil. The cotyledons commonly separate, and the plumule rises from between them, forming the ascending axis. The radicle is prolonged downwards, with a more or

less gyratory movement, by cell multiplication just within its apex, to form the root.

**D. leaves.** The leaves of dicotyledonous plants are reticulated in consequence of the veins branching in various directions and the divisions reuniting. They are commonly articulated to the stem, often compound, and variously toothed or incised at the margins.

**D. roots.** The roots of dicotyledons are formed by the elongation and branching of the radicle of the embryo. They have no pith or medullary sheath, hence the fibro-vascular part forms a central axis.

**D. stem.** In the embryo state the exogenous stem is entirely composed of parenchyma, but at the end of the first year the stem presents a central mass of parenchyma called the medulla or pith; an interrupted zone of wood cells and vessels forming the wood; an external zone of parenchyma or bark; and radiating lines of parenchyma connecting the pith and the bark, called the medullary rays.

**Dicotyles.** (Δίς; κοτύλη, a eup.) A Genus of pachydermatous *Artiodactyla*. The peccaries; they are eaten as food.

**Dicra'eous.** (Δίκρανος, forked; from εἰς, twice; κεραία, a horn.) Bifid; cloven. Having two heads.

**Dicra'nous.** (Δίκρανος, from εἰς, twice; κρανίον, the skull. G. *zweiköpfig*, gabelförmig.) Having two heads, forked, bifid.

**Dicra'nus.** (Δίκρανος.) A monster with a double cranium.

**Dicrocoelium Busk'ii.** (Δίκροος, forked; κοιλία, a hollow in the body.) A term by Weinland for the *Distoma Buskii*.

**Dicrotal.** Same as *Dicrotic*.

**Dicrotic.** (Δίπρος, double beating; εἰς, twice; ποσίω, to strike. F. *dicrote*; L. and S. *dicrote*; G. *doppelschlägig*.) Double beating.

**D. pulse.** (F. *pouls dicrote*, p. *rebondissant*.) A pulse which yields a tracing, or which gives the sensation to the fingers, of a double beat for each systole of the ventricles.

**D. wave.** A secondary wave which follows more or less quickly the primary wave of the pulse in sphygmographic tracings. It is believed to be a wave of oscillation. It is sometimes preceded by a smaller predicrotic wave, and is sometimes followed by a tricrotic one. It has been attributed to a wave of recoil on the closure of the semilunar valves, to the resiliency of the peripheral arteries, to the rebound of the blood during cardiac diastole from the resisting elasticity of that in the peripheral vessels, and to the slight constriction of the aorta at its division into the iliacs. It is more marked in the aorta and larger arteries than in the smaller ones. It is favoured by a sudden, sharp, ventricular systole, by low tension of the blood, and by extensibility with elastic reaction of the arterial walls.

**Dicrotism.** (Same etymon.) Term applied to the pulse when two waves are felt beneath the finger, or can be made apparent by special apparatus for each systole of the heart.

**Dicrot'ous.** (Same etymon.) Same as *Dicrotic*.

**Dictamni'tes.** (Δίκταμνος, dittany.) Old name for must fermented with dittany; believed to be emmenagogue. (Quincy.)

**Dictam'us.** (Δίκταμνος; from Δίκτη, a mountain of Crete, where it grew. F. *dictamne*;

G. Diptam.) A Genus of the Nat. Order *Rutaceæ*.

**D. albus**, Linn. (L. *albus*, white. F. *dictanne blanche*; G. *weisse Diptam*.) The systematic name of the white fraxinella, or bastard dittany. Its root was formerly used as stomachic, tonic, and alexipharmic, for removing uterine obstructions and destroying worms.

**D. creticus**. (F. *dictanne de Crète*; G. *Cretischer Diptam*.) A name for the *Amaracus dictamnus*, or dittany of Crete.

**D. fraxinella**, Pers. (L. dim. of *fraxinus*, the ash. F. *dictanne blanche*; G. *weisse Diptam*, Escher.) The *D. albus*.

**Dictoid**. Same as *Dictyoid*.

**Dictyitis**. Inflammation of the *Dictyon* or retina. A synonym of *Retinitis*.

**Dictyocarcinoma**. (Δίκτυον, a net; καρκίνωμα.) A synonym of *Carcinoma reticulare*.

**Dictyocarpous**. (Δίκτυον; καρπός, fruit. F. *dictyocarpe*; G. *netzfruchtig*.) Having reticulated fruit.

**Dictyogenous**. (Δίκτυον, a net; γέννω, to produce.) Having the characters of *Dictyogens*.

**Dictyogens**. (Δίκτυον, a net; γέννω, to produce.) A class of flowering plants with characters intermediate between Endogens and Exogens. Foliage broad, net-veined, usually articulating with the stem. Flowers usually ternary. It comprises the Nat. Orders *Dioscoreaceæ*, *Smilacæ*, *Philesiaceæ*, *Trilliaceæ*, and *Roxburghiaceæ*.

**Dictyoid**. (Δίκτυον; εἶδος, likeness. F. *dictyode*; G. *netzformig, gegittert*.) Net-like, reticulated.

**Dictyon**. (Δίκτυον, a net.) A network, as of vessels or nerves.

Also, a synonym of, or term for, the *Retina*.

**Dictyonosteophyte**. (Δίκτυον; osteophyte.) A reticular or cancellous osteophyte.

**Dictyopsia**. (Δίκτυον, a net; ὄψις, sight.) An affection of the vision, in which muscæ are seen of a thread- or net-like appearance.

**Dictyoptera**. (Δίκτυον; πτερόν, a wing.) A synonym of *Blattide*, from the appearance of the wing-cases.

**Dictyota-ceæ**. (Δίκτυον, a net.) A Family of Suborder *Phaeosporæ*, Order *Fucoidæ*. Olive-coloured sea weeds with a continuous thallus bearing the reproductive organs in sori upon the surface.

**Dicyanogen**. Same as *Cyanogen gas*.

**Dicyclorion**. (Δίς, twice; κύκλος, a circle; πρίον, a saw. G. *Doppelkreissäge*.) Name for a bicircular saw.

**Dicyemida**. (Δίς; κύημα, an embryo.) A group of platyhelminthous worms which are parasites of the renal organs of the Cephalopoda. They obtain their name because they produce two forms of embryos, a vermiform and an infusoriform. They are very minute and immature animals, perhaps rediæ of some undetermined trematode.

**Dicynodon'tia**. (Δίς; κών, a dog; ὄδους, a tooth.) A synonym of *Cenonodonta*, in reference to the two large tusks in the upper jaw.

**Dicypellium**. (Δίς, twice; κύπελλον, a cup.) A Genus of the Nat. Order *Lauraceæ*.

**D. caryophyllum**, Nees. (Καρύοφυλλον, the clove tree. G. *Nelkenzimmt*.) Hab. Brazil. The plant producing the clove cassia of Brazil, the *Cortex caryophyllata*.

**Dicystidæ**. (Δίς; κύστις, a bladder.) A Division of *Gregarinæ*, including those which are two-celled.

**Didactylous**. (Δίς, twice; δάκτυλος, a finger. F. *didactyle*; S. *didactilo*; G. *zweifingert, zweifelhig*.) Having only two fingers or toes, as the Ruminants.

**Didelphia**, Blainville. (Δίς; δελφός, the womb.) A Subclass or a Division of the Class *Mammalia*, including those animals in which the uterine enlargements of the oviducts continue distinct, and each opens into its own vagina, which ends in a canal common to them and to the urethra, but distinct from the rectum. It includes the *Monotremata* and *Marsupialia*.

**Didelphida**, Waterhouse. (G. *Beuteltierchen*.) A Family of the Order *Marsupialia*. Teeth 14 C; P 3 M 4. Tail long, often naked; five toes, the inner one of the hind foot opposable, forming a thumb. American.

**Didelphidæ**. (Δίς, twice; δελφός, the womb.) A group of animals which includes the *Monotremata* and *Marsupials*; same as *Didelphia*.

**Didelphys**. (Δίς; δελφός, the womb.) The condition of a double uterus.

Also, a Genus of the Order *Marsupialia*.

**D. cancrivora**, Gm. (L. *cancer*, cancer; *voro*, to devour.) An animal which is one of the constituents, along with other animal substances, it is believed, of curare.

**Didodecahedral**. (Δίς, twice; δώδεκα, twelve; ἔδρα, a base.) Having twenty-four faces; as a dodecahedral crystal with hexagonal summits.

**D. epiphysis**. (Ἐπίφυσις, an outgrowth.) A separation of the epiphysis from the diaphysis.

**Diductio**. Same as *Diduction*.

**Diduction**. (L. *diductio*, a separating; from *di*, for *dis*, separation; *duco*, to draw.) Detachment or separation of parts from each other. Also, the lateral movement of the lower jaw of Ruminants.

**Diductor**. (L. *diduco*, to draw apart.) A muscle which performs the action of *Diduction*.

**Didym**. Same as *Didymium*.

**Didymæa**. (Δίδυμος, double.) Old term (Gr. *διδυμία*), used by Galen, *de C. M. sec. Loc. x*, 2, for a certain malagma or cataplasma, and so named on account of the double use to which he applied it.

**Didymalgia**. (Δίδυμοι, the testicles; ἄλγος, pain. F. *didymalgie*; 1. and S. *didymalgia*; G. *Hodenschmerz*.) Pain in the testes.

**Didymi**. (Δίδυμοι, twofold.) A synonym of the *Testes*, because they are two in number and alike.

Also, a term for the posterior *Corpora quadrigemina*.

**Didymia**. (Δίδυμος, double.) Old term for the testes cerebri, or posterior *Corpora quadrigemina*.

**Didymis**. (Dim. of *δίδυμοι*, the testicles.) A synonym of *Epididymis*.

**Didymitis**. (Δίδυμοι, the testicles.) Inflammation of the testis.

**Didymium**. (Δίδυμος, twofold.) A metal found by Scheerer in cerite; he thus named it on account of its resemblance to lanthanum, and the difficulty of separating the salts of the two metals from each other; or on account of its not occurring alone, but always in

association with cerium or lanthanum. Didymium has a sp. gr. of 6.541.

**D., salts of.** These salts are rose-coloured; alkalis throw down from their solution a pale-rose-coloured precipitate of the hydroxide.

**Didymocar'pæ.** (*Δίδυμος*; *καρπός*, fruit.) A Suborder of the Nat. Order *Boraginaceæ*.

**Didymocar'pous.** (*Δίδυμος*; *καρπός*, fruit. *G. doppelfruchtig*.) Having didymous or twin fruit.

**Didymo'sis.** (*Δίδυμος*.) The condition of union of two similar organs.

**Didymous.** (*Δίδυμος*, double or twain. *F. didyme*; *G. zweifach*, *doppelt*.) By two and two, double, a twin.

Applied to anthers, and other rounded organs when connected in pairs on one filament or stem.

**Did'yus.** (*Δίδυμος*.) A term for a testicle; also for a twin.

**D. symphyogas'trius.** (*Συμφύω*, to grow together; *γαστήρ*, the belly.) In Teratology, a twin united to its fellow by the abdomen.

**D. symphyohypogas'trius.** (*Συμφύω*; *ὕπογαστριον*, the hypogastrum.) In Teratology, a twin united with its fellow by the lower part of the abdomen.

**D. symphyoperinæ'us.** (*Συμφύω*; *περίναιον*, the space between the scrotum and anus.) In Teratology, a twin united to its fellow by the sacrum and coccyx.

**D. symphyothoracogas'trius.** (*Συμφύω*; *θώραξ*, the chest; *γαστήρ*, the belly.) In Teratology, a twin united to its fellow by the chest and abdomen.

**Didynam.** (*Δίς*, twice; *δύναμις*, power.) A plant of the Class *Didynamia*.

**Didynamia.** (*Δίς*, twice; *δύναμις*, power.) A Linnean class of plants, including those with didynamous stamens.

**Didynam'ian.** (*Δίς*; *δύναμις*.) Relating or belonging to the *Didynamia*.

**Didynamic.** Same as *Didynamian*.

**Didynamious.** Same as *Didynamous*.

**Didynamous.** (*Δίς*, twice or double; *δύναμις*, power. *F. didynamie*; *G. zweimächtig*.) Having two or double powers. Like the *Didynamia*.

**D. sta'mens.** A term applied to stamens when they are four in number, two long, and two short.

**Diecbo'lum.** (*Διεκβάλλω*, to throw out through.) Old name for a medicine inducing abortion.

**Die'cious.** See *Diæcious*.

**Die'dral.** See *Dihedral*.

**Dieffenbachia.** (*Dieffenbach*, a German botanist.) A Genus of the Sub-order *Ara-cæ*, Nat. Order *Aroidaceæ*.

**D. segui'na.** Schott. The dumb cane, named from the inflammation of the tongue and fauces it produces when chewed. The *Caladium seguinum*, Vent. Also called *Aglaonema*.

**Dielec'tric.** (*Διά*, through; *ἤλεκτρον*, amber.) A term applied to a non-conductor which has the capacity to transmit electricity by induction.

**D. constants.** (*L. constans*, constant, firm.) A term for the specific inductive capacity of dielectrics; that of air being taken as unity, that of resin is 1.76, of glass 1.9, of shellac 1.95, of india rubber 2.8, and of mica 5.

**D. polarisa'tion.** (*L. polus*, a pole.) The condition of the molecules of a dielectric during inductive action, when they become, alternately, positively and negatively electrified.

**Dielect'ron.** (*Διά*, through; *ἤλεκτρον*, amber.) Old name for a troch, of which amber was an ingredient.

**Die'lytra.** (*Δίς*, twice; *ἑλυτρον*, a cover.) A Genus of the Nat. Order *Fumariaceæ*, so called from the shape of its flower.

**D. exim'ia.** Busk. (*L. eximius*, excellent.) The *Incentra canadensis*.

**Di'enceph'alon.** (*Δίς*, twice; *ἐγκέφαλος*, the brain.) A synonym of *Thalamencephalon*.

**Diepa'tias.** (*Δίς*, two; *ἡπατις*, of the liver.) In Teratology, a foetus with two livers.

**Dier'enbach.** A city of Bavaria, near which is a sulphurous spring.

**Dieres'ilious.** (Same etymon.) Applied to simple fruits that at their maturity are divided into a number of separate parts.

**Dierc'silis.** (*Διαίρω*, to divide.) A capsular, dry, and regular fruit, formed of many cavities ranged round an axis, the product of the re-entering valves.

**Dieresis.** The same as *Diæresis*.

**Dieretic.** (*Διαίρω*, to divide. *F. diérétique*; *L. S. diuretic*; *G. diauretisch*.) Term applied to any mechanical or chemical agent fitted to divide or cut the tissues; escharotic, corrosive.

**Diervillia.** (*Dierville*, a French surgeon, who first brought it from Arcadia.) A Genus of the Nat. Order *Caprifoliaceæ*.

**D. canad'ensis.** Willdenow. (*Canada*.) The same as *D. trifida*.

**D. hu'milis.** (*L. humilis*, low.) The same as *D. trifida*.

**D. lu'tea.** (*L. luteus*, golden yellow.) The same as *D. trifida*.

**D. Tournefort'ii.** Millar. (*Tournefort*, a French naturalist.) The same as *D. trifida*.

**D. tri'fida.** Mönch. (*L. trifidus*, three-cleft.) The bush honeysuckle. A plant indigenous in North America, which has been used as a diuretic in gonorrhœa and syphilis.

**Dies.** (*L. dies*, a day. *F. jour*; *G. Tag*.) A day; the period of twenty-four hours.

**D. canicula'res.** See *Canicularis*.

**D. contemplab'iles.** (*L. contemplabilis*, aiming.) The same as *D. critici*.

**D. contemplan'tes.** (*L. part. of contemplor*, to consider.) The same as *D. critici*.

**D. crit'ic.** (*Κριτικός*, able to discern.) Critical days, or those on which the crisis of fever was favourable or unfavourable. See *Critical days*.

**D. decreto'rii.** (*L. decretorius*, decisive.) Same as *D. critici*.

**D. indican'tes.** (*L. part. of indicio*, to point out.) The same as *D. critici*.

**D. indicato'rii.** (*L. indicio*.) The same as *D. critici*.

**D. in'dices.** (*L. index*, a discoverer.) Same as *D. critici*.

**D. intercala'rii.** (*L. intercalarius*; from *intercalo*, to insert between.) The intermediate days between the critical days of a fever.

**D. internun'til.** (*L. internuncius*, a messenger.) The same as *D. critici*.

**D. judicato'rii.** (*L. judicatorius*, judicial.) Same as *D. critici*.

## DIET—DIETHYLAMINE.

**D. principes.** (L. *princeps*, first in order.) Same as *D. critici*.

**D. radicales.** (L. *radix*, a root.) Same as *D. critici*.

**Diet.** (Old F. *diète*; from Low L. *dieta*, a ration of food; from Gr. *diata*, mode of life.) Food, a regularly ordered mode of life as to eating and drinking. The diet of different individuals varies greatly both in quantity and in quality. In the healthy European adult of average weight and stature, the diet must contain about 300—400 grains of nitrogen and from 4500—5000 grains of carbon, which are contained in about 2 lbs. of bread and  $\frac{3}{4}$  lb. of meat. As a rule, there should be a due admixture of proteids, fats, starches, and sugars, mineral salts and water, since life cannot be supported on either of these proximate principles alone, and variety is requisite to prevent disgust. One physiologist considers a healthy active man to be well fed with 16 oz. of meat, 19 oz. of bread, 3.5 oz. fat, and 52 fl. oz. of water; whilst another considers that 4 oz. of dry albumen, 11.5 oz. of some starchy substance, 3 oz. of fat, and 1 oz. of salts is sufficient.

**D., analeptic.** (Ανάληψις, a taking up, repair.) A diet appropriate for the restoration of health after illness, containing the more nutritive foods, with the addition of such things as cod-liver oil and Iceland moss.

**D., broth.** Diet limited to meat-broth with or without bread.

**D., children's.** At the London Hospital children under seven years of age are allowed daily 12 oz. of bread,  $\frac{1}{2}$  pint of milk, 2 oz. of meat; and in addition 8 oz. of potatoes five times a week, and rice pudding twice a week.

**D., convalescent.** (L. *convalesco*, to gain strength.) The convalescent diet at Middlesex Hospital, London, is daily 10 oz. of bread. Breakfast, milk half a pint; dinner, 12 oz. uncooked meat for males, 8 oz. for females, and half a pound of potatoes; supper one pint of gruel or one pint of broth.

**D. drink.** Term for an alterative decoction of medicinal herbs.

**D. drink, Lisbon.** See *Lisbon diet-drink*.

**D., dry.** See *Dieta sicca*.

**D., extra.** (L. *extra*, without.) A diet in which something to suit the palate of the invalid is added to the ordinary full diet, such as mutton chop, beef-steak, fish, puddings, with wine, spirits, or beer.

**D., fever.** At St. Thomas's Hospital, 4 oz. of bread, 2 pints of barley water or gruel, 2 pints of milk.

**D., fish.** Diet in which fish replaces meat as the principal nitrogen-containing substance. The chief fish in use in England are cod, ling, plaice, turbot, sole, flounder, haddock, whiting, herring, sprat, mackerel, pilchard, eel, red mullet, grey mullet, skate, halibut, pike, carp, tench, roach, perch, salmon, trout, bream, anchovy, whitebait, smelt, gurnard. The lamprey, sturgeon, and conger are not often consumed. Salmon contains about 77 per cent. of water, 16 of nitrogenous compounds, 5.5 per cent. of fat, and the remainder salts. The eel contains 13—23 per cent. of fat. Fish diet contains much phosphorus; it is easily digestible. Fish should be boiled and eaten fresh; the consumption of stale fish and leprosy are said to be coincident.

**D., full.** Breakfast, one pint of tea, bread

and butter; dinner, 6 to 8 ounces of meat when dressed, half a pound of potatoes, bread, and beer; tea, one pint of tea, bread and butter; supper, bread and butter, beer.

**D., half.** Breakfast, one pint of tea, bread and butter; dinner, a quarter of a pound of dressed meat, half pound of potatoes, bread and beer; tea, one pint of tea, bread and butter; supper, bread and butter, beer. Sometimes a pint of strong soup is substituted for the beer.

**D., low.** Bread about 10 oz., and half a pint of broth or beef tea, with gruel or barley water at discretion, and rice, arrowroot, or sago, as may be ordered.

**D., meat.** Diet of which meat forms an important part.

**D., milk.** (F. *diète lactée*.) Breakfast, one pint of tea; dinner, one and a half pint of milk, or one pint of milk with arrowroot, rice, or sago, bread; tea, one pint of tea, bread and butter; supper, bread and butter, gruel.

Also, a diet composed altogether of milk.

**D., pudding.** The same as *D., milk*.

**D., slop.** A diet composed chiefly of liquid food.

**D., soup.** Same as *D., broth*.

**D., subsistence.** The lowest amount of food on which life can be supported in health. It is represented by certain prison and convalescent dietaries, and contains nitrogenous matter 2.33 oz., fat 0.84 oz., carbohydrates 11.60 oz. Dynamic value 2453 foot tons.

**D. tables.** See under head *Diet* and *Dietary*.

**Dietary.** (*Diet*.) A regulated system or supply of food, so arranged as to be applicable to the wants of the economy and the demands upon its resources under ordinary conditions of work and temperature. Moleschott estimates that a man of average weight and height requires 130 grms. (4.587 oz. av.) of dry albuminous matter, 84 grms. (2.964 oz.) of fat, 404 grms. (14.250 oz.) of carbohydrates, and 30 grms. (1.058 oz.) of salts, or about 650 grms. (23 oz.) of dry solid matter. The ordinary articles of food contain about 50 per cent. of water, so that 46 oz. of solid food is required, and from 50 to 80 oz. of water is commonly drunk. The dynamic value of this diet amounts to 3360 foot tons. The diet of soldiers and artisans in active work is more liberal, consisting of nitrogenous matter about 5 oz., fat 3 oz., carbohydrates 22 oz., mineral matter 1 oz.

**Dietetic.** (Διαίτησις, to feed. F. *diététique*; G. *diätetisch*, zur Diät gehörig.) Of, or belonging to, the taking of proper food, or to diet.

**Dietetical.** Same as *Dietetic*.

**Dietetics.** (Διαίτητική, from διαίτησις, to feed. F. *diététique*; G. *Diätetik*.) The system of regulation of the food or diet, so as best to secure the restoration or maintenance of health.

**Dietetist.** (*Diet*. F. *diététiste*; I. *diētetista*.) Term applied to one who treats disease by a systematic course of diet.

**Diethyl.** C<sub>2</sub>H<sub>5</sub>. A name applied to the substance originally called ethyl, to distinguish it from butylhydride. Diethyl is now called butane.

**D. oxide.** A synonym of *Ethylie ether*.

**Diethylamine.** N(C<sub>2</sub>H<sub>5</sub>)<sub>2</sub>H. Obtained by distilling diethylammonium bromide with potash. It is a colourless, ammoniacal smelling fluid, boiling at 57.5° C. (135.7° F.)

**Diethylmethylacetic acid.** An isomer of *Emanthic acid*.

**Dietic.** (*Diet.*) Having relation to diet.

**D. diseases.** Diseases caused by inattention to wholesome rules of diet. Such diseases are scurvy, rickets, and alcoholism.

**Dieu le fitt.** France; Département du Drome. Here are alkaline, bicarbonated, cold mineral waters containing hydrogen sulphide, and a little iron.

**Dieulefoy.** A French surgeon of the present century.

**D.'s aspirator.** The surgical instrument described under *Aspirator*.

**Dieurysmus.** (*Διά*, through; *εἰρῆνω*, to make wide.) Dilatation, expansion.

**Diexodes.** (*Διά*, through; *ἐξοδος*, a way by which anything passes.) In Hippocrates, the passage of the faeces by the anus.

Also, the aperture by which an excretion is evacuated.

**Difference.** (L. *differentia*, from *differe*, to carry apart.) The state or condition of being unlike.

**D. the'ory.** A term applied to Hermann's theory of the electro-motive muscular current, because it refers all the phenomena to differences in condition of the same fibre.

**Diferent.** (L. *differeus*, part. of *differe*.) Unlike to, separate, distinct.

**D. points.** (G. *difficente Punkte*.) Term applied by Fechner to different points on the same retina; in opposition to *Disparate points*, which refers to different points on the opposite retina.

**Differential.** (L. *differentia*, a difference; from *differe*, to carry from each other; from *de*, from; *fero*, to bear.) Creating a difference, discriminating.

**D. determination.** Same as *D. diagnosis*.

**D. diagno'sis.** (*Διάγνωσις*, a distinguishing.) The distinguishing of a disease from another disease which presents some similar symptoms, but is really different.

**D. rhe'otome.** See *Rheotome, differential*.

**D. thermom'eter.** See *Thermometer, differential*.

**D. tone.** See *Tone, differential*.

**Differen'tiate.** (Same etymon.) To lead to, or mark, or distinguish by, a difference; to become distinct in character.

**Differentia'tion.** (L. *differentia*, a difference.) The production or discrimination of differences.

In Biology, the gradual formation or production of organs or parts in an animal or vegetable body by the limitation of different parts of it to the performance of special functions; a process that is usually coincident with increased complexity, and with alteration of structure and disposition of the elementary parts.

The gradual change of homogeneous material into the various tissues and organs of the body which takes place during the development of the ovum into the adult organism.

**Difficult.** (*Difficulty*.) Hard to be done.

**D. la'bour.** See *Labour, difficult*.

**Difficul'tas.** See *Difficulty*.

**D. intestin'o'rum.** (L. *intestina*, the bowels.) A synonym of *Dysentery*.

**Difficulty.** (Old F. *difficulte*; from L. *difficultas*, from *difficilis*, hard, troublesome; the old form of which was *difficilis*; from *dis*, neg;

*facilis*, easy.) Hardness to be done, that which is hard to be done, trouble.

**Diffia'tio.** (L. *difflo*, to blow apart.) Old term for *Transpiration* or *Perspiration*.

**Diffuane.**  $C_6H_5O_5N_2$ . A substance obtained, together with leucoturic acid, on heating alloxanic acid. It forms a gummy mass, very soluble in water, and having a slightly acid reaction.

**Diffuence.** (L. *diffuens*, part. of *difflo*, to flow asunder.) A condition of semi-fluidity without consistence.

**Diff'uent.** (L. *diffuens*. G. *zerfliessend*.) Being an almost fluid consistence; flowing away on all sides.

**D. tu'mour.** (L. *tumor*, a swelling.) A tumour which gives the impression of fluid.

**Diff'orm.** (L. *dis*, for *dis*, apart; *forma*, shape. F. *difforme*; G. *missgebildet, ungestaltet, unformlich*.) Of various or different shapes; irregularly formed.

**Difform'ed.** Same as *Difform*.

**Difform'ity.** (Same etymon.) Irregularity of form.

Also, same as *Deformity*.

**Diffra'ct.** (L. *diffRACTus*, part. of *diffringo*, to break in pieces.) To bend from a straight line.

In Botany, broken into areolae with distinct interspaces.

**Diffraction.** (L. *diffRACTus*. F. *diffraction*; I. *diffrazione*.) The deflection from a straight line undergone by rays of light as they pass close to the margin of opaque bodies or traverse a narrow opening. From this cause it happens that the edge of the shadow of an opaque substance does not present a sharp outline, but a gradually-thinning darkness, marked by alternate dark and light bands or fringes, which themselves fade into each other. These fringes are broader in the inverse ratio of the refrangibility of the ray of light, and thus prismatic colours are formed. The fringes vary in appearance according as they are produced by light passing by the edge of a body, or through a small round aperture, or through a narrow slit.

**D. irin'ges.** See under *Diffraction*.

**D. spectrum.** See *Spectrum, diffraction*.

**Diffra'ctive.** (Same etymon.) Causing *Diffraction*.

**Diffu'sate.** (L. *diffusus*, part. of *diffundo*, to spread in every direction.) The distilled water containing the crystalloids which have passed out of the dialyser in the operation of dialysis.

**Diffu'se.** (L. *diffundo*, to scatter abroad. F. *diffus*; I. *d. fusso*; S. *defuso*; G. *ausgebreitet*.) Widely spread; scattered; spreading indeterminately.

In Botany, applied to panicles and stems which spread and branch indeterminately, but chiefly horizontally.

In Medicine, applied to diseases that spread widely.

**D. an'eurysm.** (F. *aneurysme faux primitif*.) An aneurysm caused by the rupture of the walls of the vessels. See *Aneurysm, diffused*.

**D. inflamma'tion.** See *Inflammation, diffuse*.

**D. placen'ta.** See *Placenta, diffuse*.

**D. tu'mours.** (L. *tumour*, a swelling.) A tumour, the outline of which is not clearly defined.

**Diffused.** Same as *Diffuse*.

**D. aneurysm.** See *Aneurysm*, *diffused*.

**Diffusibility.** (Same etymon.) The quality of undergoing *Diffusion*.

**Diffusible.** (L. *diffundo*, to pour forth. F. *diffusible*; I. *diffusibile*; S. *diffusibile*; G. *verflüchtigend*.) Capable of spreading through gases or liquids.

**D. stimulants.** Term applied to substances like ammonia, ether, and alcohol, which are rapidly absorbed and distributed through the system by the blood, and which act as excitants to the nervous system.

**Diffusimeter.** (L. *diffusus*, part. of *diffundo*; Gr. μέτρον, a measure.) An instrument for measuring the rate of diffusion of gases.

**Diffusion.** (L. *diffusio*, from *diffundo*, to spread in every direction. F. *diffusion*; I. *diffusione*; G. *Verbreitung*.) A spreading, a dispersion; the dissemination or distribution of a medicine or of a poison through the body. The spontaneous mixture of two or more gases or fluids with one another. It is usually applied to the passage of a salt dissolved in water through a diaphragm or porous septum into distilled water. Bodies traversing such septa with facility are termed *Crystalloids*. Those which traverse porous septa with difficulty, or not at all, are named *Colloids*.

**D. apparatus.** A cell divided into two parts by a porous septum or diaphragm. See *Dialyser*.

**D. circle.** The ill-defined image which results from the falling of light that has passed through a lens on a screen, either in front of or behind the true focus of the lens. See also *Circle of diffusion*.

**D. of gas'es.** The spontaneous intermingling of elastic fluids. Dalton showed that gases behaved to one another as though they were empty space. The total pressure exercised upon the walls is equivalent to the partial pressure of each gas that may be present. Gases diffuse through porous septa with a rapidity which is inversely proportional to the square roots of their densities.

**D. of heat.** An irregular reflection of heat rays similar to the *D. of light*.

**D. of light.** The irregular reflection of light-rays from an unpolished surface, by which they become broken up into a variety of rays, having various angles and planes of reflection. Some bodies absorb some rays and diffuse others, and so appear coloured.

**D. of liquids.** The process by which two liquids of different specific gravity gradually intermix with each other when they are placed in contact.

**D. tube.** A graduated glass tube, used by Graham in experiments on the diffusion of gases. One end is closed by a plug of plaster of Paris; the tube is filled with the gas to be experimented on, and the open end placed on water. The rate and amount of diffusion is measured by the rise or fall of the water.

**D. volume.** The relative diffusibility of gases reduced to figures, that of air being taken as unity.

**Diffusus.** The same as *Diffuse*.

**Diffuane.** Same as *Diffuane*.

**Digallic acid.** A synonym of tannic acid, on the assumption that it is an anhydride of gallic acid, one molecule of it representing two molecules of gallic acid, less one of water.

**Digamia.** (Δίς, twice; γάμος, marriage. G. *Doppelhe*.) The condition of a flower which possesses both sexes.

**Digamous.** (Δίς; γάμος, marriage.) Having both sexes on the same flower-cluster.

**Digastric.** (Δίς, twice or double; γαστήρ, a belly. F. *digastrique*; I. and S. *digastrico*; G. *zweibäuchig*.) Two-bellied.

**D. fossa.** (L. *fossa*, a pit.) A shallow oval depression on the inner surface of the inferior border of the lower jaw, on each side of the symphysis, for the attachment of the anterior belly of the digastric muscle.

Also, the same as *D. groove*.

**D. groove.** (F. *rainure digastrique*; G. *Warzenanschnitt*.) The depression on the inner side of the mastoid process of the temporal bone from which the digastric muscle arises.

**D. lobe of cerebellum.** (G. *der zweibäuchige Lappen*.) The *Lobus cuneiformis*.

**D. muscle.** (F. *muscle digastrique*; G. *zweibäuchiger Kiefermuskel*.) A muscle of the lower jaw, which is thick and fleshy at its extremities, thin and tendinous at its middle. It arises from the *D. groove* of the mastoid process of temporal bone, and is inserted into a depression, the *D. fossa*, at the side of the inner and lower surface of the symphysis menti. The tendon passes through an aponeurotic ring, which is attached to the os hyoides. Its action is to depress the lower jaw, or to raise the hyoid bone and carry it backwards or forwards as in deglutition. The anterior belly is supplied by the mylohyoid branch of the third division of the fifth nerve. The posterior belly is supplied by the facial nerve.

In some Mammals, as the dog, and occasionally in man, the digastric muscle has only one belly; in some birds it has three. In reptiles and birds it arises from the hinder part of the skull, and is attached to the posterior extremity of the mandible.

Also, applied to muscular structure of the gizzard of birds.

**D. nerve.** A branch of the facial nerve, just as it emerges from the stylo-mastoid foramen, arising in common with the stylo-hyoid nerve; it supplies the digastric muscle, and sometimes sends a branch to join the glossopharyngeal nerve near the base of the skull.

**Digastricus.** See *Digastric*.

**D. cranil.** (Κρανίον, the skull.) A synonym of the occipito-frontalis muscle.

**D. ossis hyoidei.** (L. *os*, a bone; *hyoid*.) A synonym of the *Digastric muscle*, from its attachment to the hyoid bone.

**Digby, Sir Ken'elm.** An English physician, born 1603; died 1665.

**D's sympathetic powder.** Crystals of the protosulphate of iron heated sufficiently to expel the water of crystallisation.

**Digenæa.** (Δίς, double; γένεσις, generation.) A Suborder of entoparasitic worms of the Order *Trematoda*, with numerous small ova, and long cycle of development, which is usually associated with an alternation of generation. It contains three families: Monostomida, having a single sucker near the front of the body, which includes the opening of the mouth; Amphistomida, which have a sucker at each end of the body, the posterior being largest; and Distomida, which have a sucker in front and one near the middle of the body.

**Digen'eous.** The same as *Digenes*.

**Dig'enes.** (*Δίς*, twice; *γένος*, a race. F. *bigène*; G. *zueigeschlechtig*.) Of two sexes; bisexual.

**Digen'esis.** (*Δίς*, twice; *γένεσις*, generation.) The faculty possessed by some plants and some animals of multiplying in two ways; on the one hand by ova fecundated by means of spermatic fluid, and on the other asexually by germs or buds. Digenesis is seen in Aphides, in some Crustaceae, and in Tunicata.

Also, a synonym of *Metagenesis*.

**D., heterog'onous.** (*ἑτερος*, another; *γόνος*, seed.) The form of digenesis in which the buds produce animals differing in appearance from their progenitors.

**D., homog'onous.** (*ὁμός*, like; *γόνος*, seed.) That form of digenesis in which, as in Annélides, the buds produce animals similar to those from which they spring.

**Digenes mus.** Same as *Digeny*.

**Digenet'ic.** (*Δίς*; *γένεσις*.) Relating to *Digenesis*.

**D. worms.** Parasitic worms which at different periods of life have different forms; those of the Suborder *Digeneta*.

**Dig'eny.** (*Δίς*; *γένεσις*, generation. G. *Digénie*.) Burdach's term for the act of generation by the concurrence of two sexes.

**Dig'erens.** (L. *digero*, to digest. F. *digestif*; G. *Verdauung befördernd*.) Digesting; digestive. Applied to medicines which promote the secretion of proper, or what is called healthy, pus in wounds. Same as *Digestive*.

**Digerentia.** (L. *digero*; from *dis*, apart; *gero*, to bear.) Things which promote digestion.

**Diges'tants.** (L. *digestus*, part of *digero*, to digest.) Things which promote the digestion of food in the stomach; such are pepsin, hydrochloric acid, and lactic acid.

**Digester.** (L. *digero*, to digest. F. *digesteur*, *marmite*; G. *Verdaufer*.) Name of a strong iron or copper kettle with a safety valve, for subjecting bodies to an elevated temperature at high pressure.

**Digestibility.** (L. *digero*.) Capability of being digested.

**Digestible.** (L. *digero*. F. and I. *digestible*; G. *verdaulich*.) That which is capable of being easily digested, easily acted upon, dissolved, and rendered fit for absorption, by the gastric and other juices of the alimentary canal.

**Digestio.** See *Digestion*.

**D. depravata.** (L. part. of *depravo*, to pervert.) A disorder of digestion.

**D. diffic'ilis.** (L. *difficilis*, difficult.) Difficult, painful digestion.

**D. læ'sa.** (L. part. of *lædo*, to offend.) Dyspepsia, or indigestion.

**Digestion.** (L. *digestus*; part. of *digero*, to carry apart, to digest. F. *digestion*; G. *Daunng*, *Verdauung*.) Term for the slow action of matters on each other, by subjection to heat for a time.

Especially applied to the process undergone by the food in the stomach. See *D., gastric*.

In Surgery, an old term to express the occurrence of healthy suppuration in a wound.

Also, in Pharmacy (G. *Lösung*, *Auflösung*), the operation of solution of solid matters in liquid menstrua by the prolonged action of a gentle heat.

**D., artific'ial.** (L. *artificialis*, belonging

to art.) The action of various fluids, made to resemble the normal digestive fluids, on the different kinds of food.

**D., bad.** See *Dyspepsia*.

**D., cæ'cal.** (*Cæcum*.) Changes taking place in food-substances during their passage along the cæcum. It chiefly consists in the conversion of crude starch, which has become softened in its transit through the alimentary canal, into lactic acid.

**D., duod'enal.** (*Duodenum*.) The same as *Pancreatic digestion*.

**D., gas'tric.** (*Γαστήρ*, the belly.) The digestion of the food in the stomach and its conversion into chyme. This is an acid digestion, and is effected by the secretion of the stomach, which contains free hydrochloric or lactic acid and a ferment named pepsin. In gastric digestion the proteids are converted into peptones; sugars and salts are dissolved, but starches and fats are scarcely, if at all, acted on; gastric digestion of meat occupies from two to four hours. It is interfered with or arrested by alkalies, much alcohol, cold, and excess in quantity of either solids or fluids.

**D., good.** See *Eupepsia*.

**D., intest'inal.** (L. *intestina*, the bowels.) The food, already powerfully acted upon by the salivary, gastric, and pancreatic secretions, undergoes further changes in the small and large intestines. The fluid poured forth from the glands of the small intestine appears to have the power of converting starch into sugar, fats into emulsions, and proteids into peptones. In the large intestine starch, which has undergone softening in its passage through the small intestine, is converted into lactic acid.

**D., organs of.** (F. *organes digestives*, *voies digestives*.) Term applied to the whole tract of the intestinal canal, with the glands which pour their contents into it. It includes the mouth, pharynx, œsophagus, stomach, small and large intestine, and rectum, with the salivary, gastric, and intestinal glands, the liver, and pancreas. See *Alimentary canal*.

**D., pancreatic.** (*Pancreas*.) The digestion of food in the duodenum and upper part of ilium by the pancreatic juice. This is an alkaline digestion, and is effected by the ferments named trypsin, steapsin, and amylöpsin, contained in the pancreatic juice, aided by the warmth and movement of the intestine. The trypsin converts proteids into peptones by a kind of corrosive action; the steapsin, after emulsifying them, decomposes the fats into fatty acids and glycerine, and the amylöpsin converts starch into glucose. The ultimate results of the action of the pancreatic juice on the proteids are leucin, tyrosin, indol, and skatol.

**D., pep'tic.** (*Πεπτός*, cooked.) The same as *D., gastric*.

**D., weak.** See *Bradypepsia*.

**Digestiva.** Same as *Digestives*.

**Digestive.** (L. *digero*, to digest. F. *digestif*; G. *Verdauung befördernd*.) Belonging to, or connected with, digestion.

Applied (G. *Eiterungsmittel*) to substances which promote suppuration in a wound or ulcer, as cerates, poultices.

**D. appa'rat'us.** The organs of digestion.

**D. fermenta'tion.** (L. *fermentum*, a ferment.) The changes undergone by the various constituents of the food during digestion.

**D. ferments.** See *Ptyalin*, *Trypsin*, *Steapsin*, *Amylopsin*, *Ferment*, *Curdling*, and *Pepsin*.

**D. ointment.** (G. *Digestivesalbe*.) The *Unguentum terebinthinæ compositum*.

**D. principle.** A synonym of *Pepsin*.

**D. process.** The act of digestion.

**D. salt of Sylvius.** See *Sylvius*, *digestive salt of*.

**D. texture.** (L. *textura*, a structure.) The physical or chemical conditions of a substance which relate to its digestibility.

**D. tube.** The alimentary canal.

**Digestives.** (L. *digero*.) Substances having the action called *Digestion*.

**Digestivum sal.** (L. *digestus*, part. of *dyero*; *sal*, salt.) The *Potassii chloridum*.

**Digger pine.** The *Pinus sabiana*, Dougl.

**Dig'it.** (L. *digitus*, a finger.) A finger or toe. See *Digitus*.

**D., supernumerary.** (L. *super*, above; *numerus*, full number.) A finger or toe in excess of the usual number.

**Dig'ital.** (L. *digitalis*, belonging to a finger. F. *digital*; G. *den Finger betreffend*; *fingersdick*, *fingerslang*.) Of, or belonging to, or of the length of, or of the shape of, a finger or toe.

**D. appendix.** A synonym of the *Appendix vermiformis*.

**D. ar'teries, dor'sal.** (L. *dorsum*, the back.) The *D. arteries of anterior tibial*.

**D. ar'teries of ante'rior tib'ial, dor'sal.** Two branches of each dorsal interosseous artery of the foot which run along the contiguous borders of the three outer toes; a branch from the outermost dorsal interosseous artery, or from the metatarsal artery, supplies the outer side of the little toe.

**D. ar'teries of foot.** See *D. arteries of anterior tibial, dorsal*; *D. arteries of posterior tibial*; and *D. artery of anterior tibial, plantar*.

**D. ar'teries of hand, dor'sal.** (L. *dorsum*, the back.) The two terminal branches of the first, second, and third dorsal interosseous branches of the radial artery; they supply the adjacent sides of the index and middle fingers, the middle and ring, and the ring and little fingers, and anastomose with the palmar digital arteries.

**D. ar'teries of hand, pal'mar.** The arteries supplying the fingers. Branches, usually four in number, of the superficial palmar arch of the ulnar artery from its convexity; the innermost supplies the ulnar side of the little finger, the second divides at the end of the fourth metacarpal space into two branches for the adjoining sides of the little and ring fingers, the third is in like manner distributed to the ring and middle fingers, and the fourth to the adjoining faces of the middle and index fingers. At about the middle of the last phalanx the two arteries of each side of the finger form an arch, which gives off branches for the supply of the pulp of the finger and the matrix of the nail.

**D. ar'teries of poste'rior tib'ial.** Four branches of the external plantar artery or plantar arch, from its convexity; the first supplies the outer side of the little toe, the second splits into two branches at the end of the metatarsal space and supplies the adjoining surfaces of the little and the fourth toes, the third supplies the fourth and third toes, and the fourth supplies

the third and second toes in like manner. On the last phalanges the arteries of each side form an arch, which gives off branches for the supply of the matrix of the nail and the bulb of the toe.

**D. ar'teries, plan'tar.** (L. *planta*, the sole.) The *D. arteries of posterior tibial*.

**D. ar'teries, ul'nar.** Same as *D. arteries of hand, palmar*.

**D. artery of ante'rior tib'ial, plan'tar.** (L. *planta*, the sole.) The inner of the two terminal branches of the dorsal artery of the foot in the sole; it supplies the inner side of the great toe, and the adjacent sides of the great and second toes.

**D. cavity of lateral ven'tricle.** The posterior cornu of the lateral ventricle of the brain.

**D. compres'sion.** (L. *compressio*, a pressing together.) A mode of arresting hæmorrhage or the flow of blood through an artery by pressing the part with the fingers. See *Compression*, *digital*.

**D. dilata'tion.** (L. *dilatatio*, an enlarging.) The enlargement of a cavity by the introduction of the finger; specially used in reference to the dilatation of the os uteri by this means.

**D. examina'tion.** (L. *examinatio*, a weighing.) Examination of any object by means of the fingers; specially applied to the examination of the os and cervix uteri through the vagina.

**D. fos'sa of fe'mur.** (L. *fossa*, a pit. G. *Rollhügelgrube*.) The deep depression between the base of the inner surface of the trochanter major and the springing of the neck of the femur for the attachment of the tendon of the obturator externus muscle.

**D. fos'sa of tu'nica vaginal'is.** A pouch of the *Tunica vaginalis* lying between the testis and the epididymis, as it is reflected from one to the other.

**D. impres'sions.** (L. *impressio*, an impression.) The grooves on the inner surface of the cranial bones which correspond to the convolutions of the brain; so called from their shape.

**D. nerves of foot.** See *D. nerves of plantar, external*; *D. nerves of plantar, internal*; and *D. nerves of musculo-cutaneous*.

**D. nerves of hand.** See *D. nerves of median*; *D. nerves of radial*; and *D. nerves of ulnar*.

**D. nerves of me'dian.** Five branches of the median nerve beyond its palmar enlargement; the first supplies the outer side of the thumb, and is connected with a branch of the radial nerve on the ball; the second supplies the inner side of the thumb; the third lies on the radial side of the index finger, and supplies the first lumbricalis muscle; the fourth supplies the adjacent sides of the index and middle fingers, and supplies the second lumbricalis; and the fifth supplies the adjacent sides of the middle and ring fingers, and communicates with a branch from the ulnar nerve.

**D. nerves of mus'culo-cutaneous.** Two branches from the internal division of the musculo-cutaneous nerve; one of which supplies the inner side of the great toe, and the other the adjoining sides of the second and third toes; and two branches from the external division, which supply the adjacent sides of the third and fourth and fourth and fifth toes respectively.

**D. nerves of plan'tar, exter'nal.** Two branches of the superficial terminal branch of the external plantar nerve, one of which runs on the outer side of the little toe, and supplies the flexor brevis minimi digiti and one or both interossei of the fourth metatarsal space; the other and larger branch supplies the adjoining surfaces of the fourth and fifth toes, and communicates with a branch of the internal plantar nerve.

**D. nerves of plan'tar, inter'nal.** Four branches of the internal plantar branch of the posterior tibial nerve; the first supplies the inner side of the great toe and the flexor brevis pollicis; the second supplies the adjacent sides of the great and second toes and the first lumbricalis muscle; the third supplies the adjacent sides of the second and third toes and the second lumbricalis muscle, and the fourth supplies the adjacent sides of the third and fourth toes, and communicates with a branch from the external plantar nerve.

**D. nerves of ra'dial.** Three branches of the arch on the back of the hand, formed by the inner terminal branch of the radial nerve and the anterior branch of the external cutaneous nerve; the first supplies the ulnar side of the thumb and the radial side of the index finger, the second the adjacent sides of the index and middle fingers; and the third, joining a twig from the dorsal branch of the ulnar nerve, supplies the contiguous sides of the middle and ring fingers.

**D. nerves of tib'ial, ante'rior.** Two terminal branches of the internal division of the anterior tibial nerve which supply the dorsal integument of the adjacent sides of the great and little toes.

**D. nerves of ul'nar, dor'sal.** The terminal twigs of a branch given off from the ulnar nerve a little above the wrist; one supplies the inner side of the little finger, one the adjacent sides of the little and the ring fingers, and another joins the branch from the radial which supplies the contiguous sides of the ring and middle fingers.

**D. nerves of ul'nar, pal'mar.** A branch to the ulnar side of the little finger, and one to the adjoining sides of the little and ring fingers, from the superficial palmar branch of the ulnar nerve.

**D. phalan'ges.** (Φάλαγξ, a line of battle, the individual bones of the fingers. *F. phalanges des doigts*; *G. Fingerglieder.*) The bones of the digits, two for the thumb, three for each of the fingers. Those of the first row are slightly curved forwards; the dorsal surface is smooth and transversely convex; the palmar surface is level, with a rough edge on each side for the attachment of the sheaths of the flexor tendons; they articulate with the metacarpal bones by a thickish head having a transversely oval, concave surface, and with the contiguous row of phalanges by a head flattened from front to back and divided by a groove into two lateral condyles. Those of the second row are found only in the fingers; they are like those of the first row, but are smaller, and their proximal articulating head has a central elevation and two lateral concave surfaces. The terminal or ungual phalanges have a proximal articulating surface, like those of the second row, with a depression in front for the attachment of the tendons of the flexor muscles; and a broadish, flattened, and rough free extremity for attachment of the nails.

**D. veins.** Veins of the foot and hand corresponding to the digital arteries.

**Digitala'crin.** The same as *Digitaloic acid*, Walz. Perhaps the same as *Valerianic acid*.

**Digital'is.** (*L. digitus*, a finger.) A finger stall.

**Digital'lein**, Kosmann.  $C_2H_3O$ . An indifferent amorphous substance obtained from digitalis, and chiefly from the seeds, by Kosmann. It is the same as the *Digital'lein* of Nativelle, in that it stops the heart in systole, but is much more active.

**Digital'lein**, Nativelle. The same as *Digitalinum incrustabile*.

**Digital'lein**, Schmiedeberg. A substance easily soluble in water, and the chief constituent of the German digitalin.

**Digital'leinic acid**, Kosmann. A fluid fatty acid obtained by Kosmann from digitalis leaves.

**Digital'etin.**  $C_{22}H_{39}O_9$ . A term lately applied by Walz to pure soluble digitalin, but formerly to a substance forming white crystalline warty masses, which he obtained from the leaves of *Digitalis purpurea* and *lutea*.

**Digital'ia.** Same as *Digitalin*.

**Digitalic acid**, Moriu. An acid obtained from digitalis leaves, which crystallises in white acicular prisms. It has a not unpleasant taste, and is very soluble in water and alcohol.

**Digital'erin.** The same as *Digitalacrin*.

**Digital'iform.** (*L. digitalis*, the fox-glove; *form*, shape.) Finger- or glove-shaped; like the corolla of the *Digitalis*.

**Digital'in.** (*Digitalis*.) A term which has been given to what was supposed to be the active alkaloid of the *Digitalis purpurea*; but according to the mode of preparation the substance has varied very greatly. According to Kosmann, soluble digitalin is a compound of one molecule of *Digital'etin* and two of glucose; by some salts and acids this is converted into *D.*, insoluble, and glucose; and this again by the further action of hot dilute acids into *Digital'etin* and glucose.

See the subheadings, and also *Digitalinum*.

**D., amor'phous.** (Ἀμορφος, shapeless.) The same as *Digitalinum incrustabile*.

**D., crys'tallised.** See *Digitalinum crystallatum*.

**D. fat.** The same as *Digital'lein*.

**D., French.** The *D.* of *Homolle* and *Quevenne*.

**D., German.** The *D.*, soluble.

**D., insol'uble.** (*F. digitale française*.) The *D.* of *Homolle* and *Quevenne*.

**D. of Delfs.**  $C_{17}H_{33}O_7$ . A neutral colourless crystalline substance, readily soluble in alcohol, ether, or chloroform. It is prepared from the seeds, and is a glycoside.

**D. of Homolle and Quevenne.** A colourless substance, of indefinite composition, occurring in warty masses or in fine scales, inodorous, very bitter, easily soluble in alcohol, less easily in ether and in water, soluble in acids, but not furnishing with them any neutral salt. It is the *Digitalin* of the *B. Ph.* and the French Codex.

**D. of Kosmann.** Same as *D.*, soluble.

**D. of Na'tivelle.** The *Digitalinum crystallatum*.

**D. of Schmiedeberg.**  $C_5H_9O_2$ . An

## DIGITALINA—DIGITALIS.

amorphous substance insoluble in water, and believed by Schmiedeberg to be the active principle of the *D. of Homolle and Quevenne*.

**D. of Walz.**  $C_{24}H_{38}O_{14}$ . An amorphous substance, slightly soluble in cold water, more so in hot water, freely in alcohol. By dilute acids it is resolved into sugar, *Digitalivirin* and *Paradigitalin*. It is also called *Digitosolin*.

**D., poisoning by.** See *Digitalis, poisoning by*.

**D., soluble.** Kosmann. (F. *digitaline allemande*.)  $C_{54}H_{84}O_{27}$ , or  $C_{30}H_{50}O_{10} + C_{24}H_{34}O_{17}$ . This substance can be extracted from digitalis leaves and seeds; it is white, quickly attracts water, and is easily soluble in it. According to Schmiedeberg, it consists chiefly of digitonin and digitalin.

**D., tests for.** The chemical tests are that, when boiled with sulphuric acid, glucose is found in the fluid. Heated in a tube it gives off an acid, and not an ammoniacal vapour. Nitric acid dissolves it, the solution having a deep orange-red colour, whilst orange-coloured fumes are evolved when the acid is added to the alkaloid. Hydrochloric acid dissolves it, the solution becoming green when heated. Sulphuric acid turns it a purple black colour, the solution when diluted becoming a dirty green. Treated with sulphuric acid and exposed to bromine vapour it becomes violet. It is precipitated from its solutions by tannic acid, but not by corrosive sublimate. The physiological tests, the most important, are those of digitalis.

**Digitalina.** (L. *digitalis*, the foxglove. F. *digitaline*.) The same as *Digitalin*.

**Digitalinic acid.** An acid obtained by boiling insoluble digitalin with soda. It forms small brilliant crystals, which dissolve in spirit of wine.

**Digitalinum, B. Ph.** Forty ounces of digitalis leaf, in coarse powder, is digested with a gallon of rectified spirit for twenty-four hours at a temperature of 120° F., then put into a percolator and treated with another gallon of spirit. The product is distilled to a small quantity, and then evaporated on a water bath till the whole of the alcohol is dissipated. The residue is mixed with a mixture of five ounces of distilled water and half an ounce of acetic acid, and then digested with an ounce of animal charcoal, filtered, and the filtrate diluted with distilled water to a pint. The product is nearly neutralised with solution of ammonia, and 160 grains of tannic acid dissolved in three ounces of water is added; the precipitate thus formed is washed with water, then mixed with a little spirit and a quarter of an ounce of oxide of lead; four ounces more spirit is added, the mixture is heated in a flask to 100° F. for an hour; after the addition of a quarter of an ounce of animal charcoal it is filtered; the spirit carefully driven off from the filtrate on a water bath; the filtrate is then repeatedly washed with ether and dried. It is a white, inodorous substance, in porous mammillated masses or small scales, soluble in spirit, but almost insoluble in water and ether. Digitalin, the active principle of digitalis, acts primarily and essentially on the heart. Subcutaneously injected into frogs it prolongs the diastole and renders the systole more energetic, but in larger doses its further effects are to render the heart's action irregular, and finally to induce a peculiar condition of rigor. In mammals its use reduces the frequency of the pulse, and augments the arterial

tension, either stimulating the vasomotor centre or stimulating the peripheric branches of the vasomotor nerves, or increasing the force of the cardiac muscle. It renders the respiratory acts at first more frequent, but subsequently they become deeper and slower and interrupted. It depresses the temperature, probably by increasing the flow of blood through the cutaneous vessels. In health it causes no increase of urine, but in disease it often causes a great flow by increasing the arterial pressure; it is an anaphrodisiac. It has been used in febrile affections, in acute rheumatism, in mania, delirium tremens, migraine, epilepsy, in pneumonia, pleurisy, and pericarditis, in cases of mitral insufficiency and stenosis of the arterial openings, in dropsy, in Basedow's disease, and fatty degeneration of the heart, and in fact wherever the improvement of the tone of the heart is indicated. Dose, 0·001—0·002; or 1-60th to 1-30th of a grain.

The formula of the U.S. Ph. is very similar, and also the product.

**D. activum.** (L. *activus*, active.) The same as *D. crystallisatum*, Nativelle.

**D. crystallisatum, Nativelle.**  $C_{42}H_{60}O_{18}$ , or  $C_{42}H_{64}O_{15}$ , or  $C_{25}H_{40}O_{15}$ . A substance appearing in the form of white acicular branches of crystals, of neutral reaction and without smell. Taste slowly perceived, but persistently bitter. It contains no nitrogen. Digitalis leaves contain 0·001 per cent. of it. Insoluble in water and ether, soluble in spirit of wine and chloroform, soluble with green colour in sulphuric and hydrochloric acids. Very poisonous. It is supposed by Kosmann to be intermediate in composition between insoluble digitalin and digitalitretin.

**D. depuratum, Aust. Ph.** A preparation made by taking German digitalin 10 parts, spirit of wine of 70 per cent. and water, of each 5, chloroform 15; macerate with frequent agitation for twelve hours, and, after separation of the chloroform, add to the residue 15 parts more chloroform; then evaporate the whole of the chloroform. A semisolid yellowish brown mass remains.

**D. fluidum.** (L. *fluidus*, liquid.) A term applied to a volatile oily liquid obtained in 1864 by Englehardt from the leaves of digitalis, as conia is obtained from the leaves of hemlock.

**D. germanicum.** German digitalin. The same as *Digitalin, solub.*

**D. incrySTALLISABLE, Nativelle.** A substance, probably a glycoside, obtained from digitalis. It is a bright yellow powder, of unpleasant digitalis-like odour, bitter taste, making the eyes water, and exciting sneezing on contact with the conjunctiva or nasal mucous membrane; soluble in water and alcohol, insoluble in ether; concentrated sulphuric acid dissolves it with the production of a dirty green colour. It possesses the specific action of *D. crystallisatum*.

**D. passivum.** (L. *passivus*, passive.) The same as *Digitalin*.

**Digitalitretin.** Same as *Digitalretin*.

**Digitalis.** (L. *digitus*, a finger; because its flower has some resemblance to one. F. *digitale*; G. *rother Fingerhut, Fingerkraut, Fingerhutkraut*.) A Genus of the Nat. Order *Scrophulariaceae*. Foxglove.

Also U.S. Ph., same as *D. folia*, B. Ph.

**D. acetum, G. Ph.** (L. *acetum*, vinegar. G. *Fingerhutessig*.) One part of the cut plant is macerated with 1 part of spirit of wine and 9 of pure vinegar, for eight days; the fluid is then

# DIGITALIS-RESIN-DIGITATION.

expressed. Dose, 1 to 5 grammes, not exceeding 30 grammes per diem.

**D. acid.** Probably the same as *Valerianic acid*.

**D. ambigua**, Murr. (*L. ambiguus*.) The same as *D. ochroleuca*, Jacq.

**D. extractum**, G. Ph. (*G. Fingerhut-extract*.) The leaves, flowers, and stem of the wild plant 20 parts, water 4, to be added in successive quantities to the pounded plant and expressed. Dose, 0.03—0.15, and not exceeding 0.2—0.8 gm., per diem.

**D. fat.** The same as *Digitolein*.

**D. ferruginea**. (*L. ferrugineus*, with the taste or colour of iron.) A plant with properties similar to those of *D. purpurea*.

**D. folia**, L. Ph. (*L. folium*, a leaf. *F. feuilles de digitale*; *G. Fingerhutblätter*.) The dried leaves of the foxglove, *D. purpurea*, of the second years' growth, collected from wild indigenous plants when about two thirds of the flowers are expanded. They are alternate, oval, elongated, 10—30 cm. long, and 5—10 cm. broad, pointed, wrinkled, dull green, and pubescent on the upper surface, whitish and felted on the under; the lower leaves have long peduncles, the upper have short peduncles or none. They may be adulterated with the leaves of *D. ambigua*, *D. thapsiforme*, *D. phlomoideis*, *Verbascum nigrum*, *Lychneus thapsus*, *Symphytum officinale*, and *Coryza squarrosa*. Dose, 5 to 1.5 grain.

**D. grandiflora**, Lam. (*L. grandis*, large; *flos*, a flower.) The same as *D. ochroleuca*, Jacq.

**D. laevigata**. (*L. laevigatus*, for *levigatus*, part. of *levigo*, to pulverise.) A plant with properties resembling those of *D. purpurea*.

**D. lutea**, Linn. (*L. luteus*, yellow.) Yellow foxglove. Hab. South Europe. Much the same properties as *D. purpurea*.

**D. micrantha**, Roth. (*Μικρός*, little; *ἄθος*, a flower.) The *D. lutea*.

**D. minima**. (*L. snp. of parvus*, small.) A synonym of *Gratiola officinalis*.

**D. ochroleuca**, Jacq. (*Ὠχρός*, pale yellow; *λευκός*, white.) A species the nearly smooth leaves of which have been found mixed with the official digitalis leaves.

**D. parviflora**, All. (*L. parvus*, small; *flos*, a flower.) The *D. purpurea*.

**D., poisoning by.** The symptoms are headache, precordial anxiety, furred tongue, nausea, vomiting, rather frequent respiration, diminished flow of urine, coolness of the skin, with redness of the face, slow pulse, fainting, hallucination, insomnia, cold sweats, dyspnoea, dilatation of pupil, aphonia, and in fatal cases pallor of the face, frequent intermitting and irregular pulse, tumultuous and irregular action of the heart, convulsions, and collapse. The fatal dose of digitalin is probably from a quarter to half a grain.

**D. purpurascens**, Roth. A bastard variety resulting from the fertilisation of *D. purpurea* by *D. lutea*.

**D. purpurea**, Linn. (*L. purpureus*, purple. *F. digitale pourpre*, *gants de bergere*, *gants de Notre-Dame*, *queue de loup*; *G. Fingerhutblume*, *rother Fingerhut*.) The official foxglove. Furnishes *D. folia*.

**D. seeds.** See *D. semina*.

**D. semina**. (*L. semen*, seed.) The seeds of *D. purpurea*; they have the same properties as, but are weaker than, the leaves. They are

reddish brown, small, oblong, pitted, and angular. 1126 weigh one grain.

**D. syrupus**. Tincture of digitalis 1 part, syrup 10. Dose, 20 grms., not to exceed 120 grms., per diem.

**D. tinctura**, G. Ph. (*G. Fingerhut-tinctur*.) Five parts of pounded digitalis leaves, macerated with six of spirit of wine. Dose, 0.3—1 gm. per diem.

**D. tinctura ætherea**, G. Ph. Take of digitalis 1 part, spiritus æthereus, G. Ph., 10; macerate.

**D. tomentosa**, Link. and Hoffm. (*L. tomentosus*, woolly.) The *D. purpurea*, Linn.

**D. unguentum**, G. Ph. (*L. unguentum*, ointment. *G. Fingerhutsalbe*.) Extract of digitalis 1 part, unguentum ceruum 9; mix.

**Digitalis-resin.** See *Digitoxin*.  
**Digitalisation.** The condition of being under the specific influence of *Digitalis*.

**Digitalise.** To subject to *Digitalisation*.

**Digitalium.** The same as *Digitallinum crystallisatum* of Nativelle.

**Digitaloic acid**, Walz. Probably the same as *Digitalic acid*.

**Digitaloinic acid**, Kosmann. A green fatty substance, which can be extracted by ether from the precipitate thrown down by the addition of lead acetate to the watery extract of digitalis leaves.

**Digitalose.** A starch obtained from digitalis.

**Digitalosmin.** (*Digitalis*; *δσμή*, a smell.) The odorous principle of the digitalis plant.

**Digitalretin.**  $C_{15}H_{25}O_5$ . A product, along with glucose, of the action of hot dilute acids on insoluble digitalin; it is rather bitter, soluble in alcohol, slightly so in ether, insoluble in water and alkalies; it fuses at 60° C. (140° F.) Also called *Paradigitalin*.

**D., dehydrated.** (*L. de*, from; *hydrate*.)  $C_{15}H_{21}O_5$ . Obtained by the further continued action of hot dilute acid after the production of digitalretin. It is a resinoid, acrid-tasting substance, insoluble in water, soluble in alcohol, ether, and liquid ammonia. Also called *Paradigitalin*.

**Digitalia.** (*L. digitus*, a finger.) A Genus of the Nat. Order *Graminaceae*.

**D. dactylon.** (*G. Fingergras*.) A synonym of *Cynodon dactylon*.

**Digitalolin**, Walz. The same as *Digitalin*, soluble.

**Digitala.** (*L. digitatus*, having fingers.) Blumenbach's term for those mammals which have separate toes.

**Digitate.** (*L. digitus*. *F. digité*; *S. digitado*; *G. fingerformig*, *y.fingert*.) Fingered, having fingers, or like them.

In Botany, applied to leaves with five narrow lobes, less spreading than those of a palmate leaf; it has also been applied, but improperly, to leaves composed of more than three, and not more than five, leaflets immediately attached to the extremity of a common petiole.

**Digitated.** Same as *Digitate*.

**Digitately.** (Same etymology) In a digitate fashion.

**Digitate-pin'nate.** Same as *Digitatopinnate*.

**Digation.** (*L. digitus*, a finger. *F. digation*.) Term applied to the condition of parts that are more or less digitated or finger-

# DIGATIONES—DIGITUS.

shaped, as the origins of the serratus magnus. A finger-shaped process.

**Digitationes.** (Same etymon.) Dignations.

**D. tubarum Fallopii.** (L. *tuba*, a tube; *Fallopius*.) The fimbriae at the mouth of the Fallopian tube.

**Digitato-pinnate.** (L. *digitatus*, having fingers; *pinnatus*, feathered, pinnate. F. *digité-penné*; G. *fingeriggefiedert*.) Term applied to a digitate leaf having pinnate leaflets.

**Digitifoliate.** (L. *digitatus*; *folium*, a leaf. F. *digitifolné*; G. *fingerblättrig*.) Having digitate leaves.

**Digitiform.** (L. *digitus*, a finger; *forma*, likeness. F. *digitiforme*; G. *fingerformig*.) Formed like a finger; finger-like; digitate. Applied to various objects so shaped.

**Digitigrada.** (L. *digitus*; *grado*, to walk.) Term applied to a tribe of Carnivora which, in consequence of the bones of the tarsus and metatarsus being long bones and not applied to the ground, walk on the digits and chiefly on the second phalanges. The last phalanx which supports the nail or claw is kept in the retracted condition by an elastic ligament, and is only extended when required by a special muscle. It includes cats, dogs, hyenas, martens, and others.

**Digitigrade.** (L. *digitus*; *grado*.) Walking on the toes like the *Digitigrada*.

**Digitin.** (*Digitalis*.) A substance obtained from digitalis, which crystallises in fine needles. It is free from nitrogen, neutral and tasteless. It is soluble in alcohol, nearly insoluble in water, chloroform, and ether; concentrated sulphuric acid dissolves it with the production of a red colour. It is probably a glycoside, and has no physiological action.

**Digitinervate.** (L. *digitus*, a finger; *nervus*, a nerve. F. *digitinervi*; G. *fingernervig*.) Term applied to leaves the nerves of which diverge in all directions from the summit of the petiole, as in peltate, orbicular, palmate, and digitate leaves.

**Digitinervous.** Same as *Digitinervate*.

**Digitinum.** Same as *Digitin*.

**Digitipartite.** (L. *digitus*; *partitus*, part. of *partio*, to divide.) A term applied to a leaf which is deeply incised, so as to make more than five narrow spreading lobes.

**Digitipinnate.** (L. *digitus*; *pinnæ*, a feather.) Term applied to leaves the petiole of which terminates in secondary petioles bearing leaflets, either pinnate or digitate, forming doubly compound leaves.

**Digitium.** (L. *digitus*, a finger.) Old term for a kind of contracture, by which the joint of a finger becomes fixed.

Also, a name for onychia, or whitlow. (Quincy.)

**Digitog'cnin.** A crystallisable substance, soluble in hot alcohol, slightly in ether, obtained by the action of dilute acids on *Digitoresin* or *Digitonin* in alcoholic solution.

**Digitoleic acid.** Kosmann. (L. *digitalis*, foxglove; *oleum*, oil.) A green, acid and bitter oil obtained from digitalis, of aromatic odour, very soluble in alcohol and ether.

**Digitolein.** (L. *digitalis*; *oleum*, oil.) A fat obtained from digitalis leaves. It is a combination of glycerin with digitoleic acid.

**Digitonin.** A non-crystallisable compound obtained, together with glucose and digi-

toresin, by the action of boiling dilute acids on digitonin.

**Digitonin.** Schmiedeberg.  $C_{31}H_{52}O_{17}$ . A white amorphous substance obtained from digitalis, soluble in water, and, like its congener saponin, forming a lather on agitation, insoluble in cold alcohol, ether, or chloroform. It is said to form a large part of the soluble digitalis of commerce. It is decomposable into glucose and the following derivatives: digitoresin, digitonin, digitogenin, and paradigitogenin.

**Digitoresin.** Obtained, along with glucose and *Digitonin*, on boiling *Digitonin* with dilute acids.

**Digitorum nodi.** (L. *digitus*, a finger; *nodus*, a knot.) Heberden's term for the little hard knobs, about the size of a pea, found on the extreme ends of the fingers, and sometimes on the phalangeal joints. They are painless, and are of the character of the enlargements found in rheumatoid arthritis.

**D. ten'sor.** (L. *tendo*, to stretch.) A synonym of the *Extensor digitorum communis* of the foot.

**Digitox'in.** Schmiedeberg.  $C_{31}H_{52}O_7$ . A substance believed by Schmiedeberg to be the chief constituent of Nativelle's digitalinum. It is highly poisonous, producing nausea, irregularity of the pulse, and visual disturbances. One part is contained in 10,000 of the leaves. It forms colourless crystals, which are insoluble in water, benzol, and bisulphide of carbon, scarcely soluble in ether, slowly soluble in chloroform, and easily in alcohol. It fuses when heated. It paralyzes the transversely striated muscles of the body.

**Digitule.** (L. *digitulus*, a little finger. G. *Fingerchen*.) A little finger or toe.

Also, applied to small structures resembling a finger.

**Digitus.** (L. *digitus*, a finger, a toe; probably from the root *dak*, to take, rather than from *dak*, to show. F. *doigt*; G. *Finger*.) A finger or a toe.

**D. auricularis.** (L. *auricula*, the external ear.) The little finger, because it can be introduced into the outer ear.

**D. cordis.** (L. *cor*, the heart.) The ring or middle finger, because it was thought that a vein went direct to it from the heart.

**D. demonstrativus.** (L. *demonstro*, to point out.) The fore- or index finger, because it is used for pointing out a thing.

**D. demonstratorius.** (L. *demonstro*, to point out.) The fore- or index finger.

**D. famosus.** (L. *famosus*, ill-famed.) The middle finger, because it was used for masturbation.

**D. Hippocraticus.** (*Hippocrates*.) The clubbed condition of finger-ends seen in cases of pulmonary consumption and valvular disease of the heart.

**D. impudicus.** (L. *impudicus*, shameless.) The middle finger, because it was used for masturbation.

**D. in'dex.** (L. *index*, a discoverer.) The forefinger, index, or first finger, because it is used for pointing out a thing.

**D. infamis.** (L. *infamis*, of ill-report.) The middle finger, because it was used for masturbation.

**D. magnus.** (L. *magnus*, great.) The thumb.

**D. manus.** (L. *manus*, the hand. F.

*doigt de main.*) A finger of the hand; specially, a finger.

**D. medicinalis.** (L. *medicinalis*, pertaining to medicine.) The ring finger.

**D. medicus.** (L. *medicus*, healing.) The ring finger.

**D. medius.** (L. *medius*, that is in the middle.) The middle finger.

**D. minimus.** (L. sup. of *parvus*, small.) The little finger.

**D. myops.** (L. *myops*, nearsighted.) The little finger.

**D. obscenus.** (L. *obscenus*, of evil omen.) The middle finger, because it was used for masturbation.

**D. otites.** (Oēs, the ear.) The little finger, from its use in picking the ear.

**D. parvus.** (L. *parvus*, small.) The little finger.

**D. pedis.** (L. *pes*, a foot. F. *doigt du pied*; G. *Zeh.*.) A finger of the foot; a toe.

**D. primus.** (L. *primus*, the first.) The thumb.

**D. quartus.** (L. *quartus*, fourth.) The ring finger.

**D. quintus.** (L. *quintus*, fifth.) The little finger.

**D. salutaris.** (L. *salutaris*, serviceable.) The fore- or index finger.

**D. salutaris.** (L. *salutaris*.) The fore- or index finger.

**D. saluatorius.** (L. *saluator*, one who greets.) The index finger.

**D. secundus.** (L. *secundus*, the second.) The forefinger, the index finger.

**D. semimortuus.** (L. *semimortuus*, half dead.) A condition of diminished vitality of the fingers, which are cold and white, due to cold or to disease, or to the condition called dying of the fingers.

**D. supernumerarius.** (L. *supernumerarius*, supernumerary.) In Teratology, a finger or toe in excess of the ordinary number.

**D. tertius.** (L. *tertius*, the third.) The middle finger.

**D. verpus.** (L. *verpa*, the penis.) The middle finger, from its use in masturbation.

**Diglossia.** (Δίς, twice; γλῶσσα, the tongue. F. *diglossie*; G. *Doppelzunge*.) The condition of having a double tongue.

**Diglossum.** (Δίς, twice; γλῶσσα, a tongue.) A name for the *Ruscus hypoglossum*, or Alexandrine laurel, because a small leaf grows above the ordinary one, looking like two tongues.

**Dignathus.** (Δίς, twice; γνάθος, the lower jaw.) In Teratology, the presence of two lower jaws more or less fused together.

**Digne.** France; Département des Basses Alpes. Thermal mineral waters, from several sources, containing chloride of sodium, some alkaline sulphurets and hydrogen sulphide, which are in local repute, and used both as a drink and in the form of baths.

**Dignotio.** (L. *discerno*, to discern or know by divers parts.) Old term for *Diagnosis*.

**Digonopora.** (Δίγυνος, double; πόρος, a passage through.) A Subsection of the Section *Dendroctela*, having a double sexual aperture.

**Digonous.** (Δίς, two; γωνία, an angle. F. *digue*.) Having two angles.

**Digymnospermous.** (Δίς, two; γυμνός, naked; σπέρμα, a seed.) Having two naked seeds unenclosed in a capsule.

**Digyn.** A plant of the Order *Digynia*.

**Digyn'ia.** (Δίς, twice; γυνή, a female.) A Linnæan Order of plants, embracing such as have two styles.

**Digynian.** Same as *Digynious*.

**Digynious.** (Δίς, twice; γυνή, a woman, the symbol of the pistil, or female organ of flowers. F. *digynie*; G. *zweiweibig*.) Having two styles; two, or double styled.

**Digynous.** Same as *Digynious*.

**Dihæmaton.** (Διά, through; αἷμα, blood.) Old name for an antidote against poisoned wounds and wounds by arrows, in which, among other things, the blood of the duck, drake, and goose were ingredients. (Quincy.)

**Dihæmatum.** Same as *Dihæmaton*.

**Dihalon.** (Διά, through; ἅλς, salt.) Old name, used by Paulus Ægineta, vii, 17, Adams's Transl. vol. iii, p. 369, for a plaster made with common salt and nitre.

**Dihedral.** (Δίς, twice; ἔδρα, a seat, a base.) Having two plane surfaces, as a crystal.

**Dihedron.** (Δίς; ἔδρα.) A figure with two plane surfaces.

**Dihexahedron.** (Δίς; ἕξ, six; ἔδρα.) A six-sided prism with trihedral summits.

**Dihexyl.** (Δίς; ἕξ.) (C<sub>6</sub>H<sub>12</sub>)<sub>2</sub>. The radical of *Caproic acid*.

**Dihomocinchonin.** C<sub>20</sub>H<sub>24</sub>N<sub>2</sub>O<sub>2</sub>. An alkaloid found in *Cinchona rosulenta*.

**Dihydrate.** (Δίς; hydrate.) A compound containing two equivalents of water.

**Dihydric.** (Δίς, twice; hydrogen.) Term applied to compounds containing twice as much of hydrogen as another of the same kind, or two equivalents of hydrogen to one of something else.

**Dihydrogen-ammonium-phosphate.** H<sub>2</sub>(NH<sub>4</sub>)PO<sub>4</sub>. Obtained by adding aqueous phosphoric acid to ammonia until the solution reddens litmus, and is not precipitated by barium chloride. It crystallises in tetragonal prisms.

**D. sodium phosphate.** NaH<sub>2</sub>PO<sub>4</sub>. Superphosphate of soda. Made by adding phosphoric acid to a solution of common phosphate of soda until it no longer precipitates barium chloride. It crystallises with four molecules of water.

**D. sodium pyrophosphate.** Na<sub>2</sub>H<sub>2</sub>P<sub>2</sub>O<sub>7</sub>. Obtained by heating the common tribasic phosphate of soda with strong hydrochloric acid; it is a white crystalline powder, soluble in water.

**Dihydrogen sodium orthophosphate.** Na<sub>2</sub>HPO<sub>4</sub>. Ordinary phosphate of soda. See *Soda phosphas*.

**Dihydroquinin.** Same as *Dihydroxyquinina*.

**Dihydroxyl quinia.** A term applied by Kerner to a substance found in the secretions during the administration of quinine; it is not bitter, but is fluorescent. Also called *Chitenin*.

**Dihypogastrius.** (Δίς, double; ὑπο-γάστριον, the hypogastrium.) In Teratology, applied to a monster in which the pelvis and lower part of the abdomen are double.

**Dihysteria.** (Δίς; ὑστέρα, the womb. F. *dihystérie*; G. *doppelte Gebärmutter*.) The presence of a double uterus or double vagina.

**Diiodomethane.** Same as *Methylene diiodide*.

**Diipetes.** (Διπίπτης; Δίος, from Zeus; πίπτω, to fall.) A synonym of *Semen*.

**Dijudica tio.** (L. *dijudicatio*, a judging; from *dis*, from; *judico*, to judge.) Diagnosis.

**Dika bread.** A kind of bread, used in West Africa, which is made from the seeds of *Ireingia Barteri*.

**Dikal'egi.** (Arab.) Alchemical name for stannum or tin; also spelt *Decalgi*, and named *Dekalem*.

**Dikamali.** A Hindustani name of the fragrant resinous gum which exudes from the shoots of the *Gardenia lucida* and *G. gummifera*. It is used as an application to wounds, and to keep off flies by means of its smell.

**Dikamalli.** Same as *Dikamali*.

**Dilaceration.** (L. *dilaceratio*, tearing across; from *dis*, asunder; *laqueo*, to tear. F. *dilacération*; I. *dilacerazione*; G. *Verreissung*, *Zerspaltung*.) Rending asunder, violent laceration.

In Dental Surgery, a term employed by Tomes to describe a condition of tooth resulting from displacement of the calcified portion from the tissues which are instrumental in its production, the development being continued after the normal position of the calcified part has been lost.

**Dilactic acid.**  $C_6H_{10}O_5$ . A substance formed, along with lactide, by heating lactic acid.

**Dila'leus.** ( $\Delta\acute{\iota}\varsigma$ , twice;  $\lambda\alpha\lambda\acute{\omega}$ , to talk.) A ventriloquist.

**Dila'lia.** ( $\Delta\acute{\iota}\varsigma$ , twice;  $\lambda\alpha\lambda\acute{\omega}$ , to talk.) Ventriloquism.

**Dilamina'tion.** (L. *dis*, apart; *lamina*, a blade.) The separation into layers of parts originally continuous.

**Dilatability.** (L. *dilato*, to enlarge. F. *dilatabilité*; I. *dilatabilità*; S. *dilatabilität*; G. *Ausdehnbarkeit*.) The property of expansion in volume under the influence of heat or other agent.

**Dilatable.** (Same etymon.) Capable of Dilatation.

**Dilata'tio.** See *Dilatation*.

**D. bronchiorum.** A synonym of *Bronchictasis*.

**D. intestino'rum.** (L. *intestina*, the intestines.) Distension of the intestines with gas.

**D. ventriculi.** (L. *ventriculus*, the stomach.) Dilatation of the stomach.

**Dilata'tion.** (Old F. *dilater*, to widen; from L. *dilato*, to spread out. F. *dilatation*; G. *Erweiterung*, *Ausdehnung*.) An increase of size; an enlargement or expansion of the walls of a cavity. The state of being enlarged or expanded.

**D., active.** A term applied to expansion of a cavity with thickening of its walls.

**D., bronch'ial.** See *Bronchictasis*.

**D., bul'bar, of the ure'thra.** The bulb of the urethra.

**D., cir'soid.** Same as *Aneurysm*, *cir'soid*.

**D. cyst.** A cyst resulting from the expansion of the natural passages or ducts of glands, with retention of their contents.

**D., for'cible.** (F. *dilatation brusquée*, *d. forcée*.) A method of treating strictures of the urethra, suggested by Holt, in which a catheter or sound, split longitudinally and enclosing a wire guide, is passed in the closed condition through the stricture; the blades are then forcibly separated by pushing a small perforated sound along the wire. The method may be applied to other long passages.

**D. of ar'teries.** See *Aneurysm*.

**D. of bronch'i.** Same as *Bronchictasis*.

**D. of heart.** See *Heart*, dilatation of.

**D. of stom'ach.** See *Stomach*, dilatation of.

**D. of the pup'il.** See *Mydriasis*.

**D. of veins.** A term for *Varix*.

**D., pass'ive.** A term applied to expansion of a cavity with thinning of its walls.

**D., perman'ent.** (L. *permanens*, remaining. F. *dilatation permanente*.) Dilatation continuing to act for an unlimited period, as in the case of a style introduced into the lachrymal duct. In the case of the urethra it is effected by keeping a sound or catheter in the urethra permanently, only exchanging it from day to day for a larger one.

**D., sim'ple.** Dilatation of a cavity without any alteration of the dimensions of its walls.

**D., tempo'rary.** (L. *temporarius*, lasting but for a time.) Dilatation which lasts only for a short or limited period. Usually applied to the enlargement of the natural openings or accidental channels by means of probes or bougies to admit of the escape of pent-up fluids or solids, and to promote healing from the bottom of fistulous passages.

**D. tu'mour.** (L. *tumor*, a swelling.) The same as *Dilatation cyst*.

**Dilata'tor.** (L. *dilatator*, an extender. F. *dilatateur*; I. *dilatatore*; S. *dilatador*; G. *Ausdehner*, *Breiterer*.) A widener. Applied to certain muscles whose office is to widen or dilate the parts on which they act. Also applied to certain instruments for opening or enlarging the entrances to cavities or passages.

**D. con'chæ.** (L. *concha*, a mussel shell.)

A synonym of the *Intertragicus*.

**D., intrauterine.** See *Dilator*, intra-uterine.

**D. na'ris ante'rior.** (L. *naris*, a nostril; anterior, in front. G. *vorderer Nasenerweiterer*.) A thin slip attached to the alar nasal cartilage in front of the *D. naris posterior*, and inserted into the marginal skin of the nostril. It expands the nostril.

**D. na'ris poste'rior.** (L. *naris*; posterior, hinder. G. *hinterer Nasenerweiterer*.) A small muscle arising from the margin of the ascending process of the superior maxillary bone and from the sesamoid cartilages, and inserted into the marginal skin of the nostril. It expands the nostril.

**D. pharyn'gis.** ( $\Phi\acute{\alpha}\rho\upsilon\gamma\acute{\iota}\varsigma$ , the throat.) A synonym of the *Stylopharyngeus muscle*.

**D. pup'il'æ.** (L. *pupilla*, the pupil of the eye. G. *Erweiterer des Schloches*.) A continuous film of non-striated muscular fibres which are attached to the ciliary border of the iris, and radiate towards the pupil to become intimately connected with the fibres of the sphincter pupillæ; they occupy the posterior surface of the iris and serve to dilate the pupil.

**D. pyl'o'rus.** ( $\Pi\epsilon\lambda\omicron\pi\omicron\varsigma$ , the lower orifice of the stomach.) A term applied by Rüdinger to the external coat of longitudinal muscular fibres of the stomach at the pylorus. These fibres extend from the œsophagus, along the lesser curvature of the stomach, and interlace in this region with the circular fibres of that organ, whilst at the sides and greater curvature of the stomach they simply cover the circular fibres.

**D. tu'bæ.** (L. *tubo*, a tube. G. *Tubenverweiterer*.) The *Tensor palati*, from its action in opening the Eustachian tube during deglutition.

**Dilatato'res.** Plural of *Dilatator*.

**D. ala'rum na'si.** (L. *ala*, a wing; *nasus*,

the nose.) The two parts of the compressor naris muscles.

**Dilatatorium.** (L. *dilatator*, a widener. F. *dilatateur*; G. *Erweiterungsinstrument*.) Name given to an instrument for widening or dilating a part, as the various specula.

**Dilatatus.** (L. *dilato*, to enlarge. F. *dilaté*; G. *ausgebreitet, erweitert*.) Enlarged; widened.

**Dilating.** (Same etymon.) Producing expansion.

**D. forceps.** A pair of forceps, with a spring between the blades, for introduction into a cavity to produce its distension; or made like a pair of scissors, so that the fingers are the distending power.

**Dilatometer.** (L. *dilato*; μέτρον, a measure.) A measurer of dilatation or expansion.

**D., alcoholic.** An instrument invented by Silberman to determine the quantity of alcohol in a liquid, founded on the principle that water in passing from 0° C. to 100° C. (32° F. to 212° F.) expands .0466 of its volume, and alcohol in like manner expands .1252.

**Dilator.** (L. *dilato*, to spread out.) An instrument for enlarging natural or accidental passages and openings, either to prevent the accumulation or to facilitate the escape of fluids behind the obstruction, or to permit the extraction of concretions, or to promote healing from the bottom of the cavity. It is often metallic and composed of two blades, which can be made to open, or which can be forced open by inserting a tube between them, as in Holt's dilator of the urethra. At other times an elastic body is introduced and allowed to swell, as in the case of various kinds of tents. Other forms of dilator consist of elastic tubes, which, being carried through the stricture, can be made to expand by injecting air or fluid into them.

Also, applied to a muscle which dilates the part on which it acts.

**D., Arnott's.** See *Arnott's dilator*.

**D., Barnes's.** A fiddle-shaped india-rubber bag, with a small external pouch at the upper end and a tube with a stopcock at the lower; it is introduced into the canal of the cervix by means of the uterine sound, and water is pumped into it until sufficient distension is produced; the water is retained by turning the stopcock. Three sizes are made, which are used to produce dilatation of the os and cervix uteri when rigid, or for the production of premature labour; it is necessary that some dilatation of the cervix be present, or be produced by a sponge or laminaria tent, before the dilator can be introduced.

**D., intrauterine.** (L. *intra*, within; uterus, the womb.) An elastic tube, with an extensible bag at its extremity, which, after introduction into the uterine cavity, can be distended with air or water.

**D., laryngeal.** An instrument consisting of two or three blades, which can be separated from each other, or of a wedge- or cone-shaped bulb; used for introduction into, and dilatation of, the larynx when it is blocked up by membranous or cicatricial adhesions.

**Dilatatores.** Plural of *Dilator*.

**D. alæ nasi.** Same as *Dilatatores alæ nasi*.

**Dila'tris tinctoria.** A synonym of *Lechmanthes tinctoria*.

**Dilection.** (L. *dilectio*, from *diligo*, to

love earnestly.) A term that has been used for masturbation in the female.

**Dilvaria.** A Genus of the Nat. Order *Acanthaceæ*.

**D. ilicifolia.** (L. *ilex*, the holm oak; *folium*, a leaf.) Hab. India. A mucilaginous plant used for fomentations in rheumatism and neuralgia.

**Dill.** (Sax. *dile*. F. *anet*, or *aneth*; G. *Dill, Dillkraut*.) The *Anethum graveolens*.

**D. fruit.** See *Anethi fructus*.

**D., oil of.** A pale yellow, acrid, sweetish oil distilled from the fruit of common dill, *Anethum graveolens*. An aromatic in flatulence. Dose, 2 to 5 drops, on sugar or in emulsion.

**D. water.** See *Aqua anethi*.

**Dillenia.** (*Dillenia*.) A Genus of the Nat. Order *Dilleniaceæ*.

**D. elliptica.** Thunb. Used as *D. speciosa*.

**D. indica.** Linn. The *D. speciosa*.

**D. scabrella.** (L. *scaber*, rough.) A native of India. The young calyces and fruit used in Bengal and Chittagong in curries for its pleasant acid taste.

**D. speciosa.** Thunb. (L. *speciosus*, splendid.) A native of India. Used like *D. scabrella*, and also in cough mixtures. The ripe fruit is said to be laxative; the bark and leaves are astringent.

**Dilleniaceæ.** (*Dillenia*.) A class of plants allied to *Ranunculaceæ* and *Magnoliaceæ*. Carpels distinct; stipules none; corolla imbricated; albumen homogeneous; seeds arillate. Trees, shrubs, or, rarely, herbaceous plants, chiefly Asiatic and Australian. According to Lindley it is an Order of the Alliance *Ranales*.

**Dillenius.** A German botanist, who was Professor at Oxford, born in 1687, died 1747.

**Dilisk.** The *Rhodomenia palmata*.

**Dills.** The *Rhodomenia palmata*. A seaweed growing on rocky shores; it is eaten raw, boiled, or dried, but is tough.

**Diluent.** (L. *diluo*, part. of *diluo*, to wash away, to dilute. F. *délayant*; G. *verdünnend*.) That which dilutes, which makes more thin. Applied to substances that increase the fluidity of the blood, in all of which the chief ingredient is water.

**Dilute.** (L. *dilutus*, part. of *diluo*.) Made thin, attenuated, reduced in strength.

**Diluted.** (L. *dilutus*, part. of *diluo*. F. *détrempe, mêlé, délayé*; G. *verdünn, dünn, blass*.) Mixed; made thin; having the strength reduced by adding water or other liquid.

**Dilutio.** Same etymon and meaning as *Dilution*.

**Dilution.** (L. *diluo*, to wash away. F. *dilution*; I. *diluzione*; S. *dilucion*; G. *Verdünnung*.) Admixture, usually with water or other fluid, so as to attenuate.

**Dilutum.** (L. *dilutus*, part. of *diluo*.) A liquid in which something has been dissolved.

**Diluvial.** (L. *diluvium*, a flood. F. *diluvial*.) Of, or belonging to, a flood, or deluge, or *Diluvium*.

**Diluvium.** (L. *diluvium*, a deluge; from *diluo*, to wash away. G. *Überschweimmung*.) A deluge.

In Geology, a deposit brought together by the agency of great floods or the extraordinary action of water.

**Dilweed.** The *Anthemis cotula*.

**Dimedovia.** A Genus of the Nat. Order *Ficaceæ*.

# DIMERCURICAMMONIUM CHLORIDE—DINIODIDE.

**D. tetragonoides**, Pall. The *Tetragonia expansa*, Ait.

**Dimercuricammonium chloride**.  $\text{NH}_2\text{Hg}_2\text{Cl}$ . A yellow powder obtained by heating dimercuricammonium oxide with alcoholic hydrochloric acid.

**D. oxide**.  $(\text{NH}_2\text{Hg}_2)_2\text{O}$ . A dark brown powder obtained by heating mercuric oxide with dry liquefied ammonia. It is very explosive when heated or rubbed.

**Dimercurousammonium chloride**.  $\text{NH}_2\text{Hg}_2\text{Cl}$ . A black precipitate formed when calomel is treated with liquid ammonia.

**D. nitrate**.  $(\text{NH}_2\text{Hg}_2)_2\text{NO}_3 \cdot \text{H}_2\text{O}$ . Said by Kane to form the black precipitate known as *Mercurius solubilis Hahnemannii*.

**Dimerosomata**. ( $\Delta\text{is}$ , twice;  $\mu\text{ipos}$ , a part;  $\sigma\omega\mu\alpha$ , the body.) A synonym of *Araucoida*, from the distinct separation of the body into cephalothorax and abdomen.

**Dimerous**. ( $\Delta\text{is}$ , two;  $\mu\text{ipos}$ , a part. *F. dimère*; *G. zweitheilig, zweigliederig*.) Having a body of two segments or chief parts.

In Botany, applied to the ground plan of flowers when it consists of two members of each organ.

**Dimethyl**. A synonym of *Ethane*.

**Dimethylacetal**.  $\text{C}_4\text{H}_{10}\text{O}_2$ . An acetal found in crude wood spirit.

**Dimethylamine**.  $\text{N}(\text{CH}_3)_2\text{H}$ . An ammoniacal-smelling, inflammable liquid, boiling at from  $8^\circ\text{C}$ . to  $9^\circ\text{C}$ . ( $46\text{--}47^\circ\text{F}$ . to  $48\text{--}52^\circ\text{F}$ .) It occurs in Peruvian guano and in the products of the distillation of wood.

**Dimethylarsenic acid**.  $\text{AsO}(\text{CH}_3)_2\text{OH}$ . A synonym of *Cacodylic acid*.

**Dimethylarsine**. A synonym of *Cacodyl*.

**D. oxide**.  $[(\text{CH}_3)_2\text{As}]_2\text{O}$ . Obtained by heating white arsenic and anhydrous sodium acetate. It is a colourless heavy liquid, insoluble in water, soluble in ether and alcohol. It has a very irritating vapour, and is extremely poisonous. Also called cacodyl oxide.

**Dimethylbenzene**. Same as *Xylene*.

**Dimethylconia**.  $\text{C}_8\text{H}_{14}(\text{CH}_3)_2\text{N}$ . A product of the action of silver oxide on methylconium iodide. It is not so poisonous as conium, and produces no spasms.

**Dimethylether**.  $\text{C}_2\text{H}_6\text{O}$ . A colourless sweet-smelling anæsthetic gas, obtained by heating methylic alcohol with strong sulphuric acid.

**Dimethylketon**. A synonym of *Acetone*.

**Dimethylprotocatechuic acid**. A product, along with *Teron*, of the action of caustic alkalis on veratrin.

**Dimethylurea**. A crystalline substance obtained by acting on cyanic acid with methylamine; it is soluble in water.

**Dimethylxanthin**. A synonym of *Theobromin*.

**Dimetra**. ( $\Delta\text{is}$ , double;  $\mu\eta\tau\alpha$ , the womb. *G. doppelte Gebärmutter*.) The state of having a double womb.

**Dimetria**. (Same etymon.) The state of having a double uterus.

**Dimetric**. ( $\Delta\text{is}$ ;  $\mu\epsilon\tau\rho\omicron\nu$ , a measure.) A term applied to crystals whose vertical and lateral axes are not of the same length.

**Dimidiate**. (*L. dimidiatus*, part. of *dimidio*, to halve. *F. dimidié*; *G. halbt.*) Halved; divided into two.

In Botany, applied to organs of which one half is much smaller than the other; also to the gills of agarics when they reach only half way to the stem.

In Zoology, having the organs of one side of the body of different functions from those of the other, as when those on one side are male, and on the other side female.

**Dimidius**. (*L. dimidius*; from *dis*, apart; *medius*, in the middle. *F. dimidié*.) Half of; divided into parts.

**Dimocarpus**. A Genus of the Nat. Order *Sapindaceæ*.

**D. ly'chi**, Lour. Supplies the edible lychi nut.

**Dimorphan'dreæ**. ( $\Delta\text{is}$ , twice;  $\mu\omicron\rho\phi\eta$ , form;  $\alpha\eta\delta\rho\omicron$ , a male.) A Division of the *Cæsalpinieæ*, with a diplostemonous andræcium.

**Dimorphanthus**. ( $\Delta\text{is}$ ;  $\mu\omicron\rho\phi\eta$ ;  $\alpha\nu\theta\omicron\varsigma$ , a flower.) A Genus of the Nat. Order *Araliaceæ*.

**D. edulis**. (*L. edulis*, eatable.) A plant used in China as a sudorific. The young shoots are delicate and edible. The root is bitter, aromatic, and pleasant to the taste, and is employed by the Japanese.

**Dimorphic**. Same as *Dimorphous*.

**Dimorphism**. ( $\Delta\text{is}$ , two;  $\mu\omicron\rho\phi\eta$ , form. *F. dimorphisme*; *I. and S. dimorfismo*; *G. Doppelgestaltung*.) The property of presenting two different crystalline forms, such as calcium carbonate, which appears as calc spar and aragonite.

Also, applied in a similar fashion to plants and animals, or to parts of them.

In Botany, the condition of having two forms of flowers on plants of the same species.

In Biology, the occurrence of two distinct forms in the individuals of the same species.

**Dimorphous**. ( $\Delta\text{is}$ , twice;  $\mu\omicron\rho\phi\eta$ , form. *F. dimorphe*; *I. and S. dimorfo*; *G. zweigestaltig*.) Having two forms; applied to substances which crystallise in two distinct forms.

In Biology, having two forms not depending on sex.

**Dimpled**. (*E.* a form of *dimple*, dim. of *dip*, a hollow. *F. umbiliqué*; *G. genabellé*.) Having a dimple or depression. Same as *Umbilicated*.

**Dimyaria**. ( $\Delta\text{is}$ , twice;  $\mu\upsilon\varsigma$ , a muscle.) Term applied to those Lamellibranchiata in which the adductor muscles are two in number.

**Dimyary**. ( $\Delta\text{is}$ , two;  $\mu\upsilon\varsigma$ , a muscle) Applied to molluscs which have two muscular impressions.

**Dinan**. France; Département Côtes du Nord. A town picturesquely situated on the side of a steep hill on the left bank of the Rance. It is much frequented for its cold mineral waters, which are saline and chalybeate.

**Dinaphthyl**.  $\text{C}_{10}\text{H}_7\text{C}_{10}\text{H}_7$ . Colourless plates with a nacreous lustre, obtained by the oxidation of naphthalene with manganese dioxide and sulphuric acid.

**Din'gee**. A synonym of *Dengue*.

**Dingolfing**. Bavaria. A mineral water, containing calcium and magnesium sulphide and sulphuretted hydrogen gas.

**Dinic**. ( $\Delta\text{ivos}$ , giddiness.) Of, or belonging to, giddiness.

Also, applied to medicines that remove giddiness.

**Dini'odide**. ( $\Delta\text{is}$ , twice; *iodide*.) A

compound of two molecules of iodine to one of another substance.

**Dinitroben'zole.**  $C_6H_4(NO_2)_2$ . Carbolic acid is said to be found in the blood and urine of animals to which dinitrobenzole has been administered.

**Dinitrophénic acid.** An acid, crystallising in colourless prisms, without smell, of bitter taste, colouring the skin yellow, burning in the air; boiling nitric acid converts it into picric acid.

**Dink'hold.** Germany, in Nassau. Here are mineral waters, containing sodium and calcium carbonate, sodium sulphate and chloride, and iron carbonate.

**Din'ner.** (F. *diner*, to dine; L. *disno*, to dine; perhaps from *de*, fully; *ceno*, to sup; or from *dis*, neg.; *jeûno*, to fast; or from *desino*, to leave off, as work.) The chief meal of the day.

**D. pills.** Pills supposed to aid digestion, generally containing rhubarb, soap, and aloes, with gentian or nuxvomica.

**Dinoma'nia.** (*Δίνος*, vertigo; *μανία*, madness.) Dancing mania.

**Dinoxide.** Same as *Dioxide*.

**Dinsdale.** Durham; five miles from Darlington, in a pretty neighbourhood. A mineral water, containing chloride of sodium and magnesium, carbonate and sulphate of lime, and sulphuretted hydrogen, nitrogen, and carbonic acid gases. Used in chronic rheumatism, liver and gastric affections, and uterine enlargements.

**Dinus.** (*Δίνος*, a whirling. F. *vertige*; G. *Schwindel*.) Term for an imaginary unsteadiness of the person, or of the objects around, while really at rest; dizziness; giddiness.

**D. scoto'ma.** (*Σκότωμα*, dizziness.) Giddiness, with fixed spots of impaired or lost vision.

**D. verti'go.** (L. *vertigo*, a turning round.) Giddiness.

**Diob'olon.** (*Δίς*, twice; *ὀβολός*, the obolus.) An ancient weight of two oboli, or one scruple.

**Dioc'ho'e'dral.** (*Δίς*, twice; *ὀκτάεδρος*, eight-sided.) An octahedral prismatic crystal with tetrahedral summits.

**Dioc'tophyme.** Name given by Collet Mevret, in 1802, to the *Strongylus gigas*.

**Dioc tyl.** Same as *Heedecatan*.

**Diodon.** (*Δίς*, twice; *ὀδούς*, a tooth.) A Genus of the Suborder *Plectognathi*, Order *Telostei*, Class *Pisces*.

**D. atin'ga.** Bl. Supplies some isinglass.

**Diodonceph'alus.** (*Δίς*, twice; *ὀδούς*, a tooth; *κεφαλή*, a head. F. *diodoncephale*.) A term for a monster which has a double row of teeth in the same jaw.

**Diodonther'cos.** (*Δίς*; *ὀδούς*, tooth; *ἔρκος*, a fence.) A double series of teeth.

**Diodontostœ'chus.** (*Δίς*; *ὀδούς*, tooth; *στοίχος*, a row.) The same as *Diodonthercos*.

**Diodus.** (*Δίς*; *ὀδός*, a way.) An opening through which an excretion takes place.

**Diœ'esis.** (*Διοίκισις*, housekeeping, administration.) An old term for the dispensing of medicines.

**Diœ'cia.** (*Δίς*; *οἰκία*, a house.) A Linnean Class of plants having stamiferous flowers on one plant and pistiliferous on another.

**Diœciopolyg'amous.** (*Δίς*, twice;

*οἰκία*, a house; *πολύς*, many; *γάμος*, marriage.) A term applied to those plants of which some individuals bear unisexual and some bisexual flowers.

**Diœ'cious.** (*Δίς*, twice; *οἰκία*, a house. F. *dioëie*, *diuëque*; G. *zweihausig*.) Two, or double-housed; applied to plants which have male flowers on one individual, and female on another of the same species; and also to animals in which the sexes are separate in separate individuals.

**Diœ'ciously.** (Same etymon.) In manner of the condition called *Diœ'cious*.

**D. hermaph'rodite.** (*Ερμαφροδίτης*, of both sexes.) In Botany, having hermaphrodite flowers, but in each only the organs of one sex perfect.

**Diœ'ciousness.** (Same etymon.) The condition of being *Diœ'cious*.

**Diœ'cism.** (Same etymon.) The condition of being *Diœ'cious*.

**Diœnanthes.** (*Διά*, through; *οἰνάνθη*, the herb dropwort.) Old name for an epithem used in cholera, of which the *Evanthe*, or dropwort, was an ingredient. (Quincy.)

**Diog'enes-cup.** (*Diogenes*, the Cynic philosopher.) The cup-like hollow in the hand, formed by flexing slightly the metacarpal bones of the thumb and the little finger.

**Diog'mus.** (*Διωγμός*, the chase; from *διώκω*, to make to run.) A synonym of *Palpitation of the heart*.

**Di'oiç.** Same as *Diœ'cious*.

**Di'oiçous.** Same as *Diœ'cious*.

**Di'oleyl-ec'ithin.** An hypothetical body like *Distearyl-ec'ithin*, the radical of oleic acid being substituted for stearyl.

**Dionco'sis.** (*Διόγκωσις*, a tumour, inflammation; from *διηγκώω*, to make to swell, to render swollen.) Old term used by the Methodist physicians for plethora, distension, or tumefaction of the body; opposed to *Symptosis*.

**Dionc'a.** (*Διώνη*, the mother of Aphrodite, and also Aphrodite herself.) A Genus of the Nat. Order *Droseraceæ*.

**D. muscip'ula.** Linn. (L. *muscipula*, a mouse-trap.) Venus' fly-trap. Leaves bilobed, with three stiff hairs on each lobe; when these hairs are touched by an insect or other matter the lobes contract, and if they retain any organic matter dissolve it by aid of a secretion.

**Dionysia.** (*Διώνυσος*, Bacchus.) An old term for the *Hedera helix*, or ivy. Name of a plaster for abscesses, described by Aëtius, xv. (Gorriens.)

**Dionysia'nus.** (*Διώνυσος*, Bacchus.) Term applied to one who has a horn-like excrescence on the forehead.

**Dionysis'cus.** (*Διονυσίσκος*, dim. of *Διώνυσος*, Bacchus, who was anciently represented with horns.) Old term for a certain bony excrescence near the temple, like a horn. (Gorriens and Castellus.)

**Di'ion.** (*Δίς*, twice; *ᾠόν*, an egg.) A Genus of the Nat. Order *Cycadaceæ*.

**D. edu'lé.** Lindl. (L. *edulis*, eatable.) A native of Mexico. The large seeds of this plant yield a kind of arrowroot.

**Diophthal'mus.** (*Δίς*, double; *ὀφθαλμός*, an eye.) A kind of bandage applied over both eyes.

**Diop'orum.** (*Διά*, through; *ὀπάρω*, autumnal fruits.) Old name for a medicine made of ripe fruits, and formerly used in quinsy.

# DIOPS—DIOSCOREIN.

**Diops.** (Δίς, two; ὤψ, the eye.) Having two eyes.

**Diopsimeter.** (Δίψις, a view through; μέτρον, a measure.) An instrument for determining the extent of the field of vision.

**Dioptra.** (Δίοπτρα; from διόπτρουαι, to see through. F. *dioptrée*; I. *diottra*.) Name of an instrument for measuring the height and distance of objects.

Old name of an instrument for widening or dilating a cavity, or its entrance; a dilator; a speculum.

**Dioptric.** (Διοπτρικός, relating to *Dioptries*. F. *dioptrique*; G. *dioptrisch*.) Of, or belonging to, dioptries.

Also (F. *dioptrique*; I. *diottrica*; S. *dioptrica*; G. *Dioptrie*), the unit now adopted in the nomenclature of glasses used for correcting errors of refraction of the eye. It is equivalent to one French meter. Its symbol is D. One dioptric, which is written 1 D, is a glass of one meter, or 39·37 inches, focal distance; 2 D, or D divided by 2, = half a meter, or 19·7 inches.

**Dioptrical.** Same as *Dioptric*.

**Dioptries.** (Διοπτριά; from διὰ, through, and the root στ, to see. F. *dioptrique*; G. *Dioptrik*.) A term for the branch of optics which treats of rays refracted in passing through transparent media.

**D. of the eye.** The refractive media, by means of which definite images of external objects are formed upon the retina. They are the cornea, the aqueous humour, the lens, and the vitreous; and the action of these parts on light is dependent on their co-efficient of refraction, the curvature of these surfaces, and the distances of these surfaces from each other. The eye, when at rest, is adapted to focus parallel rays, falling on it, upon the retina, and its far point is therefore said to be infinity; but by changes effected in the lens it is capable of focussing diverging rays upon the retina. The nearest point which, with the utmost effort at accommodation, can be distinctly seen is the near point. The distance between the near and the far point is the range of accommodation. The chief values of the refractive media, when the eye is at rest, are the following: the radius of the cornea, which is 7·728 mm.; the radius of the anterior curvature of the lens, which is 9·346 mm.; the radius of the posterior curvature of the lens 5·750 mm., the refractive index of the aqueous 1·3365, of the lens substance 1·4519 to 1·4414, the refractive index of the vitreous 1·3365, air being 1. The distance of the cornea from the anterior surface of the lens 3·59 mm., the distance between the two surfaces of the lens 3·70 mm. The distance between the lens and the retina can only be obtained by calculation. When the eye is accommodated for the near point, the radius of the anterior curvature of the lens becomes 5·1610, of the posterior curvature 5·0766, and the thickness of the lens 4·3909 mm. The position of the cardinal points in the human eye is as follows for an eye at rest: the length of the first focal distance, that is, the distance of the second nodal point from the retina, is 13·898 mm.; the length of the second focal distance is 18·5 mm.; the distance of the first chief point from the vertex of the cornea is 1·9556 mm.; of the second chief point from the same 2·3528 mm.; the distance of the first nodal point from the same 6·6164 mm.; and of the second nodal point from the same 7·0219 mm.

**Dioptris'mus.** (L. *dioptra*, a dilator.) Term for the operation of dilating with the speculum *Dioptra*.

**Dioptron.** (Δίοπτρον, a spying-glass.) A speculum.

**Dioptrum.** (Δίοπτρα, a plate of talc.) A name for the *Lapis specularis*.

**Diorobon.** (Διόρ; ὄροβος, a vetch.) A medicine containing vetches as an ingredient.

**Diorrhœsis.** Same as *Diurhœsis*.

**Diorrhœsis.** (Διόρρῳσις, from διορρῶω, to turn into serum. F. *diorrhée*, *diorrhœse*.) Old term used for *Diuresis*; also, for the conversion of the humours into serum, or an excretion of serum by the urine.

**Diorsellinic acid.** Same as *Orsellic acid*.

**Diorthosis.** (Διόρθωσις, from διορθῶω, to correct or make straight. F. *diorthose*.) Old term for the reduction of a dislocation, the breaking down of ankylosis, or the replacement of a fractured portion of bone.

**Dios Gy'or.** Hungary; County Borsod. A mineral water, containing alkaline sulphates and carbonates and some iron.

**Dios-Jeno.** Hungary; Neograd County. A saline chalybeate water.

**Dioscorea.** (In honour of *Dioscorides*.) A Genus of plants of the Nat. Order *Dioscoreaceæ*.

**D. aculeata**, Linn. (L. *aculeatus*, furnished with prickles.) A species the tubers of which are used as those of *D. alata*.

**D. alata**, Linn. (L. *alatus*, winged.) White negro yam. The name of a species, growing spontaneously in both Indies, of the plant which affords the esculent root called the yam; the roots contain much starch, and are eaten, after boiling, like the potato; they are generally blue or brown, round or oblong, and weigh from one to two pounds.

**D. bulbifera**, Linn. (L. *bulbus*, a bulb; *fero*, to bear.) Same use as *D. alata*.

**D. dæmona.** (Δαίμων, a demon.) A species the tubers of which are poisonous even after cooking.

**D. fasciculata**, Roxb. (L. *fasciculus*, a small band.) *Scoenialoe*. Much used in India as a gum.

**D. globo'sa**, Roxb. (L. *globosus*, spherical.) An Indian species said to yield the best yams.

**D. purpurea**, Roxb. (L. *purpureus*, purple.) The Pondicherry sweet potato; very good.

**D. sati'va**, Linn. (L. *sativus*, that is sown.) Common yam. A plant, producing a kind of yam, used like that of *D. alata*.

**D. trifida**, Linn. (L. *tres*, three; *fido*, to cleave.) The Indian yam.

**D. triphy'lla**, Linn. (Τρεῖς, three; φύλλον, a leaf.) Buck yam. The tubers of this plant, even after cooking, are poisonous; slices are put into toddy to make it more intoxicating.

**D. villosa**, Linn. (L. *villosus*, hairy.) Wild yam root, colic root. Hab. North America. Expectorant, diaphoretic, and emetic; used in bilious colic.

**Dioscorea'ceæ.** An Order of *Dictyogens*, or a Family of the Order *Liliifloræ*, with unisexual flowers, an adherent perianth, and consolidated several-seeded carpels. Twining shrubs, with large tubers.

**Dioscor'ein.** An impure substance made

by precipitating the tincture of *Dioscorea villosa* with water, is so called.

**Dioscorides.** A Greek physician who lived in the first century of the Christian era.

**Dioscuri.** (Διώσκοροι, Castor and Pollux, the twin sons of Leda and Jupiter; from their twin-like resemblance.) Ancient name for the parotid glands, according to Galen, *in Med.*

**Diosma.** (Δίος, divine; δαρός, an odour. F. *diosma*.) A Genus of the Nat. Order *Rutaceæ*. Also, the same as *Buchu*.

**D. betulina**, Thunb. The *Barosma betulina*, Barth.

**D. crenata**, De Cand. The *Barosma betulina*, Barth.

**D. crenata**, Linn. The *Barosma crenulata*, Hooker.

**D. crenulata**, Linn. (L. *crenula*, a little notch.) The *Barosma crenulata*, Hooker.

**D. latifolia**, Lodd. (L. *latus*, broad; *folium*, a leaf.) The *Barosma crenulata*, Hooker.

**D. odorata**, De Cand. (L. *odoratus*, sweet-smelling.) The *Barosma crenulata*, Hooker.

**D. serratifolia**, Benthell. (L. *serratus*, saw-shaped; *folium*, a leaf.) The *Barosma crenulata*.

**Diosmeæ.** A Subfamily of the Nat. Order *Rutaceæ*. Ovules two in each loculus; leaves simple. Ex. *Barosma*, *Agathosma*.

**Diosmin.** A bitter principle, of brownish yellow colour, soluble in water, obtained from the *Diosma crenulata*.

**Diosmose.** Same as *Diosmosis*.

**Diosmosis.** Same as *Osmosis*.

**Diospyri.** Genitive singular of *Diospyros*.

**D. cortex.** (L. *cortex*, bark. G. *Rinde der virginischen Dattelpflaume*.) Persimmon bark. Used as an astringent in the same way, internally and externally, as oak bark.

**D. fructus.** (L. *fructus*, fruit.) See *Diospyros*, U.S. Ph.

**Diospyrinæ.** An Order of *Isocarpeæ*. Flowers actinomorphic, 4–8 merous; carpels opposite to sepals; ovary multilocular, with one or two suspended ovules in each loculus; fruit usually fleshy. It includes the Families *Sapotaceæ*, *Ebenaceæ*, *Styracaceæ*.

**Diospyres.** (Διώσπερος; εἶος, divine; πῶρος, a nut, or stone of fruit.) A Genus of the Nat. Order *Ebenaceæ*.

Also, U.S. Ph. (F. *fruit de plaqueminier de virginie*; G. *Persimmonfrucht*, *Dattelpflaume*). Persimmon. The unripe fruit of the *D. virginiana*. It is a globular berry, 1" in diameter, green, and six-celled. The unripe fruit contains tannin, malic acid, a yellow colouring matter, and sugar. Employed in infusion in catarrhal affections, leucorrhœa, sore throat, hæmoptysis, uterine hæmorrhages, and in scurvy.

**D. chinensis**, Blum. The *D. kaki*.

**D. chloroxylon**, Roxb. (Χλωρός, greenish yellow; ξύλον, wood.) Berries esculent.

**D. concolor**, Mönch. (L. *concolor*, of the same colour.) The *D. virginiana*.

**D. ebenaster**, Retz. The same as *D. ebenum*.

**D. ebenum**, Linn. fl. The systematic name of the black ebony; also called *Ebenoxylon verum*.

**D. embryopteris**, Pers. (Εμβρυον, an embryo; πτερίς, a fern.) Hub. India. An astringent and styptic. Fruit used as glue.

**D. ka'ki**, Linn. fl. (F. *figues caques du japon*.) Keg fig. The fruit is introduced from China as a dry sweetmeat; Chinese persimmon.

**D. lotus**, Linn. (F. *plaqueminier d'Orient*; G. *Dattelpflaume*.) The systematic name of the Indian date-plum tree.

**D. melanoxylon**, Roxb. (Μέλας, black; ξύλον, wood.) The Coromandel ebony tree. Bark astringent. Used in dysentery and atonic diarrhœa.

**D. sapota**, Roxb. Hub. Philippine Islands. Berries esculent.

**D. virginiana**, Linn. (*Virginia*.) Yellow plums, winter plums, persimmon. The bark and unripe fruit of this plant are used as a powerful astringent in bowel complaints and hæmorrhages. The bark is a bitter tonic. See *Diospyros*, U.S. Ph.

**Diosiosis.** (Διύ, through; *ostosis*. F. *diosiose*; G. *Knochenauweichung*.) Displacement of a bone.

**Diotia.** (Δίς, twice; οὖς, ὠτός, the ear.) Old name, used by Rhodius, for a drinking cup with two ears; also a circulatory vessel similarly supplied; also a wooden cup lined with resin and aromatic substances, such as cinnamon, cloves, and ginger, to give a flavour to what is drunk out of it.

**Diotis.** (Δίς; οὖς. G. *Zweiohr*.) A Genus of the Nat. Order *Compositæ*.

**D. candidissima**, Desf. (L. *candidus*, white.) The *D. maritima*.

**D. maritima**, Cars. (L. *maritimus*, belonging to the sea.) Used as a vermifuge and an insecticide.

**Diotous.** (Δίς, twice; οὖς, the ear. F. *diote*; G. *Zweiohrig*.) Having two ears.

**Dioxide.** (Δίς; *oxide*.) An oxide containing two atoms of oxygen to one of base.

**Dioxus.** (Διά, through; ὄξυς, acid.) Old name for a collyrium composed principally of vinegar.

**Dioxylæum.** (Διά, through; ὄξυς, acid; έλαιον, oil.) Old term for a cataplasm in which were oil and vinegar. (Quincy.)

**Dioxymethylene.** Same as *Paraformaldehyde*.

**Dip.** (Sax. *diþpan*.) To plunge, to incline downward; an inclination or sloping downward.

In Geology, the slope which strata make in relation to the plane of the horizon.

**D., magnetic.** See *Magnetic dip*.

**Dipalmityllecithin.** An hypothetical body like *Distearyllecithin*, the radical of palmitic acid being substituted for stearyl.

**Diperianth.** (Δίς, twice; περί, around; άνθος, a flower.) Term applied to dioecyledonous plants with two distinct floral envelopes.

**Diperianthous.** (Δίς, twice; περί; άνθος.) Term applied to flowers having two floral envelopes, a calyx, and a corolla.

**Dipetalopriou.** (Δίς, twice; πέταλον, a plate of metal; πρίον, a saw. G. *eine zweiblättrige Säge*.) A two-bladed or bilaminated saw.

**Dipetalous.** (Δίς, twice; πέταλον, a petal. F. *dipétale*; G. *zweiblumenblättrig*.) Two-petalled; having two petals.

**Diphallia.** (Δίς, twice; φάλλος, the penis.) In Teratology, a monster with double penis.

**Diphenyl.** C<sub>6</sub>H<sub>5</sub>.C<sub>6</sub>H<sub>5</sub>. Obtained by passing benzene vapour through a red-hot tube; it is a constituent of erlenbo anthracene. It

## DIPHENYLAMINE—DIPHTHERIA.

crystallises in colourless iridescent plates, melting at 70·5° C. (158·9° F.), and boiling at 251° C. (489·2° F.)

**D. carbamide.** Same as *D. urea*.

**D. urea.**  $\text{CO}(\text{NH}\cdot\text{C}_6\text{H}_5)_2$ . Silky needles, obtained by heating one part of urea with three parts of aniline. It is slightly soluble in water, moderately in alcohol.

**Diphenylamine.**  $\text{C}_{12}\text{H}_{11}\text{N} = \text{NH}(\text{C}_6\text{H}_5)_2$ . Formed by the dry distillation of aniline blue; a crystalline body, coloured deep blue by nitric acid; it boils at 310° C. (590° F.)

**Dipholis.** A Genus of the Nat. Order *Sapotaceae*.

**D. salicifolia**, De Cand. The *Achras salicifolia*.

**Diph'orous.** (Δίς, twice; φέρω, to bear.) Bearing fruit twice a year.

**Diph'orus.** The same as *Diphrus*.

**Diph'rus.** (Δίφρος, a stool.) A close stool.

**D. maieuticus.** (Μαιευτικός, relating to midwifery.) An obstetric chair.

**Diphryges.** (Διφρυγής, twice roasted; from εἶς, twice; φρύγω, to roast, or burn.) Old name for the oxide of copper.

**Diphtheria.** (Διφθέρα, a skin or membrane. *F. diphtherie*, or *diphthérie*; *I. diphtherite*; *S. diphtheritis*; *G. häutige Braune*.) A highly infectious epidemic and endemic disease, now usually regarded as caused by a specific contagion, which affects the general system; it attacks especially the mucous membrane of the pharynx and air passages, by the formation of whitish or greyish layers of false membrane, which usually contain low vegetable organisms; it produces great depression of vital force and anemia, and frequently causes death by gradual apnoea from extension of the deposit to the larynx and trachea, by cardiac asthenia, by fibrinous clot in the heart, or by septicæmia. During its progress albumen is frequently found in the urine, *Diphtheritic albuminuria*; and when the local lesion is almost or quite well anæsthesia or paralysis of some part is not infrequent, *Diphtheritic paralysis*. The period of incubation appears to be from a few hours to five or six days, but some speak of a much longer period. In the slightest forms it begins with pain in the throat and some swelling and tenderness of the submaxillary and cervical glands; there is usually some fever, and some part of the mucous membrane of the mouth and fauces is vivid red and swollen; on which, and on the tonsils, small greyish-white or whitish-yellow spots appear. These, after increasing in extent and thickness, may heal up, and in the course of a few days be altogether detached, leaving a healthy surface of mucous membrane beneath. In too many cases, about the fourth or sixth day an exacerbation occurs, sometimes commencing with febrile symptoms, high temperature and pulse rate, but not often with rigor. The urine is albuminous. The throat symptoms become strongly marked. The fauces are livid, false membranes rapidly form, which, if removed, show the mucous membrane to be deprived of its epithelium, and presenting numerous capillary hæmorrhages. There is a copious cough and more or less intense dyspnoea, sometimes aphonia from implication of the larynx. The inflammation, attended with exudation, extends into the cavities of the nose and middle ear, downwards into the trachea and bronchi, and on to the inner surface of the cheeks and lips.

In some cases, the breath becomes very fetid and the diphtheritic membrane dirty grey or blackish from decomposition of the exudation, and rarely, at least in this country, from gangrene of the mucous membrane. Death is a frequent result in bad cases, and it may take place at any stage of the disease from a comparatively few hours to many days. The morbid appearances after death are chiefly confined to the *Diphtheritic membrane* and its neighbourhood. Sometimes there is lobular pneumonia, or collapse of lung, or emphysema. Generally the kidneys are affected; they may be swollen and engorged, with microscopic hæmorrhagic spots, or they may be enlarged and pale with fatty or granular degeneration of the renal cells; occasionally the liver and spleen are engorged and also the brain; in septicæmic cases the arachnoid has been found covered with a soft lymph or pus. See also *Diphtheritic contagium*.

**D., asthenic.** (Ἀσθενής, without strength.) The form in which there is great and early depression of strength not always proportioned to the amount of local manifestation, and often ending in death by syncope or cardiac asthenia.

**D., catarrhal.** (Κατάρροος, a running from the head, a catarrh.) The slighter form described under *Diphtheria*. It commences like an ordinary sore throat, with little constitutional disturbance, and some swelling of the neighbouring glands, and may either rapidly get well or may run on into the more severe form.

**D., chronic.** (Ἐ. *chronicus*, long lasting.) A rare form with no fever, but much debility, in which the diphtheritic membrane continues to be formed for many weeks; there is sometimes albuminuria. It is not fatal.

**D., croup'ous.** Same as *D., laryngeal*.

**D., cutaneous.** A rare condition only observed on parts of the skin accidentally denuded of epidermis, as on sore nipples, intertrigo of infants and fat adults, and blistered surfaces. The part affected is painful, and presents a greyish deposit, from beneath which a clear or turbid fluid, sometimes offensive in odour, oozes. The borders of the skin are bluish red and prominent, and present minute vesicles, which run together, burst, and become covered with the diphtheritic deposit.

**D. deposit.** The same as *Diphtheritic membrane*.

**D., false.** (*G. Pseudodiphtherie*.) Term applied by Krebs to a form of diphtheria in which he has found balls of much coarser micrococci than those belonging to the *Microsporon diphtherie*, and which are the products of a fungus which he names the *Schistomyces monadina*. The disease with which these micrococci are associated is of a less serious and fatal nature than true diphtheria.

**D., fung'ous.** See *Diphtheritic contagium*.

**D., gangrenous.** (Γάγγραινα, gangrene.) The form in which the mucous membrane under the diphtheritic patch sloughs at an early period and exhales a most offensive odour; it is nearly always fatal by septicæmia.

**D., inflamm'atory.** The form which is characterised by high fever, very red and swollen faucial mucous membrane, great pain in swallowing, and sometimes swollen and inflamed joints.

**D., intestinal.** An occasional sequel to severe cases of typhoid fever and to severe forms

## DIPHThERIAL—DIPHThERITIC.

of other diseases. Liebermeister has observed it in cases of diphtheria affecting the pharynx and larynx. It has been repeatedly found in the large intestine, and once in the jejunum. The term has also been applied synonymously with the putrid dysentery of the older writers.

**D., laryngeal.** (*Larynx*.) The form in which the diphtheritic membrane extends into the larynx and threatens death by suffocation, unless tracheotomy be performed. The voice is hoarse, the cough metallic, the breathing quick and noisy, and paroxysmal struggles for breath occur with frequency and severity.

**D., laryngo tracheal.** (*Larynx; trachea*.) The form in which the diphtheritic membrane spreads down the air passages into the trachea; a fatal complication.

Also, a synonym of membranous croup, on the assumption that this disease is really diphtheria; for which see *Croup*.

**D., malignant.** (*L. malignus*, of an evil nature.) The form which begins with severe rigors, vomiting, often nose-bleeding, small rapid pulse, and much restlessness; the breath is very fetid; the diphtheritic membrane spreads to the nostrils and deep cervical tissues; ulceration or gangrene supervenes; a typhoid condition rapidly sets in, and submucous and cuticular hæmorrhages occur. Death is speedy from coma or syncope.

**D., nasal.** (*L. nasus*, the nose.) The condition in which the diphtheritic membrane spreads to the nasal passages; occasionally it commences there. It is accompanied by the discharge of a brown, offensive, irritating ichor, which often causes ulceration; serious nose-bleeding is not uncommon, and septic contamination is likely to result.

**D., non infecting.** (*L. non*, not; *infectio*, to infect.) A term given to *Croup*.

**D., œsophageal.** (*Œsophagus*, the gullet.) A somewhat rare form in which the diphtheritic membrane spreads down the œsophagus and produces great pain in swallowing and repugnance to food.

**D. of wounds.** A condition in which the edges of a wound become swollen and œdematous, and its surface covered with a yellowish, semi-transparent, gelatinous pellicle. This condition has been noticed where diphtheria of the throat has been present.

**D., scarlatinous.** Diphtheria occurring in the course of, or engrafted upon, scarlatina.

**D., secondary.** Diphtheria occurring in the course of other acute affections, such as typhoid fever, pyæmia, puerperal fever, erysipelas, whooping-cough, and measles, or in the course of other chronic affections, as tuberculosis of the lungs, extensive pleural exudations, chronic diseases of the kidneys, chronic suppurative inflammation of the joints, and chronic diseases of the liver. It generally manifests but slight local and general symptoms, and is almost always fatal.

**D., true.** The disease described under *Diphtheria*.

**D., urinous.** A term applied to the grey pulpy degeneration of the surfaces of wounds over which alkaline urine passes.

**D., vulvar.** (*L. vulva*, the female genitals.) A form which is sometimes seen in epidemics of diphtheria, in which the membrane makes its appearance first at the vulva or in the vagina, where it runs the same course as in the

throat, which itself often becomes subsequently affected.

**Diphther'ial.** Relating to *Diphtheria*.

**D. paralysis.** See *Diphtheritic paralysis*.

**Diphther'ic.** Belonging to *Diphtheria*.

**Diphtherine.** (Same etymon.) The alleged morbid agent of *Diphtheria*.

**Diphtherite.** A synonym of *Diphtheritis*.

**Diphtheritic.** Belonging to *Diphtheria*.

**D. albuminuria.** The albuminuria which is frequently present in cases of diphtheria; the albumen occurs generally at an early period, and is uncertain and fluctuating in amount, bearing no proportion to the severity of the attack; the urine contains, in addition, hyaline and granular casts and occasionally blood. The condition is a temporary one, and seldom tends to anasarca or permanent kidney disease.

**D. angina.** (*L. angina*, the quinsy.) The same as *Diphtheria*.

**D. bronchitis.** See *Bronchitis, diphtheritic*.

**D. chancre.** See *Chancre, diphtheritic*.

**D. conjunctivitis.** See *Conjunctivitis diphtherica*.

**D. contagium.** (*L. contagium*, a touching.) The exciting cause of the disease; on all hands it is admitted that diphtheria is a contagious disease, but the nature of contagium is as yet unsettled. Many, especially late, observers believe that a low vegetable organism is the true *causa causans*. In many, if not in all, cases, some microscopic forms of fungi are found in the diphtheritic pellicle; some, as for instance the *Oidium albicans*, a *Cryptococcus*, *Leptothrix buccalis*, *Bueterium termo*, and others of like nature are doubtless accidental growths; but many consider that the minute micrococci which are found are themselves a stage of growth of the true morbid agent. Letzerich gives the name *Zygodendrum fuscum* to the essential fungus. Ischamer has cultivated from the membrane and from the urine *Ferticillium ruberrimum*. Talamon has described a form differing from both the above. But the most recent observations that have been made, those by Klebs, seem to show that minute rod-like bodies, the *Microsporon diphtheria*, and micrococcus spheres of the same fungus which belongs to the Schistomycetæ, are usually present.

**D. croup.** A synonym of *Diphtheria, laryngeal*.

**D. encephalitis.** See *Encephalitis, diphtheritic*.

**D. endocarditis.** See *Endocarditis, diphtheritic*.

**D. gangrene.** See *Gangrene, diphtheritic*.

**D. gastritis.** See *Gastritis, diphtheritic*.

**D. inflammation.** See *Inflammation, diphtheritic*.

**D. membrane.** (*L. membrana*, a membrane.) The pellicle which forms on the parts affected in diphtheria. It is yellowish or greyish white, firm, somewhat elastic and toughish; it is soluble in caustic alkalis, insoluble in water, yielding to it neither gelatin nor albumin; it swells and becomes transparent with acetic acid. In the pharynx it consists of epithelial cells, clouded and increased in number by inflammatory proliferation; sometimes they become angular or amoebiform, or ramified, or stellate, sometimes they are fused together, or connected

by a branch; the superficial cells are the largest. In the air passages there is superadded a more or less distinctly laminated fibrous and fibrinous growth, enclosing leucocytes, underneath the cellular layer, which it gradually displaces. The pellicle may peel off, leaving a more or less healthy surface beneath, or it may become separated by suppurative form an underlying excoriated or ulcerated patch, or the subjacent membrane may occasionally become gangrenous. The diphtheritic membrane itself undergoes change, the cells becoming granular and fatty, and the fibrinous exudation becoming mucoid or gelatinous. In all or most cases it is the seat of fungoid growth; for which see *D. contagium*.

**D. ophthalmia.** Same as *Conjunctivitis diphtheritica*.

**D. paralyses.** (Παράλυσις, paralysis.) These chiefly and most frequently affect the muscles of the pharynx and soft palate, and supervene gradually during the second or third week after the healing of the lesion of the fauces. Disturbances of vision, due to paresis of the ciliary muscle, and impairment of the power of accommodation, and more rarely paralysis of the muscles of the larynx, of the trunk, rectum, bladder, diaphragm, and face have been observed. The sensory nerves are also affected; there is more or less loss of the sense of taste, numbness and pricking of the affected parts, and sometimes entire anæsthesia. The paralysed muscles preserve their electric contractility and do not degenerate. Death occasionally results from asthenia, convulsions, or coma, especially when the nerves which arise from the floor of the fourth ventricle or its neighbourhood are involved, but usually after a long period the paralysis ceases; it is not infrequent for the paralysis to attack one part after, or alternately with, another. Loss of sexual desire and power is an occasional result. Morbid appearances in the affected nerves and their centres are not uniform, but lesions of the anterior root of the spinal nerves and of the grey matter of the cord have been noticed, and the muscles themselves are not usually degenerated.

**D. pharynge'al croup.** Term synonymous with the severe forms of pharyngeal diphtheria.

**D. puer'peral fe'ver.** See *Puerperal fever, diphtheritic*.

**D. slough.** A term for the *D. membrane*, on the supposition that it is not a deposit upon, or a secretion from, the mucous membrane, but the altered mucous membrane itself.

**D. ul'cer.** See *Ulcer, diphtheritic*.

**D. wounds.** See *Diphtheria of wounds*.

**Diphtheri'tis.** (Διφθερίτις, to cover, or clothe, with skin.) A synonym of *Diphtheria*.

Also, a term by Bretonneau for inflammations of mucous membranes accompanied by the formation of false membranes.

**D. fau'cium.** The ordinary form of *Diphtheria*.

**D., infecting.** (L. *inficio*, to taint.) A synonym of *Diphtheria*.

**D. intestina'lis.** Same as *Diphtheria, intestinal*.

**D. oculi.** (L. *oculus*, the eye.) Same as *Conjunctivitis diphtheritica*.

**D. of throat.** The ordinary form of *Diphtheria*.

**D. trachea'lis.** *Diphtheria* extending into the trachea.

**D. vagi'næ.** Same as *Diphtheria, vulvar*.

**D. vulvæ.** See *Diphtheria, vulvar*.

**Diph'theroid.** (Διφθερία, a skin; εἶδος, likeness.) Like a tanned skin, or like *Diphtheria*, or a diphtheritic product.

**D. necro'sis.** (Νέκρωσις, the state of death.) Term applied by Weigert to the disappearance of the nuclei and general disintegration of cell substance that occurs in the cells of parts affected with diphtheria.

**D. ulceration.** A term applied to the ulcerations of the frænum of the tongue which are not infrequently met with in hooping-cough, from their yellowish appearance.

**Diph'thong.** (O. F. *diphthongue*; from Gr. διφθόγγος, with two sounds; from δίς, twice; φθόγγος, a voice.) A union of two vowel sounds in one syllable. The sound of a diphthong is produced in the transition from the position of the vocal organs required for making the first vowel sound to that required for the conjoined one.

**Diphthong'ia.** (Δίς; φθόγγος. G. *Doppeltonigkeit*.) The coincident occurrence of two tones of different pitch during phonation. The vocal cords are then usually subdivided into two segments, an anterior and a posterior, each of which produces a note. It may result from inflammatory swellings or the presence of tumours.

**Diphto'nia.** The same as *Diphthongia*.

**D. paralytica.** (*Paralytic*.) A form of diphthongia discriminated by Türk, in which notes of distinct pitch are produced by the glottis ligamentosa and glottis cartilaginea. It may arise from paralysis of the cricoarytenoides posterior muscle.

**Diphycerc.** A fish with the form of tail called *Diphycercal*.

**Diphycer'cal.** (Διφυής, double; κέρκος, the tail.) A term applied to the tails of those fishes which are divided into two equal portions by the caudal spine, as in Ganoids.

**Diphyllbothrium.** (Δίς, twice; φύλλον, a leaf; βόθριον, a small pit.) A mature form of cestoid entozoon.

**D. stemmacephalum,** Cobbold. (Στέμμα, a wreath; κεφαλή, the head.) A species found in the small intestine of the common porpoise, *Delphinus phocaena*.

**Diphyllous.** (Δίς, twice; φύλλον, a leaf. F. *diphyll*; G. *zweiblättrig*.) Having two leaves; two-leaved. Applied to perianths which have two leaves, sepals or petals.

**Diphyodont.** (Διφυής, twofold; ὀδούς, a tooth.) A mammal which has two sets of teeth, deciduous and permanent.

**Diphyzo'oid.** (Διφυής, of double nature; ζῶον, an animal; εἶδος, likeness.) Term applied to a detached reproductive part of a Hydrozoan, and especially to a segment of the cœnosarc supporting a polypite, tentacle and hydrophyllium.

**Diphytan'thous.** (Δίς, twice; φυτόν, a plant; ἄνθος, a flower.) The same as *Diaceous*.

**Diplacu'sis.** (Διπλῶς, double; ἀκουσις, a hearing.) The hearing of a musical note or a sound in double; or the hearing of a musical note by one ear normally, and by the other at a higher or lower pitch.

**Diplasias'mus.** (Διπλασιασμός, a doubling; from διπλῶς, to double.) Old term used by Galen, *de Musc. Dissect.* c. 18, for dupli-

cation: applied to the recurrence of the exacerbation of a disease.

**Diplazium.** A Genus of the Nat. Order *Polypodiaceæ*.

**D. esculentum.** (L. *esculentus*, eatable.) A fern, the rhizomes of which contain much starch, and are occasionally employed as an esculent.

**Diplecoïta.** (Διπλόος, double; ἀκοή, hearing. F. *diplecoïte*; G. *Doppelhören*.) Double hearing.

**Diplectolobææ.** (Δίς, two; πλέκω, to plait; λοβός, a lobe.) A Division of the Nat. Order *Cruciferaæ*, characterised by the cotyledons being doubly folded, so that they are seen three or four times in a section.

**Diplectanum.** (Δίς, twice; πλεκτός, twisted.) A sexually mature trematode worm.

**D. æquans.** Dies. (L. *æquans*, part. of *æquo*, to make equal.) Found attached to the branchia of *Labrax lupus*.

**D. pedatum.** Dies. (L. *pedatus*; part. of *pedo*, to furnish with feet.) Found on the branchia of *Julis*.

**Diplegia.** (Δίς; πληγή, a stroke.) A paralysis of a similar part on both sides.

**D. brachialis.** (L. *brachium*, the arm.) Paralysis of both upper extremities.

**D. facialis.** (L. *facialis*, facial) Bilateral facial paralysis, a condition that is of most common occurrence in chronic affections of the medulla oblongata, and is a characteristic feature in the symptomatology of progressive bulbar paralysis. The patient laughs and weeps as though behind a mask, as Roubert says.

**Diplegic.** Relating to *Diplegia*.

**D. contractions.** A term by Remak for certain reflex contractions observed when the continuous galvanic current is applied by means of the anode over the superior cervical ganglion and the cathode over the sixth cervical vertebra, or the thorax, in cases of progressive muscular atrophy and rheumatic gout. Other observers have obtained them by applying the galvanic poles to the epistrasium and the dorsal spine; and they have been observed also in cases of cerebral and spinal paralysis and palsy from lead and from arsenical poisoning. The contractions are supposed to be produced by means of the sympathetic nerve.

**Dipleurobranchia'ta.** (Διπλόος, double; βραγχία, the gills.) Pleurobranchiate molluscs having symmetrical gills on both sides under the mantle lobes.

**Diplo.** (Διπλόος, twofold.) A prefix signifying double.

**Diplocephalia.** (Διπλόος, double; κεφαλή, the head. F. *diplocephale*; G. *Doppelkopf*.) A name by Breschet for monstrosities characterised by the presence of two heads.

**Diplocephaly.** (Διπλόος, double; κεφαλή, head.) In Teratology, the condition of a fetus having two heads on one body.

**Diplococ'ci.** (Διπλόος; κόκος, a kernel.) Micrococci in which the cocci are united in a binary manner.

**Diplocotylé.** (Διπλόος, double; κοτύλη, a drinking-cup.) A larval form of trematode worm.

**D. mutabilis.** (L. *mutabilis*, changeable.) A species mentioned by v. Linstow.

**D. olrik'ii.** Krabbe. Found in the intestine of *Salmo carpio*.

**Diplodis cus.** (Διπλόος, double; δίσκος,

a round plate.) A sexually mature form of trematode worm.

**D. subclava'tus.** Dies. (L. *sub*, in composition a little; *clava*, a club.) Found in the rectum of *Rana temporaria*.

**Diploë.** (Διπλόν, a fold. F. *diploë*; I. *diploe*; G. *Diploë*, *Mittelschicht*.) Name for the cancellated substance lying between the two tables of compact tissue of the bones of the skull. It is absent in the cribiform plate of the ethmoid bone, and in the orbital plates of the frontal. Originally the word meant the overlapping of the bones of the skull.

**D. canal's of.** Branched channels containing the veins of the diploë; the walls are formed in great part of a thin layer of compact osseous tissue.

**D. vein of, frontal.** The vein and its branches contained in the canals of the diploë of the anterior part of the frontal bone; it is small, and opens into the supra-orbital vein by an opening at the supra-orbital notch; it communicates with its fellow of the opposite side and with the veins of the dura mater.

**D. vein of, occipital.** The vein and its branches contained in the occipital bone; it is the largest of the series, and opens into the occipital vein or through a foramen near the inferior looped line into the occipital sinus, or sometimes into the lateral sinus.

**D. vein of, temporal, ante'rior.** The vein and its branches contained in the diploë of the lateral and posterior part of the frontal bone, with branches from the anterior part of the parietal; it opens into the temporal vein through one or several foramina in the great wing of the sphenoid bone.

**D. vein of, temporal, poste'rior.** The vein and its branches contained in the diploë of the posterior part of the parietal and the anterior part of the temporal bone; it opens into the transverse sinus by a foramen in the posterior inferior angle of the bone, or into a pericranial vein at the same place.

**D. veins of.** A number of branching veins contained in the canals of the diploë; they are thin-walled, large, valveless, and present frequent pouch-like dilations; they consist of elastic tissue, with an epithelial lining. At first each bone has its own set, but as the sutures become ossified the areas become connected by intervening branches; they open into the pericranial veins, into the meningeal veins, and into the cranial sinuses. See the other subheadings.

**Diploëtic.** Of, or belonging to, the *Diploë*.

**D. veins.** See *Diploë*, veins of.

**Diplogast'ria.** (Διπλόος, double; γαστήρ, the belly. F. *diplogastrie*; G. *Doppelbauch*.) A name by Breschet for a monstrosity characterised by the presence of two trunks.

**Diplogenesis.** (Διπλόος; γένεσις, generation.) In Teratology, the production or generation of double organs or parts in the place of single ones.

Also, a double monster formed by the fusion of two germs, the whole body of each being almost completely formed.

**Diplogenic.** (Διπλόος, double; γινώσκω, to produce.) Producing two different substances, partaking of the character of two different bodies.

**Diplohelicoïd.** (Διπλόος, twofold; ἑλιξ, a tendril; εἶκος, likeness.) Term applied to multispiral shells, in which the helicoïdal co-

efficient in the later differs in value from that in the earlier whorls.

**Diploic.** Relating to the *Diploë*.

**D. veins.** See *Diploë*, *veins* of.

**Diplolepis.** (Διπλόος, double; λεπής, a Genus of the Suborder *Entomophaga*, Order *Hymenoptera*.)

**D. bedeguaris**, Geoffr. The *Cynips rosæ*.

**D. gallæ tinctoriæ.** The *Cynips gallæ tinctoriæ*.

**Diplo'ma.** (Διπλωμα, from διπλώω, to double. F. *diplo'me*.) Term for a double-walled vessel; a water bath.

Also (F. *diplo'me*; G. *Doctordiplom*), a name of the charter or license by which the physician or surgeon is declared qualified to practise. Generally, however, it is confined to that of the surgeon, the license or qualification of the physician being usually termed a degree. So called because the diploma license of the magistrates was folded double.

**Diplomorpha.** (Διπλόος; μορφή, form.) A synonym of *Calyptoblastea*.

**Diplomyelia.** (Διπλόος, double; μυελός, the marrow.) Apparent duplication of the spinal cord from longitudinal fissure.

**Diploneura.** (Διπλόος; νευρον, a nerve.) Grant's term for the *Articulata*, in reference to the double nerve cord which runs from one extremity to the other.

**Diploneurous.** (Διπλόος, double; νευρον, a nerve. F. *diplo'neure*; G. *doppelneurig*.) Having two nervous systems.

Also, belonging to the *Diploneura*.

**Diplonomous.** (Διπλόος, double; νόμος, a law. F. *diplo'nome*; G. *doppelgesetzig*.) Having two laws.

**Diplo'odon.** (Διπλόος, double; ὀδούς, a tooth.) A sexually mature form of nematode worm.

**D. mucronatum**, Mölin. (L. *mucronatus*, pointed.) Found in the intestine of *Dasyurus sexcinctus*.

**D. quadridentatum**, Mölin. (L. *quatuor*, four; *dentatus*, toothed.) Found in the intestine of *Myctes niger*.

**Diplopap'pus.** (Διπλόος; πάππος, seed-down. G. *Milchstrahl*.) A Genus of the Nat. Order *Compositæ*.

**D. dubius**, Cars. The *Stenactis annua*, Nees.

**Diploperistom'atous.** (Διπλόος, double; *peristome*. F. *diploperistomate*; G. *doppelb-setzmündig*.) Having two peristomes.

**Diploperistom'ious.** See *Diploperistomatous*.

**Diploperist'omous.** (Διπλόος, double; περί, around; στόμα, the mouth.) Term applied to mosses when the mouth of the sporangium is surrounded by two rows of teeth, or two peristomes.

**Diplophony.** (Διπλόος, double; φωνή, the voice. G. *Doppelstimme*.) The power of producing two distinct notes of the voice simultaneously. Thus Merkel when singing the falsetto note observed it in himself to be accompanied by the deeper octave.

**Diplophyl'um.** (Διπλόος, double; φύλλον, a leaf. F. *diplophylle*; G. *Zweikeleh*.) Term for a double calyx.

**Diplophy'seter.** (Διπλόος; φυσήτης, a bellows.) A double bellows for artificial respiration.

**Diplo'pia.** (Διπλόος, double; ὄψις, sight. F. *diplopie*; G. *Doppeltschen*.) An affection of the eyes, in which there is double vision.

**D., binocular.** (L. *bis*, twice; *oculus*, the eye.) Double vision, due to the derangement of the parallelism of the visual axis, so that two images of every external object are seen, one with the right eye and the other with the left.

**D., cross'ed.** The condition in which two images of each object are seen, but the image of the right eye is on the left side and that of the left eye on the right side. It is usually the result of paralysis of the third nerve.

**D., direct.** The same as *D., homonymous*.

**D., homonymous.** (ὁμόνομος, under the same laws. G. *gleichnamiges Doppelbild*.) Term applied to that condition in which each object appears double, the image of the right eye being on the right side and that of the left eye on the left side of the field of vision, so that when the right eye is covered the right image disappears, and *vice versa*. It is due to paralysis of the sixth nerve and external rectus muscle of one or both sides, or to excessive action of the third nerve, and contraction of the internal rectus.

**D., mask'ed.** (G. *verkapptes Doppeltschen*.) A condition in which each eye sees well singly, but in which, owing to slight overlapping of the images, confusion or disturbance occurs in binocular vision.

**D., monoc'ular.** (Μόνος, only; L. *oculus*, eye.) The same as *D., unocular*.

**D., patholog'ical.** (*Pathology*.) Diplopia arising from disease.

**D., physiolog'ical.** (*Physiology*.) Double vision, produced by a degree of convergence of the eye, which is not in harmony with the degree of accommodation. If three pencils are held nearly in a line at four, eight, and twelve inches from the eye, and the eye is accommodated for that which is at eight inches, the other two are seen double; the images of the more distant pencil are homonymous, those of the nearer one crossed.

**D., unocular.** (L. *unus*, one; *oculus*, eye.) The condition in which two or more images of each external object are seen with one eye. The distances of the images remain the same in all positions of the eye.

**Diplopi'es'mus.** (Διπλόος, double; πιεσμος, a pressing. F. *diplopi'sme*; G. *Doppel-druck*.) Term for double compression.

**Diplopneu'menous.** (Διπλόος, double; πνεύμων, the lung. F. *diplopneu'mene*; G. *doppelathmend*.) Applied to Amphibia that have a double branchial apparatus. The opposite of *Monopneu'menous*.

**Diplopod.** A member of the *Diplopoda*.

**Diplop'oda.** (Διπλόος; πούς, a foot.) A synonym of *Chilognatha*, because of nearly all the somites having two pairs of legs.

**Diplop'sis.** (Διπλόος; ὄψις, sight.) Same as *Diplopia*.

**Diplop'tera.** (Διπλόος; πτερον, a wing.) A Division of Fossorial Hymenoptera, including the wasps; so called because the upper wings are folded longitudinally.

**Diplop'terous.** (Διπλόος, double; πτερον, a wing. F. *diploptère*; G. *doppelzügelicht*.) Having fins or wings divided or folded into two folioles.

**Dip'lopy.** Same as *Diplopia*.

**Diplosan'therous.** (Διπλόος, double;

# DIPLOSIS—DIPORUS.

*anther.* *F. diplosanthère.*) Having anthers double in number to that of the divisions of the corolla.

**Diplo'sis.** (Δίπλωσις, a compounding of words.) A synonym of *Diploe*, and of *Duplica-tion*.

**Diploso'ma.** (Διπλός, double; σῶμα, the body.) The name given by Farre to a supposed entozoon found in the urinary passages. See *D. crenata*.

Also, the same as *Diplosomatia*.

**D. crena'ta.** (L. *crena*, a notch.) Farre's term for certain structures which he believed to be entozoa, which were passed by a woman in the urine; they appeared like two worms united by their extremities, and doubly erenate on the edge. The animality of this appearance is denied.

**Diplosoma'tia.** (Διπλός, double; σῶμα, the body.) A twin monstrosity with two complete bodies only adherent in parts.

**Diplospir'al.** (Διπλός, double; σπείρα, a spiral.) Term applied to a coiled shell in which the coefficient of the spire differs in the later from that in the earlier whorls.

**Diplospor'ium.** (Διπλός; σπορά, seed.) A term for a fungus, so named in consequence of the spores having a double contour.

**D. fus'cum.** (L. *fuscus*, brown.) A term by Hallier for a microscopic fungus found in a diphtheritic patch on a child's throat. It consists of delicate, sealy, articulated, irregularly-ramified filaments; mature spores bright brown.

**Diplostemon'ic.** (Διπλός, double; στήμων, a filament.) Term applied to a flower the stamens of which are double the number of the petals.

**Diplostemonopet'alous.** (Διπλός, double; στήμων, a stamen; πετάλον, a petal.) Same as *Diplostemonous*.

**Diplostemonous.** (Διπλός, double; στήμων, a stamen.) Having stamens double in number to the divisions of the corolla.

**Diplostemony.** (Same etymon.) The condition of a diplostemonous flower.

**Diplostomum.** (Διπλός, double; στόμα, a mouth.) A larval form of trematode worm.

**D. aurifa'vum.** Molin. (L. *aurum*, gold; *flavus*, yellow.) Found in the intestine of *Nycticorax griseus*.

**D. brevicauda'tum.** Nordm. (L. *brevis*, short; *cauda*, tail.) Found in the eye of *Barbus fluviatilis*.

**D. cutic'ola.** Dies. (L. *cutis*, skin; *colo*, to inhabit.) Found encapsuled in the skin of *Pomotis vulgaris*.

**D. grandē.** Dies. (L. *grandis*, large.) Found in the intestine of *Ardea agami*.

**D. puto'rii.** Linstow. Found encapsuled, attached to the oesophagus, and in the intestine of *Eutrochus putorius*.

**D. volvens.** Nordm. (L. part. of *volvo*, to twist.) Found in the eye of *Perca fluviatilis*.

**Diplosyrinx.** (Διπλός; σύριγξ, a pipe.) A double syringe.

**Diplo-tax'is.** (Διπλός, double; τάξις, order.) A genus of the Nat. Order *Crucifera*.

**D. muralis.** De Cand. (L. *muralis*, be-longing to a wall. F. *doublé rang des murailles*; G. *Doppelsame*.) An anti-corbute.

**Diplo-te'gia.** (Διπλός, double; τέγος, a roof. F. *diplotege*; G. *Doppeldach*.) Name

for a dry fruit contained in the calyx, and de-hiscing by spores, as in the Campanula.

**Diplo-te'gium.** Same as *Diplo-tegia*.

**Diplozo'on.** (Διπλός, double; ζῷον, a living being.) A sexually mature form of tre-matode worm; so called because when they at-tain maturity they unite in pairs like an X; the sex-openings are behind the point of union.

**D. paradox'um.** Nordm. (L. *paradoxus*, strange.) Found attached to the branchiae of *Gobius fluviatilis*.

**Diplozy'gia.** (Διπλός, twofold; ζυγόν, a yoke.) A series of the Nat. Order *Umbellifera*, characterised by having compound umbels, and fruit with both primary and secondary ridges well marked.

**Dipneu'mona.** (Δίς, twice; πνέμων, a breathing organ.) An Order of the Class *Holothurida*, having two branching water lungs and Cuvierian organs.

Also, the same as *Dipneumones*.

Also, the same as *Dipnoi*.

**Dipneumones.** (Δίς; πνέμων.) A Family of *Araneina* having two lungs.

**Dipneus'ti.** (Δίς, twice; πνευστικός, for breathing.) Same as *Dipnoi*.

**Dip'noi.** (Δίπνοος, with two breathing apertures; from *dis*, twice; *pnōi*, breath.) An Order or a Subclass of the Class *Pisces*. Tropical fishes, living in mud, with a broad head, a fish-like body, covered with imbricated cycloid scales, and provided with lateral and cephalic slime canals, a pointed diphyccereal tail, two pectoral and two ventral filiform limbs, a persistent thick notochord, with no vertebral subdivisions, a skull with distinct bones, and a lower jaw. It includes only *Lepidosiren* and *Ceratodus*.

**Dipno'ous.** (Δίς, double; *pnōi*, breath.) Having two openings for the entrance of air, or other matters; applied to wounds.

**Dipodaceph'alus.** (Δίς; πούς, a foot; *á*, neg.; κεφαλή, the head.) A monstrosity without a head, but possessing two feet.

**Dipod'ous.** (Δίς, twice; πούς, a foot. F. *dipode*; G. *zweifüssig*.) Having two feet.

**Dipol'ar.** (Δίς, twice; πόλος, the axis of the sphere.) Having two poles.

**D. arrangement.** Du Bois Reymond's term for the arrangement of the nervous mole-cules which he supposes to exist in the electro-tonic state. In the natural resting condition he believes that two molecules, each with opposite poles, are arranged end to end by their similar positive poles, the two extremities of the con-joined molecule being negative; in the electro-tonic state he supposes that the dissimilar poles are next to each other.

**Dipolycotyle'donous.** (Δίς, twice; πόλος, many; κοτυλίδιον, a cotyledon. F. *dipolycotylédone*; G. *zweifelsamenlappig*.) Hav-ing two multifold cotyledons.

**Diporobranch'iate.** (Δίς, twice; πόρος, a pore; βράγχια, the gills. F. *diporobranchie*; G. *zweilochschkiemig*.) Having branchie opening externally by two holes.

**Dipor'pa.** (Δίς; πορπάω, to fasten with a buckle.) A Genus of nematode worms, accord-ing to Dujardin; now known to be an immature condition of *Diplozo'on*.

**Dip'orus.** (Δίς, double; πόρος, a passage.) A sexually mature form of cestoid worm.

**D. trisigna'tus.** Dies. (L. *tres*, three; *signum*, a mark.) Found in the intestine of *Merluccius vulgaris*.

**Dippel, Johann Conrad.** A German alchemist and physician, born near Darmstadt in 1673, died at Berleburg in 1734.

**D.'s acid elixir.** Five parts of alcohol and one of sulphuric acid, and coloured with saffron and cochineal.

**D.'s animal oil.** A name for an empyreumatic oil obtained by distillation from bones and animal substances; an antispasmodic and diaphoretic. See *Oleum animale ethereum*, G. Ph.

**Dipping.** Participle of the verb *Dip*.

**D. needle.** A magnetic needle so poised upon a horizontal axis as to dip towards the earth as it approaches the magnetic pole.

**D.-tube.** A fine glass tube used to collect a small quantity of liquid or some solid matter in a liquid, for examination under the microscope; it is used by pressing the pulp of the finger on the top of the tube, putting it into the fluid, momentarily lifting the finger and then pressing it tight again, when the contents are retained by atmospheric pressure; the tube may be of even bore or with the lower end drawn out fine, and either straight or curved.

**Diprismatic.** (*Δίς*, twice; *πρίσμα*, a prism. F. *diprismatique*.) A term applied to cleavage, denoting it to be parallel at the same time to the faces of a vertical, and to those of a horizontal, obliquangular, four-sided prism.

**Diprosopia.** (*Δίς*; *πρόσωπον*, the face. G. *Doppelgesicht*.) The condition of a *Diprosopus*.

**Diprosopus.** (*Δίς*, double; *πρόσωπον*, the face.) In Teratology, applied to a monster with double face.

**D. diædoeus.** (*Δίς*; *αἰδοῖα*, the pudenda.) A monster in which the facial and pelvic regions are doubled.

**D. dihypogastrius.** (*Δίς*, double; *υπογάστριον*, the lower belly.) A monster in which the face and lower part of the body and limbs are double.

**Dipsacaceæ.** (*Δίψα*, thirst, from the leaves retaining water.) A Family of the Order *Aggregatæ*, or an Order of the Alliance *Campanales*. Flower, originally pentamerous, surrounded by an epicalyx; stamens four; ovary unilocular, with one ovule; seed with endosperm; leaves exstipulate.

**Dipsaceæ.** Same as *Dipsacaceæ*.

**Dipsacus.** (*Διψακός*, from *δίψα*, thirst; because the leaves, by their hollow shape, hold water to satisfy thirst. F. *chardon à carder*; G. *Kardendistel*.) A Genus of the Nat. Order *Dipsacaceæ*.

Also (F. *dinhôte*; G. *Harnfluss*, *Harnruhr*), formerly applied to diabetes, from the thirst attending it.

**D. fullo'num**, Linn. (L. *fullo*, a fuller. F. *chardon à carder*, c. à foulon; G. *Kardendistel*.) The cultivated teasel; probably a form of *D. sylvestris*. Root bitter, tonic, sudorific, and diuretic.

**D. sativus**, Gmel. (L. *sativus*, that is sown. F. *chardon à carder*; G. *Kardendistel*.) The *D. fullonum*.

**D. sylvestris.** (L. *sylvestris*, belonging to a wood. F. *cardère*.) The wild teasel. Root diuretic and antiscrophulous. The water which collects at the base of the leaves has been used as an eye-water.

**D. vulgaris**, Gmel. (L. *vulgaris*, common.) The *D. sylvestris*.

**Dipsas.** (*Δίψα*, thirst.) Greek name for

a species of serpent whose bite was mortal and caused a parching thirst; described by Aldrovandus, *Hist. Scorp. et Drac.* i, 8.

**Dipsetic.** (*Διψητικός*, thirsty; from *δίψα*, thirst. F. *dipsétique*; I. *dipsético*; G. *dipsetisch*.) Causing, or productive of, thirst.

**Dipsobiostatics.** (*Δίψα*, thirst; *βίος*, life; *στατικός*, statics.) The influence of drink, and especially the abuse of alcohol, on the population and the duration of life.

**Dipso'des.** (*Διψώδης*; from *δίψα*, thirst; *εἶδος*, likeness.) Provocation of thirst; thirsty.

**Dipsomania.** (*Δίψα*, thirst; *μανία*, madness. F. *dipsomanie*; G. *Trunksucht*, *Saufsucht*.) Term for an unconquerable desire for alcoholic liquors, regarded as a disease. This disease is to be distinguished from ordinary and habitual drunkenness, in that the craving is paroxysmal, and comes on apparently without the external temptation of what is called good company; indeed the dipsomaniac frequently prefers drinking in solitude.

**Dipsoma'niac.** (*Δίψα*; *μανία*.) A sufferer from *Dipsomania*.

**Dipsopathy.** (*Δίψα*, thirst; *πάθος*, disease.) The treatment of disease by abstaining from liquids.

**Dipso'sis.** (*Δίψα*, thirst.) A term for a morbid degree of thirst; nearly synonymous with *Polydipsia*.

**D. a'ens.** (L. part. of *aveo*, to crave.) Excessive thirst, with a sense of dryness in the mouth and throat.

**D. ex'pers.** (L. *expers*, having no part in.) Freedom from thirst.

**Diptera.** (*Δίς*, double; *πτερον*, a wing. F. *dipteres*; G. *Zweiflügler*.) An Order of the Subclass *Holometabola*, Class *Insecta*. The members have two transparent wings, with radial venation, and two atrophied posterior wings named halteres. The mouth is suctorial; the prothorax with the segments coalesced; two faceted eyes, with three secondary eyes on the vertex.

**Diptera'ceæ**, Lindley. An Order of thalamudoral exogens of the Alliance *Guttiferales*. Leaves simple, alternate, with large convolute stipules; flowers symmetrical; petals equilateral; calyx unequal, permanent, winged; anthers beaked; fruit one-celled, one-seeded. Gigantic trees, only found in India, all containing a balsamic resin.

**Dipteral.** Same as *Dipterous*.

**Dipteran.** A member of the Class *Diptera*.

**Dipterix.** Same as *Dipteryx*.

**Dipterocar'pæ.** (*Δίς*, double; *πτερον*, a wing; *καρπός*, fruit.) A Family of *Cistifloræ* (Prunil and Vines). Trees; leaves usually stipulate. The calyx enlarges during the ripening of the fruit.

**Dipterocar'pi balsamum.** Same as *Gurjun balsam*.

**Dipterocar'pus.** (*Δίπτερος*, two-winged; *καρπός*, fruit. G. *Zweiflügelbaum*.) A Genus of the Nat. Order *Dipteraceæ*. Various species of this genus yield a balsam, called by the natives of India gurjun, by the Cingalese dhoonatel, and by the English wood oil.

**D. ala'tus**, Roxb. (L. *alatus*, winged.) Hab. Burmah, Siam. A source of *Gurjun balsam*.

**D. costa'tus**, Gärtn. (L. *costatus*, ribbed.) The *D. alatus*.

**D. gonop'terus**, Ture. (Γονός, seed; πτερον, a wing.) The *D. alatus*.

**D. grac'ilis**, Blume. (L. *gracilis*, slender.) Hab. Java. Furnishes an inferior *Gurjun balsam*.

**D. his'pidus**, Thwaites. (L. *hispidus*, shaggy.) A probable source of *Gurjun balsam*.

**D. inca'nus**, Roxb. (L. *incanus*, hoary.) Hab. Pegu. A source of *Gurjun balsam*.

**D. in'dicus**, Bedd. The *D. turbinatus*.

**D. lae'vis**, Ham. (L. *laevis*, light.) The *D. turbinatus*, Gärtn.

**D. littora'lis**, Bl. (L. *littoralis*, belonging to the shore.) Supplies an inferior *Gurjun balsam*.

**D. retu'sus**, Bl. (L. *retusus*, blunt.) Hab. Java. Supplies an inferior *Gurjun oil*.

**D. spanog'hei**. The *D. retusus*.

**D. triner'vis**, Blume. (L. *tri*, three; *nerveus*, a nerve.) Hab. Java. This tree yields a resinous secretion, *Gurjun balsam*.

**D. turbina'tus**, Gärtn. (L. *turbinatus*, cone-shaped.) Hab. East Bengal. The chief source of *Gurjun balsam*.

**D. zeylan'icus**, Thwaites. Hab. Ceylon. A source of *Gurjun balsam*.

**Dipt'rous**. (Δίς, twice; πτερον, a wing. F. *diptère*; G. *zweiflügelig*.) Having two wings. Applied to a pericarp when it has lateral appendages like wings. Belonging to the Class *Diptera*.

**Dipterygian**. Same as *Dipterygion*.

**Dipteryg'ious**. (Δίς; πτεροξ, a wing. G. *zweiflossig*.) Applied to fishes which have double fins or wings.

**Dipt'eryx**. A Genus of the Tribe *Dalbergæ*, Nat. Order *Leguminosæ*.

**D. odora'ta**, Lam. (L. *odoratus*, part of odor, to give a smell. G. *Tonkabäume*.) The tree which produces the Tonka or Tonquin bean. It is large, and grows in the forests of Guiana, and is called coumarou by the natives. Its wood has been used medicinally, like guaiacum; the beans, containing a peculiar principle which has been called coumarin, are used in this country to scent snuff, and in America are put into chests of clothes to protect them from insects.

**D. oppositifo'lia**, Willd. (L. *oppositus*, placed opposite; *folium*, a leaf.) English tonka bean. The seed is smaller, smoother, and contains less coumarin than *D. odorata*.

**D. pter'opus**, Martius. (Υπερόπους, wing-footed.) Furnishes a bean like tonka bean.

**Diptychous**. (Δίπτυχος; from δίς, twice; πτύσσω, to fold. G. *zweifaltig*.) Double-folded.

**Dipy'gus**. (Δίς, double; πυγή, the buttocks. G. *Doppelsteiss*.) In Teratology, duplication of the posterior pelvic region of the body.

**Dipyre'non**. (Δίς; πυρήν, a kernel.) A form of probe, each extremity of which is bulbous.

**Dipyre'neous**. (Δίς; πυρήν, a fruit stone. F. *dypyrène*; G. *doppelkernig, zweisteinig*.) Having two fruit stones.

**Dipyrit'es**. (Δίς, twice; πύρ, fire.) Old epithet for bread that is twice baked; biscuit. Recommended in dropsy.

**Dipyros**. (Δίς; πύρ, fire. G. *Zwieback*.) Bread twice submitted to the fire; biscuit.

**Diradia'tion**. (L. *dis*, apart; *radius*, a ray.) The emission of light-rays from a luminous body.

Also, a synonym of *Hypnotism*.

**Dir'ca**. (Δίρκη, a fountain near Thebes.) A Genus of the Nat. Order *Thymelacæ*.

**D. palustris**, Linn. (L. *palustris*, marshy. G. *Sumpfkeilerhals*.) Moosewood, leatherwood. Hab. America. The bark, in doses of six to eight grains, produces vomiting and purging. It is said to be used as a sudorific. It produces vesication when applied to the skin. The fruit is narcotic, and its effects resemble those of stramonium.

**Dir'cæ**. Greece. Thermal sulphur water long used.

**Direct'**. (L. *directus*, part. of *dirigo*, to place straight.) In a straight line, straight.

**D. cerebr'al paralysis**. See *Paralysis, cerebral, direct*.

**D. cur'rent**. See *Current, direct*.

**D. percus'sion**. See *Percussion, direct*.

**D. symp'toms**. See *Symptoms, direct*.

**D. vis'ion**. (G. *directk. Sehen*.) The perception of an object, the image of which falls upon the yellow spot.

**Directan'gulate**. (L. *directus*; *angulus*, an angle. G. *rechtwinkelig*.) Right-angled.

**Directilin'car**. (L. *directus*; *linea*, a line. G. *geradlinig*.) Consisting of a straight line.

**Directing**. Participle of *Direct*.

**D. line**. A line drawn between two fixed anatomical points, as a guide to the position of some important structure, as an artery passing under a certain part of its course.

**Directive**. (L. *dirigo*, to make straight.) The same as *Directing*.

**D. corpuscles**. A synonym of *Formative cells*.

**Director**. (L. *directorius*, that which directs; from *dirigo*, to place straight. F. *directeur*; G. *Leiter, Vorsteher*.) That which guides, or carries a thing straight.

Name for a grooved instrument, or probe, for guiding a bistoury in certain operations.

Also, a metallic rod in a non-conducting handle connected with one pole of a galvanic battery, for the purpose of transmitting the current to a part of the body.

**D. penis**. A synonym of the *Erector penis*.

**Diremp'tion**. (L. *diremp'tus*, part. of *dirimo*, to separate. G. *Absonderung, Trennung*.) A separation into two or more of what is morphologically one organ. A synonym of *Chorisis*.

**Dirhombohed'ral**. (F. *dirhombohédrique*.) Of, or belonging to, a *Dirhombohedron*.

**Dirhombohed'ron**. (Δίς, twice; *rhombohedron*.) In Crystallography, a form where two rhombohedrons are joined together.

**Diribito'rium**. (L. *diribco*, to separate.) A synonym of the *Mediastinum*.

**Dirigent**. (L. *dirigo*, to guide or direct.) Dividing; directing. Applied formerly to certain ingredients in medicinal combinations supposed to have the effect of guiding the action of the rest.

**Dirin'ga**. (F. *acore erai*; G. *Kalmus*.) A name for the *Acorus calamus*, or sweet flag.

**Dirsdorf**. Russia. A weak sulphur water and an iron spring.

**Dirt eat'ing**. A disordered or abnormal appetite occasionally observed in hysteria. Certain tribes also, as the Ottomaks and some Arctic

people, eat a kind of clay, probably to make up for an insufficiency in the supply of food.

**Diruptio.** (L. *diruptio*; from *dirumpo*, to break asunder. G. *Berstin*, *Zerreißen*.) Rupture, tearing asunder.

**D. cordis.** (L. *cor*, the heart.) Rupture of the heart.

**Dis.** (Dis, twice or two.) A prefix signifying two, or double.

Also, from the idea of division, it has a separative signification; and from the idea of increase, an intensive signification.

**Disacidify.** (L. *dis*, neg.; *acidify*.) To neutralise acidity.

**Disappearing.** (L. *dis*, priv.; *appareo*, to appear.) Going away from the sight.

**D. paralysis.** A form of paralysis or weakness of a muscle or set of muscles which the patient can overcome for a short time by an effort of the will.

**Disarticulate.** (L. *dis*, apart; *articulum*, a joint.) To separate the bones at a joint.

**Disarticulation.** (Same etymon.) The separation or amputation of a limb, or a part of a limb, at a joint.

**Disassimilation.** (L. *dis*, apart; *assimilo*, to make like to.) The downward metabolism of the body, by which its components form lower planes of chemical compounds whilst force of one kind or another is disengaged.

**Disc.** (L. *discus*; from Gr. *δίσκος*, a quoit, a round plate. F. *disque*; G. *Diskus*, *Scheibe*.) A circular plate or surface.

In Botany, a term applied to a development of the torus within the calyx, or within the corolla and stamens, lying between the stamens and ovary.

Also, applied in a capitulum or head of flowers to the central part of the cluster, or the whole of it, as opposed to a border or ray.

Also, the surface of any organ, such as a leaf, as opposed to the margin.

Also, in Botany, certain round spots or markings on the cells called *Disc-bearing wood cells*.

In Biology, the term is applied to many circular structures, such as the cilia-bearing rim of the oral extremity of Rotifers, and the structures mentioned in the subheadings. See also *Muscle*.

**D., accessory.** (G. *Nebenscheibe*.) A thin disc of dim, feebly anisotropic substance, which, on Merkel's view of the structure of muscle, is situated near the intermediate disc or Krause's membrane, but is separated from this by a layer of clear isotropic substance.

**D., anisotropic.** (Αἰσος, unequal; *τρέπω*, to turn.) The doubly refracting dark portions of the sarcous elements of muscular fibre.

The term is specially applied to the *D., principal*.

**D.-bearing.** Possessing a disc or the appearance of one.

**D.-bearing wood cells.** The cells of *D.-bearing woody tissue*; a form which occurs in some trees, as the pine, consisting of wood-cells, with large circular discs encircling the ordinary pits; these hollows in one cell wall correspond with similar ones in an adjoining cell wall, and so give the appearance of discs with a lenticular cavity.

**D.-bearing wood'y tis.sue.** A form of woody tissue which makes up the greater part of the wood of Gymnosperms, and consisting of *D.-bearing wood cells*.

**D., blood.** A synonym of *Blood corpuscle*.

**D.s, Bowman's.** See *Bowman's discs*.

**D., cho'ked.** See *Choked disc*.

**D., contrac'tile.** (L. *contraho*, to draw together.) Term applied by Klein to the dark, anisotropic part of a sarcous element.

**D., dark, of muscle.** The same as *D., anisotropic*.

**D., epig'ynous.** (Έπί, upon; *γυνή*, a female.) A disc situated upon the ovary.

**D., epiphys'ial.** (Επίφυσος, an outgrowth.) A thin annular plate on the upper and on the lower surface of the body of each vertebra, arising, by a separate centre of ossification, about the ninth or tenth year of age, and becoming united to the body at about the twenty-fifth year.

**D. flower's.** The flowers belonging to the disc or body, in contradistinction to those of the margin or ray of a capitulum.

**D., germinal.** (L. *germen*, a bud.) The *Discus proligerus*.

**D., Hen'sen's.** (G. *Mittelscheibe*.) The paler band in the middle of the principal disc of muscle.

**D. hold'er.** An instrument for the safe holding of an object fastened to a disc during its examination by the microscope. It has an arrangement with a milled head and screw, whereby the disc may be tilted at an angle.

**D., hypog'ynous.** (Έπί, beneath; *γυνή*, a female.) A disc situated below the ovary.

**D.s, interme'diate.** The membrane of Krause, separating muscle fibre into compartments.

**D., interpu'bic.** See *Interpubic disc*.

**D., interstit'ial.** (L. *intersto*, to stand between.) Term applied by Rollett to the clear isotropic part of a sarcous element.

**D.s, interverte'bral.** See *Intervertebral discs*.

**D., isotropous.** (Έίςος, equal; *τρέπω*, to turn.) The singly refracting clear portion of the sarcous elements of muscular fibre.

**D.s, lat'eral.** (L. *lateralis*, belonging to the side.) The two adjacent parts into which Krause's membrane divides a *D., interstitial*.

**D., light, of muscle.** The same as *D., isotropous*.

**D., New'ton's.** See *Newton's disc*.

**D.s of mus'cle.** Term applied by Bowman to the transverse segments of muscle fibre, each of which is composed of a single series of sarcous elements lying on the same plane. See *Muscle*.

**D., op'tic.** (Οπτικός, for sight.) The point of entrance of the optic nerve into the globe of the eye, as seen with the ophthalmoscope. It is round or slightly oval, of a delicate pearly pink tint, varying, however, normally from a whitish to a reddish colour. It is slightly prominent, and presents a trifling depression near the centre, which is whiter than the rest of the surface, and is termed the physiological cup or pit. From the bottom of this pit the arteria centralis retinae enters the eye to divide into branches on the disc for the supply of the retina, and the vena centralis retinae passes out. Its diameter varies from 1.5 to 1.7 mm. It is insensible to light.

**D., perig'ynous.** (Περί, around; *γυνή*, female.) Term applied to the disc when it surrounds the ovary.

**D., prin'cipal.** (G. *Querscheibe*.) The broad disc of anisotropic substance which occupies the centre of each of Krause's muscle compartments.

**D., proligerous.** See *Discus proligerus*.

**D., sec'ondary.** Frédéricq's term for the *D., accessory*.

**D., slender.** (F. *disque mince*.) Frédéricq's term for *Kranse's membrane*.

**Discal.** Relating to a *Disc*.

**Discaria.** A Genus of the Nat. Order *Rhod. n. 66*.

**D. febrifuga.** (L. *febris*, a fever; *fugo*, to fly.) A plant yielding the quina of Brazil. The acrid root is employed, in the form of extract, as a febrifuge and tonic.

**Discharge.** (Old F. *décharger*, to disburden. F. *écoulement*.) The flow of a secretion or of a morbid fluid from any part. To free from a load. The act of throwing or taking out. The secretion or morbid fluid itself.

In Pathology, it is usually applied to the flow of pus from an abscess, or of a secretion more or less modified from its natural state by inflammation or its results; and also to the pus itself.

**D., electric.** See *Electric discharge*.

**D., paralytic.** (Παράλυσις, paralysis.) The increased secretion that occurs from a gland after section of all its nerves. The secretion is usually much more watery than natural.

**Discharger.** (Same etymon.) An electrical instrument, consisting of a curved brass rod with bulbous ends, and hinged in the centre, on each side of which is a handle of glass or other non-conducting material. It is used to effect the instantaneous discharge of a charged electrical condenser or other body.

**Discharging.** (Same etymon.) Participle of *Discharge*.

**D. le'sions.** See *Lesions, discharging*.

**D. rod.** Same as *Discharger*.

**Dischro'a.** A bad spelling of *Dyschroia*.

**Dischromatic.** Same as *Dichromatic*.

**Disciferous.** (L. *discus*, a quoit; *fero*, to bear. F. *discifère*; G. *scheibentragend*.) Bearing a disc.

**Discifloræ.** A Division of *Dicotyledones* having the sepals distinct or united, free or adnate to the ovary; petals distinct; disc usually conspicuous; stamens usually definite, inserted upon or at the outer or inner base of the disc; ovary superior. It is subdivided into *Sapindales*, *Celastrales*, and *Geraniales*.

**Disciform.** (L. *discus*, a quoit; *forma*, resemblance. F. *disciforme*; G. *scheibenförmig*.) Resembling a disc, or disk, or quoit.

**Discigynous.** (Δίσκος, a quoit; γυνή, a female. F. *discigyne*; G. *scheibenweibig*.) Having the ovary implanted on a disc.

**Discission.** (L. *discissio*; from *discindo*, to separate. G. *Zerschneidung*, *Zertrennung*.) A cutting into; especially an incision into or laceration of the capsule of the lens in the operation for the removal of cataract.

**D. of cataract.** See *Cataract, discission of*.

**Discoblastic.** (Δίσκος, round plate; βλαστός, a sprout.) That form of egg-cleavage in which a separation of a small disc occurs from the rest of the egg, in which disc alone cleavage occurs. It is seen in osseous fish.

**Discoblastula.** (L. *discus*; *blastula*.) Hackel's term for the small fluid-containing cavity lying between the discomorula and the nutritive yolk of a meroblastic ovum.

**Discobothrium.** (Δίσκος, a round plate; βοθρος, a pit.) A sexually mature form of cestoid worm.

**D. fallax,** v. Bened. (L. *fallax*, deceitful.) Found in the intestine of *Raja clavata*.

**Discocarp.** (Δίσκος; καρπός, fruit.) A collection of fruits in a hollow receptacle, as in the rose.

**Discocarpi.** (Same etymon.) A group of crustaceous lichens. The apothecium is surrounded by an outgrowth of the thallus.

**Discocarpium.** Same as *Discocarp*.

**Discocotylé.** (Δίσκος, a round plate; κοτύλη, a cup.) A sexually mature form of trematode worm.

**D. hirundina'ceæ,** Dies. (L. *hirundo*, a swallow.) Found on the branchia of *Coregonus Wartmanni*.

**D. leptogaster,** Dies. (Λεπτός, slender; γάστρη, stomach.) Found on the branchia of *Chimarra monstrosa*.

**Discocymatia.** (*Discus*; *cymatium*. F. *discocymatium*.) Applied to a Family of *Lichens* having a proligerous membrane, and answering to the Hymenocarpi of Meyer.

**Discodactylia.** (Δίσκος; δάκτυλος, a toe.) A division of phaneroglossous Batrachia having the toes dilated at the tip.

**Discogastrula.** (L. *discus*; *gastrula*.) Hackel's term for that form of gastrula which develops from a disc situated on a mass of food yolk, as in Ganoid fishes.

**Discoid.** (Δίσκος, a quoit; εἶδος, likeness. F. *discoidé*; G. *scheibeförmig*.) Resembling a quoit or disc; quoit-shaped.

**D. flowers.** Composite flowers, the florets of which are all tubular.

**D. head.** In Botany, applied to a head, or capitulum, destitute of ray flowers.

**Discoidal.** The same as *Discoid*.

**D. placenta.** See *Placenta, discoidal*.

**Discoidalis.** (Δίσκος; εἶδος.) Pertaining to that which is discoid.

**Discoidæa.** (Δίσκος; εἶδος.) A division of placental mammals in which the placenta is in the form of a disc.

**Discordeus.** Same as *Discoidalis*.

**Discolith.** (Δίσκος, a disc; λίθος, a stone.) Flattened or concavo-convex circular coccoliths found in the ooze brought up in deep-sea dredgings.

**Discolor.** (L. *discolor*, parti-coloured. G. *verschiedenfarbig*.) Applied to leaves the two faces of which are dissimilar in colour.

**Discoloration.** (L. *dis*, indicating difference; *color*, colour. F. *discoloration*.) Discharge of colour from a part; change in the colour of a part, especially when it becomes stained.

**Discoloured.** (Same etymon. F. *discoloré*; L. *discolorato*; G. *verschiedenfarbig*.) Having the colour faded or changed.

Also, in Botany, applied to leaves the two faces of which are of different colour.

**Discolourous.** Same as *Discoloured*.

**Discomorula.** (L. *discus*, a quoit; *morula*.) Hackel's term for the disc of cells which, during the segmentation of the impregnated meroblastic ovum, covers the nutritive vitellus as with a hood.

**Discomycetes.** (Δίσκος, a round plate; μύκης, a fungus. G. *Scheibepilze*.) A group of Ascomycetes. The characters are the same as the Pyrenomycetes, from which they differ only in the hymenium covering the surface of the discoid fructification. Ex. *Peziza hibernella*.

**Discontinuous.** (L. *dis*, apart; *continuus*, uninterrupted.) Broken up, interrupted.

**D. gemma'tion.** See *Gemination*, *discontinuous*.

**Discoph'ora.** (Δίσκος, a disc; φopίω, to bear.) A subclass of the Class *Hydracozoa*. They are free oceanic forms, with a basal umbrella, destitute of velum, but traversed by not fewer than eight branching anastomosing canals, and bearing sense organs in marginal notches; reproductive organs in symmetrical pouch-like dilatations of the body cavity.

Also, a synonym of the Order *Hirudinea*, in consequence of their having suctorial discs.

**Discoph'orous.** (Δίσκος; φopίω, to bear.) Same as *Disciferous*.

**Discopodium.** (Δίσκος; ποδός, a foot. G. *Schüßboden*.) The foot or stalk on which a disc is sometimes mounted.

**Discord.** (Old F. *discord*; from L. *discordia*; from *discordo*, to be at variance.) An unpleasant combination of notes, the unpleasantness being due to the excitation of the nerves and nerve centres by irregular impulses. It is most marked when the difference of vibrations is between 30 and 40 per second.

**Discous.** (Δίσκος.) Same as *Discoid*.

**Discreta purgatio.** (L. *discretus*, part. of *discerno*, to separate; *purgatio*, a cleansing.) The expulsion from the bowels of some particular matter. (Dunglison.)

**Discrete.** (L. *discretus*, part. of *discerno*, to separate. F. *discret*.) Separate; not coalescent. Term applied to stains, spots, or pustules, when they are scattered separately, and at a distance from each other, over a surface.

**D. small pox.** See *Small-pox*, *discrete*.

**Discretivus.** (L. *discretivus*, distinctive; from *discerno*.) Having reference to diagnosis.

**Discretorium.** (L. *discerno*, to separate.) An old name, used by Bartholin, *Anat.* ii, 3, for the diaphragm, because it separates the thorax from the abdomen.

**Discrimen.** (L. *discrimen*, a division, an intervening space; from *discerno*, to separate. F. *discrimen*.) Old name, used by Galen, *de Fasc.* n. 11, for a bandage employed in the operation of bleeding from the frontal vein; because it passed in the direction of the sagittal suture, and so equally parted the head.

**D. calvariae medium.** (L. *calvarium*, the skull; *medium*, in the middle.) The middle layer of the bones of the skull; the diploe.

**D. narium.** (L. *naris*, a nostril.) The nasal septum.

**D. nasi.** (L. *nasus*, the nose.) A bandage which, crossing beneath the nose, supports that organ when injured.

**D. thoracis et ventris.** (L. *thorax*, the chest; *et*, and; *venter*, the belly.) A synonym of the *Diaphragm*.

**Discus.** (Δίσκος, a quoit. F. *disque*; G. *Diskus*, *Scheibe*.) A platter. Also, a quoit; a disc. The same as *Disc*.

**D. oöphorus.** (ὄόν, an egg; φopίω, to bear.) A synonym of *D. proligerus*.

**D. proligerus.** (L. *proles*, offspring; *gero*, to bear. F. *disque proliger*; G. *Keimscheibe*.) A dense layer of epithelial cells surrounding the ovum in the Graafian follicle, formed by division of the cells of the membrana granulosa, or sometimes by development from the ovum itself.

**D. vitellinus.** (L. *vitellus*, the yolk of an egg.) A synonym of the *D. proligerus*.

**Discuss'.** (L. *discussus*, part. of *discutio*, to strike asunder, to disperse.) A verb used to signify the effecting of the resolution of tumours and abscesses.

**Discuss'ion.** (L. *discussio*, a shaking; from *discutio*.) A breaking or shaking up. The resolution of a swelling.

**Discussiva.** (L. *discutio*, to dissipate.) A synonym of *Discutient*.

**Discussoria.** (L. *discussorius*, dissolving.) A synonym of *Discutient*.

**Discutient.** (L. *discutio*, to discuss, to disperse. F. *discussif*; L. *discutiente*; S. *discussivo*; G. *auflösend*.) Applied to those substances which seem to have the property of promoting the resolution of tumours.

**Disdiac'lasis.** (Δίς, twice; διαλάσις, a breakage. F. *disdiac'lase*; G. *Doppelbrechung*.) A double breakage; double refraction.

**Disdiac'lasts.** (Δίς, twice; δια, through; λασις, a breaking down.) A term applied by Bartholin to the supposed minute doubly-refracting particles of a doubly-refracting crystal.

Also, applied by Brücke to dark particles forming, by their apposition on the same plane, the dark or doubly-refracting disc, band, or layer of striated muscular tissue. It is believed that certain doubly refractive bodies irregularly placed in the fibrillae of organic muscular fibre, and which are seen by polarised light, are of the same nature.

**Disease.** (Old F. *desaise*, a sickness; from *dis*, from, or neg.; *aise*, ease. F. *mal*; G. *Krankheit*.) A departure from the state of health, especially when caused by structural change.

**D., acute.** (L. *acutus*, sharp.) A disease which is violent and rapid in its course.

**D., acute specif'ic.** (L. *acutus*; *specif'icus*, forming a particular kind.) An infectious fever.

**D., Addison's.** See *Addison's disease*.

**D., bad.** A synonym of *Syphilis*.

**D., bark'ing.** A synonym of *Mal de lair*.

**D. belts.** Same as *D. zones*.

**D., blue.** A synonym of *Cyanosis*.

**D., Bright's.** See *Bright's disease*.

**D., chron'ic.** (Χρονικός, relating to time.) A disease which is slow in its progress.

**D., congen'ital.** (L. *congenitus*, born together.) Disease which was present at birth.

**D., constituti'onal.** (L. *constitutio*, a disposition, nature.) Disease affecting the whole body, or certain systems of organs, as the glandular, nervous, or lymphatic system.

**D., conta'gious.** (L. *contagium*, a touching.) A disease which spreads from person to person from direct contact.

Also, the same as *D., infectious*.

**D., Cruveilhier's.** A term for *Atrophy*, *progressive muscular*.

**D., Dit'marsch.** See *Ditmarsch disease*.

**D., Duchenne's.** See *Duchenne's disease*.

**D., endem'ic.** (Ἐπὶ ὅπου, dwelling in.) Disease affecting a particular locality or district, and resulting from peculiarities of the climate, soil, air, or water.

**D., English.** A synonym of *Rickets*; so called because it was believed to be specially an English disease.

**D., enthet'ic.** (Ἐνθετικός, fit for inserting.) Disease produced by the inoculation of some specific animal poison.

**D., epidem'ic.** (Ἐπίδημιος, among the people.) Term applied to any disease that affects

a number of different persons at or about the same time, and is not dependent on any local cause.

**D., febrile.** (*l. febrilis*, relating to fever.) Diseases accompanied by, or consisting in, fever.

**D., feigned.** See *Feigned disease*.

**D., foul.** A synonym of *Syphilis*.

**D., functional.** (*l. functio*, a performing.) A disease or disorder which depends upon an unnatural or irregular action of a part unconnected with any apparent injury to its structure.

**D., fungoid.** (*l. fungus*, a mushroom; *Gr. ἴκος*, likeness.) A synonym of *Encephaloid cancer*.

**D., general.** (*l. generalis*, belonging to all.) A disease affecting the whole body; same as *D., constitutional*.

**D., Graves'.** A synonym of *Goitre*, *exophthalmic*.

**D., grinders'.** A synonym of *Asthma*, *grinders*.

**D., hereditary.** See *Hereditary disease*.

**D., Hodgkin's.** See *Hodgkin's disease*.

**D., idiopathic.** (*l. idios*, peculiar; *παῖος*, suffering.) A disease which exists by itself, and is not dependent on some other disease or disorder.

**D., implanted.** Same as *D., inoculated*.

**D., infectious.** (*l. inficio*, to infect) Disease which is capable of being transmitted from one person to another, either by direct contact or through the agency of air or water.

Also, sometimes applied to disease which is provoked by imitation, as the dancing mania.

**D., infective.** (*l. inficio*, to taint or infect.) Term applied to any form of epidemic disease which is believed to be due to specific causes. Infective diseases are classed as parasitic-contagious, miasmatic-contagious, and miasmatic diseases.

**D., inoculated.** (*l. inoculo*, to engraft an eye or bud of one tree into another.) Disease produced by the insertion of some virus or other material into or under the skin.

**D., intercurrent.** (*l. inter*, between; *curro*, to run.) A disease which occurs during the progress of another and different disease.

**D., latent.** (*l. latet*, to lie hid.) A disease which does not testify its presence by any recognisable symptom for the whole or the greater part of its course.

**D., local.** (*l. locus*, a place.) A disease which is confined to an organ or a structure, and does not affect the general system.

**D., lucifer matchmakers'.** See *Thiosphorus poisoning, chronic*.

**D., malignant.** (*l. malignus*, of an evil nature.) A term which is generally used as a synonym of *Cancer*; but is also applied to some rapidly fatal and intractable diseases, such as certain severe forms of scarlet fever and cholera.

**D., miasmatic.** (*l. miasma*, pollution.) Disease which, like malarial fever, arises from a poison developed outside of the body, and is believed to be due to decaying vegetable matters.

**D., miasmatic-contagious.** (*l. miasma*; *l. contagium*, a touching.) A disease which is propagated partly by miasm and partly by contagion.

**D., non-febrile.** (*l. non*, not; *febris*, a fever.) Disease which is not accompanied by, or dependent upon, fever.

**D., non typical.** (*l. non*, not; *typicus*, belonging to a form.) A disease which proceeds in no definite or uniform way.

**D. of Fiume.** A grave form of syphilis

which appeared at Schierliero, on the coast of the Adriatic, and was said to have been brought from Turkey by a peasant in 1790; 13,000 cases occurred in a population of 38,000 living in the provinces of Fiume, Boncary, Nicodol, and Fucini.

**D., organic.** (*l. οργανον*, an instrument.) Disease caused by structural change in some part of the body.

**D., pandemic.** (*l. πανδημιος*, belonging to all the people.) A term applied to an epidemic disease when it afflicts nearly a whole country or population.

**D., parasitic.** Disease produced by a specific animal or vegetable organism. Examples of parasitic disease are found in splenic fever, in trichinosis, and favus.

**D., pretended.** Same as *Feigned disease*.

**D., realms.** Same as *D. zones*.

**D., septic.** (*l. σηπτικός*, putrefying.) Disease arising from the entrance into the body of some product of putrefaction.

**D., simulated.** (*l. simulo*, to be like.) Same as *Feigned disease*.

**D., specific.** (*l. specificus*, forming a particular kind.) Disease resulting from the introduction into the body of some definite poison.

**D., symptomatic.** A disease depending upon another disease.

**D., typical.** (*l. τυπος*, a model.) A disease which conforms to a type; that is to say, which runs a definite, regular course.

**D., zones.** A term applied to those large tracts in different parts of the earth where the prevalent diseases are somewhat similar to each other, and differ from those of other tracts.

**D., zymotic.** (*l. ζύμη*, leaven.) Term employed to designate any disease which appears to be due to the multiplication in the body of some living germ introduced into it from without. Some consider the term to embrace those diseases only which affect the same person but once, and apply the term septic disease to those which do not render the patient safe from another attack.

Also, a synonym of *Syphilis*.

**Diseased.** (Same etym.) Abnormal, unhealthy, sick.

**Disepalous.** (*l. dis*, twice; *sepal*.) Applied to flowers having two sepals.

**Diser'neston.** A Genus of the Nat. Order *Umbelliferae*.

**D. gummiferum.** Jaubert and Spach. The *Dorema ammoniacum*.

**Disfiguration.** (Old F. *desfigurer*; from *l. dis*, apart; *figuro*, to form.) Deformation.

**Disgorgement.** (Old F. *desgorger*; from *des*; *gorge*, the throat. F. *dégorgerment*.) An opposite condition to that of engorgement. The discharge or abstraction of a certain quantity of fluid which had previously collected in a part.

Also, a synonym of *Vomiting*.

**Disgust.** (Old F. *desgouter*; from *des*; from *l. dis*, apart; *gouter*, to taste, from *l. gusto*, to taste. F. *dégout*.) An aversion from food or drink; repugnance to anything offensive.

**Dishedral.** (*l. dis*; *ἐπα*, a side. G. *zwei-flüchig*.) Having two surfaces or faces.

**Disinfect.** (*l. dis*, neg.; *inficio*, to infect.) To deprive of, or to destroy, infectious or contagious matter.

**Disinfectant.** (*l. dis*, neg.; *inficio*, to corrupt.) An agent capable of destroying the contagium of an infectious disease. The term is also frequently used in the sense of deodorant, or destroyer of offensive smell; and in that

## DISINFECTING—DISLOCATION.

of antiseptic, or arrester of putrefaction. The principal disinfectants are heat, sulphurous acid, chlorine, bromine, and iodine, oxygen, carbolic and other acids derived from coal tar, benzoic, picric, and acetic acids, zinc and iron, manganese and alum salts, corrosive sublimate.

**Disinfecting.** (L. *dis*, neg.; *inficio*, to corrupt.) Having power to purify from infectious or contagious influences.

**D., chamber.** A chamber the temperature of which can be raised to, and retained at, a definite height, and into which bedding or clothing, which has become infected from a person suffering from some contagious disease, can be placed for the purpose of disinfection. The temperature should be from 105° C to 122° C. (221° F. to 251° F.), and the heated air may be either dry or moist. Several forms of chamber are in use.

**D., liquid, Burnett's.** A solution of zinc chloride.

**D., liquid, Condy's.** A solution of potash permanganate.

**D., liquid, Darby's.** A solution of potash permanganate.

**D., liquid, Labarraque's.** The liquor sodæ chlorinatæ.

**D., liquid, Ledyen's.** A solution of lead nitrate.

**D., powder, Corné and De'meur's.** A compound of 95 per cent. of gypsum and 5 per cent. of coal tar.

**D., powder, M'Dougall's.** A mixture of lime with lime carbonate and sulphate.

**Disinfection.** (L. *dis*, neg.; *inficio*, to corrupt. F. *disinfection*.) The process of destroying infecting matter, whether present in the air, or attached to substances, or as it emerges from its source. The process is accomplished by the use of many chemical substances, the most efficacious of which are oxidising agents or other destructives, such as potassium permanganate and sulphurous acid, and a high temperature.

**D., aerial.** (L. *aer*, the air.) The removal of infection from the air of a space without interference with the respiratory process in man.

**Disinfecter.** (L. *dis*; *inficio*.) An apparatus by which water charged with carbolic acid or other disinfectant is made to play over the surface of urinals and latrines.

**Disintegrable.** Capable of *Disintegration*.

**Disintegrate.** (L. *dis*, neg.; *integrare*, to make anew.) To destroy by separating the constituent particles one from another.

**Disintegration.** (Same etymon.) The act of breaking up into small particles.

**D., granular.** See *Granular degeneration*.

**Disjunctiflorate.** Same as *Disjunctiflorous*.

**Disjunctiflorous.** (L. *disjunctus*, separate; part. of *disjungo*, to disjoin; *flos*, a flower. F. *disjunctiflore*; G. *einsumblumig*.) Having solitary or distant flowers.

**Disjunctive.** (L. *disjunctivus*; from *disjungo*, to separate.) Causing to separate.

**D., action.** Term applied by Hunter to the process by which an eschar or sequestrum of bone is detached from the body.

**Disk.** (Δίσκος, a quoit.) Same as *Disc*.

**Dislocate.** (Same etymon as *Dislocation*.) To put out of joint, or out of the proper place.

**Dislocation.** (Low L. *dislocatus*, part. of *disloco*, to remove from its place; from L. *dis*, a prefix signifying division or diversity; *loco*, to place. F. *dislocation*, *luxation*; G. *Lageveränderung*, *Verschiebung*, *Verrückung*, *Verrückung*.) Term for the displacement of a bone of a movable articulation from its natural place or situation; a luxation.

**D., accidental.** (L. *accido*, to happen.) A dislocation occurring from external violence in contradistinction to congenital or pathological dislocation.

**D., acquired.** (L. *acquirere*, to get in addition.) A dislocation which was not present at birth.

**D., complete.** A dislocation in which the articular surfaces of the bones are completely displaced or separated from each other.

**D., compound.** A dislocation in which the coverings over the joint are torn down into the joint, the joint end of the bone protruding or not, as may be the case.

**D., congenital.** (L. *congenitus*, born together.) A dislocation which exists at birth, and depends on malformation of the joint or malposition of the bones.

**D., consecutive.** (L. *consecutus*, part. of *consequor*, to follow after.) A dislocation which follows on some disease, as dislocation of the femur in hip-joint disease.

**D., incomplete.** A dislocation in which the articular surfaces of the bones are in part in contact.

**D., irreducible.** A dislocation which cannot be replaced.

**D., of eyeball.** The displacement of the globe of the eye from its natural position in the orbit. Cases are on record where the eye having been forced out of the socket upon the cheek, by accident or disease, vision has been recovered on its replacement.

**D., of lens.** (G. *Linsenluxation*.) Displacement of the lens from its natural position immediately behind the iris. It is sometimes a congenital affection, but more frequently results from contusions of the globe. When a portion of the lens still occupies the pupillary area the dislocation is said to be partial, but when it is displaced into the vitreous or into the anterior chamber, or through a wound of the sclerotic, beneath the conjunctiva, it is said to be complete.

**D., of memory.** Holland's term for the phenomena of complete, but temporary, forgetfulness.

**D., of muscles.** See *Muscles, dislocation of*.

**D., of pupil.** Term applied to an asymmetrical position of the pupil, owing either to congenital defect, accident, or operation.

**D., pathological.** (Pathological.) A dislocation the result of disease of the joint or of its surroundings.

**D., reducible.** A dislocation which is capable of *Reduction*.

**D., reduction of.** (L. *reductio*, a leading back.) The replacement of a dislocated bone in its proper place.

**D., relapsing.** (L. *relapsus*, part. of *relabor*, to slide back.) A dislocation which is reproduced by muscular effort or slight force, in consequence of congenital relaxation of the ligaments, or from imperfect repair of the first dislocation from mechanical injury.

**D., simple.** A dislocation in which there is no accompanying laceration of integuments or fracture of bone.

**D., spontaneous.** (L. *spontaneus*, of one's free will.) A dislocation which does not result from external violence.

**D., traumatic.** (Γραυματικός, relating to wounds.) Dislocation produced by mechanical force or injury.

**Dismetamerie.** (L. *dis*, neg.) Not *Metamerie*.

**Disodic.** (Δίς, twice; ὁδός, a way.) Having a double opening.

**Disodic.** (Δίς; soda.) Applied to compounds containing two equivalents of sodium to one of another substance.

**Disomatous.** (Δίς; σῶμα, body.) Having two bodies.

**Disomus.** (Δίς; σῶμα.) A monstrosity with two bodies.

**Disorder.** (Old F. *desordre*; from *des*, from L. *dis*, apart; *ordre*, order, from L. *ordo*, arrangement.) Want of order, irregularity, confusion. A term frequently used in medicine to imply functional disturbance, in opposition to manifest structural change.

**D., anatomico-pathological.** A term for organic disease.

**D., chemico-pathological.** A disorder accompanied with a defect, in quantity or quality, of the chemical composition of part of the body, or of a secretion or excretion.

**D., histologico-pathological.** (*Histology*.) A disease in which there is structural change of the part.

**D., symptomatic.** (*Symptom*.) A synonym of functional disease.

Also, a disorder which is a symptom of some other disorder.

**Disordered.** (Same etymon.) Sick, ailing, out of order.

**Disorganisation.** (L. *dis*, apart; F. *organe*, from L. *organum*, from Gr. ὄργανον, an implement. F. *disorganisation*.) A change in the structure and composition of any organ tending to its dissolution and destruction.

**Disoxidate.** (L. *dis*, apart; *oxidate*.) To reduce to a metallic state from an oxide.

**Disoxidation.** (Same etymon.) The reduction to a metallic state from an oxidised state.

**Disoxygenate.** (L. *dis*, apart; *oxygen*.) To deprive of oxygen.

**Disoxygenation.** (Same etymon.) The act or process of depriving of oxygen.

**Dispan'sive.** (L. *dispan'do*, to spread out.) Term applied to a system of lenses which has a negative focal distance. Used in opposition to a system of lenses with positive focal distance, which is termed collective.

**Disparate.** (L. *dispar*, unequal.) Unequal, not alike.

**D.points.** Two points upon the two retinae which, when a ray of light falls upon them, do not produce similar impressions. Used by Fehner in opposition to corresponding points.

**Dispensary.** (L. *dispensio*, to distribute.) Name of the place where medicines are prepared and given out, or dispensed. Generally, the term is applied to a charitable institution, intended for the relief of the sick poor of large communities, which affords to them medical or surgical advice and medicines, or attendance at the patient's home.

**Dispensation.** (L. *dispensatio*, super-

intendence.) The process of making up medicines in accordance with prescription, and the delivery of them to the patient.

**Dispensator.** (L. *dispensator*, a manager.) An apothecary or chemist.

**Dispensatory.** (L. *dispensio*, to distribute, dispose, or set in order. F. *dispensaire*; G. *Apothekarbuch*, *Arzneibuch*.) A term for the place or shop where medicines were prepared; but oftener it signified the book in which the mode of their composition was treated of, called by the Greeks *αντιδοτάριον*, a book of medicines. The latter is the modern definition; a book giving authoritative rules and directions for the compounding of medicines.

**Dispenser.** (L. *dispensio*.) One who makes up and sends out medicine.

**Dispermatous.** (Δίς, twice; σπέρμα, a seed. F. *disperme*; G. *zweisamig*.) Having two seeds; two-seeded.

**Dispermous.** Same as *Dispermatous*.

**Dispersion.** (L. *dispersus*, part. of *dispergo*, to scatter on all sides.) The act or state of being scattered.

In Physics, the breaking up of a beam of white light into coloured rays of different refrangibility. Also, the angle of separation of the rays.

In Medicine, the removal of inflammation, suppuration, or other morbid processes, from a part, and restoration to health.

**D., chromatic.** (Χρῶμα, colour.) Same as *Dispersion* in Physics.

**D., epipollic.** See *Epipollic dispersion*.

**D., irrationality of.** (L. *irrationalis*, without reason.) Term applied to the circumstance that in the spectrum formed by prisms of different substances, the space covered by the several colours have not the same ratio to one another as the length of the spectra which they compose.

**D., point of.** The point where refracted rays begin to diverge.

**Dispersive.** (Same etymon. F. *dispersif*; G. *zerstreund*.) Capable of dispersing.

**D. power.** The relative length of the spectrum caused by prisms of different substances after a beam of compound light has passed through them. Thus the spectrum formed by a prism of oil of cassia is three times as long as that formed by a glass prism.

**Dispharagus.** (Δίς, doubly; φάρυγξ, a cleft.) A sexually mature form of nematode worm. Found, with the exception of *D. denudatus*, only in birds.

**D. brevicaudatus.** Duj. (L. *brevis*, short; *cauda*, a tail.) Found in the proventriculus of *Ardea stellaris*.

**D. calcaratus.** Molin. (L. *calcar*, a spur.) Found in the walls of the stomach of *Ibis guarauna*.

**D. capitatus.** Molin. (L. *capitatus*, having a head.) Found in *Falco minutus*.

**D. contortus.** Molin. (L. *contortus*, part. of *contorqueo*, to twist.) Found in the walls of the stomach of the *Thys falcinellus*.

**D. denticulatus.** Molin. (L. *denticulatus*, furnished with small teeth.) Found in the oesophagus of *Falco subbuteo*.

**D. denudatus.** Dies. (L. *denudatus*, part. of *denudo*, to lay bare.) Found in the intestine of *Scardinius erythrophthalmus*.

**D. ellipticus.** Molin. (L. *ellipticus*, an ellipse.) Found in the stomach and proventriculus of *Astur nisus*.

# DISPLACEMENT—DISSEPIPMENT.

**D. longeorna'tus**, Molin. (*L. longus*, long; *orno*, to adorn.) Found in the stomach and proventriculus of *Ciconia maguari*.

**D. longevagina'tus**, Molin. (*L. longus*, long; *vagina*, a sheath.) Found in the stomach of *Ciconia maguari*.

**D. magnilabia'tus**, Molin. (*L. magnus*, great; *labium*, a lip.) Found in the coats of the stomach of *Platalea ajaja*.

**D. mammilla'ris**, Molin. (*L. mamilla*, a teat.) Found in the coats of the stomach of *Corvus cajanus*.

**D. rectovagina'tus**, Molin. (*L. rectus*, straight; *vagina*, a sheath.) Found in the stomach of *Milvus ater*.

**D. rec'tus**, Molin. (*L. rectus*, straight.) Found in the stomach of *Falco femoralis*.

**D. sigma'ides**, Molin. (Greek letter Σ; *ēdos*, like.) Found in *Falco tridentatus*.

**D. spir'a'lis**, Molin. (*L. spira*, a coil.) Found in the oesophagus of *Gallus gallinaceus*.

**D. sub'ula**, Duj. (*L. subula*, an awl.) Found in the throat of *Lusciola rubicula*.

**D. ten'uis**, Duj. (*L. tenuis*, thin.) Found beneath the epithelium of the inguivies of *Saxicola rubetra*.

**Displa'cement**. (Old F. *désplacer*, to displace.) The act of removing from the usual, natural, or proper place. The quantity of water displaced by a floating body.

In Pharmacy, the term is used in the same sense as *Percolation*.

In Ophthalmic Surgery, it is used as a synonym of *Depression of cataract*.

**D. appara'tus**. (F. *l'appareil de déplacement*.) A means of obtaining extracts, whether aqueous or alcoholic. The body is pulverised, and then partially exhausted with a liquid, which is replaced by an additional quantity of the same, or of another liquid. Sometimes the air is rarefied in the recipient by means of a small aspirator, thus allowing the pressure of the air to act on the fluid which traverses the substance to be exhausted.

**D., circulatory**. A term applied in Pharmacy to a mode of making solutions; the substance to be dissolved is tied in a bag and suspended at the top of the solvent; the liquid in contact with the bag becomes saturated with the substance within, and, becoming heavier, falls to the bottom of the vessel, and the less saturated portions pass towards the substance in the bag by a kind of circulatory movement.

**D. of cataract**. The same as *Cataract, Depression of*.

**D. of pupil**. An operation by means of which, when a portion of the cornea or of the lens is opaque, the pupil is so displaced as to be opposite a clear part of either the cornea or lens.

**D. of the u'terus**. This term implies a change in the situation and direction of the womb, which is most frequently an accidental affection.

**Displa'cer**. A synonym of *Percolator*.

**Displo'sor**. (*L. displodo*, to break asunder with great noise. F. *tirailleur*.) Applied to those Coleoptera that emit, with explosion by the anus, a whitish smoke.

**Dispo'rous**. (*Dis*, twice; *σπορά*, seed. G. *zweisporig*.) Having two spores.

**Dispo'sing**. (E. part. of *dispose*; from Old F. *disposer*, to arrange; from *dis*, apart; *poser*, to place.) Arranging, regulating, determining.

**D. affinity**. (F. *affinité*; from *L. affinitus*,

nearness.) The influence exerted when the presence of a particular substance causes two others to unite under circumstances in which no such union otherwise occurs. Thus, metallic silver refuses to oxidise at any temperature, but if finely divided and mixed with siliceous matter and alkali and ignited, the whole fuses to a glass of silver silicate.

**D. influence**. The same as *D. affinity*.

**Disposition**. (*L. dispositio*, regular arrangement.) The act of disposing, or the state of being disposed; order.

In Medicine, a tendency to some affection or disease, or to the recovery from some disorder. Also, a temper, or frame of mind.

**Disputa'tio**. (*L. disputatio*, an arguing.) An exercise in colleges, in which a particular opinion or thesis is maintained, by reasoning, against opponents.

**Disruption**. (*L. disrumpo*, to burst asunder. G. *Zerreißen*.) A rupture, or breaking, or tearing through.

**Diss**. The *Arundo ampelesmos*.

**Dissect**. (*L. dissectus*, part. of *dissco*, to cut asunder.) To cut in pieces; especially to cut an animal or vegetable in pieces methodically, so as to observe and demonstrate its structure.

**Dissected**. (*L. disseco*, to cut in pieces. F. *disséqué*; G. *zerschnitten*.) Incised; cut. Applied to leaves irregularly divided by deep veins or cuts.

**Dissecting**. (*L. disseco*.) Dividing.

**D. aneurysm**. See *Aneurysm, dissecting*.

**D. microscope**. See *Microscope, dissecting*.

**Dissection**. (*L. disseco*, to cut in pieces. F. *disssection*; G. *Section, Zerghedring*.) Term for the methodical cutting up of an animal or vegetable, in order to examine and ascertain the conditions of its structure.

**D. wound**. A wound received in the dissection of a dead body. In the great majority of instances no serious results follow, but in some, very severe symptoms occur, and to these the term is practically restricted. The morbid process is of the kind commonly called septicæmic and often results in diffuse inflammation of the connective tissue of the injured limb, with the formation of abscesses and typhoid symptoms. Wounds received in the dissection of persons dead from erysipelas or other septicæmic disorders, and especially if they are recently dead, are most frequently the infective source. Recent observations on similar affections in the lower animals point to a fungoid origin of the mischief.

**Dissector**. (*L. disseco*.) One who is engaged in dissection.

**Disseminated**. (*L. disseminatus*, part. of *disscimo*, to scatter seed.) Scattered, dotted at intervals.

**D. sclero'sis**. See *Sclerosis, disseminated*.

**Dissemination**. (*L. disseminatio*; from *dis*, indicating separation; *semino*, to sow. F. *dissemination*; I. *disseminazione*; S. *disseminacion*; G. *Zerstreuung, Ausstreuen*.) The act of scattering; the natural dispersion of seeds at the time of their maturity; the spreading abroad of a disease.

**Dissepiment**. (*L. dissepimentum*, a partition; from *diss-pio*, to separate. G. *Scheidewand*.) A separation or partition.

# DISSEPIMENTUM—DITEMONOPLEANTHEROUS.

In Botany, the divisions in an ovary formed by the adherent sides of adjacent carpels.

In Zoology, the imperfect horizontal plates growing from the vertical septa in corals.

**D., spurious.** (L. *spurius*, false.) The divisions in an ovary which are not formed by the sides of the carpels.

**Dissepimentum.** See *Dissepiment*.

**D. narium.** The *Septum narium*.

**Dissep'tum.** (L. *dissipium*, a barrier; from *dissipio*, to separate. F. *diaphragme*.) Old name for the diaphragm; because it divides the thorax and abdomen. Bartholin, ii, 3.

**Dissertatio.** (L. *dissertatio*, a disquisition; from *disserto*, to discuss.) A discourse, an essay, a thesis.

**D., inaugural.** (L. *inauguro*, to install.) A thesis or lecture read at the opening of any meeting or congress.

**Dissidentia.** (L. *dissidentia*; from *dissido*, to be removed from.) A forcible separation of parts.

**Dissilient.** (L. *dissiliens*, part. of *dissilio*, to burst asunder. G. *aufspringend*.) Bursting suddenly asunder.

**Dissipation.** (L. *dissipatus*, part. of *dissipo*, to disperse. G. *Ausbreitung, Zerstreung*.) The act of scattering or dispersing.

In Physics, the insensible loss or dispersion of the molecules of a body, as when a body is dissipated or wasted by evaporation or volatilisation.

**D. of energy.** See *Energy, dissipation of*.

**Dissipium.** (L. *dissipio*, to separate.) A synonym of the *Diaphragm*.

**Dissitiflorous.** (L. *dissitus*, distant; *flos*, a flower. F. *dissitifloré*.) Having distinct flowers.

**Dissitivalvate.** (L. *dissitus*, distant; *valva*, a valve. F. *dissitivalvé*.) Having distinct valves.

**Disso'ciants.** (L. *dissocio*, to separate from fellowship.) A term applied in Microscopy to those agents which have the power to loosen the texture and to separate the elements of the structures which are placed in them; such as *Müller's solution*.

**Dissocia'tion.** (L. *dissocio*, to separate from fellowship; from *dis*, apart; *socius*, a fellow.) The act of disuniting.

In Physiological Chemistry, the separation of one body from another, as of oxygen from hæmoglobin in the blood.

In Chemistry, a decomposition taking place under the influence of a certain temperature and pressure, in which, however, the separated molecules reunite to form the primary compound as soon as the original conditions of temperature and tension are reproduced. The exchange of gases in the lungs and in the tissues is, according to Bonders, an instance of dissociation.

**Dissoluble.** (L. *dissolubilis*, from *dissolvo*, to loosen asunder. G. *auflöslich*.) Capable of being dissolved.

**Dissolutio.** (L. *dissolutio*, a dissolving; from *dissolvo*.) See *Dissolution*.

Also, a synonym of *Solution*.

**D. sanguinis.** (L. *sanguis*, blood.) A condition of the blood in which the colouring matter of the red corpuscles becomes diffused through the serum; also, a condition of non-coagulability of the blood.

**D. ventriculi.** (L. *dim. venter*, the belly.) A synonym of *Softening of the stomach*.

**Dissolution.** (L. *dissolutus*, part. of *dissolvo*, to loosen. F. *dissolution*; G. *Auflösung, Lösung*.) The act of dissolving or melting; a synonym of solution, of decomposition, of destruction, and of death.

Formerly applied by the humoral physicians to a diminution of consistence of the blood.

A term, used by Hughlings Jackson, and applied to the scientific study of disease, which he regards as a product of dissolution as opposed to evolution.

**D. of vitreous body.** The same as *Phthisis bulbi*.

**Dissolutus.** (L. *dissolutus*, part. of *dissolvo*, to loosen. F. *dissolu*.) Lax; loose. Applied to certain diseases, as *dissolutus morbus*, or dysentery.

**Dissolvent.** (L. *dissolvo*, to loosen. F. *dissolvant*; G. *auflösend*.) Having power to melt, or liquify, or dissolve. Applied to a menstruum. Applied to a medicine which dissolves morbid concretions.

**Dissolventia.** Same as *Dissolvents*.

**Dissolvents.** (L. *dissolvo*.) Medicines having power to promote the absorption of swellings or the solution of concretions.

**Dis'sonance.** (F. *dissonance*; from L. *dissono*, to disagree in sound.) The same as *Discord*.

**Distach'yous.** (Δίς, two; στήχυς, an ear of corn. F. *distachyé*; G. *zweihährig*.) Having two ears or spikes.

**Distad.** (L. *disto*, to stand apart; from *dis*, apart; *sto*, to stand.) An adverbial term applied by Dr. Barclay to express the same relation as is conveyed by his use of the word *Distal*; furthest from the trunk or mesial line.

**Distaf.** (Sax. *distaf*.) A staff to which the bunch of flax or other matter is tied, and from which the thread is drawn in spinning.

**D. thistle.** The *Cirsium lanatum*.

**Dis'tal.** (L. *disto*, to be distant one from another.) Distant, or most removed from; a word applied by Dr. Barclay, of Edinburgh, in his proposed Nomenclature, when treating of the aspects of the four extremities, meaning farthest from the trunk or mesial line.

**D. ligature.** (L. *ligatura*, a band.) The tying of an artery on the side of an aneurysm furthest from the heart.

**Distant.** (L. *disto*, to be apart one from another. F. *distant*; G. *entfernt*.) Separate. Applied to petals and stems directed far away from each other.

**Distantia.** (L. *distantia*.) Distance.

**D. sacrocotyloidea.** See *Pelvic diameter, sacrocotyloid*.

**Distan'tial.** (L. *disto*, to be apart one from another.) Remote in place.

**D. aberration.** (L. *aberratio*, a diversion from.) Imperfect or ill-defined images arising from incorrect adjustment of the focus of a lens or system of lenses.

**Distearyl'glycerinphosphoric acid.**  $C_{12}H_{25}(OC_{18}H_{35})_2O.PO.OH_2$ . A product of the decomposition of brain lecithin.

**Distegous.** (Δίς, twice; στήγη, a roof. F. *distège*; G. *zweideckig*.) Having two ridges.

**Distemonus.** (Δίς, twice; στήμων, a stamen. F. *distémone*; G. *doppelstaubbeutelig, zweistäubfädig*.) Having two stamens.

**Distemonopleantherous.** (Δίς, twice; στήμων, a stamen; πέντω, more; ανθήρ, F. *distemonopleanthère*; G. *doppelstaubbeutelig*.)

Having double the number of anthers to that of filaments.

**Distemper.** (Old F. *destemper*, to derange; from L. *dis*; *tempero*, to proportion duly.) A derangement of the condition of the body or mind.

Also, a synonym of *Disease*.

**D. louse.** The louse of *Phthiriasis*, the *Pediculus tabescens*.

**Distemperantia.** (*Distemper.* F. *dyscrasie*.) A synonym of *Dyscrasia*.

**Distemperature.** (*Distemper.*) Perturbation of mind.

**Distempered.** (*Distemper.*) Out of order; diseased; sick.

**Distempe'ries.** (*Distemper.* F. *dyscrasie*.) The same as *Dyscrasia*, which see.

**Distended.** (L. *distendo*, to stretch out.) Inflated, blown out.

In Botany, same as *Ventricose*.

**Distentio.** (L. *distentio*; from *distendo*, to stretch out. F. *dilation*; G. *Ausdehnung*.) A stretching out. An expanding or dilatation, as of the heart and arteries, and so corresponding with *Diastole*, according to Galen, *de Diff. Puls.* iv, 10.

**D. membro'rum.** (L. *membrum*, a limb.) Convulsion.

**D. nervo'rum.** (L. *nervus*, a nerve.) An old term for a convulsion or spasm.

**Distichia.** Same as *Distichiasis*.

**Distichiasis.** (*Δίς*, twice; *στῖχος*, a row. F. *distichase*; I. *distichiasi*; S. *distiquiasis*; G. *Zweireihs*.) Term for an affection in which the tarsus has a double row of eyelashes, one often turned inwards against the eye, the other outwards. The friction of the inner row against the cornea produces *Keratitis*, and other symptoms described under *Entropion*.

**Distichophyllous.** (*Δίστυχος*, with two rows; *φύλλον*, a leaf. F. *distichophylle*.) Having leaves in double rows.

**Distichous.** (*Δίς*, twice; *στῖχος*, a rank. G. *zweireihig*.) Double ranked; two-ranked. Applied to leaves and other organs disposed in opposite horizontal ranks or rows.

**Distigmatiæ.** (*Δίς*, two; *στίγμα*, a stigma. F. *distigmatie*; G. *mit zwei Narben*.) Applied by A. Richard to a Section of the *Synanthriceæ*, having two stigmata.

**Distigmous.** (Same etymon. F. *distigmaté*; G. *mit zwei Narben*.) Having two stigmata.

**Distil'.** (Old F. *distiller*, from L. *distillo*, to drip down; from *de*, down; *stillo*, to drop.) To fall in drops, to perform the act of *Distillation*.

**Distilla'tio.** See *Destillatio* and *Distillation*.

**Distillation.** (L. *destillo*, to drop by little and little. F. *distillation*; G. *Abziehen*.) The act or process of falling in drops; especially applied to a process having for its object the separation and isolation of the more volatile parts of any compound substance by vaporisation in one vessel and condensation in another. The body to be operated on is placed, with or without water, or some other fluid, in an alembic or retort, the neck of which is connected with another vessel, termed a receiver, which is kept cool by being surrounded with ice, or by a stream of cold water. Heat is applied to the bulb of the retort, and the vapours that rise are condensed in the receiver. Instead of a retort an apparatus called a still with a worm is commonly used. The

operation of distillation is not only used for the purpose of obtaining the more volatile part of a compound liquid, but is also employed for the separation of a liquid from such solids as it may hold in solution or suspension, and for separating, along with water or spirit, the volatile oils of plants.

Formerly used for a defluxion of rheum, or a catarrh.

**D., cold.** Applied to that form of distillation in which no more heat is applied than just suffices to cause the liquid to pass over in drops.

**D., destructive.** (L. *destruo*, to destroy.) The decomposition of bodies by a strong heat in one vessel, and the collection of the products in another. The same as *D., dry*.

**D., dry.** The application of heat to a substance in a retort without the addition of any fluid.

**D., fractional.** (Old F. *fraction*; from L. *fractio*; from *frango*, to break.) An operation by which two or more volatile liquids having different boiling points may be separated on the application of heat. The liquid having the lower boiling point distilling over first, and that having the higher last. The liquid is maintained at the same temperature in each of the various stages until the whole of the liquid boiling at that temperature has distilled over.

**D. in vacuo.** (L. *in*, in; *vacuus*, empty.) A mode of distillation with a still and a receiver, so made as to be air-tight when connected; the latter possesses a stop-cock, which is kept open till all atmospheric air is expelled by the vapour produced in the operation; it is then closed, and a vacuum obtained by surrounding the receiver with ice or cold water. The distillation may now be conducted at a lower temperature than when the apparatus is not air-tight; a circumstance of no little importance in the preparation of many substances.

**Distillato'rius.** (L. *distillo*, to drop little by little.) Of, or belonging to, distillation; applied to vessels (*Vasa distillatoria*) used in distilling.

**Distilled.** (L. *distillo*.) Having undergone the process of *Distillation*.

**D. oils.** See *Olea destillata*.

**D. waters.** See *Aqua destillata*.

**Distinct.** (Old F. *distinct*; from L. *distinctus*, part. of *distinguo*, to divide, or separate. G. *getrennt, deutlich*.) Applied to parts that are free and separate from others.

**Distocia.** (*Δίς*, twice; *τόκος*, birth.) The birth of twins.

**Distoc'chia.** (*Διστοιχία*, a double row.) Same as *Distichiasis*.

**Distoc'hiasis.** (*Διστοιχος*, in double rows.) The same as *Distichiasis*.

**Distoma.** (*Δίς*, twice; *στόμα*, a mouth. G. *Doppelmund*.) A Genus of the Family *Distomeæ*. Parasitic worms, usually of flattened, leaf-like form, with a pair of suckers, a dichotomously-branched intestinal canal, apocytous, with an excretory apparatus; a nervous system consisting of central and peripheric portions; egg-producing, and for the most part hermaphrodite. Their development is complicated. The ovum, which either presents specially arranged cilia or is destitute of them, is discharged from the body of the Distoma and carried into moist places or water. In the course of a short time the shell becomes detached, and the embryo set free wanders in search of a host. It usually finds one in the body of a mollusc. It loses

# DISTOMA.

its cilia, and, assuming a worm-like aspect, is named, if provided with mouth and rudimentary intestine, Redia; or, if without these, Sporocyst (G. *Kremschlauch*, Anne, *Cercarienmutter*). In the interior of the sporocyst the Distoma brood or Cercarie are produced asexually and out of germ granules. The Cercarie are larval forms, but, like the mature form, possess two suckers, a digestive and excretory apparatus, and probably a nervous system, but no sexual organs. They have, in addition, some provisional structures, as a tail, an eyespot, and sometimes a spikelet on the head. In this condition they burst through the body wall of the sporocyst or redia, and, escaping from the first provisional host, swim more or less freely in water. Sooner or later these Distoma larvae or tailed Cercarie, penetrate the body of a second provisional host. In some instances this is another mollusc, as a snail; in others it is a worm; in others an arthropod, as an insect or crustacean; and yet again in others, a vertebrate. Embedded in the second provisional host the Cercaria becomes encysted, and constitutes the young Distoma, though still remaining asexual. The development of the sexual organs and the production of the complete Distoma only occurs when it has entered the stomach of one more animal by passive migration, its definitive host. The gastric juice of this animal dissolves the capsule, and the young Distoma makes its way to its appropriate organ, as the liver, or the urinary bladder. The cortical envelope of the animal is composed of four layers, a dense cuticle provided with porous canals, a layer of cells, a muscular layer, the direction of the fibres of which are externally circular, in the middle longitudinal, and internally diagonal, and an internal cell layer. The digestive apparatus consists of a mouth opening in the anterior sucker, a vestibule, a strong muscular and fusiform pharynx, which can be projected and retracted by appropriate muscles, and an intestine which divides into two portions running backwards and ending blindly, and sending off about sixteen lateral ramifying tubes. The excretory apparatus is a retiform system of tubes, which extends over the whole body and opens at the posterior end of the animal. The nervous system consists of two upper and one inferior ganglion, which are united by commissures. The inferior ganglion gives five branches backwards to the intestine; the upper ganglia give branches forwards as well as backwards, and especially two large lateral nerves, to the posterior part of the body and to the sperm-producing apparatus.

**D. acanthoides**, Rud. (*Ἀκανθα*, a thorn; *εἶδος*, likeness.) Found in the oesophagus, stomach, and intestines of *Phoca pantherina*.

**D. acervocaliferum**, Gastaldi. (L. *acervus*, a little heap; *calx*, lime; *fero*, to bear.) Found encapsuled in the trunks of the nerves of *Rana esculenta*.

**D. aculea'tum**, Nitsch. (L. *aculeatus*, prickly.) Found in the intestines of *Bubo maximus*.

**D. acu'tum**, Leuckart. (L. *acutus*, sharp.) Found in the frontal sinus of *Fictorinus pulchellus*.

**D. æglef'ni**, v. Beneden. Found in the intestine of *Gadus æglefinus*.

**D. æqua'lē**, Dujardin. (L. *equalis*, equal.) Found in the intestine of *Strix flammea*.

**D. aff'ne**, Rud. (L. *affinis*, allied or related to.) Found in the intestine of *Scorpena cirrhosa*.

**D. ag'amos**, v. Linstow. (*Ἀγαμος*, unmarried.) Found encapsuled in the abdomen of *Gammarus pulex*.

**D. albico'lē**, v. Rud. (L. *albus*, white; *collum*, the neck.) Found in the gall bladder of *Aquila pennata*.

**D. allos'tomum**, v. Diesing. (*ἄλλος*, another; *στόμα*, the mouth.) Found in the intestine of *Tropidonotus natrix*.

**D. aluco'nis intestinal'ē**, v. Rudolphi. (L. *intestinalis*, intestinal.) Found in the intestine of *Ulula aluco*.

**D. aluco'nis thorac'icūm**, v. Rudolphi. (L. *thorax*, the chest.) Found in the cavity of the thorax of *Ulula aluco*.

**D. anar'rhihæ**, Rathke. Found in the intestine of *Anarrhichas lupus*.

**D. an'atis fus'cæ**, v. Viborg. (L. *anas*, a duck; *fuscus*, dusky.) Found in the intestine of *Oidemia fusca*.

**D. an'ceps**, Molin. (L. *anceps*, two-headed.) Found in the intestine of *Fulica atra*.

**D. Anderson'i**, Cobbold. Found in the small intestine of a species of *Platanista*.

**D. angula'tum**, Dujardin. (L. *angulus*, an angle.) Found in the intestine of *Anguilla vulgaris*.

**D. annula'tum**, Diesing. (L. *annulatus*, furnished with rings.) Found in the intestine of *Gymnotus electricus*.

**D. annul'gerum**, Mordm. (L. *annulus*, a little ring; *gero*, to bear.) Found encapsuled in the vitreous humor of *Perca fluviatilis*.

**D. anon'ymum**, Diesing. (*ἄν*, not; *νόμος*, a name.) Found in the intestine of *Gadus æglefinus*.

**D. aper'tum**, Rudolphi. (L. *apertus*, part. of *aperior*, to uncover.) Found in the intestine of *Apogon rex mulloium*.

**D. apicula'tum**, Rudolphi. (L. *apicula*, dim. of *apex*, a point.) Found in the large intestine of *Ulula aluco*.

**D. appendicula'tum**, Rudolphi. (L. *appendicula*, a small appendage.) Found in the intestine of *Perca fluviatilis*.

**D. arcua'tum**, Dujardin. (L. *arcuatus*, part. of *arcuo*, to bend.) Found in the intestine of *Garrulus glandarius*.

**D. are'nula**, Croplin. (L. *arenula*, a grain of sand.) Found in the intestine of *Fulica atra*.

**D. areola'tum**, Rudolphi. (L. *areola*, dim. of *area*, a space.) Found in the intestine of *Platessa vulgaris*.

**D. arma'tum**, Molin. (L. *armatus*, part. of *armo*, to arm.) Found in the intestine, cæcum, and rectum of *Gallus gallinæus*.

**D. arrectum**, Dujardin. (L. *arrectus*, part. of *arrigeo*, to raise.) Found in the intestine of *Lucerta viridis*.

**D. ascid'ia**, Rudolphi. (*Ἀσκός*, a leathern bag.) Found in the intestine of *Bos vulgaris*.

**D. ascid'ia**, v. Beneden. (*Ἀσκός*, a bag.) Found in the intestine of *Plecotus auritus*.

**D. ascidoi'des**, v. Beneden. (*Ἀσκός*, a bag; *εἶδος*, likeness.) Found in the intestine of *Vesperugo noctula*.

**D. aspidoph'ori**, v. Beneden. (*Ἀσπίς*, a shield; *φορέω*, to bear.) Found in the intestine of *Aspidophorus europæus*.

**D. as'sula**, Dujardin. (L. *assula*, a splinter.) Found in the intestine of *Tropidonotus natrix*.

**D. at'omon**, Rudolphi. (*Ἀτοπος*, uncut.) Found in the ventricle of *Platessa flaus*.

# DISTOMA.

**D. auriculatum**, Wedl. (*L. auriculatus*, eared.) Found in the intestine of *Acipenser ruthenus*.

**D. bacigerum**, Rudolphi. (*L. baccus*, a berry; *gero*, to bear.) Found in the intestine of *Atherina hepsetus*.

**D. bacillare**, Molin. (*L. dim.* of *baculum*, a stick.) Found in the appendix of the pylorus of *Centrolophus pompilius*.

**D. baculus**, Diesing. (*L. baculum*, a stick.) Found in the intestine of *Mergus albellus*.

**D. beleocephalum**, v. Linstow. (Βέλος, an arrow; κεφαλή, the head.) Found in the intestine of *Ardea cinerea*.

**D. belones vulgaris**, Wedl. (*L. vulgaris*, common.) Found encapsuled in the connective tissue of the pericardium and bulbous arteries of the *Belone vulgaris*.

**D. bergen'sē**, Olsson. Found in the intestine of *Anguilla vulgaris*.

**D. bifurcatum**, Wedl. (*L. bis*, twice; *furca*, a fork.) Found in the intestine of *Crocodilus vulgaris*.

**D. bilobum**, Rudolphi. (*L. bis*, twice; *lobus*, a lobe.) Found in the intestine of *Fulica atra*.

**D. bliscæ**, v. Linstow. Found encapsuled in the musculature of *Bleca hyerkna*.

**D. boscii**, Cobbold. Found in the cavity of the mouth of *Cobulus spec.*

**D. botryophoron**, Olsson. (Βότρυς, a bunch of grapes; φορέω, to bear.) Found in the ventricles of *Molva abyssorum*.

**D. brachysomum**, Creplin. (Βραχύς, short; σῶμα, the body.) Found in the intestine and cæcum of *Egialites hiatricula*.

**D. brevicollē**, Creplin. (*L. brevis*, short; *collum*, neck.) Found in the intestine of *Hæmatopus ostralegus*.

**D. bufo'nis**, Linstow. (*L. bufo*, a toad.) Found encapsuled towards the intestine of *Bufo vulgaris*.

**D. bursic'ola**, Creplin. (*L. bursa*, a purse; *colo*, to inhabit.) Found in the bursa Fabricii of *Ardea cinerea*.

**D. Buskii**, Lankester. A synonym of *Distoma crassum*, Busk, Cobbold, Leuckart.

**D. buteo'nis**, Zeder. (*L. buteo*, a kind of falcon.) Found in the intestine of *Buteo vulgaris*.

**D. cal'ceolus**, Molin. (*L. calciculus*, a small shoe.) Found in the ventricles and intestine of *Conger vulgaris*.

**D. callion'ymi**, v. Beneden. Found in the intestine of *Callionymus dracunculus*.

**D. campan'ula**, Dujardin. (*L. campanula*, a small bell.) Found in the intestine of *Esor lucius*.

**D. camp'ula**, Cobbold. (Καμπύλος, bent.) Found in the biliary ducts of *Phocæna communis*.

**D. canalicula'tum**, Rudolphi. (*L. canaliculatus*, channelled.) Found in the intestine of *Sterna galericulata*.

**D. capen'sē**, Harley. The ova said to be found in the blood of man.

**D. capitella'tum**, Rudolphi. (*L. capitellus*, dim. of *caput*, a head.) Found in the gall-bladder of *Uranoscopus scaber*.

**D. capsula'rē**, Diesing. (*L. capsula*, a small bust.) Found encapsuled in the internal muscles of *Crex pratensis*.

**D. carno'sum**, Rudolphi. (*L. carnosus*,

fleshy.) Found in the intestine of *Dentex vulgaris*.

**D. cauda'lē**, Rudolphi. (*L. cauda*, a tail.) Found in the intestine and rectum of *Nucifraga caryocatactes*.

**D. cauda'tum**, v. Linstow. (*L. cauda*, a tail.) Found in the intestine of *Erinaceus europæus*.

**D. cestici'llus**, Molin. (*L. cesticillus*, a small ring.) Found in the intestine of *Lophius piscatorius*.

**D. ces'ti ven'eris**, Vogt. (*L. cestus*, a girdle; *Venus*.) Found in the infundibulum of *Cestum veneris*.

**D. cestoi'des**, v. Beneden. (Κεστός, a girdle; εἶδος, likeness.) Found in the œsophagus of *Raja batia*.

**D. chilos'tomum**, Mehlis. (Χεῖλος, a lip; στόμα, a mouth.) Found in the intestine of *Vespertilio Leisleri* and *V. murinus*.

**D. cine'tum**, Rudolphi. (Κινητός, movable.) Found in the intestine of *Tanellus cristatus*.

**D. cirra'tum**, Rudolphi. (*L. cirratus*, enri'd.) Found in the large intestine of *Cervus monedula*.

**D. cladoca'tium**, Diesing. (Κλάδος, a shoot; καλύα, a cabin.) Found in the gall-bladder and biliary duct of *Ardea minuta*.

**D. clathra'tum**, Deslongchamps. (*L. clathratus*, set with bars.) Found in the gall-bladder of *Cypselus apus*.

**D. cla'va**, Diesing. (*L. clava*, a knotty branch.) Found in the intestine of *Ennece'tes scytale*.

**D. clava'tum**, Rudolphi. (*L. clava*, a knotty branch.) Found in the stomach of *Xiphias gladius*.

**D. clavig'erum**, Rudolphi. (*L. clavus*, a nail; *gero*, to bear.) Found in the intestine of *Rana temporaria*.

**D. coch'lear**, Rudolphi. (*L. cochlear*, a spoon.) Found in the intestine of *Sterna cantiana*.

**D. cochleari'formē**, Rudolphi. (*L. cochlear*, a spoon; *forma*, likeness.) Found in the intestine of *Mergus albellus*.

**D. cœ'lebs**, v. Linstow. (*L. cœlebs*, unmarried.) Found encapsuled in the intestine of *Fringella cœlebs*.

**D. collurio'nis**, Zeder. Found in the intestine of *Lanius collurio*.

**D. commu'nē**, Diesing. (*L. communis*, common.) Found in the liver of *Sebastes norvegicus*.

**D. commuta'tum**, Diesing. (*L. commutatus*, part. of *commuto*, to change.) Found in the intestine and cæcum of *Gallus gallinaceus*.

**D. compac'tum**, Cobbold. (*L. compactus*, part. of *compingo*, to join together.) Found in the lungs of *Mungos fasciatus*.

**D. complana'tum**, Rudolphi. (*L. complano*, to make even.) Found in the œsophagus of *Ardea cinerea*.

**D. conca'vum**, Creplin. (*L. concavus*, concave.) Found in the small intestine and cæcum of *Anas Hornschuchii*.

**D. conjunc'tum**, Cobbold, Mc'Connell. (*L. conjungo*, to join together.) Found in the biliary duct of the fox, *Canis vulpes*, in the American fox, in Pariah dogs, and by Cobbold, Lewis, and Cunningham, and Mc'Connell in man, and thought by the last named author to be identical with *Distoma crassum*.

# DISTOMA.

**D. constrictum**, Leared. (L. *constrictus*, part. of *constringo*, to draw together.) Found in the heart of *Chelone mydas*.

**D. constrictum**, Mehlis. (L. *constringo*, to draw together.) Found in the intestine of *Oidemia nigra*.

**D. contortum**, Rudolphi. (L. *contortus*, part. of *contorquere*, to turn.) Found in the gills of *Orthogoriscus nasus*.

**D. conus**, Creplin. (L. *conus*, a cone.) Found in the bile-bladder and bile-duct of *Felis domestica*.

**D. coronarium**, Cobbold. (L. *coronarius*, of, or belonging to, a wreath.) Found in the intestine of *Alligator mississippiensis*.

**D. corona tum**, Wagener. (L. *corona*, to crown.) Found in the intestine of *Corvina nigra*.

**D. corrugatum**, Dujardin. (L. *corruga*, to wrinkle.) Found in the intestine of *Sorex tetragonurus*.

**D. crassicolle**, Rudolphi. (L. *crassus*, thick; *collum*, neck.) Found in the intestine and rectum of *Salamandra atra*.

**D. crassiusculum**, Rudolphi. (L. *dim. crassus*, thick.) Found in the gall-bladder of *Buteo vulgaris*.

**D. cras sum**, Busk. (L. *crassus*, thick.) Found in the intestine of *Homo sapiens*. The digestive tube is not ramified, and the body is somewhat dilated near the posterior end.

**D. cras sum**, v. Siebold. (L. *crassus*, thick.) Found in the large intestine of *Chelidon rustica*, and in the intestine of the dog and man.

**D. crena tum**, Molin. (L. *crena*, a notch.) Found in the stomach of *Centropomus pompilus*.

**D. crista tum**, Rudolphi. (L. *cristatus*, crested.) Found in the intestine of *Stromateus fatola*.

**D. crotail**, Humboldt. (L. *crotalus*, a rattle-snake.) The *Pentastoma moniliforme*.

**D. cryptobothrium**, van Beneden. (Κρυπτός, hidden; βόθος, a pit.) Found in the intestine of *Trigla gurnardus*.

**D. crystallinum**, Rudolphi. (L. *crystallinus*, crystalline.) Found in the gall-bladder of *Rana temporaria*.

**D. cuneatum**, Rudolphi. (L. *cuneatus*, wedge-shaped.) Found in the oviduct of *Pavo cristatus*.

**D. cyclopteri**, Fabr. (Κόλλος, a circle; πτερον, a wing.) Found in the intestine of *Cyclopterus lumpus*.

**D. cygnoides**, Zeder. (L. *cygnus*, a swan; εἶδος, form.) Found in the urine and bladder of *Rana temporaria*.

**D. cylindraceum**, Zeder. (L. *cylindrus*, a cylinder.) Found in the lungs of *Rana temporaria*.

**D. cymbiforme**, Rudolphi. (L. *cymbium*, a small drinking vessel.) Found in the urine and bladder of *Halichelys atra*.

**D. cystidicola**, Creplin. (Κύστις, a bag; colo, to inhabit.) Found in *Phalangium opilio*.

**D. deflectens**, Rudolphi. (L. *deflectens*, part. of *deflecto*, to turn aside.) Found in the intestine of *Thryothorus hypoxanthus*.

**D. delicatulum**, Rudolphi. (L. *dim. delicatus*, a voluptuary.) Found in the gall-bladder of *Anas sponsa*.

**D. denticulatum**, Rudolphi. (L. *denticulatus*, furnished with small teeth.) Found in the intestine of *Sterna cantiaca*.

**D. dentriticum**, Rudolphi. (Δέντρον, a tree.) Found in the intestine of *Xiphias gradius*.

**D. dicorynnum**, Diesing. (Δίς, double; κορυφή, a club.) Found in the muscle of *Lampris guttatus*.

**D. diffusocaliferum**, Gastaldi. (L. *diffundo*, to pour forth; calx, lime; fero, to bear.) Found encased in the muscles, under the skin, in the liver, and in the lungs of *Rana esculenta*.

**D. dilatatium**, Miram. (L. *dilato*, to enlarge.) Found in the intestine, rectum, and collum of *Gallus gallinaceus*.

**D. dimorphum**, Diesing. (Δίς, twofold; μορφή, form.) Found in the oesophagus of *Ardea exilis*.

**D. divergens**, Rudolphi. (L. *dis*, apart; vergo, to bend.) Found in the intestine of *Blenius tentacularis*.

**D. dubium**, Diesing. (L. *dubius*, fluctuating.) Found in the intestine of *Scolopax minor*.

**D. echeneidis remora**, Rudolphi. (L. *echeneis remora*, the sucking-fish.) Found in the gall-bladder of *Echeneis remora*.

**D. echinatum**, Zeder. (L. *echinatus*, prickly.) Found in the intestine of *Grus cinerea*.

**D. echiniferum**, De la Valette. (L. *echinus*, a hedgehog; fero, to bear.) Found in the intestine of *Ascolopax gallinago*.

**D. echinocephalum**, Rudolphi. (Ἐχίνος, a hedgehog; κεφαλή, the head.) Found in the intestine and rectum of *Milvus regalis*.

**D. elegans**, Rudolphi. (L. *elegans*, fine, neat.) Found in the intestine of *Fringilla linaria*.

**D. elephantis**, Jackson. Found in the biliary duct and intestine of *Elephas indicus*.

**D. ellipticum**, Molin. (Ἐλλειπσις, the conic section ellipse.) Found in the intestine of *Acipenser nasus*.

**D. elongatum**, Mehlis. (L. *elongatus*, part. of *elongo*, to lengthen out.) Found in the intestine of *Larus argentatus*.

**D. embryo**, Olfers. (Εμβρυον, the embryo.) Found encased in the intestines and in the liver of *Acerina cornua*.

**D. endolum**, Dujardin. (Ἐνδον, within; λοβός, the lower part of the ear.) Found in the intestine of *Rana temporaria*.

**D. esocis lucii**, Rudolphi. Found in the intestine of *Esoc lucius*.

**D. eurysomum**, v. Linstow. (Εὐρύς, wide; σῶμα, month.) Found in the intestine of *Glucon elongata*.

**D. exasperatum**, Rudolphi. (L. *exaspero*, to roughen.) Found in the intestine of *Crossopis folicus*.

**D. excisum**, Rudolphi. (L. *excido*, to cut out.) Found in the intestine of *Scomber colias*.

**D. fabenii**, Molin. Found in the intestine of *Cantharus vulgaris*.

**D. fallax**, Rudolphi. (L. *fallax*, deceitful.) Found in the intestine of *Uranoscopus scaber*.

**D. fasciatum**, Rudolphi. (L. *fascia*, a band.) Found in the intestine of *Serranus cabrilla*.

**D. ferrox**, Zeder. (L. *ferox*, impetuous.) Found in the intestine of *Ardea stellaris*.

**D. ferrugineum**, v. Linstow. (L. *ferrugineus*, colour of iron-rust.) Found in the intestine of *Barbus fluviatilis*.

# DISTOMA.

**D. filiforme**, Rudolphi. (L. *filum*, a thread; *forma*, shape.) Found in the intestine of *Cepola rubescens*.

**D. filum**, Dujardin. (L. *filum*, a thread of anything woven.) Found in the intestine of *Passer domesticus*.

**D. flavescens**, van Beneden. (L. *flavescere*, to become golden coloured.) Found in the intestine of *Gobius minutus*.

**D. flexuosum**, Rudolphi. (L. *flexuosus*, tortuous.) Found in the stomach and intestine of *Talpa europaea*.

**D. foliaceum**, Molin. (L. *foliaceus*, leafy.) Found in the intestine of *Gobius pagannellus*.

**D. folium**, Olfers. (L. *folium*, a leaf.) Found in the urine and bladder of *Esoc lucius*.

**D. fuligulae ferinae**, Bellingham. Found in the intestine of *Fuligula ferina*.

**D. fulvum**, Cobbold. (L. *fulvus*, reddish yellow.) Found in the intestine of *Gallus mustela*.

**D. fulvum**, Rudolphi. (L. *fulvus*, reddish yellow.) Found in the intestine of *Motella mustela*.

**D. furca tum**, Bremser. (L. *furca*, a fork.) Found in the intestine of *Lota lota*.

**D. furcifera**, Olsson. (L. *furca*, a fork; *fero*, to bear.) Found in the stomach and intestine of *Platessa flexus*.

**D. fusca tum**, Rudolphi. (L. *fusco*, to darken.) Found in the intestine of *Coturnix communis*.

**D. fuscus cens**, Rudolphi. (L. *fusco*, to darken.) Found in the intestine of *Dentex vulgaris*.

**D. gam mari**, v. Linstow. Found encapsuled in the abdominal cavity of *Gammarus pulex*.

**D. gelatinosum**, Rudolphi. Found in the intestine of *Podocnemis expansa*.

**D. genicula tum**, Diesing. (L. *geniculum*, a little knee.) Found in the stomach of *Physophora tetrasticha*.

**D. genu**, Rudolphi. (L. *genu*, a knee.) Found in the intestine of *Labrus luscus*.

**D. gibbosum**, Rudolphi. (L. *gibbosus*, hunch-backed.) Found in the intestine of *Belone acus*.

**D. giganteum**, Diesing. (L. *giganteus*, belonging to giants.) Found in the biliary ducts of *Camelopardalis giraffa*.

**D. gigas**, Nardo. (L. *gigas*, a giant.) Found in the stomach of *Lutarius imperialis*.

**D. glabrum**, Creplin. (L. *glaber*, without hair.) Found in the intestine of *Salamandra maculosa*.

**D. globiporum**, Rudolphi. (L. *globus*, a globe; *porus*, a pore.) Found in the intestine of *Perca fluviatilis*.

**D. globocauda tum**, Creplin. (L. *globus*, a ball; *cauda*, a tail.) Found in the intestine of *Corvus cornix*.

**D. globulus**, Rudolphi. (L. *globulus*, a little ball.) Found in the intestine of *Cygnus olor*.

**D. Goll'ath**, v. Beneden. Found in the intestine of *Balanus mysticetus*.

**D. gracile**, Diesing. (L. *gracilis*, slender.) Found encapsuled in the gills, fins, and muscles of *Pomotis vulgaris*.

**D. grandæ**, Rudolphi. (L. *grandis*, great.) Found in the intestine of *Platatea ojaia*.

**D. grandiporum**, Rudolphi. (L. *grandis*,

great; *porus*, a passage.) Found in the stomach of *Muræna helena*.

**D. granulum**, Rudolphi. (L. *granulum*, a little grain.) Found in the intestine of *Cottus scorpius*.

**D. hæmato bium**. The same as *Bilharzia hæmatobia*.

**D. hemicyclum**, Molin. (L. *hemicyclum*, a semicircle.) Found in the intestine of *Belone acus*.

**D. hepaticum**, Rud. (Ἡπαρ, the liver. F. *douve hépatique*, *douve de foie*; G. *Leberzegel*.) The liver-flounder, or liver-fluke, the cause of the rot in sheep and cattle. It is usually found in the biliary ducts; it is rare in man; common in ruminants, especially in sheep. The body is broad and flattened, consisting of a short conical head 3—4 mm. long, and the body proper 15—33 mm. long. At the fore part of the head is the cephalic sucker, in the hollow of which is the mouth. A second sucker is situated on the under surface at the junction of the head and body. In front of the latter sucker is the genital pore, which leads into a short tortuous tube that is connected with both male and female genital apparatus. The opening of the excretory apparatus is at the posterior extremity of the body. The sides of the body are filled with the yolk-producing apparatus (F. *vitelligine*; G. *Eiherstöcke*). In the median part of the body are anteriorly the windings of the uterus, containing many ova and the germ-producing apparatus (F. *germigine*; G. *Keimstöcke*), and posteriorly the sperm-producing apparatus (F. *spermatoque*; G. *Hodenföhl*). The shell-producing apparatus is intermediate in position to the two last.

**D. heteroclitum**, Molin. (Ἑτεροκλιτός, sidewise bent.) Found in the intestine and cæcum of *Coturnix communis*.

**D. heterophyes**, Bilharz. (Ἑτεροφύης, of a different nature.) Found in the intestine of man. Body pisiform, anterior extremity narrower than posterior; surface covered with small spines, especially near the head; intestinal tube with two non-ramified branches; genital orifices with a projecting border.

**D. heteroporum**, Dujardin. (Ἑτερος, other; πόρος, a pore.) Found in the intestine of *Esperugo pipistrellus*.

**D. heterotomum**, Rudolphi. (Ἑτερος; στόμα, a mouth.) Found in the œsophagus and under the tongue of *Ardea purpurea*.

**D. hi'ans**, Rudolphi. (L. *hi'o*, to gape.) Found in the œsophagus of *Ciconia alba*.

**D. hispidum**, Abildgaard. (L. *hispidus*, rough.) Found in the intestine of *Acipenser glaber*.

**D. holostomum**, Rudolphi. (Ὅλος, whole; στόμα, the mouth.) Found in the intestine of *Rallus aquaticus*.

**D. homœosomum**, Diesing. (Ὅμοιος, like; στόμα.) Found in the stomach of *Trigla cuculus*.

**D. horridum**, Leidy. (L. *horridus*, rough.) Found in the ureter of *Bou constrictor*.

**D. hyalinum**, Rudolphi. (L. *hyalinus*, glass green.) Found in the intestine of *Salmo eriox*.

**D. hys tris**, Dujardin. (L. *hystrix*, a porcupine.) Found encapsuled in the branchial cavity and peritoneum of *Rhombus maximus*.

**D. imbutiforme**, Molin. (L. *imbutus*, part of *imbuo*, to dye; *forma*, likeness.) Found in the intestine of *Labrax lupus*.

# DISTOMA.

**D. incisum**, Rudolphi. (*L. incisus*, cut into.) Found in the stomach, intestine, and gall-bladder of *Anarhichas lupus*.

**D. incivilis**, Leidy. (*L. incivilis*, uncivil.) Found in the intestine of *Sciaenops ocellatus*.

**D. incomptum**, Rudolphi. (*L. incomptus*, rude.) Found in the intestine of a species of *Chaetodon*.

**D. incrassatum**, Diesing. (*L. incrassatus*, part. of *incrasso*, to thicken.) Found in the stomach and intestine of *Lutra solitaria*.

**D. increscens**, Olsson. (*L. increscens*, part. of *incrasso*, to grow in.) Found in the intestine of *Scomber scombrus*.

**D. inflatum**, Molin. (*L. inflatus*, part. of *inflare*, to inflate.) Found in the stomach and intestine of *Anguilla vulgaris*.

**D. inflexum**, Rudolphi. (*L. inflexus*, part. of *inflexio*, to bend.) Found in the intestine of *Idus melanotos*.

**D. insignis**, Diesing. (*L. insignis*, prominent.) Found in the stomach of *Echinorhinus spinosus*.

**D. instabilis**, Dujardin. (*L. instabilis*, unsteady.) Found in the intestine of *Crossopus fodiens*.

**D. intermedium**, Mehlis. (*L. intermedius*, intermediate.) Found in the intestine of *Podiceps rubricollis*.

**D. involutum**, Rudolphi. (*L. involutus*, part. of *involvere*, to envelop.) Found in the intestine of *Upupa epops*.

**D. irroratum**, Rudolphi. (*L. irroratus*, to wet with dew.) Found in the stomach of *Haliichelys atra*.

**D. isosotomum**, Rudolphi. (*ἴσος*, equal; *στόμα*, a mouth.) Found encapsulated in the ganglia, in the biliferous ducts, in the seminiferous ducts, and muscles of *Astacus fluviatilis*.

**D. Jacksonii**, Cobbold. Found in the liver of *Elephas indicus*.

**D. labiatum**, Rudolphi. (*L. labium*, a lip.) Found in the liver of *Syngnathus pelagicus*.

**D. labracis**, Dujardin. Found in the intestine of *Labrax lupus*.

**D. labri**, v. Beneden. Found in the intestine of *Labrus maculatus*.

**D. lacinia**, Dujardin. (*L. lacinia*, a thing bitten.) Found in the pancreas of *Cynocephalus mormon*.

**D. lancea**, Diesing. (*L. lancea*, a lance.) Found in the biliary ducts of *Dolphinus tucensis*.

**D. lanceolatum**, Mehlis. (*L. lanceolatus*, lance-shaped.) Found in the liver of man. Intestinal tube consists of two non-ramified branches. It is common in the smaller biliary canals of the sheep. It is about .35" long, .11" broad.

**D. latifolium**, Rudolphi. (*L. latus*, broad; *collum*, the neck.) Found in the intestine of *Caranx trachurus*.

**D. laureatum**, Zeder. (*L. laureatus*, laureate.) Found in the intestine of *Trutta fario*.

**D. leptosomum**, Creplin. (*λεπτός*, delicate; *σῶμα*, the body.) Found in the intestine of *Tringa alpina*.

**D. lima**, Rudolphi. (*L. lima*, a file.) Found in the intestine of *Rhinolophus ferrum equinum*.

**D. linearis**, Zeder. (*L. linearis*, linear.)

Found in the large intestine of *Gallus gallinaceus*.

**D. lineola**, Diesing. (*L. lineola*, a little line.) Found in the intestine of *Circus rufus*.

**D. lingua**, Creplin. (*L. lingua*, the tongue.) Found in the intestine of *Larus argentatus*.

**D. linguæformis**, Diesing. (*L. lingua*, the tongue; *forma*, likeness.) Found in the intestine of *Erimacrus europæus*.

**D. linguatula**, Rudolphi. (*L. linguatulus*, provided with a little tongue.) Found in the intestine of a species of *Rana*.

**D. longum**, Leidy. (*L. longus*, long.) Found in the throat of *Esox estor*.

**D. lorum**, Dujardin. (*L. lorum*, a lash.) Found in the intestine of *Talpa europæa*.

**D. lucipetum**, Rudolphi. (*L. lux*, light; *peto*, to seek.) Found in the nictitating membrane of *Larus argentatus*.

**D. luteum**, v. Beneden. (*L. luteus*, yellow.) Found in the intestine of *Mustelus vulgaris*.

**D. macrobothrium**, v. Beneden. (*Μακρός*, long; *βόθρος*, a pit.) Found in the intestine of *Osmorus eperlanus*.

**D. macrocotyle**, Diesing. (*Μακρός*, long; *κοτόλη*, a cup.) Found in the intestine of *Orthogoriscus mola*.

**D. macrophallus**, v. Linstow. (*Μακρός*, long; *φαλλός*, the male member.) Found in the intestine of *Actitis hypoleucos*.

**D. macrosotomum**, Rudolphi. (*Μακρός*, long; *στόμα*, a mouth.) Found in the intestine of *Apternus tridactylus*.

**D. macrourum**, Rudolphi. (*Μακρός*, long; *οὐρά*, a tail.) Found in the liver and gall bladder of *Anthus arboreus*.

**D. maculosum**, Rudolphi. (*L. maculosus*, spotted.) Found in the intestine of *Caprimulgus europæus*.

**D. marginatum**, Molin. (*L. marginatus*, to furnish with a border.) Found in the intestine of *Anas creca*.

**D. megacotyle**, Diesing. (*Μεγας*, great; *κοτόλη*, cup.) Found in the stomach of *Veella spirans*.

**D. megasotomum**, Rudolphi. (*Μεγας*, great; *στόμα*, mouth.) Found in the stomach of *Prionodon glaucus*.

**D. mentula**, Rudolphi. (*L. mentula*, the penis.) Found in the intestine of *Tropidonotus natrix*.

**D. mesosotomum**, Rudolphi. (*Μέσος*, in the middle; *στόμα*, mouth.) Found in the intestine of *Pyrrhula vulgaris*.

**D. microcephalum**, Baird. (*Μικρός*, small; *κεφαλή*, the head.) Found in the stomach of *Acanthus vulgaris*.

**D. microcoelum**, Rudolphi. (*Μικρός*, small; *κόκκος*, a kernel.) Found in the intestine of *Glareola austriaca*.

**D. microcotyle**, Diesing. (*Μικρός*, small; *κοτόλη*, cup.) Found in the intestine of *Rhombus maximus*.

**D. microphylia**, v. Beneden. (*Μικρός*, small; *φύλλον*, leaf.) Found in the intestine of *Osmorus eperlanus*.

**D. microsotomum**, Rudolphi. (*Μικρός*, small; *στόμα*, the body.) Found in the intestine of *Serranus cabrilla*.

**D. microsotomum**, Rudolphi. (*Μικρός*, small; *στόμα*, mouth.) Found in the intestine of *Solea vulgaris*.

# DISTOMA.

**D. m'igrans**, Dujardin. (L. *migro*, to wander.) Found in the intestine of *Crocodura leucodon*.

**D. milita'rē**, Rudolphi. (L. *militaris*, military.) Found in the intestine of *Ascolopax gallinago*.

**D. min'imum**, van Beneden. (L. *minimus*, sup. of *parvus*, small.) Found in the intestine of *Clupea sprattus*.

**D. minu'tum**, Cobbold. (L. *minutus*, part. of *minuo*, to diminish.) Found in the intestine of *Haematopus ostralegus*.

**D. mon'as**, Rudolphi. (Movás, solitary.) Found in the intestine of *Siphonops annulatus*.

**D. motellæ**, van Beneden. Found in the intestine of *Motella mustela*.

**D. mus'culi**, Rudolphi. (L. *musculus*, a muscle.) Found in the intestine of *Mus musculus*.

**D. musculo'rum per'cæ**, Waldenburg. (L. *musculus*, a muscle.) Found encapsuled in the muscles of *Pereca fluviatilis*.

**D. mutabil'is**, Molin. (L. *mutabilis*, changeable.) Found in the gall-bladder of *Lacerta muralis*.

**D. na'ja**, Rudolphi. Found in the liver of *Tropidonotus natrix*.

**D. na'num**, Rudolphi. (L. *nanus*, a dwarf.) Found in the large intestine of *Ascolopax gallinula*.

**D. nephroceph'alum**, Diesing. (Νεφρός, the kidney; κεφαλή, the head.) Found in the intestine of *Turdus saxatilis*.

**D. neurona'i Monro'ii**. Probably an immature *Gasterostoma gracilescens*.

**D. nigro'da'vum**, Rudolphi. (L. *niger*, black; flavus, yellow.) Found in the stomach of *Orthogoriscus mola*.

**D. nigroveno'sum**, Bellingham. (L. *niger*; venosus, full of veins.) Found in the œsophagus of *Tropidonotus natrix*.

**D. nodulo'sum**, Zeder. (L. *nodulus*, a little knot.) Found in the intestine of *Pereca fluviatilis*.

**D. obe'sum**, van Beneden. (L. *obesus*, plump.) Found in the intestine, skin, and in the gills of *Cottus scorpius*.

**D. obe'sum**, Diesing. (L. *obesus*, plump.) Found in the gall-bladder of *Leporinus Friërici*.

**D. oblon'gum**, Cobbold. (L. *oblongus*, oblong.) Found in the biliary ducts of *Manatus eximius*.

**D. obova'tum**, Molin. (L. *ob*, towards; *ovatus*, egg-shaped.) Found in the intestine of *Chrysophrys aurata*.

**D. ocrea'tum**, Rudolphi. (L. *ocreateus*, greaved.) Found in the intestine of *Clupea harengus*.

**D. oc'uli huma'ni**, v. Ammon. (L. *oculus*, the eye; *humanus*, human.) An immature Distoma, found by Gescheidt between the lens and capsule of the eye of an infant in v. Ammon's care. By some it is thought to be an immature *D. lanceolatum*.

**D. oken'ii**, Köll, Diesing. Found encapsuled in the vertebrae and gills of *Brama rayi*.

**D. ophthalmo'bium**, Diesing. (Ὠφθαλμός, the eye; βίωω, to live.) Found in the lens of the eyes of man. Same as *D. oculi humani*.

**D. orbicula'rē**, Diesing. (L. *orbicularis*, circular.) Found in the intestine of *Nyelipithecus trivirgatus*.

**D. ova'tum**, Rudolphi. (L. *ovatus*, egg-

shaped.) Found in the bursa Fabricii of many birds.

**D. ovocauda'tum**, Vulpian. (L. *ovum*, an egg; *cauda*, a tail.) Found under the tongue of *Rana esculenta*.

**D. oxyceph'alum**, Rudolphi. (Ὠξής, sharp; κεφαλή, the head.) Found in the intestine of *Anser albifrons*.

**D. oxyu'm**, Creplin. (Ὠξής; ὀψά, the tail.) Found in the intestine of *Tadorna vulpanser*.

**D. pachyso'mum**, Eysenhardt. (Παχός, thick; σῶμα, the body.) Found in the intestine of *Mugil auratus*.

**D. pagel'ii**, van Beneden. Found in the stomach of *Pagellus centrodontus*.

**D. palæ'monis**, v. Linstow. Found encapsuled in the abdominal cavity of *Palaemon serratus*.

**D. pallens**, Rudolphi. (L. *pallens*, pale.) Found in the intestine of *Chrysophrys aurata*.

**D. papillif'erum**, Molin. (L. *papilla*, a small pimple; *fero*, to bear.) Found in the intestine of *Belone acus*.

**D. papillo'sum**, Diesing. (L. *papilla*.) Found in the aquiferous canals of *Berœ rufescens*.

**D. pela'giæ**, Kölliker. Found in the stomach, flesh, and genitals of *Pelagia noctiluca*.

**D. pellu'cidum**, v. Linstow. (L. *pellucidus*, transparent.) Found in the œsophagus of *Gallus gallinaceus*.

**D. pelophyla'cis esculen'ti**, Wedl. Found in the brain of *Rana esculenta*.

**D. perla'tum**, v. Nardin. (L. *perlatus*, part. of *perfero*, to bear throughout.) Found in the intestine of *Tinea vulgaris*.

**D. phryga'neæ**, v. Linstow. Found encapsuled in the abdominal cavities of *Phryganea grandis*.

**D. pic'tum**, Creplin. (L. *pictus*, painted.) Found in the cloaca of *Ciconia alba*.

**D. planor'bis cor'nei**, v. Linstow. Found in *Planorbis corneus*.

**D. polo'nil**, Molin. Found in the intestine of *Caranx trachurus*.

**D. polymor'phum**, Rudolphi. (Πολός, many; μορφή, shape.) Found in the intestine of *Anguilla vulgaris*.

**D. pris'tis**, Deslongchamps. (L. *pristis*, a whale.) Found in the intestine of *Mertangus vulgaris*.

**D. pseudos'toma**, v. Will-moes-Suhm. (Πσενδής, false; στόμα, the mouth.) Found in the stomach of *Alligator mississippiensis*.

**D. pulchel'lum**, Rudolphi. (L. *pulchellus*, rather beautiful.) Found in the intestine of *Labrus cynædus*.

**D. punc'tum**, Zeder. (L. *punctum*, a point.) Found in the intestine of *Carassius vulgaris*.

**D. pusil'lum**, Zeder. (L. *pusillus*, very small.) Found encapsuled in connective tissue of *Erinaceus europæus*.

**D. puto'rii**, Molin. Found encapsuled in the pectoral cavity and in the muscles of *Euterior putorius*.

**D. pyrifo'rme**, Creplin. (L. *pyrum*, a pear; *forma*, shape.) Found in the intestine of *Oidemia fusca*.

**D. pyxida'tum**, Bremser. (L. *pyxidatus*, box-like.) Found in the intestine of *Jacare sclerops*.

**D. ra'chion**, Cobbold. (Ραχίον, dim. of

*pāxēs*, the back.) Found in the intestine of *Gadus morrhua*.

**D. radia'tum**, (L. *radius*, a spoke.) Found in the eumorant.

**D. radula**, Dujardin. (L. *radula*, a scraping iron.) Found in *Limosa palustris*.

**D. rayneria'num**, Nardo. Found in the intestine of *Lycarus imperialis*.

**D. rebellum**, Olsson. Found in the intestine of *Lubrus maculatus*.

**D. recurva'tum**, v. Linstow. (L. *recurvo*, to bend back.) Found in the intestine of *Faligula marila*.

**D. recur'vum**, Dujardin. (L. *recurvo*, to bend back.) Found in the intestine of *Mus sylvaticus*.

**D. reflex'um**, Creplin. (L. *reflexus*, bent back.) Found in the intestine of *Cyclopterus lumpus*.

**D. repa'ndum**, Rudolphi. (L. *repandus*, bent backwards.) Found in the intestine of *Cystignathus ocellatus*.

**D. retroflex'um**, Molin. (L. *retro*, backwards; *flexus*, bent.) Found in the intestine of *Belone acis*.

**D. retu'sum**, Dujardin. (L. *retusus*, blunted.) Found in the intestine of *Rana temporaria*.

**D. rhom'bi Bos'cii**, Rudolphi. Found in the mesentery of *Rhombus boscii*.

**D. ringens**, van Beneden. (L. *ringens*, gaping.) Found in the nasal cavities of *Symnodon ringens*.

**D. Ring'eri**. Found in the lung of man in Formosa and Japan; it causes cough, a rusty-brown expectoration, and hæmoptysis.

**D. ro'seum**, van Beneden. (L. *roseus*, rosy.) Found in the intestine of *Petromyzon fluviatilis*.

**D. ru'bens**, Dujardin. (L. *ruceo*, to grow red.) Found in the intestine of *Sorex tetragynurus*.

**D. ru'dë**, Diesing. (L. *rudis*, rough.) Found encapsuled in the lungs of *Lutra brasiliensis*.

**D. rufovir'idë**, Rudolphi. (L. *rufus*, reddish; *viridis*, green.) Found in the intestine of *Caprus asper*.

**D. sca'brum**, Zeder. (L. *scaber*, scurfy.) Found in the intestine of *Gadus morrhua*.

**D. scorpæ'næ cirrho'sæ**, Diesing. (L. *scorpæna*, a sea scorpion.) Found in the peritoneum of *Scorpæna cirrho'sa*.

**D. semlarma'tum**, Molin. (L. *semi*, half; *armatus*, armed.) Found in the intestine of *Acipenser naccari*.

**D. seria'lë**, Rudolphi. (L. *series*, a row.) Found in the kidneys of *Salmo salvelinus*.

**D. serpenta'tum**, Molin. (L. *serpens*, a serpent.) Found in the intestine of *Sayris canperi*.

**D. serra'tum**, Diesing. (L. *serratus*, saw-shaped.) Found in the intestine of *Aranus scolopaceus*.

**D. signa'tum**, Dujardin. (L. *signatus*, sealed.) Found in the intestine of *Tropidonotus natrix*.

**D. sim'plex**, Rudolphi. (L. *simplex*, simple.) Found in the intestine of *Gadus eglefinus*.

**D. sinen'së**, Cobbold. (L. *sincensis*, Chinese.) Body 7" long and .41" broad. Found in the liver of man.

**D. singula'rë**, Molin. (L. *singularis*,

solitary.) Found in the intestine of *Ibis falcinellus*.

**D. sinua'tum**, Rudolphi. (L. *sinuo*, to bend.) Found in the intestine of *Ophidium barbatum*.

**D. sire'nis**, Vaillant. Found encapsuled under the skin of *Siren lacertina*.

**D. soc'cus**, Molin. (L. *soccus*, a slipper.) Found in the stomach of *Mustelus vulgaris*.

**D. sole'æ**, Rudolphi. (L. *solea*, a sole.) Found in the intestine of *Solea vulgaris*.

**D. soleæfor'më**, Rudolphi. (L. *solea*; *forma*, shape.) Found in the stomach of *Trigla gurnardus*.

**D. soric'is**, Pontallie. (L. *sorex*, a shrew-mouse.) Found in the gall-bladder of *Crocodyra aranea*.

**D. spa'ri**, Rudolphi. (L. *sparius*, a kind of beam.) Found in the intestine of *Pagellus erythrinus*.

**D. spat'ula**, Dujardin. (L. *spatula*, a broad piece of anything.) Found in the intestine of *Accentor modularis*.

**D. spatula'tum**, Leuckart. (L. *spatula*.) Found in the liver of *Homo sapiens*. Same as *D. sinense*, Cobbold.

**D. spatula'tum**, Rudolphi. Found in the intestine of *Ardea minuta*.

**D. spicula'tor**, Dujardin. (L. *spicula*, to sharpen to a point.) Found in the intestine of *Mus decumanus*.

**D. spinulo'sum**, Rudolphi. (L. *spinula*, a little thorn.) Found in the intestine of *Nume'nus arqua'ta*.

**D. squa'mula**, Diesing. (L. *squamula*, a small scale.) Found in the intestine of *Putorius putorius*.

**D. ster'næ cantia'cæ**, Valette. Found in the intestine of *Sterna cantia'ca*.

**D. tec'tum**, Linstow. (L. *tectus*, covered.) Found in the intestine of *Osmorus cyprinus*.

**D. tenuicol'lë**, Rudolphi. (L. *tenuis*, thin; *collum*, a neck.) Found in the liver of *Phoca barbata*.

**D. tereticol'lë**, Rudolphi. (L. *teres*, round; *collum*.) Found in the intestine of *Lucioperca sandra*.

**D. tetracys'tis**, Gastaldi. (Τετρας, four; κύστις, a bag.) Found encapsuled in the muscles of *Rana esculenta*.

**D. tobia'ni**, Kröyer. Found in the abdominal cavity of *Ammodytes tobianus*.

**D. torna'tum**, Rudolphi. (L. *tornatus*, turned in a lath.) Found in the stomach of *Coryphæna equisetis*.

**D. torulo'sum**, Rudolphi. (L. *torulus*, a tuft.) Found in the intestine of *Silurus glanis*.

**D. transversa'lë**, Rudolphi. (L. *transversus*, turned across.) Found in the intestine of *Cobitis taenia*.

**D. triangu'lärë**, Diesing. (L. *triangularis*, three-cornered.) Found in the intestine of *Merops apiaster*.

**D. trig'læ**, Rudolphi. Found in the intestine of *Trigla cuculus*.

**D. trigonoceph'alum**, Rudolphi. (Τρεῖς, three; γωνία, an angle; κεφαλή, the head.) Found in the intestine of *Erinaceus europæus*.

**D. trunca'tum**, Leuckart. (L. *truncus*, to cut off.) Found in the kidneys of *Crossopus fodians*.

**D. trut'tæ**, Moulinie. Found in the eye cavity of *Trutta trutta*.

**D. tubarium**, Rudolphi. (L. *tuba*, a straight trumpet.) Found in the intestine of *Unbrina vulgaris*.

**D. tubulatum**, Rudolphi. (L. *tubulatus*, pipe-shaped.) Found in the intestine of a species of *Muræna*.

**D. tumidulum**, Rudolphi. (L. *tumidulus*, swollen.) Found in the intestine of *Sy gnathus acaus*.

**D. tursionis**, Marchi. Found in the intestine of *Delphinus tursio*.

**D. uncinatum**, Zeder. (L. *uncinatus*, hooked.) Found in the large intestine of *Gallinula chloropus*.

**D. unicum**, Mehn. (L. *unicus*, single.) Found in the intestine of *Centropomus pompilus*.

**D. variabile**, Leidy. (L. *variabilis*, changeable.) Found in the pleura, trachea, and bronchia of *Tropidonotus sipedon*.

**D. varicum**, Zeder. (L. *varicus*, straddling.) Found in the stomach of *Trutta salar*.

**D. variegatum**, Rudolphi. (L. *variegatus*, of various colours.) Found in the lungs of *Rana esculenta*.

**D. veliporum**, Creplin. (L. *velum*, a covering; *porus*, a channel.) Found in the stomach and intestine of *Prionodon Milberti*.

**D. ventricosum**, Rudolphi. (L. *venter*, the belly.) Found in the intestine of *Clupea sprattus*.

**D. viperae**, Rudolphi. Found in the intestine of *Vipera redii*.

**D. vitellatum**, Linstow. (L. *vitellus*, the yolk of an egg.) Found in the intestine of *Acetitis hypoleucis*.

**D. vitta**, Dujardin. (L. *vitta*, a fillet.) Found in the intestine of *Mus sylvaticus*.

**D. viviparae fasciatae**, Linstow. Found in the *Vivipara fasciata*.

**D. viviparum**, Beneden. (L. *vivus*, alive; *pario*, to bring forth.) Found in the intestine of *Aluget chelo*.

**D. wachnæ**, Tilesius. Found in the intestine of *Gadus wachnæ*.

**D. xanthosomum**, Creplin. (Xavθός, yellow; σῶμα, the body.) Found in the gall-bladder of *Podiceps minor*.

**Distomida**. A Family of *Digenea* having two suckers; one, circumoral, in front; the other, ventral, but not terminal.

**Distort**. (L. *distortus*, part. of *distorqueo*, to twist.) To put out of shape, to twist.

**Distorted**. (Same etymon.) Bent, twisted.

**D. crystals**. Crystals which have become misshapen, and apparently not in harmony with the normal form, by undue development of certain faces by excess or defect.

**Distortio**. See *Distortion*.

**D. oris**. (L. *os*, the mouth.) A synonym of *Risus sardonius*.

**D. spinæ**. (L. *spina*, the spine.) Pott's curvature.

**D. vertebrae**. (L. *vertebra*.) Pott's curvature.

**Distortion**. (L. *distortus*, part. of *distorqueo*, to set awry. F. *distorsion*; G. *Verkrümmung*, *Verstauchung*.) Term for an unnatural direction of parts, from any cause, as curvature of the spine, or club-foot.

**D. of eye-ball**. A synonym of *Strabismus*.

**Distortor**. (L. *distorqueo*, to set awry.) A twister, or distorter.

**D. oris**. (L. *os*, the mouth.) A name for

the *Zygomaticus minor* muscle, because it draws up the angles of the mouth in laughter.

**Distraçtile**. (L. *distraçtus*, part. of *distraho*, to draw asunder. F. *distraçtil*.) Carried widely apart, as in the case of anthers which are separated by long supports.

**Distraçtio**. (L. *distraçho*, to draw asunder.) Old term for the separation of substances before coherent or united; the reduction of bodies to their elements by separation or calcination. (Rulandus.)

**Distraçtion**. (Same etymon.) A drawing asunder.

**D. of joints**. The extension of a limb to reduce the mutual pressure of the bones of a joint.

**Distress**. (Old F. *distresse*; from Low L. *distraçto*, to afflict; from L. *distringo*, to pull asunder, to punish.) Pain or anguish of body or mind.

**D., cardiac**. Same as *Cardiac anxiety*.

**Distributio**. (L. *distribuo*, to divide.) A distribution. Old term applied to the nutritious juices, the same as *Anadosis*; also applied to the excrements, the same as *Diachoræna*.

**Distribution**. (Same etymon.) The act of dividing or dealing out among others; the mode of arrangement.

**D., bathymetrical**. (Bαθός, deep; μέτρον, a measure.) The mode and conditions of the distribution of living things having reference to the depth of the water in which they live.

**D., geographical**. (Γῆ, the earth; γράφω, to write.) The distribution of living things having reference to the regions of the earth which they inhabit.

**D., geological**. (Γῆ, the earth; λογός, a word.) The mode and conditions of the distribution of living things having reference to the time of the earth's history in which they have lived, as evidenced in the geological strata.

**D. of animals and plants**. The distribution of animals and plants is dependent partly on the physical conditions of the surface of the earth, and partly on their means of dispersal. The proportion of land and water, the height and length of mountain chains, the width of seas, and the direction and velocity of ocean currents, the prevalent winds, the temperature and rainfall, the nature of the soil and of its productions, all materially influence the distribution of animal and vegetable life. An examination of the fauna of the various countries has led Mr. Wallace to divide the earth into different regions, which he names Palearctic, Ethiopian, Oriental, Australian, Neotropical, and Nearctic, each having its own special groups of animal and vegetable life.

**D. of electricity**. The relative amount and character of the electricity of adjoining bodies or of adjoining parts of the same body.

**D. of heat**. The ultimate disposal of heat rays on falling on a surface, as by absorption, transmission, or reflection.

**D., vertical**. (L. *verticalis*, from *vertex*, the top.) Same as *D., bathymetrical*.

**Distributoria lactea thoracica**. (L. *lacteus*, milky; *thorax*, the chest.) The thoracic duct.

**Districhia**. (Δίς, twice; θρίξ, hair.) Same as *Distichia*.

**Districhiasis**. (Δίς, two; θρίξ, hair.) The same as *Distichiasis*.

**District**. (Old F. *district*; from Low L. *districtus*, a territory in which a lord may dis-

# DISTRIX—DIURETICS.

train; from *L. distringo*, to draw asunder.) A region with boundaries, within which some authority or influence may be exerted.

**D., cell.** Same as *Cell territory*.

**District.** (*Δίς*, double; *θῆξ*, the hair.) Term for a disease of the hair in which it splits and divides at the end. See *Dichophyia*.

**Disturbance.** (Old *F. destourber*; from *L. disturbo*, to throw into disorder.) An unquiet movement, an agitation or violent change of settled conditions. Used to describe an interference with the natural functions of the body or a part of it.

**Distylium.** (*Δίς*, twice; *στῦλος*, a pillar, a style.) A Genus of the Nat. Order *Hamamelidaceæ*.

**D. racemosum.** Zucc. (*L. racemosus*, full of bunches.) Hab. Japan. The tree which is believed, but probably erroneously, to furnish Chinese galls.

**Distylous.** (*Δίς*, twice; *στῦλος*, a style.) Having two styles.

**Disulphate.** (*Δίς*, twice; *sulphate*.) A salt containing two atoms of sulphuric acid to one of base.

**Disulphide.** (*Δίς*; *sulphide*.) A salt containing two atoms of sulphur to one of base.

**D. of carbon.** See *Carbon disulphide*.

**Disulphuric acid.** A synonym of *Sulphuric acid, fuming*.

**Disymmetria.** (*Δίς*; *συμμετρία*, due proportion.) Likeness of both sides; bilateral symmetry.

**Disznopatak.** Hungary. An alkaline chalybeate water.

**Dita.** The *Alstonia* or *Echites scholaris*, the bark of which yields *Ditain*.

**D. bark.** See *Alstonia cortex*.

**Ditain.** (*Dita*.) A doubtful substance said by some to be a special glucoside, by others, amorphous *Echitamin*. According to Harnack, its composition is  $C_{22}H_{29}N_2O_4$ , and it is the sole alkaloid of dita bark.

**Ditamin.** ( $C_{16}H_{19}NO_3$ .) An alkaloid said to be contained in small quantity in the bark of *Echites scholaris* or *Alstonia scholaris*. It is a white, slightly bitter powder, soluble in ether, chloroform, benzene, and alcohol. It is obtained in a crystallised condition from boiling petroleum. It gives a reddish colour with concentrated sulphuric acid, becoming violet as it cools. It melts at  $75^\circ C$ ; reaction alkaline. See *Ditain*.

**Ditana.** A Genus of the Nat. Order *Apocynaceæ* probably.

**D. digitifolia.** (*L. digitus*, a finger; *folium*, a leaf.) Hab. Brazil. Said to be an excellent emmenagogue.

**Ditaxium.** (*Δίς*, twice; *τάξις*, an arranging. *F. ditaxion*.) A capsular fruit with two series of compartments.

**Ditch bur.** The *Xanthium strumarium*.

**Ditetrædræ.** (*Δίς*, twice; *τέτρα*, four; *ῖτρα*, that on which anything rests.) A tetrahedral prismatic crystal with dihedral summits.

**Ditetryl.** A synonym of *Acetylene*.

**Dithecal.** (*Δίς*, twice; *θήκη*, a case.) Having two cavities.

**D. anthers.** Anthers in which the septa between the two loculi of each anther-lobe have been absorbed, so that there are two cells or cavities only.

**Dithecous.** (*Δίς*, twice; *θήκη*, a case.) Composed of two thecae, or cells, as in the anthers of many plants.

**Dithionie acid.** (*Δίς*, twice; *θῆξ*, sulphur.)  $H_2S_2O_6$ . An acid obtained by transmitting sulphurous acid gas through cold water containing manganese dioxide in suspension. The manganese dithionate is decomposed by barium hydrate, and the dithionie acid separated with sulphuric acid. It is odourless, sour, and decomposes into sulphurous and sulphuric acids when its solution is concentrated beyond sp. gr. 1.347. Formerly called *Hyposulphuric acid*.

**Dithionous acid.** Same as *Hyposulphurous acid*.

**Dithyrous.** (*Δίς*, two; *θύρα*, a door.) Having two valves.

**Ditmarsch.** A district in Holstein.

**D. disease.** A term applied to an epidemic disease which appears to have been the result of hereditary syphilis.

**Ditocia.** (*Δίς*, twice; *τόκος*, birth.) A twin birth.

**Ditoplaxis.** A Genus of the Nat. Order *Cruciferae*.

**D. muralis.** Robert. The *Sisymbrium murale*.

**Ditrachyceras.** (*Δίς*; *τραχύς*, rough; *κέρας*, a horn.) A name given to an erroneously supposed entozoon found in the feces.

**Ditrichotomous.** (*Δίς*, twice; *τρίχα*, in three parts; *τομή*, a section.) Dividing or divided into twos and threes.

**Ditropous.** (*Δίς*, two; *τρέπω*, to turn.) A term applied to an inverted ovule, the funiculus of which describes a spiral placing the ovule in the position of an erect ovule.

**Dittander.** (Corruption of *L. dictamnus*.) The *Lepidium latifolium*, or *L. sativum*.

**Dittany.** (Corruption of *L. dictamnus*. *F. dictamnæ*.) Common name for the genus *Dictamnus*.

Also, the *Lepidium latifolium*.

**D., American.** The *Conila mariana*.

**D., bas'tard.** Common name for the *Dictamnus albus*, or white fraxinella.

**D., mountain.** The *Conila mariana*.

**D. of Crete.** (*F. dictamnæ de Crète*.) Common name for the *Origanum dictamnus*.

**D., white.** The *Dictamnus albus*.

**Dittecchia.** (*Διττός*, double; *ἀκοή*, hearing.) Double hearing.

**Ditto pia.** (*Διττός*, double; *ὤψ*, the eye.) A synonym of *Diplopia*.

**Dittopsia.** The same as *Diplopia*.

**Diuresiæsthesis.** (*Διουρέω*, to pass the urine; *αἴσθησις*, feeling.) The desire or want to micturate.

**Diuresis.** (*Διά*, through; *οὐρία*, to pass water. *F. diurise*; *G. Harnabgung*.) Term for the natural, or an increased, discharge of urine, from whatever cause.

**D., chronic.** A synonym of *Diabetes insipidus*.

**Diuretic.** (*Διά*, through; *οὐρία*, to pass water. *F. diureticus*; *G. diuretisch, harntreibend*.) Applied to a medicine which, taken internally, has the effect of increasing the secretion of the kidneys, such as squill, juniper, digitalis, and some of the alkaline salts.

**D. salt.** The *Potassæ acetat*.

**D. wine.** See *Wine, diuretic*.

**Diuretica.** A synonym of *Arnica montana*.

**Diureticoæsthesis.** The same as *Diuresiæsthesis*.

**Diuretics.** Plural of *Diuretic*.

# DIURISM—DIVERTICULUM.

**D., ac'id.** A group formed by the vegetable and many of the mineral acids.

**D., aqueous.** (L. *aqua*, water.) Those remedies which increase the quantity of urine by virtue of the water they contain, such as barley water, many vegetable decoctions, whey, and such like.

**D., dras'tic.** (Δραστικός, active.) A term applied to those active purgatives which at the same time excite a flow of urine; such as jalap, scammony, colocynth, and gamboge.

**D., hydragogue.** (Υδρο-, water; ἄγω, to lead away.) A term applied to those diuretics which increase the aqueous part of the urine only; such are digitalis, juniper, and cantharides.

**D., ni'tragogue.** (Nitrogen; ἄγω, to lead out.) A term applied to those agents which increase the solid constituents of the urine, especially the nitrogenous substance urica; such are the alkaline carbonates, and especially the citrates.

**D., sali'ne.** (L. *sal*, salt.) A group which includes the acetates, citrates, tartrates, nitrates, and carbonates of potash, soda, and magnesia.

**D., specif'ic.** (L. *specificus*, forming a particular kind.) Those which excite diuresis by some special excitement of the kidney; such are digitalis, squill, cantharides, jaborandi.

**D., stimulant.** Those remedies which produce diuresis by their stimulating properties; such are spirit of nitrous ether, alcohol in all its forms, tea, coffee, and many essential oils, as turpentine and oil of juniper.

**Diurism.** The same as *Diuresis*.

**Diurna.** (L. *diurnus*, daily; from *dies*, a day. F. *diurne*; G. *täglich*.) Belonging to the day, or to the day-time. Applied to a Family of the *Lepidoptera*, which fly during the day only, being the butterflies.

Also, applied to a Family of the *Accipitres*.

**Diurnal.** (L. *diurnalis*, daily.) Relating to a day.

**Diurna'tion.** (L. *diurnalis*.) The habit or condition of sleeping in the day and being active in the night.

**Div.** An abbreviation, employed in prescriptions, of *Divide*, divide.

**Divagation.** (L. *divagatus*, part. of *divagor*, to wander about.) A going astray, a rambling in speech or in thought.

**Divalent.** (Δίς, twice; *valeo*, to be worth.) Term applied to an element or compound capable of combining with two atoms or molecules of another element or compound.

**Divapora'tio.** Old term for evaporation. (Runkel and Johnson.)

**Divaricate.** (L. *divarico*, to stretch apart. F. *divariqué*; G. *ausgespreizt*, *ausgebreitet*, *auseinanderstehend*, *ausgespreizt*.) Straddling; standing wide from each other; extremely divergent.

**Divarica'tio.** Same as *Divarication*.

**D. palpebra'rum.** (L. *palpebra*, an eyelid.) A synonym of *Ectropium*.

**Divarication.** (L. *divarico*, to spread wide one from another.) Old term for the separating of two things previously united. Formerly applied to the intersection of muscular fibres at different angles, as frequently happens; and to ectropion. (Quincy.)

In Botany, applied to branches which spread out at right angles to the stem.

**Divaricatores.** (L. *divarico*.) Two

pairs of muscles in the Brachiopoda, which pass from the ventral valve to the hinge process of the dorsal, one chief and one accessory pair.

**Divellent.** (L. *divello*, to rend asunder, to separate. F. *divellent*; G. *zerreissend*.) Undoing; putting asunder.

**D. affinity.** See *Affinity*, *divellent*.

**Divergence.** (L. *divergium*, a point of separation; from *dis*, apart; *vergo*, to incline. F. *divergence*; I. *divergenza*; G. *Divergenz*.) A going further apart. Separation from a common stem or centre.

**Divergent.** (L. *dis*, signifying division; *vergo*, to bend toward. F. *divergent*; G. *auseinanderstehend*, *auseinanderstrebend*.) Spreading out from the stem; diverging.

**D. rays.** See *Rays*, *divergent*.

**D. strabis'mus.** See *Strabismus*, *divergent*.

**D. squint.** Same as *Strabismus*, *divergent*.  
**Divergentiflorous.** (L. *dis*; *vergo*; *flos*, a flower. F. *divergentiflore*.) In Botany, having diverging flowers.

**Diverginervious.** (L. *dis*; *vergo*; *nervus*, a nerve.) In Botany, having diverging nerves.

**Diverging.** Same as *Divergent*.

**Divergivate.** (L. *dis*; *vergo*; *venosus*, full of veins.) In Botany, having diverging veins.

**Diversic'olor.** (L. *diversus*, different, part. of *diverto*, to turn away; *color*, colour. F. *diversicolor*; G. *ungleichfarbig*, *bunt*.) Having varied colours.

**Diversiflo'rate.** Same as *Diversiflorous*.

**Diversiflo'rous.** (L. *diversus*, different; *flos*, a flower.) Having different flowers; applied to umbels that have regular florets in the centre, and irregular towards the circumference.

**Diversifoli'ate.** (L. *diversus*, different; *folium*, a leaf. F. *diversifolié*; G. *ungleichblättrig*.) Having varied leaves.

**Diversiform.** (L. *diversus*; *forma*, shape. G. *verschiedengestaltet*.) Of various shapes.

**Diversifrons.** (L. *diversus*, different; *frons*, a frond.) Having varied fronds.

**Diversipe'date.** (L. *diversus*; *pes*, a foot.) Having varied feet.

**Diversisporous.** (L. *diversus*; σπορά, a seed.) Having varied spores.

**Diversorium.** (L. *diversorium*, for *deversorium*, an inn, or lodging; from *deversor*, to turn off as from the road.) Old term, used by Rivinus, for the *Receptaculum chyli*. (Castellus.)

**Diverticle.** Same as *Diverticulum*.

**Divertic'ula spir'ituum anima'lium.** (L. *diverto*, to turn away; *spiritus*, a spirit; *anima*, an animal.) The ganglia of the nerves.

**Divertic'ulum.** (L. *diverto*, to turn aside. F. *diverticule*; G. *Abweg*, *Ausbuchtung*, *Ausstülpung*.) Term for a variation or a departure from the natural conditions; a malformation.

Also, a blind tube branching out of the course of a longer one.

**D., false.** A pouch or cul-de-sac protruding from a canal, such as the intestinal canal. In the latter it is caused by rupture or separation of the muscular fibres, so that the mucous coat passes through, carrying with it the peritoneal coat.

**D. Meckelii.** (*Meckel*, a German anatomist.) A process of the small intestine near the lower end of the ileum; it is the remains of the umbilical vesicle, or rather of the connection originally existing between the intestine and the umbilical vesicle, the ductus vitello-intestinalis.

**D. Nuckii.** A process of the peritoneum which extends for some distance from the internal abdominal ring around the round ligament in the female.

**D. of duodenum.** A term applied to a small pouch formed by protrusion of mucous membrane, occasionally found in the duodenum; there may be more than one.

**D. of illum.** The *D. Meckelii*.

**D. pharyngis.** (Φάρυγξ, the gullet.) A sac-like protrusion of the pharyngeal wall which sometimes occurs, and is a source of trouble by retaining food.

A pharyngeal diverticulum has been described by Watson as communicating with the pharynx by a narrow slit in the free margin of the posterior pillar of the fauces immediately behind the tonsil; it consisted of a tubular cul-de-sac lying between the stylopharyngeus muscle and the glossopharyngeal nerve, and possessed two layers, a mucous lining, and a muscular coat consisting of longitudinal fibres only. It probably originated in a modification of the first post-mandibular cleft.

**D. Vateri.** (*Vater*, an anatomist.) A cavity formerly believed to exist in the fold which separates the openings of the ductus communis choledochus and the pancreatic duct on the inner wall of the second portion of the duodenum. See *Plica longitudinalis Vateri*.

**Dives.** A name of the mineral spring at *Bruceport*.

**Divided.** (*L. divido*, to divide. *G. theilt*.) Separated by a space, parted. Applied to leaves where the clefts extend to the base.

**D. current.** See *Current*, *divided*.

**D. respiration.** A term applied by *Walsh* to that condition of respiration in which a distinct interval separates the inspiratory from the expiratory murmur; it occurs sometimes in extreme emphysema, and probably depends upon the want of elasticity in the distended air vesicles.

**Dividing.** (*L. divido*, to divide. *F. divisif*.) That which divides or separates.

**D. bandage.** Used to keep parts separate from each other so that they cannot unite, as in cases of burns.

**Divi-divi.** The pods of *Cæsalpinia coriaria*, which are extremely astringent.

**Divi-Ladner.** The plant, according to the Gingalese, yielding the forbidden fruit, probably the *Tabernaemontana dichotoma*.

**Divination.** (*L. divinatio*; from *divino*, to foresee; from *divinus*, belonging to a deity.) The foretelling of events by various mystical means.

**Divinum remedium.** (*L. divinus*; *remedium*, a remedy.) An old epithet applied to the *Imperatoria ostruthium*, or master-wort.

**Divisibility.** (*L. divisibilis*, capable of division.) The capability of division.

**Division.** (*L. divisio*, from *divido*, to part asunder. *F.* and *S. divisio*; *I. divisione*; *G. Zerthung*.) The dividing or separating of parts; sometimes applied to a septum or dissepiment situated between the parts; at other times to the separated parts; and again to the process by which they are divided.

**D. of cataract.** Same as *Cataract*, *dissection of*.

**Divulsio.** (*L. divulsio*, from *divello*, to pull asunder.) The rupture or laceration and pulling away of parts from each other.

**D. urinæ.** (*L. urina*, urine.) An old term for a nebulous condition of the urine.

**Ditzenbach.** Germany; in Württemberg. An earthy saline water, containing calcium and magnesium carbonate.

**Dizziness.** (*Dizzy*.) Vertigo, giddiness.

**D., abdominal.** Vertigo from gastric disturbance.

**Dizzy.** (*Sax. dysig*, foolish, silly.) Giddy, confused.

**D'jur'ang.** A synonym of *Dragon's blood*.

**D'obelbad.** Austria, in Styria, near Premstätten. Indifferent mineral waters springing at a level of 1050' above sea level, and used chiefly as baths in neurasthenia, chronic catarrhs, scrofula, and rheumatism.

**Dobie's line.** Same as *Krause's membrane*; named after its describer.

**Doccio'nè.** A warm, simple saline spring at Lucca, in Italy.

**Doch'è.** (Δοχή; from δέχομαι, to take.) A receptacle.

**Docheion.** (Δοχείον, a holder.) A receptacle.

**Doch'me.** (Δόχημ.) A Greek measure of length equal to about four fingers' breadth.

**Doch'mius.** (Δόχιμος, aslant.) A Genus of the Order *Nematoda*, Class *Neuratelmintha*, Subkingdom *Termes*. Parasitic worms with a white, cylindrical, slender body, head obliquely truncated above, and containing a large angulated pharyngeal cavity; posterior extremity truncate, and terminated by a large two-lobed expansion in the male; straight and slender in the female.

**D. anchylos'tomum**, *Molin*. A synonym of *Anchylostomum duodenale*, *Dubini*.

**D. cernuus.** The *Strongylus cernuus*.

**D. duodenalis**, *Leuck*. A synonym of *Anchylostomum duodenale*, *Dubini*.

**D. hypos'tomus**, *Diesing*. (Υπό, under; στόμα, the mouth.) Found in the intestines of the goat, sheep, and other ruminants.

**D. San'geri**, *Cobbold*. Found in the intestine of the elephant.

**D. trigonoceph'alus**, *Dujardin*. (Τρεῖς, three; γωνία, an angle; κεφαλή, the head.) Found in the stomach and intestines of the dog, fox, and wolf.

**D. tubæform'is**, *Dujardin*. (*L. tuba*, a straight trumpet; *forma*, shape.) Found in the duodenum of the cat.

**Doch'na.** The African name of the seed of *Holcus saccharatus*.

**Docimacy.** See *Docimasia*.

**Docimasia.** (Δοκιμασία, from δοκιμάζω, to assay.) An examination, an assay, a testing. The art of examining or testing minerals to ascertain their quality and composition.

**D. circulatio'nis.** (*L. circulatio*, a going round.) The examination of the heart and faecal vessels as a test of living birth. The circumstances to be considered are the obliteration of the umbilical vessels, of the ductus venosus, and of the ductus arteriosus, and the closure of the foramen ovale; but the time at which these occur varies so much that it affords no reliable evidence.

**D., hepatic.** ("ἥπαρ, the liver.) A mode of determining whether an infant has been born alive by comparing the weight of the liver with the total weight of the body. Before birth the ratio is as one to eighteen, after birth the proportion decreases greatly.

**D. medicamento-rum.** (L. *medicamentum*, a medicine.) The testing of medicines.

**D. pneumohepatica.** (Πνεύμων, the lungs; ἥπαρ, the liver. F. *docimasie pneumo-hepatique*.) The relation between the weight of the lungs and that of the liver before breathing has occurred and that which exists afterwards. Before respiration has taken place the relation is as 1 : 3, but after breathing the lungs increase in weight by receiving more blood, and the proportion is as 1 : 1.

**D. pulmonalis.** The same as *D. pulmonum*.

**D. pulmonaris.** The same as *D. pulmonum*.

**D. pulmonum.** (L. *pulmones*, the lungs. G. *Lungenprobe*.) The mode of determining whether a child has been born alive or not, by the examination of the lungs; see subheadings.

**D. pulmonum hydrostatica.** (L. *pulmones*, the lungs; *hydrostatic*. F. *docimasie pulmonaire hydrostatique*.) A means of determining whether an infant has respired, by placing the lungs in water; in those children that have not respired, or have respired but feebly, the lungs sink in water.

**D. pulmonum statica.** (L. *pulmones*; *static*.) The comparison of the weight of the lungs with that of the body, used to determine whether an infant has breathed or not. In one who has respired the weight of the lungs is relatively greater, more blood having entered the pulmonary vessels. It is a very uncertain test.

**D. venenorum.** (L. *venenum*, a poison.) The testing of poisons.

**Docimasiologia.** (Δοκιμασία, an assay; λόγος, a treatise.) An account of the modes of testing.

**Docimastic.** (Δοκιμασία.) Proving by tests. Of, or belonging to, *Docimasia*.

**Docimasy.** See *Docimasia*.

**Dock.** (Sax. *docce*. F. *oscille*; G. *Ampferkraut*, *Sauerampfer*.) The plants of the Genus *Rumex*.

**D., bitter.** The *Rumex obtusifolius*.

**D., bloody.** The *Rumex sanguineus*.

**D., bloody-veined.** The *Rumex sanguineus*.

**D., blunt-leaved.** (F. *oscille à large feuille*; G. *breitblättriger Ampfer*.) The *Rumex obtusifolius*.

**D., broad-leaved.** The *Rumex obtusifolius*.

**D., cress.** Common name for the *Lapsana communis*, or nipple-wort.

**D., crisp.** A synonym of *Rumex crispus*.

**D., curled.** The *Rumex crispus*.

**D., fid'le.** A synonym of *Rumex pulcher*.

**D., golden.** A synonym of *Rumex maritimus*.

**D., round.** The common mallow, *Malva sylvestris*.

**D., sharp.** The *Rumex acetosa*.

**D., sharp-pointed, wild.** Common name for the *Rumex acutus*.

**D., sour.** (F. *l'oscille ordinaire*; G. *ge-*

*meiner Sauerampfer*.) Common name for the *Rumex acetosa*, or common sorrel.

**D., sour, bo'real.** The *Oxyria reniformis*.

**D., spat'ter.** The *Nuphar advena*.

**D., vel'et.** The *Verbascum thapsus*.

**D., wa'ter.** The *Rumex hydrolapathum*, and also the *R. britannica*.

**D., wa'ter, great.** The *Rumex hydrolapathum*.

**D., wild, sharp-pointed.** The *Rumex acutus*.

**D., yellow.** The *Rumex crispus*.

**Dock'en.** The *Dock*.

**Dock'mackie.** The *Viburnum acerifolium*.

**Doc'na Su'ra.** Hungary. A spring in the Carpathian mountains. The water contains sulphate of soda, carbonate of soda, chloride of sodium, carbonate of lime, silica, and iron. (Dunglison.)

**Docogloss'sa.** (Δοκός, a beam; γλῶσσα, the tongue.) A synonym of *Cyclobranchiata*, from the appearance of the armature of the mouth.

**Docoph'orus.** (Δοκός; φέρω, to bear.) A Genus of Suborder *Mallophaga*, Order *Hemiptera*.

**D. ictero'des.** Denny. (Ίκτερος, the jaundice; εἶδος, likeness.) Parasitic on the feathers of ducks.

**Doctor.** (L. *doctor*, from *docco*, to teach. F. *docteur*; I. *dottore*; G. *Doctor*.) A teacher; a title given by a university to those who have obtained the highest degree in a faculty, whether of law, or physic, or another. A physician; but popularly applied to every medical practitioner.

**D.gum.** Same as *Hog gum*.

**Doctr'ina.** Same as *Doctrine*.

**D. Gallia'na.** (Gall.) Craniology, or phrenology.

**D. soto'ria.** (Σωτηρία, a saving.) The science of medicine.

**Doctr'ine.** (F. *doctrine*; from L. *doctrina*, learning. I. *dottrina*; G. *Lehre*.) That which is taught; the principles of a science or art; knowledge.

**D., medical.** The aggregate of philosophic ideas which have successively guided physicians in the interpretation of the characters of organised matter and its phenomena, principally viewed from the standpoint of their accidental or morbid states. All medical doctrine ought to have for its point of departure the conditions that every phenomenon implies a substance in which it has its seat, and that every derangement implies an order of which it is an alteration. In consequence, all medical doctrine is baseless which does not rest upon a profound knowledge of the phenomena of organic or vital order; as the understanding of these latter demands the knowledge of the amorphous or definitely-shaped organised substance which manifests them. Without this, indeed, it becomes impossible to apprehend the necessary relationships which exist between the alterations of the organs and of their functions on the one part, and their normal state on the other; relationships the formulæ of which constitute the laws of pathology. Doctrine gives method in the examination of the dominant questions of a science, as, in its turn, method traces the order in which to study anatomy and normal and pathological physiology; which itself determines the choice and invention of the process of anatomical

analysis, of physiological experiment and of therapeutical application in the practice of the art. Such is the logical connection of ideas which shows that, without medical doctrine, the practitioner, driven to scepticism, differs from empirics or from charlatans only by the mask of a fictitious dignity. One sees also by the above that doctrine is distinguished from theory in that the former represents the collection of theories relative to the different sciences which meet in the same scientific or practical goal; it is thus placed above the latter. A well-founded doctrine can in a manner dispense, in a given case, at least for a time, with the direct observation of a certain number of facts of detail, when it operates so as to estimate or to apply them; it teaches at the same time to subordinate without difficulty the imagination or the desire of success to observation. (Littre and Robin.)

**D. of signatures.** Certain plants and medicinal agents were believed to be so marked or stamped that they presented outwardly or visibly the indications of the diseases, or diseased organs, for which they were specifics; these were their signatures. Hence, anciently, the proper specific for a disease was learned and determined by ascertaining what plants in their usual properties were similar or analogous to the predominating symptoms of disease, or to the organs diseased. To this doctrine we owe some popular names of plants, as eye-bright, liver-wort, spleenwort.

**D., physiolog'ical.** A doctrine enunciated by Broussais, in which irritability was regarded as a property natural to all organs, and disease as the result of excess, diminution, or aberration of irritation.

A synonym of *Broussaism*.

**Dodder.** (Dan. *dodder*; G. *Dotter*.) The plants of the Genus *Cuscuta*.

**D., American.** The *Cuscuta glomerata*.

**D., greater.** The *Cuscuta europæa*.

**D.-lauræls.** The plants of the Nat. Order *Cassythaceæ*.

**D., lesser.** The *Cuscuta epithymum*.

**D. of thyme.** (F. *épiphyne*.) The *Cuscuta epithymum*.

**Dodders.** The plants of the Nat. Order *Cuscutaceæ*.

**Dodecadactylitis.** (*Dodecadactylon*, F. *dodecadactylite*; G. *Fingerdarmsentzündung*.) Inflammation of the duodenum. See *Duodenitis*.

**Dodecadactylon.** (Δώδεκα, twelve; δάκτυλος, a finger.) A Greek name for the duodenum, which, in some of the lower animals to which their dissections were confined, was about twelve fingers' breadth. Helmontius, *Tr. Septuplex Digestio*, n. 2.

**Dodecafid.** (Δώδεκα, twelve; L. *fido*, to cleave. F. *dodecafid*; G. *zwölfgespaltet*.) Divided into twelve segments more or less deep.

**Dodecagon.** (Δώδεκα, twelve; γωνία, an angle. F. *dodécagone*.) Term for a figure having twelve equal sides and twelve angles.

**Dodecagonal.** (Same etymon. F. *dodécagone*; G. *zwölfeckig*.) Of, or belonging to, a *Dodecagon*.

**Dodecagyn.** A plant of the Order *Dodecagynia*.

**Dodecagynia.** (Δώδεκα, twelve; γυνή, a woman, the symbol of the pistil or female organ of flowers. F. *dodécagynie*; G. *zwölfeibigkeit*.) A Linnæan order of plants comprehending such as have twelve pistils.

**Dodecagyn'ian.** (Same etymon.) Same as *Dodecagynious*.

**Dodecagyn'ious.** (Same etymon.) Having twelve pistils; twelve-pistilled.

**Dodecahed'ral.** (Δωδεκάεδρος, with twelve surfaces. F. *dodécèdre*.) Of, or belonging to, a dodecahedron.

**Dodecahed'ron.** (Δώδεκα, twelve; ἔδρα, a base. F. *dodecadron*; G. *Dodecadron*, *Zwölfflächner*.) A regular solid figure consisting of twelve equal sides or bases.

**Dodecam'rous.** (Δώδεκα; μέρος, a part.) Consisting of twelve parts.

**Dodecander.** (Δώδεκα, twelve; ἀνήρ, a male.) A plant of the Class *Dodecandria*.

**Dodecand'ria.** (Δώδεκα, twelve; ἀνήρ, a man, the symbol of the stamen or male organ of flowers. F. *dodecandrie*; G. *Zwölffmännigkeit*.) A Linnæan class of plants, comprising those which have hermaphrodite flowers with twelve stamens.

**Dodecandrian.** (Same etymon.) Same as *Dodecandrous*.

**Dodecand'rous.** (Same etymon. G. *zwölffmännig*.) Having twelve stamens; twelve-stamened.

**Dodecane.** (Δώδεκα.) C<sub>12</sub>H<sub>26</sub>. One of the higher normal paraffins, boiling at about 200° C. (392° F.)

**Dodecapar'tite.** (Δώδεκα, twelve; L. *partitus*, part, of *partior*, to divide. F. *dodecaparti*; G. *Zwölffgetheilt*.) Divided into twelve parts.

**Dodecapet'alous.** (Δώδεκα, twelve; πέταλον, a leaf. F. *dodecapétale*; G. *zwölffblumenblättrig*.) Applied to a flower which has twelve petals.

**Dodecapharmacum.** (Δώδεκα, twelve; φάρμακον, a medicament.) Another name for the ointment formerly in use, called *Unguentum apostolorum*. The twelve ingredients were supposed only to be known to the Apostles.

**Dodecath'eon.** (Δωδεκάθεον; from δώδεκα, twelve; θεός, a god.) An old epithet for an antidote made of twelve simples, named after the twelve principal deities of the Greeks, described by Paulus Ægineta, vii, 11, Adams's Transl. vol. iii, p. 517.

Also, a name for the *Sanicula europæa*.

**D. Plinii.** The *Pinguicula vulgaris*.

**Dodging-time.** (E. *dodge*, to go hither and thither; of uncertain etymology.) A popular term for the period at which the menstrual secretion finally disappears; so called in consequence of the irregularity of the discharge both as to time and quantity.

**Dodonæ'a.** (After R. Dodons, of Leyden.) A Genus of the Tribe *Dodonæa*, Nat. Order *Sapindaceæ*.

Also, a synonym of *Myrica gale*.

**D., thunbergia'na.** A plant indigenous to the Cape of Good Hope. A decoction of the root is purgative, and is used in febrile complaints.

**Dodone'æ.** A Tribe of the Nat. Order *Sapindaceæ*, having alternate leaves, two or three ovules in each cell, and a spirally-rolled embryo.

**Dodra.** (L. *dodrans*, three fourths; from *de*, away; *quadrans*, a fourth.) Ancient name for a kind of potion made of nine ingredients. Raymundus Mindererus, *de Alodiaris*, c. 12.

**Dodrans.** (L. *dodrans*.) Old term for a measure called a palm, or the space between the thumb and the point of the little finger, when

the hand is expanded, being about nine inches; also, a nine ounce measure, and a weight of ten ounces.

Also, three fourths of a thing.

**Dodrant'al.** (L. *dodrants*.) Consisting of nine inches, three fourths of a foot.

**Doëglic ac'id.**  $C_{15}H_{36}O_2$ . An acid contained in the train oil obtained from the doeglin, *Baleina rostrata*.

**Dofana.** Italy, near Siena. A mineral water of temp.  $31^{\circ}$  C. ( $87.8^{\circ}$  F.), containing potassium iodide .5, sodium chloride 80, sodium sulphate 41, calcium chloride 10, calcium sulphate 8, calcium carbonate 13.5, and iron carbonate 2 grains, in 25 ounces.

**Dog.** (Du. *dog*, a mastiff. Gr. *κύων*; L. *canis*; F. *chien*; I. *cano*; S. *perro*; G. *Hund*.) The name of several species of *Canide*, but specially applied to domesticated varieties of the *Canis domesticus*; these are supposed to be derived from the breeding and crossing of several living and extinct species.

**D. and duck.** The name of a mineral water, now lost, in Lambeth. It was variable in its solid constituents, which consisted chiefly of magnesium sulphate and sodium chloride.

**D.'s apple.** Common name for the *Caninum majus*, or fruit of the *Atropa mandragora*.

**D.'s bane.** The plants of the Genus *Apocynum*, specially the *A. androsaemifolium*.

**D.'s bane, American.** The *Apocynum androsaemifolium*.

**D.'s bane, bit'ter.** The *Apocynum androsaemifolium*.

**D.'s bane, Syr'ian.** The *Asclepias syriaca*.

**D.'s bane, Vene'tian.** The *Apocynum maritimum*.

**D. ber'ry.** The fruit of *Cornus sanguinea*.

**D.'s cab'bage.** The *Thelygonum cynocrambe*. Somewhat purgative. Used as a pot-herb.

**D. cham'omile.** The *Anthemis cotula*; also, the *Matricaria chamomilla*.

**D. cher'ry.** The fruit of *Cornus sanguinea*.

**D.'s cole.** The *Mercurialis perennis*.

**D.-days.** The *Dies caniculares*, ranging from 24th July to 23rd August, named so on account of the dog-star, or Sirius, rising and setting with the sun in these days. See *Canicularis*.

**D. disea'se of Arctic re'gions.** A disease of Esquimaux dogs which has many of the characteristics of rabies, but differs from it in that although the bite will propagate the disease in dogs and wolves, it does not seem to do so in man. It is always accompanied by ulceration of the intestinal mucous membrane on both sides of the ileo-caecal valve.

**D.'s dung.** See *Album græcum*.

**D.s fen'nel.** The *Anthemis cotula*; and also the *Eupatorium feniculaceum*.

**D. fish.** The *Scyllium canicula*, and other species. They have been used in epilepsy.

**D.'s grass.** Common name for the *Triticum repens*.

**D. hip.** The *Rosa canina*.

**D. li'chen.** The *Peltidea canina*, formerly used as an antidote to hydrophobia.

**D. louse.** The *Hæmatopinus piliferus*.

Also, the *Trichodectes canis* which serves as the host to the cysticercoid larva of *Tænia cucumerina*.

**D.'s mer'cury.** The *Mercurialis perennis*.

**D.'s o'rach.** The *Chenopodium olidum*.

**D. pars'ley.** The *Ethusa cynapium*.

**D., rab'id.** A dog suffering from Rabies.

**D.-rose.** (F. *iglantier sauvage*, *rosier sauvage*; G. *Hundsrose*.) The *Rosa canina*.

**D. rose, fruit of.** See *Rosa canina fructus*.

**D. rose, trail'ing.** The *Rosa arvensis*.

**D., sea.** The seal, *Phoca vitulina*; and also the white shark, *Carcharias vulgaris*.

**D.-star.** The planet Sirius. It was formerly supposed to have great influence in producing disease.

**D.-stones.** The *Orchis pyramidalis*.

**D. tick.** The *Ixodes ricinus*.

**D.'s tongue.** The *Cynoglossum officinale*, from its soft leaf.

**D.'s tooth.** A canine tooth.

**D.'s-tooth shell.** The species of the Genus *Dentalium*.

**D.'s-tooth violet.** Common name for the *Erythronium dens-canis*.

**D. tree.** The same as *D.-wood tree*.

**D.-violet.** A synonym of *Viola canina*, said to be beneficial in cases of skin disease.

**D. wheat.** The *Triticum repens*.

**D.-wood.** See *Dogwood*.

**D.-wood tree.** The *Cornus florida*.

**Dog'bane.** See *Dog's bane*.

**Dog'banes.** The plants of the Nat. Order *Apocynaceæ*.

**Dog'ga.** An Arabic term for paronychia, or whitlow.

**Dog'ma.** (*Δόγμα*, that which seems true, an opinion; from *δοκίω*, to think. F. *dogme*; I. *dogma*, *dottrina*; G. *Lehrsatz*.) A tenet or settled principle; something held as an opinion; a doctrine asserted or taught on authority rather than on evidence.

**D.s, med'ical.** The best and most exact expression of medical knowledge at any particular period. A dogma to merit the name should satisfy these three conditions: it should furnish an exact general idea of the organisation and its functions; it should connect with, and subordinate to, a knowledge of the normal state, the study of lesions and of the corresponding disturbances; and it should indicate the various hygienic and therapeutic means necessary to restore the disordered organism to a healthy state. For lack of doctrines sufficiently based on the fundamental sciences it is not every medical dogma, among all the hypotheses which have been advanced as such, that has satisfied these three necessary conditions. The state of the sciences themselves, and especially that of biology, does not permit it. Thanks to the progress of physical and chemical means of analysis and experiment, a general conception of the economy can actually be established. An ensemble of ideas proceeding from the most simple anatomical data, of the immediate principles, and of the organised substance which they constitute passes successively through the study of the tissues, the humours, the systems, the organs, the apparatuses, and conducts at last to the knowledge of the organism as a whole, as well in the normal as in the morbid condition. On the other hand, from a dynamic point of view, the study of the special elementary properties of the organised substance, and of the actions of the different orders of parts of the body enables one to establish a constant connection between the actions and their conditions of accomplishment, between the distur-

ances of the functions and lesions of the parts which fulfil them. The new dogma, eliminating from physiology and pathology all the supernatural causes known by the names of archæus, nervous fluid, vital principle, and such like, shows that everything is obedient to natural laws, inherent properties of different forms or elementary dispositions of the organised substance. Pathological anatomy is no longer independent of normal anatomy; the latter conducts naturally to the former. Pathology, properly so called, shows also only the disturbances of more or less, or the aberrations of the actions which physiology studies. Medicine separates itself no longer from biology, of which it becomes a part. One understands thence how, aided by all the inorganic sciences which serve to the study of biology and to the proof of the connection of alterations with the normal state, the new dogma indicates clearly the direction which must be followed, whether to improve hygiene and therapeutics, or to escape the attempts, almost always empirical, to which the ancient hypotheses of the nature of diseases conducted the physician. One understands at the same time how this ensemble of ideas, flowing the one from the other, being the result of the previous working out of the different branches of biology, which, taken at first as so many different matters, have been at last co-ordinated into a single science, that this ensemble, we say, has not arisen, except as the result of all these isolated elaborations; this it is which inspires respect even for the errors of the past, and permits one to appreciate, without admitting them, those of the present. (Littre and Robin.)

**Dogmatic.** (Δογματικός, of opinions; from *dogma*. F. *dogmatique*; I. *dogmatico*; G. *dogmatisch*.) Relating to a dogma; positive; authoritative.

Also, a synonym of *Dogmatist*.

**Dogmatics.** (Δόγμα. L. *dogmatici*; F. *dogmatiques*; I. *dogmatici*; G. *Dogmatiker*.) An ancient sect of physicians, so called because they endeavoured to discover, by reasoning, the essence and the occult causes of diseases; but who, in compensation, and in virtue even, of their ideas, recommended the study of anatomy; whilst the empirics held strictly to experience, that is to observed facts, but spurned the study of anatomy, and so counterbalanced the accuracy of their opinions. (Littre and Robin.)

**Dogmatism.** (Δόγμα.) The quality of being dogmatic; the doctrine of the dogmatic physicians. See *Dogmatist*.

**Dogmatist.** (Δογματιστής, one who maintains dogmata.) One who is the author or defender of some dogma. One of the sect of *Dogmatics*.

**Dog-wood.** (Not so named from the animal, according to Prior, but because skewers are made from the wood; through F. *dogue*, a dirk.) The plants of the Genus *Cornus*, especially *C. florida* and *C. sanguinea*.

**D., American.** The *Cornus florida*.

**D., bark.** U.S. Ph. The bark of *Cornus florida*.

**D., black.** The wood of *Rhamnus frangula*.

**D., blueberryed.** The *Cornus sericea*.

**D., female.** The *Cornus sericea*.

**D., florid.** The *Cornus florida*.

**D., great-flowered.** The *Cornus florida*.

**D., Jamaica.** The *Piscidia erythrina*.

**D., New England.** The *Cornus sericea*.

**D., panicled.** The *Cornus paniculata*.

**D., pond.** The *Cephalanthus occidentalis*.

**D., round-leaved.** The *Cornus circinata*.

**D., round-leaved, bark.** U.S. Ph. The bark of *Cornus circinata*.

**D., silky-leaved.** The *Cornus sericea*.

**D., striped.** The *Acer pennsylvanicum*.

**D., swamp.** The *Cornus sericea*, and also the *Pick a trifoliata*.

**D., swamp, bark.** U.S. Ph. The bark of *Cornus sericea*.

**D., Virginian, male.** The *Cornus florida*.

**D., white.** The *Cornus paniculata*.

**Dokima'sia.** Same as *Docimasia*.

**Doktor'ka.** Bohemia; near Prachatitz A mineral water containing sodium, calcium, and magnesium carbonates, with free carbonic acid.

**Dola'bra.** (L. *dolabra*, an axe; from *dolo*, to hew.) A spiral bandage, from the appearance of the folds or reverses. Same as *Ascua*.

**Dola'brate.** Same as *Dolabriform*.

**Dola'briform.** (L. *dolabra*, an axe; *forma*, a likeness. F. *dolabriforme*; G. *hobel-förmig*.) Having the form of a hatchet, hatchet-shaped.

In Botany, applied to fleshy leaves shaped like an axe; cylindrical at the base, flattened at the summit, and having two borders, one straight and thick, the other convex and thin.

**Dol'et.** (Arab.) Alchemical name for peroxide of iron.

**Dol'ha.** Hungary; Marmaros County. An iron water containing alkaline earthy salts. The mud is used for local applications.

**Dolia'rin.** A crystalline substance obtained from the *Urostigma doliarium*, and used as an anthelmintic against the *Anchyllostomum duodenale*.

**Doli capax.** (L. *dolus*, guile; *capax*, capable of.) Apprehensive of, or capable of understanding, guile or deceit; a term used in reference to a criminal for whom insanity or youth is pleaded in excuse, when inquiry is made as to his mental capacity at the time the crime he is charged with was committed.

**Dol'ichi pubes.** (L. *pubes*, soft hair.) Cowhage, the hairs on the pods of *Dolichos* or *Mucuna puriens*.

**D. se'tæ.** (L. *seta*, a bristle.) Same as *D. pubes*.

**Dolichoceph'ali.** (Δολιχός, long; κεφαλή, the head.) The long-headed races of men. See *Dolichocephaly*.

**Dolichoceph'alia.** (Δολιχός; κεφαλή, the head.) In Teratology, a head that is abnormally long.

**Dolichoceph'alic.** (Δολιχός, long; κεφαλή, head.) Longheaded. Term applied to that form of the human head in which the length greatly exceeds the breadth, or is as 9:7. See *Dolichocephaly*.

**Dolichoceph'alism.** Same as *Dolichocephaly*.

**Dolichoceph'alus.** (Δολιχός; κεφαλή, the head.) A fetus with an unnaturally long head.

**Dolichoceph'aly.** (Δολιχός; κεφαλή, G. *Langkopfigkeit*.) Longheadedness. That condition of the human skull in which the cephalic index is below 75. The cranium is truncated in front. The posterior occipital protuber-

# DOLICHOCEROUS—DOLORES.

rance is well marked, the superciliary ridges pronounced. The greatest width of the head is generally below and a little in front of the parietal fossæ.

**D., orthognathic.** (Ὀρθός, straight; γνάθος, jaw.) Longheadedness, with vertical-fronted jaws. This includes the Swede, Norwegian, Dane, German, Scandinavian, English, Irish, and French, in Europe; the Hindoo- and Georgians in Asia; the Nubians, Abyssinians, and Berbers in Africa.

**D., prognathic.** (Πρός, in front of; γνάθος, jaw.) Longheadedness, with prominent jaws. Under this term are included the Chinese and Japanese in Asia; the Australians, Amboynese, and natives of the Sandwich Islands in the South Sea; Negroes, Caffirs, Hottentots, and Copts, in Africa; the Greenlanders, Esquimaux, Kolouches, Iroquois, Hurons, and other American tribes, in North America; the Caribo, Guarauches, Aymaras, and others, in South America. There are no representatives in Europe.

**Dolichoceros.** (Δολιχός, long; κέρα, a horn. *F. dolichocère*; *G. langhornig*.) Having long antennæ.

**Dolichodærous.** (Δολιχός, long; δέρον, the neck. *F. dolichodère*; *G. langhalsig*.) Having a long neck.

**Dolichocephalic.** Same as *Dolichocephalic*.

**Dolicholeptocephalus.** Same as *Dolichocephalus leptocephalus*.

**Dolichopodous.** (Δολιχός; ποός, a foot. *F. dolichopode*; *G. langfüssig*.) Having long feet.

**Dolichos.** (Δολιχός, long. *F. dolie*; *G. Fasl.*) A Genus of the Nat. Order *Leguminosæ*, so called because the pods of the plant are considerably elongated.

**D. biflorus**, Roxb. (*L. bis*, twice; *flos*, a flower.) The *D. uniflorus*, Lam.

**D. bulbosus**, Willd. (*L. bulbosus*, a bulb.) Hab. India. Seeds eaten as food.

**D. cat'jang**, Linn. Hab. India. Seeds eaten with food.

**D. chinensis**, Linn. The *D. sinensis*.

**D. cultratus**, Thunb. (*L. cultratus*, knife-shaped.) Seeds esculent.

**D. cylindricus**, Monch. The *D. sinensis*, Linn.

**D. dissectus**, Lamb. (*L. dissectus*, cut in pieces.) The *Phascolus aconitifolius*, Jacq.

**D. fabæformis**, L'her. (*L. faba*, a bean; *forma*, shape.) Seeds esculent.

**D. gladiatus**, Jacq. (*L. gladium*, a sword.) Sword-bean. Hab. India. Cultivated for the sake of its esculent pods.

**D. hastatus**, Lour. (*L. hastatus*, spear-shaped.) Seeds esculent.

**D. lab'lab**, Linn. The *Lablab vulgaris*.

**D. minimus**, Linn. (*L. minimus*, least.) Seeds reputed poisonous.

**D. obtusifolius**, Lam. (*L. obtusus*, blunt.) Seeds said to be poisonous.

**D. pruriens**, Linn. The former name of the plant cowhage, or cowitch, now called *Mucuna pruriens*.

**D. sinensis**, Linn. (Mod. *L. sinensis*, Chinese.) Berohati. Hab. India. Seeds much used by the natives with their food.

**D. soja**. (*G. Sojabaum*.) The *Soja hispida*.

**D. tranquebaricus**, Jacq. Seeds esculent.

**D. trilobus**, Linn. The *Phascolus trilobus*.

**D. tuberosus**, Lamb. (*L. tuberosus*, full of swellings.) Hab. West Indies. Root and seeds esculent.

**D. uniflorus**, Lam. (*L. unius*, one; *flos*, a flower.) Horse-gram. Seeds used for cattle-feeding, and by the natives in curries.

**D. urens**, Linn. The *Stizolobium urens*, Pers.

**Dolioform.** (*L. dolium*, a large jar; *forma*, shape. *G. fassahnlich*, fasschenförmig.) Of the shape of a cask or barrel.

**Dolioloid.** (*L. doliolum*, a small cask; *Gr. είδος*, likeness. *F. dolioloide*; *G. fassahnlich*.) Resembling a cask.

**Dolor.** (*L. dolor*; from *doleo*, to feel pain. *F. douleur*; *G. Schmerz*, *Leid*.) Pain; bodily suffering.

**D. al'gens.** (*L. algeo*, to be cold.) Pain accompanied by a sensation of cold.

**D. ani.** (*L. anus*, the fundament.) Pain in the inferior opening of the bowels.

**D. arthriticus.** (Ἀρθριτικός, gouty.) Gouty pain.

**D. atrox.** (*L. atrox*, terrible.) Very severe, agonising pain.

**D. capitis.** (*L. caput*, the head.) Headache.

**D. cephalicus.** (Κεφαλή, the head.) Headache.

**D. colicus.** (Κωλικός, suffering in the colon.) Colic.

**D. dentium.** (*L. dens*, a tooth.) Toothache.

**D. dentium a stridorē.** (*L. dens*; *a*, from; *stridor*, creaking.) The condition called setting the teeth on edge.

**D. faciei crucians.** (*L. facies*, the face; *crucio*, to torture.) Facial neuralgia.

**D. gravatus.** (*L. gravo*, to oppress.) Pain accompanied by a sense of weight.

**D. ischiadicus nervosus.** (*L. ischiadicus*, gout in the hip; *nervosus*, nervous.) Sciatica.

**D. le'nis.** (*L. lenis*, gentle.) Slight or subacute pain.

**D. mitis.** (*L. mitis*, gentle.) Slight pain.

**D. nephriticus.** (Νεφριτικός, affected with gravel.) Pain in the region of the kidneys.

**D. osteocopus.** (Ὀστίον, a bone; κόπος, fatigue.) Pain around and about a bone as of intense weariness.

**D. pectoris externus.** (*L. pectus*, the breast; *externus*, outside.) Stited in the side, pleurodynia.

**D. pudendorum.** (*L. pudenda*, the privy parts.) Pain in the genital organs.

**D. pungens.** (*L. pingo*, to prick.) Pain accompanied by a pricking or stabbing sensation.

**D. rheumaticus.** Rheumatism.

**D. stupidus.** (*L. stupidus*, dull) Pain of a dull kind.

**D. tensivus.** (*L. tensio*, a stretching.) Pain accompanied by a sense of distension.

**Dolores.** (*L. dolor*, pain.) Pains; applied by certain nosologists to a class of diseases of which pain is the prominent symptom.

**D. ad partum.** (*L. ad*, at; *partus*, parturition. *G. Geburtswehen*.) The labour pains.

**D. conquassantes.** (*L. conquasso*, to

shake severely. *G. Schüttelwechen*.) The expulsive pains of labour.

**D. intestinum.** (*L. intestinum*, the gut.) Colic.

**D. nocturni.** (*L. nocturnus*, belonging to the night.) Pains which occur mainly at night.

**D. osteocōpi.** (ὀστέον, bone; κόπος, from κόπτω, to break.) Pains of a severe character affecting or referred to the bones, and usually associated with syphilis.

**D. parturientis.** (*L. parturiens*, bringing forth. *G. Geburtswehen*.) Pains of labour.

**D. post-partum.** (*L. post*, after; *partus*, birth.) The after-pains of childbirth.

**D. præparantes.** (*L. præparare*, to make ready. *G. vorbereitende Wehen*.) The preliminary or preparatory pains of labour; those accompanying the dilatation of the os uteri.

**D. puerpararum.** (*L. puerpera*, a woman in labour.) The after-pains of childbirth.

**D. rodentes.** (*L. rodens*, gnawing.) Pains of a gnawing character.

**D. terebrantes.** (*L. terebro*, to bore.) Pains of a boring character.

**Doloriferous.** Same as *Dolorific*.

**Dolorific.** (*L. dolor*, pain; *facio*, to make. *G. schmerzhaft, schmerzverzend*.) Applied to agents producing pain.

**Dolorosi morbi.** (*L. dolorosus*, painful; *morbus*, a disease.) Linnaeus's term for the *Dolores* of other nosologists.

**Dolphin.** (*O. F. daulphin*; from *L. delphinus*; from Gr. δελφίς, a dolphin.) The *Delphinus delphis*, and other species.

**D., acid of.** Same as *Delphonic acid*.

**Dombeya.** (Joseph Dombey, a botanist of the 18th century.) A Genus of the Nat. Order *Byttneriaceæ*.

Also, Lamarek's name for the Genus *Araucaria*.

**D. chilensis.** Lam. The *Araucaria imbricata*.

**D. excel'sa.** (*L. excelsus*, lofty.) A tree, indigenous to Chili, yielding *D. turpentine*.

**D. turpentine.** A glutinous, milky-looking fluid of a strong odour and taste, yielded by *D. excel'sa*.

**Dombeya'ceæ.** A Nat. Order of plants now included under *Byttneriaceæ*.

**Dombey'ceæ.** A Subfamily of the Family *Sterculiaceæ*.

**Dombey's turpentine.** See *Dombeya turpentine*.

**Dom'bhât.** Hungary; near Klansenberg. A mineral water, containing potassium and sodium chloride, sodium, calcium, and magnesium carbonate, and a little iron.

**Dome trochar.** See *Trochar, dome*.

**Domestic.** (*F. domestique*; from *L. domesticus*, belonging to a house.) Relating to, or belonging to, the house or family.

In Pharmacy, applied to remedies prepared at home in the family.

In Zoology, used to denote animals kept and nurtured by man.

In Botany, used in the sense of cultivated.

**Domestication.** (*L. domesticus*, pertaining to the house. *F. domestication*; *I. domesticazione*; *G. Zähmung*.) The act of reducing animals to the domestic state. The efforts for the reclaiming of a wild animal and making it tame and submissive to human influence by the cumu-

lative effect of kindness, perhaps mingled with some show or exertion of authority, of familiarity, and of supply of food, must usually be continued through several generations. The flesh of wild animals is firmer, the quantity of fat as a rule less, the hardness of the bones greater, and the strength, activity, and ferocity greater than in tame animals. The term is sometimes applied to plants, and is then synonymous with plants in cultivation. Some animals vary greatly under domestication, as the pigeon, horse, and dog; others, as the goose, preserve their ancestral type with great tenacity.

**Domicilium.** (*L. domicilium*, a habitation.) A name for the *Choroid tunic*. (Dunglison.)

**Dominant.** (*L. dominans*, part. of *domino*, to rule.) Ruling, governing, prevailing.

**D. ideas.** Term employed by Carpenter to indicate those mental processes which govern movements of the body automatically, or without the express co-operation of the will. Examples may be given in the phenomena of the divining rod, where a strong belief may induce actions even against the will of the individual, acting as a kind of undercurrent of nerve force, of which he is not conscious.

**Domina'rum aqua.** (*L. domina*, a lady; *aqua*, water.) Old term for a certain emmenagogue medicine, described by Myrepsus.

**Domus leprosa'ria.** (*L. domus*, house; *leprosus*, leprous. *F. ladrerie*.) A lazaret house; a hospital or asylum for the reception of leprosy persons.

**Donax.** (Δόναξ. *G. Pfahlrohr*.) Old name for a reed.

**Don'do.** A synonym, or a variety, of *Albino*.

**Done'sis.** (Δονίω, to shake.) A waving; tremulousness, agitation.

**Don'ovan's solution.** The *Liquor arsenici et hydrargyri vidi*, U.S. Ph.

**Do'odia.** A Genus of the Nat. Order *Leguminosæ*.

**D. lagopodioides.** Roxb. The *Uraria lagopodioides*, De Cand.

**Doom.** (Sax. *dōm*.) Judgement, judicial sentence.

**D. bark.** The bark of several species of *Erythrophyllum*.

**D. palm.** The *Doum palm*.

**Doorweed.** A common name of *Polygonum*.

**Do'ra.** (Δορά, skin.) The skin or cutis.

**Doradilla.** A name for the *Asplenium ceterach*, or spleenwort.

**Dorcadizans.** (Δορκαδίζω, to bound like an antelope.) Leaping, as in some forms of madness.

**Dore, Mont.** See *Mont Dore*.

**Dorea.** Old name by Rhazes for one who sees by day and not by night.

**Dore'ma.** (Δορημα, a gift.) A Genus of the Nat. Order *Umbellifera*.

**D. ammoniacum.** Don. The plant which affords ammoniacum, or gum ammoniac; it is a native of Persia, a robust perennial plant, above seven feet high and four inches in circumference at the lower part of the stem. Leaves large, compound, with broad lobes. See *Ammoniacum* and *Burg-faring musk*.

**D. armeniacum.** The *D. ammoniacum*.

**D. anche'ri.** Boiss. A plant inhabiting Persia, from which good ammoniacum is derived.

**D. au'reum**, Stocks. Hab. Beloochistan. Furnishes a bitter white gum like ammoniacum.

**D. hirsu'tum**, Loftus. (L. *hirsutus*, shaggy.) The *D. ammoniacum*.

**D. panicu'latum**, Kar. The *D. ammoniacum*.

**D. robu'stum**, Loftus. (L. *robustus*, strong.) A plant producing a gum resin, resembling, but differing from, ammoniacum.

**Dorfbad**. Switzerland; near Appenzell. A mineral water containing a little calcium and magnesium carbonate.

**Dorfgaismar**. Germany; near Fritzlär. A mineral water containing small quantities of sodium, calcium, and magnesium sulphate, and calcium and magnesium carbonate, with free carbonic acid.

**Dorgali**. Sardinia; near Benetutti. Sulphur waters, of a temperature of 41° C. (111.2° F.)

**Doria's wound-wort**. The *Senecio doria*.

**Dor'idis hu'mor**. (L. *Doris*, daughter of Oceanus; *humor*, fluid.) An old term for seawater.

**Dor'is**. (L. *Doris*.) A Genus of the Sub-order *Nudibranchiata*, Order *Opisthobranchiata*, Class *Gastropoda*. Some species of this Genus are dried and used for making soup.

**Dormant**. (F. *dormant*, part. of *dormir*, to sleep; from L. *dormio*, to sleep.) Sleeping, at rest.

**D. bud**. A bud which remains, it may be for years, undeveloped on a plant stem.

**Dormita'tio**. (L. *dormitatio*, from *dormio*, to be sleepy.) Sleepiness; drowsiness.

**Dormit'io**. (L. *dormitio*, from *dormio*, to sleep.) Sleep.

**D. lucumoria'na**. (L. *lux*, light; *moror*, to delay.) Protracted sleep.

**Dormitive**. (L. *dormio*.) A substance which produces sleep.

**Dorna-Kandre'ny**. Austria; in Galicia. Mild, cold, chalybeate waters.

**Doronicum**. (Arab. *dornig*. G. *Gemswurz*.) A Genus of the Nat. Order *Compositae*. A name for leopard's bane.

**D. ar'nica**, Desf. The *Arnica montana*.

**D. austriacum**, Jacq. Used as *D. pardalianches*.

**D. corda'tum**, Lamb. (L. *cor*, the heart.) The *D. pardalianches*.

**D. germa'nicum**. A name for the *Arnica montana*.

**D. grandifo'rum**, Lamb. (L. *grandis*, great; *flos*, a flower.) The *Arnica scorpioides*.

**D. helve'ticum**, Mill. (L. *helveticus*, Swiss.) The *Senecio doronicum*.

**D. mi'nus**. (L. *minor*, less.) The *D. plantaginicum*.

**D. monta'num**, Lamb. The *Arnica montana*.

**D. officina'le**. (L. *officina*, a shop.) The *D. pardalianches*.

**D. oppositifo'lium**, Lam. (L. *oppositus*, placed over against; *folium*, a leaf.) The *Arnica montana*.

**D. pardalian'ches**, Linn. (Παρδαλι-αγχίς; from παρδαλις, a panther; ἀγχίς, to strangle. F. *mort aux pantheres*; G. *Gemswurz*.) The Roman leopard's bane; also called *D. romanum*. The root, in an overdose, is an acrid poison, but in smaller quantities it is said to have been efficacious in vertigo and epilepsy.

**D. plantagin'eum**, Linn. (L. *plantago*, the plantain.) Hab. Europe. Used as *D. pardalianches*.

**D. plantag'inis fol'io**. (L. *plantago*, plantain; *folium*, a leaf.) The *Arnica montana*.

**D. procu'rens**, Dumort. (L. *procurro*, to extend.) The *D. pardalianches*.

**D. radi'cē dul'ci**. (L. *radix*, a root; *dulcis*, sweet.) The *Arnica scorpioides*.

**D. roma'num**. A name for the *D. pardalianches*; the Roman leopard's bane.

**D. scorpioid'es**, Willd. Used as *D. pardalianches*.

**Dorsad**. (L. *dorsum*, the back.) An adverbial term, applied by Dr. Barclay, to indicate the same relation as is conveyed by his use of the word *Dorsal aspect*; towards the back.

**Dorsal**. (L. *dorsum*, the back; G. *rückenständig*.) Of, or belonging to, the back.

**D. aorta**. See *Aorta*, dorsal.

**D. aponeuro'sis**. A synonym of *Aponeurosis*, vertebral.

**D. artery of clit'oris**. See *Clitoris*, artery of, dorsal.

**D. ar'tery of foot**. See *Dorsalis pedis artery*.

**D. ar'tery of fore-fin'ger**. See *Dorsalis indicis radialis artery*.

**D. ar'tery of in'dex-fin'ger**. See *Dorsalis indicis radialis artery*.

**D. ar'tery of intercos'tal ar'tery**. The posterior branch of each intercostal artery.

**D. ar'tery of lum'bar ar'tery**. The posterior branch of each lumbar artery.

**D. ar'tery of pe'nis**. See *Dorsalis penis artery*.

**D. ar'tery of thumb**. See *Dorsalis pollicis radialis artery* and *D. pollicis ulnaris artery*.

**D. ar'tery of tongue**. The *Dorsalis linguae artery*.

**D. aspect**. (G. *Rückenfläche*.) The upper surface of a thing.

A term applied by Dr. Barclay, of Edinburgh, in his proposed nomenclature, as meaning towards the back, when treating of the aspects of the trunk.

**D. car'pal ar'tery**. The *Carpal artery*, posterior radial.

**D. cord**. (G. *Rückensaite*.) The *Notochord*.

**D. decu'bitus**. See *Decubitus*, dorsal.

**D. excu'sion**. (L. *excursio*, a running out. G. *Streckung*.) Term applied to the backward movement of the hand beyond the middle position, in opposition to flexion; dorsal flexion.

**D. face**. Same as *D. aspect*.

**D. fas'cia of foot**. See *Fascia dorsalis pedis*.

**D. fas'cia of hand**. See *Fascia dorsalis manus*.

**D. fin**. See *Fin*, dorsal.

**D. fur'row**. (F. *gouttière dorsale*; G. *Rückenfurche*.) The longitudinal depression in the centre of the back caused by the projection of the back muscles on each side and the projection of the ribs.

**D. gang'lia**. (L. *dorsum*, the back; *ganglion*, a swelling. G. *Brustknoten*.) The ganglia of the cord of the sympathetic nerve in the dorsal region, of which there are eleven or twelve. They lie beneath the pleura and over the heads of the ribs. The uppermost ganglion is the largest. Each ganglion gives off two external, or connecting branches, which join an intercostal nerve.

## DORSALIS.

The internal branches vary in size and distribution. The branches from the upper six ganglia are distributed to the aorta and the vertebrae, with their ligaments; and from the third and fourth branches twigs pass to the posterior pulmonary plexus. The internal branches from the lower six ganglia unite to form the splanchnic or visceral nerves.

**D. interosseous arteries of foot.** See *Interosseous arteries of foot, dorsal*.

**D. interosseous arteries of hand.** See *Interosseous arteries of hand, dorsal*.

**D. lamina.** See *Lamina dorsalis*.

**D. muscle, large.** The *Latissimus dorsi*.

**D. muscle, long.** The *Longissimus dorsi*.

**D. nerve, first.** (*G. erster Rückennerve*.) The anterior division of this nerve differs from that of the other *D. nerves*, in that the larger part goes to join the brachial plexus; the remainder forms the first intercostal nerve. The first dorsal nerve frequently receives a communicating branch from the second dorsal nerve.

**D. nerve, last.** (*G. letzter Rückennerve*.) The *D. nerve, twelfth*.

**D. nerve of clitoris.** See *Clitoris, nerve of*.

**D. nerve of hand.** (*G. Handrückennerve*.) A branch of the ulnar nerve about 2" to 3" above the wrist. It divides into three branches, one to supply the inner side of the little finger, a second for the adjacent sides of the little and ring fingers, and a third which joins with a branch of the radial nerve, and supplies the adjacent sides of the ring and middle fingers; all join the anterior digital nerves.

**D. nerve of penis.** (*F. nerf dorsal de la verge; G. Ruthennerv.*) A branch of the pudic nerve at the back of the ischio-rectal fossa; it accompanies the pudic artery to the dorsum of the penis, and divides into filaments at the glans which it supplies, as also the body of the penis, the constrictor urethrae, and the integument; it is joined on the dorsum of the penis by filaments from the sympathetic.

**D. nerve, second.** The second of the *D. nerves*; in addition to the intercostal branch, it gives off a twig to the arm. See *Intercostohumeral nerve*.

**D. nerve, twelfth.** The last of the *D. nerves*; in addition to the branch which runs a similar course to that of the intercostal nerves, but below the last rib, it sends a branch to supply the integument of the buttock, as far as the great trochanter of the femur.

**D. nerves.** (*G. Rückennerven*.) Those spinal nerves, twelve in number on each side, which pass out of the spinal canal under each dorsal vertebra. The anterior divisions are distributed on the thoracic and abdominal walls as the intercostal nerves, with the exception of those of the first, second, and twelfth nerves; each communicates with the ganglionic cord of the sympathetic by a short branch near the intervertebral foramen. The posterior divisions supply the muscles of the back, and the integument over them.

**D. nerves, anterior divisions of.** See *D. nerves*, and *Spinal nerves*.

**D. nerves, posterior divisions of.** See *D. nerves*, and *Spinal nerves*.

**D. phthisis.** See *Phthisis, dorsal*.

**D. ridges.** Two longitudinal ridges de-

veloped in the anterior part of the transparent area of the blastoderm a few hours after the appearance of the primitive groove; they very soon unite in front, then extend on each side of the primitive groove, and, uniting over it, form a tube, wider in front than behind, and thus form the rudimentary central nervous system.

**D. scapular artery.** The *Dorsalis scapulae*.

**D. scapular artery, inferior.** The *Dorsalis scapulae*.

**D. shield.** The upper part of the carapace of a tortoise.

**D. spine.** See *Spine, dorsal*.

**D. suture.** See *Suture, dorsal*.

**D. vein of clitoris.** A similar, but smaller, vein in the female to the *D. vein of penis*.

**D. vein of nose.** A small vein composed of branches from the dorsum of the nose, which joins the angular vein.

**D. vein of penis.** (*F. veine dorsale de la verge; G. Rückenblutader des Glüdes*.) A vein which is formed by the junction of two branches made up by twigs from the glans penis and the prepuce; it lies in the median groove on the upper surface of the penis between the dorsal arteries, receiving branches from the corpora cavernosa, the corpus spongiosum, and the integument, as far as the root of the penis, where it passes through an opening below the subpubic ligament, and divides into two branches, each of which joins its own side of the prostatic plexus and receives a branch from the obturator vein.

**D. vein of tongue.** (*F. veine dorsale de la langue*.) Arises from the dorsal lingual plexus of veins in the submucous tissue of the posterior third of the tongue, and enters the internal jugular vein or the common facial vein, either separately or by means of a common trunk.

**D. veins, spinal.** See *Spinal veins, dorsal*.

**D. vertebra.** See *Vertebra, dorsal*.

**D. vessel.** (*F. vaisseau dorsal; G. Rückengefäss*.) The long, tubular, contractile, sacculated heart of an insect. It is situated on the dorsal aspect of the abdomen, where it is suspended by triangular muscular bands; it usually consists of eight sacs, one in front of the other, and communicating by a valvular aperture, which allows of movement towards the anterior extremity only; each sac receives blood by a pair of venous openings guarded by valves, and sends its blood into the one in front of it, and so on into the aorta, whence it is distributed to the lacunae and back to the heart.

**Dorsalis.** Same as *Dorsal*.

**D. clitoridis artery.** (*L. clitoris*.) The dorsal artery of the clitoris. It has the same course and relations as the dorsalis penis. See *Clitoris, artery of, dorsal*.

**D. dig'iti min'imi ulna'ris artery.** A small branch given off from the dorsal branch of the ulnar artery, which supplies the back of the little finger.

**D. hallucis.** (*L. hallux*, the great toe.) The first dorsal interosseous artery of the foot.

**D. indicis radialis artery.** A small branch of the radial artery often arising in common with the dorsalis pollicis ulnaris. It supplies the first dorsal interosseous space and the abductor indicis, and runs along the radial border of the forefinger.

**D. linguae artery.** (*L. lingua*, a tongue.

**F. artère dorsale**; *G. Zungenrückenarterie*.) A branch arising from the lingual artery beneath the hyoglossus muscle, and ascending to supply the substance of the tongue and the tonsil; it communicates with its fellow of the opposite side around the foramen cecum.

**D. longus muscle.** (*L. longus*, long.) The *Longissimus dorsi*.

**D. nasi.** (*L. nasus*, the nose. *G. Nasenrückenmuskel*.) The *Pyramidalis nasi*.

**D. nasi artery.** (*L. dorsum*, the back; *nasus*.) The *Nasal artery of ophthalmic*.

**D. pedis artery.** (*L. pes*, a foot.) The continuation of the anterior tibial artery. It extends from the ankle to the posterior part of the first interosseous space, when it passes down between the heads of the first dorsal interosseous muscle and innervates with the plantar arch. Its branches are the tarsal, the metatarsal, the first dorsal interosseous, and the plantar digital arteries. It supplies both sides of the great toe and the inner side of the second toe.

**D. penis artery.** (*L. penis*, the male organ. *F. artère dorsale de la verge*; *G. Rückenarterie des Ruthe*.) One of the terminal divisions of the pudic artery. It runs between the crus penis and the symphysis, and, passing through the suspensory ligament, reaches the dorsum of the penis, where it ends in branches which go to the glans and the prepuce. It supplies the integuments and the body of the penis, anastomoses there with the profunda penis and the glans, where it communicates with its fellow of the opposite side. The dorsal artery of the penis arises sometimes from the obturator artery, sometimes from an external pudic branch of the femoral, and sometimes from the deep femoral artery.

**D. pollicis radialis artery.** (*L. pollex*, the thumb.) A small branch of the radial artery arising at the base of the metacarpal bone of the thumb, and running along the radial border of the dorsal surface of the thumb-bone.

**D. pollicis ulnaris artery.** (*L. pollex*, the thumb; *ulna*, the elbow; *arteria*, an artery.) A small branch of the radial artery arising near or in conjunction with the dorsalis pollicis radialis, and running along the ulnar border of the dorsal surface of the thumb-bones.

**D. scapulæ.** (*L. scapula*, the shoulder-blade.) A branch of the subscapular artery about an inch from its origin; it passes through the triangular space formed by the subscapular muscle, the *teres major*, and the long head of the *triceps*, and turns round the border of the scapula to the infraspinous fossa, where it anastomoses with the suprascapular and the posterior scapular arteries.

Also, a synonym of the posterior scapular artery.

**Dorsch.** Same as *Dorse*.

**Dorse.** The *Gadus callarias*, a source of cod-liver oil.

**Dorsibranchiata.** (*L. dorsum*, the back; *branchia*, the gills. *F. dorsibranche*.) An Order of the *Articulata*, in which the branchiae are equally distributed along the dorsum of the body, or, at least, its middle portion. A synonym of *Polychæta*.

**Dorsibranchiate.** (*L. dorsum*; *branchia*.) Having branchiae or gills along the back, as in some annelids and molluscs.

**Dorsi-epitrochlearis.** See *Dorso-epitrochlearis*.

**Dorsiferous.** (*L. dorsum*; *fero*, to bear. *F. dorsifere*; *G. rückentragend*.) Bearing on the back. Applied to ferns whose fructification is borne on the back of foliaceous organs.

**Dorsifixed.** (*L. dorsum*; *fixus*, fixed, fast.) Fastened by the back.

In Botany, used to describe an anther which is attached by its back to the filament; otherwise called *Adnate*.

**Dorsigerous.** (*L. dorsum*, the back; *gero*, to bear.) Same as *Dorsiferous*.

**Dorsigrade.** (*L. dorsum*, the back; *gradus*, a step.) A term applied to those mammals which walk on the backs of the digits.

**Dorsi lumbar.** (*L. dorsum*, the back; *lumbus*, the loin.) Relating to the back and the loins.

**D. nerve.** A small communicating branch between the lumbar plexus and the last dorsal nerve.

**Dorsiparous.** (*L. dorsum*; *pario*, to produce.) A term applied to those *Batrachia* the ova of which become inserted into the skin of the back of the parent, where they develop.

**Dorsi-spinal.** (*L. dorsum*; *spina*, the spine.) Relating to the back and to the spine.

**D. veins.** A deep set of veins lying on the spinous processes and laminae of the vertebrae. They discharge themselves into the veins lying within the spinal canal. The *Spinal veins, dorsal*.

**Dorslet.** The same as *Dorsolum*.

**Dorso.** (*L. dorsum*.) This word, occurring in compound names, denotes attachment to, or connection with, the back.

**Dorso-anterior.** (*L. dorsum*; *anterior*, in front.) Having the back in front. Applied in midwifery to such positions of the foetus in relation to the mother.

**Dorso-cervical.** (*L. dorsum*; *cervix*, the neck.) Relating to the back of the neck.

**Dorso-costal.** (*L. dorsum*; *costa*, a rib.) Extending between the spine and the ribs.

**D. muscles.** Chaussier's term for the *Serratus posticus superior*.

**Dorso-epitrochlearis.** (*L. dorsum*; *Gr. ἐπί, upon*; *τροχλία*, the roller of a windlass.) A muscle found in many mammals extending between the latissimus dorsi or infraspinatus muscle to the triceps tendon at the olecranon.

**Dorso-intestinal.** (*L. dorsum*; *intestinalis*, the intestines.) Situate on the dorsal aspect of the intestine.

**Dorso-lateral.** (*L. dorsum*, the back; *latus*, the side.) Belonging to the back and to the side, or to the side of the back.

**D. muscle.** The mass of muscular fibre which constitutes the upper division of the epaxial section of the muscles of the animal body; in man it consists of those back muscles which, arising from vertebrae, are inserted into other vertebrae, the skull, or the ribs. It has been divided into three sets of muscles; one, longitudinal, consisting of those which run from one part of a vertebra to a similar part of another vertebra, or from rib to rib; a second, directed obliquely upwards and outwards, running from a spine of one vertebra to the transverse process of another; and a third, directed obliquely upwards and outwards, running from a transverse process of one vertebra to the spinous

process or the lamina of another. These several parts have received different names. This muscle has a preaxial extension in the temporal, pterygoid, and masseter muscles.

**Dorsolum.** (*L. dorsum*.) Name by Kirby for a piece of the exoskeleton of an insect situated between the collar and scutellum, which gives insertion to the anterior organs of flight.

**Dorso lumbar.** (*L. dorsum*, the back; *lumbus*, the loin.) Applied to regions or organs of the body occupying both the dorsal and lumbar portions of the spine.

**Dorso occipital.** (*L. dorsum*; *occiput*.) Extending between the back and the occipital bone.

**D.mus'cle.** A synonym of the *Complexus*.

**Dorso posterior.** (*L. dorsum*; *posterior*, hinder.) Having the back behind. Applied in midwifery to such positions of the fœtus in relation to the mother.

**Dorso scapular.** (*L. dorsum*; *scapula*, the bladebone.) Extending between the back and the shoulder-blade.

**D.mus'cle.** (*F. dorso-scapulaire*.) Chaussier's term for the *Rhomboid muscles*.

**Dorso-supra-acromial.** (*L. dorsum*; *supra*, above; *acromion*. *F. dorso-sus-acromion*.) Extending between the dorsum and the upper part of the scapula.

**D.mus'cle.** Chaussier's term for the *Trapezius*.

**Dorso-trachelian.** (*L. dorsum*; *Gr. τράχηλος*, the neck.) Belonging to the back and the neck.

**D.mus'cle.** (*F. dorso-trachelien*.) Chaussier's term for the *Splenius colli*.

**Dorstenia.** (*Dorsten*, a German botanist. *F. dorstene*; *G. Contrayerva*.) A Genus of the Nat. Order *Moraceæ*.

**D. braziliensis.** Lamb. Hab. Brazil; there it is called *Cua apia*; one of the species which supplies *Contrayerva*.

**D. contrayerva.** Linn. (*F. contrayerva*; *G. Contrayerva*.) Hab. Pern and other parts of the Spanish West Indies; one of the species which supplies *Contrayerva*.

**D. cordifolia.** Swartz. (*L. cor*, the heart; *folium*, a leaf.) The *D. braziliensis*.

**D. Drakeana.** Mill. The *D. contrayerva*, or a variety, so called because it was first brought to England by Sir Francis Drake.

**D. Houstonii.** Mill. Name for a species, in honour of Dr. Houston. Root similar to *D. contrayerva*.

**D. opifera.** Mart. (*L. opifer*, aid-bringing.) Root like *Contrayerva*.

**D. placenterdes.** (*L. placenta*, a cake; *Gr. εἶδος*, likeness.) The *D. braziliensis*.

**D. tubicina.** Hook. The *D. braziliensis*.

**D. tubicina.** Ruiz and Pavon. (*L. tubicen*, a trumpeter.) Root similar to *Contrayerva*.

**D. vitellia.** (*L. dim. of vitis*, a vine.) The *D. braziliensis*.

**Dorsua lis.** Same as *Dorsalis*.

**Dorsum.** (*L. contr. from dorsum*, turned down. *F. dos*; *G. Rücken*, *Rückenseite*.) The back of man or beast.

Also, the vertebral column.

Applied to the superior surface of other parts, as the dorsum, or upper part, of the foot or hand.

Also, the surface of a shell opposite to its opening.

In Botany, that part of a seed which looks away from the axis of the fruit or the placenta.

**D. ephippil.** (*L. ephippium*, a horse cloth.) The same as *D. sellæ*.

**D. linguae.** (*L. lingua*, the tongue. *G. Zungenrücken*.) The upper surface or back of the tongue.

**D. manus.** (*L. manus*, the hand. *G. Handrücken*.) The back of the hand.

**D. nasi.** (*L. nasus*, the nose. *G. Nasenrücken*.) The bridge of the nose.

**D. ossis illi.** (*L. os*, a bone; *ilium*.) The outer surface of the ilium.

**D. pedis.** (*L. pes*, a foot. *G. Fussrücken*.) The upper surface or back of the foot.

**D. penis.** (*L. penis*, the male organ; *G. Ruthenrücken*.) The upper surface of the penis.

**D. sellæ.** (*L. sella*, a saddle. *G. Sattelrücken*.) The ridge which bounds the *sella turcica* posteriorly and terminates laterally in the two posterior clinoid processes.

**Dorton.** Buckinghamshire. A chalybeate water, containing twelve grains of iron sulphate to the pint.

**Dory.** (Corrupted from *F. dorc*, golden.) The *Zelus faber*, a fish used as food.

**Dorycnium.** (*Δορύκνιον*, a poisonous plant of the convolvulus tribe.) The *Convolvulus encorium*.

Also, a Genus of the Nat. Order *Leguminosæ*.

**D. hirsutum.** Ser. (*L. hirsutus*, hairy.) Hab. South Europe. Seeds used for piles.

**D. suffruticosum.** Will. (*L. sub*, under; *frutex*, a shrub.) Hab. South Europe. Seeds used for piles.

**Doryphora.** A Genus of the Nat. Order *Atherospermaceæ*.

Also, a Family of tetramerous *Coleoptera*.

**D. decemlineata.** (*L. decem*; *linea*, a line.) The Colorado beetle, very injurious to potatoes.

**D. sas'safras.** Endl. Hab. Australia. Wood used as a carminative.

**Dosage.** (*Dose*.) The determination of the proper dose of a drug.

In Chemistry, the term is sometimes used to express the determination of the quantity of each of the constituents of a compound body.

**Dose.** (*F. dose*, from *Gr. δόσις*, a portion. *G. Dosis*, *Portion*, *Gabe*, *Arzneigabe*.) The portion of medicine ordered to be taken at a time. The fitting dose of a medicine varies of course with age of the person to whom it is to be administered. The rule of Gaubius was that, if the dose for an adult of from twenty to sixty years of age be taken as one, a twelfth part should be given to a child under a year old; an eighth to a two-year old; a sixth part to a three-year old; a fourth to a four-year old; a third to one between four and seven years; a half between seven and fourteen years; and two thirds between fourteen and twenty years; persons above sixty require smaller doses; and females need less than men. Young's rule was that for children under twelve years of age, the doses of most medicines must be diminished in proportion to the age by the age increased by twelve, thus: at two years,  $2 \div 2 + 12 = \text{one seventh}$ ; at four years,  $4 \div 4 + 12 = \text{one fourth}$ . These statements are only approximately true, for much depends on strength, habits, temperaments, and idiosyncrasies.

**D. divided.** (*F. dose réfractée*.) A term applied to the mode of administration of a drug when the usual dose is given, not all at once, but

## DOSEA POWDER—DOTTED.

in small portions, at intervals of a few minutes, until the whole is taken.

**D., maximum.** (*L. maximus*, greatest.) The German Pharmacopœia provides the following list of doses of potent drugs which a dispenser is not allowed to exceed unless the prescriber has attached a note of exclamation (!) to the amount to denote that the excessive dose ordered was intentional.

	GRAMMES.	
	Maximum for each dose.	Maximum daily quantity.

**Dosea powder.** See *Powder, dosia*.

**Dosimetric.** (*Δόσις*, a portion; *μέτρον*, a measure.) Relating to *Dosimetry*.

**D. medicine.** A method of treating disease laid down by Professor Burggræve, of Ghent, which has for its basis the employment of simple and active remedies, such as the alkaloids and other immediate principles, in doses that are mathematically defined and administered according to certain rules.

**Dosimetry.** (*Δόσις*; *μέτρον*, a measure.) The measuring of a dose of a drug.

**Dosiology.** (*Δόσις*, a portion, a dose; *λόγος*, a discourse.) That branch of medicine which treats of the amounts or doses in which drugs should be given.

**Dosis.** (*Δόσις*, a portion; from *εἶδωμι*, to give. *F. dose*; *G. Dose, Dosis, Gab.*) A dose; the determinate quantity in which a medicine is prescribed, or given.

**Dosology.** Same as *Dosiology*.

**Dos'il.** (Old *F. dosil*, a spigot.) An elongated cone of lint for introduction into a wound or sinus.

**Dotage.** (From Eng. verb *dote*; *Mid. E. dotien*; with *F. suffix age*.) Feebleness of mind in an old person, or in one rendered prematurely old by disease or excess.

**Dothidea'ceæ.** A Family of the Sub-order *Pyrenomycetes*.

**Dothien.** (*Δοθίν*, a boil. *F. furuncle*; *G. Eiterstock*.) Ancient name, used by Galea, *Meth. Med.* ii, 2, for *Furunculus*, or a boil.

**Dothienenteria.** Same as *Dothienenteritis*.

**Dothienenteritis.** A better form of *Dothienenteritis*.

**Dothienophy'ma.** (*Δοθίν*, a boil; *φῆμα*, an inflamed swelling.) A boil.

**Dothienenteria.** Same as *Dothienenteritis*.

**Dothienenteritis.** (*Δοθίν*, a boil; *εντερων*, an intestine.) A term applied to inflammation and ulceration of the small glandular follicles of the intestinal canal and Peyer's patches. Used by Bretonneau and Trousseau to signify typhoid or enteric fever. It should have been *Dothienenteritis*.

**Doth'ion.** Same as *Dothien*.

**Dot'ed.** (*E. dot*, from *Dut. dot*, a little bundle of spoiled wool or flax good for nothing.) Having small spots.

**D. cells.** Same as *Cells, pitted*.

**D. vessels.** Same as *Vessels, dotted*.

**Dou'ai.** France; Département du Nord. An alkaline iron spring.

**Double.** (F. *double*, from *L. duplus*, twice as much. G. *doppelt*.) Twofold; in pairs; twice as much.

**D. affinity.** See *Attraction, elective, double*.

**D. a'qua for'tis.** (*L. aqua*, water; *fortis*, strong.) A term for nitric acid of a sp. gr. 1.36.

**D. bell'ows sound.** See *Murmur, bell'ows, double*.

**D. bla'ded.** Having two blades.

**D. bla'ded knife.** Same as *Valentine's knife*.

**D. circula'tion.** (*L. circulo*, to encircle.) A term applied to the circulation of the blood in the higher Vertebrata, in reference to the pulmonary and to the systematic circulation as connected with two separate and distinct sides of the heart.

**D. con'sciousness.** See *Consciousness, double*.

**D. contour.** (F. *contour*, an outline.) Having a double outline or boundary.

**D. decomposition.** See *Decomposition, double*.

**D.-edg'ed.** Having both edges sharp.

**D.-edg'ed knife.** A knife with two cutting edges, back and front.

**D. eye.** A term for the condition which occurs in a fish, the *Anableps*, in which the appearance of two eyes, one above another, is produced by the presence of an opaque horizontal band across the cornea, with a pupil above and below it.

**D. flow'er.** See *Flower, double*.

**D. fluid series.** A term applied to Radiata and Articulata by Williams, because they possess both blood and chylaceous fluid.

**D. hear'ing.** The hearing of the same sound by each ear at different times, or the hearing of the last notes or tones repeated.

**D. incli'ned plane.** A term applied to a form of splint for the treatment of fractures of the thigh. Essentially it consists of two pieces of wood joined at an angle, so that if placed on a bed, and the limb made to lie on it and be fixed to it, the femur would be flexed on the trunk and the leg on the femur, and the tendency to shortening be counteracted. The same principle is carried out in the *Fracture bed*.

**D. joint.** See *Joint, double*.

**D. leaf.** The *Ophrys ovata*.

**D. mon'sters.** See *Monsters, double*.

**D. nose piece.** See *Nose-piece, double*.

**D. pulse.** See *Pulse, double*.

**D. rank'ed.** See *Distichous*.

**D. refraction.** A property possessed by many crystals, by which a single incident ray passing through them is divided into two, the ordinary and extraordinary ray, so that an object seen through them appears double. In Iceland spar the angle between the ordinary and extraordinary rays is  $6^{\circ} 12'$ .

**D. salt.** A salt containing two bases and one acid only; or in which two equivalents of hydrogen of an acid are replaced by two distinct metals.

**D. stain'ing.** In Histology, the employment of two staining reagents to demonstrate special details of structure. Thus the tissue may first be stained with silver nitrate or gold chloride, and then with hæmatoxylin, carmin, or anilin. Other combinations are: Picro-

carmin and hæmatoxylin; resin and hæmatoxylin; resin and anilin green; picrocarmin and anilin; anilin rose and anilin green; Bismark brown and anilin green.

**D. tongue.** The *Ruscus hypoglossum*.

**D. touch.** Term for a mode of exploration wherein vaginal and rectal examination is combined, so that the index finger being placed in the rectum, and the thumb in the vagina, any intervening morbid growth may be embraced between them.

**D. vision.** The impression that two objects are present when only one is before the eyes. It is attributed to a want of harmony in the muscles of the eye, so that the images received by the two eyes do not fall on corresponding points of the retina.

**Doubles.** (Same etymon.) Same as *Epsom salts, double*.

**Doublet, Wollaston's.** See *Wollaston's doublet*.

**Doubling Gap.** United States; Pennsylvania, Cumberland County. Mineral waters containing hydrosulphuric acid, carbonates of soda and magnesia, and chloride of sodium.

A chalybeate spring contains carbonate of iron, sulphate and carbonate of magnesia, and chloride of sodium. (Dunglison.)

**Doubting.** (E. part. of *doubt*, from Old F. *douter* or *doubter*; from *L. dubito*, to be of two minds.) The being of uncertain mind.

**D. mad'ness.** See *Madness, doubting*.

**Douche.** (F. *douche*, a shower-bath; from *I. doccia*, a gutter; from *docciare*, to pour.) A column, or stream, or jet of hot or cold liquid, or of a gas, directed against some part of the body with more or less force, obtained by elevation of the receptacle, or the use of a pump.

**D., air.** A douche in which a current of hot air replaces the stream of water.

**D., al'ternating.** A douche in which a hot and a cold stream of water are alternately and repeatedly at definite intervals, and for a definite time, directed against the affected part.

**D., ascend'ing.** (*L. ascendo*, to climb up.) A douche in which the stream of water is propelled from below to the part.

Also, a term applied to a form of enema in which strong and graduated pressure may be used; the rectal tube being attached to an elevated reservoir of water.

**D., au'ral.** (*L. auris*, the ear.) A method of applying a stream of water to the external auditory meatus; it consists of a receptacle for warm water placed at a greater or less height above the head, from which an india-rubber tube, with or without a nozzle, leads to the ear.

**D., auric'ular.** (*L. auricula*, the external ear.) Same as *D., aural*.

**D., bell.** (F. *douche en cloche*.) A douche which is effected by means of a bell-shaped nozzle, with a fissure for the escape of the water along its circumference.

**D., capillary.** (*L. capillus*, a hair.) A synonym of *Aquapuncture*.

**D., carbonic acid.** A stream of carbonic acid gas applied to a part; it is said to relieve the pain of open cancer.

**D., cir'cular.** A douche from an apparatus composed of a series of perforated tubes, each extending partly around the body; the perforations are small.

**D., cold.** (F. *douche froide*.) A douche in which cold water is used.

**D., colum'nar.** A douche in which the stream of water is round and large.

**D., concent'ric.** (F. *concentrer*, to join in one centre.) A douche through an expanded nozzle having linear concentric fissures or openings.

**D., descend'ing.** (L. *descendo*, to go down.) A douche in which the stream of water falls from above on to the part.

**D., horizon'tal.** Same as *D., lateral*.

**D., hot.** (F. *douche chaude*.) A douche in which hot water is used; it produces relaxation and engorgement of the capillaries, with some anesthesia when long continued; but it is a stimulant when it is of short duration.

**D. in circles.** See *D., circular*.

**D., lance-shaped.** A douche through a nozzle with a long linear opening.

**D., lat'eral.** (L. *latus*, the side.) A douche propelled from the same level as the part to which it is applied.

**D., na'sal.** (L. *nasus*, the nose.) A douche of water applied by a tube to the interior of the nostrils.

Specially applied to a mode of washing out the nostrils, suggested by Weber, and improved by Thudicum, and based upon the fact that when one side of the nasal cavity is filled with fluid by hydrostatic pressure, while the patient is breathing through the mouth, the fluid escapes by the other nostril. The necessary apparatus consists of a reservoir for water, elevated above the patient, to which is attached an elastic tube terminating in a nozzle, which accurately plugs the nostril.

**D., oc'ular.** (L. *oculus*, the eye.) Same as *Eye douche*.

**D., rain.** A douche effected by means of a nozzle with a flat end, perforated by many fine holes.

**D., Scotch.** A douche of hot water, at first of a temp. of 40° C. (104° F.), gradually increased to 45° C. (113° F.) or 50° C. (122° F.), and followed immediately by short use of quite cold water. It is used as a revulsive.

**D., sheet.** A douche in which the water escapes from the aperture to fall on a surface which causes it to spread out in a sheet; it is a form of affusion.

**D., steam.** A douche in which the steam of water is projected against the part; it is used in chronic thickenings of joints.

**D., transi'tion.** (L. *transitio*, a going over.) Same as *D., Scotch*.

**D., u'terine.** (L. *uterus*, the womb.) A douche applied by means of a vaginal tube to the cervix uteri.

**D., vagi'nal.** (*Vagina*.) A douche applied by means of a tube passing into the vagina.

**D., va'pour.** The use of a vapour or gas, as steam or carbonic acid, as a douche.

**Douglas, James.** A Scotch obstetric physician and anatomist, born 1675, died 1741.

**D.'s cul-de-sac.** (F. *cul*, bottom; *de*, of; *sac*, bag.) Same as *D.'s pouch*.

**D.'s fold.** The lower border of the posterior wall of the sheath of the rectus; it is semilunar in outline, the concavity looking downwards, and is situated about half way between the umbilicus and the os pubis.

**D.'s pouch.** The pouch of peritoneum, between the uterus and the rectum, formed by the reflection of the membrane from the upper part of the vagina to the rectum.

**D.'s semilu'nar fold.** (L. *semi*, half; *luna*, the moon.) Same as *D.'s fold*.

**Doum palm.** The *Hyphane thebaica*; the fruit tastes like ginger-bread, and is esculent. Its rind is used, in infusion, as a refrigerant and laxative.

**Dou'ma.** A Genus of the Nat. Order *Pal-maceæ*.

**D. theba'ica.** Poir. The *Hyphane thebaica*.

**Dou'rine.** The Arabic name of *Mal de coit*.

**Dou'r'a.** Same as *Durra*.

**Dovadola.** Italy, in Tuscany, near Castro Carlo. Saline mineral waters, of which there are several springs, one of which contains potassium iodide 2, sodium chloride 840, magnesium chloride 50, and calcium chloride 40 grains, in 25 ounces; another is very similar, but with only one grain of potassium iodide, and contains a grain of carbonate of iron, very little salt, and much free carbonic acid, in 25 ounces.

**Dove.** (Sax. *dufa*. F. *colombe*; G. *Taube*.) The birds of the Genus *Columba*.

**D.'s foot.** The *Geranium columbinum*, and the *G. molle*, from the shape of the leaf.

**D.'s foot, blue.** The *Geranium sylvaticum*.

**Do've.** A German physicist of the present century.

**D.'s law.** A statement concerning the rotation of winds; that they have a very great tendency to veer in the line of the sun's motion, passing from north, through north-east, east, south-east, to south, and on through west to north, so as to make a complete circle.

**Dover, Thomas.** An English physician, graduated as M.B. at Cambridge in 1687, died probably in or about the year 1741.

**D.'s powder.** (G. *Dover'sches Pulver*.) Four parts of potassium nitrate, fused with four parts of potassium sulphate, are finely powdered, and mixed with one part each of ipecacuanha, opium, and liquorice.

Also, a synonym of *Pulvis ipecacuanhæ compositus*, B. Ph., which is a substitute for it.

**Down.** (A Scand. word; Icel. *dunn*.) The soft fluffy covering of the skin of birds under the feathers.

Also, a growth of very fine hair.

In Botany, the fine hairy substance attached to seeds and fruits, also called *Pappus*.

**Down-bearing.** See *Bearing-down*.

**Downy.** (*Down*.) Having fine, closely-set, short, soft hairs.

**Doy'ère.** A French anatomist of the nineteenth century.

**D.'s eminence.** Same as *D.'s papilla*.

**D.'s papilla.** (L. *papilla*, a small teat.) The small conical eminence at the point where the cylinder axis of a nerve filament penetrates the sarcolemma of a muscular fibre to form a *Motorial end-plate*.

**D.'s prom'inence.** Same as *D.'s papilla*.

**Draba.** (Δράβα, Arabian mustard.) Whitlow grass. A Genus of the Tribe *Alyssineæ*, Nat. Order *Crucifera*.

**D. muralis.** Linn. (L. *muralis*, belonging to a wall.) Wall whitlow-grass. Herb aperient, detergent; seeds used instead of pepper.

**D. verna.** Linn. (L. *vernus*, belonging to spring.) Whitlow-grass. The seed is hot and stimulating, and is used like pepper. The *Erophila verna*.

**Dracœ'na.** (*Δράκαινα*, the she-dragon. *F. dragonur*; *G. Drachenbaum, Drachenblume.*) A Genus of the Nat. Order *Liliaceæ*.

**D. dra'co**, Linn. (*F. draco*, a dragon. *F. dragonur*; *G. geminer Drachenbaum.*) The dragon tree of Tenerife, the juice of which affords a resin similar to dragon's blood, called Canary dragon's blood.

**D. fer'ra**, Linn. (*L. ferreus*, pertaining to iron.) The *D. terminalis*.

**D. om'bet**, Kotschy. Probably the same as *D. draco*. It supplies Socotra dragon's blood.

**D. reflex'a.** (*L. reflexus*, part. of *reflecto*, to turn back.) Name of a species growing in the Isle of France and Madagascar; the young shoots are said to be emmenagogue and abortive.

**D. terminalis**, Blume. (*L. terminalis*, belonging to boundaries; so called because it is planted to mark the boundaries of estates in India and China.) The root is used in dysentery, and when baked is eaten as food; a fermented liquor is made from the juice.

**Dracœ'næ.** (*Dracœna*.) A Tribe of the Subfamily *Asparagaceæ*, Family *Liliaceæ*.

**Drac'anth.** Same as *Tragacanth*.

**Drach'ion.** An old synonym of *Figillus*.

**Drachm.** (*Δραχμή*, an Attic weight, from *δράσσομαι*, to grasp with the hand. *F. drachme, drachme*; *G. Drachme.*) A weight of 60 grains, or 3 scruples; the 8th part of an apothecaries' ounce; it is equivalent to 3.888 grammes. The drachm avoirdupois weight, sixteen of which make an ounce, contains only 27.34 grains.

**D., flu'id.** An eighth part of an ounce; it contains sixty minims.

**Drach'ma.** (*Δραχμή*.) An Attic weight, weighing about 66.5 grains.

**Drac'ic acid.** A synonym of *Anisic acid*.

**Drac'in.** Same as *Dracoin*.

**Drac'o.** (*Δράκων*, probably from *δρίκομαι*, to flash; because of the reputed glaring brightness of its eyes. *F. dragon*; *G. Drache.*) The name of the fabled monster, the dragon. A term applied to various objects, and to some animals, from their fancied resemblance.

**D. her'ba.** (*L. herba*, springing vegetation.) A name for the *Artemisia dracunculus* of Linnæus.

**D. mitiga'tus.** (*L. mitigo*, to make mild.) Ancient term for calomel, *Hydrargyri subchloridum*.

**D. sylves'tris.** (*L. silvestris*, belonging to a wood.) A name for the *Achillea ptarmica*.

**D. vol'ans.** (*L. volo*, to fly.) An old term for corrosive sublimate, *Hydrargyri perchloridum*.

**Dracoceph'alum.** (*Δράκων*, a dragon; *κεφαλή*, a head.) A Genus of the Nat. Order *Labiataæ*.

**D. canarien'se.** Used as *D. moldavicum*.

**D. molda'vicum**, Linn. (*Moldavia*, a Danubian principality. *F. melisse de moldavie*; *G. Drakenkopf, Türkische Melisse.*) Canary balsam. A species which yields, by distillation, a fragrant essential oil, called in Germany *Ölum syrie*; also called *Melissa turcica*. The whole herb is aromatic, tonic, and antispasmodic.

**D. Roylea'num**, Wallich. Hab. India. Seeds used to make mucilaginous drinks.

**Drac'ol.** A synonym of *Anisol*.

**Draconic acid.** A synonym of *Anisic acid*.

**Dra'conin.** (*Δράκων*, a dragon.) Name given to a red substance said to be alkaline, found in the *Sanguis draconis*, or dragon's blood.

**Draconis sang'uis.** (*L. draco*, a dragon; *sanguis*, blood.) See *Dragon's blood*.

**Dracont'hæ'ma.** (*Δράκων*; *αἷμα*, blood.) A name for dragon's blood.

**Dracont'iasis.** (*Dracunculus.*) The morbid conditions produced by the *Dracunculus medinensis*.

**Dracontiso'ma.** (*Δράκων*; *σῶμα*, the body.) A genus of single celosomian monsters, thus named on account of their likeness to the lizards of the Genus *Iguana*, called dragons.

**Drac'ontium.** (*Δράκων*, a dragon; because its roots were supposed to resemble the tail of one.) A Genus of the Nat. Order *Acoraceæ*.

Also, U.S. Ph., the rhizome and roots of *Dracontium fetidum*.

Also, a name of the *Arum dracunculus*.

Also, a name of the *Dracunculus medinensis*.

**D. angustispa'thum.** (*L. angustus*, narrow; *spathe*.) The narrow-spated skunk cabbage. Properties the same as *D. fetidum*.

**D. foetidum**, Linn. (*L. fetidus*, stinking. *F. pothos fétide*; *G. stinkende Drachenwurz.*) The skunk cabbage, the rhizome and roots of which are used (U.S. Ph.) as an antispasmodic and expectorant; it exhales a very fetid odour. Locally it is an irritant; and in larger doses produces vertigo, nausea, and vomiting. Dose, 10 to 20 grains.

**D. pertu'sum**, Willd. (*L. pertusus*, perforated.) Hab. West Indies. The fresh leaves are used by the Indians to cover dropsical parts, where they produce vesications, and an oozing of serum.

**D. polyphy'lum**, Linn. (*Πολύς*, many; *φύλλον*, a leaf.) Purple-stalked dragon. Hab. South America, Hindostan. The root is regarded as an antispasmodic in India, and as a remedy in asthma; when boiled it is eaten as food. The fresh juice of the root is a vesicant.

**Dra'conyl.** A synonym of *Anisyl*.

Also,  $C_{12}H_{18}$ , a solid white hydrocarbon obtained from dragon's blood; identical with *Styrol*.

**Drac'onylic acid.** A synonym of *Anisic acid*.

**Dracuncula'ceæ.** (*Dracunculus.*) A Tribe of the Nat. Order *Araceæ*; having the stamens and pistils numerous, with interposed rudimentary organs, spadix naked at the end, and the cells of the authors larger than the connective.

**Dracunculus.** (*L. dim. of draco*, a dragon.) A Genus of the Family *Etilariæ*, Order *Nematoda*, Class *Nemathelmintha*.

Also, a Genus of the Nat. Order *Araceæ*.

Also, the *Artemisia dracunculus*.

Also, a term for *Comedones*.

Also, the same as *Dracontium*.

**D. esculen'tus.** (*L. esculentus*, edible.) The *Artemisia dracunculus*.

**D. hortens'is.** (*L. hortensis*, belonging to a garden.) The *Artemisia dracunculus*.

**D. lo'a**, Cobbold. The *Filaria loa*.

**D. medinen'sis**, Cobbold. (*Medina*, where it was common. *F. dragonneau, veine de Médine, ver de Guinée*; *G. Fadenwurm, Haarwurm, Medinawurm.*) The Guinea worm. A nematoid worm, the female only of which is known. It is common amongst the inhabitants of the borders of the Red Sea and Persian Gulf, in Upper Egypt and Abyssinia, and on the banks

# DRACYL—DRAKENA RADIX.

of the Ganges; also in some of the West Indian islands. It penetrates the skin and leads to the formation of a painful abscess. The female is two feet or more in length, and is about 1 mm. thick. It is quite cylindrical, and terminates posteriorly by a short recurved point. The anterior extremity is rounded, and presents a small depression surrounded by an elliptical chitinous plate, at the margin of which are two papillae at the bend of the lateral lines, and two other pairs of papillae are seen on each side of the lateral line. There is no mouth or anus; the intestinal canal is reduced to a flattened band. The female organs consist of an ovary and of a uterus filled with cylindrical embryos, which on their escape are said to inhabit the Cyclops or other minute Crustacean, where they complete their larval state. By most writers, with the exception of Cobbold, this worm is regarded as a *Filaria*.

**D. oculi**, Diesing. (*L. oculus*, the eye.) A synonym of *Filaria loa*.

**D. persarum**, Kämpfen. The same as *Filaria medinensis*, Gmelin.

**D. polyphyllus**. (Πολύς, many; φύλλον, a leaf.) The *Arum draecunculus*.

**D. pratensis**. (*L. pratensis*, growing in meadows.) The *Achillea ptarmica*, or sneezewort.

**D. vulgaris**, Schott. The *Arum draecunculus*, the roots of which were formerly official as *Radix draecunculi*, or *R. serpentariae majoris*.

**Dracyl**.  $C_2H_8$ . A dark-red oil obtained from dragon's blood; identical with *Toluol*.

**Dragacantha**. Same as *Tragacantha*.

**Dragant'in**. Same as *Adraganthin*.

**Drage**. (*F. dragée*, a sugar plum; from Gr. *τραγύματα*, dried fruits.) A sugar plum or sweetmeat in the centre of the substance of which is a drug; intended for the more pleasant administration of medicinal substances.

**Dragma**. (Δράγμα, as much as one can grasp; from *δράσσομαι*, to grasp.) A handful.

**Dragmis**. (Δραγμίσ, a small handful.) A pinch; the same as *Pagillus*.

**Dragomërfalva**. Hungary, Marmaros County. A water containing hydrogen sulphide and naphtha, with carbonate of lime, chloride of sodium, and a little iron.

**Dragon**. (*F. dragon*; from *L. draco*; from Gr. *δράκων*.) A fabulous animal in form of a long-tailed lizard with wings.

The word has been used in French to express hypochondriasis; and has also been applied to opacities of the cornea and to cataract.

**D.'s blood**. (*F. sang-dragon*; *G. Drachenblut*.) The resin obtained from the fruit of *Calamus draco*, Willd. It occurs commercially in irregular grains or masses or cakes and in sticks. It is dark red, brighter and glossier internally, breaks with an irregular resinous fracture, is tasteless, has a slight smell of benzoin when heated, and is soluble in alcohol and ether. When the pure resin is extracted its composition is  $C_{20}H_{30}O_2$ . It is a slight astringent, and is used in tooth powders.

Also, the concrete juice of the *Pterocarpus draco*.

Also, the resin obtained from *Croton draco*.

Also, the resin obtained from *Dracæna draco* is sometimes thus called.

**D.'s blood, Cana'ry**. The resin of *Dracæna draco*.

**D.'s blood, East-Indian**. The produce of *Dracæna draco*.

**D.'s blood, Soco'tra**. Supplied by *Dracæna ombet*.

**D.'s blood, West Indian**. The resin of *Pterocarpus draco*.

**D.'s claw, sca'ly**. The *Pterospora andromedea*.

**D., green**. The *Arum dracontium*.

**D.-root**. A name for the *Arum triphyllum*, and also for the *Pterospora andromedea*.

**D. tree**. (*F. dragonar*; *G. Drachenbaum*.) The *Dracæna draco*.

**D. turnip**. The *Arum triphyllum*.

**D.'s wort**. The *Arum draecunculus*.

**Draho'wa**. Hungary, Neutra County. An iron water containing carbonic acid.

**Drahtschmiedlibad**. Switzerland, at the junction of the Sihl and the Limmat. A saline chalybeate water.

**Drain**. (*Sax. dröhnigean*, to strain. *G. Drainirung*.) A channel by which a fluid is carried off. To empty of liquid by a channel.

**D. gas**. See *Sewer gas*.

**Drainage**. (*Drain*.) The gradual flowing of a liquid from some thing, or substance, or structure. The arrangements by which the slops, cleansings, and excreta of a house are removed.

**D. anchor**. (*F. ancre*; from *L. ancora*; from Gr. *ἀγκυρα*, an anchor.) Davy's name for an india-rubber filament with laterally projecting arms, which is introduced within a cannula into the cavity of an abscess; it serves for drainage, and is kept in position by the expansion of the arms on the removal of the cannula which compressed them.

**D., capillary**. (*L. capillus*, a hair.) The gradual removal of an effused fluid, as that of hydrothorax, by the introduction of a small cannula, as that of *Southey's trochar*.

**D., surgical**. The use of a *D. tube*, or of strands of horse-hair, silk, or other material, rendered aseptic by carbolic acid or other disinfectant, in a wound or suppurating cavity for the purpose of removing the fluids therein contained.

**D. tent**. See *Tent, drainage*.

**D. tube**. A small single or double india rubber or coiled wire or other tube, with lateral perforations. When used, the tube may be passed through a cannula into the abscess or cavity to be drained, leaving one end hanging out, the cannula then being withdrawn; or the tube, attached to a probe, is drawn through the abscess by a counter-opening, and the ends tied. Employed in empyema, large wounds, and abscesses to promote the escape of pus and the contraction of the walls of the cavity. Drainage tubes have also been made of other structures as, for instance, of the decalcified long bone of the bird.

**D. tube, decalcified**. (*L. de, from; calx, lime*.) A chicken, or other long thin, bone which has had its calcareous matter removed by soaking for a few days in dilute hydrochloric acid and is rendered aseptic by carbolic acid. Used for the drainage of abscesses or wounds.

**Draitschbrunnen**. Germany; near to Godesberg on the Rhine. A mineral water, containing magnesium and sodium carbonate, with free carbonic acid.

**Drake**. Same as *Dravick*.

**Drake**. (A contraction of *ened-rake* or *end-rake*, a masc. form from *Sax. ened*, a duck, with the suffix *rake*, denoting the male sex.) The male of the duck species.

**Drake'na radix**. (In honour of Sir Francis Drake, who first brought it from Peru,

**L. radix**, a root.) A name for the *Dorstenia contrajerva*.

**Dram.** Same as *Drachm*.

**Drank.** (According to Prior, a misspelling of *Drank* or *Dravick*.) The *Bromus sterilis*, and also the *Avena fatua*.

**Drastic.** (Δραστικός, active; from δράω, to do. F. *drastique*; I. *drastico*; G. *drastisch*, *kräftig wirkend*.) A medicine which is prompt, powerful, and effective in operation; usually applied to a purgative, but also to an emetic and to remedies having other actions.

**Drastics.** (Δραστικά.) A term now usually applied to irritant and powerful purgatives, such as scammony and gamboge.

**Draught.** (Sax. *dragan*, to draw.) A potion, or what a person drinks at once.

In Pharmacy (F. *potion*; G. *Tränkehen*), a single dose of a liquid medicine put up in a bottle.

Also, a term used to express the sensation caused in the breast of a nursing woman when the capillaries become dilated at the sight or thought of her child, and the secretion of milk becomes more active.

**D., black.** The *Mistura sennæ composita*.

**Drauk.** Same as *Dravick*.

**Dravick.** (Dut. *dravig*, darnel, weeds in general.) The *Bromus sterilis*, and also the *Avena fatua*. (Prior.)

**Draw.** (A variant of E. *drag*, from Sax. *dragan*.) To pull along after one.

Applied in popular language to the action of a blister; and also to that of a poultice in promoting the maturation and pointing of an abscess.

**D.-tube.** The sliding tube of the body of a microscope which, on being pulled out, lengthens the body, increases the distance between the eye-piece and the object-glass, and thus increases the magnifying power.

**Drawing.** The act of pulling. See *Draw*.

**Drax.** (Δράξ.) Same as *Dragma*.

**Dream.** (Sax. *dræm*, a sweet sound. F. *rice*; L. *somnium*; I. *sogno*; S. *sueño*; G. *Traum*; Gr. *ὄναρ*.) A train of thought, usually more or less disconnected and incongruous, excited by external or internal stimuli in the brain, when this organ is in a state of partial inactivity.

**D., wa'king.** An hallucination or illusion.

**D., wet.** A term applied to the involuntary emission of semen during sleep.

**Dregs.** (Scand., as Ice. *drugg*. F. *lic*; G. *Satz*.) The sediment of waste stuff in a liquid; waste substance; refuse.

Also, applied to the sequelæ of a disease.

**Drench.** (Sax. *drecean*.) To make to drink; to administer a liquid, especially a purge, by force.

**Drepanium.** (Δρέπανον, a scythe. G. *Sichel*.) Eichler's term for a sickle-shaped cyme; one in which the lateral axes are all in the median plane and spring from the upper side of the curved axis.

**Drepanoid.** (Δρέπανον, a scythe or curved sword, εἶδος, likeness.) Scythe- or sickle-shaped.

**Dress.** (Old F. *dresser*, to arrange; from the supposed Low L. *drietio*, to make straight; from L. *directus*, straight.) To put in order; to put on clothes.

In Surgery, to put plasters or other application on to wounds or ulcers.

**Dress'er.** (*Dress*.) An assistant in a hospital whose duty it is to dress wounds.

**Dress'ing.** (*Dress*.) An application of lint, plaster, or other substance, to a wound or ulcer.

Also, the act of putting on an application.

**D., absorbent.** (L. *absorbo*, to suck up.) Applications, such as chalk or fuller's earth, applied to a suppurating or discharging surface, in order to dry it up.

**D., alcoholic.** Wine was employed as a dressing to wounds by Hippocrates, and in later times by Paracelsus the Less. It is regarded as a coagulant and astringent, and is said to favour primary adhesion. It also stimulates granulations, and acts as a disinfectant.

**D., antiseptic.** See *Wounds*, *antiseptic treatment of*.

**D., dry.** Dressing composed of some absorbent material, such as cotton and lint, which is often impregnated with some antiseptic substance, as boracic or salicylic acid or iodoform. It is usually applied where quick healing is anticipated, but not in lacerated, contused, or punctured wounds.

**D., earth.** The earth, originally employed by Dr. Addinell Hewson, who first wrote on the subject in 1872, was dried, yellow, ferruginous clay, which had been finely sifted. It is applied directly, and is said to exclude air, absorb discharges and gases; it acts as a deodorizer, prevents putrefaction, and arrests or retards inflammatory action. It should be removed daily if there be much discharge.

**D., evaporating.** (L. *evaporo*, to disperse in vapour.) An application to a wound or inflamed surface of some easily volatilisable substance, as dilute alcohol or dilute vinegar.

**D., fixed.** Term applied to dressings which are retained in position by being soaked or coated with plaster of Paris, starch, potassium silicate, chalk and gum, glue, oxide of zinc and glue, or paraffin.

**D., permanent.** (L. *permaneo*, to stay to the end.) Same as *D., fixed*.

**D., Scott's.** See *Scott's dressing*.

**D.s., surgical.** Term applied to various materials adapted to protect wounds, absorb discharges, serve as vehicles for applying remedial agents to wounds or diseased structures, and aid in retaining injured parts in position. The substances usually employed for these purposes include lint, charpie, tow, oakum, cotton, paper lint, and earth.

**D., water.** The application of lint or other material kept moistened with water.

**Dreykirchen.** Austria; in the Tyrol. An alkaline saline water.

**Drias.** The name in Cyrene of the *Thapsia silphium*.

**Dri'burg.** Germany; in Westphalia, in a pretty hill-enclosed valley, 700' above sea level. A chalybeate water, containing also a little manganese, with bicarbonate of lime, sodium and magnesium sulphate, and a trace of arsenious acid. Peat baths are employed.

**Dried.** (*Dry*.) Having lost its moisture.

**D. alum.** Same as *Alumen exsiccatum*.

**D. iron sulphate.** See *Ferri sulphas exsiccata*.

**D. sodium carbonate.** See *Sodii carbonas exsiccata*.

**Driff.** A name by Van Helmont for a stone which was supposed to be an antidote to disease by virtue of some occult influence.

**Drill.** (Du. *drillen*, to bore.) To pierce

## DRILLING, OPERATION OF--DROP.

through; to bore by turning round and round, and hence to train soldiers.

An instrument by the rotation of which a hole may be bored, as in Dentistry, to prepare a cavity in a tooth for stopping. Drills are of various shapes.

**D. bone.** A triangular bony deposit found in the left deltoid muscle of some soldiers; it is produced by pressure of the rifle.

**D., cut ting.** A dentist's drill with teeth cut at the extremity and also for some distance along the shaft.

**D. holder.** A stem for the dentist's drill; it may be made with a crutch-like extremity, with circular motion, to rest in the angle between the thumb and finger, while the centre of the stem is grasped by the tips of these digits, and rotation effected while pressure is made on the crutch.

**D., rose-head.** A dentist's drill with a rounded file-like extremity; various sizes are used.

**Drilling, operation of.** A method of treating cataract suggested by Tyrrell. It consists in passing a fine straight needle through the cornea at the outer part, and penetrating the anterior capsule of the lens close to the inner margin of the pupil, taking care not to injure the iris. The needle is made to enter the lens to a depth of 1-16th inch, then rotated between the forefinger and thumb, and finally withdrawn. The operation is repeated every three, four, or five weeks, till the whole lens is absorbed, the capsule being punctured in a fresh place at each operation.

**Drimia.** (*Δριμός*, sharp.) A Genus of the Nat. Order *Liliaceæ*.

**D. ciliaris**, Jacq. (*L. cilium*, an eyelash.) Hab. South Africa. Called there Jeukbôl. The juice of the bulb is very irritant, and is used as an emetic, diuretic, and expectorant.

**Drimyphagy.** (*Δριμοφάγία*, from *δριμός*, sharp; *φάγειν*, to eat.) A diet of stimulating foods.

**Drimyrrhizæ.** (*Δριμός*, sharp; *ρίζα*, a root.) A synonym of *Amomeæ*.

**Drimys**, Forster. (*Δριμός*, sharp.) A Genus of the Nat. Order *Magnoliaceæ*, characterised by its pluriovulated carpels.

**D. aromatica.** (*L. aromaticus*, fragrant.) The *D. Winteri*.

**D. axilla'ris**, Forster. (*L. axilla*, the under part of the arm.) A tree of New Zealand. Properties similar to those of *D. Winteri*.

**D. chilensis**, De Cand. (*Chili*.) A variety of *D. Winteri*.

**D. granaten'sis**, Linn. A variety of *D. Winteri*.

**D. lanceola'ta.** (*L. lanceolatus*, armed with a point.) A tree of Australia. The fruit is employed as a substitute for pepper.

**D. mexicana**, De Cand. (*Mexico*.) A variety of *D. Winteri*.

**D. Winteri**, Forster. (*G. Gewürzrindenbaum*.) The Winter's bark tree. See *Wintera*.

**Drink.** (*Sax. drincan*, *Gr. πρῶσις*; *L. potus*; *F. boisson*; *I. bevanita*; *S. bebidā*; *G. Getränk*.) A liquid to be swallowed.

**D., di'et.** See *Diet drink*.

**D., imper'ial.** See *Imperial drink*.

**Drinking.** Participle of the verb to Drink.

**D. wa'ter.** See *Water, drinking*.

**Dr'pax**, Noronh. A Genus of the Nat. Order *Violaceæ*, having emetic properties.

**Drivelling.** (*Mid. E. drincelen*, for *drincelen*, for *drincelen*, from *Ir. drab*, a spot.) An involuntary flow of the saliva, as in old age, infancy, and idiocy; slavering.

**Drize.** Switzerland; near Geneva. A chalybeate spring.

**Droho'bycz.** Austria; in Galicia, at the foot of the Carpathian Mountains. A strong salt water used for bathing. There is also a chalybeate water containing carbonic acid.

**Droit'wich.** Worcestershire. Concentrated baths of common salt in water; containing about 23 per cent. They are used in chronic rheumatism and gout and in scrofula and chlorosis.

**Dro'ma.** Old name for a certain plaster.

**Dromæog'nathæ.** The same as *Dromæognathidæ*.

**Dromæognathidæ.** (*Δρομαῖος*, swift; *γνάθος*, a jaw.) Term applied to carinate birds, somewhat grouse-like in habit, with fairly well-formed wings and broad coalescing vomers, which in front join the broad maxillo-palatines and behind receive the hinder end of the palatines and the anterior ends of the pterygoids. The head of the quadrate bone is single. So called because they have a vomer like that of the ostrich. Ex. the Tinamidae or Tinamous.

**Dromæognathous.** Presenting the characters of the *Dromæognathidæ*.

**Drom'edary.** (*Old F. dromedaire*, from *Low L. dromedarius*, from *L. dromas*, from *Gr. δρομαῖος*, running. *F. dromedaire*; *I. dromedario*; *G. Dromedar*, *Trampeltier*.) The *Camelus dromedarius*; used as the Camel.

**Drom'ograph.** (*Δρόμος*, a course; *γράφω*, to write.) An instrument, by Chauveau, for measuring the velocity of the blood current. It consists essentially of a needle, the broad end of which is passed through the coats of the vessel, and is influenced by the current of blood. The extent of movement of the opposite end of the needle is read off from a graduated arc, and furnishes the data for determining the velocity of the current of fluid within the vessel.

**Dromographic.** (*Δρόμος*; *γράφω*.) Relating to the *Dromograph*.

**D. curve.** (*G. Geschwindigkeitscurve*.) The tracing obtained by the dromographic indicator. It shows a primary elevation which corresponds to the systole of the heart and a secondary elevation.

**Drooping.** (*Mid. E. drupen*, from *Ice. drupa*, to droop.) Bending downwards, as if feeble.

**Drop.** (*Sax. dropa*. *L. gutta*; *F. goutte*; *I. goccia*; *S. gota*; *G. Tropfen*.) The smallest quantity of a liquid, which detaches itself in spherical form from the edge of its containing receptacle. The size of a drop of different liquids varies much. According to Durand, 150 drops of ether, 138 of rectified spirit, 90 of sulphuric acid, 54 of hydrochloric acid, and 45 of distilled water each measure a fluid drachm.

**D., a'gue, ta'steless.** The *Liquor arsenicalis*, from its use and property.

**D.s., antivenere'al.** (*Avrtl.* against; *venereal* disease.) An old Dutch medicine containing perchlorides of iron and mercury.

**D., black.** See *Black drop*.

**D. bot'tle.** An apparatus used in chemical operations, consisting of a bottle half filled with

## DROPACISM—DROPSY.

water and closed with a cork, through which is passed a fine glass tube; when inverted and warmed by the hand the air expands and forces out the water by drops.

**D.s. Dutch.** The *Balsam, sulphur, terebinthinated*.

**D.s. nit.** The *Tinctura fuliginis*.

**D.s. Jes'uits'.** The *Tinctura benzoini composita*.

**D. sere'ne.** See *Gutta serena*.

**D.s. soot.** The *Tinctura fuliginis*.

**D.s. Warburg's.** See *Warburg's tincture*.

**D.-wort.** See *Dropwort*.

**Dropacism.** (*Δροπακτισμός*; from *δροπακίζω*, to draw out hairs by pitch plasters.) Old term for the application of the *Dropax*.

**Dropax.** (*Δρόπαξ*, a pitch plaster; from *δρῖπω*, to pluck.) Old term for a form of rubefacient medicine, sometimes soft like a poultice, sometimes more dry and firm like a plaster, sometimes composed of pitch and oil, and sometimes containing various stimulants or irritants. It was applied to the skin and then forcibly pulled off again, this procedure being frequently repeated; it was used to produce redness and attraction of fluids to the skin; and also, when stiff, to pull out the hairs from the part to which it was applied.

**D. compos'itus.** (*L. compositus*, compound.) A dropax composed of various irritants in addition to the pitch and oil, such as pepper, pyrethrum, or bitumen, to produce redness of skin; sulphur, salt, or wood ashes to produce desiccation; and euphorbium to produce a blister.

**D. sim'plex.** (*L. simplex*, simple.) A dropax consisting of pitch and oil alone.

**Dropped.** (*Drop.*) Fallen down.

**D. hand.** A nervous disorder consequent on paralysis of the extensors of the forearm. It is a common result of chronic lead poisoning, and generally comes on consecutively to colic. The paralysed muscles atrophy, and, while retaining their electro-insensibility, lose more or less completely their electro-contraction. Cutaneous sensibility is not impaired. The order in which the muscles are liable to be attacked, according to Duchenne, is extensor communis digitorum, ext. indicis, ext. minimi digiti, ext. secundi internodii pollicis, ext. carpi radialis brevis, ext. carpi radialis longior, ext. carpi ulnaris, ext. ossis metacarpi pollicis, and ext. primi internodii pollicis.

**D. lid.** Same as *Ptosis*.

**Drop'ping.** Separating, or causing to separate, in a *Drop*.

**D. bot'tle.** A bottle having a perforated stopper, the lower end of which is a fine tube reaching nearly to the bottom of the bottle, and the upper end of which is funnel-shaped; over this end a piece of thin vulcanised india-rubber is tied. By pressure on this the tube may be filled or emptied drop by drop.

Also, the same as *Drop bottle*.

**D.-tube.** The tubulated stopper of the *D.-bottle*.

**Drops.** (Plural of *Drop*. *F. gouttes*; *G. Tropfen*.) A term employed in Pharmacy for liquid medicines which are ordered to be taken in drops or minims.

**D.s. Dutch.** See *Dutch drops*.

**D.s. Haar'lem.** Same as *Dutch drops*.

**D.s. Jes'uits'.** See *Jesuits' drops*.

**Drop'sical.** Having, or relating to, the *Dropsy*.

**D. effu'sion.** (*L. effusus*, part. of *effundo*, to pour out.) The accumulation or the pouring out of the fluid which constitutes dropsy.

Also, the effused fluid itself.

**D. flu'id.** (*L. fluidus*, fluid.) The watery fluid which constitutes dropsy. It is a derivative from the serum of the blood, and is, at least at first, the accumulated fluid which in very minute quantity is normally contained in serous cavities and in the meshes of areolar tissue. It varies greatly according to its cause and to its locality. It is usually limpid and colourless, or of a pale straw colour, and commonly contains leucocytes and sometimes red blood-corpuscles. It is generally alkaline in reaction, but is sometimes slightly acid. It consists in large part of water, about 95 per cent., holding solids in solution. Albumin is always present and fibrinogen, though fibrin as such is only occasionally found; colouring matters of the blood and bile, urea, uric acid, and lactic acid occur; xanthin, creatin, and creatinin are occasionally present; biliary salts and bilirubin are found when there is causative liver disease; the fats are increased, especially cholesterolin, in old dropsies; sodium chloride and the other salts of the blood serum are found abundant in proportion to the newness of the exudation; carbonic acid gas, oxygen, and nitrogen are present in small quantity. The proportionate composition varies in the different forms of dropsy.

**D. infil'tration.** (*F. infiltrer*, to creep in.) The charging of the tissues of a part with dropsical fluid; a term which includes *Edema* and *Anasarca*.

**Drop'sical.** Same as *Dropsical*.

**Drop'sy.** (Short for *hydropsy*; from Old *F. hydropsie*; from *L. hydropsis*; from late *Gr. ὑδρωπῖσις*, from *Gr. ὑδρῶς*, dropsy; from *ὑδωρ*, water. *F. hydropsie*; *I. idropisia*; *S. hydropsia*; *G. Hydropsie*, *Wassersucht*.) A morbid condition characterised by the accumulation of watery fluid in one or more of the natural serous cavities of the body, or in the meshes of the connective tissue of the body or of an organ. It depends either upon some obstruction to the flow of blood through the veins, or to the flow of lymph through the lymphatic vessels or glands, whereby their absorbing power is diminished or arrested; or upon the presence of inflammatory or other analogous processes at the seat of the dropsy; or upon some morbid condition of the blood or of the blood-vessels, whereby the more fluid parts of the blood escape; or upon an excessive amount of the natural exudation into a serous cavity or into the areolar tissue of a part or organ. According to its cause it varies in position and extent, being local or general; and it varies in the character of the effusion, which may be watery or fibrinous.

**D., abdom'inal.** (*L. abdomen*, the belly.) The same as *Ascites*.

**D., ac'tive.** Dropsy depending on excessive exhalation of serous fluid into a cavity or tissue.

Also, a synonym of *D., inflamm'atory*.

**D., acu'te.** (*L. acutus*, sharp.) Same as *D., febrile*.

**D., amniot'ic.** See *Amnion, dropsy of*.

**D., anæ'mic.** (*Ἀν. neg.*; *αἷμα*, blood.) Dropsy, at first usually subcutaneous, resulting from an impoverished condition of the blood from deficiency of albumen, and a feeble heart

## DROPSY.

with relaxed vascular tissue; it is especially frequent in chlorosis. In those cases of anemia which are caused by kidney disease and cancer, and in which dropsical effusion occurs, it is at first confined to the subcutaneous areolar tissue, but subsequently extends to the serous cavities and to the lungs or brain.

**D., atmospheric.** (*Ἀτμός*, vapour; *σφαῖρα*, a sphere.) A term applied to some forms of acute dropsy, occurring in tropical climates, which are supposed to be caused either by a sudden arrest of perspiration by cold or by some morbid influence of the atmosphere.

**D., cachectic.** (*Καχεξία*, a bad habit of body.) Dropsy depending on a morbid or abnormal condition of the blood, either essential or depending on some other structural disease; and generally expressed in deficiency of the red corpuscles and albumin, with excess of leucocytes and water.

**D., cardiac.** (*Καρδία*, the heart.) Dropsy dependent on disease of the heart which obstructs the current of venous blood, such as one producing regurgitation through the tricuspid valve, itself induced by mitral disease or pulmonary mischief. Cardiac dropsy generally appears first as anasarca about the ankles, and is usually accompanied by a reddish or purplish colour of the face. Simple weakness of cardiac muscle will also produce it.

**D., cellular.** See *Hydrops cellularis*.

**D., cerebral.** (*L. cerebrum*, the brain.) An accumulation of fluid in the cavities of the brain, or in the arachnoid or subarachnoid cavity. See *Hydrocephalus*.

**D., chronic.** (*Χρονικός*, long-lasting.) Slowly progressing dropsy, such as the common forms of cardiac and renal dropsy.

**D., essential.** Same as *D., idiopathic*.

**D. ex vacuo.** See *Edema ex vacuo*.

**D., false.** Same as *D., spurious*.

**D., febrile.** Dropsy accompanied by a heightened temperature and a dry skin; usually a form of renal dropsy in which there is some congestion or inflammation of the kidney, as in scarlet fever.

**D., fibrinous.** (*Fibrin*.) Dropsy in which the effused fluid contains fibrin; it is generally the result of some inflammatory process in the part affected.

Also, Vogel's term for *D., inflammatory*.

**D., free.** A term for serous effusion into a cavity as distinguished from oedema.

**D., general.** The same as *Anasarca*.

The term is also applied to a dropsical condition of the subcutaneous cellular tissue or anasarca when accompanied by effusion into one or other of the serous cavities, and caused by some central morbid condition, as disease of the heart.

**D., hepatic.** (*Ἡπατικός*, of the liver.) Dropsy depending on liver disease.

**D., hydræmic.** (*Ἵδωρ*, water; *αἷμα*, blood.) Dropsy depending on a watery condition of the blood, from a diminution of the normal amount of albumin and fibrin, or from arrest of the watery part of a secretion.

**D., idiopathic.** (*Ἰδίος*, peculiar; *πάθος*, suffering.) The class of dropsies which occur without any known cause, such as kidney or heart disease, or obstruction.

**D., inflammatory.** (*Inflammation*.) The class of dropsies which result from inflammation of the part which is the seat of the effusion. Inflammatory dropsy may be acute or

chronic; it may be caused by inflammation of the serous sac which pours out the fluid, or of the organ which it encloses, as witness hydrothorax, hydropericardium, and hydrocephalus.)

**D., local.** (*L. localis*, belonging to a place.)

A collection of fluid in a limited portion of the body, as in one leg, arm, or eyelid; or in one serous cavity.

**D., lymphatic.** (*Lymph*.) Infiltration of a limb or of a part with lymph or a lymph-like fluid from obstruction of one or more lymphatic vessels. The affected structure is tense and pale.

**D., malarial.** (*Malaria*.) The dropsical effusion occurring in cases of malarial cachexia; it has various causes, the anemia which is generally present, chronic nephritis, and atrophy of the liver being among them.

**D., mechanical.** (*Mechanical*.) Dropsy arising from a mechanical impediment to the centripetal current of blood or lymph.

**D. of pregnancy.** Dropsical effusions in pregnant women are mostly oedema of the lower limbs from obstruction to the return of blood by the veins. Occasionally it is caused by acute parenchymatous nephritis.

**D. of the amnion.** See *Annion*, dropsy of.

**D. of the antrum.** Distension of the antrum of Highmore in the maxillary bone with a more or less viscid or a serous fluid.

**D. of the areolar tissue.** Same as *Edema*.

**D. of the areolar tissue, subcutaneous.** (*L. sub*, under; *cutis*, the skin.) A term for *Anasarca*.

**D. of the belly.** (*F. ascite*; *G. Bauchwassersucht*.) The disease *Ascites*.

**D. of the bile ducts.** A term applied to a condition which follows occlusion of the bile duct, in which the ducts behind the seat of arrest become dilated, sacculated, and filled with a colourless, mucoid, thin fluid, without any trace of bile.

**D. of the brain.** (*F. hydrocephale*, *hydro-ropisie de la tête*; *G. Wasserkopf*, *Wassersucht des Hauptes*.) The disease *Hydrocephalus*.

**D. of the capsule of Tenon.** (*F. Hydropsie de la bourse fibreuse de Tenon*; *G. Wasseraussammlung in der Tenonische Kapsel*.) Fluid collected in the connective tissue behind the insertion of the recti muscles into the globe of the eye.

**D. of the cellular membrane.** The disease *Anasarca*.

**D. of the chest.** (*F. hydrothorax*; *G. Brustwassersucht*.) The disease *Hydrothorax*.

**D. of the ear.** (*F. hydrotie*; *G. Ohrwassersucht*.) The disease *Hydrotitis*.

**D. of the eye.** Same as *Hydrophthalmia*.

**D. of the Fallopiian tube.** See *Fallopiian tube*, dropsy of.

**D. of the flesh.** (*F. anasarque*, *hydro-sarque*; *G. Anasarka*, *Hautwassersucht*.) The disease *Anasarca*.

**D. of the gall bladder.** See *Gall bladder*, dropsy of.

**D. of the head.** Same as *Hydrocephalus*.

**D. of the integuments.** The disease *Anasarca*.

**D. of the joints.** (*F. hydroropsie articulaire*; *G. Gelenkwassersucht*, *Gliedwassersucht*.) The disease termed *Hydrops articuli*.

**D. of the kidney.** See *Kidney*, cysts of.

**D. of the lachrymal sac.** Ancl's term for *Lachrymal hernia*.

Also, applied to *Lachrymal fistula*.

**D. of the la'rynx.** See *Larynx, edema of*.

**D. of the lower belly.** The disease *Ascites*.

**D. of the lung.** See *Lung, edema of*.

**D. of the optic sheath.** (G. *Hydrops der Opticuscheide*.) Effusion of fluid into the loose connective tissue surrounding the optic nerve and intervening between the neurilemma and the dense outer sheath of the nerve; the sheath is seldom congested. The fluid is clear, and is probably either derived from that filling the subarachnoid space, or is due to the retention of the normal lymph. It may or may not be associated with optic neuritis.

**D. of the ovary.** (F. *hydro-ovaire*; G. *Eistockwassersucht*.) See *Ovarian dropsy*.

**D. of the ovum.** See *Ovum, dropsy of*.

**D. of the pericardium.** See *Hydro-pericardium*.

**D. of the peritonæum.** Same as *Ascites*.

**D. of the pleu'ra.** Same as *Hydrothorax*.

**D. of the skin.** (F. *anasarque, hydro-sarque*; G. *Ansarke, Hautwassersucht*.) The disease *Anasarca*.

**D. of the spine.** (F. *hydrovachis*; G. *Rückgratswassersucht*.) The disease *Hydro-rachis*.

**D. of the testicle.** (F. *hydrocile*; G. *Wasserbruch*.) The disease *Hydrocele*.

**D. of the tunica vaginalis testis.** (L. *tunica, a coat; vaginalis, sheathing; testis, a testicle*.) A term for *Hydrocele*.

**D. of the tympanum.** (F. *hydroisie de tympan*; G. *Trommelwassersucht, Trommelwassersucht*.) The disease otherwise named *Hydromyringu*.

**D. of the uterus.** (F. *hydromètre*; G. *Gebärmutterwassersucht*.) The disease *Hydrometra*.

**D. of the vit'reous hu'mour.** An accumulation of fluid in the seat of the vitreous humour. The vitreous is usually fluid, the anterior chamber shallow, the globe enlarged, and its tension augmented. See *Hydrophthalmia*.

**D. of the womb.** Same as *Hydrometra*.

**D., omen'tal.** (*Omentum*.) Distension of the omental cavity with fluid.

**D., ova'rian.** See *Ovarian dropsy*.

**D., passive.** Dropsy depending on diminished absorption of the fluid of a serous cavity or areolar tissue, the result of over-distension of the veins or lymphatics.

Also, Breschet's term for *D., cachectic*.

**D., pericar'dial.** (Περὶ, around; καρδιά, the heart.) The same as *Hydropericardium*.

**D., plethoric.** (Πληθώρα, fulness.) Stoll's term for *D., inflammatory*.

**D., pleu'ral.** (Πλευρόν, a rib.) The same as *Hydrothorax*.

**D., pul'monary.** (L. *pulmo*, the lung.) The same as *D., pulmonic*.

**D., pulmonic.** (L. *pulmo*, the lung.) Dropsy resulting from obstruction of the flow of blood through the lungs.

**D., re'nal.** (L. *ren*, the kidney.) Dropsy resulting from disease of the kidneys. It is characterised by a waven, pallid, puffy face, and by the presence, in general, of albumen in the urine. It is by some thought to be due to increased tension in consequence of imperfect

elimination of water by the diseased kidneys; by others to great increase of blood pressure in the arteries from thickening of the structure of the extreme vessels.

**D., scarlati'nal.** See *Scarlatinal dropsy*.

**D., spi'nal.** See *Hydro-rachis*.

**D., spu'rious.** (L. *spurius*, false.) A term applied to collections of fluid like hydrophthalmia and hydrocele, which own a different origin to true dropsy.

**D., sthen'ic.** (Σθίvos, strength.) Brown's term for *D., inflammatory*.

**D., subchoroi'dal.** (L. *sub*, beneath; *choroid*, the membrane of that name.) A collection of fluid between the adherent sclerotic and choroid on the one side and the retina on the other. The pressure of the fluid is apt to cause absorption of the vitreous and co-reaction of the retina.

**D., subcleroti'c.** (L. *sub*, beneath; *sclerotic* the membrane of that name.) Fluid collected between the choroid coat of the eye and the sclerotic. It is usually seen in atrophied eyes.

**D., true.** The condition described under the chief heading.

**D., tu'bal.** See *Fallopian tube, dropsy of*.

**D., u'rinal.** (L. *urina*, urine.) A term for *Diabetes*.

**D., wind.** A term for *Emphysema*.

**Drop'wort.** The *Spiraea filipendula*, from its small tubers hanging by slender threads, according to Turner.

**D., hem'lock.** The *Enanthe crocata*.

**D., wa'ter.** The plants of the Genus *Enanthe*; especially the *E. fistulosa*, from its growth in wet places or from its use in stillici-dium.

**D., wa'ter, com'mon.** The *Enanthe fistulosa*.

**D., wa'ter, five-lea'ved.** The *Enanthe phellandrium*.

**D., wa'ter, pars'ley.** The *Enanthe pimpinelloides*, and also the *E. pseudanifolia*.

**D., wes'tern.** The *Gillenia trifoliata*.

**Drosa'tum.** Perhaps a corruption of *Rosatum*, or wine in which roses have been infused.

**Dros'era.** (Δροσερός, dewy.) A Genus of the Nat. Order *Droseraceæ*. The sun dew, so called because its leaves are set with glands like dew drops.

**D. commu'nis.** (L. *communis*, common.) Hab. Brazil. Said to be poisonous to sheep.

**D. longifo'lia,** Hayne. Used as *D. rotundifolia*.

**D. pel'ta'ta,** Smith. (*Peltate*.) Hab. India. Leaves, bruised and mixed with salt, used as a vesicant.

**D. rotundifo'lia,** Linn. (L. *rotundus*, round; *folium*, a leaf. F. *rossolis, rosée du soleil*; G. *Sonnenblau*.) The sun-dew; also called *Ros solis* and *Rorilla*. The juice contains malic acid, or a special acid according to Lagan, and a greenish-brown, acrid resin; the glands exude a neutral viscous substance. It is said to be so acrid as to ulcerate the skin and remove warts and corns, and to excite in sheep, who eat it, a fatal coughing and delirium. It has been used in chronic bronchitis, asthma, and hooping cough; and was formerly employed also in tuberculosis and dropsy.

**Drosera'ceæ.** (*Drosera*.) A Nat. Order of thalamifloral Exogens of the Berberal Alliance. Sundews. Flowers regular and symmetrical;

# DROSISTICON—DRUG.

placentæ parietal; stamens alternate with the petals, and twice as many.

**Drosisticon.** A variety of *Bosa* made from the fruit of *Solanum lycopersicum*.

**Drosium.** The *Drosera rotundifolia*.

**Drosobotanum.** (Δρόσος, dew; βότανον, a herb. *F. betaine commune*.) The *Betonia officinalis*, so called because it was said to be covered with an aromatic dew.

Also, a synonym of *Drosera rotundifolia*.

**Drosomeli.** (Δρόσος, dew; μέλι, honey.) A synonym of *Aeromeli*.

**Drosometer.** (Δρόσος, dew; μέτρον, a measure. *F. drosometre*; *G. Thaumesser*.) An instrument proposed for measuring the dew.

**Drowning.** (Sax. *drincian*, to drown; from *druncen*, part. of *drincen*, to drink. *F. action de noyer*; *G. Ertrinken*.) Death from immersion in water, or other liquid.

**D., death by.** The cause of death in drowning is essentially asphyxia by means of exclusion of air from, and admission of fluid into, the lungs; but in a considerable proportion of cases syncope from cardiac shock, congestion of the brain, and the depression produced by cold, promote the occurrence. It is probable that complete insensibility occurs in from one to two minutes, or in some cases earlier, after submersion, and that death occurs in from two to five

minutes. The presence of paleness of the surface, of cutis anserina, of substances grasped in, or excretions of, the hands, of water in the stomach, and of mucous froth in the air-passages and lungs and on the lips and nostrils, are the signs generally relied on as indicative of death by drowning.

**D., restoration from.** The chief modes of restoring the natural breathing are described under *Artificial respiration*.

**Drowsiness.** (Sax. *drisian*, to be sluggish.) Sleepiness; occurring as a morbid condition in some diseases.

**Drowsy.** (Sax. *drisian*.) Sleepy; heavy with sleep.

**Drug.** (*F. drogue*, perhaps from *Du. droog*, dry, *l. droga*; *S. droga*; *G. Arzneiwaare, Apothekerwaare*.) An original, simple, medicinal substance, organic or inorganic, either used in its natural condition or prepared by art or mixed with other substances to form a medicament or medicine. The term arose doubtless because the medical substances called drugs were mainly dry plants and roots. Generally, the word is used for all medicinal substances.

**D.s., antagonistic.** (Ἀνταγωνιστής, an adversary.) *Lauder Brunton* gives the following table of the names of the chief antagonistic drugs, with the lethal and antagonistic doses in grains per pound weight of animal.

		Lethal dose of i.	Lethal dose of ii.	Dose of i.	Antidotal dose of ii.	Remarks.
i	ii					
Aconitin	Atropin .	1/900	7	1/750	13/5	Within 15 minutes Not less than 5 hours before.

**D. disea'se.** Any morbid condition produced by a drug; especially a morbid condition resulting from the long continued and excessive use of a drug.

**D.-smo'king.** A mode of administration of a drug by soaking paper, of which the best is, according to Reginald Thompson, Swedish filter-paper, in a weak solution of nitre and a tincture

or solution of the drug, drying it, rolling it into the shape of a cigarette, lighting it and smoking it, with inhalation of the smoke into the lungs. Opium, stramonium and other drugs have been used in this way for the relief of asthma, pain from laryngeal ulceration, and other diseases.

**Druggist.** (Belg. *drooghist*. F. *droguiste*; G. *Droguist*.) A dealer in drugs.

**Drum.** (Probably an imitative word. F. *tambour*; G. *Trommel*.) A musical instrument in the form of a short cylinder, with each end covered with tightly stretched vellum or dry skin.

**D. mem'brane.** The *Membrana tympani*.

**D. mem'brane, artificial.** See *Membrana tympani, artificial*.

**D. of the ear.** The *Tympanum*.

**Drum'gorn.** Ireland; Co. Fermanagh. A sulphur water.

**Drum'mond light.** The light from a piece of quicklime or other substance raised to a white heat in the oxyhydrogen flame.

**Drum'sna.** Ireland; Co. Leitrim. A sulphur water.

**Drunk'ard.** (E. *drunk*, base of part, *drunken*; F. *ard*, an intensive suffix. F. *ivrogne*; I. *abbriacane*; S. *borrachon*; G. *Trunk-enbold*.) One who is habitually or frequently under the intoxicating influence of some alcoholic liquor.

**D. s. civil responsibility of.** In civil matters an amount or persistence of drunkenness which produces temporary loss or permanent enfeeblement of the mental powers is regarded as presumption of irresponsibility.

**D. s. criminal responsibility of.** Drunkenness is not admitted as a ground of irresponsibility for a crime, but is of importance in determining the question of intent.

**D. s. liver.** A term applied to cirrhosis of the liver in reference to its frequent cause.

**D. s. pan'creas.** A term applied by Friedrich to a general, chronic, interstitial pancreatitis, the result of chronic alcoholism; it is of the same nature as cirrhosis of the liver.

**Drunk'eness.** (E. *drunken*, part. of *drunk*. F. *ivresse*; G. *Trunkenheit*.) The state of being drunk or intoxicated with alcohol.

**Drunk'wort.** The tobacco plant, *Nicotiana tabacum*.

**Dru'pa.** See *Drupe*.

**Dru'pa'ceæ.** (*Drupe*.) A Suborder of the Nat. Order *Rosaceæ*, or a Nat. Order of the Alliance *Rosales*, having the ovary single, free, containing two ovules placed side by side, a filiform terminal style, regular polypetalous flowers, and drupaceous fruit; such are *Prunus*, *Amygdalus*, *Cerasus*.

**Dru'pa'ceous.** (L. *drupa*, a drupe. F. *drupacé*; G. *steinfruchtartig*.) Having, or bearing, or resembling, a drupe.

**Drupe.** (F. *drupe*; from L. *drupa*, an over-ripe olive; from Gr. *δρῦπνα*; from *δρῦπις*, ripened on the tree; or *δρῦπερις*, falling from the tree. F. *drupe*; G. *Steinfrucht*.) A stone-fruit; being a superior, one-celled, one- or two-seeded, indehiscent fruit, proceeding from a single carpel, and becoming differentiated during growth into a delicate membranous epicarp, a fleshy or pulpy sarcocarp, and a hard, strong, or crustaceous endocarp enclosing the seed; such are the plum and olive.

The term is also, but erroneously, applied to such fruits as the walnut; but these are formed from more than one carpel.

**Dru'pel.** (Dim. of *drupe*.) A little drupe.

**Dru'pelet.** (Dim. of *drupe*.) A little drupe; such are the individual fruitlets which go to form the blackberry.

**Dru'peola.** (L. dim. of *drupe*. F. *drupeole*; G. *Steinfruchtchen*.) Name for a drupe smaller than a pea. Same as *Drupelet*.

**Dru'peolate.** (F. *drupeolé*.) Like a *Drupeola*.

**Drupe'tum.** (*Drupe*.) Dumortier's term for a collection or aggregation of drupelets, as the blackberry.

**Drupif'erous.** (L. *drupa*; *fero*, to bear. F. *drupifère*; G. *steinfruchttragend*.) Bearing drupes.

**Druskiemni'ki.** Poland; near Grodno. A strong salt bath.

**Dry.** (Sax. *dryge*. Gr. *Ξρὸς*; L. *siccus*; F. *sec*; I. *sicco*; G. *trocken*.) Without moisture.

**D. asth'ma.** See *Asthma, dry*.

**D. bell'yache.** (F. *colique de plomb*; G. *Bleikolik*.) The vulgar term for the disease *Colica pictonum*.

**D. catarrh'.** See *Catarrh, dry*.

**D. colic.** See *Colic, dry*.

**D. cup'ping.** See *Cupping, dry*.

**D. di'et.** See *Diet, sicc*.

**D. distilla'tion.** See *Distillation, dry*.

**D. fruits.** See *Fruits, dry*.

**D. gan'grene.** See *Gangrene, dry*.

**D. la'bour.** A labour in which little or no liquor amnii escapes during its course.

**D. nurse.** A nurse who takes care of, but does not suckle, a child.

**D. pile.** See *Pile, dry*.

**D. pleur'isy.** See *Pleurisy, dry*.

**D. rhon'chus.** See *Rhynchus, dry*.

**D. rot.** A destructive process occurring in wood, whether dead or alive, and caused by the growth within it of the mycelium of some fungus varying according to the character and nature of the wood; *Merulius lacrymans* is the most common form in England, *M. destructor* in Germany, and *Polyporus hybrida* in oak-built ships. Prior suggests that dry-rot is a corruption of tree-rot.

**D. scall.** See *Scall, dry*.

**D. synov'itis.** See *Synovitis, dry*.

**D. wine.** See *Wine, dry*.

**Drya'deæ.** Same as *Potentillæ*.

**Dryad'idæ.** (L. *Dryas*.) A Subfamily of snakes, Family *Colubridæ*. Long, not much compressed; tail long, not distinct from trunk; head distinct from neck, loreal often absent; eye large, pupil round; posterior frontals truncated behind.

**Dryan'dra.** (*Dryander*, a Swedish botanist.) A Genus of the Nat. Order *Euphorbiaceæ*.

**D. cordata**, Thunb. The same as *Aleuritis cordata*, Mull.

**D. vernic'ia**, Correa. The *Elaeococca verrucosa*.

**Dry'as.** (*Δρὺς*, an oak.) A Genus of the Nat. Order *Rosaceæ*, so called from the oak-like character of its foliage.

**D. octopet'ala**, Linn. (*Ὀκτώ*, eight; *πέταλον*, a leaf.) Leaves employed as tea; it is said to be an astringent and tonic.

**Dry'ina.** (*Δρὺς*, an oak.) Same as *Quercin*.

**Drying.** (*Dry*.) The act of losing or removing moisture. Same as *Desiccation*.

**Drymirrhiz'ææ.** See *Drymyrrhizææ*.

**Drynaria.** A Genus of the Nat. Order *Polypodiaceæ*.

**D. quercifolia.** The *Polypodium quercifolium*.

**Dryness.** (*Dry*.) The condition of having no moisture. Used to denote a special characteristic of a respiratory sound as distinguished from a moist sound.

**D. of eye.** See *Xerosis*.

**Dryobalanops.** (*Δρὺς*, the oak, any timber tree; *βάλανος*, an acorn. *G. Flügeliche*.) A Genus of the Nat. Order *Dipteraceæ*.

**D. aromatica.** Gärt. Fil. (*L. aromaticus*, fragrant.) Same as *D. camphora*.

**D. camphor.** The produce of the *D. camphora*. The camphor is found in longitudinal fissures in the wood; it is of fine quality. Also called *Borneol*.

**D. camphora.** Colebr. (*F. le camphrier de sumatra, le camphrier de Borneo*.) Hab. Sumatra, Borneo, and Lebanon. A tree growing to the height of 150 feet without a branch, then forming a crown with aromatic white flowers. From its stem a liquid oil of camphor, and a crystalline solid camphor, are obtained. See *Camphor*, oil of, and *Borneol*.

**Dryobalanopseæ.** Baillon. A Sub-order of the Nat. Order *Dipteraceæ*. The receptacle slightly concave; stamens indefinite; ovary free, plurilocular, each loculus containing two ovules.

**Dryophidæ.** (*Δρὺς*, an oak; *ὄφης*, a snake.) A Family of *Opisthoglypha*. Tree snakes. Usually green; very long and slender; head long; snout moveable; eyes small.

**Dryophilous.** (*Δρὺς*, an oak; *φιλέω*, to love. *F. dryophile*.) Living in forests.

**Dryopteris.** The *Polypodium dryopteris*.

**Drypa.** Same as *Drupa*.

**Drypsela.** (*Δρύψελα*.) Scrapings.

**Drysdale's cells.** Granular cells said to be found in the fluid of ovarian dropsy; they are said to differ from pus cells in that acetic acid does not remove the granular appearance. They are not generally admitted.

**Drysomeli.** (*Δρὺς*, an oak; *μέλι*, honey.) The *Fraxinus ornatus*.

**Dsudam.** A name for *Elephantiasis arabum*.

**Dthokë.** A term given by the natives of the Fiji Islands to a disease resembling yaws.

**Du'alin.** Nitroglycerin mixed with nitrated sawdust.

**Dualism.** (*L. dualis*, that which contains two. *F. dualisme*.) A system in which is explained all the phenomena of nature by means of two principles which are the origin and cause of all.

In Chemistry, a synonym of the *Binary theory*.

**D., chan'crous.** A term applied in Pathology to the doctrine that there are two forms of chancre, infecting and non-infecting, or hard and soft.

**Dualist.** (*L. dualis*.) A term especially applied to those who believe in the doctrine of chancreous dualism.

**Dualis'tic.** (*L. dualis*.) Relating to two.

**D. the'ory.** Same as *Dualism*, *chancreous*.

Also, the same as *Binary theory*.

**Duality.** (*F. dualitas*, the condition of two. *G. Zweiheit*.) The quality of being double.

Also, applied to *Dualism*, *chancreous*.

**D. of brain.** See *D. of mind*.

**D. of mind.** Applied to a theory that the two hemispheres of the brain are distinct organs, capable of acting independently of each other, and hence called the duality of the mind, as if

each individual really possessed two distinct minds.

**Dubogrâdsk.** Russia. In this government are four saline springs, two of them containing chiefly magnesium sulphate and two sodium sulphate.

**Dubois, Antoine.** A French surgeon born 1756; died 1837.

**D.'s operation for calculus in female.** This consisted in dilatation with partial slitting up of the urethra, the incision being made vertically upwards.

**D.'s powder.** The *Pulvis escharoticus debilis*, Fr. Codex.

**Duboisia.** (After Dubois.) A Genus of the Nat. Order *Solanaceæ*.

Also, a term for the leaves of the *D. myoporoides*.

Also, a synonym of the alkaloid *Duboisin*.

**D. Hopwoodii.** Müller. Hab. New South Wales. Supplies *Pturi*.

**D. myoporoides.** R. Br. A pretty tree, from 12—15 feet high. Hab. Australia, New Caledonia. Supplies *Duboisin*.

**Duboisin.**  $C_{17}H_{23}NO_3$ . An alkaloid obtained from *Duboisia myoporoides*. It is an active poison; it first increases, then lessens arterial blood pressure, it quickens the pulse, dilates the pupil, dries the mouth by stopping the salivary secretion, stops perspiration, produces a scarlatinoid eruption, headache, drowsiness, and tetanus. Its action is very like that of atropin, but it is more powerful, or, according to some, like that of hyoscyamin, with which it is said to be identical. It produces dilatation of the pupil when dropped into the eye in eight minutes, which lasts four days, and serious poisonous symptoms have resulted from its absorption; it has been used hypodermically to restrain the perspirations of phthisis.

**Duboisinum.** Same as *Duboisin*.

**D. bromatum.** Bromide of duboisin. Used as the alkaloid.

**D. sulphuricum.** Sulphate of duboisin. Used as the alkaloid.

**Dubova Sauerbrunn.** Hungary; County Arva-Turocz. A carbonated alkaline water.

**Dubrave.** Hungary; County Zips. A carbonated alkaline water.

**Ducha.** A Hottentot name for Indian hemp.

**Duchen'ne.** A French physician of the present century.

**D.'s disea'se.** A synonym of *Paralysis, pseudohypertrophic*.

**D.'s paralysis.** Same as *D.'s disease*.

**D.'s sign.** The sinking in of the epigastrium during inspiration, which sometimes occurs when there is considerable effusion into the pericardium, or in other cases where there is impeded or arrested movement of the diaphragm from pressure or paralysis.

**Duck.** (*Mid. E. duke*, a diver; from *duken*, to dive. *Gr. νῆσσα*; *L. anas*; *F. canard*; *I. anitra*; *S. anade*; *G. Ente*.) The birds of the Linnaean Genus *Anas*.

**D.-bill'd.** Having the shape of a duck's bill.

**D.-bill'd speculum.** See *Speculum, duck-bill'd*.

**D. foot.** Same as *Flat foot*.

**D.'s foot.** The *Podophyllum montanum*.

**D.-leg'ged.** Having unnaturally short legs.

**D.'s meat.** The *Lemna minor*, because ducks like it.

**D.-weed.** See *Duckweed*.

**Duck'weed.** The plants of the Genus *Lemna*, because ducks feed on them.

**D., greater.** The *Lemna polyrrhiza*.

**D., lesser.** The *Lemna minor*.

**Duct.** (L. *ductus*, part. of *duco*, to lead. F. *canal, conduit*; I. *duto, condotto*; S. *conducto*; G. *Rohre, Gang.*) A canal or tube for the transit of fluid.

In Anatomy, the word is applied in a generic sense to many structures, for which see sub-headings.

In Botany, applied to the individual vessels of the vascular tissue of plants.

**D., aberrant.** See *Aberrant duct of testis* and *A. ducts of liver*.

**D., access'ory pancreat'ic.** The *Ductus pancreaticus minor*.

**D., alimentary.** Same as *Alimentary canal*.

Also, a term for the *Ductus thoracicus*.

**D., Bartholin's.** See *Bartholin's duct*.

**D.s., Bellini's.** See *Bellini, ducts of*.

**D., bile, common.** The *Ductus chole-dochus communis*.

**D.s., biliary.** (L. *bilis*, the bile. G. *Gal-lengange*.) The channels which, commencing between the cells of the lobules of the liver, unite repeatedly till they form the right and left biliary ducts. They are believed to be formed by the close apposition of the biliary cells at first, and only subsequently on leaving the lobule to obtain an independent wall.

**D.s., Cu'vier's.** See *Ductus Cuvieri dexter*, *D. Cuvieri sinister*, and *Cuvieri's duct*.

**D., cyst'ic.** See *Ductus cysticus*.

**D., ejaculatory.** See *Ductus ejaculatorius communis*.

**D.s., galactoph'orous.** See *Galactophorous ducts*.

**D., Gärtner's.** A fine, slightly undulating canal running from the parovarium through the broad ligament, by the side of the uterus, to the vagina, where it is lost. It is larger in some of the lower animals, such as the Ruminants. It is the remains of the middle part of the Wolffian duct.

**D., gen'ital.** The same as *D., Müllerian*.

**D., gut'tural.** (L. *guttur*, the throat.) A synonym of the *Eustachian tube*.

**D., hep'ato-cyst'ic.** See *Ductus hepato-cysticus*.

**D., intercel'lular.** (L. *inter*, between; *cellula*, a cell.) The air-spaces of the parenchyma of plants.

**D., lachrymal.** (L. *lachryma*, a tear.) The *Nasal duct*.

**D.s., lactiferous.** See *Ductus lactiferi*.

**D., Ley dig's.** (*Leydig*, a German anatomist.) The same as *D., Müller's*.

**D., lymph.** The *Ductus lymphaticus dexter*.

**D., lymphatic.** (*Lymph.*) The *Ductus thoracicus*.

**D., lymphatic, left.** The *Ductus thoracicus*.

**D., lymphatic, right.** The *Ductus lymphaticus dexter*.

**D., mam'mary.** (*L. mamma*, the breast.) See *Galactophorous ducts*.

**D., Müller's.** The same as *D., Müllerian*.

**D., Müllerian.** (*Müller*.) This is composed of the anterior undivided extremity of the segmental duct, the pore of which opens into the abdominal cavity, and of the inferior or ventral division of the posterior part of the segmental duct, which opens on each side into the general cloaca.

In the female the Müllerian duct becomes the oviduct or Fallopian tube, which opens anteriorly by a fimbriated extremity and posteriorly opens into the uterus. In the male it atrophies in the normal condition; sometimes it is persistent, and then is called Rathke's duct.

**D., na'sal.** See *Nasal duct*.

**D., of coch'lea.** A term for the *Canalis cochlearis*.

**D. of Cowper's gland.** It proceeds from the union of smaller ducts in the gland, perforates the lower wall of the membranous portion of the urethra, and opens either into the fore part of the bulbous portion or into the cavernous portion of the urethra.

**D., om'phalo-mesenter'ic.** See *Ductus omphalo-mesentericus*.

**D., pancreat'ic.** See *Ductus pancreaticus*.

**D., parot'id.** See *Ductus parotideus*.

**D., Pec'quet's.** See *Pecquet's duct*.

**D., primitive.** (L. *primitivus*, the first of its kind.) The same as *D., segmental*.

**D., Rath kē's.** (*Rathke*, a German anatomist. G. *Rathkische Canal*.) A name applied to the Müllerian duct when it is persistent in the male.

**D., segment'al.** (L. *segmen*, what is cut off.) Term applied by Balfour to the duct of the pronephros or Wolffian body; it forms the basis for the generative and urinary ducts. It is developed at a very early period of embryonic life from a column of cells in the intermediate cell mass of mesoblast, on the outer side of the protovertebrae, and near the hind end of the heart. It soon acquires an opening into the abdominal cavity anteriorly, and becomes connected with the segmental tubes laterally. It then divides longitudinally at its lower part to form the Wolffian and Müllerian ducts, the former lying dorsally to the other.

**D.s., sem'inal.** See *Seminal ducts*.

**D., seminal, com'men.** See *Ductus seminalis communis*.

**D., spermat'ic.** (Σπερματικός, relating to seed.) The *Vas deferens*.

**D., Ste'n'o's.** See *Steno's duct*.

**D., Ste'n'son's.** See *Stenson's duct*.

**D., thorac'ic.** The *Ductus thoracicus*.

**D., vitell'ine.** See *Vitelline duct*.

**D., Whar'ton's.** See *Wharton's duct*.

**D., Wir'sung's.** See *Wirsiung's duct*.

**D., Wolf'ian.** (*Wolff*.) A tube resulting from the longitudinal division of the posterior part of the segmental duct. It is that part which remains attached to the segmental tubes.

**Ductile.** (F. *ductile*; from L. *ductilis*, easily lead. I. *duatile*; S. *ductil*; G. *dehnbar, zah.*) That which can be drawn out and lengthened.

**Ductility.** (F. *ductilité*; from L. *ductilis*, that may be drawn; from *duco*, to draw. I. *ductilita*; S. *ductilitad*; G. *Zähigkeit, Dehnbarkeit, Geschmeidigkeit, Streckbarkeit*.) The property by virtue of which bodies can be elongated by drawing with diminution of their diameter, but no separation of their parts. The order of tenacity of ductile metals is gold, silver, platinum, iron, copper, zinc, tin, and lead the least.

**Ductless.** Possessing no Duct.

**D.glands.** Term applied to several bodies which present the general character of glands, but possess no excretory ducts. They are the thymus and thyroid bodies, the spleen, adrenals, and the vascular, erotic, coecygeal, and pituitary bodies.

**Ductor.** (L. *ductor*, a leader. G. *Leiter*, *Führer*.) The same as *Director*.

**D. canaliculatus.** (L. *canaliculatus*, channelled.) A term for the *Gorget*.

**D. urinæ.** (L. *urina*, urine.) The *Ureter*.

**Ductus.** (L. *ductus*, a leading; from *duco*, to lead. F. *canal*, *conduit*; G. *Canal*, *Gang*, *Röhre*.) A canal or duct.

**D. ad na'sum.** (L. *ad*, to; *nasus*, nose.) The nasal duct which extends from the lower part of the lachrymal sac to the inferior meatus of the nose, where it opens by a slit-like opening.

**D. adiposi.** Same as *Sacculi adiposi*.

**D. aquosi.** (L. *aquosus*, watery. F. *vais-seaux lymphatiques*; G. *Wasserröhren*.) The watery ducts; a term for the lymphatic vessels.

**D. Arantii.** See *Arantii ductus*.

**D. arteriosus.** (L. *arteria*, an artery. F. *canal artériel*, G. *Botallischer Gang*.) The continuation in the embryo of the common pulmonary artery after it has given off the right and left pulmonary arteries to the lungs; it joins the arch of the aorta, opening into the latter just beyond the origin of the left subclavian artery. In the fetus, at the age of six months, each pulmonary artery has a diameter of 4 mm., whilst the ductus arteriosus has a diameter of 5.6 mm., and transmits therefore as much blood as the other two put together, and it is under a less pressure. The blood is impure, being chiefly blood from the superior vena cava which has passed through the head, and is on its way to the placenta to be purified. The lumen of the tube is generally closed about the eighth day; but according to some it frequently remains patent to a much later period. In the adult the duct is reduced to a short ligamentous cord; occasionally by a malformation it remains open. In mammals the common pulmonary artery, with its right and left branches, is developed as a branch in connection with the fifth branchial arch of the left side, which itself becomes the ductus arteriosus. In birds and reptiles the right and left pulmonary arches are developed respectively from the right and left branchial arches, and so there are two ductus arteriosi in the fetus of these animals; in the adult bird they become obliterated, but in some reptiles they remain patent during life.

**D. arteriosus Botalli.** (Botall.) The *D. arteriosus*.

**D. arteriosus, pa'tency of.** (L. *pateo*, to stand open.) The continuing open after birth of the canal of the ductus arteriosus; it causes cyanosis and an early death, though some have lived to fifteen years, and a few to forty years and upwards. It is probably denoted by hypertrophy of the right ventricle, and a prolonged diastole or a double murmur over the second left costal cartilage, which is not transmitted downwards.

**D. auris palatini.** (L. *auris*, the ear; *palatus*, the palate.) An epithet for the Eustachian tube.

**D. Bartholinianus.** (F. *conduite sublinguale*; G. *Bartholinischer Gang*.) See *Bartholin's duct*.

Also called *D. sublingualis minor*.

**D. Belliniani.** See *Bellini's ducts of*.

**D. biliaris.** See *Duct, biliary*.

**D. biliaris communis.** The *D. communis choledochus*.

**D. biliferi.** (L. *bilis*, the bile; *fero*, to carry.) The same as *D. biliaris*.

**D. Botalli.** (Botalli.) The *D. arteriosus*.  
**D. choledochus.** Same as *D. choledochus communis*.

**D. choledochus communis.** (Σοληδόχος, containing bile; L. *communis*, common. G. *gemeinschaftlicher Gallenauströhrgang*.) The tube which results from the junction of the hepatic duct with the cystic duct. It runs downwards to the left and backwards, at first lying between the layers of the gastrohepatic omentum, on the right side of the portal vein, and then behind the descending portion of the duodenum, in close contact with, or surrounded by, the lobules of the head of the pancreas, and for a short distance by the right side of the pancreatic duct. It then perforates the muscular coat of the duodenum and runs between it and the mucous coat, which it raises into a fold for a space of 14 mm.; it then becomes narrow, and opens on the mucous surface of the intestine in common with the pancreatic duct about 3.5" below the pylorus. Sometimes it opens separately from the duct of the pancreas. The opening is 2 mm. in diameter. The length of the duct is 68 mm. and its width from 5.6—7.5 mm.

**D. chyli'ferus.** (L. *chylus*, chyle; *fero*, to bear.) A synonym of *D. thoracicus*.

**D. cibarius.** (L. *cibarius*, relating to food.) The *Alimentary canal*.

**D. cochlearis.** The *Canal cochlearis*.

**D. communis choledochus.** See *D. choledochus communis*.

**D. Cuvieri dexter.** (Cuvier, a French naturalist; L. *dexter*, right hand.) A vessel which, when it first appears in the fetus, is a short trunk receiving the blood of the jugular vein from the right side of the head and of the cardinal vein from the postaxial part of the trunk. At a later period it receives the blood from the subclavian and superior vertebral veins in addition, and it ultimately forms the right superior vena cava, as in birds, or by joining with the left superior vena cava by a cross-branch named the left innominate, as in mammals, the single or common superior vena cava. It discharges its blood into the sinus venosus. It does not receive any of the blood coursing through the inferior vena cava or portal system of vessels.

**D. Cuvieri sinister.** (Cuvier; *sinister*, left handed.) A vessel formed similarly to the *D. Cuvieri dexter*, but by veins on the opposite side of the body. The part near the heart in mammals ultimately atrophies, the blood being conducted to the superior vena cava by the left innominate vein.

**D. cysticus.** (Κύστις, the bladder. G. *Gallenblasengang*.) The duct of the gall-bladder which is given off from the common hepatic duct at an acute angle about 4 mm. from its commencement. It runs towards the right side and a little forward, and then bends suddenly to the gall-bladder. Its length is 2 cm., and its diameter 2 mm.

**D. deferens.** Same as *Vas deferens*.

**D. deferens seminis.** (L. *defero*, to bear away; *semen*, seed.) A synonym of *Vas deferens*.

**D. ejaculatorius.** Same as *D. ejaculatorius communis*.

**D. ejaculatorius communis.** (L. *ejaculo*, to shoot out; *communis*, common. F. *conduit ejaculateur*; G. *Ausspritzungskanal*.) The common ejaculatory duct; a name for a duct formed by the union of the *Vas deferens* with the

duct of the vesicula seminalis of the same side at the base of the prostate gland.

**D. endolymphaticus.** (*Endolymph.*) Hasse's name for the aqueductus vestibuli. A tubular outgrowth from the primitive auditory vesicle found in all Vertebrata from the Cyclostomi upwards. It grows from the inner wall of the sacculus, and, perforating the inner wall of the auditory capsule, indents the dura mater, terminating in a blind enlargement, the sacculus endolymphaticus. In *Salpiscii* it extends beneath the skin, and in some lizards runs towards the occipital region, and after communicating with the one of the opposite side extends to the pharyngeal and oral mucous membrane, expands intercranially between the bone and dura mater on the median side of the auditory capsule, stretches between the muscoli pterygoidei, and even projects in a lobed form into the orbit. The whole of this system is filled with white otolith pap. In birds it appears as a prolongation of the internal wall of the sacculus opening into the epicerebral cavity. In mammals it terminates in the fibrous tissue of the dura mater.

**D. excretorii.** (*L. excremo*, to separate. *G. Ausführgänge.*) The channels by means of which the products of the secretion of glands are conducted to their destination. The finer ones are generally composed of epithelium and a basement membrane, but may be columnar or spheroidal or flattened; the larger ducts have often, in addition, a coat of smooth muscular tissue, outside of which is a tunica adventitia composed of connective tissue, the whole supplied with nerves and blood-vessels.

**D. excretorius glandis Cowperi.** (*L. excremo*, to separate; *gland*; *Cowper*, an anatomist.) See *Duct*.

**D. excretorius testis.** (*L. excretus*, part of *excremo*, to separate by sitting; *testis*, the testicle.) The *Vas deferens*.

**D. Ferreinii.** See *Ferrein*, tubes of.

**D. galactophori.** (*Γαλακτοφόρος*, giving milk. *F. canaux lactifères*; *G. Milchführgänge*, *Milchgänge*.) See *Galactophorous ducts*.

**D. hemithoracicus.** (*Ἡμ, half*; *θώραξ*, the chest.) A lymphatic trunk which, running parallel with the vena azygos minor, joins the thoracic duct about the level of the seventh dorsal vertebra.

**D. hepaticus.** (*Ἡπαρ*, the liver. *G. Lebergang.*) The duct resulting from the junction of the right and left branches, which result from the gathering together of the biliary ducts. It is 4.5 to 5.6 mm. in diameter and 50 mm. long. It unites with the cystic duct to form the *D. choledochus communis*.

**D. hepaticus medius.** (*L. medius*, in the middle.) A duct sometimes proceeding from the lobus quadratus and joining the *D. choledochus communis*.

**D. hepatocysticus.** (*Ἡπαρ*; *κύστις*, a bladder.) A canal, or several, passing directly from the liver to the gall-bladder. These ducts occur occasionally in man, constantly in many animals.

**D. hygroblephari.** (*Υγρός*, moist; *βλέφαρον*, the eyelid. *F. canaux hygrobléphariques*.) A name for the Meibomian glands, from their office.

**D. hygrophthalmici.** (*Υγρός*, moist; *ὀφθαλμός*, the eye. *F. canaux hygrophthalmiques*.) A term for the Meibomian glands, from their office.

**D. incisivus.** (*L. incido*, to cut into.) A canal on each side of the middle line in the fore part of the palatine plate of the superior maxillary bone. The two canals open by a common aperture into the cavity of the mouth below. They contain the right and left nasopalatine nerves with the ganglion of Cloquet.

Also, called *Canal, palatine, anterior*.  
**D. incisivus.** (*L. incisor*, from *incido*.) The *D. incisivus*.

**D. interlobulares.** (*L. inter*, between; *dim. of lobus*.) The minute ramifications of the bile ducts situated between the lobules of the liver.

**D. intestinalis.** (*L. intestina*, the intestines.) The alimentary canal exclusive of the stomach.

**D. lacrimalis.** (*L. lacrima*, a tear.) The *Nasal duct*.

**D. lacrumalis.** (*L. lacruma*, a tear.) The *Nasal duct*.

**D. lacrymalis.** (*L. lacryma*, a tear.) The *Nasal duct*.

**D. lactei.** (*L. lacteus*, milky.) The *Galactophorous ducts*.

**D. lacteus.** (*L. lacteus*.) The *D. thoracicus*, from its white contents.

**D. lactiferi.** (*L. lac*, milk; *fero*, to bear. *F. conduits galactophores*; *G. Milchgänge*.) The ducts of the mammary gland. They vary in number from ten to fourteen. The *Galactophorous ducts*.

**D. lumbothoracicus.** (*L. lumbus*, the loin; *Gr. θώραξ*, the chest.) A synonym of the *D. thoracicus*.

**D. lymphaticus communis sinist.** (*Lymph*; *L. communis*, common; *sinister*, on the left.) A synonym of *D. thoracicus*.

**D. lymphaticus dexter.** The *D. thoracicus dexter*.

**D. Meibomia.** The *Meibomian glands*.

**D. meseraicus.** (*Μέσος*, middle; *ἀραιά*, the small intestines.) The *Intestine duct*.

**D. mesonephric.** (*Μέσος*, in the middle; *νεφρός*, the kidney.) A synonym of the *Wolffian duct*.

**D. Mülleri.** The *Duct, Müllerian*.

**D. nasalis.** (*L. nasus*, the nose. *F. conduit nasal*.) The nasal duct, or that conveying the tears from the lacrymal sac to the nose. See *Nasal duct*.

**D. naso-lacrymalis.** (*L. nasus*, the nose; *lacryma*, a tear. *G. Thränennasengang*.) The *Nasal duct*.

**D. naso-palatinus.** (*L. nasus*, the nose; *palatum*, the palate. *G. Nasenauemnangenge.*) A synonym of *D. incisivus*.

**D. naso-pharyngeus.** (*L. nasus*; *pharynx*. *G. Nasenrachengang*.) Kölliker's term for the upper or respiratory division of the primitive buccal cavity of the embryo.

**D. nigri.** (*L. niger*, black.) An old term for the black radiating lines, from adhesion of choroidal pigment, seen on the surface of the enclosing membrane of the vitreous body when separated from the ciliary processes.

**D. Nuckiani.** (*Nuck*, an anatomist. *G. Nuckische Gänge*.) The three or four small excretory ducts of the glandula orbitalis so largely developed in some Carnivora. They coalesce to form a single duct, which opens into the oral cavity opposite the last molar tooth of the upper jaw.

**D. nutritii.** (*L. nutritius*, that which

# DUCTUS.

nourishes.) The canals which lead the blood-vessels into the interior of a bone.

**D. omphalo-entericus.** (Ὠμφαλός, the navel; ἔντερον, an intestine. F. *canal omphalo-enterique*; G. *Nabelblasen-Darmgang*.) The *Vitelline duct*.

**D. omphalo-mesentericus.** (Ὠμφαλός, the navel; μεσέντερον, the mesentery.) The *Vitelline duct*.

**D. pancreaticus.** (Πάγκρεας, the sweetbread. F. *canal pancréatique*; G. *der Bauchspeicheldrüsen-gang*.) The pancreatic duct, or excretory duct of the pancreas, by which its secretion is conveyed to the duodenum. The duct is very thin walled, and, commencing at the left extremity of the gland, runs towards the right. It opens into the intestine at the lower end of the plica longitudinalis duodeni either immediately below the opening of the ductus chole-dochus communis or in common with it. Its diameter is 2-3 mm.

**D. pancreaticus accessorius.** (L. *accedo*, to approach.) A duct proceeding from the head of the pancreas or from the lesser pancreas. It opens into the duodenum a short distance from the pancreatic duct. According to Meckel, the pancreatic duct is double in the fetus, the two canals communicating by a cross branch and opening separately into the duodenum; the lower one is the pancreatic duct of the adult, and the upper one, when persistent, is the accessory pancreatic duct, but most commonly the part between the communicating branch and the duodenum is obliterated.

**D. pancreaticus azygus.** (ἄζυγος, unpaired.) The same as *D. pancreaticus accessorius*.

**D. pancreaticus minor.** (L. *minor*, less.) The *D. pancreaticus accessorius*.

**D. pancreaticus recurrens.** (L. *recurro*, to run back.) The *D. pancreaticus accessorius*.

**D. pancreaticus Santorini.** The *D. pancreaticus accessorius*.

**D. pancreaticus secundarius.** (L. *secundus*, second.) The same as *D. pancreaticus accessorius*.

**D. pancreaticus superior.** (L. *superior*, upper.) The same as *D. pancreaticus accessorius*.

**D. parotideus.** (*Parotid* gland. G. *Ohrspeicheldrang*.) The duct of the parotid gland. It emerges from the anterior border of the gland about 14 mm. below the lower border of the zygomatic arch, and runs nearly horizontally forwards on the outer surface of the masseter to the inner border where, surrounded by fat, it turns inwards and perforates the buccinator muscle and mucous membrane obliquely opposite the crown of the second molar tooth of the upper jaw.

**D. Pecqueti.** See *Pecquet's duct*.

**D. pneumaticus.** (Πνευματικός, relating to wind.) A short tube by which the air-bladder communicates with the œsophagus in physostomous fishes.

**D., pronephric.** A synonym of the *Segmental duct*.

**D. prostatici.** (*Prostate* gland.) The ducts of the prostatic gland. They are about thirty in number, and open on the floor of the urethra, on either side of the verumontanum.

**D. punctorum lacrymalium.** (L. *punctum*, a point; *lacrymalis*, belonging to a tear.) The *Puncta lacrymalia*.

**D. Rathkei.** See *Duct, Rathke's*.

**D. recessus vestibuli.** (L. *recessus*, a nook; *vestibulum*, entrance.) The same as *D. endolymphaticus*.

**D. Rivianii.** (*Rivinus*.) The same as *D. sublinguales minores*.

**D. Rivinianii.** (*Rivinus*.) The same as *D. sublinguales minores*.

**D. roriferus.** (L. *ros*, dew; *fero*, to bear. F. *conduct* or *canal thoracique*; G. *der Brustgang*.) The dew-bearing duct; an epithet for the thoracic duct, so called by Bilsius because the chyle is distilled by it like dew into the receptaculum chyli.

**D. salivales.** (L. *saliva*, spittle.) The ducts of the salivary glands.

**D. salivaris inferior.** (L. *inferior*, lower. F. *canal de Wharton*.) A term for the duct of the submaxillary gland; also called *D. Whartonianus*.

**D. salivaris superior.** (L. *superior*, upper. F. *canal de Stenon*.) A term for the parotid duct. See *Steno's duct*.

**D. Santorini.** (*Santorini*.) The *D. pancreaticus accessorius*.

**D. semicirculares.** (L. *semicirculus*, a half-circle.) The *Canals, semicircular*.

**D. semicirculares membranae celi.** The *Canals, semicircular, membranous*.

**D. semicirculares ossei.** The *Canals, semicircular, osseous*.

**D. seminales.** (L. *seminalis*, belonging to seed.) The *Seminal ducts*.

**D. seminalis communis.** The *D. ejaculatorius communis*.

**D. seminiferi.** (L. *semen*, seed; *fero*, to bear.) The *Seminal ducts*.

**D. serosi.** (L. *serum*, the watery part of a thing.) The lymphatic vessels.

**D. spermaticus.** (L. *spermaticus*, seminal.) A synonym of *Vas deferens*.

**D. spirales cochleæ.** (L. *spiralis*, winding; *cochlea*.) The *scala of the cochlea*.

**D. Stenonia nus.** See *Steno's duct*. A synonym of *D. parotidæus*.

**D. Stenonia nus.** See *Stenson's duct*.

**D. sublinguales minores.** (L. *minor*, less.) The smaller ducts of the sublingual gland, which number from twelve to twenty. They open separately into the floor of the mouth near or on the caruncle. They are also called *Rivini's ducts*; one of them, larger than the others, is called *Boetholin's duct*.

**D. sublingualis major.** (L. *sub*, under; *lingua*, the tongue; *major*, the greater.) The principal duct of the sublingual gland. It either opens into the duct of the submaxillary gland or separately on the caruncula sublingualis.

**D. submaxillaris.** (L. *sub*, under; *maxilla*, the jaw. G. *Unterkiesspeicheldrang*.) The duct of the submaxillary gland, which proceeds from the anterior and upper part of the gland; it lies on the hyoglossus muscle, beneath the mylohyoid muscle and gustatory nerve, and opens on the side of the frenum in the centre of an eminence, the *caruncula sublingualis*.

**D. thoracicus.** (Θώραξ, the breast. G. *Milchbrustgang*.) The duct by which the lymphatic and lacteal fluids of the lower half of the body including the abdominal viscera except part of the upper surface of the liver, and of the left side of the upper half of the body is transmitted into the blood. It begins in the abdomen by an enlargement named the re-

ceptaculum chyli, which rests on the first or second lumbar vertebra, and receives the lymphatics of the parts below. It enters the thorax through the same opening as the vorta, lying on the right side of that vessel; continuing to ascend in the posterior mediastinum, it passes beneath the arch of the aorta opposite the fourth dorsal vertebra, and is in contact with the left side of the oesophagus, and is conducted to the neck under the left subclavian artery, where it opens into the left subclavian vein at its angle of junction with the internal jugular vein. In the thorax the duct sometimes divides and reunites, and it is occasionally branched near its termination. It is provided with many double valves, and has a double valve at its termination in the vein. Its length is from 15" to 18"; it is .25" wide at its lower part, narrows to .17" at the fifth dorsal vertebra, and slightly enlarges again towards its termination.

**D. thoracicus dexter.** (*L. dexter*, right. *G. rechter Sangaderstamm*.) A short trunk which receives in general the lymphatics of the right side of the head and neck, of the right side of the chest, of the right upper limb, of the right lung, of the right side of the heart, and of part of the upper surface of the liver. Not infrequently, however, some or other of these open into a neighbouring large vein. It is about half an inch in length, and opens into the angle of junction of the right subclavian and jugular veins.

**D. thoracicus sinister.** The *D. thoracicus*.

**D. thyroidei.** (*Thymus*.) Two large lymphatic ducts that commence at the upper extremity of the lobes of the thymus, and pass downwards to terminate at the junction of the jugular and axillary veins on each side.

**D. umbilicalis.** (*L. umbilicus*, the navel, the navel string. *F. ombilic*; *G. Nabel*.) A term for the umbilical cord.

**D. urinæ.** (*L. urina*, urine.) The *Ureter*.

**D. urinarius.** (*L. urina*, urine.) The *Urethra*.

Also, a term applied to the ureters, bladder, and urethra conjointly.

**D. uriniferi Bellini.** (*L. urina*; *fero*, to bear; *Bellini*.) The *Uriniferous tubules*, especially the straight part near the opening on the papilla.

**D. uteri varicosus.** (*L. uterus*, the womb; *varicosus*, full of dilatations.) A term for the *Fallopian tube*.

**D. venosus.** (*L. venosus*, veiny. *F. canal venosus*; *G. der venöse Gang*.) A large vessel situated on the under surface of the liver of the fetus. It is originally constituted by the posterior part of the trunk resulting from the union of the two omphalo-mesenteric veins, and after this trunk has given off the vena advehentis hepatis and has joined with the umbilical vein, at a later period, it appears as that one of the two branches of the umbilical vein of the fetus at the transverse fissure of the liver, which continues the course of the trunk and joins the vena cava through one of the hepatic veins. It is obliterated after birth, generally within the first six weeks, and remains as a slender cord.

**D. venosus Aran'til.** (*Aran'tius*.) The *D. venosus*.

**D. vitellarius.** (*L. vitellus*, the yolk of an egg.) The *D. vitello-intestinalis*.

**D. vitellinus.** (*L. vitellus*.) The *D. vitello-intestinalis*.

**D. vitello-intestinalis.** (*L. vitellus*, yolk of egg; *intestinalis*, the intestines. *G. Dottercanal*.) A short canal connecting the vitellus or umbilical vesicle with the intestine, and by means of which the yolk is absorbed. Some remains of it may occasionally be found in the form of a diverticulum of the ileum. See *Vitelline duct*.

**D. Waltherianus.** (*Walther*, an anatomist.) Same as *D. Wharton's*.

**D. Whartonianus.** (*Wharton*, an anatomist.) A synonym of the *D. submandibularis*.

**D. Wirsungianus.** (*Wirsung*, an anatomist.) The same as *D. pancreatikus*.

**D. Wirsungi.** The *D. pancreatikus*.

**D. Wolfii.** See *Duct, Wolfian*.

**Dudaim.** The mandrake, *Mandragora officinalis*, is considered to be the dudaim of Scripture.

**Dulech.** (Arab.) See *Dulech*.

**Duella.** (Arab.) Ancient weight of eight scruples; the third part of an ounce, equal to 145.56 troy grains.

**Duellum.** (Lat.) The original form of *Bellum*, war; or a combat between two.

**D. venerum.** (*L. veneris*, belonging to Venus.) Sexual connection.

**Du'enech.** (Arab.) Alchemical term for the *Mercurius philosophorum*.

**Du'enech.** (Arab.) Old name for antimony or antimony. (Ruland and Johnson.)

**Du'enez.** (Arab.) Old name for the *Limatura ferri*, or steel filings. (Ruland and Johnson.)

**Duffin bean.** The *Phaseolus lunatus*.

**Dug.** (Allied to Swed. *dagga*; Dan. *dægga*, to fondle.) A nipple.

**Dugong.** (*G. Seekuh*.) The species of the Genus *Halicorn*. Their flesh is delicate and agreeable as food; they supply *D. oil*.

**D. oil.** The oil obtained by boiling the subcutaneous fat of the *Halicorn dugong*, *H. australis*, and other species. It is a bland, sweet, not unpalatable oil, and has been used as a substitute for cod-liver oil.

**Dulcac'idum.** (*L. dulcis*, sweet; *acidus*, sour.) Anything that is both sweet and sour, as oxymel.

**Dulcamara**, B. Ph. (*L. dulcis*, sweet; *amarus*, bitter; because the stalks have a slightly bitter taste, followed by a remarkable sweetness resembling liquorice. *F. tyges de douce-amère*; *G. Bittersüss-Stengel*.) The dried young branches of bitter-sweet, *Solanum dulcamara*. They are light, hollow, cylindrical, or slightly angular, .25" or less in diameter, with an unpleasant smell, and a bitter, then sweet, taste. They contain an alkaloid, *Dulcamarin*; a glucoside, *Solanin*; gummy, resinous, and waxy substances. *Dulcamara* is said to produce depression of the heart, twitching of the eyelids and lips, and tremulousness of the limbs; it has been used in skin disorders, chronic rheumatism, and chronic coughs in decoction.

**D. flexuosa**, Mönek. (*L. flexuosus*, full of turns.) The *Solanum dulcamara*, Linn.

**Dulcamaretin.**  $C_{16}H_{20}O_6$ . A brown, resinous, tasteless substance obtained from *dulcamarin*, along with glucose, by the action of dilute acids.

**Dulcamarin.** (*L. dulcis*, sweet; *amarus*, bitter.)  $C_{21}H_{33}O_{10}$ . An alkaloid contained in *Dulcamara*. It is a yellowish powder, of bitter, then sweet, taste, soluble in alcohol and

water, insoluble in ether, and converted by dilute acids into dulcamaretin and glucose.

**Dulcamarum.** Same as *Dulcamara*.

**Dulcarin.** Same as *Dulcamara*.

**Dulce.** See *Dulse*.

**Dulce'do.** (*L. dulcedo*, from *dulcis*, sweet, pleasant.) Sweetness; delightfulness.

**D. amoris.** (*L. amor*, love. *F. clitoris*; *G. Klitoris*, *Kitzler*, *Schamzünglehen*.) A former name for the clitoris. Bartholin, i, 34.

**D. saturni.** (*L. Saturnus*, an old name for lead. *F. céruse*; *G. Bleiweisse*.) Old epithet for cerussa, or white lead. Ruland and Libavius, *Syt. Arc. Chym.* vii, 36.

**D. sputatorum.** (*L. sputator*, one who spits much.) Same as *D. sputorum*.

**D. sputorum.** (*L. sputum*, spittle.) A term applied to an unnaturally copious secretion of a sweet-tasting saliva.

**Dulcichinum.** The *Cyperus esculentus*.

**Dulcification.** (*L. dulcis*, sweet; *facio*, to make. *F. dulcification*; *G. Versüssung*.) The act of rendering mild or sweet. An old term for the mixing of alcohol with the mineral acids to make them more mild.

**Dul'city.** (*L. dulcis*; *facio*. *I. dolceficare*; *G. versüssen*.) To soften, to dilute with a milder liquid.

**Dul'cin.** Same as *Dulcite*.

**Dul'cinan.** The same as *Dulcitan*.

**Dul'cis amara.** (*L. dulcis*, sweet; *amarus*, bitter.) Same as *Dulcamara*.

**D. ra'dix.** (*L. radix*, a root.) Liquorice root, from its sweet taste.

**Dulcitamine.**  $C_6H_{15}NO_5$ . A base obtained by acting on chlorhydric ethers of dulcite with alcohol saturated with ammonia. It is a syrupy liquid.

**Dulcitan.**  $C_6H_{12}O_5$ . Obtained by heating dulcite with hydrochloric acid, or by saponifying a dulcitanide.

**Dulcit'anides.** Ethers formed by heating dulcite with an organic acid, analogous to mannitanides.

**Dulcite.** (*L. dulcis*, sweet.)  $C_6H_{14}O_6 = C_6H_8(OH)_6$ . A sugar, isomeric with mannite, obtained from an unknown substance from Madagascar, and from *Melampyrum nemorosum*, *Scrophularia nodosa*, *Enonymus europæus*, and other plants. It differs from mannite in being a monoclinic prism when crystalline, and in melting at  $182^\circ C$ . ( $359.6^\circ F$ .) Also called Madagascarmanna.

**Dulcitolose.** (*L. dulcis*, sweet.)  $C_6H_{12}O_6$ . A fermentable substance.

**Dul'cose.** Same as *Dulcite*.

**Dulech.** (Arab.) An old term for a species of tartar, or spongy stone in the human body, causing great danger and pain; but Paracelsus, *de Morb. Tartareis*, c. xi, distinguishes it from tartar, stating that it is intermediate between it and calculus.

**Dulesh.** (Arab.) The *Rhodymenia palmata*.

**Dull.** (*Sax. dol.*) Stupid, heavy, not bright, not clear.

**Dul'ness.** (*Dull*, *G. Dämpfung*.) The condition of being dull.

Applied to the percussion note as a quality.

**D., cardiac.** See *Cardiac dulness*.

**D., wooden.** (*G. bretthähnliche Dämpfung*.) A term applied to the percussion note over the lung when it gives a sound and a resistance, as when percussing over wood.

**Dulong and Petit's law.** That the

product of the specific heat of any solid element into its atomic weight is a nearly constant number.

**Dulse.** (*Gael. duilliasg*; *Ice. duilleasg*.) The *Rhodymenia palmata*. A seaweed with a reddish-brown or purplish frond, which is used as an article of food in Scotland, Ireland, and Iceland.

A fermented liquor is made from it in Kamtschatka.

Also, the *Schizymenia edulis*.

**D., pep'per.** The *Laurencia pinnatifida*, so called from its somewhat biting taste. Also used as food in Scotland and Ireland.

**D., red.** The *Schizymenia edulis*.

**Dul'wich.** A southern suburb of London. There were formerly mineral waters here containing sodium chloride and magnesium sulphate.

**Du'mal.** Same as *Dumose*.

**Du'masine.** (*Dumas*.)  $C_{10}H_{16}O$ . An empyreumatic oil produced at the same time as acetone in the distillation of acetate of lime.

**Dumb.** (*Sax. dumb*, *G. stumm*; *L. mutus*; *F. muet*; *I. muto*; *S. mudo*; *Gr. ἀφωσος, κωφός*.) Unable to make articulate sounds, speechless.

**D. a'gue.** An ague in which the paroxysms are obscure.

**D. bell.** See *Dumb-bell*.

**D. cane.** The *Dicffenbachia seguina*, from its supposed property of producing dumbness when applied to the lips.

**Dumb-bell.** A metal weight consisting of two ball-shaped pieces connected by a short rod for the hand. One is held in each hand and swung to and fro for the purpose of exercising the muscles.

**D. crys'tals.** A term for microscopic crystals of oxalate of lime of this shape; they are seen in the urine.

**Dum'blane.** Scotland; on the Allan, near Stirling. Waters the same as those of *Airthrey*.

**Dumb'ness.** (*Sax. dumb*, silent. *F. mutism*; *G. Stummheit*.) The condition of a person unable to speak or make articulate sounds. It may arise from defective mechanism, such as malformation or injuries of the tongue, palate, or other structure; from defective innervation, the result of idiocy, or other causes, central or peripheral, of well-made structures; from deafness or very defective hearing; and from intellectual disorders or emotional disturbances.

**D. for words.** One of the forms of aphasia in which, without any affection of the organ of hearing, and without loss of intelligence, words cannot be well understood.

**Du'metose.** (*L. duometum*, a thorn hedge.) Growing in the fashion of a thicket.

**Dumo'sæ.** (*L. dumus*, a bush.) A Nat. Order of plants, according to Linnaeus, of which *Viburnum* and *Rhus* are examples.

**Du'mose.** (*L. dumus*, a bush. *G. busch-artig, dornig*.) Bush-like in growth; full of bushes, bushy.

**Dunc.** (*Sax. dun.*) A low, long sandbill on the sea coast.

**Dung.** (*Sax. dung*.) Ordure; filth; excrement.

**Dungan'non.** Ireland. A chalybeate spring rises near the town.

**Dunsc-down.** (*Dut. dons*, down.) The *Typha latifolia*; so called from its soft spikes.

**Duobus, sal de.** See *Sal de duobus*.

**Duodecim'fid.** (*L. duodecim*, twelve; *findo*, to cleave. *F. duodecim'fide*.) Having twelve divisions.

**Duodecimlobate.** (*L. duodecim*, 29

twelve; λοβός, the lobe of the ear.) Having twelve lobes.

**Duodenal.** (*Duodenum.*) Connected with, or pertaining to, the duodenum.

**D. artery, inferior.** (*L. inferior, lower. G. untere Zwölffingerdarmschlagader.*) The inferior pancreatico-duodenal artery.

**D. digestion.** In the duodenum the chyme, as it leaves the stomach, is submitted to the action of the pancreatic and biliary secretions and to the secretion of the glands of Brunner and the Lieberkühnian follicles. Its acid reaction is neutralised or rendered alkaline; the actions by which the starches are converted into sugar, fats are emulsified and converted into fatty acids and glycerine, and the partially digested proteids are converted into peptones, are commenced in the duodenum. The parapeptones found during gastric digestion are probably in part precipitated. See also *Digestion, duodenal.*

**D. diverticula.** (*L. diverticulum, a bye-road.*) Same as *Cæca, pyloric.*

Also, a term applied to blind pouches consisting of all the coats of the intestine occasionally found in man.

**D. dyspepsia.** See *Dyspepsia, duodenal.*

**D. glands.** Same as *Brunner's glands.*

**Duodenitis.** (*Duodenum.*) Inflammation of the duodenum; a catarrhal condition of the intestine produced by chill or the irritation of acrid bile. There is tenderness and a sense of discomfort in the right hypochondrium, and sometimes, from extension into the bile ducts, jaundice, when chronic thickening and contraction of the walls of the intestine may result.

**Duodenostomy.** (*Duodenum; στόμα, a mouth.*) The opening of the duodenum through the abdominal walls and its attachment to them so as to make an artificial mouth or entrance for food, as in cancer of the pylorus.

**Duodenotomy.** (*Duodenum; τομή, section.*) The opening of the duodenum through the abdominal parietes, as in cancer of the pylorus, to introduce nutriment.

**Duodenum.** (*Late L. duodenum; from duodeni, twelve apiece. F. duodenum; L. duodeno; G. Zwölffingerdarm, Gallendarm; L. ventriculus succenturiatus; Gr. δωδεκάδακτυλον.*) The first part of the small intestine immediately below the stomach, about 10" in length and 1·5" to 2" in diameter, with a saciform dilatation at its origin. It is bent into a horse-shoe shape, with the concavity upwards and to the left, enclosing the head of the pancreas. The first or superior portion extends from the pylorus to the gall-bladder at the level of the first lumbar vertebra; the second or descending portion extends from the gall-bladder to the second or third lumbar vertebra in front of the right kidney; and the third or oblique portion continues the intestine to the left, and, turning forwards, ends in, or becomes, the jejunum at the left side of the first lumbar vertebra. The biliary and pancreatic ducts open into the second part. It derives its blood supply from the duodenal branches of the gastro-duodenalis, and pancreatico-duodenalis vessels, and its nerves from the sympathetic plexuses surrounding the gastro-duodenalis and pancreatico-duodenalis arteries. It is fixed in its position by the hepatoduodenal ligament, by areolar tissue attaching it to the inferior vena cava and to the aorta, and by the suspensory muscle. The name is derived from its being about twelve fingers' breadth long

in those animals in which its early describers first examined it.

**D., arteries of.** The duodenum receives branches from the superior pancreatico-duodenal branch of the gastro-duodenal artery and from the inferior pancreatico-duodenal branch of the superior mesenteric artery.

**D., inflammation of.** See *Duodenitis.*

**D., nerves of.** These are sympathetic nerves from the solar plexus.

**D., suspensory muscle of.** Treitz's term for a slender fasciculus of unstripped muscular tissue arising from the areolar tissue surrounding the celiac axis and from the left crus of the diaphragm, and inserted among the longitudinal fibres of the third portion of the duodenum.

**D., ulceration of.** A condition which occurs most frequently in the course of burns and scalds in the stage of reaction. The ulceration is usually found in the first portion of the duodenum, and has sharp cut sloping edges and a non-suppurating base consisting of the muscular or the serous coat; it may end in perforation or in cicatrisation, with resulting stricture of the intestine, or obliteration of the bile ducts. The cause is supposed to be a hæmorrhagic infarctus, which becomes in consequence capable of solution and disintegration by the gastric juice.

**D., veins of.** The veins of the duodenum correspond to and accompany the arteries. They discharge themselves into the gastro-duodenal and superior mesenteric veins, and form part of the portal system of veins.

**Duosternal.** (*L. duo, two; sternum, the breast-bone.*) Beclard's term for the second of the six pieces into which he divided the sternum.

**Duplay.** A French surgeon of the present century.

**D.'s acoustic sound.** (*Ἀκούω, to hear.*) An instrument for detecting foreign bodies in a canal. It consists of a tube tipped with a silver olive-shaped bulb, and having at its upper end an expanded resonance chamber, from which an india-rubber tube passes to the ear of the observer.

**Duplex.** (*L. duo, two; plico, to fold. F. double; G. doppelt, zweifach.*) Folded into two; twofold; double. Applied to leaves and perianths.

**Duplicana.** (*L. duplex, double.*) A term for a double tertian ague.

**Duplicate.** (*L. duplicatus, part. of duplico, to double. F. double; G. verdoppelt.*) Double; duplicate. Applied to flowers having a double row of petals.

**D. ratio.** The ratio of the squares of two numbers; thus, the duplicate ratio of 3 and 4 is the ratio of 9 to 16.

**Duplicated.** (*L. duplicatus. G. verdoppelt.*) Doubled. Applied to intermittent fevers in which two paroxysms occur during the time in which one only is usual; the two paroxysms being unlike to each other, but each like the corresponding one of the following period.

**Duplication.** (*L. duplicatio, from duplico, to double.*) A doubling.

In Teratology, applied to parts which are in duplicate.

**D. of foetus.** A term applied to spontaneous evolution of the foetus or child when it becomes, as it were, folded on itself.

**Duplicative.** (*L. duplico.*) Having the quality of doubling.

**Duplicato-dentate.** (*L. duplicatus, doubled; dentatus, toothed. G. doppelt-gezähnt.*)

## DUPLICATO-PINNATE—DURA MATER.

A term applied to a dentate leaf when its teeth are themselves dentate.

**Duplicato-pinnate.** (L. *duplicatus*; pinnate. G. *doppelt-gefidert*.) Having the leaflets of a pinnate leaf themselves pinnate.

**Duplicato-serrate.** (L. *duplicatus*; serratus, toothed like a saw. G. *doppelt-gesägt*.) Applied to a serrate leaf the serrations of which are themselves serrate.

**Duplicato-ternate.** (L. *duplicatus*; terni, three each. G. *doppelt-dreizählig*.) Applied to a ternate leaf, the leaflets of which are themselves ternate.

**Duplicature.** (L. *duplico*, to double. F. *duplicature*; G. *Verdoppelung*.) A fold; a reflection of a substance upon itself.

**Duplicidentata**, Ill. (L. *duplex*, double; *dentatus*, toothed.) An Order of *Rodentia*. Dental formula i. 2; the second pair small and external; alisphenoid canal absent, optic foramina confluent, fibula ankylosed below to the tibia and articulating with calcaneum; a hairy patch within the cheek, testes external. A highly generalised form of rodent.

**Duplicipennate.** (L. *duplex*, double; *penna*, a wing.) Having the wings folded longitudinally when in repose.

**Duplicitas.** (L. *duplicitas*, from *duplex*, twofold. G. *Zweifaltigkeit*.) The condition of being doubled.

**D. monstro'sa.** (L. *monstruosus*, strange, preternatural.) The condition of a double monster, or of a monstrosity with some parts double.

**Dupondium.** An old measure equivalent to four drachms.

**Dupuytren, Guillaume, Bar'on.** A French surgeon, born at Pierre Buffière in 1777, died in Paris in 1835.

**D.'s classification of burns.** This classification rests on the depth of the burn, from the slightest to the most severe; he makes the following divisions:—erythema, or simple reddening of the skin; vesication; incomplete destruction of the skin; complete destruction of the skin, involving also the subcutaneous connective tissue; charring and disorganisation of the whole substance of the burnt part.

**D., compres'sor of.** Name given to an instrument, invented by Dupuytren, for compressing the femoral artery, consisting of a semicircle of steel having a pad at each end, and which, pressing only upon the vessel and the opposite point of the thigh, has the advantage of not impeding the collateral circulation like the common tourniquet.

**D.'s contraction.** The fixed flexion of one or more of the fingers from thickening and contraction of the palmar fascia; so called from its earliest describer.

**D.'s enterotome.** An instrument for the closure of the opening in artificial anus. It consists of a serrated forceps worked by a screw crossing the end of the handle. The septum between the upper and lower openings of the bowel is grasped and compressed between the blades, and the pressure is daily increased, by turning the screw, until the blades meet, and the intervening septum has sloughed away.

**D.'s operation of lithotomy.** The same as *Lithotomy, bilateral*.

**D.'s splint.** A short straight splint, applied to the inner side of the leg from the knee to the foot. The pad should be doubled opposite the inner malleolus, and a roller wound round

the foot and splint in a figure-of-8 form, so as to draw the foot inwards over the pad as a fulcrum, and the roller may then be continued upwards to the knee to steady the splint. Employed in cases of Pott's fracture to prevent eversion of the foot.

**Dura mater.** (L. *durus*, hard; *mater*, mother. F. *dure mère*; I. *dura madre*; G. *die dicke Hirnhaut, hartes Hirnhell*.) The external membrane which envelopes the brain and spinal cord; so called because of its hard, tough quality, and because it was supposed to give origin to all other membranes of the body. The dura mater is a dense, inelastic, fibrous membrane, thin and very tough, closely adherent to the bones of the cranium, loosely attached to the vertebral canal. It consists of bands and layers of white fibrous and elastic tissue, which cross each other in the cranial part, but are nearly parallel in the spinal division; the interspaces communicate with each other, and contain connective-tissue corpuscles and lymph. Both the outer and the inner surfaces are covered with a layer of flattened epithelial cells, those of the latter being formerly described as the parietal layer of the arachnoid membrane. Through the foramina in the bones the dura mater becomes continuous with the periosteum, and where nerves pass through it becomes continuous with their areolar sheath. See subheadings.

**D. mater, ar'teries of.** The arteries in the anterior fossa of the skull are derived from the internal carotid and from the anterior and posterior ethmoidal of the ophthalmic; those in the middle fossa are the middle meningeal entering through the foramen spinosum and the small meningeal through the foramen ovale, and branches from the ascending pharyngeal entering through the foramen lacerum medium; those in the posterior fossa are meningeal branches from the ascending pharyngeal through the jugular foramen, other branches from the same artery through the anterior condyloid foramen, branches from the occipital artery entering through the jugular foramen; and branches from the vertebral through the foramen magnum.

**D. mater cer'ebr'i.** (L. *cerebrum*, the brain.) The *D. mater of brain*.

**D. mater enceph'al'i.** (Εγκεφαλος, the brain.) See *D. mater of brain*.

**D. mater, fun'gus of.** (L. *fungus*, a mushroom.) A soft sarcomatous or carcinomatous pulsating growth from the upper surface of the dura mater, which produces from pressure, on the one side thinning and perforation of the skull bone, and on the other brain symptoms, such as epilepsy, paralysis, and coma.

**D. mater, inflamm'ation of.** See *Meningitis* and *Pachymeningitis*. Simple inflammation of the dura mater is uncommon, except as a result of injury.

**D. mater, lat'eral pro'cesses of.** The *Tentorium cerebelli*.

**D. mater medull'æ spinal'is.** (L. *medulla*, marrow; *spinalis*, spinal.) The same as *D. mater of spinal cord*.

**D. mater of brain.** (F. *dure-mère crânienne*; G. *harte Hirnhaut*.) The dura mater which encloses the encephalon. It is continuous with the dura mater of the spinal cord through the occipital foramen, and is firmly attached to the inner surface of the cranial bones, forming their internal periosteum. The adhesion is particularly close at the base of the skull, and at the several sutures, and at the margins of the

openings, as of the foramen magnum, the foramen ovale, and foramen lacerum posterius. It may be split into two layers, which at certain points separate and leave interspaces named *sinuses*, which are filled with venous blood. From its inner surface processes are given off, which form the *falx cerebri*, *falx cerebelli*, *tentorium cerebelli*, and a fold to enclose the pituitary body. It receives blood from the *meningeal arteries*, and nerve filaments from the fifth and twelfth cranial nerves, and from the sympathetic nerve.

**D. mater of spinal cord.** (*G. harte Rückenmarkshaut*.) The portion of the dura mater which surrounds the spinal cord. It differs from the *D. mater of brain*, of which it is a prolongation, in forming a loose sheath round the cord, which is not adherent to the bones. The bones have an independent periosteum. The space between the wall of the vertebral canal and the dura mater contains loose fat, areolar tissue, and a plexus of spinal veins; opposite each intervertebral foramen it presents two openings for the roots of the spinal nerves. The spinal dura mater blends with the sheath of the nerves. Its inner and outer surfaces are lined with epithelial cells, as the *D. mater of brain*.

**D. mater testis.** (*L. testis*, the testicle.) The *Tunica albuginea*.

**D. mater, veins of.** The veins of the dura mater accompany the corresponding arteries, and probably discharge themselves into the sinuses; one only, the middle meningeal, has received a name, and joins the internal maxillary vein.

**D. meninx.** (*Μήνιγξ*, a membrane.) The hard membrane; another name for the *D. mater*.

**Duramen.** (*L. duramen*, hardness. *F. cœur du bois*; *G. Kernholz*.) Dutrochet's term for the perfect wood or heart-wood of an exogenous stem; in which the wood cells have become hard-walled and thickened.

**Durande.** A French physician of the end of the eighteenth century.

**D.'s remedy for gall-stones.** Turpentine and sulphuric ether.

**Duration.** (*L. duratus*, part. of *duro*, to last.) Length of time, continuance in time.

**D. of life.** See *Life*, *duration of*.

**D. of pregnancy.** See *Pregnancy*, *duration of*.

**Durenhof.** Russia; in Livonia. A sulphur spring.

**Durheim.** Germany; in Baden. A strong salt water.

**Durian.** The Malay name of the fruit of *Durio zibethinus*.

**Durio.** (*Duryon*, or *Durian*, the Malay name of the tree.) A Genus of the Nat. Order *Sterculiaceæ*.

**D. zibethinus.** (*Arab. zabād*, eivet. *G. Zibethbaum*.) Bears a large fruit, called *Durian*, of unpleasant odour, but agreeable taste.

**Dürkheim.** Germany; in Rhenish Bavaria. A saline spring, 360' above sea level, from seven sources. They contain a considerable quantity of sodium and calcium chloride, with small quantities of iron, iodine, and bromine, and some free carbonic acid. They are used as baths, and also internally, in chronic rheumatism and serofulous conditions. Sool baths are used, and the whey and the grape cures are employed.

**Duro-arachnitis.** A term which has been applied to conjoint inflammation of the dura mater and of the arachnoid.

**Durra.** The name in India for the grain of *Holcus sorghum*.

**Durrwangen.** Germany; in Würtemberg. A sulphur water containing also sodium chloride and carbonate.

**Durtal.** France, Département Maine et Loire, near Angers. A chalybeate spring.

**Durvillea.** (*D'Urville*, a French naturalist.) A Genus of the Nat. Order *Algae*.

**D. utilis.** Bory. (*L. utilis*, useful.) Is used for food by the poorer inhabitants on the West Coast of South America.

**Duskiness.** (*E. dusk*; perhaps from same root as *Sw. duskug*, misty.) A condition of partial darkness, slight lividity of complexion.

**Dusky.** (Same etymon.) Rather dark, somewhat livid.

**Dust.** (*Sax. dust*.) Fine dry powder. Applied to anything of this nature.

**D. fungi.** The fungi of the Class *Myxogastres*.

**D.-lung.** A lung diseased from the inhalation of fine dust, as in many handicrafts. The dust probably finds its way into the interstitial tissue of the lung by means of the leucocytes, which, from the irritation produced by the breathing of the dust, gather in the air cells, and thence by the lymphatics, or through the interstices of the connective tissue, convey the dust particles into the substance of the lung.

**Dust-bag.** A muslin bag, hanging in the mouth of a wide-mouthed bottle, to let only very fine particles pass into the interior.

**Dutch.** (*G. Deutsch*.) Belonging to Holland.

**D. camphor.** See *Camphor*, *Dutch*.

**D. drops.** A common name for the balsam of turpentine; also applied to a preparation made of oil of turpentine, tincture of guaiac spirit of nitric ether, and oils of amber and cloves.

**D. gold.** An alloy of copper and zinc.

**D. liquid.** The chloride of olefant gas, *Ethylene chloride*; also called *D. oil*.

**D. mad'der.** See *Madder*, *Dutch*.

**D. med'lar.** The *Mespilus germanica*.

**D. myrtle.** The *Myrica gale*, or sweet willow.

**D. oil.** The chloride of olefant gas, *Ethylene chloride*; also called *D. liquid*.

**D. rushes.** The *Esquisetum hyemale*. Imported from Holland.

**D. turn'sole.** A term for *Litmus*. See also *Tournesol*.

**Dutchman.** A native of Holland.

**D.'s laud'anum.** The *Murucija ocellata*.

**D.'s pipe.** The *Aristolochia hirsuta*.

**Duthiersia.** A Genus of parasitic worms of the Family *Bothriocephalidae* having large, coral-like suckers. They are found in reptiles.

**Dutray.** (*F. pomme épincuse*; *G. Stechapfel*.) Old name for the *Datura stramonium*, or thorn-apple.

**Dutroa.** Same as *Dutray*.

**Dutrochet, René Jo'achim Henri.** A French physiologist and natural philosopher; born 1776, died 1847.

**Duumvirate.** (*L. duumviri*, a Roman court consisting of two persons.) A government of two. Applied by Van Helmont to the vital principle belonging in common to the stomach and the spleen, and influencing all the organs of the body.

**Duvaua.** A Genus of the Nat. Order *Anacardiaceæ*.

**D. depen'dens**, De Cand. (L. *dependeo*, to hang down.) The *Schinus molle*.

**Duverney, Joseph Guis'chard**. A French physician; born 1648. Date of death unknown.

**D.'s endosmom'eter**. See *Endosmometer*.

**D.'s gland**. A synonym of the *Harderian gland*, which Duverney discovered in 1641.

Also, a synonym of *Bartholin, gland of*.

**Dwale**. (Sax. *dwala*, error. F. *belladonne*; G. *Tollkirsche*, *Tollkraut*, *Wolfskirsche*.) A common name for the *Atropa belladonna*, or deadly nightshade, because its berries cause stupefaction.

**Dwarf**. (Sax. *dweorg*.) Low in stature.

**D. elder**. (F. *Phyble*; G. *Attich*, *Niederholder*, *Zwergholunder*.) The *Sambucus ebulus*.

**D. flag**. The *Iris lacustris*.

**D. male**. (G. *Zwergmännchen*.) A term applied to the small male plant or antheridium of few cells, in which the antherozoids are found, which arises from a zoogonidium developed in connection with the oogonium of the female of *Edogonium* and its allies.

**D. shoots**. The small shoots which occur on many trees in which the internodes are very short; such are the axillary shoots of the larch which occur on an ordinary shoot of the same year, and the flower- and fruit-bearing shoots of the apple tree.

**Dwarfing**. (Same etymon.) The act of making, or becoming, or being short in stature or bulk.

**Dwarfish**. (Same etymon.) Rather short in stature.

**Dyad**. (*Δύας*, the number two.) A pair, a couple.

In Chemistry, an element each atom of which has divalent powers, that is, which requires two monad atoms, or another dyad, for saturation. Also called *D. radicle*.

**D. elements**. See under *Dyad*.

**D. radicle**. (*Radicule*.) See under *Dyad*.

**Dyadic**. (*Δύας*.) Pertaining to the number two, or to a *Dyad*.

**Dychophyia**. See *Dichophyia*.

**Dycle'sium**. See *Diclesium*.

**Dye**. (Sax. *deigan*, to dye; *deig*, colour.) To stain with a colour; a colouring substance.

**D., hair**. See *Hair dye*.

**Dy'enhyl**. Lœvig's term for the group of chemical compounds consisting of acetyl, formyl, and such like.

**Dyer**. (Sax. *deagan*, to dye.) One who dyes or stains materials.

**D.'s al'kanet**. The *Anchusa tinctoria*.

**D.'s ber'berry**. The *Berberis tinctoria*.

**D.'s broom**. (F. *genet des teinturiers*.) The *Genista tinctoria*.

**D.'s green'weed**. The *Genista tinctoria*.

**D.'s mad'der**. The *Rubia tinctorum*.

**D.'s oak**. The *Quercus tinctoria*.

**D.'s roc'ella**. The *Rocella tinctoria*.

**D.'s saffron**. (F. *carthame des teinturiers*; G. *Safflor*, *wilder Saffran*.) The *Carthamus tinctorius*.

**D.'s spir'it**. A solution of chlorides of tin used in calico printing; it is very poisonous.

**D.'s weed**. The *Roseda luteola*.

Also, the *Genista tinctoria*.

**D.'s woad**. The *Isatis tinctoria*.

**Dying**. Participle of the verb to *Die*.

**D., modes of**. See *Death, modes of*.

**Dynactinom'eter**. (*Δύναμις*; *ἀκτίς*, a ray; *μέτρον*, a measure.) An instrument for measuring the intensity of the actinic power in light.

**Dynam**. (*Δύναμις*.) A foot pound, being a unit of work, equal to one pound weight, raised through one foot in one second of time.

**Dynam'eter**. See *Dynamometer*.

**Dynamia**. (*Δύναμις*, power. F. *dynamie*; *Kraft*.) Term for the vital power or strength.

**Dynam'ic**. (*Δυναμικός*, powerful; from *δύναμις*, power. F. *dynamique*; G. *dynamisch*.) Relating to strength or force, or to the forces of nature, or to *Dynamics*.

In Medicine, used in the same sense as *Sthenic*. Lobstein's term for all the morbid phenomena due to an exaggeration of the organic or vital properties of the tissues.

**D. absorption**. (L. *absorbo*, to suck up.) The same as *D., chilling*.

**D. chilling**. The reduction of temperature which occurs when a tube full of gas or vapour is rapidly exhausted; it is owing to the loss of heat in the production of motion.

**D. disease**. Same as *Disease, functional*.

**D. electric'ity**. See *Electricity, dynamic*.

**D. heat'ing**. The increase of temperature which occurs when a gas or vapour is allowed to enter an exhausted tube; it is owing to the development of heat in the collision of the molecules of the gas against the sides of the tube.

**D. murmurs**. See *Murmurs, dynamic*.

**D. radia'tion**. (L. *radius*, a ray.) The same as *D. heating*.

**D. school**. A name given to the school of the Stahlins, or followers of Stahl, in attributing the vital phenomena to the operation of an internal force or power (*δύναμις*) acting for the most part independently of external causes; which power was supposed to be the rational soul.

**D. state**. De Blainville's term for the condition of an organism in reference to its physiological activity.

**D. the'ory**. Kant's theory to explain the nature and mode of origin of matter, which he attributed to the mutual antagonistic action of two motions, attraction and repulsion.

**Dynamical**. (*Δύναμις*.) Same as *Dynamic*.

**D. the'ory of gas'es**. Same as *Gases, kinetic theory of*.

**Dynamic'ity**. (*Δύναμις*.)

**Dynamics**. (*Δύναμις*, power. F. *dynamique*; G. *Dynamik*, die Lehre von der Kraft.) Term for the science of the power or force of bodies in relation to each other.

**D., vital**. See *Vital dynamics*.

**Dynamide**. (*Δύναμις*.) Berzelius's generic term for caloric, light, electricity, and magnetism, in substitution for that of fluid, which had been applied to them.

Also, a term applied by Redtenbachien to a mass formed by a ponderable atom, with a supposed investment of ether; these masses strive to approximate, owing to the attraction of the ponderable atoms to each other, but are kept apart by the repulsive force of the ether atoms to each other.

**Dynamiom'eter**. See *Dynamometer*.

**Dynam'is**. (*Δύναμις*.) A faculty or power of action. Anciently applied to the pro-

perty of the whole substance or essence of a medicine. Galen, *Comm. in Epid.* vi, 5.

**Dynamisation.** (Δύναμις.) A term used by the homeopaths to denote the accession or freeing of active powers produced in a medicine by pounding it or shaking violently the bottle in which it is contained.

**Dynamism.** (Δύναμις.) A term applied to the theory of the origin of disease from change or alteration of vital force.

**Dynamite.** (Δύναμις.) A dilution of nitroglycerine with siliceous earth, charcoal, sand, or other inert matter. It has been used for suicidal purposes, by putting it into the mouth and exploding it. It is poisonous by virtue of the *Nitroglycerin*. The symptoms are headache, colic, burning sensations over the whole body, bloody evacuations, and great stupor. Post-mortem examination shows congestion and ecchymosis of the lungs, brain, and mucous membrane of the stomach.

**Dynamo-electricity.** See *Electro-dynamics*.

**Dynamograph.** (Δύναμις; γράφω, to write.) An instrument which records the evidences of muscular power; consisting of a dynamometer, to which is attached a mode of registration, as in the sphygmograph.

**Dynamology.** (Δύναμις; λόγος, a discourse.) A treatise on forces.

**Dynamometer.** (Δύναμις, power; μέτρον, a measure. F. *dynamomètre*; G. *Kraftmesser*.) A strength measurer; especially applied to an instrument invented by Duchenne for measuring and recording the strength of the muscular grasp of the hand, and to modifications of it. The form ordinarily used (Mathieu's) consists of an elliptical steel spring, within which is attached to one side a graduated semicircle of brass, with which is connected an index which moves in proportion to the movement towards each other of the sides of the ellipse by the pressure of the hand, and thus indicates the power exerted.

**D., Hamilton's.** A long glass tube, attached to a graduated scale, is arranged so as to dip through a tight-fitting cork into a small bottle containing mercury; into the air in the upper part of the bottle a bent tube is passed, to which an indiarubber tube, terminating in a closed indiarubber bulb, is attached. The capacity for, or strength of, muscular contraction is registered on the scale by the rise of the mercury when the ball is grasped by and squeezed in the hand.

**D., Mathieu's.** The instrument described under *Dynamometer*.

**Dynamometric.** (Δύναμις; μέτρον.) Relating to *Dynamometry*.

**D. forceps.** See *Forceps, dynamometric*.

**Dynamopathy.** (Δύναμις; πάθος, suffering.) A synonym of *Homoeopathy*, in reference to the supposed *Dynamisation* of drugs.

**Dynamoscope.** (Δύναμις; σκοπῶ, to look at.) An instrument designed by Collingues; it consists of a stem of cork or steel, 10 to 15 centimeters long, due at one end, and larger at the other, which is hollowed like a thumb to receive one of the finger-ends of the sick person, the narrow end being introduced into the external auditory meatus of the observer. The hollow end may be placed on any plane surface of the body of the patient, but the hand of the observer must not touch the instrument. During an observation the head of the observer should not be

too low, and the subject should assume a position of muscular relaxation. See *Dynamoscopy*.

**Dynamoscopy.** (Δύναμις; σκοπῶ.) A term applied by Collingues to a special form of auscultation by means of the *Dynamoscope*, in order to recognise and appreciate the sound called bruit rotatoire by Lacunée. This bruit can be heard at any part of the body, but most distinctly at the end of the fingers. It is a continuous, hollow rumbling, like to the distant rolling of a heavy carriage, intermixed with more or less of small cracklings. The bruit is said to depend on fibrillary contraction of the muscles. Collingues describes alterations of intensity, of rhythm, and of character in the bruit, but they do not seem to be of diagnostic or practical value.

**Dyne.** (Δύναμις, force.) A term for that unit of force which, acting on a gramme for one second, generates a velocity of one centimeter per second.

**Dyōta.** See *Diota*.

**Dys.** (δύς.) A prefix signifying difficult, evil, bad.

**Dysacōē.** (δύς; ἀκοή, hearing.) Defect or loss of hearing.

**Dysæmia.** (δύς, bad; αἷμα, the blood. F. *dysémie*.) A morbid condition of the blood.

**Dysæmorrhoides.** (F. *dysæmorrhoides*.) The discomfort arising from suppressed hæmorrhoids.

**Dysæsthesia.** (δύς, difficulty; αἴσθησις, a sensation. F. *dysæsthesie*; G. *Unempfindlichkeit*.) A term for dulness of any of the senses, particularly touch; also for perverted sensations, such as numbness, tingling, formication, tinnitus aurium, sparks, fogs, peculiar odours, and the like. Sensation rendered difficult from disease. It is usually employed as synonymous with pain.

Also, and more frequently latterly, used to denote the painfulness of a sensation which in a normal condition is not so. Thus Charcot describes under this term a distressing pain of a vibratory character which radiates up and down from a part of a limb which is touched or to which a cold body is applied; after lasting some minutes a similar pain in the other limb may be felt.

Also, the same as *Anæsthesia*.

**D. audito-ria.** (L. *audio*, to hear.) Deafness.

**D. gusto-ria.** (L. *gusto*, to taste.) Loss or deprivation of taste.

**D. interna.** (L. *internus*, within.) Loss of memory.

**D. olfacto-ria.** (L. *olfacto*, to smell at.) Loss of smell.

**D. visua-lis.** (L. *visualis*, relating to sight.) Loss of sight.

**Dysæsthesiæ.** (δύς; αἴσθησις.) An Order of the Class *Locales*, of Cullen's Nosology. Diseases of the senses.

**Dysæsthesis.** Same as *Dysæsthesia*.  
**Dysalthes.** (δυσάλθης, from δύς; ἀλθαίω, to heal.) Difficult of cure.

**Dysanagogos.** (δυσανάγωγος, from δύς; ἀναγωγῆ, a bringing up.) Hard to expectorate.

**Dysanarrhophesis.** (δύς; ἀναρρόφωσις, a gulping down again.) A morbid difficulty of absorption.

**Dysaphe.** (δύς, bad; ἀφή, touch. F. *dysaphe*; G. *krankhaftes Gefühl*.) A morbid sensation of touch.

**Dysapocatas'tasis.** (Δύς; ἀποκατάστασις, complete restoration.) A feeling of morbid discontent with restlessness of mind.

**Dysaponotocy.** (Δύς; ἀπονός, without pain; τόκος, a bringing forth.) Difficult labour free from pain. (Littre and Robin.)

**Dysapulo'tous.** (Δύς; ἀπουλώ, to make to scar over.) Healing with difficulty.

**Dysapul'ous.** Same as *Dysapulo'tous*.

**Dysar'thria.** (Δύς; ἄρθρον, a joint. G. Sprachstörungen.) Defect of articulate speech, derangement of speech in regard to articulation.

**D., ba'sal bulbar.** (Bulb.) Defective speech from disease or disorder of the motor nuclei of the medulla oblongata or bulb, from which result wasting and paralysis of the speech muscles.

**D., ba'sal kinesod'ic.** (Βάσις, a base; κίνησις, motion; ὁδός, a way.) Defective speech from defect or disorder of those nerve fibres of the pons Varolii which serve to transmit the cerebral influence to the nuclei of the medulla oblongata and the speech muscles.

**D., cen'tro hemispher'ic.** (Κέντρον, a centre; ἡμι, half; σφαῖρα, a globe.) Defective speech produced by disease or disorder of the conducting fibres of the central part of the cerebral hemisphere.

**D., cortical.** (L. cortex, rind.) Defect of articulate speech, the result of derangement of the cortical surface of the brain as far as it influences the mechanism of speech.

**D. liter'a'lis.** (L. litera, a letter.) Derangement of the speech from defective pronunciation of some letter or letters.

**D. syllaba'ris.** (L. syllaba, a syllable.) Defective speech from difficulty of articulating a syllable, the first sound of which is repeated many times before the next sound can be accomplished; stuttering.

**Dysarthrit'is.** (Δύς; ἀρθρίτις, gout. F. dysarthrite.) Anomalous arthritis, or gout, when it is difficult of development and is of long duration.

**Dysarthro'sis.** (Δύς; ἀρθρωσις, a jointing.) A faulty formation of a joint.

Also, a congenital dislocation.

Also, a disorder of the speech.

**Dysblen'nia.** (Δύς; bad; βέννα, mucus. F. dysblennie.) A morbid formation and bad condition of the mucus.

**Dysbul'ia.** (Δύς; βούλομαι, to will. G. Willenskrankheit.) Difficulty in the exercise of the will.

**Dyscardioner'via.** (Δύς; καρδία, the heart; νέρυον, a nerve.) Piorry's term for *Cardiodysneuria*.

**Dyscatabro'sis.** (Δύς; κατάβρωσις, an eating up. F. dyscatabrose.) Old term for difficult deglutition, from whatever cause.

**Dyscatapo'sis.** (Δύς; κατάποσις, a swallowing down. F. dyscatapose; G. das erschwerte Trinken.) Difficulty of swallowing; especially applied to fluids.

**Dyscatapoti'a.** (Δύς; κατάποσις.) Mead's term for *Hydrophobia*, from the great difficulty of swallowing water.

**Dyschez'ia.** (Δύς, difficult; χέζω, to ease oneself. F. and G. dyschezie.) A difficult and painful evacuation of the feces.

**Dyschimo'sis.** See *Dyschymosis*.

**Dyscholia.** (Δύς; χολή, bile.) A morbid condition of the bile.

**Dyschrœ'a.** Same as *Dyschroia*.

**Dyschro'ia.** (Δύς, bad; χροιά, colour of the skin. F. dyschrie; G. Dyschroie.) Morbid discoloration of the skin.

**Dyschro'ic.** (Δύς; χροιά.) Relating to or having a bad coloured skin.

**Dyschro'ma.** (Δύς; χρώμα, the complexion.) Discoloration of the skin.

**Dyschroma'sia.** (Δύς; χρώμα, the complexion.) Same as *Dyschroia*.

The term has also been erroneously used for *Dyschromatopsia*.

**Dyschroma'siæ.** (Δύς; χρώμα. G. Missfärbungen.) The more or less uniform alterations or discolorations of the skin which occur in disease, such as the waxy paleness of chlorosis, the yellowness of jaundice, and the blueness of cyanosis.

**Dyschromatoder'ma.** (Δύς; χρώμα; ἐρμα, the skin.) Discoloration of the skin.

**Dyschro'matope.** (Δύς; χρώμα; ὄψις, sight.) One who is the subject of *Dyschromatopsia*.

**Dyschro'matop'sia.** (Δύς; χρώμα; ὄψις, sight.) Difficulty of distinguishing colours.

**D., chromatic.** (Χρώμα, colour.) The form in which some of the colours can be distinguished, but not the various shades.

**D., dichromat'ic.** (Δίς, twice; χρώμα.) The form in which two colours only are perceived, all clear tints being seen white, and all coloured tints black.

**Dyschrō'matous.** (Δύς; χρώμα.) Having a bad colour.

**D. dermatō'ses.** (Δέρμα, the skin.) Alibert's term for skin diseases characterised by change of colour.

**Dyschro'os.** (Δύς; χροός, colour of the skin.) Same as *Dyschroie*.

**Dyschylag'ogia.** (Δύς; bad; χυλός, juice, chyle, ἄγω, to lead. F. dyschylagogue.) A wrong direction of the chyle, as through the kidneys.

**Dyschyl'ia.** (Δύς; χυλός. F. Dyschylie.) A morbid condition of the chyle.

**Dyschym'ia.** (Δύς; bad; χυμός, juice, chyme. F. dyschymie.) A bad condition or faulty formation of chyme.

**Dyschymō'ma.** (Δύς; χυμός. F. dyschymome; G. Sufterverdorbenheit.) The corruption of the chyme.

**Dyschymō'sis.** (Δύς; χυμός.) Same as *Dyschymia*.

**Dyschymous.** (Δύς; χυμός.) Having bad chyme; having bad juices.

**Dyscine'ses.** (Δύς; κίνησις, movement.) An Order of the Class *Locales*, of Cullen's Nosology; being the disorders of motion.

**Dyscine'sia.** (Δύς; κίνησις, movement. F. dyscinésie; G. Schwerbeweglichkeit, Steifigkeit.) Term for a diminution or deprivation of the power of voluntary motion.

**D., u'terine.** (L. uterus, the womb.) Graily Hewett's term for inability to walk or move, or perform certain of the ordinary motions of the body, without producing pain referable to the uterus, and situated in the sacral region or the groin; it is, he says, a common symptom of flexion or distortion of the uterus.

**Dyscœ'lia.** (Δύς; κοιλία, the belly.) Difficulty and indolence in the performance of the functions of the abdominal viscera, such as want of appetite, and constipation.

**Dyscœ'lious.** (Δύς; κοιλία.) Having

the abdominal functions indolent and the bowels constipated.

**Dyscopho'sis.** (Δυσκοφός, stone-deaf.) Great deafness.

**Dyscopria.** (Δύς; κόπρος, dung. F. *dyscoprie*.) A bad condition of the feces.

**Dyscrasia.** (Δυσκρασία, bad tempera- ment; from δύς; κράσις, a mixing, combination. F. *dyscrasie*.) A faulty state of the constitution, or of the fluids, in olden medical language. Lately restricted to a supposed morbid condition of the blood. In recent times generally used to denote a faulty condition of the blood from the presence of some general disease.

**D. hæmorrhagica.** (Διμορραγικός, liable to hæmorrhage.) A morbid condition of blood, formerly supposed to conduce to the formation of piles.

**D. herpetica.** (Περπες.) The morbid state of the blood and juices, formerly supposed to be an antecedent condition of all or most skin diseases.

**D., mala'rious.** The bad condition of body and state of ill-health resulting from continued exposure to the noxious influence of *Malaria*.

**D. potatorum.** (L. *potator*, a drinker.) The unhealthy condition of body produced by the excessive use of alcohol. See *Alcoholism*.

**D., primary.** (L. *primus*, first.) A morbid condition of the system which leads to the formation of special diseases.

**D. psorica.** (Ψώρα, the itch.) A morbid condition of blood, formerly supposed to be the predisposing cause of itch.

**D., sanguineous.** (L. *sanguis*, the blood.) A term anciently applied to all morbid conditions of the blood, whether by excess or defect; but lately applied to diminution of the amount of fibrin.

**D. saturnina.** (L. *Saturnus*, an old name of lead.) The morbid state of body produced by chronic lead poisoning.

**D. scrofulosa.** The unhealthy condition of body caused by, or being, *Scrofula*.

**D., secondary.** (L. *secundus*, second.) The morbid habit of body produced by the occurrence of some infective disease, such as cancer or syphilis. Deterioration of the general health, resulting from the presence of effete and morbid products in the system derived from some disease, such as cancerous tumours, syphilis, and the like.

**D., specific.** (L. *specificus*, particular.) The incubation stage of an acute infectious disorder.

**D. tuberculo'sa.** The morbid condition of body resulting in *Tuberculosis*.

**Dyscrasiacum.** (Δύς; κράσις.) A medicine which produces a dyscratic condition of the body; such as iodine in long-continued, large doses.

**Dyscrasie.** (Δύς; κράσις.) Relating to, or having the characters of, *Dyscrasia*.

**D. inflammation.** See *Inflammation*, *dyscrasie*.

**Dyscrasy.** Same as *Dyscrasia*.

**D., bilious.** A term for jaundice.

**Dyscratic.** (Δύς; κράσις.) Relating to *Dyscrasia*.

**Dyscritous.** (Δύσκριτος, hard to deter- mine; from δύς; κρίνω, to pick out.) Difficult of determination or of diagnosis.

**Dysdacrya.** (Δύς; δάκρυ, a tear.) A morbid condition of the tears.

**Dysdacryo'sis.** (Δύς; δάκρυ, a tear.) A morbid condition of the tears.

**Dysdiachore'sis.** (Δύς; διαχώρησις, excrement; from διαχωρίζω, to go through.) A slow and difficult passage of the food through the alimentary canal.

Also, Hagen's term for the form of rheumatism which makes walking difficult.

**Dysdipleura.** The term *dipleura* is employed by Hæckel to designate the funda- mental form or plan on which all the higher classes of animals, such as Vertebrata, Arthro- poda, and Mollusca, are constructed. He divides them into *Endipleura* and *Dysdipleura*. The latter includes asymmetrical forms of animals, in which the two antimeres are developed unequally, one becoming superior, the other inferior, as regards the horizontal plane. Examples are seen in *Pleuronectis* and in the spiral coiling of the body of the snail.

**Dysdynamia.** (Δύς, a prefix meaning bad; δύναμις, power. F. and G. *dysdynamie*.) An abnormal quality of animal power.

**Dysecc'risis.** (Δύς; έκκρισις, secretion.) Difficult or deficient excretion of a critical secre- tion.

**Dyseco'ia.** (Δυσεκκοία; from δύς, diffi- cult; άκον, hearing. F. *dysecoie*, *dysecoie*; G. *Schwerhören*.) Diminished hearing; deafness. A Genus of the Order *Dysæsthesie*, Class *Locales*, of Cullen's Nosology. Organic dysecoia arises from wax in the meatus, injuries of the mem- brana tympani, or inflammation and obstruction of the auditory tube.

**D. atonica.** (Άτονος, not stretched, languid.) Dulness of hearing from weakness of body or structure.

**Dysecpneusis.** (Δύς, bad; έκπνευσίς, a breathing out. F. *dysecpneusis*; G. *die krank- hafte Ausathmung*.) Difficulty of expiration.

**Dysecpno'a.** (Δύς; έκπνέω, to breathe out.) Difficulty of expiration.

**Dysel'cia.** (Δύς, bad; έλκος, an ulcer. F. *dyseleie*.) Difficulty in healing of an ulcer.

Also, a malignant condition of an ulcer or an abscess.

**Dysembol'isis.** (Δύς; ιμβάλλω, to throw in.) Difficulty in the administration of an injection.

**Dysem'esis.** (Δύς; έμεσις, vomiting.) Urgent and difficult vomiting.

**Dysenteria.** See *Dysentery*.

**D. æquinoctialis.** (L. *æquinoctialis*, pertaining to the time of equal day and night.) The ordinary dysentery of the tropics.

**D. alba.** (L. *albus*, white.) Simple dys- entery in which the evacuations do not contain blood, but consist chiefly of a transparent mucus.

**D. bilio'sa.** Same as *Dysentery*, *bilious*.

**D. carno'sa.** (L. *carnosus*, fleshy.) Dy- sentery accompanied by the dejection of small masses of a fleshy or sebaceous matter.

**D. castræ'nis.** (L. *castrum*, a camp.) Dysentery occurring among troops.

**D. cruen'ta.** (L. *cruentus*, bloody.) Dy- sentery in which blood is passed.

**D. epidem'ica.** (Έπιδήμιος, prevalent among a people.) Ordinary dysentery.

**D. hæmate'ra.** (Αιματηρός, bloody.) Dysentery when there is blood in the evacua- tions.

**D. hepatica.** (Ηπατικός, suffering in the liver.) A synonym of *Hæpatorrhæa*.

**D. inflammato'ria.** Same as *Dysentery*, acute.

**D. intermittens.** (L. *intermittens*, placed apart.) Dysentery accompanied by intermittent fever.

**D. maligna.** (L. *malignus*, of an evil nature.) See *Dysentery*, malignant.

**D. milia'ris.** (L. *milium*, millet.) Dysentery accompanied with the milary fever.

**D. putrida.** (L. *putridus*, rotten.) Same as *Dysentery*, malignant.

**D. pyretica.** (Πυρεκτικός, feverish.) Sydenham's term for a variety of acute dysentery described by Good as marked by frequent stools, in every way diversified both in colour and consistency, severe pain in the abdomen, and considerable fever, mostly a synochus.

**D. scorbu'tica.** See *Dysentery*, scorbutic.

**D. seve'ra.** (L. *severus*, harsh, severe.) A synonym of *Dysentery*, asthenic.

**D. splen'ica.** (Σπλίη, the spleen.) A synonym of *Melena* depending on splenic disease.

**D. typho'des.** See *Dysentery*, typhoid.

**D. vermino'sa.** (L. *verminosus*, full of worms.) Dysentery accompanied by intestinal worms.

**Dysenter'ic.** (Δυσεντερία. G. *ruhrartig*.) Relating to *Dysentery*.

**D. casts.** See *Dysentery*, exuviae of.

**D. diarrhoe'a.** See *Diarrhoea*, dysenteric.

**D. fever.** The same as *Dysentery* pyretica.

**D. synovi'tis.** See *Synovitis*, dysenteric.

**Dysenter'icoid.** (Δυσεντερία, dysentery; εἶδος, likeness.) Like unto *Dysentery*.

**Dysenteris'chesis.** (Δυσεντερία, dysentery; σχίσσις, a checking. F. *dysentérischèse*; G. *Verhaltung der Ruhrgänge*.) Term for a stoppage of the dysenteric discharge.

**Dysenter'ium.** (Δυσεντερίον.) Same as *Dysentery*.

**Dysenteroner'via.** (Δύς, a prefix signifying evil; εντέρον, an intestine; νεύρον, a nerve.) A term for colic.

**D. saturni'na.** (L. *Saturnus*, an old name of lead.) Lead colic.

**Dysenteroporphyr'otyphus.** (Δυσεντερία, dysentery; πορφύρεος, purple, dark; typhus fever. G. *Scharlachtyphus mit Durchfall*.) Petechial typhus fever with dysentery.

**Dysentery.** (Δυσεντερία; from δύς, difficulty; εντέρον, a bowel. F. *dysentérie*; I. *disenteria*; G. *Darmfaule, Ruhr*.) A disease especially prevalent in tropical climates, where it is endemic, or almost epidemic, characterised by inflammation of the solitary glands and the Lieberkühnian follicles of the large intestine; and accompanied by tormina, followed by straining and scanty mucous and bloody stools, containing little or no faecal matters, and attended by febrile disturbance. It is prevalent wherever malarious fever prevails; and among the exciting causes are the drinking of polluted water, the eating of unwholesome food, and the too free use of alcoholic liquors, exposure to vicissitudes of temperature, and sleeping on the ground with insufficient protection or in marshy districts. It is not generally believed to be contagious, although few deny that the disorder may be propagated by the excreta, especially when patients are closely crowded.

Post-mortem examination shows the mucous membrane of the large intestine, and sometimes of the lower part of the ileum, to be intensely congested and thickened with inflammatory exudation. The solitary glands are distended with a gelatinous mucus, and burst into the canal of the intestine, or more rarely into the connective tissue; from this, ulceration commences. The surface becomes covered with a thin opaque granular film, which, if removed, brings with it casts of the Lieberkühnian follicles; sloughs form, and deep ulcers, that may remain open for months or years; hæmorrhage is of almost constant occurrence; perforation is occasionally observed, and, when cicatrization takes place, stricture often results; as complications, enlargement of the lymphatic glands, congestion of the liver, spleen, kidney, and lungs, and hepatic abscess are met with.

**D., acu'te.** (L. *acutus*, sharp.) Dysentery commencing with a chill or rigor, and characterised by tormina, tenesmus, mucous or bloody stools, and a sense of heat or pain in the colon and rectum, with tenderness on pressure, and symptomatic fever; the nervous, circulating and muscular functions not indicating depression till late in the disease.

**D., adynam'ic.** (Α, neg.; δύναμις, power.) Same as *D., asthenic*.

**D., asthen'ic.** (Ασθενής, weak.) Dysentery characterised by depression of the organic actions, of the tone of the circulating nervous and muscular functions, preceeding or accompanying the occurrence of tormina and tenesmus, with mucous, bloody, and offensive stools, and giving rise to fetid exhalations, and infection in confined places and predisposed persons.

**D., atax'ic.** (Ἀταξία, disorder.) The same as *D., malignant*.

**D., benign.** (L. *benignus*, kind.) Term applied by Vignes to the purely inflammatory form of dysentery, such as the mucous and bilious.

**D., bil'ious.** (L. *bilis*, bile.) The form when the stools contain much bile of a greenish or yellowish colour, the tongue is furred, there is a bitter taste in the mouth, and nausea.

**D., bil'ious adynam'ic.** (Ἀδυναμία, want of strength.) A form of dysentery occurring sporadically in temperate and endemically in hot climates, commencing with bilious or serous diarrhoea, frontal pain, mucous yellow coating on the tongue, and chills, and apt to run into the malignant form.

**D., catarr'h'al.** (Κατάρροος.) The form of ordinary dysentery in which there is little blood and no malarious contamination.

**D., chol'er'iform.** (Cholera; L. *forma*, likeness.) A form of dysentery with rice-water evacuations like those of cholera.

**D., chron'ic.** (Χρονικός, relating to time.) A long-lasting form which sometimes follows an acute attack, especially in persons originally feeble or weakened by malarious disease. In these cases the ulcers are often extensive and long in healing; atrophy of the mucous coat may occur, and abscesses of the liver may result.

**D., conta'gious.** A term for *D., epidemic*, by those who believe in its contagiousness.

**D., diphtherit'ic.** (Διφθερία, a piece of leather.) The form of severe dysentery in which fibrinous exudations, or diphtheritic casts as they are called, are voided with the stools.

**D., epidem'ic.** (Ἐπιδημιος, prevalent among a people.) The common form of dysentery in tropical and malarious climates. Dysentery sometimes becomes epidemic in temperate climates.

**D., erysipelatous.** The form in which there is extensive inflammation and infiltration of the mucous membrane.

**D., exuvie of.** The substances cast off from the bowel in dysentery; they are best examined by washing the evacuations with water so as to remove the fecal matter. Aitken gives the following list and their indications: Ecchymosed sloughs which indicate abraded or minute ulcers; compact grey or light-yellow sloughs indicating acute phlegmonous dysentery; thick pus-infiltrated mucus indicating erysipelatous dysentery; ragged sloughs denoting gangrene; dark olive sloughs denoting secondary gangrene of the mucous coat; thin, black, plain, or tubular sloughs denoting primary gangrene of the mucous coat; shreddy sloughs denoting gangrene in either the mucous or the cellular coat; molecular substance or putridity indicating disintegration of tissue; flaky epithelial sloughs denoting commencing gangrene of the mucous membrane; shaggy sloughs indicating violent inflammatory action; free, filamentous, simple sloughs denoting primary gangrene in the submucous tissue; free, filamentous, pus-infiltrated sloughs denoting submucous cellulitis; ring-shaped sloughs denoting ring-shaped ulceration of the mucous folds; and discoid sloughs indicating circular ulcers in ecchymosed patches.

**D., hepatic.** (Ἡπαρ, the liver.) Dysentery complicated with inflammatory disease of the liver which precedes it; this form is frequently epidemic, and is produced by endemic causes.

**D., inflam'matory.** The same as *D., acute*.

**D., intermit tent.** (L. *intermitto*, to make to go apart.) Dysentery in which the accompanying fever assumes an intermittent character, becoming quotidian, tertian, or other.

**D., mala'rious.** Dysentery accompanied by the symptoms characteristic of malarious fevers. In this form liver complications are common.

**D., malig'nant.** (L. *maligno*, to do maliciously.) Term applied by Vignes to the typhoid, adynamic, ataxic, and complicated forms of dysentery. Forms that are common in the track of war and in overcrowded localities. The mental powers are greatly depressed, breath fetid, dark sordes on lips, stools cadaverous, thin, and bloody; the soft solids faecid. Skin of dirty hue, patient rapidly becoming apathetic, but not delirious, or passing into stupor, till shortly before death.

**D., mite of.** The *Acarus dysentericus*.

**D., mu'cous.** (Mucus.) Same as *D., acute*, when the attack is not very severe, and there is no blood in the motions.

**D., nervo-adynam'ic.** (Νεύρον, a nerve; ἀδυναμία, want of strength.) The same as *D., typhoid*.

**D., non-conta'gious.** A term for *D., sporadic*, in contradistinction to *D., epidemic*, which was believed to be contagious.

**D., pitui'tous.** (L. *pituita*, mucus.) The same as *D., mucous*.

**D., pu'rulent.** (L. *purulentus*, mattery.) A term for the disease called *Serpingos*.

**D., pu'trid.** The same as *D., malignant*.

**D., remittent.** (L. *remitto*, to send back.) The form accompanied by symptoms of remittent fever.

**D., rheumat'ic.** Dysentery in which there is rheumatic inflammation of one or more joints, with synovial effusion passing from one to another, and interchanging with pleurodynia and catarrh of bronchial mucous membrane. The abdominal pains and tenesmus are severe.

**D., scorbu'tic.** (Scorbutus.) Dysentery, complicated with scurvy, commonly seen in sailors in long expeditions when insufficiently provided with lime juice or other antiscorbutic remedies.

**D., sim'ple.** The same as *D., sthenic*.

**D., sporad'ic.** (Σποραδικός, scattered.) Dysentery occurring in scattered cases in a community, which do not appear to have a common cause of origin. As a rule, this is not a very fatal disorder.

**D., sthen'ic.** The same as *D., acute*.

**D., typhoid.** (Typhus; εἶδος, likeness.) A form of asthenic dysentery occurring in poor and overcrowded localities, characterised by headache and vertigo, muscular pains, præcordial anxiety, stupor, dry and brown tongue, thirst, weak, quick, and irregular pulse, stools scanty, with much tenesmus, urine scanty, petechie on skin, with death from the 6th to the 24th day if unrelieved.

**Dysepulot'icus.** (Δύς, difficulty; ἵπνον-λῶα, to eructate. F. *dysépulotique*.) Difficult to be healed; (Gr. δυσπεπώλωτος), applied to ulcers, malignant or not, Galen, de C. M. per Gen. i, 18.

**Dysepulo'tous.** Same as *Dysepulot'icus*.

**Dyserethis'ia.** (Δύς; ἐρεθίζω, to excite.) Defective irritability or sensibility.

**Dysgalac'tia.** (Δύς; γάλα, milk.) A defective condition or difficult secretion of the milk.

**Dysga'lia.** See *Dysgalactia*.

**Dysgastroner'via.** See *Gastrodys-neuria*.

**Dysgene'sia.** (Δύς, bad; γένεσις, generation. F. *dysgenesis*.) A morbid condition of the generative faculty or organs.

**Dysgen'esis.** (Δύς; γένεσις.) Broca's term for a form of homogenesis in which the hybrids are sterile among themselves, but are capable of propagating with individuals of either parental race, their products, named *metis de second sang*, being sometimes sterile, so that they cannot form a new race.

**Dysgeu'sia.** (Δύς, bad; γεύσις, taste. F. *dysgeusie*; G. der krankhafte Geschmack.) Morbid or depraved taste.

**Dysgeus'tia.** Same as *Dysgeusia*.

**Dysgram'matical.** (Δύς; γραμματικός, versed in one's letters.) Not according to grammar.

**D. speech dera'ngements.** Grammatical faults of speech arising from disease.

**Dysgraph'ia.** (Δύς; γράφω, to write.) Vice of configuration of an organ. (Littre and Robin.)

**Dyshæ'mia.** (Δύς; αἷμα, blood.) A morbid condition of the blood.

**Dyshæmorrhœ'a.** (Δύς, difficulty; αἰμορροῖς, the piles. F. *dys hæmorrhée*.) The morbid conditions arising from the suppression of the hæmorrhage from piles.

**Dyshæmorrhöis.** Same as *Dyshæmorrhœa*.

**Dyshaphia.** See *Dysaphe*.

**Dysharmonia.** (Δύς; ἀρμονία, harmony.) Want of harmony.

**D., functional.** (L. *functio*, a performing.) Disturbance of the functions of an organ, itself free from lesion, in consequence of a morbid condition affecting another organ having some intimate anatomical or physiological connection with it.

**Dyshidrosis.** (Δύς; ἰδρῶς, sweat.) A disease of the sweat follicles, according to Tilbury Fox, characterised by the appearance of vesicles like boiled sago grains in the substance of the skin, which at first contain acid sweat and then an alkaline fluid, and are situated between the fingers and on the palms of the hands. They may dry up, or may form bulbs, or the macerated cuticle may peel off and leave a red non-discharging surface.

**Dysialia.** See *Dyssialia*.

**Dysiatous.** (Δυσίατος.) Hard to cure or heal.

**Dysidria.** (Δύς, bad; ἰδρῶς, sweat. F. *dysidrie*; G. *ein krankhafter Schweiss*.) A morbid condition of the sweat.

**Dysidrosis.** See *Dyshidrosis*.

**Dysidrous.** (Δυσιδρῶς, hardly perspiring.) Perspiring little or with difficulty.

**Dyskinesia.** See *Dyscinesia*.

**Dysla'lia.** (Δύς, difficulty; λαλία, speech. F. *dyslabie*; G. *der erschwerte Sprechen*.) Old term for difficult or indistinct articulation.

In modern medical language the term is confined to those defects of speech which are caused by organic changes in the external apparatus of speech, the muscles and the motor nerves, or other mechanism.

**D. dentalis.** (L. *dens*, a tooth.) Defect of speech produced by deficiency or malposition of the teeth.

**D. labia'lis.** (L. *labia*, the lip.) Defective speech from imperfection of the lip, such as a hare-lip.

**D. larynge'a.** (Λάρυγξ, the larynx.) Defective speech from disease or disorder of some part of the larynx.

**D. lingualis.** (L. *lingua*, the tongue.) Imperfect speech caused by congenital or acquired defect or absence of the tongue.

**D., mechanical.** Imperfect speech depending upon defects of the external apparatus of articulation.

**D. nasalis.** (L. *nasalis*, belonging to the nose.) Defective speech arising from imperfect closure or opening of the posterior nares at the proper time. Called by Kussmaul *Rhinolalia*.

**D. palatina.** (L. *palatum*, the palate.) The form of *D. nasalis*, or *Rhinolalia*, which is caused by defective action of the soft palate.

**Dysloch'ia.** (Δύς, difficulty; λοχεία, the discharge consequent on child-birth. F. *dysloch'ie*; G. *die fehlerhafte Kindbettreinigung*.) Term for the partial or total suppression of the lochial discharge.

**Dyslog'ia.** (Δύς; λόγος, a word.) A defect of speech in which the individual words are correctly formed, but are so put together as to express a disturbance of thought.

**Dyslog'ical.** (Δύς; λόγος.) Relating to *Dyslogia*.

**D. paraph'ia.** See *Paraphasia*, *dyslogical*.

**Dys'lysin.** (Δύσλυτος, that which can scarcely be dissolved.)  $C_{24}H_{36}O_8$ . A whitish or yellowish powder obtained by boiling cholic acid with hydrochloric acid, and purified by dissolving in ether and precipitating with alcohol. It fuses at  $140^{\circ} C.$  ( $284^{\circ} F.$ ), is insoluble in water and in alcohol, soluble in ether. It is produced when choloidic acid is heated to  $300^{\circ} C.$  ( $572^{\circ} F.$ )

**Dysmase'sis.** (Δύς, bad; μάσησις, a chewing. F. *dysmasése*.) Difficult mastication.

**Dysmen'ia.** Same as *Dysmenorrhœa*.

**Dysmenorrhœ'a.** (Δύς, difficulty; μῆν, a month; ροία, a flow. F. *dysménie*, *dysmenorrhée*; G. *Dysmenie*, *Dysmenorrhœe*, *Menstrualkolik*.) Difficult and painful menstruation.

The term was formerly applied also to complete suppression of the menstrual discharge.

**D., congestive.** Painful menstruation caused by a condition in which the uterus is large and heavy from too much blood, or from some deposit in its structure, or from subinvolution after pregnancy, or from general plethora.

**D., endometritic.** (*Endometritis*.) The painful menstruation which frequently accompanies endometritis.

**D., inflammatory.** Painful menstruation produced by or accompanying inflammatory thickening of the uterine walls or mucous membrane.

**D., interme'diate.** (L. *intermedius*, that which is in between.) Same as *D., intermenstrual*.

**D., Intermens'trual.** (L. *intermenstruus*, between two months. G. *Mittelschmerz*.) A term applied by Priestly to cases in which pain in one or both ovarian regions commences in the mid-period but ceases before menstruation sets in, and attributed by him to a commencing ovulation-process in an ovary having a thickened peripheral stroma.

**D., mechan'al.** The form which depends either on an obstruction to the menstrual flow at some part of its course, which may be at the os externum, along the canal of the cervix from imperfect development, at the os internum, or in the body from flexure, according to different authors; or on an obstruction caused by altered condition of the menstrual fluid whereby it clots; or on an obstruction produced by shreds of membrane secreted by, or being exfoliations of, the uterine mucous membrane.

**D. membrana'cea.** See *D., membranous*.

**D., mem'branous.** (L. *membrana*, thin skin.) The form of painful menstruation in which a membranous substance, of greater or less size, is discharged along with the menstrual fluid. In a large number of instances the membrane consists of the exfoliated uterine mucous membrane, either entire or in shreds containing glands; in some the membrane appears to be of a fibrinous nature, and in others it may be a tough secretion from the cervix, decolorised fibrinous coagula, or shreds of disintegrating tissue from a cancer.

**D., neural'gic.** (Νεύρον, a nerve; ἄλγος, pain.) Painful menstruation in which no organic mischief or other definite cause can be found.

**D., obstruc'tive.** The same as *D., mechanical*.

**D., ova'rian.** (L. *ovarius*, an egg-keeper.) Painful menstruation connected with difficulties about ovulation. It is accompanied by pain and

tenderness in one or both iliac regions, where, and also from the vagina and rectum, the ovary may be felt enlarged and tender; sometimes the uterus leans to the affected side, and generally there are hysterical symptoms.

**D., sympathetic.** (Συμπαθητικός, affected by like feelings.) Same as *D. neuralgic*.

**D., tubal.** (L. *tuba*, a tube.) Painful menstruation from narrowing or obstruction of the Fallopian tube.

**D., uterine.** (L. *uterus*, the womb.) Painful menstruation caused by some disturbance of the natural conditions of the womb, such as inflammation of its lining membrane, narrowing of the cervix, or flexure of the body.

**Dysmenorrhœa.** Relating to *Dysmenorrhœa*.

**D. membrane.** See under *Dysmenorrhœa*, *membranous*.

**Dysmenorrhœic.** (Same etymon.) Relating to *Dysmenorrhœa*.

**Dysmnœsia.** (Δύς, prefix meaning bad; μνήσις, of memory. G. *Gedächtnisschwäche*.) Weakness or defect of memory.

**Dysmorphê.** Same as *Dysmorphia*.

**Dysmorphia.** (Δύς; μορφή, form. F. *dysmorphie*; G. *Missgestaltung*.) A misshaping.

**Dysmorphoma.** (Δύς; μορφή. F. *dysmorphome*; G. *Missgestalt*.) A monstrosity.

**Dysmorphosis.** (Δύς; μορφή.) The formation of *Dysmorphoma*.

**Dysmorphosteopalinklast.** (Δύς; μορφή, form; ὀστέον, a bone; πάλιν, again; κάλω, to break.) A term for an apparatus used to break through the ossified callus of a crookedly-united fractured bone, so that the limb may be restored to its straight condition.

**Dysmorphosteopalinklasty.** (Same etymon.) The use of the *Dysmorphosteopalinklast*.

**Dysmorphous.** (Δύς; μορφή. G. *missgestaltet, ungestaltet, hässlich*.) Misformed, misshapen.

**Dysnephrouria.** See *Nephrouria*.

**Dysneuria.** (Δύς, a prefix meaning bad; νῆρον, a nerve. F. *dysneurie*.) A failing condition of the senses, weakness of mind.

**Dysnusia.** (Δύς; νοῦς, mind. G. *Verstandsschwäche*.) Weakness of mind.

**Dysodes.** (Δυσώδης, from δύς, bad; ὄζω, to smell.) Smelling badly; fetid. Old term applied by Hippocrates, *Aph.* iv. 47; *Coac. Prænot.* 7, 292, to a fetid disorder of the small intestines, according to Fœsius. (Quincy.)

An old epithet of a malagma for a pleurisy, according to Galen. (Hooper.)

Also, applied to a certain aceton, by Paulus Ægineta, vii, 19, Dr. Adams's Transl. vol. iii, p. 581.

**Dysodia.** (Δύς; ὀζω, to smell. F. *dysodie*; G. *abler Geruch, Gestank*.) Term (Gr. *δυσωδία*), used by Hippocrates, *Coac. Prænot.* 406, for a bad smell or stench; factor.

Applied by Sauvages and others, as the name of a genus of diseases, including those characterized by factor.

Also, any fetid exhalation from the body, such as bad-smelling breath, offensive eructations, factor of the sweat, and such like.

**Dysodmia.** (Δυσωδμία, an evil smell.) Same as *Dysodia*.

**Dysodontiasis.** (Δύς, difficult; ὀδον-

τίας, dentition. F. *dysodontiasis*; G. *das schwere Zahnen*.) A term for difficult dentition.

**Dysodynia.** (Δύς; ὀδύνη, pain.) Nägel's term for difficulty and ineffectiveness of labour pain.

**Dysodœœa.** See *Dysœœa*.

**Dysoneiros.** (Δυσονειρος; from δύς; ὄνειρος, a dream.) Having bad dreams.

**Dysootœia.** (Δύς, prefix meaning with difficulty; ὠοτοκίω, to lay eggs; from ὠόν, an egg; τόκος, a bringing forth.) Barnes's term for difficult and painful ovulation by the ovary, as distinguished from the coincident or sequent painful condition of menstruation attributable to the uterus.

**Dysophylla.** A Genus of the Nat. Order *Labiata*.

**D. auricularia.** Blum. (L. *auricula*, the outer ear.) Hab. Hindostan. Used as a stimulating application in deafness.

**Dysopia.** (Δυσωπία.) Shamefacedness, shyness.

Also (δύς, prefix meaning bad; ὤψ, the eye), the same as *Dypsopia*.

**D. dissitorum.** (L. *dissitus*, lying apart.) A synonym of *Myopia*.

**D. proximorum.** (L. *proximus*, the nearest.) A term for *Presbyopia*.

**Dysopsia.** (Δύς; ὄψις, vision. F. *dysopsie*; G. *Gesichtsfehler*.) Term for painful or defective vision; bad sight. A Genus of the Order *Dysasthesie*, Class *Locales*, of Cullen's Nosology.

**D. lateralis.** (L. *lateralis*, belonging to the side.) Clear sight only when the object is looked at out of the side of the eye, as when there is a central opacity of the cornea.

**D. luminis.** (L. *lumen*, the light. F. *nyctalopie*; G. *Nachtssehen, Nyktalopie, Tagblindheit*.) A term for day-blindness, or night-sight. See *Nyctalopia*.

**D. tenebrarum.** (L. *tenebræ*, darkness. F. *héméralopie*; G. *Hemeralopie, Nachtblindheit*.) A term for night-blindness, or day-sight. See *Hemeralopia*.

**Dysopsy.** Same as *Dypsopia*.

**Dysorasis.** (Δύς; ὄρασις, seeing. F. *dysorase*; G. *das erschwerte Sehen*.) Difficult or weak sight.

**Dysorexia.** (Δύς; ὄρεξις, appetite. F. *dysorexie*; G. *die verminderte Esslust*.) Term for a depraved appetite. Applied to an Order of the Class *Locales*, of Cullen's Nosology.

The term was formerly used by Blancardus for diminished appetite, as distinguished from *Anorexia*, or abolished appetite.

**Dysorexy.** Same as *Dysorexia*.

**Dysosmia.** (Δύς; ὀσμή, odour. F. *dysosmie*.) A bad or foul odour. The same as *Dysodia*.

Also, enfeeblement of the sense of smell.

**Dysosphra'sia.** Same as *Dysosphresia*.

**Dysosphresia.** (Δύς, bad; ὀσφρησις, the sense of smell. F. *dysosphresie*.) A term for an impaired condition of the sense of smell.

**Dysostosis.** (Δύς; ὀστίον, a bone.) Faulty formation of a bone.

**Dysovariner'via.** Same as *Ovariodysneuria*.

**Dyspareunia.** (Δυσπαρέννιος, ill-mated; from δύς; πάριυνος, a bed-fellow.) Barnes' term for the condition of difficult or painful performance of the sexual function.

**Dyspathes.** (Δυσπαθής, feeling to ex-

# DYSPEPSIA—DYSPEPSIA.

cess, also hardly feeling.) Seriously or severely ill.

Also, taking a disease with difficulty.

**Dyspathia.** (Δύς, difficult; πάθος, disease, or affection.) Old term (Gr. *dysπάθεια*), used by Galen, *de Usu Part.* i, 15, and ii, 7, 8, for indisposition to, or non-susceptibility of, a disease.

Also, a severe disease.

**Dyspepsia.** (Δυσπεψία; from δύς, prefix meaning with difficulty; πέπω, to digest. F. *dyspepsie*; A. *dyspepsia*; G. *Unverdaulichkeit*, *Schwerverdaulichkeit*.) Difficult digestion.

Also (G. *Verdauungsschwäche*), weakness of digestion.

The term is used generally to denote any imperfection in the digestion of food which makes itself known by signs chiefly referable to the stomach, whether the cause be in the nature of the food, or in the performance of the gastric functions.

**D., ac'id.** Indigestion accompanied or caused by an excessive secretion of gastric acid, or by the formation of acid products of digestion; the morbid product is commonly lactic acid.

**D., alcoholic.** (*Alcohol*.) The chronic gastritis produced by excessive drinking of alcoholic liquors shown by a pallid, flabby tongue, morning vomitings and loss of appetite. Ulceration is a not infrequent sequel.

**D., pyretic.** (A. *neg.*; πυρετός, fever.) Same as *D., atonic*.

**D., arthritic.** (Ἀρθρίτις, gout.) Same as *D., gouty*.

**D., asthenic.** (Ασθενικός, weakly.) Same as *D., atonic*.

**D., atonic.** (A. *neg.*; τόνος, tone.) The form of indigestion in which there is no feverishness and little pain, but a sense of epigastric weight and languor after meals, and probably emaciation and weakness.

The term has also been applied to sudden arrest of digestion, as from a nervous shock.

Also, by some used to denote the form of indigestion caused by deficiency of the gastric juice.

**D., bil'ary.** Defective digestion having its origin in deficiency or faulty constitution of the bile; so that the fatty matters may not be rendered possible of absorption, and the chyme and fecal matters may undergo putrefaction.

**D., boulimic.** (Βουλμία, ravenous hunger.) Indigestion accompanied by a frequent craving for food. It is often accompanied by constipation, and occasionally by diarrhoea.

**D., catarrhal, acu'te.** The catarrhal form of *D., gouty*.

**D., chemical.** Indigestion produced by defect of the gastric juice so that the chemical process of solution of the food in the stomach is imperfectly performed; this may arise from absolute deficiency of the hydrochloric or lactic acids, or of the pepsin of the gastric juice, or of the natural secretion of the gastric mucous membrane, or from the presence of abnormal ferments which produce putrefaction.

**D. chlorosis.** A synonym of *Chlorosis* in reference to its supposed origin.

**D., climacteric.** (Κλιμακτήρ, the step of a ladder.) A term applied to the form of indigestion occurring at the time of, and supposed to be caused by, the climacteric changes, such as the occurrence or the cessation of menstruation.

**D., diabet'ic.** (*Diabetes*.) Digestion troubles due to the existence of diabetes.

A term also applied to the disturbances of the digestive process which in some cases of diabetes are the cause of the disease; such as those connected with pancreatic or hepatic mischief.

**D., duoden'al.** (*Duodenum*.) Indigestion supposed to depend on congestion or inflammation of the mucous membrane of the duodenum. There is commonly pain over the duodenum, and there may be jaundice from implication of the opening of the common bile-duct.

Also, applied to a form of dyspepsia supposed to depend upon defect of the pancreatic secretion.

**D., dyscra'sic.** Indigestion caused by some *Dyscrasia*.

**D., flatulent.** (L. *flatus*, a blowing.) Indigestion accompanied by a rapid and excessive development of gas in the stomach and upper part of the intestines.

**D. from defect' of ac'id.** This form of imperfect digestion, caused by deficiency of the acid of the gastric juice, occurs in fevers, in anæmia and chlorosis, and in dilatation of the stomach.

**D. from defect' of pep'sin.** (Πέπω, to digest.) The form of indigestion in which there is a too scanty formation of pepsin, or in which it remains in its insoluble state, the propepsin of Schiff.

**D., ga'seous.** (Gas.) Same as *D., flatulent*.

**D., gastric.** (Γαστήρ, the belly, the stomach.) Indigestion depending on a fault of, or in, the stomach.

**D., gout'y.** Indigestion directly connected with a gouty dyscrasia; consisting either in digestive troubles, such as weight at the epigastrium, flatulence, pyrosis, and constipation preceding for some time an attack of gout; or a catarrh of the stomach accompanying a paroxysm of gout; or spasmodic pains of the stomach, heartburn, vomiting of acrid matters, with faintness or syncope, and coldness or lividity of the surface, constituting the so-called gout at the stomach, and probably depending on uric acid in the blood.

**D., herpetic.** The indigestion supposed to be caused by *Herpes*.

**D. hypochondri'asis.** A synonym of *Hypochondriasis*, from its supposed cause.

**D., inflam'matory, chron'ic.** A term for *Gastritis, chronic*.

**D., intestinal.** (L. *intestina*, the intestines.) Dyspepsia caused by imperfection of the duodenal digestion, as in the defective transformation of sugars into glucose.

**D., mo'tor.** (L. *motor*, a mover.) Indigestion produced by an enfeebled condition of the muscular coat of the stomach, so that the necessary contractions are imperfectly performed.

**D., mu'cous.** Indigestion produced by disorder of the gastric mucous membrane.

**D., ner'vo-secre'tory.** (L. *nervus*, a nerve; *secreta*, to separate.) Imperfect digestion dependant on deficient gastric secretion, supposed to be caused by an interference with the functions of the sympathetic ganglia in the stomach-walls.

**D., ner'vous.** (Νεύρον, a nerve.) Indigestion caused by defective nerve supply to the muscles, or the secretory apparatus of the stomach.

**D., ner'vous, anæsthetic.** (Νεύρον; ἀνασθησία, insensibility.) The indigestion sup-

# DYSPEPSIODYNIA—DYSPHAGIA.

posed to be caused by imperfect innervation whereby the muscular movements become defective.

**D., ner'vous, hyperæsthet'ic.** (Νεύρωσις; ἔκπερ, in excess; αἰσθησις, sensation.) Indigestion supposed to be caused by an exalted nervous influence provoking excessive muscular action or secretion or pain of the stomach.

**D., neuralgic.** (Νεύρων; ἄλγος, pain.) A form of gastralgia supposed to be essentially in the nerves and not caused by the presence of undigested food or any irritating matter.

**D., neurotic.** (Νεύρων, a nerve.) Same as *D., nervous*.

**D., nicotia'nic.** (Nicotianum.) The digestive troubles and weakness which proceed from the abuse of tobacco smoking or from the practice of tobacco chewing; they consist in loss of appetite, pain after food, and constipation.

**D., ova'rian.** (Ovary.) A form of indigestion produced by ovarian irritation.

**D., pancreat'ic.** (Pancreas.) Indigestion from deficiency or morbidity of the pancreatic juice, when the starchy matters, especially of the food, will to a large extent escape digestion.

**D., per consen'sum.** (L. per, by; consensus, agreement.) Same as *D., sympathetic*.

**D., phthis'ical.** The gastric phenomena which frequently precede or accompany the development of the pulmonary phthisis; there may be loss of appetite, gastralgia, vomiting, with emaciation. The term also includes the stomach troubles which occur in the later stages of the disease.

See also, *Phthisis, dyspeptic*.

**D., pyret'ic.** (Πυρετός, a fever.) Gendrin's term for the fevers formerly called gastric, bilious, pituitous, mucous, and such like.

**D., pyro'sis.** A synonym of *Pyrosis*.

**D., re'flex.** (L. reflecto, to turn back.) Stomach disturbances produced by reflex action, such as the vomiting accompanying the passage of gall-stones, or of renal calculi, or that occurring during labour.

**D., salivary.** (L. saliva, spittle.) Indigestion depending on deficient or morbid secretion of the saliva.

**D., scrof'ulous.** (Scrof'ula.) The indigestion of scrof'ulous children; it is accompanied by a red tongue, a sallow complexion, perverted appetite, and irregular, pale, offensive motions.

**D., stru'mous.** (Struma.) Same as *D., scrof'ulous*.

**D., sympathetic.** (Συμπάθεια, like-feeling.) Same as *D., reflex*.

**D., symptomat'ic.** Indigestion occurring as a symptom of some other disease.

**D., tuber'cular.** The gastric phenomena which often precede or accompany the development of tubercle in some part of the body.

**D., uræ'mic.** (Urea; alua, blood.) Disturbances of digestion produced by the presence of urea or of carbonate of ammonia in the blood, and due to its action on the secretory glands. Vomiting is a common symptom.

**D., va'so-mo'tor.** (L. vas, a vessel; motor, a mover.) Indigestion produced by excess or defect of blood supply to the stomach, the result of nerve disturbance produced by psychological or emotional causes.

**Dyspepsiodyn'ia.** (Δυσπεψία; ὀδύνη, pain. F. and G. *dyspepsiodynic*.) Dyspepsia with pain of the stomach.

**Dyspep'sy.** Same as *Dyspepsia*.

**Dyspep'tic.** (Δυσπεψία. F. *dyspeptique*.) Pertaining to, or suffering from, *Dyspepsia*.

**D. asth'ma.** Same as *Asthma, peptic*.

**D. phthi'sis.** See *Phthisis, dyspeptic*.

**Dyspepton.** (Δύς, with difficulty; πίπτω, to digest.) A doubtful substance, probably a mixture, described by Meissner as a subsidiary product of the artificial digestion of casein. It is insoluble in water and in alcohol.

**Dysperistal'sis.** (Δύς, difficult; περισσπαστικός, clasp and compressing.) Violent or stormy contraction of the muscular walls of the alimentary canal. It may be induced by interruption of the blood-current and want of oxygen, or by direct stimulation of the intestine.

**Dyspermasia.** See *Dyspermasia*.

**Dysphagia.** (Δύς; φαγείν, to eat. F. *dysphagie*; G. *Dysphagie*, *Schweerschlengen*, *Schlingbeschwerde*.) Term for difficulty in swallowing. A Genus of the Order *Dyscinesia*, Class *Locales*, of Cullen's Nosology.

**D. atonica.** (Ατωνος, relaxed.) Difficulty of swallowing from debility of the muscles of deglutition.

**D. callo'sa.** (L. *callosus*, thick-skinned.) Same as *D. constricta*.

**D. constricta.** (L. *constrictus*, part. of *constringo*, to bind together.) Difficulty of swallowing from a permanent contraction of the œsophagus.

**D. globo'sa.** Same as *Globus hystericus*.

**D. hysteric'a.** Same as *Globus hystericus*.

**D. inflammato'ria.** Difficulty of swallowing depending upon inflammation of the œsophagus.

**D. larynge'al.** (Λάρυγξ, the larynx.)

Difficulty of swallowing depending on inflammation or other disease of the larynx.

**D. linguo'sa.** (L. *lingua*, the tongue.)

Difficulty of swallowing produced by enlargement or protrusion of the tongue.

**D. luso'ria.** (L. *lusus*, a sport.) A term applied to difficulty of swallowing caused by compression of the œsophagus by the right subclavian artery, when it arises from the aorta beyond the left subclavian, and passes to the right side either in front of or behind the œsophagus.

**D. nervo'sa.** (L. *nervus*, a nerve.) Same as *D. spastica*.

**D., œsophage'al.** (Οἰσφαγός, the gullet.) Difficulty of swallowing caused by some disease or disorder of the œsophagus.

**D. paralytica.** (Παράλυσις, paralysis.) Difficulty of swallowing, the result of paralysis of the pharyngeal muscles or of the œsophagus. It occurs in the course of many diseases of the nervous system when the medulla oblongata, the pons Varolii, and the neighbouring parts are affected. It occurs also in the course of, or as a sequel of, diphtheria; and has been supposed to be the result also of alcoholism, lead poisoning, and syphilis.

**D. pharynge'a.** (Φάρυγξ, the gullet.) Difficulty of swallowing caused by some disease or disorder of the pharynx.

**D., pharynge'al.** (Φάρυγξ, the throat.)

Swallowing obstructed by a polypous excrescence in the pharynx. (Good.)

**D. ranula.** Same as *Ranula*.

**D. scirr'ho'sa.** (Σκίρπος, a hard tumour.) Difficulty of swallowing from scirrhus of the œsophagus.

# DYSPHAGIC—DYSPNŒA.

**D. spasmodica.** (Σπασμός, spasm.) Same as *D. spastica*.

**D. spastica.** (Σπαστικός, drawing.) Difficulty of swallowing from spasm of the muscular coat of the œsophagus and pharynx, as in hysteria and hydrophobia.

**D. torpida.** (L. *torpidus*, benumbed.) Difficulty of swallowing produced by loss of muscular power of the pharynx or œsophagus.

**D. uvulosa.** (Uvula.) Difficulty of swallowing from relaxation, enlargement, or absence of the uvula.

**Dysphagic.** (Δύς; φαγεῖν.) Relating to *Dysphagia*.

**Dyspha'sia.** (Δύς; φάσις, speech.) Difficulty of speaking from the loss of the idea of words; derangement of the faculty of diction or the regular and intelligent arrangement of words.

**Dyspho'nia.** (Δύς, prefix meaning difficult, bad; φωνή, the voice. F. *dysphonie*; G. *das erschwerte Sprechen*.) Term used by Galen for a defective condition of the vocal organs; imperfect or dissonant voice.

**D. clericorum.** (L. *clericus*, a clergyman.) A term applied to granular pharyngitis when it occurs in a clergyman or one who uses his voice much.

**D. immodulata.** (L. *immodulatus*, inharmonious.) The condition in which the voice is permanently depraved or inharmonious.

**D. puberum.** (L. *puber*, adult.) The condition of the voice in males at the age of puberty, in which it is dissonant and untrue, passing abruptly and involuntarily from deep and rough to high and shrill.

**D. susurrans.** (L. *susurro*, to whisper.) The condition in which the voice is weak, whispering and scarcely audible.

**Dysphoria.** (Δύς, badly, or with difficulty; φορέω, to bear. G. *Unwohlsein*.) Term, Gr. *δυσφορία*, used by Hippocrates, *Coc. Prænot.* 2, 265, 479, for the restlessness and anxiety which accompany many diseases.

**D. anxietas.** Same as *Anxiety*.

**D. nervosa.** (L. *nervus*, a nerve.) The same as *Fidgets*.

**D. simplex.** (L. *simplex*, simple.) The same as *Fidgets*.

**Dyspho'tia.** (Δύς, bad; φῶς, light.) Same as *Myopia*.

**Dysphrasia.** Δύς; φράσις, speech.) Difficulty of speaking from deficient ideas; defective speech from impairment of the intellect.

**Dysphrenia.** (Δύς; φρήν, the mind.) In Kahlbaum's classification (1865), disturbance of the intellect associated with special physiological or pathological condition of disease.

**D. neuralgia.** (*Neuralgia*.) A psychosis or disturbance of the mind associated by Schüle with neuralgia.

**Dyspionia.** (Δύς, bad; πίων, fat. F. *dysphonie*.) A morbid condition of the fat.

**Dysplasmatic.** Same as *Dysplastic*.

**Dysplastic.** (Δύς, bad; πλάσσω, to form. F. *dysplaste*.) Of bad formation; applied to diseases as tuberculosis.

**Dysplo'cea.** (Δύς, bad; πλοκή, a plaiting. F. *dysploce*.) A faulty condition of organic structure.

**Dyspnœa.** (Δύς, difficulty; πνέω, to breathe. F. *dyspnée*; G. *Schwerathmigkeit, Engbrüstigkeit*.) Term for difficult or laboured

breathing. A Genus of the Order *Spasmi*, Class *Neuroses*, of Cullen's Nosology.

**D. aërea.** (L. *aëreus*, belong to the air.) Dyspnœa which is increased by atmospheric changes.

**D. aquosa.** (L. *aqueus*, watery.) Dyspnœa with scarcity of urine and œdematous feet, and no other symptoms indicating dropsy in the chest.

**D. cardiac.** (Καρδία, the heart.) Breathlessness depending upon disease or disorder of the heart. It assumes various forms, and is of various intensity; simple sighing, transient attacks of hurried breathing, shortness of breath on exertion, and permanent and agonising breathlessness.

**D. catarrhalis.** (L. *catarrhus*, a catarrh.) Difficulty of breathing accompanied with copious discharge of viscid mucus.

**D. chronica.** (L. *chronicus*, long-lasting.) Short breath; according to Good, the breathing uniformly short and heavy; mostly accompanied with a cough. It may arise from organic deformity, from lung mischief produced by the inhalation of forms of dust, from metallic or other poisonous exhalations, from a cachectic habit, or from fatness.

**D. convulsiva.** (L. *convulsio*, cramp.) A synonym of *Asthma*.

**D. diabe'tic.** (*Diabetes*.) The difficulty of breathing which sometimes occurs in the latest stages of diabetes, the result of disturbance of the respiratory centre; it may be from acetone or other poisonous substance in the blood.

**D. exacerbans.** (L. *exacerbo*, to aggravate.) Breathlessness, from whatever cause, occurring in paroxysms.

**D. expiratory.** (L. *expiro*, to breathe out.) Difficulty of breathing dependent on defect of the expiratory power of the lungs, as in emphysema, asthma, congestion, and on obstruction of the lumen of the larger air-tubes; when it is produced by catarrh of the large bronchi, the corresponding region of the chest expands little in inspiration and the other parts much, so that in them emphysema may be produced.

**D. extrin'seca.** (L. *extrinsecus*, from without.) Dyspnœa from evident external influences.

**D. heat.** A form of breathlessness supposed to depend upon the direct action of superheated blood on the nervous centres.

**D. hydrothorac'ica.** A synonym of *Hydrothorax*.

**D. inspi'ratory.** (L. *inspiro*, to breathe in.) Difficulty of breathing resulting from obstruction of the larger air-tubes, as in croup, in hydrothorax, acute œdema of the lung, and such like; it is accompanied by recession of the lower part of the fore-chest, and of the epigastrium, whistling, and short expiration, as compared with the inspiration.

**D. mixed.** Difficulty of breathing which is sometimes inspiratory, sometimes expiratory.

**D. monta'na.** (L. *montanus*, belonging to a mountain.) The shortness of breath caused at high altitudes by the rarefaction of the air.

**D. nervous.** Breathlessness from emotional agitation, without disease of the respiratory or circulatory organs.

**D. of pregnancy.** A form of nervous breathlessness in pregnant women not dependent on pressure of the enlarged womb.

**D. pinguedinosæ.** (L. *pinguedo*, fatness.) Dyspnœa arising from corpulency.

**D. pneumatica.** A synonym of *Pneumothorax*.

**D., pulmonary.** (L. *pulmo*, the lung.) Difficulty of breathing from lung disease.

**D. pyothoracica.** A synonym of *Empyema*.

**D., renal.** (L. *ren*, the kidney.) A form of breathlessness occurring in the early course of kidney diseases.

Also, the same as *D., uræmic*.

**D. sicca.** (L. *siccus*, dry.) Dyspnœa without any considerable discharge.

**D. terrea.** (L. *terra*, earth.) Dyspnœa when earthy or calculeous matters are spit up.

**D. thoracica.** (Θώραξ, the chest.) Dyspnœa from injury or deformity of the chest.

**D., uræmic.** (Ούρον, urine; αἷμα, blood.) The form of breathlessness which is supposed to be caused by uræa, or its derivative carbonate of ammonia, in the blood, and to be of nervous origin.

**Dyspnoic.** (Δυσπνοϊκός. G. *engbrüstig*.) Short of breath.

**Dyspnoon.** The same as *Dyspnœa*.

**Dysporomorphæ.** (Δύς; μόρφη, sleep.) An Order of *Carinata* in Huxley's classification. Large aquatic birds, with weak scapula; clavicles sometimes ankylosed to the sternum, a long pointed basisphenoid rostrum, but no basipterygoid process. The foot is stegonate. Ex. pelican, solan goose, frigate bird, cormorant, darters, and phœthon.

**Dyspotism.** (Δύς; ποτίζω, to give to drink.) Difficulty in drinking.

**Dyspotous.** (Δύσποτος, unpalatable.) Difficult to drink from its bad taste.

**Dysrachitis.** Old name for a plaster used for fistula and callous sinus, according to Galen, *de C. M. per Gen.* v, 3.

**Dyssialia.** (Δύς, bad; σάλαια, spittle. F. *dyssialie*.) Term for faulty secretion of spittle.

**Dyssiteis.** (Δύς, bad; σίτησις, an eating.) Difficulty in the taking and swallowing of food.

**Dyspermasia.** (F. *dysspermæsie*.) Same as *Dysspermatismus*.

**Dyspermatis.** See *Dysspermatis-*

**mus.** (Δύς, difficulty; σπέρμα, seed. F. *dysspermæsie*, *dysspermatisme*; G. *erschwerte Samenentleerung*.) Difficult or imperfect discharge of semen. A Genus of the Order *Epischæses*, Class *Locales*, of Cullen's Nology.

**D. apractodes.** (Ἀπρακτος, doing nothing.) Dyspermatis from a want of vigour in the genitals.

**D. cunctans.** (L. *cuncto*, to linger.) Retardation of the emission of semen from debility until the orgasm of the female has subsided.

**D. epilepticus.** (Ἐπιληψία, epilepsy.) Dyspermatis from epileptic fits occurring during coition.

**D. hypertonicus.** (Υπέρ, above; τόνος, tone.) Dyspermatis from excessive erection of the penis.

**D. mucosus.** (L. *mucosus*, mucous.) Dyspermatis arising from obstruction of a viscid mucus.

**D. nodosus.** (L. *nodosus*, knotty.) Dys-

spermatis from tumour in either corpus cavernosum.

**D. præputialis.** (L. *præputium*, the prepuce.) Dysspermatis from contracted orifice of the prepuce.

**D. refluxus.** (L. *refluo*, to flow back.) The form of dysspermatis in which the semen is supposed to be thrown back into the urinary bladder, or into the vesicula seminalis.

**D. urethralis.** (Οὐρήθρα.) Dysspermatis when the obstruction is in the urethra.

**Dysspermia.** (Δύς, bad; σπέρμα, seed.) A term for a faulty condition of the semen.

Also, Good's term for *Dysspermatismus*.

**D. anticipans.** (L. *antico*, to take before, to anticipate.) Emission of the semen prematurely without introduction into the vagina.

**D. entonica.** (Ἐντονος, strained.) Imperfect emission of semen from priapism or too great erection of the penis.

**Dysstichiasis.** (Δύς; στίχος, a row.) Irregularity in the row of the eyelashes. Same as *Distichiasis*.

**Dysstœchiæsis.** (Δύς, bad; στίχος, order. F. *dystœchiæse*.) A term for an irregular distribution of the hairs in the eyelids.

**Dyssymmetria.** (Δύς, bad; συμμετρία, symmetry.) A term for faulty symmetry.

**Dyssynodus.** (Δύς; σύνodus, a coming together.) A term for difficult coitus.

**Dyssynusia.** (Δύς, bad; συνουσία, a living together.) Term for difficult coitus.

**Dystaxia.** (Δύς; τάξις, order, an arranging.) Irregularity of muscular movement.

**D. agitans.** (L. *agito*, to put a thing in motion.) Sanders's term for tremor of the muscles depending on increased irritability of the motor centres of the spinal cord having an anæmic origin.

**Dysteleology.** (Δύς; τέλειος, perfect; λόγος, an account. G. *Unzweckmässigkeitslehre*.) Hæckel's term for the study of rudimental and vanishing organs or structure, in so far as they become purposeless, such as the appendix æci vermiformis of man.

**Dysthana'sia.** (Δύς; θάνατος, death.) A slow and painful death.

**Dysthana'tous.** (Δυσθάνατος; from δύς; θάνατος, death.) Dying hardly, or with painfulness.

Also, that which causes a hard death.

**Dysthela'sia.** (Δύς, bad; θηλάζω, to suck.) Term for faulty sucking, or inaptitude to give suck.

**Dytherapeusia.** (Δύς; θεραπευσία, medical treatment.) Difficulty of cure.

**Dytherapeutos.** (Δύς, difficulty; θεραπεύω, to heal.) Slow, or difficult to heal. Applied, Gr. *δυσθεράπειτος*, by Galen, *de C. M. per Gen.* vi, 1, to wounds and ulcers.

**Dytherapeutus.** Same as *Dytherapeutos*.

**Dytherapia.** (Δύς, bad; θεραπεία, medical treatment.) Difficulty of cure.

**Dythermasia.** (Δύς; θέρμη, heat.) Gubler's term for a deficient development of heat by the animal economy.

**Dysthesia.** (Δύς, bad; θέσις, an arranging.) A bad condition of body.

**Dysthetica.** (Δύς; θέσις.) Good's term for cachexies; diseases in which there is a morbid state of the blood or blood-vessels; alone or connected with a morbid state of the fluids, producing a diseased habit.

**Dysthymia.** (Δύς, bad; θυμός, mind. G. *Missmuth.*) Term, Gr. *δυθυμία*, used by Hippocrates, *Aph.* vi, 23, for sadness of mind; melancholy; despondency.

**Dystochia.** See *Dystocia*.

**Dystocia.** (Δυστοκία; from δύς, difficulty; τόκος, birth. F. *dystocie*; G. *Dystokie, schwere Geburt.*) Old term, *δυστοκία*, used by Hippocrates, *Aph.* v, 35, for difficult labour or childbirth.

**D. aborti'va.** A synonym of *Abortion*.

**D. dyscye'esis.** Same as *Dyscyesis*.

**D. dyscye'esis extrauteri'na.** (L. *extra*, outside; *uterus*, the womb.) Extrauterine pregnancy.

**D. foetal.** (L. *fetus*, offspring.) Difficult labour from malformation or malposition of the child.

**D. mater'nal.** (L. *mater*, a mother.) Difficult labour caused by some defect on the mother's side.

**Dystocology.** (Δυστοκία, hard birth; λόγος, a discourse. F. and G. *dystocologie.*) A treatise on difficult labour.

**Dystoechi'asis.** See *Dysstachiasis*.

**Dystonia.** (Δύς, bad; τόνος, tone.) A morbid tone of the body.

**Dystopia.** (Δύς; τόπος, a place.) Malposition of an organ.

**Dystraum'ia.** (Δύς; τραύμα, a wound.) The condition of a wound or ulcer in which it is slow to heal.

**Dystres'ia.** (Δύς, bad; τρέψις, a boring. F. *dystresie.*) A term for imperfection of an opening.

**Dystroph'ia.** (Δύς, bad; τροφή, nourishment.) Term for faulty nourishment.

**D. neurotica.** (Νευρον, a nerve.) A term applied to disturbances of nutrition which

are caused by perversion or abolition of the nervous influence, such as the corneal ulcer which follows injury of the trophic nerves derived from the Gasserian ganglion.

**Dystrophy.** Same as *Dystrophia*.

**Dysulotous.** (Δυσούλωτος, hard to sear over; from δύς; ούλωμαι, to be seared over.) Difficult to heal.

**Dysure'sia.** (Δύς, bad; ούρησις, a making water.) A faulty secretion and excretion of the urine.

**Dysu'ria.** (Δύς, difficulty; ούρον, the urine. F. *dysurie*, *dysurie*; G. *Harnzwang, Harnbeschwerde.*) Difficult or painful and incomplete discharge of urine. A Genus of the Order *Epischestes*, Class *Locales*, of Cullen's Nosology.

**D. ar'dens.** (L. *ardeo*, to burn.) Dysuria with a sense of heat without disorder of the bladder.

**D. calculo'sa.** (L. *calculus*, a small stone.)

Dysuria from calculus, or stone in the bladder.

**D. compressio'nis.** (L. *comprimo*, to press together.) Dysuria from compression of the parts.

**D. irrita'ta.** (L. *irrito*, to excite.) Dysuria from the irritating presence of a calculus.

**D. muc'o'sa.** (L. *mucosus*, mucous.) Dysuria from profuse secretion of mucus.

**D. phlogis'tica.** (Φλογιστός, inflammable.) Dysuria from violent inflammation.

**D. spasmod'ica.** (Σπασμός, spasm.) Dysuria from spasm.

**D. spast'ica.** (Σπαστικός, stretching.) Dysuria from spasm of the urethra or neck of the bladder.

**Dysu'ric.** (Δυσουρικός.) Relating to *Dysuria*.

**Dysury.** Same as *Dysuria*.

## E.

**Eagle.** (F. *aigle*; from L. *aquila*, from *aquilus*, brown; in allusion to the colour of the bird. L. *aquila*; S. *aguila*; G. *Adler.*) The birds of the Genus *Aquila*, which see for an account of the ancient medicinal uses.

**E-stone.** See *Actites, Aquile lapis*.

**E.veins.** See *Actioi phlebæ, Aquile venæ*.

**E.wood.** A synonym of *Aloes wood*; so called by a corruption of its Malayan name *Aglita to Aquila*.

**Ear.** (Sax. *earc*, from Aryan root *aw*, to be pleased with. F. *oreille*; I. *orecchio*; S. *oreja*; G. *Ohr.*) The organ of hearing; consisting of three parts, the external, middle, and internal ear, or the auricle, tympanum, and labyrinth. Often used to denote the external ear only.

In Crustacea, it is a dermal sac, either closed, containing an otolith, or open, with a simple or complex mouth, sometimes containing a foreign body acting as an otolith. The cavity is lined with regularly disposed stiff acoustic hairs, either attached to the otolith and retaining it in place, or free at one end. The shafts are continuous with a chitinous layer lining the vesicle, and are connected to the deeper structures by their axes.

In Insects, hearing organs are not universal,

but antennary rods of various lengths vibrate in response to certain musical sounds. Some have a chitinous ring, over which is stretched a drum-like membrane, and beneath this is a vesicular dilatation of a brachial tube, in connection with which is a ganglion, whose nerves end in club-like rods with fine acoustic hairs. This is placed under the knee on the outside of the front pair of legs in crickets, and on the metathorax close to the third pair of limbs in Acrididae, at the base of the *halteres* of Diptera, and at the base of the hind wings of beetles, the chitinous integument is porous, and beneath this area are clusters of rod-like nerve endings.

In Mollusca, the ears are paired round vesicles usually behind the eye, close to the foot ganglion. They are generally in contact with the nerve centres, and are more rarely situated on the end of a nerve. There are often many otoliths. The otocyst is ciliated within.

For ear of Vertebrates see *Hearing, organ of*. Also, anything of the same shape or appearance as the ear of an animal.

Also (Sax. *ear*, from Aryan root *ak*, to pierce. F. *épi*; I. *spiga*; S. *espiga*; G. *Ahre*), a head or spike of corn or grass.

**E. ache.** (F. *otalgie*; G. *Ohrschmerz*, *Otalgie*.) The common term for the disease *Otalgia*.

**E., asy'lum.** A synonym of *Hæmatoma auris*, from its occurrence in asy'lum patients.

**E., bloody tumour of.** See *Hæmatoma auris*.

**E. bones.** The *Ossicula auditus*.

The term has also been applied to the concretions called *Otoliths*.

**E. cockle.** A disease of wheat and other graminaceous plants caused by the presence of vibriones in the seed.

**E. cough.** A cough excited through irritation of the external ear. When a speculum is introduced into the external auditory meatus violent attacks of coughing ensue in some persons. Persistent cough has been cured by the removal of plugs of cerumen from the external ear; and foreign objects, such as beans, introduced therein have occasioned like symptoms. The explanation of these well-established occurrences is found in the nerve associations of the ear and larynx. A branch of the vagus, the auriculo-pneumogastric, is distributed to the external auditory canal, the irritation of which by a solid body is communicated to the laryngeal branches of the vagus as a motor impulse, causing the muscles of the larynx to become spasmodically contracted, and so producing the phenomenon of ear-cough. (Wooakes.)

**E., devel'opment of.** The first rudiment of the ear appears in the chick on the dorsal surface of the head as a small depression of the epiblast on either side of the hind brain during the second day. Before the end of the third day the mouth of the pit is closed, and this becomes a closed vesicle lined with epiblast and surrounded by mesoblast. This is the otic vesicle. This soon subdivides into an upper longer segment, the recessus labyrinthi vel vestibuli, and an inferior rounder segment, from which the cochlea, vestibular sacculi and semicircular canals are developed. The tympanic cavity, with the Eustachian tube and external auditory meatus, proceed from the persistent dorsal part of the first visceral cleft. The membrana tympani is a local constriction of the same. The epiblast of the otic vesicle forms the epithelium, hair-cells and rods of Corti of the membranous labyrinth, the cavity of which, filled with endolymph, represents the original cavity of the otic vesicle. The corium of the membranous labyrinth, and all the tissues of the osseous labyrinth, are derived from the mesoblastic investment of the vesicle.

**E., drum of.** The *Tympanum*.

**E., exter'nal.** (L. *externus*, outward. F. *oreille externe*; G. *aussere Ohr*.) The part of the organ of hearing lying on the outside of the head, and consisting of the *Pinna* and the *Meatus auditorius externus*.

**E. finger.** The little finger, on account of it being the one chiefly used for introduction into the ear.

**E., flap.** See *Flap ear*.

**E., fun'gi of.** Low vegetable forms growing in the external meatus and on the membrana tympani. They are usually forms of *Aspergillus*. See *Otomycosis*.

**E. giddiness.** (Sax. *gyddran*, to be merry.) The giddiness that is associated with disease or disorder of the ear when the semicircular canals or labyrinth are affected, as in *Meniere's disease*.

**E., inflamma'tion of the.** (F. *otite*; G. *Ohrentzündung*.) See *Otitis*.

**E., insa'ne.** Same as *E., asy'lum*.

**E., inter'nal.** The *Labyrinth*.

**E., mid'dle.** The *Tympanum*.

**E., os'sicules of.** See *Ossicula auditus*.

**E.-pick.** (Sax. *pycan*, to pick.) A probe-shaped instrument with a small scoop at one end, used for the removal of hardened wax or foreign bodies from the external meatus.

**E., poly'pus of.** See *Polypus of ear*.

**E.-pow'der.** Same as *Otolith*.

**E.-probe.** (L. *probe*, to try.) Same as *E.-pick*.

**E.-sand.** Same as *Otolith*.

**E.-scoop.** (Sw. *skopa*.) Same as *E.-pick*.

**E.-sneez'ing.** The occurrence of sneezing from irritation of the ear, as by a plug of wax in the meatus auditorius externus. An analogous phenomenon to *E.-cough*.

**E. spec'u'um.** See *Speculum auris*.

**E.-spout.** A trough which can be attached to the outer ear during the operation of syringing the external meatus so as to carry off the water.

**E.-stone.** Same as *Otolith*.

**E. syringe.** See *Syringe, ear*.

**E. trum'pet.** A conical, straight, or convoluted instrument, with a narrow opening for introduction into the meatus, and a wide expanded opening for collecting and so intensifying the sound waves which otherwise would diverge; used by deaf persons to improve the hearing.

**E.-wax.** (F. *cerumen, cire des oreilles*; G. *Ohrenschnitz*.) The secretion of follicles situated under the living membrane of the meatus auditorius externus. See *Cerumen*.

**Eared.** (F. *oreillé*; G. *gehört*.) Having ears, or ear-like appendages.

In Botany, having leaflets like ears, or the rounded lobes at the base of the leaf.

Also (G. *gehort*), bearing ears or spikes.

**Earless.** (E. *ear*; less, from Sax. *leas*, loose from.) Without ears.

**Earlet.** (E. dim. of *ear*. G. *Ohrehen*.) An ear-like appearance produced by an indentation in the leaves of some of the foliose *Hepaticæ*.

**Earn, Bridge of.** See *Pitcaithly*.

**Earth.** (Sax. *eorthe*. F. *terre*; I. *terra*; S. *tierra*; G. *Erde*.) Soil; mould; the crust of the globe, or land; the globe itself.

In Chemistry, the word was used to designate those non-metallic substances which do not dissolve in water, and are not changed by exposure to a high temperature. Earths were believed to be elementary substances; they are alumina, zirconia, yttria, glucina, and thorina; and baryta, strontia, lithia, lime, and sometimes magnesia were formerly included until the former were classed as alkaline earths.

**E., absor'bent.** (L. *absorbo*, to suck up.) An old term for chalk.

**E.s., al'kaline.** A term applied in Chemistry to a section of the earths because they had an alkaline reaction and neutralised acids; they are baryta, lime or calcia, lithia, and strontia.

**E. al'monds.** The corms of *Cyperus esculentus*.

**E., alu'minous.** An old term for *Alum*.

**E., argilla'ceous.** (Ἀργιλλος, potter's earth.) An old term for alumina.

**E. ball.** The truffle, *Tuber cibarium*, from its appearance and underground growth.

**E. bath.** See *Bath, earth*.

**E., bo'lar.** (F. *terre boilaire*; G. *Bolar-erde*.) A name for *Bole*.

**E., bone.** A term for phosphate of lime.

**E. clos'et.** An apparatus for the reception, deodorisation, and retention of human feces, intended as a substitute for a water-closet; it is so arranged that the excrement is surrounded by dry earth, which acts as a deodorant.

**E. club.** The *Orobancha americana*.

**E. current.** (L. *currentes*, part. of *curro*, to run.) An electric current perceived in a telegraphic wire of long circuit produced by a difference of potential in the earth at the two ends of the wire.

**E. dres'sing.** See *Dressing, earth*.

**E. eating.** The use of earth as food to which tribes of nations in many parts of the world are addicted. The earth used consists in some instances of minute infusoria, and in others of clay or of the earth of ant-hills. See *E.s., edible*.

As a morbid condition see *Cachexia aquosa*.

**E.s., edible.** (G. *Erdeessbare*.) A term applied to those earths which are used as food by the inhabitants of certain countries; such are the inhabitants of the banks of the Orinoco, who bake a reddish-yellow clay with sesamum oil. Another kind is eaten in Java, which when analysed yielded in 100 parts siliceous earth 39.8, clay 25.9, iron oxide 9.8, lime carbonate 3.0, magnesia 1.3, soda 3.9, manganese protoxide 0.6, potash 0.6, water and volatile constituents, amongst which was ammonia, 14.8.

**E. flax.** A flax-like variety of asbestos, consisting of fine filaments.

**E., fuller's.** (L. *fullo*, a cleaner of clothes. F. *terre à foulon*; I. *creta saponacea*; S. *tierra de batan*; G. *Walkererde*.) A soft unctuous clay from the oolite and chalk systems, containing 53 per cent. of silica, 10 of alumina, and 9 of oxide of iron. It is used to remove grease from woollen fabrics in the process of fulling; and as an absorbent application to sores, excoriations, and erythema intertrigo. Also called *Cimolia terra*.

**E. gall.** The *Feratrum viride*.

Also, the *Erythraea centaureum* and other gentianaceous plants, from their bitter taste.

**E., heavy.** (F. *terre pesante*; G. *Schwererde*.) Common name for *Baryta*.

**E., Japan'.** (G. *Japanische Erde*.) A synonym of *Catechu*.

**E., Lem'nian.** See *Terra Lemnia*.

**E.'s mag'netism.** See *Magnetism, terres-trial*.

**E. met'als.** A term applied to beryllium, yttrium, erbium, lanthanum, didymium, cerium, aluminium, zirconium and thorium.

**E. moss.** The *Lycopodium clavatum*.

**E. nut.** The *Bunium bulbocastanum*, the *Conopodium denudatum*, and also the *Arachis hypogaea*, and the *Cyperus rotundus*.

**E.-nut, American.** The *Arachis hypogaea*.

**E.-nut oil.** (F. *huile d'arachide*.) The oil of the seeds of *Arachis hypogaea*. See *Arachis oil*.

**E. of bones.** Phosphate of lime.

**E. oil.** A term for petroleum.

**E. peas.** The seeds of *Arachis hypogaea*.

**E., pon'derous.** (L. *pondus*, a weight.) *Baryta*, so called from its weight.

**E.s., prim'itive.** (F. *terrains primitifs*.)

The following ten oxides baryta, strontia, lime, magnesia, alumina, silica, glucina, zirconia,

yttria, and thorina; as it is from their combination or intermixture, in various proportion and number, that the stony or pulverulent masses composing mountains, plains, and valleys are formed.

**E., Sa'mos.** See *Terra Sami*.

**E.s., seal'ed.** See *Terra sigillata*.

**E. smoke.** The *Flumaria officinalis*.

**E. treatment.** The application of dried and powdered clayey loam to wounds and ulcers for the purpose of disinfection and deodorisation.

**E. wax.** A term for one of the native solid petroleums.

**Earth'worm.** (F. *lombric terrestre*; I. *lombrico*; S. *lombriz*; G. *Regenwurm*.) The *Lumbricus terrestris*, and other species of *Lumbricus*. The ashes, soaked in wine, were used to dissolve stone, and in oil were said to prevent grey hairs.

**E. oil.** See *Oleum lumbricorum*.

**Earth'y.** Relating to earth.

**E. degenera'tion.** Same as *Degeneration, calcareous*.

**E. phos'phates.** Phosphates of the earth-metals; usually applied to the triple phosphate of ammonia and magnesia, the basic phosphate of ammonia and magnesia, and the phosphate of lime found in urine.

**E. springs.** The mineral water sources which contain calcium carbonate, chloride and sulphate with free carbonic acid; they are usually hot. Such are Bath, Leuk, and Lucca.

**Earwig.** (Sax. *eor-wicga*; F. *verre-oreille*; I. *formica pinzajuola*; S. *tjerata, euchi-bero*; G. *Ohrwurm*.) The insects of the Family *Forficulidae*, especially *Forficula auricularia*, so called because it was supposed to produce disease or death by crawling into the ear.

**Earwort.** The *Dysophila auricularia*, from its use.

**East.** (Sax. *east*. F. *est*; I. *oriente, levante*; S. *oriente, este*; G. *Ost*.) The part of the heavens where the sun rises.

**East India arrowroot.** See *Arrowroot, East India*.

**E. India gin'ger.** See *Ginger, East India*.

**E. In'dia ki'no.** See *Kino, East India*.

**E. India myrrh.** See *Myrrh, East India*.

**Eastbourne.** Hampshire, on the sea coast. There is an earthy spring here of little moment.

**Eastern buck'wheat.** Common name of the *Polygonum divaricatum*.

**Easton, Dr.** A Glasgow physician of the present century.

**E's syrup.** Dissolve sulphate of iron five drachms, in boiling water an ounce; also dissolve phosphate of soda an ounce, in boiling water two ounces; mix the solutions, and wash the resulting precipitate of phosphate of iron till the washings are tasteless. Dissolve sulphate of quinine 192 grains, with a few drops of dilute sulphuric acid in two ounces of water; precipitate the quinine with ammonia water and wash it. Dissolve the phosphate of iron, the quinine, and strychnia six grains, in dilute phosphoric acid fourteen ounces, and dissolve without heat. Each drachm contains about a grain of phosphate of quinine, and a thirty-second of a grain of phosphate of strychnia.

**Eat.** (Sax. *etan*; from Aryan root *ad*, to eat. L. *edo*; Gr. *ēdō*; F. *manger*; I. *mangiare*;

*S. comer*; *G. essen*.) To chew up and swallow, to devour, to consume, to corrode.

**Eating.** (*E. part. of eat.*) Consuming, corroding.

**E. hive.** An Irish name of *Pemphigus gangranosus*.

**Eau.** (*F. eau*, water; from *L. aqua*, water.) Water.

**E. d'arquebuse.** (*F. arquebuse*, to shoot.) The *Alcoolum vulnerarium*, *Fr. Codex*.

**E. de Cologne.** (*Köln*, or *Cologne*, the city where it was first made. *G. Kölnisches Wasser*.) An aromatic spirituous fluid made from various receipts, for some of which see *Aqua colonensis*.

**E. de goudron.** (*F. goudron*, tar; from *Ar. katran*.) The *Aqua picea*.

**E. de Javelle.** See *Aqua javelli*.

**E. de Labarraque.** The *Liquor natrii chlorati*.

**E. de Luce.** The *Spiritus ammoniæ succinatus*.

**E. de Rabel.** The *Acidum sulphuricum alcoholisatum* of the French *Codex*, which is coloured by the petals of *Paraver rhæas*.

**E. de Saint Jean.** Sulphate of zinc 3 grammes, sulphate of copper 1, camphor in spirituous solution .5, saffron .25, distilled water 700 grammes. Used in spasms and in fetid suppurations.

**E. de vie.** (*F. vie*, life.) French epithet for brandy; the water of life.

**E. des Carmes.** (*F. Carme*, a Carmelite friar.) The *Alcoolum melissæ compositum*, *Fr. Codex*; so called because it was first made at the Carmelite monastery in the Rue de Vaugirard, Paris, in 1614.

**E. laxative de Vienne.** *Fr. Codex*. The *Infusum senecæ compositum*, *Aust. Ph.*

**E. vegeto-minérale.** The *Lotio plumbei*, *Fr. Codex*; so called because it is made of a vegetable product, vinegar, and a mineral product, lead.

**Eaux Bonnes.** France; Département des Basses-Pyrénées, in a beautiful narrow gorge 2450' above sea level, with a mild but variable climate. Mineral waters from six springs, of temperature 25° C.—33° C. (77° F.—91.4° F.), and from one cold spring. The water contains sodium chloride 2.6 grains, calcium sulphate .85, organic sulphur-holding matter .81, and a very little iron, with some hydrogen sulphide, carbonic acid, and nitrogen. The hot springs are used for baths and inhalations, the cold for drinking. Used in atonic phthisis, laryngeal diseases, clergyman's sore throat, and such like.

**Eaux-Chaudes.** France; Département des Basses-Pyrénées, in a narrow, gloomy, but picturesque gorge, 2200' above sea level, with a rough climate. Mineral waters, of temperature 25° C.—33° C. (77° F.—91.4° F.), containing sodium sulphide .008, gramme in 1000 grammes, and iron sulphide .005. Used in rheumatic complaints and in chlorosis.

**Ebarbulate.** (*L. e*, neg.; *barbula*, a little beard. *F. ebarbule*.) Applied to feathers which are without barbules.

**Ebed.** Hungary, County Gran. A warm sulphur water of temp. 24° C. (75.2° F.).

**Echl.** Old name for the seeds of sage or juniper. (Quincy.)

**Ebena'cæ.** (*Εβενος*, ebony. *G. Eben-*

*holzgewächse*.) A Nat. Order of epipetalous corollidioral Exogens, or a Family of the Order *Diospyrina*, having no stipules, and a simple, sessile, radiating stigma.

**Ebenads.** The plants of the Nat. Order *Ebenaceæ*.

**Ebenoxylon verum.** (*Εβένος*, ebony; *ξύλον*, wood; *L. verus*, true.) The *Diospyros ebenum*, or black ebony tree.

**Ebenum.** (*Εβένος*.) Same as *Ebony*.

**Ebenus.** (*Εβένος*.) Same as *Ebony*.

**E. æthiopica.** The *Cocos fusiformis*.

**Eberbach.** Germany, in Württemberg, near Althausen. A saline spring.

**Ebesmech.** (*Arab.*) Old name for *Hydrargyrum* or quicksilver.

**Ebis'cus.** Same as *Hibiscus*.

**Eblanin.** A synonym of *Pyroanthin*.

**Ebnigen.** Germany, in Württemberg, district of Balingen. A mineral spring containing sodium chloride, sodium and calcium carbonate, free carbonic acid and hydrogen sulphide.

**Eboë nuts.** The fruit of *Dipteryx eboensis*.

**Eb'nite.** Same as *Vulcanite*.

**Eb'ony.** (*F. ebene*; from *L. ebenus*; from *Gr. ἔβενος*; from *Ileb. hobnim*, ebony; from *ebon*, a stone, from its hardness. *G. Ebenholz*.) The wood of several species of *Diospyros*.

**E. tree.** The *Diospyros melanoxylon*.

**E. tree, black.** The *Cocos fusiformis*.

**Ebracteate.** (*L. e*, neg.; *bract*. *F. ebracté*; *G. deckblattlos*.) Without a bract.

**Ebracteated.** Same as *Ebracteate*.

**Ebracteolate.** (*L. e*, neg.; *bracteole*. *F. ebractéolé*.) Deprived of bracteoles.

**Ebriach.** Austria, in Carinthia, near Kappel. An alkaline saline chalybeate water.

**Ebriecat'um.** (*L. ebria*, to make drunk.) A Paracelsian term for the affection of the mind produced by drunkenness.

**E. coles'te.** (*L. celestis*, from *cælum*, heaven.) Term applied by Paracelsus to those excited by religious enthusiasm.

**Ebri'ety.** (*L. ebrietas*, from *ebrius*, drunk. *F. ivresse*, *vergerie*; *G. Trunkenheit*.) The state of intoxication or drunkenness.

**Ebriosity.** (*L. ebriosus*, given to drinking. *G. Trunksucht*.) Drunkenness, especially when habitual or frequent.

**Ebsemech.** See *Ebesmech*.

**Ebshamen'sis sal.** (*L. sal*, salt.) A synonym of *Magnesium sulphate*.

**Ebullioscope.** (*L. ebullio*, to bubble up; *Gr. σκοπέω*, to observe.) An instrument for the purpose of determining the amount of alcohol in a liquid by ascertaining its boiling point, and based on the principle that the more the spirit the lower the boiling point.

**Ebullit'io.** See *Ebullition*.

**E. sang'uinis.** (*L. sanguis*, blood.) The condition of an organ called *Orgasm*.

**E. stom'achi.** (*Στομαχος*, the stomach. *G. Sodbrennen*.) Heartburn.

**Ebullition.** (*L. ebullio*, to bubble up. *F. ebullition*; *I. ebollizione*, *ebullicion*; *G. Aufkochen*, *Aufsieden*, *Aufwallung*.) Same as *Boiling*.

Also, occasionally used in the same sense as *Effervescence*.

**Ebulus.** (*F. Fhyble*; *G. Attich*, *Zwerg-hollunder*, *Niederholder*.) The dwarf elder, *Sambucus ebulus*.

**Ebur.** (L. *ebur*, from Sans. *ibha*, an elephant. F. *ivoire*; G. *Elfenbein*.) Ivory.

**E. dentis.** (L. *dens*, a tooth.) A term for the *Dentine*.

**E. fossilis.** (L. *fossilis*, dug up.) An old term for fossil bones of large animals, which were thought to be astringent and diaphoretic.

**E. ustum nigrum.** (L. *ustus*, burnt; *niger*, black. G. *gebranntes Elfenbein*, *Beinschwarz*, *Knochenkohle*.) The substance called ivory black.

**Eburin.** (L. *ebur*.) A substance obtained by subjecting a mixture of ivory or bone dust with albumen or ox blood to great pressure at a high temperature. It is very hard, and is a non-conductor of electricity.

**Eburnation.** (L. *ebur*, ivory. F. *éburnification*.) The act or process of becoming hard and dense like ivory.

Applied to the incrustation of tumours with lime salts.

Also, applied to the condition of interstitial hypertrophy which occurs in arthritis deformans and other bone diseases in which the bone becomes very dense, porcelain-like, and polished, and the Haversian canals smaller from deposit of bone within the canals.

Also, applied to the ossification of articular cartilages.

**Eburneous.** (L. *ebur*. F. *éburné*; G. *elfenbernartig*, *elfenbeinern*.) Having the appearance or characters of ivory, yellowish white.

**Eburnification.** (L. *ebur*; *fit*, to become.) The conversion into a substance like ivory. Same as *Eburnation*.

**Ecalcarate.** (L. *e*, neg.; *calcar*, a spur.) Without a spur or horn.

**Ecalyptrate.** (L. *e*, neg.; *calyptra*, a veil. F. *écalyptré*.) Having no calyptra.

**Ecalyptrocarpous.** (L. *e*, neg.; *calyptra*; Gr. *καρπός*, fruit. F. *écalyptrocarpe*.) Having the fructification uncovered with a calyptra, as in some *Musce* and *Hepaticæ*.

**Ecardines.** (L. *e*, without; *cardo*, a hinge.) A subdivision of the *Brachiopoda*, including those in which the shell has no hinge.

Also, a Group of *Sarcobranchiata*, without a joint, intestine long, rectum opening on the right side.

**Ecastaphyllous.** (Έκαστος, each; φύλλον, a leaf. F. *ecastaphylle*.) Having simple leaves.

**Ecaudata.** (L. *e*, without; *cauda*, a tail.) A synonym of the *Anoura*.

**Ecaudate.** (L. *e*, neg.; *cauda*, a tail. F. *écaudé*; G. *unbeschwänzt*, *schwanzloss*.) Without a tail.

**Ecbalia.** Same as *Ecballium*.

**Ecbalii fructus**, B. Ph. (L. *fructus*, fruit.) The fruit of the squirting cucumber, *Ecballium officinarum*. It is about 2" long by 1" thick, oblong, pale green, with fleshy prickles, three-celled, and having a watery juice, which contains elaterin, resin, gum, and according to some, propoctic, elateric acid, hydro-elaterin, and elaterin. The sediment from the juice is *Elaterium*.

**Ecbalin.** (*Ecballium*.) A synonym of *Elaterin*, and also of *Elateric acid*.

**Ecballium.** The form of spelling of *Ecballium* adopted in the British Pharmacopœia.

**E. elaterium.** A synonym of *Ecballium officinarum*.

**Ecballium.** (Έκβάλλω, to cast out.) A

Genus of the Nat. Order *Cucurbitaceæ*, so called from the habit of the fruit, which, when ripe, suddenly breaks from the stalk and expels the seeds and juice from a basal opening.

**E. agrestis**, Richard. The *E. officinarum*.

**E. officinarum**, Rich. (L. *officina*, a workshop. F. *concombre sauvage*, *c. d'aie*; I. *cocomaro asinio*; G. *Eselskürbis*, *Springgurke*, *wilde Gurke*.) The squirting cucumber. Hab. South Europe, Eastern Asia; cultivated in England, France, and Germany. Supplies *Ecbalii fructus*.

**Ecblastesis.** (Έκ, out; βλάστησις, a budding.) The production of buds within flowers or on indorsecescences in consequence of monstrous development. Engelmann's term for axillary proliferation in plants.

**Ecbblepharos.** (Έκ, out; βλήφαρον, the eyelid.) A form of artificial eye, consisting of a piece of leather or of metal, on which the semblance of an eye is painted, for introduction under the eyelid.

**Ecblo'ma.** (Έκβάλλω, to cast out.) The embryo or fœtus which has been expelled in abortion.

**Ecbolë.** (Έκβολή, a throwing out; from ἐκβάλλω.) An abortion.

Also, a dislocation or displacement of a bone.

**Ecbolia.** (Έκβολιον, a drug for causing abortion.) Same as *Ecbolics*.

**Ecbolic.** (Έκβάλλω, to cast out. F. *écbolique*; G. *austreibend*, *fruchtatreibend*.) Having power to cast out, or to produce abortion.

**Ecbolics.** (Έκβολή, a throwing out; from ἐκβάλλω.) Medicines which have power to induce abortion, or increase the contractions of the womb.

**Ecbolin.** (Έκβολή; from ἐκβάλλω.) An alkaloid obtained from ergot. It is amorphous, brown, slightly bitter; easily soluble in water and spirit of wine, insoluble in ether and chloroform; it is probably the same as *Ergotin* of Wenzelt. It produces contraction of the muscles. It is supposed to exist in combination with ergotic acid.

**Ecbolina.** Same as *Ecbolin*.

**Ecbra'smata.** (Έκρασμα, that which is thrown out by boiling.) Old term for an eruption of fiery pimples. (Quincy.)

**Ecbra'smus.** (Έκβράσσω, to cast out.) Fermentation.

**Ecbyrso'ma.** (Έκ, out of; βύρσα, the skin.) Old term for a protuberance of a bone at the joints appearing through the skin; (Gr. *ἐκ-βύρσωμα*) used by Galen, *de Artic.* iv, 34.

**Eccanthis.** (Έκ, out of; καθός, the corner of the eye. F. *ecanthis*.) A fleshy growth in the eyelid.

**Eccathar'sis.** (Έκ, out of; καθάρσις, a cleansing.) A complete cleansing, with expulsion of the impure stuff. Similar to *Catharsis*.

**Eccathartic.** (Έκκαταίρω, to purge outwards. G. *ausreinandend*.) Having power to evacuate outwards. Applied formerly to medicines which open the pores of the skin; also, to expectorant and to purgative medicines (Gr. *ἐκκαταρτικός*), used by Galen, *de Simp. Fac.* v, 12.

**Eccema.** A false spelling of *Eczema*.

**Eccentric.** (Έκ, out of; κέντρον, the centre of a circle. F. *excentrique*; G. *excentrisch*.) Not in the centre, not taking origin from the centre, not related to the centre.

**E. convulsions.** Convulsions depending on some cause outside the central nervous system.

**E. em'bryo.** ('Εν, in; βρῖω, to bud forth.) In Botany, an embryo which is sensibly distant from the centre of the perisperm within which it is entirely contained, and not in the axis of the seed.

**E. hyper'trophy.** See *Hypertrophy*, *eccentric*.

**E. mo'tion.** Motion directed from the centre to the circumference, as from the centre of the body to the skin.

**E. ovary.** (L. *ovarius*, an egg-keeper.) Applied to the ovary when not in the centre of the flower, but on the side of the placenta.

**Eccentricity.** ('Εκ; κέντρον.) Deviation from a centre, or from what is customary; oddity.

Maudsley in describing the difference between eccentricity and insanity says that a truly eccentric man has a strong individuality, but little vanity; he has broad and original views, and great moral courage; he is emancipated from vulgar prejudice, and heeds not much the world's blame or censure. Eccentricity differs from monomania in that it is not a change of character but a persistence of an odd habit, and in that it is under the control of the will.

**Eccentrop'esis.** ('Εκκέντρος, out of the centre; πίσις, a pressing.) Pressure from within outwards.

**Eccentrot'es.** ('Εκκεντρότης.) Eccentricity.

**Eccephalo'sis.** ('Εκ, out; κεφαλή, the head.) A synonym of *Excrebration*.

**Ecces'ma.** A false spelling of *Eczema*.

**Ecc'helysis.** ('Εκ, out; χελύσσομαι, to expectorate. F. *echélyse*; G. *Aushusten*.) A term for the act of expectoration.

**Eechondro'ma.** Same as *Eechondrosis*.

**Eechondro'sis.** ('Εκ, out; χόνδρος, cartilage.) One of Virchow's divisions of *Chondroma*, the other being *Euchondroma*. Eechondrosis is an homologous tumour, an outgrowth from a normal cartilage; it not infrequently ossifies.

**E. sphe'no-occipita'lis.** (Sphenoid bone; occipital bone.) A small tumour lying on the clivus Blumenbachii, and sometimes attached to the basilar artery, arising from a piece of cartilage which has escaped ossification with the remainder when the basilar processes of the sphenoid and occipital bones have become attached to each other by bone. The matrix of the cartilage undergoes mucoid softening, and the corpuscles become vesicular; sometimes it ossifies.

**Eechore'sis.** ('Εκχώρησις, a going out.) A synonym of *Defecation*.

**Eechylo'ma.** ('Εκ, out of; χυλός, juice.) Old name for expressed juice, an extract.

**Eechylo'sis.** Same as *Eenchylosis*.

**Ec'hyma.** ('Εχυμα, that which is poured out.) Old term for *Eczema*.

**Eechymo'ma.** ('Εκχύμωμα, from εκχυμόμα, to extravasate blood under the skin.) A tumour formed by an *Eechymosis*.

Alibert includes vascular naevi also under this term.

**E. arterio'sum.** (L. *arteria*, an artery.) Old term for a false aneurism.

**E. cap'itis recen'tum nato'rum.** (L. *caput*, the head; *recens*, fresh; *natus*, born.) A synonym of *Cephalothematoma*.

**E. hypon'ychon.** Same as *Hyponychon*.

**E. lymphatica.** (Lymphatic.) A syno-

nym of the condition called *Phlegmasia dolens*, from the implication of the lymphatics.

**E. melas'ma.** Same as *Melasma*.

**Eechymo'sis.** ('Εκχύμωσις, from εκχυμόμα. F. *echymose*; L. *echymosi*; G. *Unterlaufung*.) A bluish, reddish, or yellowish blotch caused by extravasation of blood into the superficial vascular layer of the corium, or into the subcutaneous or submucous connective tissue, the result of rupture of small vessels or capillaries from a blow or other injury. Eechymosis may be produced by violence inflicted on a recently dead body.

**E., cadaver'ic.** (L. *cadaver*, a dead body.) A term for *Sugillation*.

**E., capillary.** (L. *capillus*, a hair.) Minute extravasations of blood from the capillary blood-vessels.

**E., post-mor'tem.** (L. *post*, after; *mors*, death.) A term for *Sugillation*.

**Eechymotic.** (Same etymon.) Of the nature or appearance of an *Eechymosis*.

**Ec'chysis.** ('Εκχυσις, from εκχέω, to pour out. F. *echyse*; G. *Ausgiessen*.) A pouring out or an effusion.

**Eecleg'ma.** Same as *Ecelegma*.

**Ec'clisis.** ('Εκκλίσις, to bend out of the regular line.) Old term (Gr. *ἐκκλισις*), used by Hippocrates, *de Artic.* iv, 4, for a dislocation.

Also, the separation from one another of the ends of a broken bone.

**Ec'clysis.** ('Εκ, out of; κλύσις, a washing out. F. *ecclyse*; G. *Auswaschen*.) Evacuation by clysters; washing out by injections.

**Ec'copé.** ('Εκκοπή, a cutting out; from ἐκκόπτω, to cut out. F. *ecope*; G. *Aushäutung*, *Ausschneidung*.) Old term, used by Galen in *Def.*, for the cutting out of any part.

Also, an oblique incision of a bone or other part which does not remove a section.

**Ec'copeus.** ('Εκκόπτω, to cut out.) Old term for an instrument used in trepanning; the raspatory.

**Eccoprosiæsthes'is.** ('Εκκόπρωσις, a cleansing from dung; αἴσθησις, a sensation.) The sensation of desire to evacuate the bowels.

**Eccopro'sis.** ('Εκκόπρωσις. G. *Kothausleitung*.) The act of emptying the bowels.

**Eccoprotic.** ('Εκ, out of; κόπρος, dung. F. *ecoprotique*; G. *Kothausleitend*.) Evacuating; emptying. Applied to medicines that merely evacuate the contents of the bowels, without causing any liquid discharge; such is the case with rhubarb and aloes.

**Eccoprotics.** ('Εκ; κόπρος. G. *Abführmittel*.) Medicines having the action called *Eccoprotic*.

**Eccorthatic.** ('Εκ, out; κόρθις, a heap.) A term applied to medicines which were supposed to disperse collections of humours. (Dunglison.)

**Eccrinology.** ('Εκκρίνω, to secrete; λόγος, an account. F. *eccrinologie*; G. *Ausscheidungslchre*.) Term for the doctrine of, or a treatise on, the secretions.

**Eccrisiolog'y.** ('Εκκρίσις, secretion; λόγος, an account.) Same as *Eccrinology*.

**Eccrisionomy.** ('Εκκρίσις; νόμος, a law.) The laws of excretions and evacuations.

**Eccrision'osi.** ('Εκκρίσις; νόσος, disease.) Diseases caused by defects of excretion.

**Eccrisioschesis.** ('Εκκρίσις; σχήσις, retention.) Retention of an excretion or a critical discharge.

**Ec'crisis.** (Ἐκκρίσις, from ἑκκρίνω, to excrete.) Old term for an excretion or expulsion, whether a normal secretion or a product of disease; also the thing excreted.

**Ec'critica.** (Ἐκκριτικός, from ἑκκρίνω, to excrete.) Of, or belonging to, excretion. A class in Good's Nosology, being diseases of the excrement function, and divided into *Mesotica*, *Catolica*, and *Acrotica*.

**Ec'critocritica.** (Ἐκκρισις, secretion; κριτικός, fit for discerning.) Critical signs which indicate the renewal of, or need of, an arrested excretion.

**Ec'cye'sis.** (Ἐκ, out of; κύσις, gestation.) A term for extra-uterine foetation, or imperfect foetation in some organ exterior to the uterus.

**E.abdomina'lis.** (L. *abdomen*, the belly.) Extra-uterine pregnancy when occurring in the cavity of the abdomen; either from rupture of the ovarian capsule, or of the Fallopian tube, or of the uterine walls in which the impregnated ovum may have been arrested; or from the impregnated ovum dropping out of the mouth of the Fallopian tube into the abdominal cavity.

**E.ovaria.** (L. *ovarius*, an egg-keeper.) Extra-uterine pregnancy occurring in the structure of the ovary.

**E.tuba'lis.** (L. *tuba*, a straight trumpet.) Extra-uterine pregnancy when occurring in the Fallopian tube.

**Ec'cyl'osis.** (Ἐκ, out; κύλιω, to roll along.) A disease or disturbance of development.

**Ec'cys'tis.** (Ἐκ; κύστις, the bladder.) Extroversion of the urinary bladder.

**Ec'dars'is.** (Ἐκ, out; δάρσις, excoaration. G. *Schunden*.) An extensive removal of the skin by means of a wound or other cause.

**Ec'demic.** (Ἐκδημος, from home.) A term applied, in contradistinction to epidemic and endemic, to diseases which originate in a cause away from the locality in which they are found, and which do not spread among the people.

**Ec'demoma'nia.** (Ἐκδημος, from home; μανία, madness. G. *Reisesucht*.) A form of insanity in which there is a morbid desire for travelling about.

**Ec'demon'osus.** (Ἐκδημος; νόσος, disease.) Same as *Ec'demomania*.

**Ec'dermopto'sis.** Same as *Ex'dermoptosis*.

**Ec'deron.** (Ἐκ, out; δέρμα, skin.) The outer part of the skin and skin-like structures, the epidermis and the epithelium.

Also, the outer layer of the *Ectoderm* of *Cten-terata*.

**Ec'dora.** (Ἐκδορά; from ἐκδίδω, to strip the skin off. F. *edore*; G. *Enthauptung*.) Old term for excoaration, especially when it occurs in the urethra.

**Ec'dor'ious.** (Ἐκδορά. G. *hautan-fresend*.) Having power to excoarate. Applied to that which causes excoaration, as caustic applications (Gr. ἐκδόριος), used by Dioscorides, iii, 70.

**Ec'dysis.** (Ἐκύνσις, a getting out; from ἐκδίδω, to strip.) Stripping or moulting of the skin, as in serpents and caterpillars, or of the chitinous integument, as in Crustacea.

Also, extensive desquamation of the skin in disease.

**Ec'gonin.** (Ἐκγονος, born of.) C<sub>9</sub>H<sub>15</sub>NO<sub>3</sub>+H<sub>2</sub>O. A crystalline base, occurring in colourless prisms, obtained, along with benzoic

acid and methylic alcohol, when cocaine is heated with hydrochloric acid; it has a sweetish bitter taste, and is soluble in water, but insoluble in alcohol.

**Ec'goni'na.** Same as *Ecgonin*.

**Echallot'te.** Same as *Eschulot*.

**Echecollon.** (Ἐχέω, to have; κόλλα, glue.) Old term for any gluey or adhesive remedy. (Gorræus.)

**Echecollum.** Same as *Echecollon*.

**Echeneiboth'rium.** (Ἐχηνίς, ship-holding, the remora; βόθρος, a pit.) A Genus of cestoid worms, Family *Tetraphyllide*. Head with a crown of four leaf-like suckers, which have transverse ridges.

**E. affi'nē.** (L. *affinis*, that is neighbouring.) Found in the intestine of *Raja batis*.

**E. du'bium.** v. Beneden. (L. *dubius*, moving in two directions.) Found in the intestine of *Raja batis*.

**E. mi'nimum.** Van Beneden. (L. *mini-mus*, least.) Found in the intestine of *Trygon pastinaca*.

**E.myliob'atis aquila.** Wedl. Found in the intestine of *Myliobatis aquila*.

**E.sphæroceph'alum.** Diesing. (Σφαίρα, a ball; κεφαλή, the head.) Found in the stomach of *Raja clavata*.

**E.tumi'dulum.** v. Beneden. (L. *tumidus*, swollen.) Found in the intestine of *Raja batis*.

**E.variab'ilē.** van Beneden. (L. *variabilis*, variable.) Found in the intestine of *Raja asterias*.

**Echene'is.** (Ἐχηνίς, holding ships back.) A Genus of the Division *Acanthopterygii*, Order *Teleostei*, Class *Pisces*. So called because the ancients believed that they held fast to ships by the sucker on the upper surface of the head.

Also, a synonym of the *Remora Huttoni*.

**Echetro'sis.** (Ἐχέτροσις.) A name for the *Bryonia dioica*, or white bryony.

**Echia'les.** (Ἐχίον.) An Alliance of perigynous Exogens, according to Lindley, having dichlamydeous, monopetalous flowers, nucamentaceous fruits, a large embryo, and no albumen.

**Echicaout'chin.** C<sub>25</sub>H<sub>40</sub>O<sub>2</sub>. A substance, elastic at ordinary temperatures, obtained by means of petroleum and ether from Dita bark. It is slightly soluble in boiling alcohol, easily in benzene, chloroform, and ether. It is not acted on by concentrated solution of potash.

**Echiceric acid.** (Ἐχicerin.) C<sub>30</sub>H<sub>48</sub>O<sub>4</sub>. An amorphous acid substance obtained by the action of sodium on echierin. It melts at 100° C. (212° F.) It is found in the juice of *Galatodendron utile* and of *Tubernemontana utilis*.

**Echic'erin.** C<sub>30</sub>H<sub>48</sub>O<sub>2</sub>. A substance accompanying echitin in Dita bark. It crystallises in stellate or nodular needles, which melt at 157° C. (315° F.)

**Echid'na.** (Ἐχίνα, a viper.) A genus of serpents now usually included in other genera.

Also, a Genus of the Order *Monotremata*.

**E.ar'letans.** Meir. See *Clotho arietans*.

**E.at'ropos.** (Ἀτροπος, one of the Parcae.) Hab. Cape of Good Hope. Poisonous.

**E.gabon'ica.** Hab. Gaboon. Poisonous.

**E.inorna'ta.** (L. *inornatus*, unadorned.) Hab. South Africa. Venomous.

**E. hystrix**, Cuv. (Υπτιξ, a porcupine.) An animal indigenous to New South Wales, of the size of a hedgehog; skin with spines. Used as food.

**E. mauritanica**. (L. *mauritanica*, the modern Morocco and Fez.) A poisonous species found in Algeria and the neighbouring countries.

**E. ocellata**. (L. *ocellatus*, marked with spots like little eyes.) Hab. Peru. A very poisonous species.

**E. setosa**, Cuv. (L. *seta*, a bristle.) An animal indigenous to Van Diemen's Land; skin with hairs concealing the spines. Used as food.

**Echidnin**. (Same etymon.) The active part of viper's poison. It is obtained by coagulating the poison by alcohol, washing on a filter with alcohol, and then with water. It is neutral, inodorous, colourless, tasteless, and transparent; is precipitated by alcohol, but redissolved by water; it is distinguished from the ptyalin of saliva, which it resembles, by being precipitated by ferric sulphate.

**Echina'cea**. (Εχίνος, the hedgehog.) A Genus of the Nat. Order *Compositæ*, so called from the prickly disk.

**E. heterophylla**, Don. (Ετερος, other; φύλλον, a leaf.) Hab. Mexico. Used in dysentery and as a vulnerary.

**E. purpurea**. (L. *purpureus*, purple.) Purple coneflower. Hab. America. Root aromatic and carminative. (Dunghison.)

**Echinate**. (Εχίνος, the hedgehog. F. *échiné*; G. *stachelig, igelstachelig*.) Beset with prickles like the hedgehog.

**Echinated**. Same as *Echinate*.

**Echini**. (L. pl. of *echinus*, a hedgehog.) The spines on the surface of the pilus of fungi.

**Echini'des**. (Εχίνος, an urchin.) Term employed by Hippocrates for the means he employed for purging or cleansing the womb.

**Echinobothrium**. (Εχίνος; βοθρος, a pit.) A Genus of the Family *Diphyllidæ*, Order *Cestoda*; larvæ found in Crustaceans and Molluscs.

**E. aff'nē**, Diesing. (L. *affinis*, allied.) Found in the large intestine of *Raja aspera*, Will.

**E. levicollē**, Lespès. (L. *levis*, smooth; *collum*, a neck.) Found in capsules in the liver of *Nassa reticulata*.

**E. typus**, v. Bened. (L. *typus*, an image.) Found in the intestines of *Raja clavata*, Rondelet.

**Echinocactæ**. (Εχίνος, a hedgehog; κάκτος, the cactus.) A Group of gamophyllous *Cactaceæ*. The tube of the calyx prolonged more or less beyond the ovary; it includes Melocactus, Mamillaria, Echinocactus, Cereus, Epiphyllum, and Phyllocactus.

**Echinocarpous**. (Εχίνος, a hedgehog; καρπός, fruit. F. *echinocarpe*; G. *igel-fruchtig*.) Having the fruit rough, with rigid points.

**Echinocephalus**. (Εχίνος, an urchin; κεφαλή, the head.) A sexually mature form of nematoid worm.

**E. uncinatus**. (L. *uncinatus*, barbed.) Found in the large intestine of *Trygon Brucei*.

**Echinococ'cifer**, Weinland. (Echinococcus; L. *fero*, to bear.) A Genus of the Family *Tæniodeæ*.

**E. echinococ'cus**, von Siebold. The *Tænia echinococcus*.

**Echinococ'cus**, Rudolphi. (Εχίνος;

κόκκος, a grain or berry. F. *échinococque*; I. *echinococco*; G. *Hülseusurm, Saugrüsselsbasenwurm, Blasenstachelwurm*.) The scolex or higher larval form in man, quadruman, and other animals, of the *Tænia echinococcus* of the dog. It is developed in considerable numbers from the inner surface of the *E. brood-sac*, or hydatid cyst, and is when mature an ovoid, clear, vesicular body, .17" to .01" in diameter, and consisting of two unequal segments separated by a slight constriction; an anterior part, smaller, bearing the rostellum and the suckers; and a posterior, larger, and attached to the brood-sac by a pedicle. The rostellum consists of an oval projection, which is capable of retraction within the body of the parasite, and carries a double circle of hooklets as well as, in its hinder segment, four suckorial eminences. The hooklets are arranged in two rows, one of which consists of somewhat longer ones than the other, being from 1-550th" to 1-1000" in length. They are curved somewhat like the claw of a cat, have a broad, oblique base with a bifid extremity. It possesses a water vascular system at a very early stage. For an account of the early stage of development see *Tænia echinococcus*.

The term was formerly, and is still sometimes, used as a synonym of *Hydatid*.

See also *Hydatid* and *Acephalocyst*.

**E. altric'cipariens**. (L. *altrix*, a female nourisher; *pario*, to produce.) The second of Küchenmeister's three varieties of hydatid cyst in which there are developed from the inner surface of the primary vesicle brood capsules with one scolex, or with secondary fertile brood capsules.

**E. brood-cap'sule**. (L. *capsula*, a small box.) Same as *E. brood-sac*.

**E. brood-sac**. (G. *Echinococcus-Mutterblase*.) The vesicles projecting from the inner surface of the germinal membrane of an hydatid cyst in which echinococcus heads are developed.

**E. cyst**. (Κέστυς, a bag.) An hydatid cyst containing *Echinococci*.

**E. emb'ryonal sac**. (Εμβρυον, the embryo.) The primary hydatid cyst, being the development of the first scolex from the egg.

**E. endog'enus**, Kuhn. (Ενδον, within; γίνωαι, to produce.) The form of hydatid cyst in which the secondary cysts are developed from the inner surface of the parent cyst; being a synonym of *E. altric'cipariens*.

**E. exog'enus**. (Εξω, outside; γίνωαι, to produce.) The form of hydatid cyst in which the secondary cysts are developed from the outer surface of the parent cyst, being a synonym of *E. scoloc'cipariens*.

**E. gallopavo'nis**, Siebold. Found in the lungs of *Meleagris gallopavo*.

**E. gou'rae corona'tæ**, Crisp. (L. *corona*, a crown.) Found in the liver of *Goura coronata*.

**E. granula'ris**. Same as *E. granulosus*.

**E. granulo'sus**. (L. *granula*, a small grain.) Leuckart's term for *E. scoloc'cipariens*, on account of the bud or granule-like appearance of the scolices.

**E. head**. The scolex of the *Tænia echinococcus* described under the chief heading.

**E. homin'is**, Rudolphi. (L. *homo*, man.) The scolex of *Tænia echinococcus*.

**E. huma'nus**. (L. *humanus*, human.) Same as *E. homin'is*.

**E. hydatido'sus**, Leuckart. (*Hydatid*.) The same as *E. altric'cipariens*.

**E. maca'ei**, Cobbold. Found in the cavity of the thorax of *Macacus*.

**E. meleagris ocella'tæ**, Crisp. (L. *ocellus*, an eyelet.) Found in *Meleagris ocellata*.

**E. moth'er-sac**. (G. *Echinococcus mütterblase*.) The same as *E. embryonal sac*.

**E. multilocula'ris**. (L. *multus*, many; *loculus*, a cell.) The third of Küchenmeister's three varieties of hydatid cyst in which a number of small secondary exogenous vesicles have been produced, and which are frequently separated from each other by trabeculae of connective tissue; this condition occurs most frequently in the liver.

**E. par'di**, Huxley. (L. *pardus*, a male panther.) Found in *Felis mitis*.

**E. polymor'phus**, Diesing. (Πολύς, many; μορφή, form.) Found in the viscera and especially the liver of *Homo sapiens*. The same as *Tenia echinococcus*, v. Siebold.

**E. scolecipa'riens**. (*Scolex*; L. *pario*, to bring forth.) The first of Küchenmeister's three varieties of hydatid cyst in which there are developed from the outer layer of the primary vesicle brood-capsules with one scolex, or with secondary fertile brood-capsules; or the whole of the brood-capsules may be infertile, forming accephalocysts.

**E. sim'ia**, Rudolphi. (L. *simia*, an ape.) The scolex of *Tenia echinococcus* when occurring in a monkey.

**E. veterino'rum**, Rudolphi (L. *veterinus*, belonging to beasts.) The scolex of *Tenia echinococcus* when occurring in cattle.

**Echinodermal**. Relating to the *Echinodermata*.

**Echinoderm'mata**. (Εἶχος; δέρμα, skin. G. *Stachelhäuter*, *Igelhäuter*.) A Subkingdom of animals having a more or less radiated structure, a calcareous dermic skeleton often furnished with spines, a distinct vascular and an alimentary system, with generally an anal aperture, a nervous system, and an ambulacral or water vascular system.

**Echinoderm'matous**. (Εἶχος; δέρμα.) Relating to the *Echinodermata*.

**Echinoderm'i**. (Εἶχος; δέρμα. G. *Stachenschweinmensch*.) Persons with papillary, horny, skin.

**Echinoglos'sum**. (Εἶχος; γλῶσσα, the tongue.) The *Ophinglossum vulgatum*.

**Echinoid'ea**. (Εἶχος; εἶδος, likeness.) A Class of the Subkingdom *Echinodermata*. They are rounded or discoidal forms of various colours enclosed in a shell or perisome of spine-bearing, 4—6 angled, calcareous plates; some of which are perforated for the ambulacral feet. The sexes are distinct.

**Echinomelocactus**. (Εἶχος, a hedge-hog; μήλον, an apple; κάκτος, a cactus.) The *Melocactus communis*.

**Echinopæ'dium**. (Εἶχος; παῖς, a child.) The bilaterally symmetrical larva of the *Echinodermata*.

**Echinoph'ora**. (Εἶχος; φορέω, to bear.) The prickly parsnip. A genus in Linnaeus's botany. He enumerates two species and one variety.

Also, a name of some species of parsley.  
**Echinoph'oræ**. (Εἶχος; φορέω.) A Division of the Nat. Order *Umbellifera*, according to Baillon; fruit miloecular, by abortion of one of the carpels; primary ridges only present, and but slightly developed.

**Echinoph'orous**. (Εἶχος; φορέω, to bear. G. *Stacheltragend*.) Bearing spines like a hedgehog.

**Echinophthal'mia**. (Εἶχος; ὀφθαλμία, inflammation of the eye. F. *échinophthalmie*.) Old term for inflammation of the edge of the eyelids, so that the hairs project like the quills of a hedgehog.

Or, according to some, an ophthalmia in which the conjunctiva is rough and granular.

**Echinopodium**. (Εἶχος, a hedgehog; πούς, a foot.) A species of broom, supposed to be the *Spartium scoparium*, because its flowers resemble the foot of the hedgehog.

**Echinops**. (Εἶχος; ὤψ, aspect or appearance. G. *Angeldistel*.) A Genus of the Nat. Order *Compositæ*.

**E. maximus**, Siev. (L. *maximus*, greatest.) The *E. sphaerocephalus*.

**E. multiflorus**, Lamh. (L. *multus*, many; *flos*, a flower.) The *E. sphaerocephalus*.

**E. pauciflorus**, Lamh. (L. *paucus*, few; *flos*, a flower.) The *E. ritro*.

**E. ri'tro**, Linn. The ritro or little globe thistle. Hab. South Europe. Root astring nt.

**E. sphærocephalus**, Linn. (Σφαῖρα, a ball; κεφαλή, the head.) The globe thistle. Its root and seeds are moderately diuretic.

**E. strigo'sus**, Linn. (L. *strigosus*, full of wrinkles, leam.) Hab. Spain. The down of the flower and leaves, called Spanish tinder, is used as amadou.

**Echinopus**. The *Echinops sphaerocephalus*.

**Echinorhynchus**. (Εἶχος, a hedgehog; ῥύγχος, a beak. F. *échinorrhynque*; G. *Dornrüssel*, *Stachelschirmp*, *Kratzer*.) A Genus of the Order *Acanthocephala*, Class *Nemathelmintha*, Subkingdom *Vermes*. The embryo is a small elongated body, with temporary hooklets at the anterior end, and a central granular embryonic nucleus; it is enclosed in the fusiform egg before leaving the body of the parent, is then swallowed by some Amphipod, or Isopod, or other Crustacean, becomes free in the digestive tube, perforates the wall of the intestine, and is transformed, after having lost its temporary hooklets, into a small oblong gregariniform worm, which remains in the visceral cavity of its host, where it develops: it then escapes, is eaten by some fish or aquatic bird, and, attaining in its new abode full sexual maturity, breeds. For an account of the adult, see *Acanthocephala*.

**E. acanthoso'ma**, Westrumb. (Ἀκανθός, a thorn; σῶμα, body.) Found in the intestines of *Atherina hepsetus*.

**E. acus**, Rud. (L. *acus*, a needle.) Found in the intestines of *Gadus luscus* and *G. morrhua*.

**E. æqualis**, Zed. (L. *æqualis*, equal.) Found in the intestine of *Agolius otus*.

**E. agilis**, Rud. (L. *agilis*, nimble.) Found in the intestine of *Mugil auratus*.

**E. amphipach'us**, Westrumb. (Ἀμφί, on both sides; πᾶχος, thick.) Found in the mesentery of *Erinaceus europæus*.

**E. angusta'tus**, Rudolphi. (L. *angustus*, narrow.) In the intestines of the perch, trout, and other fresh-water fish; embryo fills the visceral cavity of the water-slayer, *Asellus aquaticus*.

**E. anthu'ris**, Dujardin. Found in the intestines of *Triton taniatus*.

**E. annula'tus**, Molin. (L. *annulatus*, ringed)

Found in abdominal cavity of *Merluccius vulgaris*.

**E. appendicula'tus**, Westrumb. (L. *appendicula*, a small appendage.) Found in the intestines and mesentery of *Cracidura aranea*.

**E. arcua'tus**, Diesing. (L. *arcuatus*, from *arcus*, to bend like a bow.) Found in the liver of *Macruron trachera*.

**E. ar'dea' albae**, Rud. (L. *albus*, white.) Found in the intestines of *Ardea alba*.

**E. areola'tus**, Rud. (L. *areola*, a small open place.) Found in the intestines of *Sylvia atricapilla*.

**E. argenti'næ**, Rudolphi. (L. *argentum*, silver.) Found in the abdomen of *Scopelus Humboldtii*.

**E. auran'tiacus**, Risso. (L. *aurantia*, an orange.) Found in the intestines of *Trachypterus fulv.*

**E. bacilla'ris**, Zed. (L. *bacillum*, a small staff.) Found in the intestines of *Mergus albellus*.

**E. balanoceph'alus**, Owen. (Bálanos, an acorn; κεφαλή, the head.) In some whales.

**E. brevicoll'is**, Molin. (L. *brevis*, short; *collum*, a neck.) Found in the intestines of *Balenoptera rostrata*.

**E. campanula'tus**, Diesing. (Low L. *campanula*, a little bell.) Found in the intestines of *Felis concolor*.

**E. campylu'rus**, Nitzsch. (Καμπύλος, curved; ὅπισθ, a tail.) Found in the intestines of *Lestris catarrhactes*.

**E. cauda'tus**, Zed. (L. *cauda*, a tail.) Found in the intestines of *Circus rufus*.

**E. cinc'tus**, Rud. (L. *cingo*, to surround.) Found in the peritonæum of *Vipera Redii*.

**E. circumflex'us**, Molin. (L. *circumflecto*, to bend about.) Found in the intestines of *Talpa europæa*.

**E. clava'ceps**, Zed. (L. *clava*, a club.) Found in the intestines of *Cyprinus carpio*.

**E. clava'ula**, Dujardin. (L. *clavula*, a little twig.) Found in the intestines of *Gobius niger*.

**E. compres'sus**, Rud. (L. *comprimio*, to squeeze.) Found in the intestines of *Corvus cornix*.

**E. contor'tus**, Bremser. (L. *contorqueo*, to turn.) Found in the intestines of *Lanius colubrin.*

**E. contor'tus**, Molin. (L. *contorqueo*, to turn.) Found in the intestines of *Strix flammea*.

**E. crassicol'lis**, Villot. (L. *crassus*, thick; *collum*, a neck.) Found in the intestines of *Calidris arnaria*.

**E. crotalli**, Humboldt. (*Crotalus*.) The *Pentastoma moniliforme*, Diesing.

**E. cuniculi**, Bellingham. Found in the intestines of *Lepus cuniculus*.

**E. cylindra'ceus**, Schrank. (L. *cylindrus*, a cylinder.) Found in the intestines of *Dendrocopus major*.

**E. decip'iens**, Dujardin. (L. *decipio*, to ensnare.) Found in the intestines of *Trogodytes parvulus*.

**E. dendro'copi**, Westrumb. Found in the intestines of *Dendrocalyptis albicollis*.

**E. depres'sus**, Nitzsch. (L. *deprimo*, to press down.) Found in the duodenum of *Muscula faina*.

**E. dimorphoceph'alus**, Westrumb. (Διμορφος, two-formed; κεφαλή, the head.) Found in the intestines of *Muscicapa collaris*.

**E. echinodis'cus**, Diesing. (Εχίνος, a hedgehog; εἶσκος, a quoit.) Found in the intestines of *Myrmecophaga tetradactyla*.

**E. elegans**, Dies. (L. *elegans*, elegant.) Found in capsules beneath the skin in *Hapale chrysolenca*.

**E. emberiz'zæ**, Rudolphi. (L. *emberiza*, a bunting.) Found in the intestines of *Fringilla citrina*.

**E. enterode'lus**, Weinland. (Εντερων, an intestine; ὄφλος, conspicuous.) In the intestine of *Emys rubriventris*.

**E. eperlan'is**, Rudolphi. Found in the abdomen and intestines of *Osmerus eperlanus*.

**E. falca'tus**, Frolich. (L. *falcatus*, scythe-shaped.) Found in the intestines of *Salmandra atra*.

**E. fascia'tus**, Westrumb. (L. *fascia*, a band.) Found in the omentum of *Sylvia atricapilla*.

**E. filicoll'is**, Rud. (L. *filum*, a thread; *collum*, a neck.) Found in the intestines of *Anas boschas domestica*.

**E. fla'vus**, Molin. (L. *flavus*, yellow.) Found in the intestines of *Pagellus erythrinus*.

**E. Frasso'nii**, Molin. Found in the intestines of *Nematus arguata*.

**E. fustiform'is**, Zed. (L. *fusus*, a spindle; *forma*, shape.) Found in the intestines of *Trutta fario*.

**E. galbulæ**, Westrumb. Found in the intestines of *Alcedo galbula*.

**E. gibbo'sus**, Rud. (L. *gibbosus*, hump-backed.) Found in the liver and coats of the intestines in capsules in *Platessa flesus*.

**E. gigas**, Goze. (L. *gigas*, a giant. G. *Riesenkrauter*.) In the small intestine of swine; the tapeworms found in the human animal which were thought to be *E. gigas* have been shown to be of some other species. Male 3", females sometimes 20" long. Embryo probably in the larvæ of the cockchafer, *Melolontha vulgaris*; or, according to some, in land snails.

**E. globicol'lis**, Creplin. (L. *globus*, a sphere; *collus*, a neck.) Found in the intestines of *Larus maximus*.

**E. globocauda'tus**, Zed. (L. *globus*, a sphere; *cauda*, a tail.) Found in the intestine of *Utrula aluco*.

**E. globulo'sus**, Rud. (L. *globulus*, a globule.) Found in the intestine of *Acerina cernua*.

**E. grac'ilis**, van Beneden. (L. *gracilis*, thin.) Found in the intestines of *Mugil chelo*.

**E. grac'ilis**, Rudolphi. (L. *gracilis*, thin.) Found in the intestines of *Coracius garrula*.

**E. gru'is**, v. Linstow. Found in the intestines of *Grus cinerea*.

**E. hæru'ca**, Rud. In the frog; embryo in *Asellus aquaticus*.

**E. Haliaët'ti**, Rud. Found in the intestines of *Pandion haliaët'tus*.

**E. hamula'tus**, Leidy. (L. *hamulus*, a small hook.) Found in the intestines of *Emys insculpta*.

**E. hepatic'us**, Molin. (Ήπαρ, the liver.) Found in the abdominal cavity and liver of *Pica caudata*.

**E. hexacan'thus**, Dujardin. (Εξ, six; ἄκανθός, a thorn.) Found in the intestines of *Mugil labeo*.

**E. hiru'dinum**, Rudolphi. (L. *hirundo*, a swallow.) Found in the intestines of *Cypselus apus*.

**E. hom'inis**, Lambl. (*L. homo*, a man.) A term applied to the Echinorhynchus found in boy by Lambl; the species is a doubtful one. Some have, erroneously, thought it to be *E. gigas*; Leuckhart asserts its great similarity to *E. angustatus*.

**E. hys'trix**, Brems. (ὕστριξ, a porcupine.) Found in the large intestine of *Mergus merganser*.

**E. impud'icus**, Diesing. (*L. impudicus*, shameless.) Found in the intestines of *Doras niger*.

**E. inæqua'lis**, Rud. (*L. inæqualis*, unequal.) Found in the stomach of *Buteo vulgaris*.

**E. incrassa'tus**, Molin. (*L. incrassatus*, fattened.) Found in the intestines of *Gobius paganellus*.

**E. infla'tus**, Creplin. (*L. inflatus*, blown into.) Found in the intestines of *Hæmatopus ostralegus*.

**E. inflex'us**, Cobbold. (*L. inflecto*, to bend.) Found in the intestines of *Halichelys atra*.

**E. inscrip'tus**, Westrumb. (*L. inscriptus*, inscribed.) Found in the intestines of *Turdus albicollis*.

**E. la'bri**, Rudolphi. Found in the intestines of *Crenulabrus tinca*.

**E. lagenæfor'mis**, Westrumb. (*L. lagena*, a flask; *forma*, shape.) Found in the intestines of *Circus cyaneus*.

**E. lamel'liger**, Diesing. (*L. lamella*, a plate; *gero*, to bear.) Found in pyloric appendix of *Naucrutes ductor*.

**E. lan'cea**, Westrumb. (*L. lancea*, a spear.) Found in the intestines of *Oedienemus creptans*.

**E. lanceola'tus**, Linstow. (*L. lancca*, a spear.) Found in the intestines of *Aegialites hiaticula*.

**E. latera'lis**, Molin. (*L. latus*, side.) Found in the intestines of *Belone acus*.

**E. lesinifor'mis**, Molin. Found in capsules in the peritoneum of *Rana esculenta*.

**E. linea'ris**, Westrumb. (*L. linearis*, linear.) Found in the intestines of *Sterna cantina*.

**E. longicol'lis**, Villot. (*L. longus*, long; *collum*, a neck.) Found in the intestines of *Streptilas interpres*.

**E. macracan'thus**, Bremser. (*Μακρός*, long; *ἀκανθος*, a thorn.) Found in the intestines of *Charadrius plumalis*.

**E. macrorhyn'chus**, Diesing. (*Μακρός*, long; *ρύγχος*, a snout.) Found in the intestines of *Vastres Cuvieri*.

**E. macrou'tus**, Bremser. (*Μακρός*, long; *οὖρος*, wind.) Found in the intestines of *Ardea purpurea*.

**E. major**, Bremser. (*L. major*, greater.) Found in the intestines of *Erinaceus europæus*.

**E. manifest'us**, Leidy. (*L. manifestus*, clear.) Found in the intestines of *Picus colluris*.

**E. megaceph'alus**, Westrumb. (*Μεγας*, great; *κεφαλή*, head.) Found in the peritoneum of *Pantherophis zææ*.

**E. micracan'thus**, Rud. (*Μικρός*, small; *ἀκανθα*, a thorn.) Found in the intestines of *Fringilla caelebs*.

**E. microceph'alus**, Rud. (*Μικρός*, small; *κεφαλή*, head.) Found in the intestines of *Didelphys philander*.

**E. milla'ris**, Zenker. (*L. milium*, millet.)

The embryo of *E. polymorphus* found in the intestine of *Gammarus pulex*.

**E. monilifor'mis**, Bremser. (*L. monile*, a collar; *forma*, shape.) Found in the intestines of *Cricetus frumentarius*.

**E. mur'is**, Zeder. (*L. mus*, a mouse.) Found in the stomach of *Mus musculus*.

**E. napæfor'mis**, Rud. (*L. napa*, a turnip; *forma*, shape.) Found in the cæcum and under the skin of *Erinaceus europæus*.

**E. nar'doi**, Molin. (*Νάρδος*, nard.) Found in the intestines of *Belone acus*.

**E. obli'quus**, Dujardin. (*L. obliquus*, oblique.) Found in the intestines of *Certhia familiaris*.

**E. oligacanthoi'des**, Rud. (*ὀλίγος*, small; *ἀκανθα*, a thorn; *εἶδος*, likeness.) Found in the intestines and mesentery in capsules in *Bothrops jararacca*.

**E. oligacanth'us**, Rud. (*ὀλίγος*, small; *ἀκανθα*, thorn.) Found in the peritoneum of *Elaphis quadrilincata*.

**E. ori'oli**, Rud. Found in the intestines of *Icterus cristatus*.

**E. o'tidis houbæ'ræ**, Miescher. Found in the intestines of *Otis houbara*.

**E. ova'tus**, Leidy. (*L. ovatus*, egg-shaped.) Found in the small intestines of *Felis pardus*.

**E. pachy'o'mus**, Creplin. (*Παχός*, thick; *σῶμα*, the body.) Found in the stomach of *Trutta salar*.

**E. pa'ri**, Rud. Found in the intestines of *Parus major*.

**E. pellu'cidus**, Leuckart. (*L. pellucidus*, transparent.) Found in the intestines of *Delphinus delphis*.

**E. plagiceph'alus**, Westrumb. (*Πλάγιος*, slant; *κεφαλή*, a head.) Found in the intestines of *Acipenser glaber*.

**E. plates'sæ**, v. Bened. Found in the intestines of *Platessa vulgaris*.

**E. pleuronec'tes max'imi**, Müller. Found in the intestines of *Rhombus marinus*.

**E. pleuronec'tes platessoi'dis**, Rud. Found in the intestines of *Platessa flesus*.

**E. polymor'phus**, Brems. (*Πολύς*, many; *μορφή*, form.) A parasite of the ducks and other birds.

**E. por'rigens**, Rudolphi. (*L. porrigo*, to spread out.) In whales.

**E. prætex'tus**, Molin. (*L. prætexo*, to border.) Found in the intestines of *Triton lobatus Bonaparte*.

**E. pris'tis**, Rud. (*Πρίστις*, a sea monster.) Found in the intestines of *Scomber colias*.

**E. propin'quus**, Duj. (*L. propinquus*, near.) Found in the intestines of *Gobius niger*.

**E. pro'teus**, Westrumb. (*L. proteus*, changeable.) In the intestines of many freshwater fishes; the embryo form lives in the freshwater shrimp, *Gammarus pulex*.

**E. puto'rii**, Molin. Found in the coats of the abdominal arteries of *Festorius putorius*.

**E. pyrit'omis**, Bremser. (*L. pyritus*, a pear; *forma*, shape.) Found in the intestines of *Turdus merula*.

**E. reticula'tus**, Westrumb. (*L. reticulum*, a net.) Found in the intestines of *Rallus nigricans*.

**E. rhopalorhyn'chus**, Diesing. (*Ῥόπαλον*, a club; *ρύγχος*, a snout.) Found in the intestines of *Jacare nigra*.

**E. ricinoi'des**, Rud. (*L. ricinus*, a tick;

Gr. *εἶδος*, form.) Found in the mesentery and intestines of *Uppa popa*.

**E. ro'seus**, v. Bened. (L. *rosceus*, rosy.) Found in the intestines of *Labrus tumaculatus*.

**E. ro'seus**, Molin. (L. *rosceus*, rosy.) Found in the stomach of *Cantharus vulgaris*.

**E. rubicundus**, Molin. (L. *rubicundus*, ruddy.) Found in the liver of *Platessa passer*.

**E. sclia'næ**, Rudolphi. Found in the mesentery of *Sciæna aquila*.

**E. sigmoides**, Westrumb. (Σίγμα, the letter S; *εἶδος*, form.) Found in the intestines of *Oriolus galbula*.

**E. simplex**, Rudolphi. (L. *simplex*, simple.) Found in the intestines of *Trigla gurnardus*.

**E. solita'rius**, Molin. (L. *solitarius*, solitary.) Found in the stomach and intestines of *Conger vulgaris*.

**E. sphæroceph'alus**, Bremser. (Σφαῖρα, a ball; κεφαλή, a head.) Found in the intestines of *Hemalotopus ostralegus*.

**E. spira**, Diesing. (L. *spira*, a coil.) Found in the intestines of *Sarcophamphus popa*.

**E. spiralis**, Rudolphi. (L. *spiralis*, from *spira*, a coil.) Found in the intestines of *Ardea minuta*.

**E. spiru'ia**, Olfers. (L. *spirula*, a small coil.) Found in the small intestines of *Inuus caudatus*, and other monkeys.

**E. stella'ris**, Molin. (L. *stellaris*, star-shaped.) Found in and upon the intestines of *Anus boschas*.

**E. stria'tus**, Goeze. (L. *strio*, to striate.) Found in the intestines of *Megaceryle torquata*.

**E. strumo'sus**, Rudolphi. (L. *strumosus*, serofulous.) Found in the small intestine of *Halichoerus grypus*.

**E. subula'tus**, Zed. (L. *subula*, an awl.) Found in the intestines of *Alosa vulgaris*.

**E. tænioi'des**, Diesing. (Ταυία, a band; *εἶδος*, form.) Found in the intestines of *Dichotophus cristatus*.

**E. tan'agræ**, Rud. Found in the intestines of *Oreolus*.

**E. tar'dæ**, Rud. Found in the intestines of *Otis tarda*.

**E. tere'bra**, Rud. (L. *terebra*, a borer.) Found in the intestines of *Pelamys sarda*.

**E. te'res**, Westrumb. (L. *teres*, rounded.) Found in the intestines of *Corvus monedula*.

**E. tetrico'collis**, Cobbold. (L. *teres*, rounded; *collum*, a neck.) Found in the intestines of *Pholis levis*.

**E. transver'sus**, Rud. (L. *transversus*, turned across.) Found in the intestines of *Lusciola luscinia*.

**E. trito'nis**, Westrumb. Found in the peritoneum of *Triton alpestris*.

**E. tu'ba**, Rud. (L. *tuba*, a trumpet.) Found in the intestines of *Nyctale tengmalini*.

**E. tubero'sus**, Zed. L. *tuberosus*, full of lumps.) Found in the intestines of *Perca fluviatilis*.

**E. tu'midus**, Rud. (L. *tumidus*, swollen.) Found in the intestines of *Crotophaga ani*.

**E. turbinella**, Diesing. (L. *turbo*, a top.) Found in the intestines of *Hyperodon rostratum*.

**E. ur'niger**, Dujardin. (L. *urniger*, urn-bearing.) Found in the intestines of *Solea vulgaris*.

**E. vagina'tus**, Diesing. (L. *vagina*, a sheath.) Found in the intestines of *Rhamphastus culminatus*.

**E. varia'bilis**, Diesing. (L. *variabilis*, changeable.) Found in capsules in and upon the intestines of *Monochir macedipinnis*.

**E. vasculo'sus**, Rud. (L. *vasculum*, a small vessel.) Found in the intestines of *Lepidopus argyreus*.

**E. ventri'co'sus**, Rud. (L. *venter*, a belly.) Found in the intestines of *Factorius putorius*.

**E. Vesia'nii**, Molin. Found in the intestines of *Gobius paganelus*.

**E. wach'næ**, Tilesius. Found in the intestines of *Gadus wachnia*, Pallas.

**Echinostomum**, v. Beneden. (Έχι-vos; στόμα, a mouth.) A genus of cestoid worms.

**E. gado'rum**, v. Beneden. (L. *gadus*, a codfish.) A species found in the cod.

**Echinotæni'idæ**, v. Beneden. (Έχι-vos; ταυία, a band. G. *Stachelbandwürmer*.) A Family of Tæniadæ, including those provided with hooklets.

**Echinozo'a**. (Έχι-vos; ζῷον, an animal.) A synonym of Echinodermata.

**Echinulate**. (Έχι-vos.) Beset with small bristles; a diminutive of Echinatæ.

**Echinus**. (Έχι-vos, the hedge-hog. G. *Igel*.) The hedge-hog, *Erinaceus europæus*.

Also, a Genus of the Class Eudocyclica, Order Echinoudea; many of the species are used as food. See *E. esculentus*, *E. granularis*, *E. lividus*, *E. melo*, and *E. spha'ra*.

Also, a Genus of the Nat. Order Euphorbiaceæ. See *E. philippinensis* and *E. scandens*.

Also, in Botany, the prickly head of a plant.

Also, a term for the rough stomach of a ruminant, the rumen.

Also, a term for the rough and muscular gizzard of granivorous and gallinaceous birds.

**E. esculen'tus**, Linn. (L. *esculentus*, eatable.) Used as food.

**E. granula'ris**, Lamk. (L. *granula*, a small grain.) Eaten in Southern Italy.

**E. livi'dus**, Lam. (L. *lividus*, dusky.) Used as food.

**E. me'lo**, Lamk. (L. *melo*, a melon.) Hab. shores of the Mediterranean, where it is used as food.

**E. philippinen'sis**, Baill. The *Rotlera tinctoria*.

**E. scan'dens**. (L. *scando*, to climb.) The *Allamanda cathartica*.

**E. sphæ'ra**. (Σφαῖρα, a globe.) The sea urchin. Used as food, especially in late summer when full of ova.

**Echioi'des**. (Έχι-vos, the bugloss; *εἶδος*, likeness.) A term applied to some plants from their likeness to an echium.

**E. praten'sis**. The *Myosotis pratensis*.

**Echir'etin**. C<sub>35</sub>H<sub>56</sub>O<sub>2</sub>. An amorphous tasteless resin accompanying ditain in Dita bark.

**Ech'is**. (Έχι-s, a viper.) A Genus of the *Viperidæ*. Scales on the under surface of the head smooth, body round.

**E. carina'ta**, Merr. (L. *carina*, a keel.) A poisonous African snake.

**Echit'amin**. C<sub>22</sub>H<sub>28</sub>N<sub>4</sub>O<sub>4</sub> + 4H<sub>2</sub>O. An alkaloid found in Dita bark; it crystallises in brilliant prisms.

**Echitein**. C<sub>42</sub>H<sub>70</sub>O<sub>2</sub>. A substance remaining in the alcoholic solution from which echio-rin and echitin have been separated. It crystallises in delicate long prisms, melts at

195° C. (383° F.), and sublimes at a higher temperature.

**Echites.** (Eχis, the viper. *G. Klammerstrach.*) A Genus of the Nat. Order *Apocynaceae*, so called from its twisting habits.

**E. acuminata**, Ruiz and Pavon. (*L. acuminatus*, pointed.) Supplies a thin bark; pale grey on the outside; the *Condurango de plátano*.

**E. antidysenterica**, Roxb. The *Wrightia antidysenterica*, Br. Also, the term for *Holarrhena antidysenterica*, Wall.

**E. caryophyllata**, Roxb. (Καρύοφυλλον, the clove tree.) Leaves used in rheumatic febrile affections.

**E. cururu**, Mart. Bark used in diarrhoea and dysentery.

**E. difformis**. The *Forsteronia difformis*.

**E. frutescens**, Roxb. The *Ichnocarpus frutescens*, R. Brown.

**E. hirsuta**, Ruiz and Pavon. (*L. hirsutus*, hairy.) Supplies a bark with a soft, pale yellow corky layer; the *Condurango de paloma* from Zaruma.

**E. insignis**, Spr. (*L. insignis*, remarkable.) Bark used in diarrhoea and dysentery.

**E. longiflora**, Desf. (*L. longus*, long; *flor*, a flower.) Bark used in diarrhoea and dysentery.

**E. malabarica**, Lam. Hab. Hindostan. Root used as febrifuge, leaves applied to carbuncles.

**E. pubescens**, Buck. (*L. pubesco*, to be downy.) Bark used in diarrhoea and dysentery.

**E. salicifolia**, Willd. (*L. salix*, a willow; *folium*, a leaf.) The *Attamandu cathartica*, Linn.

**E. scholaris**, Linn. The *Alstonia scholaris*.

**E. spinosa**, Burm. (*L. spina*, a thorn.) The *Carissa carandas*, Linn.

**E. suberecta**. (*L. sub*, under; *erectus*, upright.) A species said to be one of those the juice of which goes to form curare.

**E. syphillica**, Linn. Hab. Surinam. Used in syphilis.

**E. tetragonus**, De Cand. (Τετράς, four; γωνία, an angle.) Supplies a dark grey bark; the *Condurango de paloma* from Malacatos.

**E. venenosus**, Roxb. (*L. venenum*, poison.) Hab. Mexico. A poisonous species producing inflammation of the mucous membranes, delirium, coma, and death.

**Echitin**.  $C_{32}H_{52}O_2$ . One of the crystalline constituents of *Dita bark*; it forms white anhydrous scales, which melt at 170° C. (338° F.)

**Echium**. (Eχis, a viper. *G. Natterkraut*, *Natterkopf*.) A Genus of the Nat. Order *Boraginaceae*; so called because the different species were supposed to be useful in the bite of a viper. Several species are used in India under the name Gouzabám.

**E. ægyptiacum**. (*Egypt*.) The wall bugloss, the root of which is used as sudorific, and, with oil, as a dressing for wounds; also called *Lycopsis*.

**E. creticum**, Pall. (*Crete*.) The *E. rubrum*.

**E. italicum**, Gmel. (*Italy*.) The *E. rubrum*.

**E. plantaginum**. (*Plantago*.) A species used in Brazil as a pickle.

**E. rosicium**, Gmel. (Mod. *L. rossicus*, Russian.) The *E. rubrum*.

**E. rubrum**, Jacq. (*L. ruber*, red.) Alkanet. Hab. Hungary. Bark of the root supplies a red dye. Used as a colouring matter in pharmacy.

**E. vulgare**, Linn. (*L. vulgaris*, common. *F. viperine commune*; *G. Natterkopf*.) Viper's bugloss. Hab. Europe. Root aperient, and then slightly astringent.

**Echnin**. A term erroneously put for *Echidna*.

**Ech'o**. (Eχώ, a returned sound. *F. écho*; *G. Wiederhall*.) The repetition of a sound reflected by a body; also, the place where the repetition is heard.

**E., amphoric**. Same as *Amphoric resonance*.

**E., metallic**. A term applied to the amphoric resonance of the cough in hydropneumothorax, which partakes of the character of an echo.

**Echolalia**. (Eχώ; λαλία, talking. *G. Echosprache*.) Romberg's term for the disturbance of speech in certain nervous disorders and in some insane persons when they repeat the words and tones of the person speaking to them.

**Echometer**. (Eχος; μέτρον, a measure.) Same as *Metronome*.

**Echos**. (Eχος, a sound.) A term for ringing in the ears.

**Echoscope**. (Eχος; σκοπείω, to examine.) A stethoscope.

**Echoscophragma**. (Eχος; σκοπείω; ἐμφράγμα, a barrier.) The plug which was formerly introduced into the expanded end of a stethoscope.

**Echoscopia**. (Eχος; σκοπείω, to examine. *F. Echoscopie*; *G. Schallprüfen*.) Term for auscultation or exploration of sound.

**Echoscopium**. (Same etymon.) Same as *Sonometer*.

Also, a synonym of *Stethoscope*.

**Echthysteroecyesis**. (Eχτός, without; ὄστρα, the womb; κύσις, pregnancy. *F. Echthysteroecyese*; *G. Unterleibshohlenschwangerschaft*.) Extra-uterine pregnancy.

**Echthysteros**. (Eχτός, without; ὄστρα. *F. echthystere*; *G. ausserhalb der Gebärmutter*.) Extra-uterine.

**Echzell**. Germany, in Hesse, near Neuschwalheim. A sulphuretted mineral water.

**Eciliate**. (*L. e*, out; *cilium*, an eyelash. *G. wimperlos*.) Without eyelashes, without cilia.

**Eckartsbrunn**. Germany, in Nassau, not far from Dinkholder, 150 feet above sea level. A chalybeate water containing iron carbonate 5.6 grains in 72 ounces, besides calcium, magnesium, and sodium carbonates.

**Eck'er, Alexander**. A German anatomist of the present century; professor of comparative anatomy at Freiburg in Baden.

**E., yolk-plug of**. A term for the central mass of large white cells in the lower segment of the egg of Amphibia in the early stage of segmentation. See *Rusconi*.

**Eclactisma**. (Εκλάκτισμα, a dance in which the legs are thrown up behind; from ἐκλακτίζω, to kick out.) A synonym of *Epilepsy*.

**Eclampsia**. (Εκλάμπω, to shine forth, to burst forth violently. *F. éclampsie*; *I. eclampsia*; *G. Eklampsie*.) A term generically

applied to epileptiform convulsions dependent on some actual disturbance of the nervous centres caused by anatomical lesion from injury or disease; by a deficient supply of blood; by introduction of poisonous matter, as urea, lead, strychnia, or hydrocyanic acid, into the blood; by the structural changes induced by the commencement of a febrile disease; or by the reflex irritation of intestinal worms, or of teething. The term was originally restricted to the convulsions of children, and of puerperal women; and the name had reference to the suddenness of the attack.

**E. gravidarum.** (L. *gravida*, a pregnant woman.) Same as *Puerperal convulsions*.

**E. infantum.** (L. *infans*, a young child.) Same as *Convulsions, infantile*.

**E. nutans.** (L. *nuto*, to nod the head.) A peculiar bowing forward and downward of the head, in some cases even so as to touch the knees, while in others it is rather a quick nodding repeated sometimes as often as 150 times in succession; also called *Salaam convulsion*.

**E. parturientum.** (L. *parturio*, to bring forth.) Same as *Puerperal convulsions*.

**E. puerperalis.** Same as *Puerperal convulsions*.

**E. typhoides.** (Τύφος, stupor; είδος, likeness.) A synonym of the disease called by Linnaeus *Raphania*.

**Eclampsic.** Relating to *Eclampsia*.

**E. idiocty.** See *Idiocty, eclampsic*.

**Eclampsy.** Same as *Eclampsia*.

**Eclampsic.** (Same etymon. F. *eclampsique*.) Relating to *Eclampsia*.

**Eclectic.** (Εκλεκτικός, from εκλέγω, to pick out, to select. F. *eclectique*; G. *eclectisch*.) Selecting or choosing from among others; anciently applied to doctrines or principles professed by certain physicians, who took from all other sects what appeared to them to be the best and most rational.

**Eclecticisim.** (Εκλεκτικός.) The doctrine and practice of an *Eclectic*.

In Medicine, as in Philosophy, the system which assumes to take the good and the true from all other systems, and to leave the bad and the false.

Also, applied to the doctrines of a school of physicians founded by Agathinus, but they are not well known.

**Eclectics.** (Εκλεκτικός.) The followers or professors of *Eclecticisim*.

Also, a term applied to certain medical practitioners in America, without much apparent object beyond the distinguishing themselves as a class.

**Eclecticisim.** Same as *Eclecticisim*.

**Eclectos.** The same as *Ecleigma*.

**Eclégm.** Same as *Ecleigma*.

**Eclégma.** Same as *Ecleigma*.

**Ecleigma.** (Εκλείγμα, from εκλείχω, to lick up. F. *eclegme*; G. *Lechsaft*.) Old term for a linctus, or form of medicine of a semiliquid consistence, which is licked off the spoon.

Also called *Looch*.

**E. album.** Same as *Looch album*.

**E. gummo-so-oleo'sum.** (L. *gummi, gum; oleum, oil*.) The *Looch album*.

**Eclep'isis.** (Εκλείσις, a taking off the shell; from εκ, from; λείπις, a scale. G. *Abschalen*.) A synonym of exfoliation or desquamation, as of a piece of dead bone, or of the epidermis.

**Eclep'sitrep'anum.** Same as *Eclep'sitrypanon*.

**Eclep'sitrypanon.** (Εκλεπίζω, to free from shell; πρύπανον, a trephine. G. *Entblätterungstrepan, Abblätterungstrepan*.) A trephine for the removal of exfoliating bone.

**Eclégma.** Same as *Ecleigma*.

**Eclímia.** (Εκλίμος, starved out. G. *Heiss hunger*.) A synonym of *Boulimia*.

**Eclípha.** (Εκλείπω, to leave out.) A Genus of the Nat. Order *Compositæ*.

**E. adpress'a.** Mönck. (L. *adpressus*, from *adprimo*, to press toward.) The *E. erecta*.

**E. erect'a.** Linn. (L. *erectus*, upright.) Hab. Asia, West Indies. Juice used to dye the hair black.

**E. prostra'ta.** Linn. (L. *prostratus*, spread out.) Hab. India. Root purgative and emetic; used in diseases of the liver and spleen and the consecutive dropsy. Probably a variety of *E. erecta*.

**Eclips'is.** (Εκλείψις, a failing; from εκλείπω, to leave out.) A synonym of *Fainting*.

**Eclithotomy.** Same as *Lithectomy*.

**Eclyses.** (Εκλυσίς, weakness.) Adynamic diseases.

**Eclysis.** (Εκλύω, to dissolve.) Old term (Gr. εκλυσίς), used by Hippocrates, Lindennus, Sylvius, Willis, for a universal faintness.

**E. pneumocardi'aca.** (Πνεύμων, the lung; καρδία, the heart.) A synonym of *Asphyxia*.

**Ecm'yze'sis.** (Εκμύζησις, a sucking out.) The action of sucking.

**Ecnœ'a.** (Εκνοεία; from εκ, out of; νόος, mind. G. *Verstandeslosigkeit*.) Maduess, insanity.

**Econom'ic.** (L. *œconomia*, economy. F. *économique*.) Of, or belonging to, economy, or the useful distribution and application of things.

**Econ'omy.** (Old F. *œconómie*; from L. *œconomia*; from Gr. *oikonomia*; from *oikos*, a house; *νόμος*, a usage.) The management of a household; the arrangement of work.

Also, used to denote the collection of organs or parts forming a living thing.

**E. animal.** A term used first by Charlton in 1658 to designate the laws which govern the actions of living things, vegetable as well as animal. It was employed by Haller, and is now used to indicate the totality of the parts of a living thing.

**E. med'ical.** The rules which govern the practice of medicine.

**Ecornic'ulate.** (L. *e*, out; *cornu*, a horn. G. *ungehörnt*.) Without a horn, hornless.

**Ecor'ticate.** (L. *e*, out; *cortex*, bark. G. *rindenlos, unberindet*.) Without bark, deprived of bark.

**Ecost'ate.** (L. *e*, neg.; *costa*, a rib. G. *ungerippt, ripplos*.) Having no costa or vein or rib; applied to leaves.

**Ecephlogiæ.** (Εκφλογίζω, to set on fire. F. *cephlogie*; G. *Pocken*.) A synonym of *Small-pox*.

**Ecephlogi'o'des.** Same as *Ecephlogi'ois*.

**Ecephlogi'ois.** (Εcephlogiæ; είδος, likeness.) Same as *Variolosis*.

**Ecephlogis'con.** (Dim. of *cephlogia*.) The same as *Variella*.

**Ecephlogo'sis.** (Εκφλόγωσις, a conflagration.) Inflammation.

**Ecp'hlydi'asis.** (Εκφλύζω, to burst forth. F. *Ecp'hlydase*; G. *Pockenkrankheit*.) Name for pustular disease.

**Ecpflysis.** (Ἐκφύσις, to burst forth.) A vesicular eruption confined in its action to the surface, in contradistinction to *Emphlysis*.

Also, Good's term for blains, being orbicular elevations of the cuticle, containing a watery fluid.

**E. ec'zema.** Heat eruption. Good's term for *Eczema*.

**E. her'pes.** Tetter. Good's term for *Herpes*.

**E. her'pes circinna'tus.** Same as *Herpes circinnatus*.

**E. her'pes exe'dens.** Same as *Herpes exedens*.

**E. her'pes millia'ris.** Same as *Herpes miliaris*.

**E. her'pes zos'ter.** Same as *Herpes zoster*.

**E. pom'pholyx.** Water blebs. Good's term for *Pompholyx*.

**E. rhy'pia.** (Ρύπος, filth.) Sordid blain. Good's term for *Rupia*.

**E. vaccin'ia.** Same as *Vaccinia*.

**Ecp'horerysip'elias.** (Ἐκφωρά, a passage outward; ἐρυσιπέλας, erysipelas.) A form of erysipelas in which there is much elevation of the skin.

**Ecp'hractic.** (Ἐκφρακτικός, from ἐκφράσσω, to remove obstructions. F. *ecp'hractique*; G. *auffösend, eröffnend, ausleerend*.) Aperient; also, the same as *Deobstruent*.

**Ecp'hraxis.** (Ἐκφράσσω, to remove obstructions.) Term (Gr. ἔκφραξις), used by Galen, *Meth. Med.* xi, 13, for the removal of obstructions or the opening of obstructed pores of the body.

**Ecp'hro'nia.** (Ἐκφρων, out of one's mind.) Old term for insanity or craziness.

Also, a Genus of Good's Order *Phrenica*; in which there is diseased perception, with little derangement of the judgment, occasionally shifting into diseased judgment with little derangement of the perception; disturbing the mind generally; diminished sensibility; irregular remissions.

**E. ma'nia.** (Μανία, madness.) Madness; according to Good, the discrepancy between the perception and the judgment general; great excitement of the mental, sometimes of the corporeal, powers.

**E. melanchol'ia.** (Μελαγχολία.) Melancholy; according to Good, the discrepancy between the perception and the judgment limited to a single object, or a few connected objects or trains of ideas; the will wayward and domineering.

**Ecp'hyas.** (Ἐκφύας, an outgrowth.) An appendix or excrescence. Old term, used by C. Hoffmannus, *Comm. in Galen, de Us. Part. n.* 258, for the *Appendix vermiformis*.

**Ecp'hyma.** (Ἐκφύμα, an eruption of pimples. F. *ecp'hyme*; G. *Auswuchs*.) Old term for a cutaneous excrescence.

According to Good, a superficial, permanent, indolent exuberance; mostly circumscribed.

**E. cal'lus.** A callosity. See *Callus*.

**E. carun'cula.** A Caruncle.

**E. cla'vus.** A corn. See *Clavus*.

**E. oedemat'icum.** (Οίδημα, a swelling.)

A synonym of *Edema*.

Also, a synonym of *Phlegmasia dolens*.

**E. physco'nia.** (Φύσκων, fat-paunch.) Pendulous abdomen.

**E. tricho'ma.** (Τρίχωμα, a growth of hair.) A synonym of *Plica polonica*.

**E. verru'ca.** Same as *Verruca*.

**Ecp'hy'mata.** (Same etymon.) Measles.

**Ecp'hyse'ma.** (Ἐκ, out of; φύσημα, that which is blown. F. *ecp'hyseme*; *Ausgeblasene*.) A pustule.

**Ecp'hyse'sis.** (Ἐκφύσις, emission of the breath; from ἐφυσάω, to breathe out.) Old name for a quick expulsion of air from the lungs, hurried breathing.

**Ecp'physis.** (Ἐκφύω, to beget. F. *ecp'hyse*; G. *Auswuchs*.) Old term (Gr. ἐκφύσις), used by Galen, *Adm. Anat.* ii, 5, for an apophysis, appendix or process of any kind; the same as *Ecp'hyas*.

**E. ventric'uli.** (L. *ventriculus*, the stomach.) A term applied to the duodenum, *de Us. Part. v*, 3.

**Ecp'ies'ma.** (Ἐκπίεσμα, that which is squeezed out; from ἐκπίζω, to express juice. F. *ecp'iesme*; G. *Ausgepresste*.) Old term for the expressed juice of plants.

Formerly applied (Gr. ἐκπίεσμα), by Galen, *Def. Med.* 2, to a fracture of the skull into many pieces.

**Ecp'ies'mos.** Same as *Ecp'iesmus*.

**Ecp'ies'mus.** (Ἐκπιεσμός, a squeezing out; from ἐκπίζω, to press out. F. *ecp'iesme*.) Old term, used by Celsus, for a disorder of the eye in which the globe is pressed out of its cavity, so that it appears prominently extruded.

An old name for *Erophthalmus*.

**Ecp'le'ro'ma.** (Ἐκπληρόμα, to fill. F. *ecp'le'rome*; G. *kleines Kissen, Polster*.) Old name (Gr. ἐκπληρώμα), used by Hippocrates, *Mochlic.* viii, 17, for a small ball or pad of leather, or other hard substance to fill up a hollow for the better application of a bandage; or for such materials adapted to the arm-pit, so that by the pressure of the heel upon them a luxated os humeri may be returned to its place; also called *Supplementum*.

**Ecp'letopseudomorpho'sis.** (Ἐκπιπλῆγμα, to fill up; ψευδής, false, μορφή, form.) The assumption of a particular crystalline form, owing to the substance setting or being deposited in a cavity or mould previously occupied by some other crystal which has been dissolved out.

**Ecp'lex'ia.** Same as *Ecp'lexis*.

**Ecp'lex'is.** (Ἐκπλήσσω, to terrify or amaze. F. *ecp'lexie*; G. *das Erstarren von Schrecken*.) Old term (Gr. ἐκπληξις), used by Galen, *Comm. in Hipp. Aph.* vii, 14, for stupor or astonishment, the patient remaining with open eyes, speechless as a machine.

**Ecp'neumat'o'sis.** (Ἐκπνευμάτωσις, a breathing out.) Expiration.

**Ecp'neu'sis.** (Ἐκπνευσίς, a breathing out.) Expiration.

**Ecp'noë.** (Ἐκπνέω, to breathe out. F. *ecp'noë*; G. *Ausathmen, Ekpnoë*.) Old term (Gr. ἐκπνοή), used by Galen, *de Musc.* ii, for *Expiration*.

**Ecp'no'ic.** (Same etymon.) Relating to expiration.

**Ecp'to'ma.** (Ἐκπτωμα, from ἐκπίπτω, to fall out. F. *ecptome*; G. *Herausfallen*.) Old term for a falling down of any part; and thus applied to a luxation, the expulsion of the placenta, the falling off or detachment of gangrenous parts, scrotal hernia, and prolapsus uteri.

**Ecpto'sis.** (Ἐκπτοσις.) The development of an *Ecptoma*.

**Eccytic.** (Ἐκ, utterly; περικύω, to make close.) A doubtful term for the rendering of the fluids more solid, according to Hooper.

**Eccyema.** (Ἐκ, utterly; πύον, pus. F. *ecyeme*.) Old term (Gr. ἐκπύημα), used by Hippocrates. *Aph.* vii, 20, for a collection of pus, or for a part in complete suppuration.

**Eccycsis.** (Ἐκπύσις, from ἐκπύω, to suppurate. F. *ecycsis*; G. *Veriterung*.) Old term for the process of suppuration.

Humid seall, according to Good, being an eruption of small pustules distinct or confluent; hardening into crustular plates.

**E. eethy'ma.** Good's term for *Ecthyma*.

**E. impeti'go.** Good's term for *Impetigo*.

**E. porri'go.** Good's term for *Porri'go*.

**E. sca'biles.** Good's term for *Scabies*.

**Eccytic.** (Ἐκπυτικός, bringing to suppuration. F. *eccytique*.) Of, or belonging to, *Eccycsis*; suppurative; causing to suppurate.

**Ecrasement.** (F. *écraser*, to crush.) The operation of removing a part by means of the *Ecraseur*.

**Ecraseur.** (F. *écraser*, to crush.) Name by M. Ciassaigne for an instrument consisting essentially of a sort of Munt chain-saw, or a single or twisted wire cord, which is tightened by a screw or by a rack and pinion, for removing piles, polypi, cancers of the tongue, or such erectile or malignant growths as could not be removed by the knife without a probability of dangerous hemorrhage.

**E., chain.** An instrument in which a chain noose is gradually tightened by a rack and pinion, or by a screw, so as to strangle and crush off any part around which it is cast. It is used for the removal of the tongue, penis, vascular growths and tumours.

**E., galvan'ic.** An *ecraseur* connected with a galvanic battery so that the wire may be made red-hot.

**E., wire.** An instrument resembling the chain *ecraseur* in principle, but in which the chain is replaced by a wire.

**Ecreg'ma.** (Ἐκρήγμα, to break out.) Old term (Gr. ἐκρήγμα), used by Galen, *de Artic.* iv, 63, for a segment, or rough fragment; also, an eruption or pustule. (Castellus.)

Also, a rupture. (Turton.)

**Ecrex'is.** (Ἐκρήξις, to break out.) Old term (Gr. ἐκρήξις), used by Hippocrates, *de Steril.* iii, 1, for a rupture or laceration of the vulva or of the womb.

**Ecrhythmos.** Same as *Ecrhythmos*.

**Ecrhythmos.** (Ἐκ, neg.; ῥυθμός, rhythm. F. *ecrhythme*.) Old term (Gr. ἐκρυθμός), applied by Galen, *de diff. Puls.* i, 9, to the pulse, and meaning irregular or unrhythmic.

**Ecroë.** (Ἐκρίω, to flow out.) Old term for an efflux or flowing out, or evacuating of any humor which requires purging.

**Ecrusta'ceous.** (L. *e*, neg.; *crusta*, a shell.) Applied to lichens which have no thallus.

**Ecrysis.** (Ἐκρύω, to flow out.) Old term for an efflux of the semen before it receives the conformation of a fetus, and so distinguished from *Abortion*; such was the idea of Hippocrates. (Hooper.)

Also the same as *Ecroë*.

**Ecsarco'ma.** (Ἐκ, out; σάρξ, flesh. F. *ecsarcome*; G. *Fleischwucherung*.) Old term for

a fleshy excrescence, especially that which is called proud flesh. (Goraeus.)

**Ecsarcosiotrauma.** (Ἐκσάρκωσις, to make to grow to flesh; τραῦμα, a wound.) A wound with proud flesh.

**Ecsarco'sis.** The development of an *Ecsarcoma*.

**Ecses'ma.** A false spelling of *Eczema*.

**Ecstalt'ic.** (Ἐκ, out; στέλλω, to place.) A term by Marshall Hall to denote the proceeding from or out of the spinal cord by virtue of its own powers, and not by transmission.

**Ecstasis.** Same as *Ectasy*.

**E. morient'ium.** (L. *moriens*, dying.) The excitement of mind which occasionally manifests itself immediately before death in persons who have been in a stupor or coma.

**Ecstasy.** (F. *extase*; from L. *ecstasis*, a trance; from Gr. ἐκστασις, distraction, a trance; from ἐξίστημι, to put out of its place. G. *Ektase*.) A state of total suspension of sensibility, voluntary motion, and often of mental power; the body remaining motionless and either flaccid or inflexible, the pulsation feeble, and the breathing slow; the soul or mind removed, as it were, from the body.

**Ecstomosis.** (Ἐκ, out of; στόμα, a mouth. F. *ecstomose*; G. *Ausmundung*.) An opening on the surface of the body.

**Ecstrophius.** (Ἐκστρέφω, to invert.) Old term (Gr. ἐκστρόφος), applied by Galen, *de C. M. sec. Loc.* ix, 7, to any medicine which had power to cause blind piles to appear outwardly.

**Ecstrophy.** (Ἐκστρέφω, to turn out of. G. *Auswärtsdrehung*.) A turning out or eversion of a part.

**E. of blad'der.** Same as *Extroversion of bladder*.

**Ecta'sia.** (Ἐκτείνω, to stretch out.) A dilatation. A synonym of *Aneurysm*.

**E. vena'rum.** (L. *vena*, a vein.) A synonym of *Varix*.

**Ectasimometer.** (Ἐκτασις, extension; μέτρον, a measure. F. *ectasimometer*; G. *Dehnbarkeitsmesser*, *Metallductilitätsmesser*.) An instrument for ascertaining the ductility of metals.

**Ectasis.** (Ἐκτασις, extension; from ἐκτείνω, to stretch out. G. *Ausdehnung*.) Extension, expansion; any morbid condition characterised by a state of dilatation.

**E. æquatorialis corporis ciliaris.** (*Equator*; L. *corpus*, the body; *ciliary*.) The same as *Staphyloma corporis ciliaris*.

**E. annula'ris.** (L. *annulus*, a ring.) The same as *Staphyloma annulare*.

**E., capillary.** (L. *capillus*, a hair.) Dilatation of the capillaries.

**E., capillary, ampullar.** (L. *ampulla*, a vessel with a narrow neck and swollen belly.) Same as *E., capillary, varicose*.

**E., capillary, simple.** A general and uniform dilatation of the capillary blood-vessels.

**E., capillary, varicose.** (L. *varix*, a dilated vein.) A bead-like dilatation of a capillary blood-vessel of a limited character, either affecting the whole or a part only of the circumference.

**E. corneæ.** (L. *corneus*, horny.) Distension and projection of the cornea, usually the result of inflammatory processes, which weaken its structure and dispose to yield to the intra-ocular pressure.

**E. intercala'ris.** (L. *intercalaris*, inter-

calate.) Staphyloma of the sclerotic, occurring between the attachment of the iris and the ciliary processes.

**E. iridis.** (*Iris*.) The extension of the iris which produces a small pupil.

**E. posticum.** (*L. posticus*.) The same as *Staphyloma posticum*.

**E. scleræ.** (*Σκληρός*, hard. *G. Ausbuchtung der Sklera*.) A thinning and projection of the sclerotic coat of the eye. It may be partial or complete.

**Ectasy.** Same as *Ectasis*.

**Ectaterythema.** (*Εκτατός*, capable of extension; *erythema*.) Diffuse erythema; the opposite of *Periphracterythema*.

**Ectatic.** (*Εκτατός*, capable of extension.) Relating to *Ectasis*.

**Ectatocacpneumonia.** (*Εκτατός*; *κακός*, bad; *pneumonia*.) Diffuse *Pneumonasaprosis*.

**Ectatopneumoniasaprosis.** (*Εκτατός*.) Diffuse *Pneumonasaprosis*.

**Ectatoprothylé.** (*Εκτατός*; *πρώτος*, first; *ύλη*, matter.) A term applied to a supposed primary expansive substance, and therefore to hydrogen.

**Ecteron.** Same as *Ecderon*.

**Ecthemoid.** (*Εκτός*, outward; *ethmoid* bone.) A term for the prefrontal of the fish, or of the lateral ethmoidal mass, with upper and middle turbinals in man.

**Ectexis.** (*Εκτίκω*, to liquefy or consume.) Old term for emaciation. (Quincy.) Also, applied to thin or watery blood, or coagulation of that fluid.

**Ethelynsis.** (*Εθελύνω*, to soften or effeminate. *G. Verweichlichung*.) Old term (*Gr. ἐθελύνσις*), applied by Hippocrates, *Aph.* v, 16, to the skin and flesh when loose and soft.

Also, formerly applied to bandages when not sufficiently tight.

**Ecthetobrophotrophium.** (*Εκθετος*, exposed; *βρόφος*, a tectus; *τρέφω*, to bring up.) A foundling hospital.

**Ecthetotrophium.** (*Εκθετος*; *τροφείον*, a small room; from *τρέφω*.) A foundling hospital.

**Ecthimma.** (*Εκθίβω*, to press.) Old term (*Gr. ἐκθίμμα*), used by Hippocrates, for excoriation, ulceration of the skin, caused from violent pressure. Galeu, in *Comm. de Fraet.* ii, 65.

**Ecthlipsis.** (*Εκθίβω*, to press out.) Ancient term (*Gr. ἐκθλίψις*), used by Hippocrates, *Coac. Prænot.* 218, for elision or expression; a bursting or dashing out, as of the eyes.

**Ecthoræum.** (*Εκ*, out; *βορῶς*, containing the seed.) The thread of a *Nematocyst*.

**Ecthyma.** (*Εκθύμα*, a pustule; from *ἐκθύω*, to break out. *F. ecthyme*; *G. Ekthyma*, *Eiterblasen*, *Schmutzflechte*.) Term for an eruption of large polyzacious pustules arising from red, raised, hardish bases, at some distance from each other, and not very numerous, unattended with fever, and not contagious. By some it is looked upon as the same as *Impetigo*.

**E. acutum.** (*L. acutus*, sharp.) The form which commences with some fever and sore throat; reddish points with hard bases appear, which speedily become pustular, and are often of large size; they then discharge, and dry into a dark-coloured crust, which leaves, when it falls off, a deeply congested stain, and sometimes an

ulcer. It has been thought to be the result of syphilis.

**E. cachecticum.** (*Καχεξία*, a bad habit of body.) A form of chronic ecthyma occurring in persons of a cachectic habit of body, in which the pustule contains a dark-bloody purulent fluid, and leaves, on bursting, a thick, dark-coloured crust, which often falls and exposes an ill-conditioned ulcer.

**E., chronic.** (*L. chronicus*, lasting.) Ecthyma of slow progress, unaccompanied by fever, and generally produced by some superficial irritation.

**E., contagious.** (*L. contactus*, a touching.) A doubtful form of ecthyma which is supposed to be propagated by contagion.

**E. febrilè.** (*L. febris*, a fever. *G. Menschenblattern*.) A synonym of *Varicela*. Also, a term for *Urticaria*.

**E. gangrænosum.** (*Γάγγραινα*, gangrene.) A synonym of *Rupia escharotica*.

**E. infantile.** (*L. infantilis*, belonging to infants.) A form of chronic ecthyma occurring in unhealthy and dirty children.

**E. luridum.** (*L. luridus*, sallow, lurid.) A form of chronic ecthyma occurring in elderly persons, in which the pustules are large, their contents puriform or bloody, and the surrounding areola purplish or livid.

**E. syphiliticum.** (*Syphilis*.) A form of skin affection in constitutional syphilis characterised by scattered, indolent pustules, with a copper-coloured base or areola; the resulting crusts are brownish or blackish, and cover ulcers with purplish indurated margins and greyish bases. It occurs chiefly on the legs.

**E. vulgare.** (*L. vulgaris*, common.) A synonym of *E. acutum*.

**Ecthymatic.** (*Εκθύμα*, a pustule.) Pustular. Used synonymously with *Eczanthe-matous*.

**Ecthymatiform.** (*Ecthyma*; *L. forma*, likeness.) Resembling *Ecthyma*.

**E. syphiloderm.** (*Syphilis*; *Gr. ζέουμα*, the skin.) Term applied to the large flat pustular syphiloderm, and to that form of syphiloderm commonly called *Rupia*.

**Ecthymatodes.** (*Εκθύμα*; *είδος*, likeness. *G. pustelartig, blatterähnlich*.) Like to, or relating to, a pustule.

**Ecthymosis.** Same as *Ecthyma*.

**Ecthyserocyesis.** (*Εκτός*, outside; *ύστέρα*, the womb; *κύσις*, pregnancy.) Extra-uterine pregnancy.

**Ectillotie.** (*Εκτίλλω*, to pull out. *F. ectillotique*.) Having power to pull out. Applied to that which eradicates corns or destroys superfluous hair; depilatory.

**Ectilmus.** (*Εκτίλλω*.) The act of plucking out, evulsion.

**Ectmesis.** (*Εκτίμνω*, to cut out.) A synonym of *Excision*.

**Ecto.** (*Εκτός*, without.) A prefix signifying out, outside.

**Ectoblast.** (*Εκτός*; *βλαστός*, a bud) A term for the wall or outer envelope of a cell.

Also, a term for the membrane of the yolk.

**Ectocardia.** (*Εκτός*; *καρδία*, the heart.) Alvarengo's term for displacement or malposition of the heart.

**E. abdominalis.** (*L. abdomen*, the belly.) Displacement of the heart through a deficient diaphragm into the abdominal cavity.

**E. cervicalis.** (L. *cervix*, the neck.) Displacement of the heart into the neck.

**E. extrathoracica.** (L. *extra*, on the outside; *thorax*, the chest.) Displacement of the heart out of the cavity of the chest, as when it lies in the abdomen from defect of the diaphragm.

**E. intrathoracica.** (L. *intra*, within; *thorax*, the chest.) Displacement of the heart within the thorax, as when it occupies the right side of the chest.

**E. pectoralis.** (L. *pectus*, the breast.) Displacement of the heart within the chest.

**Ectocarpeæ.** (Εκτός; καρπός, fruit. G. *Aussenfruchtige*.) A Family of *Phaeosporææ*. Small conferva-like plants, living in the open sea, and rarely attached to rocks, but growing on larger sea-weeds. Thallus jointed, more or less branched, often consisting of simple cell threads. Sporangia occurring in the form of short club-like lateral branches, sessile or stalked, simple or multiple, in some instances producing resting-spores, in others swarm-spores; germination occurring soon after escape from the sporangia, or even before.

**Ectocarpidæ.** (Εκτός; καρπός.) A Tribe of the Suborder *Fuacheriæ*, Nat. Order *Fuaceæ*, with threads jointed, consisting of a single row of cells, variously branched; vesicles derived from one joint, either at the end of the branches or of the laterals. (Lindley.)

**Ectoclinæ.** (Εκτός; κλινodé.) A Division of *Clinosporææ*, having a fleshy clinode covering all or part of the surface of the receptacle.

**Ectocuneiform.** (Εκτός; cuneiform bone.) The external cuneiform bone.

**Ectocyst.** (Εκτός; κύστις, a bag.) The outer chitinous or calcareous covering of the *Polysoa*. It consists of indistinct epithelial cells and of hollow fibres, which often become calcified.

**Ectoderm.** (Εκτός, outside; δέρμα, the skin.) The outer layer of the blastoderm; also called *Epiblast*.

Also, a term applied to the outer layer of the body of the *Colenterata*.

**Ectodermal.** (Εκτός; δέρμα.) Relating to the *Ectoderm*.

**Ectodermic.** (Εκτός; δέρμα.) Relating to the cuticle, or to the *Ectoderm*.

**E. cells.** The cells forming the *Ectoderm*.

**E. sphere.** The larger and more transparent of the two spheres into which the mammalian ovum divides after impregnation; also called *Epiblastic sphere* and *Ectomere*.

**Ectodysæsthesia.** (Εκτός; δυσαισθησία, insensibility. F. *ectodysæsthésie*.) Term for dullness of the external senses.

**Ectogenous.** (Εκτός, outside; γέννω, to produce.) Originating from without.

**Ectomé.** (Εκτομή; from ἐκτίμνω, to cut out.) Excision; castration.

**Ectomere.** (Εκτός, outside; μέρος, a part.) The larger and clearer of the two daughter cells into which the mammalian ovum first divides after fertilisation.

**Ectomia.** Same as *Ectome*.

**Ectomias.** (Εκτομίας.) One who is castrated.

**Ectomon.** (F. *hellébore noir*; G. *schwarze Aescwurcz*.) Old term (Gr. ἐκτομον), interpreted by Galen, in *Lex. Hippocr.* as ἑλλε-

βορον μίλανον, the *Helleborus niger*, or black hellebore.

**Ectomous.** (Εκτομή, u cutting out.) Castrated.

**Ectoœsophagus.** (Εκτός, without; œsophagus.) Name of an instrument by Vaccà-Berlinghieri for displacing some portion of the œsophagus for œsophagotomy.

**Ectopagus.** (Εκτός, without; πάγος, from πήγνυμι, to make fast.) A twin monstrosity with lateral union between the two chests as far as the umbilicus, which is common in both.

**Ectoparasite.** (Εκτός; παράσιτος, a parasite. G. *Aussenschemarotzer*.) An external parasite, or one which lives on the surface of a living body.

**Ectophlœodous.** (Εκτός, without; φλοιός, bark. F. *ectophlœode*.) Applied to the lichens which grow on the exterior surface of other plants.

**Ectophyte.** (Εκτός; φυτόν, a plant.) A vegetable parasite of the exterior of the body; an epiphyte.

**Ectopia.** (Εκτοπος, displaced. F. *ectopie*; G. *Ektopie, Ortsveränderung, Lageveränderung*.) Protrusion or displacement; an anomaly of situation or relation.

**E. ani.** Same as *Prolapsus ani*.

**E. bulbi.** (L. *bulbus*, a bulb.) The same as *E. oculi*.

**E. cerebri.** (L. *cerebrum*, the brain.) Same as *Encephalocèle*.

**E. cordis.** (L. *cor*, the heart.) Displacement or malposition of the heart.

**E. herniosa.** Same as *Hernia*.

**E. intestinum.** (L. *intestina*, the intestines.) A hernia which contains intestine.

**E. lentis.** (L. *lens*, a lentil.) Displacement of the crystalline lens of the eye.

**E. lentis congenita.** (L. *congenitus*, born with.) Displacement of the lens existing at birth.

**E. oculi.** (L. *oculus*, the eye.) Displacement of the eye, which may be either congenital or traumatic, or the result of disease. See *Exophthalmos*.

**E. oculi congenita.** (L. *congenitus*, born with.) A condition of displacement of the eye usually associated with anencephalia, and consequent on imperfect development of the orbit.

**E. pulmonum.** (L. *pulmo*, the lung.) Hernia of the lung.

**E. pupillæ.** (L. *pupilla*, the pupil of the eye.) Displacement of the pupil. It results from imperfect development of the iris. See *Coloboma*.

**E. splenis.** (L. *splen*, the spleen.) Displacement or malposition of the spleen.

**E. tar'si.** (Ταρσός, the edge of the eyelid.) A rare affection caused by *Buphthalmus*, which turns the lid outwards, and leads in some instances to the formation of a chemotic fold of conjunctiva between the lid and the globe of the eye.

**E. testis.** (L. *testis*, the testicle.) An abnormal descent of the testicle.

**E. testis cruralis.** (L. *crus*, the thigh.) The abnormal condition in which the testicle passes out of the abdomen through the femoral or crural ring.

**E. testis perinæalis.** (L. *perinæum*.) The abnormal condition in which the testicle after passing down the inguinal canal avoids the scro-

tum and reaches the perinæum either between the scrotum and the thigh, or by the side of the raphe in front of the anus.

**E. vesicæ.** (L. *vesica*, a bladder.) Extroversion or outward protrusion of the bladder through congenital or other deficiency of the abdominal wall.

**Ectopiæ.** (Ἐκτοπίαι.) An Order of the Class *Locales*, of Cullen's Nosology.

**Ectopic.** (Ἐκτοπός.) Out of place.

**E.gestation.** See *Gestation*, *ectopic*.

**E. menstruation.** See *Menstruation*, *ectopic*.

**Ectopisis.** Same as *Ectopia*.

**Ectoplasm.** Same as *Ectopia*.

**Ectoplasm.** (Ἐκτός; πλάσμα, anything formed.) The outer hyaline non-cellular layer of the protoplasm of a vegetable cell; it is occasionally striated, either longitudinally or transversely, and sometimes presents rods.

Also, the same as the *Ectosare* of Infusoria.

**Ectopocystic.** (Ἐκτοπος, away from a place; κύστις, the bladder.) Relating to displacement of the bladder.

**Ectopocystis.** (Ἐκτοπος; κύστις, a bag.) A displacement or malposition of the urinary bladder.

**Ectopogonous.** (Ἐκτός, without; πύργον, a beard. F. *ectopogone*; G. *aussenbärtig*, *aussenähnig*.) Applied to those mosses which have the orifice of the urn garnished with double teeth or clefts, which form an external peristome.

**Ectopous.** (Ἐκτοπος, away from a place.) Out of place, displaced.

**Ectoprocta.** (Ἐκτός; πρωκτός, the anus.) An Order of the Class *Polysa* having the anus outside the mouth-tentacles.

**Ectoprotic.** Erroneous orthography for *Ectoprotic*.

**Ectopterygoid.** (Ἐκτός, without; πτερυγοειδής, pterygoid.) A term applied to two different bones; to the transverse bones of reptiles and to the pterygoid proper of fishes, which is the equivalent of the internal pterygoid plate of man. It may be formed on cartilage in the lower types, which cartilage dies out in the higher orders, being replaced by membrane.

**Ectopy.** Same as *Ectopia*.

**Ectorganism.** (Ἐκτός; organism.) A parasitic plant or animal which lives on the outer surface of another.

**Ectosarc.** (Ἐκτός, outside; σάρξ, flesh.) The outer layer of the body of amœboid animals.

**Ectosporous.** (Ἐκτός; σπορά, spore. G. *aussensporig*.) Having spores on the outside.

**Ectosteal.** (Ἐκτός, outside; ὀστέον, a bone.) Relating to, or on, the outside of a bone.

**E. ossification.** (L. *os*, a bone; *facio*, to make.) Same as *Ectostosis*.

**Ectosteomycetes.** (Ἐκτός; ὀστέον, a bone; μύκης, a fungus.) External fungus of bone; probably applied to a spongy exostosis.

**Ectostosis.** (Ἐκτός; ὀστίσις.) A term applied to that form of ostosis or ossification in cartilage in which the calcareous deposit first occurs immediately under or in the perichondrium, and then proceeds inwards, replacing or surrounding the cartilage, and so becoming *Endostosis*.

**Ectotheca.** (Ἐκτός, outside; θήκη, a sheath.) The external delicate structureless investment which covers the medusiform gono-

phores or sporosacs of many hydroid polypes, through which the planoblasts burst as they become detached. It is absent in *Clavatella* and *Corymorpha*.

**Ectoœna.** (Ἐκτός, without; οἶσνα. F. *ectozene*.) External oœna; oœna affecting the fore part of the nasal cavities.

**Ectozoa.** (Ἐκτός, without; ζῷον, an animal.) A general term for those parasitic insects that, like the itch insect and the flea, infest the surface or external part of the body, in distinction from the *Entozoa*.

**Ectozoon.** (Ἐκτός, outward; ζῷον, an animal.) An animal parasite of the outside of the body.

**Ectrimma.** (Ἐκτρίβω, to rub off.) Old term (Gr. *ἐκτρίμμα*), used by Hippocrates, *de Fract.* iii, 26, for an excoriation or ulceration of the skin over the sacrum or other part in contact with the bed.

**Ectrodactylia.** (Ἐκτρωσις, abortion; δάκτυλος, a finger.) A malformation in which one or more fingers or toes are wanting.

**Ectrog'eny.** (Ἐκτρωσις; γεννία, to produce.) Serres' term for monstrosity by defect or diminution in number of organs or parts.

**Ectroma.** (Ἐκτρωμα, from *ἐκτρίβω*, to abort or miscarry.) Old term for the product of an abortion, and sometimes for the act of abortion.

**Ectrom'cles.** (Ἐκτρωμα; μέλος, a limb.) A Genus of monstrosities in which the thoracic or abdominal limbs are nearly or altogether deficient from an arrest of development, as distinguished from spontaneous amputation.

**Ectromely.** (Same etymon.) The condition of an *Ectrom'cles*.

**Ectropè.** (Ἐκτροπή, from *ἐκτρέπω*, to turn aside.) Old term for a duct by which morbid humours are diverted and drawn off.

Also, the same as *Ectropium*.

**Ectropia.** (Ἐκτροπή. G. *Auswärts-wendung*, *Ablenkung*.) A turning or bending outwards. Same as *Ectropium*.

**Ectropic.** (Ἐκτροπος, a turning out of the way. G. *abgewendet*.) Bending outwards. Also, relating to *Ectropium*.

**Ectropion.** Same as *Ectropium*.

**E. of bladder.** Same as *Extroversion of bladder*.

**E. of os uteri.** (L. *os*, the mouth; *uterus*, the womb.) Eversion of the lips of the os uteri.

**E. vesicæ.** (L. *vesica*, a bladder.) Extroversion of the bladder.

**Ectropium.** (Ἐκτρέπω, to turn from. F. *ectropion*; I. *ectropio*; G. *Umkehrung des Augenlichs*.) An outward bending; especially applied to the condition in which the eyelid folds on itself, so that the conjunctival surface becomes external; eversion of the eyelid.

**E. acutum.** (L. *acutus*, sharp.) The same as *E. musculare spasmodicum*.

**E. anguli externi.** (L. *angulus*, angle; *externus*, external.) A condition of eversion of the lid which occasionally arises as the result of carious disease of the bone in this region.

**E. congenitum.** (L. *congenitus*, born with. G. *angeborenes Ectropium*.) A condition noticed by v. Ammon as occasionally resulting from *Euphthalmus*.

**E. factitium.** (L. *factitius*, made by art.) The same as *E. simulatum*.

**E. luxurians.** (L. *luxurio*, to have in abundance.) A synonym of *E. sarcomatostum*.

**E. mechan'icum.** (*L. mechanicus*, belonging to mechanics.) The same as *E. organ'icum*.

**E. muscula'rö.** (*L. musculus*, a muscle.) Ectropium resulting from muscular action when the lids have been greatly swollen or extended by tumours of the orbit.

**E. muscula'rö seni'lë.** (*L. senilis*, belonging to age.) The same as *E. senile*.

**E. muscula'rö spasmod'icum.** (*L. spasmus*, a cramp. *G. spastisches Ectropium*.) That form of eversion of the lid which sometimes occurs in blennorrhœal affections of the conjunctiva, and is due to swelling of the lid and sudden and violent contraction of the orbicularis palpebratum.

**E. of the lips.** A condition in which the upper lip, or the lower lip, or both, are more or less everted, as from the contraction of the cicatrix of a burn.

**E. organ'icum.** (*L. organicus*, relating to instruments.) Ectropium resulting from contraction of the external cutis.

**E. palpebræ cicatric'eum.** (*L. palpebra*, an eyelid; *cicatrix*, a scar. *G. Narbenelectropium*.) Ectropium resulting from contraction of the cicatrix following a wound, and especially a burn.

**E. palpebræ ex blepharadenit'ë.** (*Βλεφαρίτης*, the eyelid; *αδέν*, a gland.) Ectropium resulting from the occurrence of numerous abscesses at the roots of the cilia, leading to contraction of the skin and eversion of the puncta lacrymalia. It chiefly affects the borders of the lids.

**E. paralytic'um.** (*L. paralyticus*, palsied.) Ectropium resulting from more or less complete paralysis of Horner's muscle.

**E. sarcomatosum** (*Σάρκωμα*, a fleshy excrescence.) Term applied to cases in which the eyelid or lids are first inflamed and swollen, and the orbicularis rendered parietic, and at length, either by spontaneous contraction of the orbital portion of the orbicularis, or by an effort to raise the lid with the fingers, eversion results.

**E. seni'lë.** (*L. senilis*, belonging to age.) Ectropium due to relaxation of the skin occurring in old people. There has usually been for a long period conjunctivitis, with muco-purulent secretion, which forms crusts about the roots of the cilia, and the affection generally commences at the inner angle.

**E. simula'tum.** (*L. simulatus*, feigned.) Eversion of the eyelids, practised by beggars to excite compassion.

**E. symptomatic'um.** (*Συμπτωμα*, a symptom.) Ectropium resulting from the growth of a tumour.

**Ectro'sis.** (*Εκτρωσις*, from *εκτρίνω*, to abort.) An abortion or miscarriage.

**Ectrotic.** (*Εκτροτικός*, belonging to abortion; from *εκτρίνω*, to throw out. *F. ectrotique*; *G. fruchtabtreibend*.) Throwing out. Of, or belonging to, *Ectroma* or *Ectrosis*.

Term formerly applied to medicines and agents which cause abortion of the fetus.

Also, applied to medicines or modes of treatment which tend to produce the abortion or sudden cutting short of a disease.

**E. meth'od.** A term specially applied to a method of treatment of smallpox by pricking the apex of each pustule with a gold or silver needle, charged with nitrate of silver or other

escharotic, in order to procure the arrest of the disease.

**Ectylo'tic.** (*Εκτυλωτικός*, hardening to a callus.) Making hard, developing a callus.

Also (*εκ*, out; *τύλος*, a callus), having the power to remove a callus, as the milder caustics.

**Ectympano'sis.** (*Εκτυμπάνωσις*, a swelling out like a drum.) A synonym of *Tympanitis*.

**Ec'cyphellate.** (*L. e*, out; *cyphella*.) Without a *Cyphella*.

**Ec'zema.** (*Εκζέμα*, anything thrown out by heat, a heat spot; from *εκζέω*, to boil over. *F. eczème*, *durée squameuse humide*; *I. eczema*; *G. Eczem*, *aussende Flechte*, *Satzfluss*.)

An acute or chronic, non-contagious, simple inflammation of the skin, characterised by the presence of itching papules and vesicles, which discharge a serous fluid, or dry up. The features of the disease vary greatly in different persons, and on different parts of the same person. It may be an erythematous swelling of the skin; or it may be papular, with or without scales; or it may consist of vesicles, which may dry up without bursting, or which may burst and discharge a sticky serum, or leave a red, excoriated, weeping surface, studded with small pustules, which in the end form yellowish or blackish crusts and scabs; or the skin may become thickened and covered with scales. Some forms of lichen and strophulus are by many believed to be papular forms of eczema. In not a few cases there is an hereditary predisposition, and in many a gouty proclivity; irritating substances, exposure to the sun, great perspiration, certain foods, errors in diet, and mental worry, may produce an attack. Some include under this head the affections by others called *Lichen* and *Strophulus*.

**E. acu'tum.** (*L. acutus*, sharp.) The form of eczema in which the skin inflammation is severe, quick spreading, and extensive, with more or less oedema; it is sometimes accompanied by febrile disturbance.

**E. arsenica'lë.** A vesicular eruption of the skin, which is one of the toxic effects of the long-continued use of arsenic.

**E. articulo'rum.** (*L. articulum*, a joint.) Eczema at the bend of the elbow, at the wrist, at the ham, or other flexure of a joint; it has a great tendency to produce fissures.

**E. aur'ium.** (*L. auris*, the ear.) Eczema of the ear; not uncommon in elderly people. It is accompanied with much redness and swelling, often leaves thickening of the auricle and pustules, or small abscesses. It may spread to the meatus auditorius externus.

**E. bar'bæ.** (*L. barba*, a beard. *G. Eczem der behaarten Gesichtshaut*.) Eczema of the hairy chin; it is often followed by sycoosis.

**E. calor'icum.** (*L. calor*, heat.) A vesicular form produced by exposure to the sun's rays.

**E. capillit'ii.** (*L. capillitium*, the hair.) Same as *E. capitis*.

**E. cap'itis.** (*L. caput*, the head. *G. Eczem der Kopfhaut*.) Eczema of the hairy scalp. It is common in young children. In its later stage it presents yellowish scales matted in the hair upon a red, cracked skin.

**E., chron'ic.** (*L. chronicus*, lingering.) The form in which there are many recurrences of the disease, with much thickening of the skin, with fissures, and sometimes ulceration.

**E. compos'itum.** (*L. compositus*, com-

## ECZEMA.

pound.) Eczema with pustules and scales as well as vesicles.

**E. cru'rum.** (L. *crus*, a leg.) Eczema of the legs; it is generally accompanied by cutaneous infiltration, hardening, and pigmentation.

**E. crusta'ceum.** (L. *crusta*, rind, crust.) The form in which the exudation dries on the surface of the skin in the form of crusts.

**E. crusto'sum.** Same as *E. crustaceum*.

**E., diabe'tic.** (Διαβήτης.) A form accompanied by much itching, occurring on the pudenda and thighs of females, from the irritation of the diabetic urine, or from the growth of *Saccharomyces* or other fungi.

**E. difu'sum.** (L. *diffusus*, spread about.) The ordinary form of eczema when attacking an extended surface.

**E. digito'rum.** (L. *digitus*, a finger.) A similar form to *E. manuum*.

**E. epizoō'tica.** (Έπί, upon; ζῷον, an animal.) Foot-and-mouth disease of cattle.

**E. erythemato'sum.** (Ερυθμα, a redness of the skin.) A very mild form, in which no vesicles form, only a redness of skin, followed by slight desquamation, or thickening of the skin from infiltration of inflammatory products.

**E. facie'i.** (L. *facies*, the face. G. *Eczem der Gesichtshaut*.) Eczema of the face. There is generally a copious discharge, drying into large crusts, or becoming purulent in pustules; there is often accompanying conjunctivitis.

**E. figura tum.** (L. *figuratus*, shaped.) The form occurring in well-defined but irregular patches.

**E. fis'sum.** (L. *fissus*, cleft. F. *eczema fissile*.) The form of chronic eczema in which the raw surface of skin becomes cracked, and often bleeding.

**E. fugax.** (L. *fugax*, fleeting.) Eczema of short duration.

**E. genita'lē.** (L. *genitalis*, belonging to the genitals.) Eczema of the neighbourhood of the genital organs. It produces in the male a thickened and fissured state of the scrotum, and, often, in the female severe itching.

**E. hæmorrhoida'lē.** (Αἱμορροΐς, liable to discharge blood.) The form of *E. perineale* in which there are pile-like swellings around the anus.

**E. hu'midum.** (L. *humidus*, moist.) The form in which there is much discharge.

**E. hypertroph'icum.** (Υπέρ, above; τροφή, nutrition. I. *E. hypertrofico*.) The form of chronic eczema, especially that which afflicts the legs, in which, from persistent hyperæmia or congestion, the connective tissue and cutaneous structures grow and thicken.

**E. ichoro'sum.** (Ίχθρ, sanies.) Chronic eczema in which, after bursting of the vesicles, a red surface is left, which exudes a copious irritating discharge.

**E. impetigino'ides.** (L. *impetigo*; Gr. ἰδός, likeness.) A term applied to forms of eczema in which the vesicular contents very rapidly become purulent, and dry into thick yellow scabs, covering a red ichorous surface, as in *Grocer's itch*.

Also, applied to acute eczema complicated with impetigo.

**E. impetigino'sum capilli'ti.** (L. *impetigo*; *capillitium*, the hair.) The form of *E. capitis* in which some of the vesicles become pustular and pointed.

**E. infan'tilē.** (L. *infantilis*, belonging to

children. I. *eczema dei bambini*.) Eczema occurring in children, often scrofulous, generally unhealthy. It begins usually in the acute form, becomes chronic, and often impetiginous; the skin is often excoriated, and the discharge purulent.

**E. intertrigo.** (L. *intertrigo*, a chafing.) Eczema produced by perspiration between two adjacent parts, as in the axillæ or in the groins of fat persons.

**E. labia'lis.** (L. *labium*, the lip.) A form which is usually impetiginous.

**E. lichenoi'des.** (Lichen; εἶδος, likeness.) Same as *E. papulosum*, from its resemblance to *Lichen*.

**E. lotricum.** (L. *lotor*, a washer.) Eczema of the fingers and hands in washer-women, produced by the irritating action of soda and other substances used in their work.

**E. mad'idans.** (L. *madido*, to make wet.) The form in which there is extensive epithelial denudation and copious serous discharge from the hyperæmic corium.

**E. mamilla'rum.** (L. *mamilla*, a teat.) Eczema of the nipple. See *Paget's disease*.

**E. mam'mæ.** (L. *mamma*, the breast.) Eczema of the breast, especially around the nipple in suckling women. The skin often cracks, and mammary abscess may result.

See also *E. of nipple*.

**E. mamma'rum.** Same as *E. mamme*.

**E. man'uum.** (L. *manus*, the hand.) Eczema of the hand, characterised by toughness of the vesicles, which occasionally run into bullæ, and by the frequent cracking of the skin. It may be excited by local irritants, as in some forms of *Grocer's itch*.

**E. margina'tum.** (L. *marginatus*, to furnish with a border.) A term applied to a red, dry, scaly skin affection occurring at the inner and upper part of the thigh in sedentary men, such as shoemakers, and also in cavalry soldiers; it is said to be caused by perspiration. In many instances, at least, it is a parasitic disease, *Tinea marginata*, a variety of *T. tonsurans*; in some it is simple *Intertrigo*; and in others it may be syphilitic.

Hebra gave it this name from its centrifugal progress and simultaneous central involution; it begins as a raised red patch, which gradually spreads at its circumference, and becomes paler at its centre, and may exhibit both papules and vesicles.

**E. mercuria'lē.** A form of *E. rubrum* produced by the external use of mercury; by some it is believed to be caused also by the internal use of the drug.

**E. mucoso'sum.** (L. *mucosus*, mucous.) That form in which the skin is softened, and resembles a mucous membrane. It is chiefly seen in the axilla and fold of the groin.

**E. neuro'sum.** (Νεύρον, a nerve.) The form in which there is great pain.

**E. neuro-traumat'icum.** (Νεύρον, a nerve; τραύμα, a wound.) Weir Mitchell's term for the vesicular eruption which occurs, after injury to a nerve, on the skin of the part to which it is distributed; the skin may in other respects be healthy, but more generally it is atrophied, shining, and painful. The eruption consists of small, scattered, acutely-pointed vesicles.

**E. nummula'rē.** (L. *nummularis*, belonging to money, and so circular like a coin.) A form which occurs in circular, coin-like patches.

# ECZEMATOID—EDENTATA.

**E. œdemato'sum.** (Οἰδήμα, a swelling. I. *E. edematoso.*) The form in which the skin structure becomes infiltrated with serous fluid.

**E. of face.** See *E. faciei*.

**E. of nipple.** (G. *Eczem der Brustwarze.*) Ordinary eczema occurring on the nipple and areola; it usually spreads to the surrounding skin, and often arises from some local cause, as want of care in drying the surface after nursing the child.

For the form of eczema of the nipple which is very persistent, and usually assumes a malignant form of mammary disease, see *Paget's disease*.

**E. of scalp.** Same as *E. capitis*.

**E. papulo'sum.** (L. *papula*, a pimple.) The form characterised by the occurrence of small red papules, being the papillae of the skin distended with serum or congested follicles.

According to Hebra, the same as *Lichen eczematoides*.

**E. pe'dum.** (L. *pes*, a foot.) Eczema of the feet, very similar to *E. manuum*.

**E. perinae'alē.** (Περιναιος, the space between the scrotum and the anus.) The form which affects the perinaum; it often spreads to the anus, and causes much pain and swelling, with deep fissures.

**E. persis'tens.** (L. *persisto*, to remain.) Chronic long-lasting eczema.

**E. pilā'rē.** (L. *pilus*, a hair.) Eczema of a hairy surface, especially of the hairy scalp.

**E. psoriasi'formē.** (*Psoriasis*; L. *forma*, shape.) Same as *E. squamosum*.

**E. pudendo'rum.** (L. *pudenda*, the privy parts.) Same as *E. vulvæ*.

**E. pustulo'sum.** (L. *pustulosus*, full of pustules.) A synonym of *Impetigo*.

Also, a term applied to some of those cases of eczema in which the vesicles become turbid by the admixture of pus with the serum.

**E. ru'brum.** (L. *ruber*, red. I. *eczema rosso.*) The same as *Pityriasis rubra*.

Also, a term applied to the inflammatory form, or *E. acutum*, when the redness of skin is intense.

**E. sclero'sum.** (Σκληρός, hard.) Eczema accompanied by induration of the skin.

**E. sic'cum.** (L. *siccus*, dry.) The form in which there is little or no discharge.

**E. simplex.** (L. *simplex*, simple.) The milder form of the disease, consisting of discrete, but clustered, small vesicles on an erythematous skin; the fluid contents get opaque, dry, and form powdery crusts.

The term is sometimes restricted to the purely papular form; and is also called *lichen* or *strophulus*.

**E. sola'rē.** (L. *solaris*, belonging to the sun. I. *E. scmplicē.*) The form of *E. simplex* which is produced by exposure to the sun's rays; it is generally papular.

**E. spargosi'formē.** (Σπάργωσις, a swelling, as of a breast with milk; L. *forma*, likeness.) Eczema with mamillary hypertrophy of the skin.

**E. squamo'sum.** (L. *squamosus*, scaly.) Chronic eczema, in which the epidermis is rapidly formed, and exfoliates in fine brawny or flaky scales which succeed the vesicles.

Also, the same as *Pityriasis rubra*.

**E. stru'mous.** (*Struma*.) Eczema occurring in scrofulous persons, especially children; it occurs most frequently about the face and head, especially near the ears, nose, and mouth;

there is much discharge, and pustules are frequent.

**E. syco'si'formē.** (*Sycosis*; L. *forma*, likeness.) A form of chronic eczema occurring on the chin and eyebrows, which is accompanied or followed by pustules of sycosis.

**E. syphiliti'cum.** Eczema depending on syphilitic infection; the occurrence of such a condition is much doubted.

**E. umbil'i'ci.** (L. *umbilicus*, the navel.) Eczema of the navel.

**E. unisquamo'sum.** (L. *unus*, one; *squama*, a scale.) Eczema occurring in round, isolated, somewhat scaly patches.

**E. verruco'sum.** (L. *verruca*, a wart.) The form in which the skin develops elevated warty-looking papules.

**E. vesiculo'sum** (L. *vesicula*, a small vesicle.) The form or stage in which the eruption consists of fine vesicles containing serum.

**E. vulga'rē.** (L. *vulgaris*, common.) The same as *E. simplex*.

**E. vulvæ.** (L. *vulva*, the womb.) Eczema of the external organs of generation; it generally begins between the labia and the thighs, whence it spreads. In its chronic form it produces much distress, and alteration in the cutaneous and mucous structures, which become dry, hard, and often cracked, the hairs fall out, and the fat becomes absorbed.

**Eczem'atoid.** (Εκζεμα; εἶδος, likeness.) Resembling *Eczema*.

**Eczemato'ses.** (Εκζεμα.) A family of diseases of the classification of Fuchs, consisting of morbid conditions of the cutaneous secretion.

**Eczemato'sis.** (Εκζεμα. F. *eczématose*.) The coming out of an eruption on the skin.

**Eczem'atous.** (Εκζεμα.) Of, or belonging to, or of the nature of, the disease *Eczema*.

**Eczesis.** (Εκζεσις, a boiling out.) Same as *Eczema*.

Also, a synonym of *Effervescence*.

**Eczes'ma.** (Εκζεσμα, a heat spot.) Same as *Eczema*.

Also, a synonym of *Lichen tropicus*.

**Eczes'mopygag'ra.** (Εκζεσμα; pygagra. F. *eczes'mopygag're*; G. *das Steissleiden mit Hautstippen*.) Term for papulous pygagra.

**Eda'cious.** (L. *edax*, gluttonous; from *edo*, to eat.) Voracious, greedy.

**Edac'ity.** (L. *edacitas*, gluttony; from *edo*, to eat. G. *Gefrässigkeit*.) Great voracity.

**Ed'da.** Same as *Eddoe*.

**Ed'doe.** The root of the yam, the *Arum esculentum*, and other species.

**Edel'tis.** Same as *Edacitis*.

**Edema.** Same as *Edema*.

**Edematous.** Same as *Edematous*.

**Edemosarko'ma.** (Οἰδήμα, a swelling; *sarcoma*.) Term applied by Severino to elephantiasis of the scrotum.

**Edenkoben.** Bavaria; in the Haardt mountains. A sulphuretted mineral water. The grape-cure is also carried out here.

**Edental.** Same as *Edentate*.

**Edentalous.** Same as *Edentate*.

**Edenta'ta.** (L. *e. neg.*; *dentatus*, toothed.) An Order of the Subclass *Monodelphia*, Class *Mammalia*. Claw bearing, usually incisecutate mammals with thoracic mammae, inguinal or abdominal testes; no median incisors nor canine teeth; and when other teeth occur, they are

without fangs and enamel, have permanent pulps, and are not preceded by deciduous teeth. Examples of the Order are Manis, Dasypus, Orycteropus, and Myrmecophaga. Also called *Bruta*.

**Edentate.** (*L. e*, neg.; *dentatus*; from *dens*, a tooth. *F. édenté*; *G. zahnlös*.) Without teeth.

**Edenta'tion.** (*L. e*; *dentatus*.) A depriving of teeth.

**Edentuli.** (*L. edentulus*, toothless.) Persons having no teeth.

**Edentulous.** (Same etymon. *G. ungezähnt*.) Having no teeth.

**Edeod'ny.** Same as *Edeod'nyia*.

**Edeog'raphy.** Same as *Edeography*.

**Edeology.** Same as *Edeology*.

**Edeotomy.** Same as *Edeotomy*.

**Ed'era.** See *Hedera*.

**Edes.** (*Arab.*) Old term for amber. (*Ruland*.)

**Edes'senum.** Old name for a collyrium made with tragacanth, gum arabic, opium, and other things.

**Edez.** See *Edes*.

**Edibility.** (*L. edibilis*, eatable.) The quality of being eatable.

**Edible.** (*L. edibilis*, eatable; from *edo*, to eat. *F. bon à manger*; *I. comestibile*, *buono a mangiare*; *G. essbar*, *geniessbar*.) Eatable, good for eating.

**E. bird's nest.** See *Bird's nest*, *edible*.

**E. earths.** See *Earths*, *edible*.

**E. fu'cus.** The *Chondrus membranifolius*.

**E. hibis'cus.** The *Hibiscus esculentus*.

**E. moss.** The *Schizymenia edulis*.

**Edibleness.** Same as *Edibility*.

**Edic.** An old term from the Arabic for iron. (*Ruland*.)

**Edich.** Same as *Edic*.

**Edir.** Same as *Edic*.

**Editus.** (*L. editus*; from *edo*, to put forth.) Dung, excrement.

**E. bo'um.** (*L. bos*, an ox. *G. Kuhmist*.) Cow dung.

**Edeceph'alus.** (*Αἰδοῖον*, the sexual parts; *κεφαλή*, the head.) Geoffroy St. Hilaire's term for a monstrosity having the ears approaching or united to each other under the head, the jaws atrophied, the mouth absent, and above the eyes an abortive nose like a penis.

**Ed'ra.** (*Ἔδρα*, a sitting place.) Old term for a fractured bone, on which there is an impression from the instrument by which it was broken.

**Edriophthal'ma.** (*Ἐδρῆα*, sitting; *οφθαλμός*, the eye.) A Subclass of the Class *Crustacea*, having sessile eyes, no carapace, branchiae more or less connected with the legs.

**Edriophthalmous.** Relating or belonging to the *Edriophthalma*.

**Educt.** (*L. educo*, to draw out.) An extract; something obtained from another body, and which was previously present in it.

**Eductum.** Same as *Educt*.

**Edulcorant.** (*L. edulco*, to make sweet. *F. adoussant*; *G. besäufugend*.) Sweetening. Formerly used in the same sense as absorbent; and also applied to a medicine which purified the fluids by sheathing their asperities, or, like a sponge, absorbing superfluous moisture in the body, and so acting as a dryer or a sweetener.

**Edulcorate.** (*L. edulco*. *G. aussüssen*, *auswaschen*.) To sweeten, to free from acid or salts, or acrid matters, by washing.

**Edulcora'tion.** (*L. edulco*, to make sweet. *F. edulcoration*; *G. Aussüssen*, *Versüssung*, *Auswaschung*.) Old term for the affusion of water or any substance to remove saline or other acrid particles, which are soluble in water.

Also, applied to the sweetening of a medicine, either liquid or dry, with sugar or honey.

**Edulcorator.** (*L. edulco*.) A term for a Dropping-bottle or a Wash-bottle.

**Edu'lious.** (*L. edulium*, something to be eaten.) Eatable.

**Ed'wards, Milno.** See *Milne-Edwards*.

**Edwig'la.** Misspelling of *Hedwigia*.

**Eel.** (*Sax. æl*. *G. Aal*; *L. anguilla*; *F. anguille*; *Gr. ἰχθυόσ*.) The fishes of the Division *Apoda*, Order *Tricostei*. The flesh of several of the species is eaten and much esteemed; by some it is said to be laxative. It contains much fat. Its composition is, nitrogenous matter 9.9, fat 13.8, saline matter 1.3, water 75.0 parts, in 100. Another analysis (Payen), nitrogenous matter 13.0, fatty matter 23.86, mineral matter 0.77, non-nitrogenous matter and loss 0.30, water 62.07 parts, in 100.

**E., con'ger.** See *Conger eel*.

**E., elec'tric.** The *Gymnotus electricus*.

**E. fat.** The fat obtained from eels while roasting. Used as an ointment for stiff joints.

**E.-grass.** The *Zostera marina*.

**E.s, paste.** Minute eel-like animals, found in acidifying flour paste, of the Genus *Anguillula*; the *A. glutinis*.

**E., vin'egar.** The *Anguillula aceti*.

**Effect.** (*Old F. effect*; from *L. effectus*, from *efficio*, to bring to pass; from *ex*, out; *facio*, to make. *G. Erfolg*.) That which is produced by, or results from, the action of a cause or agent.

**Eff'ferent.** (*L. effero*, to bring out; from *ex*, out; *fero*, to bear.) Carrying out, discharging.

**E. nerves.** Those nerves which convey nerve force or nervous influence away from a nervous centre.

**E. ves'sels.** See *Vasa efferentia*.

**Effervesce'.** (*L. effervesco*, to boil over.) To be in a state of *Effervescence*.

**Efferves'cence.** (*L. effervesco*, to boil over. *F. effervescence*; *G. Aufbrausen*.) Term for the agitation produced in a liquid by the sudden escape of a gas from it in small bubbles when resulting from chemical action, or from the removal of pressure, and not from heat.

Also, in Pathology, an old term for the disturbance of the humours of the body, produced by heat, or by the injurious action on each other of some of the principles contained in the fluids.

**E. of the blood.** (*F. échanboulture*.) A disease of the horse and ox resembling urticaria, consisting in the eruption on the skin of small circular, flattened swellings the size of a nut, which do not suppurate, but from which the epidermis and hair sometimes exfoliate. It is accompanied with fever.

**Efferves'cent.** (*L. effervesco*. *G. aufbrausend*.) Having the capacity of *Effervescence*.

**E. al'kali.** A term formerly applied to all carbonates of alkalis.

**Efferves'cible.** (*L. effervesco*.) Capable of producing, or of undergoing, *Effervescence*.

**Effete.** (*L. effetus*, that has brought forth young, and so exhausted; from *ex*, out; *factus*, young. *G. entkräftet*, *geschwächt*.) Worn out,

exhausted, without vigour; past fruit-bearing from age.

**Efficient.** (F. *efficient*, from L. *efficiens*, part. of *efficio*, to bring to pass. G. *beurkundend*.) Producing, causing, effectual.

**E. cause.** (L. *causa determinans*; G. *Entstehungs-Ursache*.) A cause which produces an effect.

**Effides.** (Arab.) Old term for *Cerussa*, or white lead. (Ruland and Johnson.)

**Effilia.** (F. *ephilide*; G. *Sommersprossen*, *Sonnenflecken*.) Old term for *Ephelis*, or freckle. (Ruland and Johnson.)

**Efflacio.** (L. *efflo*, to breathe out.) A strong expiration.

**Efflatus.** Same as *Egflation*.

**Effleurage.** (F. *effleurer*, to touch slightly.) The form of *Massage* which consists in gently rubbing the surface with the palm of the hand, the direction being towards the centre of the body.

**Effloration.** Same as *Efflorescence*.

**Effloresce.** (F. *efflorescence*; from L. *effloresco*, to flourish.) To burst into bloom, to become covered with a whitish powder, as some salts.

**Efflorescence.** (F. *efflorescence*; from L. *effloresco*, to flourish. G. *Aufblühen*.) Term for the blooming of flowers; the time of flowering.

Also (G. *Auswitterung*, *Beschlag*), the state of saline bodies when on exposure to the air they assume the form of a dry powder by losing their water of crystallisation.

Also, the white powder itself produced under such circumstances.

Also (G. *Hautblüthe*), a term for a morbid redness, or rash, of the skin.

**Efflorescency.** (L. *effloresco*.) Same as *Efflorescence*.

**Efflorescent.** (L. *effloresco*.) A term applied to those salts which exhibit *Efflorescence*.

**Efflorescentia.** (L. *effloresco*. F. *éruptions*.) The exanthematous diseases which are accompanied by some distinct elevation of the skin.

**Effluence.** (F. *effluence*; from L. *effluo*; from *ex*, out; *fluo*, to flow.) The act of flowing out; that which flows out of a body.

**Effluent.** (L. *effluens*, part. of *effluo*, to flow out.) Flowing out. A stream which flows out of another stream, or out of a lake.

**Effluvia.** (L. *effluvia*, a flowing out.) Capable of being given off as an *Effluvia*.

**Effluvial.** (L. *effluvia*.) Relating to, or containing, *Effluvia*.

**Effluvium.** (L. *effluvia*, from *effluo*, to flow out. F. *effluve*, *emanation*; G. *Ausfluss*.) A something flowing out in a subtle form. Applied to the small particles emitted by bodies which, though they do not sensibly diminish them, have perceptible effects on the senses; especially to those emanations which are offensive or noxious.

The term was proposed by Lancisi, as a substitute for that of marsh miasmata.

**E. capillorum.** (L. *capillus*, a hair.) Falling off of the hair, baldness.

**E., human.** Cullen's term for the morbid substances derived from man, which are the proximate cause of contagious and continued fevers, in contradistinction to *E., marsh*.

**E. latrinarium.** (L. *latrinum*, a privy.) The air of a privy or sewer.

**E., marsh.** Cullen's term for the exha-

lations from moist, unhealthy places, which cause intermittent and remittent fevers; in contradistinction to *E., human*.

**E. palustris.** (L. *paluster*, marshy.) Marsh miasm.

**Efflux.** (L. *effluo*, to flow out. G. *Ergiesung*.) A flowing out, that which flows out.

An old midwifery term for the expulsion of a fetus within seven days of the commencement of some disease of the mother.

**E. of liquid.** A fluid issues from a hole in the bottom or at the side of its containing vessel with equal proportionate velocity; which is a velocity equal to that which a freely-falling body would have when it reached the orifice after starting from the surface of the liquid where it was in a state of rest. When an efflux tube or *Ajutage* is adjusted to the orifice the velocity is increased.

**E. tube.** Same as *Ajutage*.

**Effluxion.** (L. *effluo*.) A flowing out, that which flows out.

A term applied formerly to the expulsion of the fetus when it occurs before the third month of pregnancy, after which it was called abortion.

The term has also been used to express the expulsion of the product of conception within the first seven days of its existence.

**Effodientia.** Illiger. (L. *effodio*, to dig out.) A family of mammals having few teeth or none. A synonym of *Eutomophaga*.

**Effetous.** Same as *Effete*.

**Effoliation.** (L. *e*, neg.; *folium*, a leaf. F. *feuilleaison*; G. *Entblätterung*.) The action by which a plant is stripped of its leaves.

**Effort.** (F. *effort*; from *efforcer*, to endeavour; from *ef*, for *ec*, from L. *ex*, out; and *forcer*, from *force*, from L. *fortis*, strength. I. *sforza*; G. *Anstrengung*.) An exercise of strength, or muscular contraction, for the purpose of resisting an external force, or procuring the expulsion of something from the body by the natural channels. Such are the actions of pushing or pulling, the attempt to effect an evacuation of the bladder or intestines when there is some obstruction, and the forcing pains of childbirth.

**E., hamorrhagic.** Same as *Molimen hamorrhagicum*.

**Effossio.** (L. *effossio*, from *effodio*, to dig up. G. *Ausgrabung*.) Exhumation of a dead body.

**Effractura.** (L. *effringo*, to break down. F. *effrature*.) Old term, used by Paré, *Chir.* ix, 6, for a fracture of the cranium, in which the bone is much depressed.

**E. cranii.** (L. *cranium*, the skull.) Depressed fracture of the skull.

**Effrenitatio.** (L. *effreno*, to unbridle, to let loose.) Drastic purgation, hypercatharsis.

**Effulcrate.** (L. *ef*, for *ex*, out; *fulcrum*, a support.) In Botany, applied to a bud from which the leaf in whose axil it grew has fallen away.

**Effumability.** (L. *ef*, for *ex*, out; *fumus*, smoke.) The quality of being volatile, or of evaporating.

**Effumable.** (L. *ef*; *fumus*.) Volatile.

**Effusc.** (L. *effusus*, part. *effundo*, to pour out.) Fanned out freely.

In Botany (G. *ausgebreitet*, *umherzerstreut*), applied to a very loosely spreading inflorescence.

Also, applied to shells in which the aperture has lips separated behind by a space.

## EFFUSIO—EGG.

**Effusio.** Same as *Effusion*.

**E. seminis.** (*L. semen*, seed.) Ejaculation of the semen.

**Effusion.** (*L. effusio*, from *effundo*, to pour out. *F. effusion*; *G. Ausgiessung*, *Erguss*.) The act of pouring out; that which is poured out.

The escape of any fluid out of its natural vessel or viscus and its lodgment in another cavity, in the cellular texture, or in the substance of parts.

Also, the separation of fluid from the vessels in a morbid state of parts; thus coagulable lymph is said to be effused on different surfaces.

**E. of blood.** See *Extravasation of blood*.

**E. of gases.** A term applied by Graham to the passage of gases into a vacuum, or, by pressure, through an aperture in a thin plate of .033 millimetre in diameter or thereabouts. The rate of effusion is inversely as the square root of the density of the gas.

**Effagellate.** (*L. e*, neg.; *flagellum*, a twig. *F. éflagellé*.) Having no Sarcmentum. Also, without a Flagellum.

**Efuniculate.** (*L. e*, out; *funiculus*, a slender cord.) Having no funiculus or navel-string.

**Egagropilus.** See *Agagropilus*.

**Egartbad.** Austria; in the Tyrol, near Meran. A cold sulphur spring.

**Eg'bell.** Hungary, Neutra County. A sulphur spring.

**Egegh.** Hungary, County Gran. A strong chalybeate water.

**Egelhof.** Austria, near Windisch-Gars-ten. A cold sulphur spring.

**Egelidus.** (*L. e*, neg.; *gelu*, frost.) Luke-warm.

Also (*L. e*, intens.; *gelu*), intensely cold.

**Egerdach.** Austria; in the Tyrol. A cold alkaline carbonated water.

**Egeries.** (*L. egeries*, excrement. *G. Koth*, *Mist*.) Faeces.

**Egerminate.** (*L. e*, out; *germen*, a sprout. *G. hervorsprossen*, *ausschlagen*.) To put out buds, to sprout.

**Egersis.** (*Εγερσις*, a waking. *G. Er- wecken*.) Intense wakefulness.

**Egesta.** (Plural of *egestum*.) The matters cast out by the bowels.

**Egestion.** (*L. egestio*, an emptying; from *egero*, to discharge.) Old term for an excretion. Applied generally to evacuations by stool.

**Egestive.** (*L. egestivus*; from *egero*. *G. ausleerend*.) Expelling; applied to the organs and acts of organs which produce expulsion from the body; the antithesis of *Ingestive*.

**Egestous.** (*L. egestus*, part. of *egero*, to cast or carry out. *G. ausleerend*.) Cast, carried, or put out. Applied to the natural excretions or evacuations, to substances rejected by the stomach or discharged from the bowels.

**Egestum.** (*L. egestum*; from *egero*, to cast or bear out. *F. excrement*; *G. Auswurf*, *Koth*.) Ordure or dung, excrement.

**Egg.** (*Sax. eg*. *G. Ei*; *Gr. ὄον*; *L. ovum*; *F. œuf*; *I. ovo*.) The *Ovum*. The number, size, and weight of the egg varies greatly in different animals. Thus, in regard to number, *Echinus sphæra* produces yearly 1,000,000, *Ascaris umbricoides* 60,000,000 or more, *Carcinus maenas* 3,000,000, river crab 200, house fly 50—70 every two or three weeks, garden snail 30—70, oyster 1,000,000, frog 2500—3800, piper 40—70, crocodile 40—70, house martin 4 or 5 eggs two or three

times, mouse 20—50, fox 4—7, sheep 1—3, man 1, elephant, every three or four years, 1. The diameter of the ripe egg in *Echinus* is 0.1 mm., *Helix* 0.2, *Cephalopods* 8.5, in mammals usually 0.15—0.2. The weight of a single egg is, in *Echinaster*, 0.0006 grm., crab 0.00004, river crab 0.01, silkworm moth 0.0007, garden snail 0.23, frog 0.003, piper 0.34, partridge 12.2, ostrich 1200 grm. The ripe ovum of mammals weighs scarcely 0.001 grm. The eggs of many birds and of some reptiles are eaten as food. An ordinary domestic hen's egg generally weighs about two ounces, of which 60 per cent. is white and 30 yolk, the remainder being shell. An egg furnishes when dried 110 grains of nitrogenous matter, and a little more than 80 grains of fatty matter.

Also, in Botany, a synonym of *Oosphere*.

**E. albumin.** See *Albumen, ovum*.

**E. apparatus.** The three cells at the upper or micropylar end of the embryo sac of a fertilised ovule of a plant; the two upper ones are the *Synergids*, the lower one the *Oosphere*.

**E. apple.** The fruit of *Solanum melongena*, *S. origerum*, and other species.

**E. bag.** The *Ovaryum*.

**E. bed.** The ovarium or ovary.

**E. brandy.** The *Mistura spiritus vini gallici*.

**E. broth.** The yolk of an egg beaten up with sugar to a cream, half a pint of boiling milk mixed with it, and half an ounce of brandy with some nutmeg.

**E. slip.** The *Mistura spiritus vini gallici*. Another form is three eggs mixed and well beaten, with half a pint of beer and two ounces of sugar, gently heated, but not allowed to boil, and then another half pint of beer added, with nutmeg and ginger or other spice.

**E. mixture for infants.** Yolk of an egg 6 grammes, lactose 100 grammes, water. In the siege of Paris, Bouehut prescribed as a substitute for milk the yolk of one egg and a little white of egg, 15 grammes of cocoa butter, beaten together with one half litre of warm sugar and water.

**E., oil of.** (*G. Eieröl*.) A reddish-yellow, thick, oily fluid, obtained by roasting and then pressing the yolk of eggs, or by gently heating them to drive off the water, digesting in alcohol, filtering, and distilling off the spirit; it is solidified by cooling, and quickly becomes rancid. It contains cholesterin or a similar body. It was formerly used as an emollient and to mix with mercury so as to kill it, as it was called.

**E. plant.** The *Solanum melongena*.

**E. plant, o'val.** The *Solanum origerum*.

**E.-shaped.** Having the form of an egg; ovoid.

**E. shell.** (*F. coquille*; *G. Eierschale*.) The outermost coating of a bird's egg. It consists of a matrix of organic matter impregnated with calcareous salts, and presents two layers; the outer is the thinner, sometimes contains vertical and longitudinal markings, and is the seat of the colouring matter when there is any; the inner is the thicker, is composed of alternating horizontal laminae of opaque and transparent substance, and presents on its inner surface rounded prominences. Canals, simple in *Carinata*, branched in *Ratitæ*, run between, and open on, both surfaces.

The shell of the domestic fowl's egg contains calcium carbonate 93.7 parts, magnesium carbonate 1.39, calcium and magnesium phosphate .75, and organic matter 4.15, in 100 parts.

The shell of reptiles' eggs contains much less mineral matter, with the exception of that of the alligator. See *Testa ovi*.

**E., white of.** (F. *blanc d'œuf*; G. *Eiweiss*.) See *Albumen ovi*, and *Albumin, ovum*.

**E., yolk of.** (F. *jaune d'œuf*; G. *Eidotter*, *Eigelb*.) See *Folk* and *Ovi vitellus*.

**Egilops.** See *Ægilops*.

**Eglandulose.** Same as *Eglandulous*.

**Eglandulous.** (L. *e*, neg.; *glandula*, glands. F. *églanduleux*; G. *drüsenlos*.) Deprived or destitute of glands.

**Eglantine.** (F. *églantine*, or *aiglantine*, from Low L. *aculentus*, prickly; from L. *aculeus*, a sting.) The sweet briar, *Rosa rubiginosa*.

**Egobronchophony.** (Aīē, a goat; βρογχος, the windpipe; φωνή, a voice.) A synonym of *Ægophony*.

**Egoism.** (L. *ego*, I. G. *Eigenmütz*, *Selbstsucht*.) The totality of the tendencies or instincts which direct the acts of the individual to be performed with a view to his own advantage or pleasure.

**Egony.** Same as *Ægony*.

**Egophony.** Same as *Ægophony*.

**Egranulose.** (L. *e*, neg.; *granula*, a small granule.) Having no granules.

**Egregorisis.** (Ἐγρηγορσις, wakefulness.) Morbid wakefulness.

**Egressus.** (L. *egressus*, from *egredior*, to go out.) An outlet.

**E. ventriculi.** (L. *ventriculus*, the stomach.) A term for the pylorus.

**Egritude.** (L. *agritudo*.) Disease.

**Egu'sé oil.** An oil used for food in Central Africa, supposed to be obtained from some of the species of *Cucurbita*.

**Egyptian.** Relating to Egypt.

**E. bean.** The *Nymphaea nelumbo*.

**E. bean, black.** The *Lablab vulgaris*.

**E. chlorosis.** (Χλωρός, greenish-yellow.) The chlorotic, anæmic condition of the subjects of *Anchylostomum duodenale*.

**E. corn.** The seed of *Holcus sorghum*.

**E. lotus.** See *Absus*.

**E. medicine.** The deciphering of hieroglyphics has allowed of the exposition of certain medical papyri, by which some positive, but limited, information has been gained. This medicine, long before that of the Greeks, had numerous attachments to the divine powers; books and prescriptions were said to proceed from celestial personages. Incantations and magic were used. Anatomy was not known. The formulæ were generally very complicated; many contained more than ten substances borrowed from the different kingdoms of nature; plants, herbs, seeds, raw and cooked foods, blood of animals, asses' hoofs, vegetable and animal oils, urine, chips of cedar, salt, and soda. We need information in order to appreciate the degree of practical skill which the Egyptian physicians had acquired in curing the sick and the wounded; but it was in any case a purely empirical skill, without either theory or science. (Littre and Robin.)

**E. musk.** The *Hibiscus abelmoschus*.

**E. myrobalsans.** The fruit of *Balanites aegyptiaca*.

**E. ophthalmia.** A synonym of *Ophthalmia, purulent*, from its frequency in Egypt.

**E. opium.** See *Opium, Egyptian*.

**E. pes'sary.** See *Ægyptius pessus*.

**E. soap root.** The *Gypsophila struthium*.

**E. ulcers.** See *Ægyptia ulcera*.

**Ehrenberg.** A German naturalist, b. 1795, d. 1876.

**E.'s classifica'tion of animals.** *Myeloneuria*, including Mammalia, Aves, Amphibia, and Pisces; and *Ganglioneura*, including Articulata, Mollusca, Tubulata, and Racemifera. Man stands in a class apart.

**Ehrenbreitstein.** Germany, on the Rhine, opposite Coblenz. An earthy saline water is found here.

**Ehretia.** A Genus of the Nat. Order *Boraginaceæ*.

**E. buxifolia.** Roxb. (L. *buxus*, the box tree; *folium*, a leaf.) Hab. India. Root used as an alterative in secondary syphilis, and in cachectic conditions. It is also used as an antidote to vegetable poisons.

**Ehretia'ceæ.** A Nat. Order of epipetalous corollidoral Exogens of the Alliance *Echiales*, having regular, symmetrical flowers, five stamens, naked stigma, four coadherent nuts, and circinnate inflorescence.

**Ehretiads.** The plants of the Nat. Order *Ehretiaceæ*.

**Ehrlosen.** Switzerland, Canton Zürich, near Rapperswyl, 2100 feet above sea-level. A cold sulphur spring.

**Eichhorn.** A German anatomist.

**E.'s fibre.** The epidemic lining of the sudoriparous glands when it is withdrawn as a fine fibre on separating the epidermis from the corium in macerated skin.

**Eichwald.** Austria, near Teplitz, 1300 feet above sea-level. A water-cure resort, in a beautiful neighbourhood; pulmonary affections are treated here.

**Eight.** (Sax. *eahta*. G. *acht*; L. *octo*; Gr. *ὀκτώ*; I. *otto*; S. *ocho*; Old F. *oit*; F. *huit*.) One of the cardinal numbers.

**E.-rank'd.** A variety of phyllotaxis in alternate leaves in which it requires eight leaves to complete the spiral circle of the stem, so that the first leaf is directly underneath the ninth; as in the holly.

**Eighth.** (*Eight*.) The one in an order corresponding to eight.

**E. cranial nerve.** The auditory nerve.

**Eilamides.** (Εἰλῆω, to roll up.) Old term for the covering and enclosing the brain, as the dura mater. (Goræus.)

**Eilema.** (Εἰλῆω.) Old term (Gr. εἰλημα), used by Hippocrates, *de Flatib.* xiv, 1, for a painful convulsion of the intestines, or tormina, caused by flatulence.

Also, applied to a fixed pain in some part of the intestines, as if a nail were driven in, caused by flatus there confined within their tunics, according to Lindens, *Sel. M. ex. iv*, 14.

**Eileon.** Old name for the *Ileum*.

**Eileos.** (Εἰλῆός; from εἰλῆω, to roll up.) Old name for *Ileus*.

**Eiloides.** (Εἰλῆός, from εἰλῆω, to roll up; εἶδος, likeness.) A hypertrophic disease of the skin in which it becomes rolled on itself or folded.

**Eilsen.** Germany, in Lippe-Schaumburg, in a pleasant mild valley, 300 feet above sea-level. A cold sulphur spring; inhalations and mud baths are also employed. Used in rheumatic and gouty thickening and stiffenings of joints; and the inhalations in chronic laryngeal catarrh.

**Eim bech.** Prussia. An indifferent water.

**Ein'öd.** Austria, in Carinthia. A chalybeate water.

**Eisanthema.** (Eis, in; ἀνθίω, to blossom. F. *eisanthema*.) Term for an internal exanthema; an eruption or efflorescence on a mucous membrane.

**Eis'bolë.** (Eis, in; βάλλω, to cast.) Old term for an enema or injection.

Also (Gr. ἑσβολή), formerly used by Galen, *de Temp. Morb.* c. 6, to express the access of a disease or of a particular paroxysm.

**Eisenbach.** Hungary. A thermal water, of the temp. 40° C. (104° F.) The mineral constituents are small, but it contains much free carbonic acid.

**Eisenberg.** Russia, near Pätigorsk. In the neighbourhood rise thirteen chalybeate springs, of temp. varying from 14° C. (57-2° F.) to 42° C. (107-6° F.)

**Eisodic.** (Eis; ὁδός, a way.) Marshall Hall's term for those nerves in which the course of the nerve force is from without to within, from circumference to centre.

**Eis'ol.** (G. Eis, ice; Öl, oil.) Old term for anhydrous sulphuric acid.

**Eispnoë.** (Εἰσπνέω, to inspire.) Old term for inspiration, a part of the process of respiration.

**Ejaculant.** (L. *ejaculator*, to cast out. G. *ausspritzend*.) Casting out; ejaculating.

**Ejacula'tio.** (L. *ejaculator*. G. *Heraus-spritzen*.) Casting out; ejaculation.

**E. sem'inis.** (L. *semen*, the seed.) Expulsion of the semen.

**E. sem'inis impedi'ta.** (L. *impeditus*, hindered.) Difficulty in the expulsion of the semen.

**Ejacula'tion.** (L. *ejaculator*. F. *éjaculation*; I. *ejaculazione*; G. *Ausspritzung*, *Aufnahme des Samens*.) The act of shooting out; the ejection of the semen. The expulsion or emission of the semen in the act of coition or otherwise. The first stage is effected by the strong muscular peristalsis of the vesiculæ seminales and the vasa deferentia, and, when the semen has entered the urethra, the emission is produced by the rhythmical contraction of the accelerator urinæ muscle. These contractions are accomplished under the influence of the ejaculation centre in the lumbar spinal cord.

**E. cen'tre.** See *Centre*, *ejaculation*.

**Ejacula'tor.** (L. *ejaculator*, to squirt out. F. *éjaculateur*; G. *Herauswerfer*, *Ausspritzer*.) A squirter out.

**E. sem'inis.** (L. *semen*, seed.) Term for the *Accelerator urinæ*.

**E. uri'næ.** The *Accelerator urinæ*.

**Ejacula'torium.** (L. *ejaculator*. G. *Spritze*.) A syringe; a squirt.

**Ejaculatory.** (L. *ejaculator*. F. *éjaculateur*; I. *ausspritzend*.) Having power to cast out.

**E. canal'.** Same as *Ductus ejaculatorius communis*.

**E. duct.** See *Ductus ejaculatorius communis*.

**Ejectio.** Same as *Ejection*.

**E. fæ'cum.** (L. *feces*, excrement.) The act of expelling the feces.

**Ejection.** (L. *ejectus*, part. of *ejicio*, to thrust out. F. *éjection*; G. *Hinauswerfen*, *Ausleerung*, *Auswurf*.) The act or process of discharging anything from the body. A casting out of the excretions of the body.

**Ejulant.** (L. *ejulo*, to cry out or wail.) Wailing; crying out; shrieking.

**Ekabor.** A name given by Mendelejeff to the new element called *Scandium* by Niellson.

**Ekalumin'ium.** (Sans. *eka*, one; *aluminium*.) A name given by Mendelejeff to an element, not at the time discovered, which was needed to fill up a gap in his system of classification. The element was afterwards discovered and called *Gallium*.

**Eklithotomy.** Same as *Lithectomy*.

**Ekta'sia.** See *Ectasia*.

**Ekthyma.** See *Ecthyma*.

**El Arai'che.** Morocco. A town at the mouth of the River Kos. A winter resort for pulmonary invalids.

**El Molar.** Spain, in the Province of Madrid. A sulphuretted spring.

**Elaborate.** (L. *elaboro*, to take pains with; G. *ausarbeiten*, *bereiten*.) To produce or prepare with care; to work out fully; to prepare a higher or more complicated or refined substance from lower and coarser material.

**Elabora'tion.** (L. *elaboro*, to take pains with; from *ex*, quite; *laboro*, to work. G. *Ausarbeitung*, *Anfertigung*.) The act of carefully finishing with accurate and minute labour.

In Physiology, applied to various processes by which a crude substance becomes formed into a higher substance, or a tissue, or a structure; as the elaboration of food into chyme, of chyle into blood, of sap into fruit.

**Elab'rate.** (L. *e*, priv.; *labrum*, a lip. F. *labré*; G. *ohne Lippen*.) Having no *Labrum*.

**Elacalli.** The *Euphorbia nervifolia*, Linnaeus; used as cathartic.

**Elæ'a.** (Ελαία.) The olive tree.

**Elæagna'ceæ.** A Nat. Order of monochlamydeous Exogens of the Alliance *Amentales*, or a Family of the Order *Thymelæina*, having amentaceous, bracteate male flowers, definite perigynous stamens, a superior one-celled ovary with one ascending ovule, and a straight embryo with an inferior radicle.

**Elæag'non.** (Ελαιον, oil; ἀγνός, chaste.) A name for the *Vitex agnus castus*, or chaste tree.

**Elæag'nus.** (Ελαίανθος.) The *Myrica gale*; or, according to some, the *Salix babylonica*.

Also (G. *Oleaster*, *Ölweide*), a Genus of the Nat. Order *Elæagnaceæ*.

**E. angustifolia.** Linn. (L. *angustus*, narrow.) Hab. Europe. A vermicifuge.

**E. cor'do.** The *Myrica gale*.

**Elæen'cephol.** (Ελαιον, oil; ἐγκέφαλος, within the head. F. *éléncéphale*; G. *Eläenkephal*.) See *Eleencephol*.

**Elæ'erin.** (Ελαιον; ἔπιον, wool.) A fatty substance, analogous to oleine, found in the greasy matter of sheep's wool.

**Elæ'is.** See *Elais*.

**Elæocar'pæ.** (Ελαιον, oil; καρπός, fruit.) A Tribe of the Nat. Order *Tiliaceæ*, having divided petals, and anthers opening at the apex.

**Elæocar'pus.** (Ελαιον, oil; καρπός, fruit.) A Genus of the Nat. Order *Tiliaceæ*.

**E. copallif'erus.** Retz. (*Copal*; L. *fero*, to bear.) Said to be a source of copal. The *Vateria indica*.

**E. integrif'olius.** Lamb. (L. *integer*, entire; *folium*, a leaf.) Hab. India. Fruit esculent.

# ELÆOCERATE—ELAPHIS.

**E. oblongus**, Smith. (*L. oblongus*, oblong.) Hab. India. Fruit esculent.

**Elæocerate**. (Ελαιον, oil; *L. cera*, wax.) Same as *Cerate*.

**Elæochrysum**. An erroneous spelling of *Heliochrysum*.

**Elæococca**. (Ελαιον, oil; κόκκος, a kernel.) A Genus of the Nat. Order *Euphorbiaceæ*.

**E. cordata**. (*L. cordatus*, heart-shaped.) The *E. montana*.

**E. montana**, Endl. (*L. montanus*, belonging to a mountain.) Hab. India, Japan. Nuts yield an oil.

**E. vernicia**. Hab. China. Nuts yield an oil.

**E. verrucosa**, Juss. (*L. verrucosus*, warty.) The *E. montana*.

**Elæodendron**. (*Elæodendron*.) A Tribe of the Nat. Order *Celastraceæ*, with drupaceous fruit.

**Elæodendron**. (Ελαιον, oil; δένδρον, a tree.) A Genus of the Nat. Order *Celastraceæ*.

**E. argan**. The *Rhamnus siculus*.

**E. kubu**. Hab. Cape of Good Hope. Fruit esculent.

**E. Roxburghii**, Wight and Arnot. Hab. India. A poultice of the fresh bark is used as an astringent to inflamed and other swellings; and the root is believed to be an antidote in snake bites.

**Elæodicaicid**. (Ελαϊώδης, oily.) Same as *Ricinoleic acid*.

**Elæoides**. (Ελαιον, oil; είδος, likeness. *F. elæide*; *G. ähnlichlich*.) Resembling oil.

**Elæolate**. (Ελαιον.) A medicament which has a volatile oil for its base.

**Elæolea**. (Ελαιον, oil. *F. elæole*.) Applied by Bérál to fat oil solutions, or medicated fatty oils, by mixing, dissolving, digesting, or boiling.

**Elæolica**. (Ελαιον, oil. *F. elælique*.) Applied by Bérál to combinations of fat oils generally, as in *Elæolea*, *Elæolativa*.

**Elæolotiva**. (Ελαιον, oil; *L. lavo*, to wash. *F. elælotif*.) Applied by Bérál to solutions of fat oil for rubbing, oil baths.

**Elæomargaric acid**.  $C_{17}H_{30}O_2$ . An acid found in the oil of the seeds of various species of *Elæococca*. It crystallises in rhomboidal plates.

**Elæomeli**. (Ελαιον, oil; μέλι, honey.) Old name (*Gr. ελαϊόμελο*), used by Dioscorides, i. 37, for a sweet purging oil, the produce of a Syrian tree.

**Elæometer**. (Ελαιον, oil; μέτρον, a measure. *F. élémètre*; *G. Elæometer*, *Ölmesser*.) An instrument for determining the specific weight of oils, and so their purity.

**Elæon**. (Ελαιον.) Anciently written for *Oleum*.

**Elæophanes**. (Ελαιον, oil; φαίνομαι, to appear. *F. elæphane*; *G. ähnlichlich*.) Having an oily appearance, as phosphatic urine.

**Elæopten**. (Ελαιον, oil; πτερόν, volatile. *F. elæopten*; *G. Elæopten*.) Name by Berzelius for the liquid part of a volatile oil from which the solid part or stearopten has been separated by the influence of cold.

**Elæosacchara**, G. Ph. (Ελαιον, oil; σάκχαρον, sugar.) The pharmacopœial preparations, also called oil-sugars; they are made by

tritulating one drop of the essential oil with two grammes of white sugar.

**Elæosaccharum**. (Ελαιον, oil; σάκχαρον, sugar. *F. elæosaccharum*; *G. Ölucker*.) Term (*Gr. ελαϊοσάκχαρον*), used by Schröderus, i. 2, for a mixture of oil with sugar, praised by Rollinkins, *Chym.* iv, s. 6, c. 1, for the purpose of rendering the former miscible with water, to which end the sugar must exceed thirteen times the weight of oil.

**Elæoselinum**. See *Elæoselinum*.

**Elæostearic acid**. A solid acid obtained by crystallisation from the alcoholic solution of the saponified oil from *Elæococca* nuts; it is probably a polymericide of *Elæomargaric acid*.

**Elæothesion**. (Ελαιον, olive oil; θέσις, from τίθημι, to place.) The oiling room at the baths of the Romans.

**Elæic**. Relating to *Elæin*; same as *Oleic*.

**E. acid**. A synonym of *Oleic acid*.

**Elæidate**. A salt of *Elæidic acid*.

**Elæidic**. (Ελαία, the olive.) Of, or belonging to, elaidin.

**E. acid**. (*G. Elaidinsäure*.)  $C_{18}H_{34}O_2$ . A solid isomeric or allotropic modification of oleic acid, obtained by treating it with nitric acid. A synonym of *Ricinoleic acid*.

**Elæidin**. (Ελαία, the olive.)  $C_{27}H_{50}O_6$ . A substance resembling stearin, produced by the action of hyponitric acid upon olive, almond, and some other oils.

**Elæierine**. Same as *Elæerin*.

**Elæin**. (Ελαιον, oil.) A synonym of *Olin*.

**Elæiodic**. (Ελαιον; είδος, likeness.) Like to oil.

**E. acid**. A synonym of *Ricinoleic acid*.

**Elæiodon**. (Ελαιον, oil.) A name for the fluid part of volatile oils.

**Elæiometer**. Same as *Elæometer*.

**Elæis**. (Ελαία, an olive tree.) A Genus of the Nat. Order *Palmaceæ*.

**E. butyracea**, Kunth. The *Cocos butyracea*, Linn.

**E. guineensis**, Jacquin. (*F. palmier aroira*.) Guinea or oil palm. Hab. Guinea. Much cultivated in the West Indies; it affords palm oil; it is said to furnish the best palm wine.

**E. melanococca**. (Μέλας, black; κόκκος, a kernel.) A species supplying palm oil, and used for making palm wine.

**E. occidentalis**. (*L. occidentalis*, western.) Supplies some palm oil.

**Elæizon**. (Ελαίζω, to be olive green.) Olive colour.

**Elæmbication**. Old term for a mode of analysing mineral waters, for the purpose of investigating their qualities, either by the sand bath or by heat in a glass vessel, as described by Fallopius, de *Aq. Therm.* i. 9, p. 224.

**Elæand**. (*Du. eland*, an elk.) A South African antelope, *Oreus canna*, and other species. The flesh is good eating.

**Elæanula**. Old name for a kind of very hard alum, like iron.

**Elæopten**. Same as *Elæopten*.

**Elaphine**. (Ελαφος, a stag.) Stag- or deer-like.

**Elaphis**. (Ελάφιος, deer-like.) A Genus of the Family *Colubridæ*, Suborder *Colubrifformes*, Order *Ophidia*.

**E. æsculapii**. The *Coluber æsculapii*.

# ELAPHIOBOSCU—ELASTIN.

**Elaphobos'cum.** (Έλαφος, a stag; βόσκειν, to feed.) Ancient name applied to several umbelliferous plants, because deer eat them greedily; especially applied to the *Pastinaca sativa*.

**Elaphomyces.** (Έλαφος; μύκης, a mushroom. G. *Hirschkräutl*, *Hirschbrunst*.) Deer balls. A Genus of the Suborder *Tuberaceti*, Order *Ascomycetes*.

**E. granula'tus**, Fr. (L. *granulum*, a small grain.) Deer balls. Spherical, yellowish, covered with short warts. Used, under the name *Boletus cervinus* and *Lycoperdon nuts*, as an oxytocic, galactagogue, and aphrodisiac.

**E. murica'tus.** (L. *muricatus*, pointed.) Used as *E. granulatus*.

**Elaphoscorodon.** (Έλαφος, a stag; σκόροδον, garlic.) Old name for a species of *Allium*; stag's or viper's garlic.

**Elaphrium.** (Έλαφρός, light. G. *Leichtholz*.) A Genus of the Nat. Order *Amyridaceæ*, so called from the lightness of the wood.

**E. elemif'erum**, Royle. The *Amyris elemifera*.

**E. tomento'sum**, Jacq. (Mod. L. *tomentosus*, woolly.) Yields the fragrant resin *Tucamahaca*. Also called *Bursera tomentosa*.

**Elaphus.** (Έλαφος.) The stag, *Cervus elaphus*.

**Elap'idæ.** (Elaps.) A Family of the Suborder *Proteroglypha*, Order *Ophidia*, with cylindrical bodies, pointed tail, lateral nostrils, and large fangs. Example, the cobra.

**Elaps.** A Genus of the Suborder *Proteroglypha*, Order *Ophidia*. The species are poisonous.

**Elap'sus.** (L. *elapsus*, from *elabor*, to slip.) A dislocation.

**Elaquir.** (Arab.) Old term for red vitriol. (Quincy.)

**Elasma.** (Έλασμα.) Old term for *Lamina* or a plate of metal.

Also, a former name used by Lindenus, *Sol. M.* ex. iv, § 101, for a clyster-pipe.

**Elas'mia.** (Έλασμα, a plate. F. *elasmie*.) The horny transverse plates which in the whales take the place of teeth, and hang from the lateral parts of the palate.

**Elasmobranch'iate.** (Έλασμα; βράγχια, the gills.) Belonging to the *Elasmobranchii*.

**Elasmobranch'ii.** (Έλασμα; βράγχια, the gills.) Same as *Chondropterygii*.

**Elastembryul'cus.** (Elastic; embryulcus. F. *elastembryulce*.) An elastic obstetrical forceps.

**Elastes.** Same as *Elasticity*.

**Elasthis'tus.** (Elastic; ιστός, a web.) Elastic tissue.

**Elasthyphē.** (Elastic; ὑφά, a weaving.) Elastic tissue.

**Elastic.** (Έλαστω, to urge forward, to beat out. F. *élastique*; G. *elastisch*, *federkräftig*, *spannkraftig*.) Having the property of elasticity or springiness.

**E. ban'dage.** A bandage of india-rubber or of india-rubber woven with silk or cotton, used for application to a limb or other part so as to exert compression.

**E. cartilage.** See *Cartilage, elastic*.

**E. compression.** (L. *compressio*, a pressing together.) Compression by means of *Esmarch's bandage* or other elastic substance.

**E. fibres.** (G. *elastische Fasern*.) The fibres which form the greater part of elastic tissue, and which also occur in areolar and fibrous tissue. They are yellowish in colour when seen in a mass, transparent, with a distinct and angular outline, branching and reuniting so as to enclose larger or smaller meshes, and curling up when broken. In man they vary in diameter from 1-2400th in the vocal cords to 1-4000th of an inch, or much more, in the ligamentum subflavum. They are unacted by acetic acid and alkaline solutions, and stain readily with magenta. They are composed chiefly of elastin. Some have described striations in them, some have seen a sheath to each, and some believe them to be tubular.

**E. fluid.** A term for a gas.

**E. force.** A term for the property otherwise called *Tension*.

**E. gum.** (F. *caoutchouc*; G. *Eberharz*.) A name for *Caoutchouc* or Indian rubber.

**E. lamina of cor'nea.** See under *Cornea*.

**E. lig'ature.** See *Ligature, elastic*.

**E. membrane.** A membrane or coat formed of elastic tissue.

**E. ring.** The ring which surrounds the sporangium of a fern; it bursts and springs back when ripe and scatters the spores.

**E. stocking.** See *Stocking, elastic*.

**E. tis'sue.** The variety of connective tissue of those structures which are chiefly composed of *E. fibres*, such as the ligamentum nucha, the ligamenta subflava, the stylohyoid, thyrohyoid, and cricothyroid ligaments, and the vocal cords. Elastic tissue is found beneath the tracheal and bronchial mucous membranes, and in the coats of the arteries. It is composed of a ground substance or matrix, a few indistinct bundles of white fibres separating the larger and more definite bundles of elastic fibres, and sometimes penetrating them. It is very strong and elastic. White fibrous tissue is found mixed in small quantities in the elastic tissue of all structures, and flattened connective-tissue cells are also found in the ground substance lying between the fibres. It contains a few blood-vessels and some lymphatics, both running, chiefly longitudinally, between the bundles of fibres, but not penetrating them.

**Elasticin.** Same as *Elastin*.

**Elasticity.** (Έλαστω, to urge forward, to beat out. F. *élasticité*; G. *Elasticität*, *Schnellkraft*, *Spannkraft*.) The property by which bodies return forcibly and of themselves to the same dimensions or form they possessed before compression or displacement by any external force, as in pulling, bending, and twisting. The elasticity of all solids has its limit.

Also, applied to the spirits when in a buoyant state; also to the perfectly healthful condition of living parts.

**E., force of.** The force by which the molecules of a body tend to reassume their original position after being displaced by some external mechanical influence.

**E., mod'ulus of.** (L. *modulus*, a small measure.) The measure of the elasticity of a body represented by the weight in units, as kilogrammes, which would be required to lengthen a unit bar, as one having a sectional area of a square millimetre, of the substance to double its length, assuming it to be perfectly elastic.

**Elastin.** The substance composing the

elastic fibres of connective tissue; it is obtained by boiling connective or elastic tissue in ether, then in alcohol, and then for a long time in water, so as to remove fatty matter and collagen; afterwards the insoluble substance left is boiled in acetic acid and caustic soda alternately. It may be dissolved by digesting with pepsin and trypsin, and it yields leucine with boiling strong sulphuric acid. According to Mulder, it consists of, about, carbon 55.47, hydrogen 7.54, nitrogen 16.09, and oxygen 20.9, in 100 parts. A similar substance has been obtained by Helger from the shell of the egg of a snake.

**Elastobrephulcus.** (*Elasticus*; *brepheulcus*.) Same as *Elastembryulcus*.

**Elastoclinē.** (*Elastic*; *κλίνη*, a bed. *F. elastocline*.) An elastic bed.

**Elasticee.** Cardamom.

**Elatē.** (*Ελάτη*, the pine.) The *Pinus pecea*.

**E. sylvestris**, Linn. (*L. sylvestris*, belonging to a wood.) Wild date tree. Hab. India. The *Phoenix sylvestris*.

**E. theleia.** (*Θήλεια*, fem. of *θῆλυς*, female.) The *Pinus rubra*.

**Elater.** (*Ελάτης*, a driver. *F. elatore*; *G. Springfied*.) Name by De Candolle for the elastic, spiral, membranous threads which, in some *Hepaticae*, are attached to the sporangium, and serve to disperse the contained spores when the sporangium arrives at maturity and bursts; they are elongated cells.

Similar organs form part of the spore of the *Equisetacea*.

Also, a synonym of *Elasticity*.

**Elastic acid.** An inert product, according to Buckheim, of the action of potassa on a hot alcoholic solution of elaterin.

**Elaterid.** An amorphous substance found in elaterium.

**Elateril po'ma.** (*Elaterium*; *L. poema*, an apple.) The fruit of *Ecballium officinale*.

**Elaterin.**  $C_{20}H_{28}O_5$ . The principal constituent of *Elaterium*, occurring in colourless, shining, hexagonal scales or prisms, having an acrid bitter taste, and soluble in alcohol and chloroform. Nitric acid produces a pinkish, and, when heated, a red colour; sulphuric acid makes it deep red, changing to brown. It is the active drastic principle. Dose, .003 to .008 gramme.

**Elaterinum.** Same as *Elaterin*.

**Elaterium**, B. Ph. (*Ελατήριον*, an opening medicine; from *ελαύνω*, to drive. *F. elaterium*; *G. Elaterium*, *Springgurkensafft*.) A sediment from the juice of the fruit of the squirting cucumber, *Ecballium officinarum*. The nearly ripe fruit is cut lengthwise and gently pressed; the juice thus obtained is strained through a sieve and set aside to deposit; the sediment is poured on to a linen filter and dried on a porous tile. Elaterium is in light, friable, flat, or slightly incurved fragments, having a granular fracture, a slight tea-like odour, and an acrid bitter taste. Its principal constituent is *Elaterin*. Elaterium is a drastic purgative, producing watery stools, griping, and sometimes vomiting. It does not act as a purgative to dogs and rabbits, but produces tetanic symptoms. It is used as a purgative in congestions and dropsy to produce an evacuation of watery fluid. Dose, 1-16th of a grain.

Also, a Genus of the Nat. Order *Cucurbitaceae*.

Also, a term by Richard for the fruit of the *Euphorbiaceae* which bursts with violence when ripe.

**E. album.** (*L. albus*, white.) The substance described as *Elaterium*, B. Ph.

**E. cordifolium**, Mönch. (*L. cor*, the heart; *folium*, a leaf.) The *Ecballium officinarum*, Richard.

**E., English.** The substance described as *Elaterium*, B. Ph.

**E., French.** Elaterium prepared by evaporation of the juice of the elaterium fruit; it is much less active than *E.*, B. Ph.

**E. fruit.** See *Ecballii fructus*.

**E. nigrum.** (*L. niger*, black.) The juice of the fruit of *Ecballium officinale* evaporated to the consistence of an extract.

**Elaterometer.** (*Ελάτηρ*, a driver; *μέτρον*, a measure. *F. élastromètre*.) An instrument for measuring the elasticity of atmospheric air, or gas, or vapour when condensed or rarified in a machine.

**Elates.** (*Ελάτης*, a driver.) A term for *Elasticity*.

**Elatheria.** See *Eleutheria*.

**Elatine.** A clear, yellow-brown, oily liquid obtained from tar. It has a very offensive odour.

**Elatio.** Same as *Alusia elatio*.

**Elatin.** A name given by Paris to an alcoholic extract of squirting cucumber fruit, *Ecballium officinarum*, which is probably a mixture of elaterin and chlorophyll.

**Elatinaeae.** The water peppers. A Nat. Order of thalamifloral Exogens of the Alliance *Eutales*, having apetalous, imperfect, axillary flowers; capsular, 3- to 5-celled, many-seeded fruit, and exalbuminous seeds.

**Elatinē.** See *Antirrhinum elatine*.

**E. cymbalaria.** The *Linaria cymbalaria*.

**E. hasta'ta.** (*L. hasta*, a spear.) The *Antirrhinum elatine*.

**Elatobranthii.** (*Ελάτη*, an oar; *βράχια*, the gills.) Applied by Menke to a Class of the *Mollusca* answering to the *Lamellibranchii* of Blainville, containing the *Acéphala* with lamellated branchia.

**Elayl.** A synonym of *Olefiant gas*, or *Ethy-lene*.

**Elaylē.** Same as *Elayl*.

**Elaylum.** Same as *Elayl*.

**E. chloratum.** (*G. Elaylechlorūr*.) A term for *Ethylene bichloride*.

**Elbow.** (*Sax. alboga*; from *ell*, the forearm; *boga*, a bow. *Gr. κύβιτος, άγκών*; *L. cubitus*; *I. gomito*; *S. codo*; *G. Ellenbogen*.) The outer part of the joint between the fore and the upper arm.

Also, an angle or bend like to the elbow.

**E., bend of.** (*F. pli du coude*.) The flexure in front of the elbow.

**E., dislocations of.** Displacements of the radius, or of the ulna, or of both bones, either in front, or behind, or on one side of the humerus at the elbow-joint, complete or incomplete, and simple or compound, or complicated with fracture of one or both condyles of the humerus, of the olecranon, of the coronoid process, or of the head of the radius.

**E. joint.** (*F. articulation du coude*; *G. Ellenbogengelenk*.) The hinge-joint formed by the connection of the lower end of the humerus with the upper ends of the radius and ulna by means of ligaments; it admits of flexion and extension only.

**E. joint, nerves of.** These are fibres

from the perforans brachii, median and radial nerves, which enter it on the volar side; fibres from the ulnar, and from the muscular branch of the radial, supplying the external head of the triceps; sometimes also a fibre from the ramus collateralis ulnaris nervi radialis; the radio-ulnar joint receives a few fibres from the nervus interosseus antibrachii volaris.

**E., ligament of, anterior.** A thin expanded ligament attached above to the upper surface of the coronoid fossa of the humerus, and below to the coronoid process of the ulna and the annular ligament of the radius.

**E., ligament of, external lateral.** (F. *ligament lateral externe*; G. *äusseres Hüftband*.) A band of fibres attached by its upper end to a depression below the external condyle of the humerus, and by its lower to the annular ligament of the radius and by a few filaments to the ulna.

**E., ligament of, internal lateral.** (F. *ligament lateral interne*; G. *inneres Hüftband*.) A fan-shaped ligament, with its anterior and posterior borders much thickened, attached above to the internal condyle of the humerus, and below to the coronoid process, to the inner border of the olecranon, and to the transverse band stretching across the notch between the two.

**E., ligament of, posterior.** A loose, thin ligament attached above to the upper border of the olecranon fossa of the humerus, and below to the edges of the olecranon.

**E., lymphatic glands of.** (G. *Ellenbogendrüsens*.) These are arranged in two sets, a superficial and a deep. The superficial (G. *oberflächliche Ellenbogendrüsens*), one or two in number, are placed about 4 cm. above the inner condyle of the humerus, near the vena basilica. The deep (G. *tiefe Ellenbogendrüsens*) consist of two or three small glands situated in the bend of the elbow, near the communicating trunk, between the superficial and deep veins.

**E., miner's.** See *Miner's elbow*.

**E., synovial membrane of.** The lining membrane of the elbow-joint. It covers the joint ends of the bones, the olecranon and coronoid processes of the humerus and the head of the radius, and lines the ligaments of the elbow-joint and the annular ligament of the radius.

**Elcaja.** The *Trichilia emetica*.

**Elcicorn.** Same as *Aleicornis*.

**Elcidrion.** See *Helehydrion*.

**Elcosis.** (Ελκος, ulceration.) Old term for a disease in which large chronic ulcers appear, carious, fetid, and attended with fever. (Quincy.)

Also, a term applied to a specially severe and deep ulceration of the cornea.

Also, ulceration in general.

**Elcuster.** (Ελκυστήρ, an instrument for drawing.) A pair of midwifery forceps.

**Elder.** (Altered from Mid. E. *eller*; from Sax. *ellen*; perhaps connected with *alder*. F. *sureau*; I. *sambuco*; S. *sauco*; G. *Hollunder*.) The *Sambucus nigra*.

**E., American.** The *Sambucus canadensis*.

**E.-berry.** The fruit of the *Sambucus nigra*, and also the tree itself.

**E., common.** The *Sambucus nigra*; and, in America, the *S. canadensis*.

**E., dwarf.** (F. *l'hyble*; G. *Atlich, Niederholder*.) The *Sambucus ebulus* or Danewort. Also, the *Aralia hispida*.

**E. flower water.** The *Aqua sambuci*.

**E. flowers.** (F. *fleurs de sureau*; G. *Hollunderblüthen*.) The *Sambucus flores*, B. Ph., and the *Sambucus*, U.S. Ph.

**E., mountain.** The *Sambucus racemosa*.

**E. ointment.** The *Unguentum sambuci*.

**E., pepper.** The *Piper amalago*.

**E., prickly.** The *Aralia spinosa*.

**E., red-berried.** The *Sambucus pubens*.

**E. rob.** See *Roob sambuci*.

**E. tree.** The *Sambucus nigra*.

**E., water.** The *Fiburnum opulus*.

**E., white-berried.** The *Sambucus nigra*, var. *viridescens*.

**E., wild.** The *Aralia hispida*.

**E.-wort.** The *Sambucus ebulus*.

**Elcampane.** (F. *enulcampane*, from L. *enula*; and Low L. *campana*, a bell; or *Campania*, its place of growth. F. *aunee, aulnée*; I. *enula campana*; S. *enula campana*; G. *Alant*.) The *Inda helenium*. See *Inda*, U.S. Ph.

**Elcampin.** Same as *Tautin*.

**Elect.** An abbreviation, used in prescriptions, of *Electuarium*, an electuary.

**Electarium.** Same as *Electuarium*.

**Electuary.** Same as *Electuary*.

**Elective.** (F. *electif*; from Low L. *electivus*; from *eligo*, to pick out. G. *wahlend*.) Chosen by selection.

**E. affinity.** See *Affinity, elective*.

**E. attraction.** See *Attraction, elective*.

**Electivity.** (F. *electif*; from L. *eligo*.) The property by which some substances attach themselves to certain anatomical tissues and not to others; as when carmine stains growing tissue and avoids formed substance. The principle is at the bottom of the modern mode of microscopical investigation by the staining process. The act or property of selection.

**Electropeter.** (Electricity; Gr. *τρέπω*, to turn.) A machine for changing the direction of an electric current.

**Electric.** (F. *électrique*; I. *elettrico*; S. *electrico*; G. *elektrisch*.) Relating to, exhibiting, derived from, producing, or conveying *Electricity*. For subheadings see also under *Electrical*.

Also, a body capable of exhibiting, and being a bad conductor of, electricity.

**E. accumulator.** (L. *accumulo*, to heap together.) Same as *E. condenser*.

**E. anæsthesia.** (Ανασθησία, want of feeling.) The condition of diminished cutaneous or other sensibility produced by the passage of an electric current through a part of the body; no real anaesthesia is produced, but a gradual diminution of electric sensibility is produced.

See also *Voltaic narcotism*.

**E. atmosphere.** (Ατμός, a vapour; σφαῖρα, a globe.) The sphere or space outside themselves within which electrified bodies manifest their special properties.

**E. attraction.** See *Electrical attraction*.

**E. aura.** (Αῦρα, a gentle air.) See *Aura electrica*.

**E. axis.** (L. *axis*, an axle-tree.) The line between the two electric poles of a crystal in which pyroelectricity has been developed.

**E. bath.** See *Bath, electric*.

**E. battery.** A series of Leyden jars, the inner coatings of each of which are connected with each other by metallic rods, and the outer coatings by the tinfoil lining of the box in which they stand.

## ELECTRIC.

**E. brush.** A metallic brush charged with electricity. Employed as a counter-irritant in neuralgia.

**E. button.** An electrode with an expanded extremity and an insulated stem for the therapeutical application of electricity to the internal organs or parts of the body.

**E. calamine.** A name given to silicate of zinc.

**E. cautery.** Same as *Galvano-cautery*.

**E. chain.** See *Pulvermacher's chain*.

**E. charge.** The quantity of electricity which is accumulated on or in an insulated substance over and above that which it contained when it was connected with the earth.

**E. charge, residual.** *L. residuus*, remaining.) The charge which is found remaining in a Leyden jar after it has been once discharged, and which is caused by the return to the surface of the electricity which had entered the substance of the coating of the jar.

**E. chorea.** See *Chorea, electric*.

**E. circuit.** Same as *Galvanic circuit*.

**E. concussion.** (*L. concussio*, a violent shaking.) The shock given to the organism by an electric discharge.

**E. condenser.** See *Condenser, electric*.

**E. conduction.** (*L. conduco*, to draw together.) The act or condition of the transmitting of electricity through the substance, or along the superficies, of a body.

**E. conductivity.** (*L. conduco*, to draw together.) The capacity for the transmission of an electric current; if the electric conductivity, at 0° C., of silver be taken as 100, copper will be 99.95, gold 77.96, zinc 29.02, tin 12.36, lead 8.32, arsenic 4.76, antimony 4.62, and bismuth 1.245. The capacity for the conduction of the electric current decreases with increase of temperature.

**E. contractility.** (*L. contraho*, to draw together.) The capacity of a muscle to contract on the application of an electric current.

**E. current.** (*L. currens*, part. of *curro*, to run.) The flow of electricity through a conducting body from a high potential to a low one, or from the positive to the negative pole, such as occurs in a galvanic battery.

**E. currents, action on each other.** Parallel currents in the same direction attract each other; parallel currents in opposite directions repel each other; currents meeting at a point attract each other if they are both proceeding to it, repel each other if one is running from it and the other to it.

**E. density.** (*L. densitas*, thickness.) A term denoting the quantity of electricity on a given area of the surface of a conductor at one moment; this varies with the shape of the conductor. If it be a sphere the density or quantity of electricity is the same for all points of the surface; if it be an ellipsoid it is greatest at the ends of the long axis, least at the ends of the short axis; and if it be a flat circular disc it is almost nothing on the surfaces, great at the edges.

**E. discharge.** A term employed to denote the sudden or continuous recombination of the two forms of electricity, positive and negative, when two bodies, each charged with one of the different electricities, are approached to each other.

Also, applied to the act of producing this recombination.

**E. distillation.** (*L. distillo*, to trickle down.) The passage of a liquid, positively electrified, over the elbow of a bent tube from one limb to a liquid in the other limb negatively electrified.

**E. distribution.** (*L. distributio*, a division.) The mode in which the electricity is disposed, or the varying density of electricity, on a charged conductor. See under *E. density*.

**E. eel.** The *Gymnotus electricus*.

**E. endosmosis.** (*Ἐνδόν*, within; *σμός*, a thrusting in.) Same as *E. osmosis*.

**E. excitability.** The same as *Electric irritability*.

**E. excitation.** (*L. excito*, to put in rapid motion.) The development of electricity in glass or other substance by friction.

**E. expansion.** (*L. expando*, to spread out.) The increased capacity of a Leyden jar or such like apparatus when charged with electricity; it has been explained on the supposition that the attraction between the two electricities of the outer and inner coatings causes a rearrangement of the molecules of the glass, whereby it expands laterally at the cost of a diminution in thickness.

**E. fishes.** A term applied to certain fishes which possess electrical organs; such are *Torpedo*, *Silurus*, *Gymnotus*.

The principal electric fishes are, amongst the Selachians, the *Torpedo* (*G. Zitterrochen*, *Kramp-frochen*; 1. *torpedine*), of which there are several species, the *Narcine* of Brazil, the *Astrape* and *Ternera* of the Indian Ocean, the *Discopyge* of Peru, and *Hypnos* of the Australian seas. The *Gymnotus* (*I. ginnoto*; *G. Zitteraal*), and *Malapterurus* (*G. Zitterwelsen*) of the Nile and Senegal, amongst the apodous fishes. There are two other fishes which inhabit the Nile, the *Mormyrus* and *Gymnarchus*, which possess organs the structure of which is similar to those of the true electrical fishes, but with less certainly-determined functions. In the *Torpedo* the apparatus is situated on either side of the head external to the gills, and is composed of six-sided prisms, which extend from the skin of the dorsal to that of the ventral surface. The prisms, 470 on each side, are separated by numerous (2000 or more) horizontal septa into a series of cells, which contain the electric plates in which the nerves entering on their ventral surface terminate in the form of a fine plexus; on the other side is a plexus of capillaries. The dorsal surface of the animal is electropositive, the ventral electronegative. The nerve-trunks supplying the organ are four, of which the most anterior is a branch of the trigeminus; and the three others spring from the vagus. The organs themselves are developed from the external investing muscles of the five or six visceral arches of the embryonic skeleton. In the *Gymnotus* the electric organ occupies the lateral and inferior regions of the tail. The columns resemble those of the *Torpedo*, except that they are arranged horizontally. The nerves are branches of the anterior roots of the spinal nerves, and are stated to be as many as two hundred. In the *Malapterurus*, one of the *Siluridae*, the electric organ is distributed over the surface of the whole body, but is most developed over the belly. It weighs sometimes as much as three hundred grammes, or half the weight of the whole body. It is divided into two symmetrical halves by a fibrous septum. Each organ receives only one electric nerve, which springs from a giant ganglion cell

in the spinal cord on each side between the second and third spinal nerves, resembles a motor root, and consists of a single but colossal primitive fibre with a very thick sheath. This divides into numerous fibrilla, that are distributed to the organ. In *Mormyrus longipennis* the supposed electric organs are situated in the tail. Babuchin considers that they are composed of electric elements, each of which is divisible into two. One of them originates in muscle protoplasm, and may be termed the metasarcoblastic element, the other is nervous.

**E. fluid.** A term applied by Franklin to a subtle, impoederable fluid which he supposed to exist in all matter, and which acting by repulsion of its own particles, is the cause of all electrical phenomena. When a body contains its proper natural quantity it is in a state of electric equilibrium; this state may be disturbed by friction, which in some bodies produces an addition to the natural amount of electricity, when they become positively electrified; and in other bodies produces a diminution, when they are said to be negatively electrified.

Another theory, suggested by Dufay, and elaborated by Symmer, assumes the existence of two electric fluids, the positive or vitreous, and the negative or resinous; when combined in equal proportions in a body it is neutral or in a state of equilibrium; when by friction or other means the proportion is altered, the body becomes positively or negatively electrified, according as there is abstraction or repulsion of the negative or the positive fluid.

**E. force.** The force with which electricity tends to move matter.

**E. frictions.** (L. *frico*, to rub.) A mode of employing electricity for medical purposes, by slowly moving the bulbous-ended conductor of an electrical machine a little distance in front of the affected part, which is covered with flannel; the proceeding causes tingling, gentle heat, and slight redness.

**E. glow.** The noiseless discharge of electricity of great density into the air from a conductor when no other conductor is near; it appears in the dark as a pale blue luminous cloud.

**E. ictus.** (L. *ictus*, a blow.) The electric shock.

**E. illumination.** (L. *illumino*, to light up.) The illumination of the cavities of the body by means of an electric light, for the purposes of diagnosis.

**E. image.** An electrified point, or system of points, on one side of a surface, which would produce on the other side of that surface the same electrical action which the actual electrification of that surface really does produce. (Clerk Maxwell.)

**E. induction.** See *Induction*.

**E. insulation.** (L. *insula*, an island.) The placing of a body in such a position that it is separated from direct or indirect contact with a conducting body by means of a non-conducting substance.

**E. intensity.** The quantity of electricity which in a given unit of time flows through a given point of a circuit, and expressed by its power of overcoming resistance.

**E. irritability.** (L. *irrito*, to excite.) The capacity of a muscle or of a nerve to respond, each according to its kind, to the stimulus of electricity.

**E. jar.** The *Leyden jar*.

**E. light.** The bright light produced when the two poles of a voltaic battery are brought into contact or into a very close approach; the light consists in great measure of minute, intensely luminous particles of the terminals of the poles. In the light as used for illuminating purposes the luminosity is chiefly caused by the carbon points themselves, or by the incandescence of a fine infusible filament.

**E. lobe.** A nervous lobule of the medulla oblongata in the electric fish *Torpedo*, from whence many of the nerves to the electric organs arise.

**E. matter.** Same as *E. fluid*.

**E. mor'a.** See *Mor'a, electric*.

**E. organs.** See under *E. fishes*.

**E. organs, nerves of.** See under *E. fishes*.

**E. osmo'sis.** (Ὠσμός, impulsion.) A term applied to the transfer of a liquid from one side to the other of a porous diaphragm when a current of electricity is caused to pass through it. The process is a mechanical one, it takes place in the direction of the electric current, and is most notable in a badly conducting liquid.

**E. pile.** See *Pile*.

**E. polarity.** (Low L. *polaris*, from L. *polus*, the end of an axis.) The condition of a body in which opposite ends or surfaces have different electric properties; becoming electro-positive and electronegative.

**E. poles.** The points, two in number, of the greatest intensity of free electricity in a crystal in which pyro-electricity has been developed.

**E. poten'tial.** See *Electrical potential*.

**E. poult'ice.** The application to a part of such an apparatus as a Pulvermacher's chain in a wet substance.

**E. probe.** (L. *probo*, to try.) A metal probe consisting of a prolongation of the two conducting wires of a galvanic battery insulated throughout their extent, except at their farther ends. It is used for the detection of a bullet or other metallic foreign body in the tissues, when on being reached by the probe completes the circuit and indicates the fact by the deflection of an electroscopic needle, or by the ringing of a bell.

**E. quantity.** The amount of electricity on a given surface at a given time.

**E. ray.** A term applied to the fishes of the Genus *Torpedo*.

**E. reaction.** The response of muscle or nerve, according to their several functions, to the stimulus of the electric current.

**E. repulsion.** See *Electrical repulsion*.

**E. residue.** (L. *residuum*, remaining.) The feeble discharge, which may be also two or three times repeated, which may be obtained from a Leyden jar or similar apparatus which has already been once discharged, if a little time is allowed to elapse, so as to permit the deeper electricity to mount to the surface.

**E. resis'tance.** See *Electrical resistance*.

**E. sensibility.** The sensation of stinging or burning produced by the application of electricity to the skin; and the sensation of contraction when electricity is applied to a muscle; these sensations may be altered by disease, in the way of increase, diminution, or abolition.

**E. shad.** The *Malapterurus electricus*.

**E. shock.** The effect on the animal body

## ELECTRICAL—ELECTRICITY.

of a sudden electric discharge from a Leyden jar or an induction coil, which consists in more or less pain and more or less muscular contraction. It is caused by the high electro-motor force of the current.

**E. spark.** (F. *étincelle électrique*.) The luminous discharge from the conductor or from an insulated body placed in the condition of a conductor, of an electrical machine which occurs when a more or less pointed surface connected with the earth, as that of a finger, is presented to it.

**E. state.** The condition of a body charged with electricity.

**E. stool.** (F. *tabouret électrique*.) A stool with glass legs, or otherwise insulated, on which to place the person to be charged with Franklinic electricity.

**E. ten'sion.** (L. *tendo*, to stretch.) The strain or pressure, according to Maxwell, exerted upon a dielectric in the neighbourhood of an electrified body. Tension, strictly speaking, is not a property of the current, but of the battery by which the current is generated; it is a statial property, and is exhibited by the insulated poles of the battery.

**E. thermom'eter.** See *Thermometer, electric*.

**E. thick'ness.** Same as *E. density*.

**E. tis'sue.** The structure of the *E. organs*.

**Electrical.** Containing, or conveying, or relating to, *Electricity*. For subheadings see also *Electric*.

**E. air.** See *Aura, electric*.

**E. attrac'tion.** (L. *attraho*, to draw to.) The tendency which two bodies charged with opposite electricity have to touch each other and to produce neutrality.

**E. attraction, laws of.** That the attraction between two opposite electrified bodies is in the inverse ratio to the square of the distance of their centres from each other; and that it is in the direct ratio of the quantity of the electricity with which they are charged.

**E. capac'ity.** (L. *capacitas*, spaciousness.) The quantity of electricity which a body can acquire when fully charged.

**E. conductiv'ity.** See *Electric conduc-tivity*.

**E. cur'rent of mus'cle.** See *Muscle-current, electrical*.

**E. cur'rent of nerve.** See *Nerve-current, electrical*.

**E. cur'rent of skin.** See *Skin-current, electrical*.

**E. flu'id.** See *Electric fluid*.

**E. for'mulæ.** (L. *formula*, a small pattern.) Letters or symbols used for shortness-sake in describing electrical phenomena, especially in regard to medicine. The chief are:

*A.* Anode.

*A. C. C.* Anodal closure contraction, being muscular contraction produced at the anodal rheophore on the closure of the circuit.

*A. O. C.* Anodal opening contraction, being muscular contraction produced at the anodal rheophore on the opening of the circuit.

*An.* Anode.

*C.* Cathode.

*C. C. C.* Cathodal closure contraction, being muscular contraction produced at the cathodal rheophore on the closure of the circuit.

*C. O. C.* Cathodal opening contraction, being muscular contraction produced at the cathodal rheophore on the opening of the circuit.

*KZ.* Klang, the German for sound, used in electrifying the ear.

*K.* Kathode or cathode.

*O.* Opening of the circuit.

*Tc.* Tetanic contraction.

*Z.* Zuckung, the German for contraction of muscle.

*Z'.* A higher or stronger form of contraction.

*z.* A lower or feebler form of contraction.

*+*. The anode or positive pole.

*-*. The cathode or negative pole.

*<*. Crescendo, increasing loudness.

*>*. Diminuendo, diminishing loudness.

**E. induction.** See *Induction*.

**E. mach'ine.** An apparatus for producing and collecting frictional electricity; the chief forms being the *Cylinder machine* and the *Plate machine*. A machine has been made in which electricity is generated by the friction of a jet of steam; and others which work by the continuous inductive action of an electrified body, as the *Electrophorus*.

**E. plates.** The soft cellular interlamellar structure of the electrical organs in which the nerves are distributed. See under *Electric fishes*.

**E. poten'tial.** (L. *potentia*, power.) The capacity to do work of some kind possessed by some body in virtue of its electrical connection or relationship with some other body, and that work done in opposition to electrical force.

**E. repul'sion.** (L. *repulsus*, part. of *repello*, to repel.) The tendency which two bodies charged with similar electricity have to repel or drive away each other.

**E. repulsion, laws of.** Same as *E. attraction, laws of*.

**E. resis'tance.** The opposition which a body exhibits to the passage of electricity through it; it varies with the quality of the body, it is in inverse ratio to its diameter, and increases as the length.

**Electric'itas.** See *Electricity*.

**E. anima'tis.** (L. *animal*, a breathing creature.) A term for *Galvanism*.

**E. galvan'ica.** Same as *Galvanism*.

**E. metal'lica.** (L. *metallum*, metal.) Galvanism from its mode of production.

**Electric'ity.** (L. *electricum*; from Gr. *ἤλεκτρον*, amber. F. *électricité*; I. *elettricità*; G. *Electricität*.) A term proposed by Gilbert, at the end of the 16th century, and used by him in reference to the attractions and repulsions of light bodies excited by the friction of certain substances, such as amber, sealing-wax, sulphur, and glass; and which, as far as concerns the attraction of silk to amber when rubbed, was probably first observed by Thales in B.C. 600. The force or agent causing these attractions and repulsions, and manifesting itself in many other ways, such as the development of heat and light, the production of chemical decomposition, and the stimulation of muscular contraction, is called electricity. According to some, this agent is a fluid, see *E. fluid*; according to others, it is a peculiar condition of the molecules of the electrified body or of the ether which surrounds them.

**E., ac'tive.** The condition produced by the disturbance of the natural electricity of a body; whereby its neutral condition is changed for one exhibiting the presence of negative or positive electricity.

**E., an'im'al.** Electricity as exhibited in

# ELECTRICS—ELECTRISATION.

animals, whether by special organs or in the ordinary actions of the different structures.

**E., atmospheric.** (*Ἀτμός*, vapour; *σφαῖρα*, a sphere.) The electric phenomena of the atmosphere.

**E., bound.** A term applied to a charge of electricity on the surface of a conductor which is held there by the presence of a neighbouring charge of the opposite kind. (Silvanus Thompson.)

**E., chemical.** Electricity developed by chemical action. A synonym of *Galvanism*.

**E., contactual.** (*L. contactus*, a touching.) A synonym of *Galvanism*, on the assumption that it was produced by the contact of two dissimilar metals.

**E., continuous.** The electricity developed by chemical decomposition in a galvanic battery.

**E., current.** (*L. currentes*, part. of *curro*, to run.) The form of electricity observed in the galvanic battery.

**E., disguised.** A term applied to the condition of the electricity of two oppositely electrified bodies which are not quite near enough to each other to cause a luminous discharge, but are within the range of the influence of their mutual induction, so that no indication is given by them to a pith ball electroscope.

**E., dynamical.** (*Δύναμις*, power.) A term applied to electricity in motion, as exhibited in the galvanic battery, in contradistinction to *E., statical*. It is the electricity developed by chemical action or heat.

**E., Faradic.** (*Faraday*.) The electricity developed by an induction machine; it is of high intensity, and has a powerful stimulating action on muscles and nerves; the term was proposed in honour of Faraday.

**E., Franklinic.** (*Franklin*.) A term applied by Faraday to frictional or static electricity, in honour of Franklin.

**E., free.** A term applied to the condition of the electricity on a charged conductor when there is no neighbouring charge of an opposite kind.

**E., frictional.** (*L. frictio*, a rubbing.) The electricity set free by friction, as when sealing-wax is rubbed with flannel or glass with silk. The nature of the electricity developed, positive or negative, depends on the body rubbed, and also on the stuff with which it is rubbed.

**E., galvanic.** (*Galvani*.) The electricity of the galvanic battery; current or continuous electricity; it is of low intensity and great quantity.

**E., induced.** Same as *E., Faradic*.

**E., inductive.** Electricity set free by *Induction*.

**E., influential.** A term for *Induction*.

**E., magnetical.** A term for the force developed by an electro-magnetic apparatus.

**E., medical.** The application of electricity to medical uses, whether for diagnostic or curative purposes.

**E., natural.** A term indicating the neutral electric condition of a body, in which there are no indications of negative or positive electricity.

**E., negative.** (*L. negatus*, part. of *nego*, to deny.) A term applied by Franklin to the form of electricity produced on glass by rubbing it with silk, on the supposition that the friction

abstracts from it electricity; it is denoted by a minus (—) sign.

**E. of plants.** An electric current has been shown to exist in plants from the transverse to the longitudinal section of a fibre. The centre is electro-negative in regard to the periphery.

**E. of tension.** (*L. tendo*, to stretch.) Statical or Franklinic electricity; so called because it is always ready to escape.

**E., organic.** Electricity as developed in organic structures, whether animal or vegetable.

**E., paralysed.** (*Παράλυσις*, paralysis.) Same as *E., disguised*.

**E., positive.** (*L. positivus*, settled.) A term applied by Franklin to the form of electricity produced on resinous bodies by rubbing them with wool or fur, on the supposition that the friction imparts to it electricity; it is denoted by a plus (+) sign.

**E., resinous.** (*Resin*.) A term by Dufay for the electricity produced on amber, sealing-wax, resin, and similar bodies, by rubbing them with wool or flannel.

**E., statical.** (*Στατικός*, belonging to a stand-still.) A term applied to electricity at rest, as exhibited in an insulated conductor charged from a frictional electrical machine, as distinguished from *E., dynamical*. It is the electricity developed by friction or induction.

**E., theories of.** See under *Electricity* and *Electric fluid*.

**E., thermic.** See *Thermo-electricity*.

**E., unit of.** See *Unit, electrical*.

**E., velocity of.** (*L. velox*, swift.) The velocity of frictional electricity, according to Wheatstone, is 288,000 miles in a second; that of dynamical electricity is, according to Kirchhoff, in a wire where there is no resistance, 192,924 miles in a second.

**E., vitreous.** (*L. vitrum*, glass.) A term applied by Dufay to the electricity produced on glass by rubbing it with silk.

**E., Voltaic.** (*Volta*.) The form of electricity developed by the chemical action produced when two metals are immersed in a liquid and connected by a conductor. It was so called in honour of Volta. It is a synonym of *Galvanism*.

**Electrics.** (*Ἠλεκτρον*, amber.) A term first applied by Gilbert to amber, jet, sealing-wax, glass, resin, and many other substances which behave as amber in attracting light bodies after being rubbed with flannel or silk; in contradistinction to metals or non-electrics which, when held in the hand and rubbed in like manner, do not attract bodies.

**Electrifiable.** (*Electricity*; *L. fio*, to become.) Capable of being electrified; capable of being charged with or of conducting electricity.

**Electrification.** (*Electricity*; *L. facio*, to make.) The act of developing or producing sensible electricity in a body.

**Electrify.** (*Electricity*; *L. facio*, to make.) To communicate or to charge with electricity.

**Electrine.** (*Ἠλεκτρον*, amber.) Relating to, or composed of, or like, amber.

Also, composed of *Electrum*.

**Electrisable.** (*G. electrificierbar*.) Able to assume or to be endowed with *Electricity*.

**Electrisation.** (*Electricity*. *F. électrisation*; *G. Elektrisirung*.) The operation of

exciting the electric property of bodies by friction, contact, heat, or compression.

Also, the passing of a charge of Faradic electricity or of a current of Voltaic electricity into the body or into a part of it.

**E., general.** The medical application of electricity by passing an electric current through the whole body, or by charging the body with electricity while insulated.

**E., localized.** (*L. locus*, a place.) Duchenne's term for the use of electricity as a remedial agent by applying it to a muscle or a nerve, or to a set of muscles or nerves, or to any special organ.

**Electrify.** Same as *Electrify*.

**Electrifier.** (*Electricity*.) One who electrifies.

Also, a machine for electrifying.

**Electrification.** (*Electricity*.) De Blainville's term for the mode of recognition by the animal body of the electrical condition of external objects, either by luminous, auditive, olfactive, or gustatory impressions; this recognition has been supposed to be effected by a special disseminated sense-apparatus.

**Electrobiology.** (*Electricity*; *Gr. βίος*, life; *λόγος*, an account.) The branch of electrical science which is concerned with the electrical phenomena of living beings.

Also, a term for *Mesmerism*, in allusion to the supposed influence of a form of electricity in the production of the phenomena.

**Electrobioscopy.** (*Electricity*; *Gr. βίος*; *σκοπία*, to observe.) The examination of an animal body by means of a galvanic current, to determine the presence or absence of muscular contractions, and so the presence or absence of life.

**Electro-capillary.** (*Electricity*; *L. capillus*, a hair.) Relating to the influence of electricity on capillary tubes under certain conditions.

**E. force.** The influence which causes a globule of mercury, placed in the middle of a capillary tube filled with dilute acid, to move when an electric current is passed through the tube. Electrometers have been made on this principle.

**Electrochemic.** Relating to *Electrochemistry*, or the *Electrochemical theory*.

**E. indifference.** A term applied to the condition of substances which have no tendency to combine with each other, in consequence of their not being in opposite electrical states.

**Electrochemical.** Relating to *Electrochemistry*, or to the *E. theory*.

**E. decomposition.** (*F. de*, from; *composer*, to compose.) The same as *Electrolysis*.

**E. equivalent.** (*L. equus*, equal; *valere*, to be worth.) The amount of an electrolyte decomposed by a given current of electricity in a given time. The amount is calculated on the basis of the amount of hydrogen liberated in the electrolysis of water by the electrochemical unit called a *Coulomb* during one second of time. The unit thus determined for hydrogen is, according to Kohlrausch, .000010521 grms., and, according to Mascart, .000010415. The electrochemical equivalent of other bodies may be determined by multiplying their chemical equivalent by the electrochemical equivalent of hydrogen.

**E. series.** A series of elementary substances arranged in order of electrochemical properties, the highest being electronegative to

those below them, the lowest electropositive to those above them. Berzelius' list is oxygen, sulphur, selenium, nitrogen, fluorine, chlorine, bromine, iodine, phosphorus, arsenic, chromium, vanadium, molybdenum, tungsten, boron, carbon, antimony, tellurium, tantalum, titanium, silicon, hydrogen, gold, osmium, indium, platinum, rhodium, palladium, mercury, silver, copper, bismuth, tin, lead, cadmium, cobalt, nickel, iron, zinc, manganese, uranium, cerium, thorium, zirconium, aluminium, didymium, lanthanum, yttrium, glucinum, magnesium, calcium, strontium, barium, lithium, sodium, potassium.

**E. theory.** An hypothesis which assumes that chemical action depends upon electrical force, chemical combination taking place only between substances in opposite electrical states, or of differing electric polarity.

**Electrochemistry.** (*Electricity*; *chemistr.*) The science of the application of the electric current to chemistry, divided into *Electrolysis* and *Electrometallurgy*.

Also, a synonym of the *Electrochemical theory*.

**Electrode.** (*Electricity*; *Gr. ὅδος*, a way.) Faraday's term for the place or surface where the electric current leaves or enters a liquid undergoing electrolysis; otherwise the poles or ends of the wires of a galvanic battery. They are the *Anode* and the *Cathode*.

The electrodes used for medical purposes are usually metallic cups or cylinders attached to the conducting wires of a battery, and provided with an insulating handle; sponges, wetted with salt and water are introduced into them for the better and more convenient action on the skin. Charcoal electrodes are also used; and a covering of wetted chamois leather is employed instead of sponge.

**E., laryngeal.** See *Laryngeal electrode*.

**E., non-polarisable.** (*L. non*, not; *polarisation*.) An electrode which is not susceptible of polarisation. See *Polarisation of electrodes*.

In Medical electricity unpolarisable electrodes are made of zinc, with a porous stopper, containing a solution of zinc sulphate.

**E., polarisation of.** See *Polarisation of electrodes*.

**Electroden'tistry.** (*Electricity*; *L. dens*, a tooth.) The application of electricity to dentistry, as in the transmission of an electric current through a tooth at the moment of its removal to destroy its sensibility.

**Electrodes.** (*ἤλεκτρον*, amber; *εἶδος*, likeness.) Old term (*Gr. ἡλεκτρόδους*), used by Hippocrates, *Épîl.* vi, xxii, 16, for alvine feces or stools, which, shining and recent, resembled amber.

**Electrodiagnosis.** (*Electricity*; *Gr. διαγνώσις*, a distinguishing.) The use of the electric current for the purposes of diagnosis of disease.

**Electrodynam'ic.** (*Electricity*; *Gr. δύναμις*, power.) Relating to *Electrodynamics*.

**E. attraction.** (*L. attrahere*, to draw together.) The mutual attraction exerted on each other by electric currents moving in parallel lines in the same direction.

**E. induction.** See *Induction*.

**E. repulsion.** (*L. repello*, to drive back.) The mutual repulsion exerted on each other by electric currents moving in parallel lines in opposite directions.

## ELECTRODYNAMICAL—ELECTROMAGNETISM.

**Electrodynam'ical.** Pertaining to *Electrodynamics*.

**Electrodynam'ics.** (*Electricity*; Gr. *δύναμις*, force.) Ampère's term for the science of the influence or force which one electric current exerts upon another, and upon the magnetic current.

**Electrodynamism.** (*Electricity*; Gr. *δύναμις*, power; F. *électrodynamisme*.) Same as *Electrodynamics*.

**Electrodynamom'eter.** (*Electricity*; Gr. *δύναμις*, power; *μέτρον*, a measure.) An instrument devised by Weber to measure the electrodynamic action of electric currents on each other, and so the existence and strength of currents. It consists of a coil of wire, composed of many turns, suspended by a silken cord in the inside of a similar but much larger coil, at right angles to it. When an electric current is passed through both, the tendency of the smaller coil is to range itself parallel to the larger coil; the force of the current is indicated by the amount of the deflection of the coil, and the direction of the current by the direction in which the coil turns.

**Electro galvan'ic.** (F. *électro-galvanique*; G. *elektrogalvanisch*.) Applied to the electric fluid as exhibited in the voltaic pile or galvanic battery.

**Electrogen.** (HΛΕΚΤΡΟΝ, amber, by means of which electricity was discovered; *γεννᾶω*, to beget.) Old term for the cause of the phenomena of electricity.

**Electrogenesis.** (*Electricity*; Gr. *γένεσις*, birth.) The produce or effect of electricity; a term given to a particular state of the spinal marrow, or of muscular nerves, observed under the following circumstances: if the spinal marrow or the lumbar nerves be denuded and insulated in the frog, and a voltaic current be passed through them for ten or twenty minutes, and the voltaic influence be then withdrawn, the lower limbs instantly pass into a continuous state of rigid tetanus or tetanoid spasm; and this is styled *Electrogenesis*, or the electrogenic state.

**Electrogenic.** (Same etymon. F. *électrogénique*.) Of, or belonging to, the state named *Electrogenesis*.

**E. state.** The condition described under *Electrogenesis*.

**Electrog'enous.** (*Electricity*; Gr. *γεννᾶω*, to beget.) Producing or developing electricity.

**E. apparatus.** The *Electric organs* of certain fishes.

**Electrog'eney.** Same as *Electrogenesis*.

**Electrokinet'ic.** (*Electricity*; Gr. *κίνησις*, movement.) Relating to electricity in motion.

**Electrolithot'ricity.** (*Electricity*; *lithotritia*.) The breaking up of an urinary calculus by sending a galvanic current through it, in order to produce disintegration.

**Electrology.** (*Electricity*; λόγος, a discourse.) The section of physics treating of the phenomena and the laws of electricity.

**Electroly'sable.** Susceptible of *Electrolysis*.

**Electrolysa'tion.** The act of *Electrolysis*.

**Electrolyse.** (*Electricity*; Gr. λύω, to loose.) To decompose by electrochemical agency.

**Electrolysed.** (*Electricity*; Gr. λύω,

to loose.) A term applied to bodies that are electro-chemically decomposed.

**Electrolysis.** (HΛΕΚΤΡΟΝ, amber, and so electricity; λύω, to loose.) The resolution of compounds into their elements under the influence of electricity. The electro-chemical decomposition of a body.

In Medicine, electrolysis has been used for the decomposition and destruction of tumours and for the solidification of aneurysms in the form of *Galvano-puncture*, and for the disintegration and solution of urinary calculi.

**E., laws of.** An electrolyte must be a conductor of electricity. Electrolytic action is equal in amount at all parts of the electric circuit; the amount of the product or of the ion liberated at an electrode in a given time is proportioned to the strength of the current; the amount of each ion liberated at an electrode by the same quantity of electricity is in the ratio of the chemical equivalent of the bodies.

**Electrolyte.** (*Electricity*; Gr. λυτός, loosed; from λύω, to release.) A body which can be, or is being, decomposed by *Electrolysis*. Each element or compound into which it is decomposed is called an *Ion*, and these may be electropositive or electronegative.

**Electrolytic.** (Same etymon.) Relating to *Electrolysis*.

**E. cell.** The vessel in which the substance undergoing electrolysis is placed.

**E. convec'tion.** (L. *convec'tus*, part. of *convec'to*, to convey.) Helmholtz's term for the partial electrolysis which occurs when an electromotive force less than that necessary for complete electrolysis is passed through an electrolyte.

**E. decomposition.** Same as *Electrolysis*.

**E. test for ar'senic.** A mode of detecting arsenic by passing a galvanic current through an acidulated solution containing arsenic, when the metal, combined with hydrogen, appears at the negative electrode.

**Electrolytical.** Same as *Electrolytic*.

**Electromagnet.** Sturgeon's name for a piece of soft iron surrounded by a coil of wire, which becomes magnetic whenever an electric current is passing through the wire.

**Electromagnetic.** Relating to *Electromagnetism*.

**E. engines.** Same as *Electromotors*.

**E. force.** The force of an *Electromagnet*; it includes the induction currents which the development and disappearance of the magnetism of the core indicates, in the surrounding spiral, the free magnetism of the core, the attractive force, and the lifting power.

**E. induction.** See *Induction*, *electromagnetic*.

**E. mea'sure.** The mode of measuring electricity by *E. units*.

**E. medi'um.** A term applied to the medium filling space, and generally called ether. It is supposed that on the potential and kinetic energy of this medium the various electrical, magnetic, and luminous phenomena depend.

**E. the'ory of light.** See *Light*, *electromagnetic theory of*.

**E. units.** See *Units*, *electromagnetic*.

**Electromagnet'ics.** The science of the mutual relations of electric currents and magnets.

**Electromag'netism.** (*Electricity*; *magnetism*.) The phenomena of the production

## ELECTROMASSAGE—ELECTROPHORUS.

of magnetism by the electric current; and of the influence of a magnet on the electric current.

**E., laws of.** That the strength of an electromagnet is proportional to the strength of the magnetising current; that it is proportional to the number of turns of wire in its coils; that it is independent of the thickness and material of its conducting wire; that it is independent of the diameter of its coils; and that a current requires time to magnetise an iron core to the full extent of its power. (Sylvanus Thompson.)

**Electromassage.** (*Electricity; massage.*) The application of an instrument in which a small electromagnetic machine is combined with a roller, so that the kneading action is combined with the transmission of a galvanic current to the limb or part.

**Electrometallurgy.** (*Electricity; Gr. μεταλλον, a metal; εργον, work.*) A term applied to those applications of the electrolysis of metallic solutions which consist in the deposit of a thin metallic layer on the surface of some body, either as a firm permanent covering, as in electroplating, or as a removable mould, as in electrotyping.

**Electrometer.** (*Electricity; Gr. μέτρον, a measure. F. électromètre; G. Elektricitätsmesser.*) An instrument, variously formed, for ascertaining the quality and quantity of electricity in an electrified body; or, in other words, for the recognition and measurement of difference of electrical potential.

**E., absolute.** (*L. absolutus, part. of absolvo, to set free.*) A form of *E. attracted-disc*.

**E., attracted-disc.** An instrument consisting of a long lever supporting a disc which hangs over a fixed insulated disc, which can be charged with electricity; the movement of the lever indicates the amount of electric attraction between the discs.

**E., capillary.** (*L. capillus, a hair.*) An electrometer based on the principles described under *Electrocapillary force*.

**E., quadrant.** (*L. quadrans, a fourth.*) A form consisting of a wooden pillar having a quadrant scale attached, from which hangs on a hinge a whalebone index, with a pith-ball end; when placed on a charged conductor the index rises and marks the amount of the divergence on the scale.

**Electrometric.** (*Electricity; Gr. μέτρον, relating to Electrometry.*)

**Electrometrical.** Same as *Electrometric*.

**Electrometry.** (*Electricity; Gr. μέτρον, a measure.*) The measurement of the amount of electricity by an *Electrometer*.

**Electromotion.** (*Electricity; L. motus, motion.*) Mechanical motion produced by means of electricity.

Also, the action or progress of an electric current.

**Electromotive.** (*Electricity; L. movere, to move.*) Relating to the movement of electricity, or to mechanical movements caused by electricity.

**E. force.** The force or agent which moves or tends to move electricity; its amount in an electric circuit is obtained by dividing the energy by the quantity conveyed by the current in a given time. It is the result of difference of potential.

Also, formerly, in accordance with the ideas of Volta, the force exhibited in the voltaic battery,

the development of which he attributed to the mere contact of dissimilar metals.

**E. force, unit of.** See *Unit of electromotive force*.

**E. séries of metals.** The series of metals so arranged that the most electropositive are at the beginning, the most electronegative at the end, each one being electronegative to those above, electropositive to those below it; such a series is zinc, cadmium, tin, lead, iron, nickel, bismuth, antimony, copper, silver, gold, platinum, graphite.

**Electromotor.** (*Electricity; L. movere, to move. F. électromoteur.*) Moving or exciting electricity.

Also, a machine which is set in motion by means of electricity.

**E. force.** Same as *Electromotive force*.

**E. metals.** See *Electromotive series of metals*.

**Electromotors.** (*Electricity; L. movere.*) A term applied to machines which are set in motion by electromagnetic force.

**Electromuscular.** (*Electricity; L. musculus, a muscle.*) Relating to the mutual influence of the electric current and muscular contraction.

**E. contractility.** (*L. contrahere, to draw together.*) The capacity of a muscle to contract when an electric current is passed through it.

**E. sensibility.** (*L. sentio, to feel.*) The capability of perceiving the passage of a current of electricity through a sensory nerve. The contractile sensitiveness of a muscle to electricity.

**Electronegative.** (*Electricity; F. négatif; from L. negatus, denying.*) Relating to negative electricity, or to the negative pole of a galvanic battery.

**E. elements.** Those elements which, during decomposition by electricity, pass to the anode or positive pole of the battery.

**Electro-optics.** The science of the relations between electricity and optics.

**Electro-otiatrics.** (*Electricity; Gr. οὖς, the ear.*) The application of electricity to the cure of auditory affections.

**Electro-pathology.** (*Electricity; pathology.*) The recognition of disordered conditions of the several organs of the body by means of electricity.

**Electrophone.** (*Electricity; φωνή, the voice.*) A synonym of *Telephone*.

**Electrophorus.** (*Electricity; Gr. φορτίω, to bear. F. électrophore; G. Elektricitätsführer.*) An instrument invented by Volta for the purpose of generating static electricity by induction. It consists of a circular cake of resinous material, about an inch thick, which fits into a wooden mould lined with tinfoil, or on to a metallic disc, the form or sole; and another metallic disc of somewhat less diameter, the cover, having a glass handle. The cake is warmed and beaten with a woollen cloth or with a cat's skin, when it becomes charged with negative electricity. The cover is then placed on the cake, where it rests only on a few points, and is touched with the finger, when on lifting it up by the handle it is found charged with positive electricity; the inductive action of the negative electricity of the cake attracts positive electricity to the lower surface of the disc, and repels negative to the upper surface, this is neutralised by the touch of the finger, and on removing the disc the positive charge is free on

## ELECTROPHYSIOLOGICAL—ELECTROVITAL.

the surface, and will pass to the conductor as a spark.

**E., continuous.** (L. *continuus*, unbroken.) An electrical machine or apparatus in which the operations of using the ordinary electrophorus are accomplished by mechanical means, and so are continuous.

**Electrophysiological.** Relating to *Electrophysiology*.

**Electrophysiology.** (*Electricity*; *physiology*.) The electrical conditions of the physiological processes. The testing of the functions of the several organs of the body by electricity.

**Electropolar.** (*Electricity*; Gr. *πόλος*, an axis.) A term applied to the condition of a cylindrical conductor when, on being electrified by induction, the ends become polar, one being positive, the other negative.

**Electropositive.** (*Electricity*; F. *positif*; from L. *positivus*, settled.) Relating to positive electricity, or the positive pole of a galvanic battery.

**E. elements.** Those elements which during electrolysis pass to the cathode or negative pole of the battery.

**Electropotential.** Same as *Electric potential*.

**Electropuncturation.** The same as *Electropuncture*.

**Electropuncture.** (*Electricity*; L. *punctura*, a pricking.) Same as *Galvano-puncture*.

**Electropuncturing.** The act of *Electropuncture*.

**Electropyrometer.** See *Pyrometer*, *electric*.

**Electroscope.** (*Electricity*; Gr. *σκοπ-τω*, to look at. F. *electroscope*.) An instrument for ascertaining the presence and the kind of electricity. It is based on the principle of opposite electricities repelling each other. Such an instrument consists of a pair of pith balls suspended by two thin metallic wires or threads, or of two thin gold leaves attached to a metal rod and enclosed in an air-tight flask.

**Electroscopic.** (*Electricity*; Gr. *σκοπ-τω*.) Relating to, or connected with, the *Electroscope*.

**Electroscopy.** (*Electricity*; Gr. *σκοπ-τω*.) The science of the use of the *Electroscope*.

**Electrostatic.** (*Electricity*; Gr. *στα-τικός*, relating to a stand-still. F. *électrostatique*.) Relating to *Electrostatics*.

**E. force.** The force which is exerted by a charged conductor on a body close to it.

**E. laws.** That electric charges of similar quality repel, of opposite quality attract, each other; and that the force exerted between two charges of electricity is directly proportional to their product, and inversely proportional to the square of the distance between them.

**E. measure.** The mode of measuring electricity by *E. units*.

**E. potential.** (L. *potentia*, power.) The potential at any point is the work that must be spent upon a unit of positive electricity in bringing it up to that point from an infinite distance. (Sylvanus Thompson).

**E. units.** See *Units, electrostatic*.

**Electrostatics.** (L. *electricity*; Gr. *στατικός*, belonging to a stand-still.) The science of static electricity or electricity at rest, con-

sisting of the laws and phenomena of electric charges on the surface of bodies.

**Electrostixis.** (*Electricity*; Gr. *στίξις*, a pricking. F. *électrostixis*.) Electric or galvanic acupuncture.

**Electrosurgery.** (*Electricity*; *surgery*.) The application of electricity to surgical operations, as in the electrolysis of tumours.

**Electrotherapeutics.** (*Electricity*; Gr. *θεραπεύω*, to do service to.) The treatment of disease by electricity.

**Electrotherapy.** (*Electricity*; Gr. *θεραπεύω*.) Same as *Electrotherapeutics*.

**Electrothermancy.** (*Electricity*; Gr. *θερμανσις*, a heating.) Same as *Electrothermy*.

**Electrothermic.** (*Electricity*; Gr. *θερμ-ος*, heat.) Relating to *Electrothermy*.

**Electrothermy.** (*Electricity*; Gr. *θερμ-ος*, heat.) The science of the electricity developed by heat.

Also, the science of the heat produced by electricity.

**Electrotone.** (*Electricity*; Gr. *τόνος*, that by which a thing is stretched, a stretching.) Same as *Electrotonus*.

**Electrotonic.** (*Electricity*; Gr. *τόνος*.) Relating to *Electrotonus*.

Also, applied to the state of a conductor electrified by induction.

**E. condition.** The state of *Electrotonus*.

**E. muscle-current.** A current said by some observers to occur in muscles under the same circumstances as, in nerves, produce the *E. nerve-current*.

**E. nerve-current.** An electric current in a nerve, different from the natural nerve-current, produced by a polarising constant current near to the part of the nerve through which this latter current is passing, or, as some say, between the electrodes also, and having the same direction as itself. Two explanations have been given of the origin of this current: the one that under the influence of the causing current the supposititious electromotive molecules of the nerve become bipolar in the direction of the current instead of peripolar; and the other, that it is an escape of the causing current itself.

**Electrotonising.** (*Electricity*; Gr. *τόνος*.) Producing *Electrotonus*.

**E. current.** The constant galvanic current which produces the condition in a nerve called *Electrotonus*.

**Electrotonus.** (*Electricity*; *τόνος*, that by which a thing is stretched.) The modified condition of a motor nerve when under the influence of a constant galvanic current. This condition consists of diminished irritability in the neighbourhood of the anode of the battery, or anelectrotonus; and of increased irritability, or catelectrotonus, in the neighbourhood of the cathode.

A similar condition is believed to be produced in muscle by the constant current.

**Electrotype.** (*Electricity*; Gr. *τύπος*, a model.) A model or copy of a thing formed by the electrolysis of a copper solution and the deposition of the metal upon a mould attached to the cathode of the battery.

**Electrovital.** (*Electricity*; L. *vita*, life.) Relating to the connection of the electricity and the vital actions.

**E. currents.** Two electric currents supposed to exist in the animal body; one passing

from the central nervous system to the extremities and periphery; the other from the central nervous system to the viscera.

**Electrovitalism.** (*Electricity*; *L. vita*.) The theory of the dependence of the functions of the living organism on electricity, or on a force identical with it.

**Electrum.** (ἤλεκτρον, amber. *F. ambre, saecur*; *G. Bernstein*.) A name for amber.

**E. minera'lē.** Old name for the tincture of metals; made of tin and copper, to which some added gold and double its quantity of martial regulus of antimony melted together; from all which there was produced a metallic mass thus called; the mass was powdered and detonated with nitre and charcoal to a kind of scoria; it was powdered again whilst hot, and then digested in spirit of wine, whence a tincture was obtained of a fine red colour.

**Electuarius.** An *Electuary*.

**E. anodynū.** (Ἄν, neg.; ὀδὼν, pain.) The *E. aromaticum cum opio*.

**E. anthelmin'ticum.** Belg. Ph. (Ἀντί, against; ἔλμιν, a worm.) Male fern 2 parts, valerian 2, semen contra 2, sulphate of potash 2, distilled water 8, and honey 16.

**E. anthelmin'ticum Hufeland ii.** (*G. Wurmlatwerg*.) Valerian root 3 parts, jalap root 2, flores cinæ 8, tartrate of potash 6, oxy-mel of squills 15, syrup 20. Dose, a teaspoonful.

**E. anthelmin'ticum Störck ii.** Same as *E. anthelmin'ticum Hufelandii*.

**E. aperiens.** (*L. aperio*, to open.) The *Confectio senneæ*.

**E. aromaticū.** The *Confectio aromatica*.

Also, Ph. Aust., peppermint leaves, sage leaves, of each 160 parts, ginger, angelica root, of each 20, cinnamon, cloves, nutmeg, of each 10, honey a sufficiency. Dose, a teaspoonful.

**E. aromaticū cum opio.** Aust. Ph. One part of opium mixed with 100 parts of *E. aromaticū*, Aust. Ph.

**E. caryocostinū.** See *Caryocostinus*.

**E. cassiæ.** The *Confectio cassiæ*.

**E. cassiæ lenitivū.** (*L. lenio*, to make soft.) The *Confectio cassiæ*.

**E. cassiæ sen'næ.** The *Confectio senneæ*.

**E. cassiæ tamarinda'tum.** (*Tamarind*.) The *Confectio cassiæ*.

**E. catechu.** The *Confectio catechu composita*.

**E. catechu compos'itum.** The *Confectio catechu composita*.

**E. catholicū.** (Καθολικός, general.) The *E. de rheo compos'itum*, Fr. Codex.

**E. catholicū commun'ō.** (*L. communis*, common.) The *Confectio senneæ*.

**E. cincho'næ.** The *Opium fbrifugum*.

**E. cro'ci compos'itum.** See *E. de croco compos'itum*.

**E. de al'oō.** The *Opium mesentericum*.

**E. de cro'co compos'itum.** Fr. Codex. (*L. crocus*, saffron. *F. electuaire de safran composé*.) Terra sigillata, crab's eyes porphyrised, of each 80 parts, Ceylon canella 30, dictamnus of Crete, yellow sandal, red sandal, myrrh, of each 10, white honey 240, syrup of *Dianthus caryophyllus* 480, and saffron 10 parts.

**E. de croco emenda'tum.** (*L. emendatus*, perfect.) The *E. de croco compos'itum*.

**E. de kina kina.** Same as *Opium fbrifugum*.

**E. de rheo compos'itum.** Fr. Codex. (*F. electuaire de rhubarbe composé*.) Polypody root 80 parts, root of *Cichorium intybus* 20, liquorice root 10, leaves of agrimony and scolopendrum, of each 30, white sugar 640, pulp of tamarind and cassia, of each 40, rhubarb, senna, of each 40, liquorice powder 10, fennel seeds 15, violet seeds 20, pumpkin seeds 15, water 1000 parts.

**E. de sen'na compos'itum.** Fr. Codex. (*F. electuaire de séné composé*.) Pearl barley 60, root of *Polypodium vulgare* 60, liquorice root 30, fresh leaves of *Scolopendrum officinale* 45, fresh leaves of *Mercurialis annua* 120, raisins 60, fruit of *Zisypus vulgaris* 45, senna leaves 60, sugar 1200, pulp of tamarind, cassia, and prunes, of each 200, powdered pods of *Cassia acutifolia* 150, fennel and anise seeds, of each 10 parts, and water sufficient.

Also, the *Confectio senneæ*.

**E. diapho'nix.** See *Diaphonicon*.

**E. diapru'num.** (Διά, through; πρῶνον, a plum.) The *Confectio senneæ*, in reference to the prunes which it contains.

**E. diascor'dium.** Same as *Diascordium*.

**E. eccopro'ticum.** (ἑκκαπρωτικός, cleansing from dung.) The *Confectio senneæ*.

**E. e scammo'nio.** The *Confectio scammoniū*.

**E. e scor'dio.** Same as *Diascordium*.

**E. e sen'na.** G. Ph. (*G. Sennalatwerg*.) Senna leaves, powdered, 10 parts, syrup 40, tamarind pulp 50 parts; mixed whilst heated in a vapour bath.

**E. laxati'vum.** (*L. laxo*, to unloose.) The *Confectio cassiæ*.

**E. leniti'vum.** (*L. lenio*, to make soft.) The *Confectio senneæ*.

**E. opia'tum.** The *Confectio opii*.

**E. opia'tum astrin'gens.** (*L. astringo*, to bind.) Same as *Diascordium*.

**E. o'pii.** A preparation of the old Edinburgh Pharmacopœia, containing senna in addition to the *Confectio opii*.

**E. piperis.** The *Confectio piperis*.

**E. scammo'nii.** The *Confectio scammoniū*.

**E. scor'dii.** Same as *Diascordium*.

**E. sen'næ.** The *Confectio senneæ*.

**E. sen'næ compos'itum.** The *Confectio senneæ*.

**E. sen'næ cum pul'pis.** (*L. pulpa*, the fleshy part of fruit.) The *Confectio senneæ*.

**E. sol'idum.** (*L. solidus*, firm.) Same as *Tabella*.

**E. stomach'icum.** (Στόμαχος, the stomach) The *E. aromaticū*, Aust. Ph.

**E. sulphuris.** The *Confectio sulphuris*, B. Ph.

**E. terebinthina'tum.** The *Confectio terebinthina*, B. Ph.

**E. theba'icum.** (*L. thebaicus*, Theban.) The *Confectio opii*.

**E. theri'aca.** (*L. theriaca*, an antidote against poison.) Powdered opium 1 part, macerated in Spanish wine 3, for a day, and then angelica root 6, Virginia snake-root 4, valerian 2, squills 2, zedoary 2, cassia bark 2, cardamom 1, myrrh 1, sulphate of iron 1, and purified honey 72 added. A hundred parts contain one part of opium. Formerly in the G. Ph.

Also, a term for *Confectio opii*.

**Electuary.** (*L. electus*, part, of *eligo*, to choose or pick out. *F. electuaire*; *G. Latwerg*.)

# ELENCEPHOL—ELEMENTARY.

A confection, or conserve of soft consistence, formed of drugs, fruits, and honey or syrup.

**E. len'itive.** (*L. lenio*, to make soft.) The *Confectio semnae*.

**Eleen'cephol.** (Ἐλεαιον, oil; ἐγκέφαλος, the brain.) Name given formerly to a fat contained in the brain, and found to contain phosphorus and sulphur; it is a mixture.

**Elegie'æ.** A synonym of *Restiææ*.

**Ele'idin.** Term applied by Raavie to the substance of which epidermis cells are composed.

**Elelis'phacos.** (Ἐλελίσφακος.) Old name for a kind of sage.

**Element.** (*L. elementum*, a first principle.

*F. élément*; *l. elemento*; *G. Grundstoff, Urstoff*.)

A fundamental part, a primary principle. Fire, air, earth, and water were anciently believed to be the four elements which constituted everything.

In Chemistry, a term applied to simple bodies which have not as yet been shown to be composed of more definite substances than one. See *Elementary bodies*.

Also, in Biology, applied to the ultimate microscopic structures of which an organ or tissue is composed.

**E.s, anatom'ical.** (Ἀνατομή, dissection.) The essential primary parts or tissues of an organ or structure.

**E.s, ar'riad.** (Ἀρτιος, complete, even.) Elementary substances having an even equivalency or atomicity; such are dyads, or bivalent substances, and tetrads, or quadrivalent substances.

**E.s, histolog'ical.** (Ἱστός, a web; λόγος, an account.) The elementary structural constituents of the animal and vegetable tissues, such as cells and fibres.

**E.s, morbid.** (*L. morbus*, a disease.) A name given to that tissue of an organ in which a disease first arises.

**E.s of disease.** The several constant phenomena which accompany a disease, such as fever, pain, or spasm, caused by dynamic disturbances of the tissue or body.

**E.s, organ'ic.** (*Organic*.) The conjoined molecules forming a compound organic radical.

Also, the ultimate histological elements of the living body.

**E.s, per'issad.** (Περισσός, beyond the regular number, uneven.) Elementary substances having an uneven equivalency or atomicity; such are monads, or univalent substances, and triads, or trivalent substances.

**E.s, sarcous.** See *Sarcous elements*.

**E.s, sym'bols of.** (Σύμβολον, a sign by which one knows a thing.) An arbitrary designation of each of the elementary bodies, by which themselves and their combining proportions or atomic weights are shortly denoted. The list of symbols, as well as of the atomic weights, are given under *Elementary bodies*.

**E.s, ult'imate.** (*L. ultimus*, the last.) The last and simplest substances into which a body can be resolved.

**E.s, veg'etative.** See *Vegetative elements*.

**Element'ary.** (*L. elementum*, *F. élémentaire*.) Simple, primary, not compound.

**E. analysis.** (Ἀνάλυσις, a loosening.) The analysis or resolution of a chemical compound into its simple elements.

**E. bod'ies.** The chemical elements or

simple substances which have not been resolved into simpler or different bodies. The following is a list of those known, with their atomic weight:

	Symbol.	Atomic weight.
Aluminium . . . . .	Al . . . . .	27.3
Antimony (Stibium) . . . . .	Sb . . . . .	122.
Arsenic . . . . .	As . . . . .	74.9
Barium . . . . .	Ba . . . . .	136.8
Beryllium . . . . .	Be . . . . .	9.
Bismuth . . . . .	Bi . . . . .	210.
Boron . . . . .	B . . . . .	11.
Bromine . . . . .	Br . . . . .	79.75
Cadmium . . . . .	Cd . . . . .	111.6
Cæsium . . . . .	Cs . . . . .	133.
Calcium . . . . .	Ca . . . . .	39.9
Carbon . . . . .	C . . . . .	11.97
Cerium . . . . .	Ce . . . . .	141.2
Chlorine . . . . .	Cl . . . . .	35.37
Chromium . . . . .	Cr . . . . .	52.4
Cobalt . . . . .	Co . . . . .	58.6
Copper (Cuprum) . . . . .	Cu . . . . .	63.
Didymium . . . . .	D . . . . .	147.
Erbium . . . . .	E . . . . .	169.
Fluorine . . . . .	F . . . . .	19.1
Gallium . . . . .	Ga . . . . .	69.8
Gold (Aurum) . . . . .	Au . . . . .	196.2
Hydrogen . . . . .	H . . . . .	1.
Indium . . . . .	In . . . . .	113.4
Iodine . . . . .	I . . . . .	126.53
Iridium . . . . .	Ir . . . . .	196.7
Iron (Ferrum) . . . . .	Fe . . . . .	55.9
Lanthanum . . . . .	La . . . . .	139.
Lead (Plumbum) . . . . .	Pb . . . . .	206.4
Lithium . . . . .	Li . . . . .	7.01
Magnesium . . . . .	Mg . . . . .	23.94
Manganese . . . . .	Mn . . . . .	54.8
Mercury (Hydrargyrum) . . . . .	Hg . . . . .	199.8
Molybdenum . . . . .	Mo . . . . .	95.6
Nickel . . . . .	Ni . . . . .	58.6
Niobium . . . . .	Nb . . . . .	94.
Nitrogen . . . . .	N . . . . .	14.01
Osmium . . . . .	Os . . . . .	198.6
Oxygen . . . . .	O . . . . .	15.96
Palladium . . . . .	Pd . . . . .	106.2
Phosphorus . . . . .	P . . . . .	30.96
Platinum . . . . .	Pt . . . . .	196.7
Potassium (Kalium) . . . . .	K . . . . .	39.04
Rhodium . . . . .	Rh . . . . .	104.1
Rubidium . . . . .	Rb . . . . .	85.2
Ruthenium . . . . .	Ru . . . . .	103.5
Selenium . . . . .	Se . . . . .	78.
Silicon . . . . .	Si . . . . .	28.
Silver (Argentum) . . . . .	Ag . . . . .	107.66
Sodium (Natron) . . . . .	Na . . . . .	22.99
Strontium . . . . .	Sr . . . . .	87.2
Sulphur . . . . .	S . . . . .	31.98
Tantalum . . . . .	Ta . . . . .	182.
Tellurium . . . . .	Te . . . . .	128.
Thallium . . . . .	Tl . . . . .	203.6
Thorium . . . . .	Th . . . . .	231.5
Tin (Stannum) . . . . .	Sn . . . . .	117.8
Titanium . . . . .	Ti . . . . .	48.
Tungsten (Wolfram) . . . . .	W . . . . .	184.
Uranium . . . . .	U . . . . .	240.
Vanadium . . . . .	V . . . . .	51.2
Yttrium . . . . .	Y . . . . .	93.
Zinc . . . . .	Zn . . . . .	64.9
Zirconium . . . . .	Zr . . . . .	90.

**E. cell.** See *Cell, elementary*.

**E. cor'puscle.** (*L. corpusculum*, a small body.) Same as *Cell, elementary*.

**E. fib're.** See *Fibre, elementary*.

# ELEMENTUM—ELEPHANTIASIS.

**E. particles.** (L. *particula*, a small part.) The simpler substances into which a body is resolved by decomposition.

**E. substances.** Same as *E. bodies*.

**E. tis'suc.** See *Tissue*, elementary.

**E. tone.** See *Tone*, elementary.

**Elementum.** Same as *Element*.

**E. acidificum.** (L. *acidum*, an acid; *facio*, to make.) A synonym of *Oxygen*.

**Elemi**, B. Ph. (G. *Elemiharz*.) A concrete, resinous exudation, soft and transparent when fresh, dry, brittle, and lemon-yellow when kept, from a plant growing in Manilla, probably the *Canarium commune*. It has a strong aromatic, somewhat terebinthinate odour, and a warm, aromatic, acid taste. It contains a colourless, fragrant, volatile oil, brein, bryoidin, breidin, and elemic acid. Used, in an ointment, as an application to indolent ulcers and issues.

**E., African.** The produce of *Boswellia Ferriana*. It is a clear yellow or whitish resin, softening in the mouth, and having a pleasant terebinthinous odour.

**E., Bengal.** The produce of *Amyris cymophora*.

**E., Brazilian.** The produce of *Icica iciciriba*, and other species; it is in soft yellowish-white, or in solid pale or greenish-yellow masses.

**E., East Indian.** The produce of *Canarium commune*.

**E., false.** Same as *E., Brazilian*.

**E., Manilla.** The official *Elemi*.

**E., Mauritius.** The produce of *Coleophonia mauritiana*; it resembles the official elemi.

**E., Mexican.** The produce, probably, of *Amyris elemifera*, Royle; it is in yellowish and greenish masses, waxy and translucent, or opaque and friable.

**E., oriental.** The same as *E., African*.

**E. tree.** The *Canarium commune*.

**E., Ve'ra Cruz.** Same as *E., Mexican*.

**Elemic acid.** ( $C_5H_8O_4$ ). A substance obtained from *Elemi*.

**Elemi**,  $C_{25}H_{32}O$ . A white, opaque, crystallisable resin found in *Elemi*.

**Eleuium.** The *Imula helenium*.

**Eleocarpus.** See *Eleocarpus*.

**Eleocharis.** (Έλος, a marsh; χαίρω, to rejoice.) A Genus of the Nat. Order *Cyperaceae*.

**E. palustris**, Br. (L. *paluster*, marshy.) Flowering tops, seeds, and roots used as an astringent in diarrhoea and hæmorrhage.

**Eleopten.** (Έλαιον, oil; πτηνός, volatile.) Term employed to designate the liquid and volatile portions of the essential oils, in opposition to stearopten, which is applied to the solid parts.

**Eleoselinum.** (Έλος, a marsh; σέλιον, parsley. F. *ache*; G. *wilder Eppich*.) The *Apium graveolens*, or smallage.

**Elephant.** (Old F. *elefant*, or *elefant*; from L. *elephas*; from Gr. *ἐλέφας*; from Heb. *eleph*, an ox.) The species of the Genus *Elephas*; the trunk, foot, and other parts, are used as food.

**E. apple.** The fruit of *Feronia elephantium*.

**E. crep'er.** The *Argyria speciosa*.

**E.'s foot.** The *Testudinaria elephantipes*.

**E. grass.** The *Typha elephantina*.

**E. leg.** The *Elephantiasis arabum*.

**E. skin disease.** A synonym of *Elephantiasis graciorum*.

**Elephanta'sia.** (Έλεφας, ivory.) A Genus of the Nat. Order *Palmaceae*.

**E. macrocarpa**, Willd. The vegetable ivory tree, *Phytelephas macrocarpa*.

**Elephantia.** (Έλεφας, an elephant.) Old term for a kind of *Anasarca*; also for *Elephantiasis*.

**E. arabum.** Old term for *Elephantiasis arabum*.

**Elephantiac.** Relating to *Elephantiasis*.

**Elephantia'sic.** Relating to *Elephantiasis*.

**Elephantiasis.** (Έλεφαντίασις, from *ἐλέφας*, the elephant. F. *elephantiasis*; I. *elefantiasi*; S. *elefancia*; G. *Elephantenaussatz*.) A term applied to two distinct diseases, *E. arabum* and *E. graciorum*, from the shapelessness of the limb affected, and its likeness to an elephant's leg.

Also, a term applied to a cutaneous disease of oxen, in which there is an eruption of erythematous patches, sometimes preceded by febrile symptoms, which become cracked, discharge, and end in obstinate gangrenous ulcerations.

**E. alopecia'ta.** (Άλωπεκία, a disease in which the hair falls off.) The form of *E. graciorum* in which baldness occurs from extension of the disease to the scalp.

**E. anæsthetica.** (Ανασθησία, want of feeling.) The form of *E. graciorum* in which the loss of sensation in the affected parts of the skin, from implication of the nerves, is a stronger feature than its tuberculated condition. It is usually considered to be synonymous with *E., non-tuberculated*, but in the *E., tuberculated* the skin is not infrequently more or less insensate.

**E. arab'ica.** Same as *E. arabum*.

**E. arabum.** (L. *Arabs*, an Arab. F. *elephantiasis des Arabes*; G. *Rosshain*.) Barbadoes leg, elephant leg, elephantiasis of the Arabians, so called because the best and earliest descriptions of it were given by the Arabian physicians. It is a more or less extensive, and a more or less hard, swelling of the skin and sub-jacent tissue of some part of the body, resulting from, or commencing with, inflammation of the lymphatics, and, it may be, the veins; and increased by repeated attacks of this inflammation of vessels. The disease usually attacks the legs, or one of them, first; but the scrotum, pndendum, abdomen, breast, and other parts, may become implicated. At the outset there is some febrile disturbance, with an erysipelatous appearance of the skin, and some swelling; more especially is this notable over the course of the lymphatics, which feel like a knotted cord, and over the lymphatic glands, which are swollen and tender; the febrile attack lasts a few days, and leaves behind it a thickened skin and areolar tissue, and swollen glands; it recurs at irregular and not infrequent intervals, and each attack increases the swelling of the limb. The skin becomes dusky or tawny, indurated, sometimes scaly or fissured, and warty; the thickening extends to the subjacent tissues, even to the bone. The fissures grow into foul ulcerations, the lymphatics become distended into vesicles, and the general health suffers; usually the disease becomes chronic, and remains stationary for a long time; sometimes it kills at an early period. It occurs more frequently in males, commencing most often at or a little beyond puberty; it is not hereditary, neither is it contagious; its cause is unknown. Barbadoes leg is essentially an

## ELEPHANTIASIS.

inflammatory and obstructive disease of the lymphatics, with hyperplasia of the true skin and the connective tissues; in the interstices of which the altered lymph is found in considerable excess, yielding cells and nuclei in great number. It has been thought that the *Filaria sanguinis hominis* is a causative agent in some cases. See *E. lymphangiectodes*.

**E. arabum cru'ris.** (*L. crus*, the leg.) The ordinary form of *E. arabum*.

**E. arabum, fila'ria of.** The *Filaria sanguinis hominis*.

**E. asturien'sis.** (*L. asturiensis*, belonging to Asturia or Spain.) The form of *Pellagra* which occurs in Spain.

**E., bacil'lus of.** See *E. græcorum, bacil'lus of*.

**E. du'ra.** (*L. durus*, hard.) The form of *E. arabum* in which the thickening of the skin is firm and dense.

**E. frambæsi'ofdes.** (*F. framboise*, a raspberry; Gr. *εἶδος*, likeness.) The form of *E. arabum* in which there are papillary outgrowths of the skin on the sole and on the toes, which in some sort resemble raspberries.

**E. fus'ca.** (*L. fuscus*, dark brown.) The form of *E. arabum* in which the skin is of a dark tawny colour.

**E. gla'bra.** (*L. glaber*, smooth.) The form of *E. arabum* in which the cutaneous surface is little affected.

**E. greco'rum.** (*L. Græci*, the Greeks. *F. elephantiasis des Grecs*, *lepre vran*; *L. la lebbra, il male de figato*; *Ar. jazam*; *Hind. rakta-piti*; *Du. Melatscheid*; *Norw. Spedalsked*; *G. Aussatz*.) Leprosy, the elephantiasis of the Greeks, so called because the earliest and best description of it was given by the Greek physicians. A non-contagious, hereditary disease, characterised by a morbid change in the skin of the face, ears, or limbs, whereby it becomes thickened, wrinkled, dark-brown or bronzed, studded more or less closely with shining dusky-red tubercles, more or less insensitive, and exuding an offensive perspiration, or almost or quite insensitive, and atrophied, and without tubercles; in both forms, *E., tuberculated* and *E., non-tuberculated* or *E. anæsthetica*, the skin is liable to ulceration. It consists in the infiltration of a granulation tissue with leucocytes or lepra cells into the corium of the skin and mucous membranes, into the serous membranes, and into the connective tissue of other organs; and in the non-tuberculated or anæsthetic variety around the ends of the cutaneous nerves, and into the central nervous system, and the nerve trunks arising therefrom. Its cause is uncertain; hereditary taint is very frequent; it appears earlier in women, more frequently in men; a malarious climate, the use of stale fish, of unsound cereals, and other bad hygienic conditions, have been supposed to be agents of power in its production; it is largely propagated among the progeny by intermarriage with the leprosy, and in some cases it is said to be produced by cohabitation and inoculation. Its geographical distribution is very extensive; it is found in the greatest abundance in India, but also very commonly in the Cape of Good Hope and Ceylon, and the chain of islands stretching between them, in China, Japan, Palestine, Syria, Persia, North Africa, West Indies, South America, the islands of the Archipelago, Salonica, Thessaly, and in many other places in Europe. For further detail see *E., tuberculated* and *E., non-tuberculated*,

which two forms, although very distinct in typical cases, in many instances run into each other. See also *E. græcorum, bacillus of*.

**E. græco'rum, bacil'lus of.** A bacillus very like the bacillus of tuberculosis, which is now described by many observers as a constant of leprosy; the fungi are found chiefly in the exudation cells, but also in the diseased connective tissue, and sometimes in the blood-vessels; a beaded appearance, suggestive of spore formation, has been seen in them.

**E. italia.** (*L. italicus*, Italian.) A synonym of *Pellagra*.

**E. læ'vis.** (*L. lævis*, light.) Same as *E. glabra*.

**E. leonti'na.** (*L. leo*, a lion.) The form of *E. græcorum* in which the face assumes a lion-like appearance from thickening of the skin about the eyebrows and other parts.

**E. lymphangiectodes.** (*Lymphangiectasis*; *εἶδος*, likeness.) A condition of skin and subcutaneous tissue like elephantiasis arabum due to obstruction of the lymphatics, and consequent overfulness of these vessels and thickening and infiltration of connective tissue. The typical form is believed by Lewis to depend upon the obstructive presence of *Filaria sanguinis hominis*.

**E. mollis.** (*L. mollis*, soft.) A term for the form of *E. arabum* which more often attacks the scrotum and genitals, because of its soft gelatinous structure.

**E. mutilans.** (*L. mutilo*, to maim.) The form of *E. græcorum* in which the phalanges or other parts of the limbs drop off from caries and ulceration of the soft tissues.

**E. næ'void.** (*Ævus*; Gr. *εἶδος*, likeness.) The form of *E. lymphangiectodes* in which the distension of the lymphatics and lymph-spaces causes elastic swellings which exude lymph on being punctured.

The term has also been employed by T. Smith to denote a form of *E. arabum* in which there is a great development under the skin of a dense, reticulate, spongy venous tissue of a cavernous character.

**E. ni'gra.** (*L. niger*, black.) The form of *E. arabum* in which the skin contains much black or dark brown pigment.

**E. nodo'sa.** (*L. nodosus*, full of knots.) The form of *E. non-tuberculated* in which there are large knots and lumps about the joints, formed by enlargement of the ends of the bones and contraction of the muscles.

**E., non-tuberculated.** (*L. non*, not; *tuberculum*, a small swelling.) The form of *E. græcorum* in which the skin presents white patches, is atrophied, exhibits no tubercles, and is insensitive. It begins with burning and pricking sensations in the hands and feet, with tenderness along the course of certain nerve-trunks; the skin becomes dry, shrivelled, and sometimes scaly; symmetrical erythematous patches or bullæ appear on the insensitive parts, superficial ulcers result, which heal with a white, hairless, glandless patch, anæsthetic in the centre, which may develop scales or weep an ichor; the anæsthetic centre grows in size, and the patches run into each other. The muscles of the body waste, and, contracting, produce distortions of the limbs, and broad, flat, or clubbed finger ends; the face becomes disfigured; circular, ragged, and foul ulcers form on the lower extremities; interstitial absorption of the deeper parts occurs, the terminal

# ELEPHANTIC—ELEUTHEROBLASTEA.

phalanges are first removed, and then the other bones, and the patient dies, worn out with his weary disease, after eighteen or twenty years. The accounts of the condition of the central nervous system vary; some speak of no change, others of albuminoid infiltration of the membranes, and induration and atrophy of the cord, with discolouration of its grey matter. All observers agree as to the serious changes in the nerve-trunks, which are firmer, larger, and generally more opaque than natural, by virtue of an intratubular deposit, which early contains clear, round, oblong nuclei, 1-2000th" to 1-1600th" long, and 1-8000th" in diameter, and subsequently becomes fibrillar.

**E. of the Arabs.** See *E. arabum*.

**E. of the Greeks.** Same as *E. grecorum*.

**E. pachydermia.** (Παχύς, thick; *ἐΐμα*, the skin.) A synonym of *E. arabum*.

**E. papillaria.** (L. *papilla*, a small teat.) The form of *E. arabum* in which hardened papillae grow from the skin-surface.

**E. scroti.** (L. *scrotum*, the bag for the testicles.) The form of *E. arabum* in which the scrotum is the chief seat of disease; it often attains a very large size, concealing altogether the penis.

**E. teleangelectodes.** (Teleangiectasis; Gr. *εἶδος*, likeness.) A pendulous condition of the skin, in which there is great hypertrophy of the connective tissue and of the blood-vessels.

**E. tuberculatus.** (L. *tuberculum*, a small swelling.) The form of *E. grecorum* in which the skin of the affected parts develops tubercles. It often begins with general malaise, pains, and tingling and pricking in the limbs; then brownish-coppery, or dull red stains appear, on which small tubercles grow; loss of sensibility, frequently of the ulnar side of the hand and of the little finger, follows. The tubercles vary in size from a pea to a walnut; they are soft, smooth, shining, and dusky-red, gradually changing to brownish-yellow. The diminished sensibility may be preceded by a period of exalted sensitiveness; soon there is increased secretion of the sebaceous glands; the tubercles enlarge, altering and disfiguring the facial expression; the muscles waste; the mucous membranes towards their outer end become affected, and all the internal organs, except the pancreas, participate more or less in the degeneration. Then the tubercles ulcerate, and the discharge from them is very offensive; the eye may be destroyed, the nasal bones exfoliate, other bones become carious, intestinal ulceration may occur, and in ten or twelve years, or more, the sufferer dies. The morbid deposit is more opaque than in the non-tuberculated form, and instead of occupying the nerve-tissue, is chiefly in the skin and mucous membranes and the viscera, and consists mainly of small rounded cells, and spindle-shaped cells, with intermediate forms, which gradually invade, compress, and destroy the tissue which they infiltrate.

**E. tuberculo'sa.** Same as *E. tuberculatus*.

**E. tuberculous.** Same as *E. tuberculatus*.

**E. tuberosa.** (L. *tuberosus*, full of lumps.) The form of *E. arabum* in which the hyperplasia of the skin structures assumes the form of small tubercles.

Also, the same as *E. tuberculatus*.

**E. ulcero'sa.** (L. *ulcerosus*, full of sores.)

A term applied to the stage of *E. arabum* when ulcers appear.

**E. vas'cular.** (L. *vasculum*, a little vessel.) Same as *E. nevroid*.

**E. verruco'sa.** (L. *verruca*, a wart.) The form of *E. arabum* in which the cutaneous growths are in the form of warts.

**E. vul'vae.** (L. *vulva*, the womb.) The form in which the disease attacks the external organs of generation in the female.

**Elephant'ic.** Relating to, or afflicted with, *Elephantiasis*.

**Elephan'tinum emplastrum.** (Ἐλεφαντινός, of ivory; L. *emplastrum*, a plaster.) Old name of a plaster made, according to Aëtius, of cerussa, wax, oil, and water. (Goraeus.)

**Elephantom'ma.** (Ἐλεφας, an elephant; ὄμμα, the eye.) Same as *Buphthalmus*.

**Elephan'topede.** (L. *elephas*, an elephant; *pes*, a foot.) Having feet like an elephant.

**Elephan'topous.** (Ἐλεφας, the elephant; πούς, a foot.) Having feet like an elephant.

Also (Ἐλεφαντίασις, the disease so called), having *Elephantiasis*.

**Elephan'topus.** (Ἐλεφας, an elephant; πούς, a foot.) A Genus of the Nat. Order *Compositae*.

**E. sca'ber.** Linn. (L. *scaber*, rough.) Hab. India. Used in dysuria and abdominal pains.

**Elephas.** (Ἐλεφας.) The elephant. Also, a Genus of the Order *Proboscidea*, Class *Mammalia*.

Formerly a name for *Elephantiasis*.

Also, a term for ivory.

Alchemical name for *Aqua fortis*.

**Eler'sna.** (Arab.) Alchemical name of *Molybdenum*. (Ruland and Johnson.)

**Eles'matis.** (Arab.) Alchemical name of burnt lead. (Ruland and Johnson.)

**Eletta'ri.** (Malab.) The *Elettaria cardamomum*, or lesser cardamom.

**Elettaria.** (Elettari, the Malabar word for the lesser cardamom.) A Genus of the Nat. Order *Zingiberaceae*.

**E. cardamomum.** Maton. The species supplying the *Cardamomum*, B. Ph. Hab. India, the Malabar mountains.

**E. cardamomum, var. B.** The *E. major*.

**E. ma'jor.** Smith. The species which supplies the Ceylon cardamom.

**Eleusin'ë.** A Genus of the Nat. Order *Graminaceae*.

**E. coraca'na.** Gärtn. Ragi, a kind of millet. The seeds form the chief food of the natives of many parts of India, and a fermented liquor is also made from them.

**E. stric'ta.** (L. *strictus*, drawn together.) Used as *E. coracana*.

**E. tocus'so.** Seeds used in Abyssinia as food.

**Eleute'ria.** See *Croton eleuteria*.

**E. bark.** The bark of *Croton eleuteria*.

**Eleutheran'therous.** (Ἐλευθερος, free; *anther*.) Having free anthers.

**Eleuthera'ta.** (Ἐλευθερος.) A synonym of *Coleoptera*.

**Eleutheria.** See *Croton eleuteria*.

**Eleutheroblas'tea.** (Ἐλευθερος; βλαστός, a sprout.) An Order of the Subclass

# LEUTHEROGYNIA—ELIXATION.

**Hydroïda**, Class *Hydrozoa*. Hydrosome consisting of a single persona, attached at will by an aboral disc or hydrorhiza; tubular for a digestive cavity, having no anus, and the oral end provided with tentacles. Reproduced by nutritive buds growing from all parts of the organism by fission, and by artificial section.

**Eleutherogynia**. (Ἐλευθερος; γυνή, a female.) A division of plants including those which have free ovaries.

**Eleutheropetalous**. (Ἐλευθερος; petal.) Having the petals distinct.

**Eleutherophyllous**. (Ἐλευθερος; φύλλον, a leaf.) Having the parts of the perianth distinct and free; a term applied when the perianth consists of one whorl only.

**Eleutheropoda**. (Ἐλευθερος; ποὺς, a foot.) A division of cartilaginous fishes in which the pectoral fins are separate.

**Eleutheropomi**. (Ἐλευθερος; πῶμα, a lid.) A division of cartilaginous fishes in which the operculum is free.

**Eleutherosepalous**. (Ἐλευθερος; sepal.) Having the sepals distinct and free.

**Eleutherostemon**. (Ἐλευθερος; στήμον, a thread.) Plants with free stamens.

**Elevatio**. (L. *elevatio*; from *elero*, to lift up. F. *élévation*; G. *Erhebung*.) Old term for sublimation and distillation.

Also, a synonym of *Diastole*.

Also, applied to swelling or enlargement, as of the liver or spleen, according to P. M. de Calderia, *Oper.* ii, 14.

**E. uteri**. (L. *uterus*, the womb.) A condition in which the womb occupies a higher position in the abdomen than is natural.

**Elevation**. (L. *elevatio*. F. *élévation*; I. *elevazione*; S. *elevacion*; G. *Höhe*.) A lifting up; height; increase, as of temperature, or of rapidity of the pulse.

**Elelevator**. (L. *elevator*, a lifter up; from *elero*, to lift up. F. *élévatoire*; G. *Erheber*, *Hebeisen*.) An instrument for raising any depressed portions of bone, particularly of the skull.

Also, in Anatomy, the same as *Licator*.

Also, an instrument used in Dentistry for the removal of stumps of teeth; it consists of a strong, straight or curved, steel shaft, with a more or less pointed, more or less flattened, spear- or other-shaped head, and mounted in a strong handle. The head is inserted by the side of the stump, and by a lever action or by a pushing movement, or by both combined, it is removed from its socket.

**E. labiorum communis**. (L. *labium*, the lip; *communis*, common.) The *Licator angulorum*.

**E. oculi**. (F. *élevateur de l'œil*.) The *Rectus superior oculi*.

**E. patientiæ**. (L. *patientia*, the act of suffering.) The *Licator anguli scapulae*, because of its action in shrugging the shoulders.

**E. scapulae**. The *Licator anguli scapulae*.

**E. testiculi**. (L. *testiculus*, the testicle.) The *Cremaster*.

**E. triploid**. (Τριπλός, threefold; ὄμοιος, likeness.) A straight perforated stem ending in three legs, with a hook-ended screw passing through the stem. It was used to elevate a depressed piece of bone by attaching the hook to it.

**E. urethræ**. (Ουρήτρα.) The small slip from the *Transversus perinei* muscle which sometimes passes to the urethra.

**E. uterine**. A term applied to an intra-uterine stem or pessary, because it keeps the uterus upright.

**Elevatorium**. (L. *elevator*.) An elevator.

**Elev'en**. (Sax. *endlofan*, *end'ufon*, from *en* for *in*, one; an excrement *d*; *lofan*, ten.) The number of ten and one.

**E. o'clock lady**. The *Ornithogalum umbellatum*, on account of its opening of the flowers only late in the day.

**Elev'enth**. The unit of a series corresponding to eleven.

**E. cranial nerve**. The spinal accessory nerve.

**Elf-dock**. The elecampane, *Inula helenium*.

**Elias'ter**. A Paracelsian term for the earliest beginning of a thing.

**Elibanum**. Same as *Olibanum*.

**Elichrysosum**. (Ἐλίκρυσος, from ἔλιος, the sun; χρῶσος, gold.) The *Solidago virgaurea*, from its shining yellow appearance. See *Helichrysosum*.

**E. montanum**. (L. *montanus*, belonging to a mountain.) The *Antennaria dioica*.

**El'icoid**. See *Helicoid*.

**Elid'rium**. A name formerly given to gum mastich; also to *Rheoponticum*.

An ancient name for *Hydrargyrum* or mercury; also for an alloy of silver, gold, and brass. (Kuland.)

**Elid'rium**. Same as *Elid'rium*.

**Elig'ii morbus**. (L. *morbus*, a disease.) A name for a fistula.

**Eligma**. Old term for a *Linctus*. (Quincy.)

**Elig'uate**. (L. *e*, out; *ligula*, a little tongue.) Without a ligula.

**Eliminant**. (L. *elimino*, to put forth from the threshold.) Having power to throw off by the excretions.

**Eliminate**. (L. *elimino*. G. *entfernen*, *vertreiben*.) To throw off by the excretions, to expel.

**Elimina'tion**. (L. *eliminatus*, part. of *elimino*, to put forth from the threshold. F. *élimination*; G. *Absonderung*, *Ausstossung*.) The act of throwing off, or excreting.

**Eliminatives**. (L. *elimino*.) Remedies which increase the excretions.

**Elinguate**. (L. *e*, neg.; *lingua*, the tongue. F. *élingue*; G. *ohne Zunge*.) Having no tongue or proboscis.

**Elinguid**. (L. *e*; *lingua*. G. *sprachlos*.) Speechless, tongue-tied.

**Eliselinum**. See *Eleoselinum*.

**Eliotrop'ia**. See *Heliotropia*.

**Elipsis**. The same as *Ecligma*.

**Eliquation**. (L. *eliquo*, to clarify, to make liquid. F. *éliquation*; G. *Abschmelzung*.) The act or process by which one substance is separated from another by fusion; consisting in the application of such a degree of heat as will make the more fusible matter flow, and not the other.

**Eligue acid**. A term given by Chevreul to a colourless fluid obtained from mutton suet.

**Elisabeth Salzbad**. Hungary, in Ofen. A saline water containing a considerable quantity of magnesium sulphate.

**Elithroides**. See *Elytroides*.

**Elix'ate**. (L. *elizo*, to seethe.) To extract by much boiling.

**Elix'ation**. (L. *elizo*, to seethe. G. *Sotten*, *Auslängen*.) A term for a decoction in which

# ELIXIR.

both the liquid product of boiling and the substance boiled are made use of.

Old term (*G. Absiden*), for the process of seething or boiling.

Also, a synonym of *Decoction*.

**Elixir.** (*Arab. el iksir*, the philosopher's stone.) A preparation similar to a compound tincture; also an extract or quintessence.

Also, applied to a compound of many drugs with syrup and spirit.

**E. acidum Dippelii.** Same as *E. acidum Halleri*.

**E. acidum Halleri.** Equal parts by weight of alcohol and strong sulphuric acid. Used as an astringent in hæmorrhages.

**E. ad longam vitam.** (*L. ad, to; longus, long; vita, life. G. Lebenselixir.*) The *Tinctura aloës composita*.

**E. alexipharmacum Huxhami.** (*Ἀλεξίφάρμακος*, resisting poison.) The *Tinctura chinæ Huxhami*.

**E. aloës.** The *Tinctura aloës composita*.

**E. amarum, G. Ph.** (*L. amarus*, bitter. *G. bitteres Elixir.*) Extractum absinthii 10 parts, saccharum menthe piperitæ 5, rubbed with 25 of water, and then tinctura aromatica 5, and tinctura amara 5 parts added.

**E. ammonia-to-opiatum.** The *E. e succo liquiritiæ* 40 parts, with the addition of 1 part of *Tinctura opii crocata*.

**E. anthelminticum succorum.** (*Ἀντι, against; ἄνυμς*, a worm; *L. succus*, juice.) The *Tinctura jalapæ composita*.

**E. antlastmatum Bôrhavii.** See *Bôrhavæ's antlastmatic elixir*.

**E. antihypochondriacum.** (*Ἀντι, against; ὑποχονδριακός*, affected in the hypochondrium.) The *Tinctura cinchonæ amara*.

**E. antinephriticum.** (*Ἀντι, νεφρικός*, affected with gravel.) The *E. acidum Halleri*.

**E. antiserosulous, of Peyrilhe.** Carbonate of soda and gentian root dissolved in weak alcohol. Used in serofula.

**E. aperitivum.** (*L. aperio*, to open.) The *Tinctura aloës composita*.

**E. aurantiorum compositum, G. Ph.** (*G. Hoffmann'sches Magenelixir, Pommeranzeneelixir.*) Orange peel 50 parts, cassia bark 10, and potash carbonate 25, macerated for eight days in 250 parts of sherry; then expressed and strained, and 5 parts each of extractum gentiane, extractum absinthii, extractum trifolii fibrini, and extractum casearii added.

**E., bitter.** The *E. amarum*.

**E., Bôrhavæ's.** Aloës, myrrh, saffron, and tartrate of potash dissolved in alcohol and water.

**E., calisay'a.** Calisaya bark 1 oz., orange peel 5 oz., cinnamon, coriander seeds, angelica seeds, of each 3 dr., caraway seeds, aniseed, cochineal, of each 1 dr., percolated with brandy until 10 oz. have been obtained, then with brandy and water in equal parts until 22 oz. have been obtained, and subsequently 10 oz. of syrup are added. A tonic and cordial.

**E., carminative, of Syllivius.** The *Tinctura carminativa Syllivii*.

**E. cinchonæ compositum.** Tincture of cinchona 3 parts, simple elixir 13.

**E. cinchonæ flavæ.** (*L. flavus*, yellow.) Yellow cinchona bark 4 oz., orange peel 2 oz., Ceylon cinnamon and coriander, of each 1 oz., anise, caraway, cardamom, and cochineal, of each 2 drs., brandy 25 pints, alcohol and water

sufficient; percolated to make 65 pints, and then syrup 5 pint added.

**E., Clau'der's.** Carbonate of potash 1 oz., aloës, guaiacum, myrrh, saffron, rhubarb, of each 2 drs., macerated in water 18 oz. for several days, and then decanted. Laxative and emmenagogue. Dose, a tablespoonful.

**E., Daffy's.** A nostrum said to be composed of senna half a pound, jalap, aniseed, and caraway, of each 10 drachms, juniper berries 25 ounces, proof spirit 6 pints; macerated for 14 days, and 105 ounces of treacle and 1 pint and 5 ounces of water added.

**E. Dano'rum.** The *E. e succo liquiritiæ*, *G. Ph.*

**E. de Ga'rus.** The *E. proprietatis Paracelsi*.

**E. e succo glycyrrhizæ.** (*L. e, from; succus*, juice; *glycyrrhiza*, liquorice.) The *E. e succo liquiritiæ*.

**E. e succo liquiritiæ, G. Ph.** (*L. liquiritiæ*, liquorice. *G. Brustelixir.*) Extract of liquorice 10 parts, dissolved in aqua fœniculi 39 parts, and liquor ammoniæ anisatæ 10 parts added.

**E. fœtidum.** (*L. fœtidus*, stinking.) The *Tinctura castorei composita*.

**E. guaiacac volatillæ.** (*L. volatilis*, fleeting, volatile.) The *Tinctura guaiaci ammoniata*.

**E. guarana's.** Percolate 4 troy ounces of powdered guarana with diluted alcohol until 8 fluid ounces of tincture have been obtained; then add spirit of orange 2 fluid drachms, spirit of cinnamon 10 minims, syrup 6 fl. oz., and water 2 fl. oz. (Stillé and Maisch.)

**E. jalapæ compositum.** The *Tinctura jalapæ composita*.

**E. longæ vitæ.** The *E. ad longam vitam*.

**E. of alker'mes.** Canella 23, mace 15, cloves 4, and nutmeg 4 parts, digested for five days in alcohol 3800 parts, distilled, and then sugar 6000, rose water 2500, and water 3000 parts added.

**E. of bis'muth citrate.** Bismuth citrate 256 grains, dissolved in four ounces of water with the aid of a few drops of ammonia, and added to 12 oz. of simple elixir. (Stillé and Maisch.)

**E. of calisay'a.** Tincture of cinchona 3 parts, simple elixir 13. (Stillé and Maisch.)

**E. of camphor, monobromated.** Monobromated camphor 3 grammes, alcohol 120, glycerin 100, water 80; dissolved by means of a gentle heat.

**E. of cinchona and iron.** Ammonio-citrate of iron 256 grains, sulphate of quinine 12, sulphate of cinchona 12, dissolved in half a fluid ounce of water, and added to 155 fluid ounces of simple elixir.

**E. of cinchona, iron, and bis'muth.** Ammonio-citrate of bismuth 256 grains dissolved in a fluid ounce of water, and mixed with *E. of cinchona and iron* 15 fluid ounces.

**E. of cinchona, iron, and strychnia.** Strychnia 25 grains and citric acid 5 grains, dissolved in 16 fluid ounces of *E. of cinchona and iron*.

**E. of Ga'rus.** Vanilla 1 part, saffron 5 parts, macerated in alcoholatum Gari 1000 parts for two days, and the product mixed with decoction of adiantum pedatum 20 parts for 500, orange flower water 200, and white sugar 1000.

**E. of gentian and iron.** Fluid extract of gentian 5 fl. oz., dilute alcohol 75 fl. oz., spirit of orange 2 fluid drachms, spirit of cinnamon 10

minims, syrup 6 fl. oz., and 256 grains of ammonio-citrate of iron, previously dissolved in water 2 fl. oz. (Stillé and Maisch.)

**E. of hops.** Tincture of hops 8 fl. oz., spirit of orange 2 fluid drachms, spirit of cinnamon 10 minims, syrup 6 fl. oz., and water 2 fl. oz. (Stillé and Maisch.)

**E. of iron pyrophosphate.** Pyrophosphate of iron 256 grains dissolved in an ounce of water and 15 ounces of simple elixir. (Stillé and Maisch.)

**E. of iron pyrophosphate, compound.** Pyrophosphate of iron 256 grains, dissolved in 4 fluid ounces of distilled water and 6 fluid ounces of syrup added along with a solution of strychnia 2-5 grains, and quinine 128 grains, in alcohol 5-5 fl. oz., and spirit of orange 5 fl. oz. (Stillé and Maisch.)

**E. of long life.** The *Tinctura aloes composita*.

**E. of potassium bromide.** Potassium bromide 1280 grains dissolved in 16 fluid ounces of red elixir. (Stillé and Maisch.)

**E. of quinine, cinchonin, and iron.** The *E. of cinchona and iron*.

**E. of vitriol.** The *Acidum sulphuricum aromaticum*.

**E. of vitriol, sweet.** The *Spiritus aetheris aromaticus*.

**E. of vitriol, Vigani's.** The *Spiritus aetheris aromaticus*.

**E., paregoric.** (Παρρηγορικός, soothing.) The *Tinctura camphoræ composita*.

**E., paregoric, Scotch.** (Παρρηγορικός.) The *Tinctura opii ammoniata*, formerly in the Edinburgh Pharmacopœia.

**E. paregoricum.** (Παρρηγορικός, soothing.) The *Tinctura camphoræ composita*, B. Ph., and the *Tinctura opii camphorata*, U.S. Ph., and the *T. opii benzoica*, G. Ph.

**E. pectoralē.** (L. *pectoralis*, belonging to the breast.) The *E. e succo liquiritiæ*.

**E. pectoralē dulcē.** (L. *dulcis*, sweet.) The *E. e succo liquiritiæ*.

**E. pectoralē Hufelandii.** Elecampane root, iris root, squills, of each 8 parts, benzoin, myrrh, aniseed, extract of liquorice, ammoniacum, of each 4, saffron 3, spirit of wine 93 parts. Dose, a teaspoonful.

**E. pectoralē regis Daniae.** (L. *rex*, a king.) The *E. e succo liquiritiæ*.

**E. proprietatis.** Same as *E. proprietatis Paracelsi*.

**E. proprietatis cum acido.** The *E. proprietatis Paracelsi* acidulated with sulphuric acid.

**E. proprietatis cum rheo.** Aloes 6 parts, myrrh 2, saffron 1, rhubarb 4, Spanish wine 64, hydrochloric acid 4 parts.

**E. proprietatis Paracelsi.** G. Ph. (G. *saures Abœlixir*.) Aloes, myrrh, of each 2, saffron 1 part, macerated for eight days in alcohol 24 parts and dilute sulphuric acid two parts.

**E. proprietatis sine acido.** (L. *sine*, without.) Aloes 6 parts, myrrh 2, saffron 1, tartrate of potash 3, water 7, spirit of wine 14 parts.

**E. proprietatis tartarisa'tum.** The *E. proprietatis Paracelsi* with the addition of tartar.

**E. purgans.** (L. *purgo*, to purge.) The *Tinctura jalapii composita*.

**E., Radcliffe's.** The *Tinctura aloes composita*.

**E., red.** Compound tincture of cochineal 5 fl. oz. mixed with simple elixir 15-5 fluid ounces.

**E. regis Daniae.** (L. *rex*, a king.) The *E. e succo liquiritiæ*.

**E. rhei compositum.** The *Vinum rhei*.

**E. rhei dulcē.** (L. *dulcis*, sweet.) The *Vinum rhei*.

**E. Ringelman'ni.** The *E. e succo liquiritiæ*.

**E. roborans Whyt'tii.** (L. *roboro*, to make strong.) The *Tinctura cinchonæ amara*; also the *Tinctura chinæ composita*, G. Ph.

**E. sa'crum.** (L. *sacer*, holy.) Old epithet for a tincture made chiefly of rhubarb and aloes. The *Tinctura rhei et aloes*.

**E. salutis.** (L. *salus*, health.) *F. elixir de salut.* The *Tinctura sennæ composita*.

**E., simple.** Spirit of orange 2 fluid drachms, spirit of cinnamon 10 minims, alcohol 4 fl. oz., syrup and water of each 6 fluid ounces. (Stillé and Maisch.)

**E. stomachicum.** (Στομαχικός, disordered in the stomach.) The *Tinctura gentianæ composita*.

**E. stomachicum spirituosum.** The *Tinctura cinchonæ amara*.

**E. sue'cicum.** (Mod. L. *suecicus*, Swedish. *F. elixir succidous*.) The *Tinctura aloes composita*.

**E. sulfurico-acidum.** The *E. acidum Halleri*.

**E. traumat'icum.** (Τραυματικός, for wounds.) The *Tinctura benzoini composita*.

**E. vene'reum.** A name for the preparation call'd *Jesuits' drops*.

**E. viscera'lē Hoffmanni.** (L. *viscera*, the internals.) An old medicine represented by the *E. aurantiorum compositum*, G. Ph.

**E. vi'tæ.** (L. *vita*, life.) A panacea for all evils, and a source of long life, often searched for, and always being found, by the olden chemists and alchemists.

**E. vitæ Mathi'oli.** (L. *vita*, life.) Old title for a preparation made from a great number of aromatic and stimulant substances digested in alcohol. Formerly used in epilepsy.

**E. vitrioli.** The *Acidum sulphuricum aromaticum*.

**E. vitrioli acido-aromat'icum.** The *Acidum sulphuricum aromaticum*.

**E. vitrioli cum tinctura aromatica.** The *Acidum sulphuricum aromaticum*.

**E. vitrioli dulcē.** (L. *dulcis*, sweet.) The *Spiritus aetheris aromaticus*.

Also, the *Acidum sulphuricum aromaticum*.

**E. vitrioli Edinburgensium.** The *Acidum sulphuricum aromaticum*.

**E. vitrioli Mynsichti.** The *Acidum sulphuricum aromaticum*, and the *Tinctura aromatica acida*, G. Ph.

**E. Whyt'tii.** The *Tinctura cinchonæ amara*.

**Elixirium.** An *Elixir*.

**E. antisept'icum.** (Ἐντί, against; σήπτικός, putrefying.) The *Tinctura cinchonæ ætherica composita*.

**Elix'is.** Same as *Electos*.

**Elixivia'tion.** (L. *e*, out of; *lixivium*, a lye.) Old term for the extraction of a fixed salt from vegetables by the allusion of water. See *Lixiviation*.

**Eliz.** Old term for the *Flos æris*. (Quincy.)

**Elk.** (Icel. *elgr*; Sw. *ely*; or perhaps through *L. alces*; Gr. *ἄλκη*; from Sans. *rishya*, a kind of antelope. F. *élan*; I. *alce*; G. *Elendthier*.) The *Alces mulchis*. Used largely as food in its native habitat. The hoofs were formerly used in epilepsy on the ground that the animal was subject to fits, which it cured by putting the hoof of the left foot into its ear.

**E. bark.** The *Magnolia glauca*.

**E. tree.** The *Andromeda arborea*.

**E. wood.** The *Andromeda arborea*, and also the *Magnolia macrophylla*.

**Elkoplasy.** See *Holeoplasy*.

**Elle'bria.** Switzerland, Canton St. Gall. A sulphur spring.

**Ellagic.** (F. *galle*, read backwards, a nut-gall.) Of, or belonging to, the nut-gall.

**E. acid.**  $C_{14}H_{10}O_8$ . (G. *Ellagsäure*.) An anthraene derivative formed by the action of oxidising agents on gallic acid; it is contained in bezours, from which it may be obtained by boiling with potash and precipitating with hydrochloric acid.

**Ellagitan'nic acid.**  $C_{14}H_{10}O_{10}$ . The form of tannic acid found in myrobalans and divi-divi; it differs from gallotannic acid in that it contains another atom of oxygen.

**Elleboras'ter.** The *Helleborus fatidus*.

**Ellebo're.** See *Hellebo're*.

**Elleboris'mus.** See *Helleborism*.

**Ellebo'rus.** See *Hellebo'rus*.

**Ellipan'thous.** (Ελληνθός, defective; ἄνθος, a flower. F. *ellipanthé*; G. *unvollkommenblühend*.) Having incomplete flowers; either stamens only or pistils only. Same as *Dianthus*.

**Ellipse'.** Same as *Ellipsis*.

**Ellipsis.** (L. *ellipsis*, from Gr. ἔλλειψις, a leaving behind, a defect. F. and G. *ellipse*.) An oval figure produced when a cone is cut by a plane cutting through it, but not running parallel to or cutting the base.

**Ellipsoid.** (Ελληνειδής, an ellipse; εἶδος, likeness.) A solid figure every plane section of which is an ellipse or a circle.

Also, like to an ellipse, oval in shape.

**Ellipsoid'al.** (Ελληνειδής; εἶδος.) Of the shape of an ellipse, almost oval.

**Ellipsospermous.** (Ελληνειδής; σπέρμα, a seed. F. *ellipsosperme*; G. *ellipssamig*.) Having elliptic seeds.

**Elliptic.** (Ελληνειδής, defective, elliptic. F. *elliptique*.) Of, or belonging to, an *Ellipsis*.

Applied to leaves so shaped.

**E. paren'chyma.** See *Parenchyma*, *elliptic*.

**E. polarisa'tion.** See *Polarisation*, *elliptic*.

**Elliptical.** Same as *Elliptic*.

**E. amputa'tion.** A mode of amputation specially adapted for the removal of the limb at the elbow or the knee; in which the incision has the form of an ellipse, the long extremity being on the side furthest from the vessels.

**Elliptico-lan'ceolate.** (Elliptic; lanceolate.) A term for a lanceolate leaf with a somewhat elliptic or ovoid outline.

**Ello'pa.** The Malay name of *Bassia longifolia*.

**E. oil.** The oil of the fruit of *Bassia longifolia*.

**Ellychnis'tus.** Same as *Ellychniotus*.

**Ellychnia.** (Ελληνιον, a lamp wick.)

A term applied to the stellate arrangement of veins on the surface of the kidney which gives origin to the interlobular veins of the kidney.

**Ellychniotos.** (Ελληνιοντός, made of cotton torch; ελληνιον, a torch or candle wick.) Old term for a kind of liniment, because it was made of the material from which torches or candles were formed.

According to some, and more probably, a kind of tent shaped like or made of a lamp wick.

**Elm.** (Sax. *elm*. F. *orme*; I. *olmo*; G. *ulme*.) The *Ulmus campestris*.

**E. bark.** See *Ulm's cortex*.

**E. bark, slip'pery.** See *Ulmus*, U.S.

Ph.

**E., broad-leav'ed.** The *Ulmus campestris*.

**E., com'mon.** The *Ulmus campestris*.

**E.-leav'ed su'mach.** The *Rhus coriaria*.

**E., red.** The *Ulmus fulva*.

**E., rough-leav'ed.** The *Ulmus americana*.

**E., slip'pery.** The *Ulmus fulva*.

**E., white.** The *Ulmus americana*.

**El'men.** Prussia, near Magdeburg. A strong salt spring, containing in the drinking water 201 grains, and in the bathing water 375 grains, of sodium chloride in a pint. Used in scrofulous and rheumatic diseases.

**El'mins.** See *Holmins*.

**El'minthocorton.** See *Helminthocorton*.

**El'oanx.** (Arab.) Old name for *Auripigmentum* or orpiment. (Ruland.)

**Eloc'ular.** (L. *e*, without; *loculus*, a small cell.) Not divided into cells, partitions, or loculi.

**Elodæ'a.** A Genus of the Nat. Order *Hypericaceæ*.

**E. virgin'ica.** Hab. North America. A stomachic tincture is prepared from the leaves.

**Elodææ.** A Tribe of the Nat. Order *Hypericaceæ* having glands alternating with the bundles of stamens.

**Elodes.** (Έλος, a swamp.) The Greek name for sweating fevers. See *Helodes*.

**El'omö.** A synonym of *Orpiment*.

**Elongan'thous.** (Low L. *elongo*, to lengthen out; Gr. ἄνθος, a flower.) Having longish spikes.

**Elongate.** (Low L. *elongo*, to lengthen out. F. *allongé*; G. *verlängert*.) Lengthened out.

**Elongated.** (L. *elongatus*, part. of *elongo*. G. *verlängert*.) Lengthened.

**E. paren'chyma.** See *Parenchyma*, *elongated*.

**Elonga'tion.** (Low L. *elongo*, to lengthen out. F. *élongement*, *allongement*; G. *Verlängerung*.) A lengthening or stretching out. Old term for an imperfect luxation, when the ligaments are only relaxed and lengthened, but the bone is not out of place.

Also, the extension of a limb for the purpose of reducing a dislocation or setting fractured bones, according to Fallopius, *de Luxat.* ii. 3.

**Elöpa'tak.** Russia, near Cronstadt. An alkaline chalybeate mineral water used in scrofula, rickets, gout, chronic rheumatism and abdominal congestions.

**Elor'rio.** Spain, in the province of Biscay. A cold sulphuretted spring.

**El'ster.** Saxony. An alkaline saline chalybeate water, from several springs, in a plea-

sant valley 1465 feet above sea-level. The different springs contain from 4 to 48 grains of sodium sulphate, 3 to 14 grains of sodium chloride, and about .35 grain of carbonate of iron and a little lithia in a pint with free carbonic acid. Used in anæmia, in chronic bronchial catarrh, and in abdominal congestions. There are peat baths, and the whey cure is employed.

**Eltville.** Germany, Nassau, in the Sulzbach valley, 670 feet above sea-level. A salt spring.

**Elu'triate.** (L. *elutrio*, to wash out.) To purify by washing.

**Elu'triation.** (L. *elutrio*, to wash out. F. *Elutration*; G. *Auswaschen, Ausschlammen*.) Term for the act or process of pulverising metallic ores, or other substances, and mixing them with water, so that the lighter parts capable of suspension are poured off, and thus separated from the heavier particles which fall to the bottom.

In Pharmacy, the term is applied to the mode of obtaining a very fine powder, as in the process of obtaining prepared chalk.

**Elu'vics.** (L. *eluvies*, from *eluo*, to wash out.) Old term for the humour discharged in *Leucorrhæa*, according to Pechlinius, *Obs. Ph. Med.* i, 36, *fin*.

Also, an inordinate discharge of any kind.

Also, the excessive discharge itself.

**Elux'ate.** (L. *e*, out; *luco*, to put out of joint.) To dislocate, or put out of joint.

**Eluxa'tion.** The same as *Luxation*.

**Elythritis.** The same as *Elytritis*.

**Elytra.** Plural of *Elytron*.

Also, a term applied to iuibrated plates or scales.

**Elytratre'sia.** (Ελντρον, a sheath, the vagina; *ἀ*, neg.; *τρώω*, to pierce through. F. *elytratre'sie*.) Occlusion of the vagina.

**Elytreurynter.** (Ελντρον; *εἰρύνω*, to dilate.) A vaginal speculum.

**Elytricule.** (Dim. *elytrum*. F. *elytricule*; G. *Deckschildchen*.) Name by Necker for each of the small florets which constitute compound flowers.

**Elytriform.** (Ελντρον; L. *forma*, likeness.) Having the appearance of a sheath, or of an elytron.

**Ely'trin.** (Ελντρον.) The form of chitin which composes the elytra of insects.

**Elytritis.** (Ελντρον, a sheath, the vagina. F. *elytrite*, *elytrite*; G. *Entzündung der Scheide*.) A term for inflammation of the vagina.

**Elytroblennorrhœa.** (Ελντρον; *βλεῖνω*, mucus; *ροία*, a flow.) Vaginal leucorrhœa.

**Elytrocaus'tique.** (Ελντρον; *καυστικός*, capable of burning.) A forceps designed for the purpose of effecting mechanical compression and also, at the same time, euterisation of the vagina, to diminish its calibre and so prevent or retain prolapsus of the womb.

**Elytrocele.** (Ελντρον; *κηλή*, a tumour. F. *elytrocele*; G. *Scheidenbruch*.) Old term for vaginal hernia.

**Elytrocy'e'sis.** (Ελντρον; *κύσις*, pregnancy. F. *elytrocyse*; G. *Scheiden schwangerschaft*.) Pregnancy of the vagina.

**Elytroedema.** (Ελντρον; *οἰδήμα*, a swelling.) Edema of the vagina.

**Elytroid.** Same as *Elytroides*.

**E.mem'brane.** The tunica vaginalis of the testicle.

**Elytroïdes.** (Ελντρον, a sheath; *ἴδης*, likeness. F. *elytroïde*; G. *scheidenähnlich, scheidenartig*.) Resembling a covering or sheath.

Formerly applied to the *Tunica vaginalis*, because it enclosed the testis like a sheath.

Also, an old name for a form of vaginal pessary.

**Elytroitis.** Same as *Elytritis*.

**Elytromochlion.** (Ελντρον, a sheath, the vagina; *μοχλός*, a lever.) A pessary consisting of a steel spring with wooden lips, which distends the vagina laterally, and so supports a prolapsed womb.

**Elytron.** (Ελντρον. G. *Scheide*.) A sheath. A term for the vagina.

Also, a term applied to the shield-like plates or notopodial appendages on the back of some polychæteous Annelids.

Also, a name of the spinal membranes.

Also (G. *Flügeldecke*), the outer hard wing-case of a coleopterous insect, one on each side. It consists of an outer, cellular, epidermic layer, a second or inner, cellular, epidermic layer, a third or dark, resinous, pigmental layer, and a fourth or cuticular layer, in or on which the nerves or veins of the elytron run.

**Elytron'cus.** (Ελντρον; *όγκος*, bulk, mass. G. *Scheidenschwulst*.) A hard vaginal swelling or tumour.

**Elytropapp'pus.** (Ελντρον; *πάππος*, seed down.) A Genus of the Nat. Order *Compositæ*.

**E.rhinocero'tis.** (Ρινόκερος, the rhinoceros.) Hab. South Africa. A bitter and resinous stomachic. An infusion is given in infantile diarrhœa.

**Elytroph'y'ma.** (Ελντρον; *φῦμα*, a tumour.) Swelling or soft tumour of the vagina.

**Elytroplas'tic.** Relating to *Elytroplasty*.

**Elytroplasty.** (Ελντρον; *πλάσσω*, to form. F. *elytroplastie*.) A term for the operation of closing a vesico-vaginal fistulous opening by borrowing a flap from the labia or nates.

**Elytropolypus.** (Ελντρον; *πολύς*, many; *ποῦς*, a foot. G. *Mutterscheidenpolyp*.) Vaginal polypus.

**Elytrop'terous.** (Ελντρον; *πτερόν*, a wing. F. *elytrophère*; G. *deckschildflugelicht*.) Having the wings properly covered by elytra.

**Elytrop'to'sis.** (Ελντρον; *πτώσις*, a falling down. F. *elytrophose*; G. *Mutterscheiden vorfall*.) An inversion or prolapsus of the mucous membrane of the vagina.

**Elytrorrhagia.** (Ελντρον; *ρήγνυμι*, to burst forth. F. *elytrorrhagie*; G. *Mutterscheidenblutung*.) Term for sudden discharge, as of blood, from the vagina.

**Elytror'r'haphy.** (Ελντρον; *ράφη*, a seam. G. *Scheidennaht*.) The operation of closing the orifice of the vagina by suture in order to support the uterus when prolapsed.

Also, the suturing of a ruptured vagina.

**Elytrorrhœa.** (Ελντρον; *ροία*, a flow.) Same as *Elytrorrhagia*, but having reference to a freer and more prolonged flow.

**Elytrotome.** (Ελντρον; *τομή*, section.) A pair of scissors for section of the vagina.

**Elytrotomy.** (Ελντρον; *τομή*. G. *Scheidenchnitt*.) A cutting into, or of, the vagina.

**Elytrum.** Same as *Elytron*.

**Ema'ciate.** (L. *emacio*, to make very lean.) To make lean, to become lean.

**Emacia'tion.** (L. *emacio*. F. *émaciation*, *amaigrissement*; G. *Abmagerung*, *Abzehrung*.) The state of being, or of becoming, lean or emaciated.

**Emanation.** (L. *emano*, to flow out. F. *émanation*; G. *Ausfluss*.) The act of flowing from; that which issues or proceeds from.

**Emandibulate.** (L. *e*, neg.; *mandibula*, a jaw. F. *emandibulé*; G. *ohne Kinnladen*.) Without mandibles.

**Eman'sio.** (L. *emansio*, from *emaneo*, to exceed one's furlough.) A tarrying long out of a place.

**E. men'sium.** (L. *mensis*, a month.) Term for a tarrying or delay in the first appearance of the catamenia or menses.

Also, a synonym of *Amenorrhœa*.

**Emar'cid.** (L. *e*, intens.; *marceo*, to droop.) In Botany, flaccid.

**Emarginate.** (L. *emargino*, to take away the edge or margin. F. *emarginé*; G. *ausgerandet*, *eingekerbt*.) Having a sharp or nearly triangular notch at the apex; nicked; applied to leaves and petals.

Also, applied to the gills of Agarics when they are notched before joining the stipe.

**Emargina'tion.** (L. *emargino*. F. *échanerure*.) The condition of having a notch; the act of making a notch, or taking away the margin. A notch or depression on the edge of a bone, or of a leaf.

Also, the cleansing of a wound or ulcer by the removal of debris or soddened epidermis from its edges.

**Emarginature.** (L. *emargino*.) In Botany, a superficial or shallow notch at the apex of an organ.

**Emas'culate.** (L. *emasculo*, to make impotent. F. *emasculé*; G. *entmannig*.) Impotent; incapable of generating; applied to males in this condition.

Also (G. *entmannen*), to remove the testicles, to deprive of virile power.

**Emascula'tion.** (L. *emasculo*, to make impotent. F. *emasculat*; G. *Entmannung*.) The act or process of rendering impotent, by injury or removal of the whole of the male generative organs or of the testicles only. The removal of the whole male organs, the penis and testicles, is practised in Egypt to obtain a eunuch. The subjects are often young negro boys of seven or eight years of age. The removal is effected by a sharp knife, boiling oil is poured on the wound, and a tube inserted into the urethra to keep open the canal.

**Embalm.** (F. *embaumer*; from *en*, in; *baume*, balsam.) To anoint with balsam; to perform the act of *Embalming*.

**Embalming.** (Old F. *embaumer*, from *en*, in; *baume*, balsam. F. *embaumement*; G. *Enbalsamirung*.) The process of impregnating a dead body with antiseptic and balsamic substances, by which it is preserved against putrefaction, and retains its form and consistency for an indefinite period of time. Many substances have been used for the purpose. The ancient Egyptians used asphalt; in later times arsenical and mercurial preparations have been used, as well as salts of zinc, of hyposulphurous acid, and other substances.

**Embamma.** (F. *εμβάπτω*, to dip in.) Old name (Gr. *εμβάμμα*) for a liquid condiment in which the food was dipped to excite the appetite. (Gorraeus.)

**Embaph'ium.** (F. *εμβάφιον*, a flat vessel for sauces.) A cup into which medicine or food is placed, or in which it is measured.

Also, a vessel in which anything is dipped or steeped.

**Embase'ment.** Same as *Embasis*.

**Embasis.** (F. *εμβασις*, a going in.) A bath for hot water.

**Emb'den groats.** See *Groats*, *Embden*.

**Embed'ded.** Lying as in a bed, deep planted.

**Embellia.** A Genus of the Nat. Order *Myrsinaceæ*.

**E. ri'bes.** Burm. Hab. India. Berries anthelmintic and cathartic. Used to adulterate pepper.

**E. ribeslo'i'des**, Liun. The *E. ribes*.

**E. robusta.** (L. *robustus*, hard.) Berries cathartic.

**Emb'ira.** The *Xylopia grandiflora*, the fruit of which is used as a spice in Brazil. It is the *Pindoriba* of Piso.

**Embl'ic myrob'alans.** See *Myrobalans*, *embl'ic*.

**Embl'ica.** A Genus of the Nat. Order *Euphorbiaceæ*.

**E. officina'lis**, Gärt. (L. *officina*, a shop.) The species supplying embl'ic myrobalans. Leaves and bark used in dysentery; flowers aperient. Also, called *Phyllanthus embl'ica*.

**Emboitement.** (F. *emboiter*, to fit in.) The enclosure of a series of objects one within the other.

In Biology, the term was used by Buffon to describe the hypothesis of the generation of living things, according to which successive generations are produced by the successive development of living germs which lie one within the other.

**Embolæ'mia.** (F. *εμβολος*, a wedge; *αίμα*, blood.) The condition of the blood prior to, or accompanying, the formation of metastatic abscesses in pyæmia, when it contains pus-masses or fragments of clot or other substances which form the embolus around which the abscess forms.

**Embolê.** (F. *εμβολή*, a throwing or putting in; from *εμβαλλω*, to throw in.) The reducing of a dislocated limb.

Also, a plug or wedge.

Also, same as *Embolus*.

**Embolia.** (F. *εμβολος*, a wedge.) Diseases produced by *Embolism*.

**Embol'ic.** (F. *εμβολος*.) Relating to, or caused by, an *Embolus*.

**E. abs'cess.** See *Abscess*, *embolic*.

**E. arteri'tis.** Same as *Arteritis*, *plastic*.

**E. infarc'tion.** (L. *infarcio*, to stuff into.)

The plugging of a blood-vessel by an *Embolus*.

**E. invagina'tion.** See *Invagination*, *embolic*.

**E. phleb'i'tis.** See *Phlebitis*, *embolic*.

**E. pneumo'nia.** See *Pneumonia*, *embolic*.

**E. pro'cess.** The development of *Embolism* and the formation of an *Embolus*.

**Embolimos.** (F. *εμβόλιμος*, inserted.) Same as *Intercalary*.

**Embolis'm.** (F. *εμβόλις*, to put in. F. *embolisme*; G. *Einsetzen*.) A putting in or inserting.

**Embolism.** (F. *εμβόλισμα*, that which is put in; from *εμβαλλω*, to throw in. F. *embolie*; G. *Embolie*.) A term formerly used to denote the replacement of a dislocated bone;

## EMBOLISM.

also the act or condition of infiltration or injection of the tissues.

In the Medicine of to-day the term is used to denote an obstruction of the lumen of a blood-vessel by some body, not rightly there, which has been conveyed by the blood-current to the place of arrest from some other, and perhaps distant, part of the circulatory system. The obstructing mass, or *Embolus*, may be a blood-clot, or a fibrinous concretion from a vein, from an aneurysm, or from the cavity of the heart, a detached vegetation from a diseased cardiac valve, debris from calcareous or atheromatous vessel-walls, a fragment from a morbid growth, fat, air, or some foreign substance introduced from without. If, from its shape, it does not at first completely stop the circulation through the vessel in which it has been arrested, it soon does so, either by being driven onwards by the blood current or by coagulation of blood around it. The location of the embolus depends on its source; if it be derived from the right side of the heart, or the systemic veins, it will be in the course of the pulmonary arteries; if from the left side of the heart, the systemic arteries, or the pulmonary veins, it will be in the course of the systemic arteries; and if from veins of the organs of digestion, it will be found in the liver. Embolism may produce only transient deficiency of blood in the area supplied by the affected artery, on account of free intercommunication of blood-vessels, or on account of the small size of the vessel in which the arrest has taken place, as in a capillary; or it may produce inflammation of the walls of the vessel where it is arrested, with consequent local coagulation of the contained blood and impairment of nutrition of the part which it feeds, either in the form of atrophy, or of interstitial or general necrosis; or the coagulation may extend throughout the branches of the blocked vessel, as in the *Endoarteries*, and a hæmorrhagic infarction may result; caused, according to some, by reflux from the veins; according to others, by side-flow from neighbouring arteries through capillaries. When embolism is produced by infective clots, as in some septic inflammations, it may give rise to small abscesses at the point of arrest.

**E., air.** The condition of arrest of the flow of blood by a plug of air in a vessel, which is by some supposed to be the cause of death produced by the admission of air into one of the large veins; it is not generally admitted.

**E., apoplecticiform cerebral.** A term applied to embolism of a cerebral artery with consequent apoplecticiform symptoms.

**E., arterial.** Embolism of an artery, or of a branch. The common cause is a detachment of a fragment of a fibrinous vegetation on, or of some calcareous debris of, a cardiac valve; or of a fragment of a thrombus; and its most usual seat is the brain, spleen, or kidney.

**E., capillary.** (*L. capillus*, a hair.) Embolism of a capillary blood-vessel; when single or few, little disturbance of the part is produced; when numerous, grave disturbances of the functions of the organs affected may ensue.

**E., cerebral.** (*L. cerebrum*, the brain.) Embolism of some cerebral artery, a frequent cause of apoplexy.

**E., fat.** Embolism, chiefly of the pulmonary capillaries, produced by particles of oil which have gained admission into the blood. It is an occasional cause of sudden death, a few days after an operation, or after a fracture of a bone, or

during pyæmia, preceded by collapse, lividity of skin, some hæmoptysis, Cheyne-Stokes respiration, delirium, spasmodic movements, and perhaps paralysis; and frequently oil globules are to be seen in the urine. In such cases the blood-vessels of the lungs are found to be plugged with oil-globules, and sometimes those of the brain and spinal cord. It may be produced artificially by injecting oil into the systemic circulation, into the serous cavities, into the subcutaneous connective tissue, or into lymph sacs.

**E., lymphatic.** (*Lymph.*) The arrest of solid matter in a lymphatic vessel, or perhaps more commonly in a lymphatic gland; a condition which probably occurs in cancer and in purulent infection, when inflammation, and often suppuration, of a lymphatic gland results.

**E., microscopic.** (*Μικρός*, little; *σκοπεῖν*, to observe.) Same as *E., pigmental*, on account of the small size of the obstructions.

Also, the same as *E., capillary*.

**E., multiple.** (*L. multiplex*, having many parts.) A term applied to the form of embolism in which the emboli are small and numerous, such as may occur in ulcerative endocarditis, or in the softening of venous clots.

**E., oil.** Same as *E., fat*.

**E., pigmental.** (*L. pigmentum*, a paint.) The condition which occurs in certain of the organs in some malarious diseases when they contain numerous minute deposits of black pigment, derived from the breaking up of red blood-corpuscles in the spleen; the large particles are arrested in the liver, the small pass through and are deposited in the heart, brain, and other organs.

**E., pulmonic.** (*L. pulmo*, the lung.) Embolism of the pulmonary artery presents different symptoms and ends in different fashion, whether the obstruction be of the trunk or of a large branch, or whether it be of one or many small twigs; in the former case there may be rapid death from collapse, preceded by severe pain in the cardiac region and great dyspnoea; in the latter there may result patches of pulmonary apoplexy or hæmorrhagic infarction, or of pneumonic consolidation, multiple abscesses, or limited gangrenes of the lung.

**E., pyæmic.** (*Πύον*, pus; *αἷμα*, blood.) The condition of disseminated abscesses in the viscera and other parts which occurs in pyæmia, from transfer of pus, fragments of blood clot, or other substances, from the inflamed veins of the primarily diseased part.

**E., retinal.** (*Retina*.) Arrest, partial or complete, of the flow of blood through the trunk or one of the branches of the arteria centralis retinae. It may arise from chronic endarteritis, or more frequently from detachment of a fragment of deposit from one of the valves of the heart, resulting from endocarditis and its impaction in the artery. It sometimes occurs in puerperal states, attended with pyæmia. The attack usually supervenes suddenly, and is attended with impairment or loss of vision, but with little pain. There is sometimes temporary and partial return of vision. The affection is unilateral. Ophthalmoscopic examination shows that the media are clear, but the papilla is pale; the arteries emanating from it reduced in size to threads and white. The retinal veins are small but often varicose; occasionally hæmorrhages are observed. After some days the retina becomes cloudy. The yellow spot presents the

aspect of a red spot, which after a few days becomes opaque, probably from serous infiltration of the retina. The termination varies; most commonly white atrophy of the optic papilla occurs, with great impairment or total loss of vision; but sometimes partial collateral circulation is established, and then some vision may be retained. If only one branch of the retinal artery is affected, that part of the retina supplied by it becomes insensitive.

**E., venous.** (L. *vena*, a vein.) Embolism of some part of the venous system; it very rarely occurs in the general veins, because they are larger in the direction of the current; the most common seat is the lungs and the liver.

**Embolismus.** Same as *Embolism*.

**Embolon.** (Εμβολον, a plug.) Same as *Embolus*.

**Embolum.** Same as *Embole*.

**E. cerebri.** (L. *cerebrum*, the brain.) The infundibulum of the brain.

**Embolus.** (Εμβολος, anything put in, as a wedge. F. *embole*.) The body which causes *Embolism*.

Also, in olden medical language, the piston of a syringe.

Also (F. *embole*; G. *Hornzapfen*), the osseous axis of the horns of the *Ruminantia caricornia*.

**E., pigment.** See *Embolism*, *pigmental*.

**Emboly.** (Εμβολή, a throwing in.) Same as *Invagination*, *embolie*.

**Emborisma.** A synonym of *Aneurysma*.

**Embossed.** (F. *embosser*, to swell in bunches.) In Botany, projecting in the centre like the boss of a shield.

**Embotum.** A funnel converging fumes into any part of the body. (Parr.)

**Embowelling.** (F. *em*, for *en*, in; E. *bowel*, from Old F. *boel*.) The removal of the abdominal viscera. Properly *Disembowelling*; embowelling rightly means enclosing deeply.

**Embrace.** (F. *embrace*; from *em*, for *en*, in; *bras*, the arm.) To take in the arms; to enclose.

**Embracing.** (Same etymon.) Enclosing.

In Botany, applied to a wide-based leaf which encloses or clasps the stem from whence it springs.

**Embreg'ma.** (Εμβρεγμα, from *εμβρίχω*, to soak in.) Old term for an embrocation. P. Morellus, *Meth. Præser. Form.* ii. s. i. c. 7.

**Embrocatio.** Same as *Embrocation*.

**E. acotinæ.** Aconitin 8 grains, rectified spirit 2 ounces. (Turnbull.)

**E. ammoniæ.** Camphor 2 oz., rectified spirit 14 oz., solution of ammonia 2 oz., oil of lavender .5 oz. Used for headache.

**E. delphin'æ.** Delphinia a scruple, rectified spirit 2 ounces. (Turnbull.)

**E. veratriæ.** Veratrin a scruple, rectified spirit 2 ounces. (Turnbull.)

**Embrocation.** (Εμβρίχω, to soak in. F. *embrocation*; G. *Eureibung*.) A fluid application for rubbing on any part that may be bruised, inflamed, painful, or otherwise diseased.

Also, an old synonym of *Fomentation*.

**E., Roché's.** Olive oil 2 oz., oil of cloves and oil of amber, of each 1 ounce. (Paris.)

**Embrocha.** Same as *Embroche*.

**Embroché.** (Εμβροχή.) The same as *Embrocation*.

**Embronte'tos.** (Εμβρόντητος, thunder-struck.) An old term for one struck with apoplexy.

**Embryo.** (F. *embryon*, from Gr. *ἐμβρυον*, the embryo; from *ἐμ*, for *εν*, in; *βρύω*, to swell with.) The rudiment of a living thing, or its fecundated germ.

Term for the fœtus in utero before the fourth month of pregnancy.

In Botany, the rudimentary plant contained in the seed; it consists of a central axis, the lower part of which is the radicle, the upper the plumule, and one or two seed leaves or cotyledons near its upper end. It is developed from the inferior terminal cell, or suspensor, of the row of cells developed from the oosphere of the ovule after fertilisation by the pollen.

**E. adventitious.** (L. *adventitius*, additional.) Strasburger's term for the supernumerary embryos which are found in the seeds of some plants as the *Funkia*; they originate in a species of budding of the cells of the nucellus.

**E. bud.** See *Bud*, *embryo*.

**E. cell.** The germ in the embryo sac of the archegonium of *Filices*, *Hepaticæ*, and *Musci*.

Also, a term for the first cell of the fecundated animal ovum.

**E., dicotyle'donous.** (Δίς, twice; κοτυληδών, a seed lobe.) The plant embryo which is provided with two cotyledons. The cotyledons vary in form, in texture, and in relative position to each other and to the radicle; occasionally, as in *Corydalis*, there may be only one by abortion of the other, and sometimes, as in *Quercus*, there may be three by excess of development; the axis is always prolonged below the cotyledons to form the radicle.

**E., fix'ed.** Dupetit-Thouars's name for the leaf buds of plants.

**E., mo'bile.** (L. *mobilis*, movable.) Dupetit-Thouars's name for the fertilised ovule or seed of plants.

**E. monocotyle'donous.** (Μόνος, single; κοτυληδών, a seed lobe.) The plant embryo which is provided with one cotyledon only. This embryo is generally small in proportion to the remainder of the seed; it is usually cylindrical and fusiform, the axis terminating in a very short radicle, and bearing a large sheathing cotyledon, which in the grasses is covered by an outgrowth of the axis, called the *Scutellum*.

**E., naked.** A term applied to a spore.

**E. nod'ule.** (L. *nodulus*, a small knot.) Same as *Bud*, *embryo*.

**E. sac.** A cavity formed by the development of one cell of the nucellus or nucleus of the ovule of a plant, situated at its anterior end, within which is the oosphere, from which the embryo is developed.

Also, in *Filices*, the cell at the bottom of the canal of the archegonium, in which the germ or embryo cell is developed.

**E., stages of hu'man.** At about three weeks—Length, 8–10 mm.; mouth, a cleft; eyes, two black points; members, nipple-like prominences; liver occupying the whole abdomen; chorion with villi over the whole surface.

At about six weeks—Length, 20 mm.; weight, 3–5 grammes; apertures of nose, mouth, ears, and eyes perceptible; head distinct from thorax; clavicle and maxillary bone with a point of ossification; distinct umbilicus; placenta beginning to be formed.

## EMBRYOTONOUS—EMBRYOPLASTIC.

At about two months—Length, 1.25"–1.7"; weight, 150–300 grs.; elbows and arms detached from the trunk, heels and knees also isolated; osseous joints in the frontal bone and in the ribs.

At about three months—Length, 2–2½ in.; weight, from 1 oz. to 1½ oz. troy; eyelids in contact by their free margins; membrana pupillaris visible; fingers completely separated; two ventricles of heart distinct; placenta isolated.

Fœtus of four months—Length, 5–6 inches; weight, 2½–3 oz.; nails begin to appear; meconium in duodenum; ossicula auditus ossified; points of ossification in superior part of sacrum.

Fœtus of five months—Length, 6–7 inches; weight, 5–7 oz.; hair beginning to appear; germs of permanent teeth visible; points of ossification in pubis and calcaneum.

Fœtus of six months—Length, 9–10 inches; weight, 1 lb.; funis inserted a little above pubes; points of ossification in the several divisions of sternum.

Fœtus of seven months—Length, 13–15 in.; weight, 3–4 lbs.; eyelids no longer adherent; membrana pupillaris disappearing; a point of ossification in the astragalus; valvule conniventes begin to appear; gall-bladder contains bile, testicles distinct from kidneys.

Fœtus of eight months—Length 14–16 in.; weight, 4–5 lbs.; a point of ossification in the last vertebra of the sacrum; brain with some indication of convolutions; testicles descend into inguinal ring.

Fœtus of nine months—Length, from 17–21 inches; weight, 5–9 lbs., average 6½ lbs.; four portions of occipital bone distinct; testes have passed inguinal ring.

**Embryotonomous.** Relating to *Embryotomy*.

**E. rem'edies.** Medicines which produce abortion.

**Embryoc'tony.** (Εμβρυον, a fœtus; κτείνω, to kill. *F. embryotonic*; *G. Embryotomie*.) The act of the destruction of the fœtus in the womb.

**Embryogenic.** Relating to *Embryogeny*.

**Embryog'eny.** (Εμβρυον; γεννάω, to engender.) The origin and formation of the embryo; and the science thereof.

**Embryog'ony.** (Εμβρυον; γένος, a begetting.) The formation of an embryo.

**Embryog'raphy.** (Εμβρυον, a fœtus; γράφω, to write. *F. embryography*.) The description of the fœtus or embryo.

**Embryolog'ic.** (Εμβρυον; λόγος, a speech.) Relating to *Embryology*.

**Embryolog'ical.** Same as *Embryologie*.

**Embryology.** (Εμβρυον, a fœtus; λόγος, a speech. *F. and G. embryologie*.) A dissertation or treatise on, or the doctrine of, the embryo and its development, from the ovum onwards.

**Embryometrotroph'ia.** (Εμβρυον; μίτρα, the womb; τρέφω, to nourish. *F. embryometrotrophie*.) The nourishing of the embryo in the womb, equivalent to pregnancy.

**Embryomor'phous.** (Εμβρυον; μορφή, form.) An epithet applied to certain abnormal encysted cartilaginous products found in the ovary, the testicle, or other organs, which are supposed to be relics of a conception.

**Embryon.** (Εμβρυον.) Same as *Embryo*.

**Embryonal.** (Εμβρυον. *F. embryonnaire*.) Of the nature of, or belonging to, a germ or embryo.

**E. area.** Same as *Area germinativa*.

**E. cells.** See *Cells, embryonic*.

Also, the same as *Embryo cell*.

**E. corpuscle.** (*L. corpusculum*, a small body.) A minute body seen in the germ or germ cell of the archegonium of *Filices*.

**E. spot.** (*G. Embryonfleck*.) The *Germinal spot*.

**E. tis'sue.** See *Tissue, embryonal*.

**E. tubes.** The marginal cells of the group which compose the embryo of some plants of the Order *Gnetales*.

**E. vesicle.** (*L. vesicula*, a little bladder.) The same as *Oosphere*.

**Embryonary.** (Εμβρυον.) Relating to an *Embryo*.

**E. sac.** Same as *Embryo sac*.

**Embryon'a'tæ.** (Εμβρυον.) Richard's term for the plants which possess male and female organs and a seed with an embryo; it includes dicotyledonous and monocotyledonous plants.

**Embryonate.** (Εμβρυον, the germ. *F. embryone*.) Having an embryo or germ.

**E. plants.** Plants which possess seeds.

**Embryonell'um.** (Εμβρυον. *F. embryonelle*.) Name by Agardh for the spores of cryptogamous plants to distinguish them from the germs of plants provided with true seeds, to which he limits the name of embryo.

**Embryon'ic.** (Εμβρυον.) Relating to an *Embryo*.

**E. a'rea.** (*F. tache embryonnaire*.) A discoid opacity in the central part of the blastoderm of mammals, in which the primitive streak and groove take origin. The French name was given by Coste; it is the *Area germinativa* of many authors.

**E. connec'tive tis'sue.** Connective tissue in its earliest stage, when it consists of small, round cells, and an amorphous intercellular substance.

**E. connec'tive tis'sue tu'mours.** The sarcomata, especially the small round-celled forms, inasmuch as they consist of connective tissue which does not proceed far beyond its embryonic condition.

**E. sac.** The early stage of the embryo when by the folding of the edges of the blastoderm a sac-like body representing the embryo is formed and is separated by the umbilical constriction from the yolk sac.

**E. shield.** The slightly opaque central part of the area pellucida of the fertilised bird's egg seen in the first few hours of incubation.

**Embryonif'erous.** (Εμβρυον; *L. fero*, to bear. *F. embryonifere*; *G. embryontragend*.) Having or possessing an embryo.

**Embryon'iform.** (Εμβρυον; *L. forma*, shape. *F. embryoniforme*; *G. embryonformig*.) Like to an embryo.

**Embryop'arous.** (Εμβρυον; *L. pario*, to bring forth. *F. embryopare*; *G. embryonher-vorbringend*.) Bringing forth or producing an embryo.

**Embryoph'thora.** (Εμβρυον; φθορά, decay.) Death of the embryo.

**Embryoplas'tic.** (Εμβρυον; πλασσω, to form.) Relating to the formation of the embryo.

**E. cells.** The cells of embryonic connective tissue.

**Σ. tu'mour.** A term applied to small-celled and other sarcomata.

**Embryopteris.** (Ἐμβρυον, an embryo; πτερίς, a fern.) A Genus of the Nat. Order *Ebenaceæ*.

**E. glutinifera**, Roxb. (L. *gluten*, glue; *fero*, to bear.) The *Diospyros embryopteris*.

**E. peregrina**, Gärtn. (L. *peregrinus*, foreign.) The *Diospyros embryopteris*.

**Embryospastic.** (Ἐμβρυον; σπαστικός, drawing.) Relating to the extraction of the embryo by pulling at it.

**Embryosphacta.** (Ἐμβρυον; σφάκτης, a slayer. F. *embryosphacte*; G. *Embryotödtler*.) An instrument for destruction of the embryo, and the production of artificial labour.

**Embryotega.** (Ἐμβρυον; τεγή, a roof. G. *Embryotekappe*.) A small prominence like a leather cap which in certain seeds covers the micropyle and corresponds to the radicular extremity of the embryo.

**Embryotegium.** Same as *Embryotega*.

**Embryothlas'is.** (Ἐμβρυον, the fœtus; θλάω, to break.) The use of the *Embryothlastes*. The destruction of the embryo.

**Embryothlast.** (Ἐμβρυον; θλάω.) Huter's name for the *Cephalotribe*.

**Embryothlasta.** Same as *Embryothlastes*.

**Embryothlastes.** (Ἐμβρυον, the fœtus; θλάω, to break. F. *embryothlaste*; G. *Embryothlast*.) Old name for an instrument for breaking the bones of a fœtus in order to its more easy delivery.

Also, the name for a crotchet for extracting the fœtus. (Castellus.)

**Embryothlastum.** Same as *Embryothlastes*.

**Embryotic.** (Ἐμβρυον.) Relating to an embryo.

**Embryotoc'ia.** (Ἐμβρυον; τόκος, birth.) Abortion; that is, labour while the fœtus is still an embryo.

The term has also been used to denote the birth of a fœtus containing another fœtus, or a part of one, eneysted in its ovary or testicle.

**Embryotome.** (Ἐμβρυον; τομή, a cutting.) An instrument for the performance of *Embryotomy*.

**Embryotom'ic.** (Ἐμβρυον; τομή.) Relating to *Embryotomy*.

**Embryotomy.** (Ἐμβρυοτομία, a cutting out the fœtus; from ἔμβρυον, the fœtus; τέμνω, to cut.) The cutting up of the fœtus in utero into pieces in order to effect its removal from the mother by the natural passages when these are narrowed by distortion of the pelvic bones, or by the presence of a tumour, or by any other cause; or when the fœtus is too large, or diseased, or deformed in such a manner as to prevent its expulsion without a reduction in its size. Under this head are included the operations of *Craniotomy*, *Cephalotripsy*, the cutting in pieces of the head by the wire cerasur, as suggested by Barnes, *Decapitation* and *Evisceration*.

**Embryotroph.** (Ἐμβρυον; τροφή, nourishment. G. *Fruchtsstoff*.) The material out of which the embryo is formed or nourished; as the albumen in plants, the yolk in animals.

**Embryotrophy.** (Ἐμβρυον; τροφή.) The nutrition of the embryo.

**Embryul'cia.** (Ἐμβρυον, a fœtus; ἔλκω, to draw. F. *embryulcie*; G. *Embryulcie*.) Generally, a term for the obstetric art or midwifery;

but it has especial reference to the drawing or extracting of the dead fœtus; it is also applied by many to the operation of breaking down the contents of the fœtal head by means of the perforator, or other destroying instrument, in order to effect delivery; and also to the evisceration of the thoracic and abdominal cavities of the fœtus for a like purpose.

**Embryul'cus.** (Ἐμβρυον, a fœtus; ἔλκω, to draw. F. *embryulcie*; G. *Fotuszange*.) A blunt hook for extracting the child in difficult labour.

Also, an old name of the midwifery forceps.

**Emb'ryule.** (Ἐμβρυον.) A small embryo.

**Embryustercul'cia.** (Ἐμβρυον; σκῆρα, the womb; ἔλκω, to draw.) Same as *Embryul'cia*.

**Ememor'phia.** (Emetic; morphia.) Mathiessen's name for *Apomorphia*, on account of its emetic properties.

**Eme'nagogue.** See *Emmenagogue*.

**Emend'ant.** (L. *emendo*, to free from faults.) A synonym of *Corrigent*.

**Em'erald.** (Old F. *esmeralde*; L. *smaragdus*; Gr. *σμάραγδος*. F. *émeraude*; G. *Smaragd*.) A precious stone of a pure green colour, containing about 65 per cent. of silica, 14 of alumina, 13 of glucina, 2.5 of lime, and 3.5 of oxide of chromium.

**E. green.** The aceto-arsenite of copper. It has been used to colour wall papers, muslins, confectionery, and other articles, and thus has given rise to chronic arsenical poisoning.

**Em'erandes.** An old spelling of *Hæmorrhoids*.

**Emer'ged.** (L. *emerge*, to rise up.) Same as *Emersed*.

**Emer'gence.** (L. *emerge*, to rise up.) A term applied to the prickles, warts, and tubercles of a plant, to indicate that they are not, like hairs, developments of the epidermis only, but that they arise from the subepidermic tissue also. Also, a place of exit.

**Emer'gent.** (L. *emerge*, to rise up. F. *émergent*; G. *hervorragend*.) Rising out of, issuing or proceeding from.

**E. ray.** A ray of light when it has issued from the medium into which it has penetrated, and which it has traversed.

**Em'erods.** Same as *Hæmorrhoids*.

**Em'eroids.** Same as *Hæmorrhoids*.

**Emer'sed.** (L. *emerge*, to rise up. F. *émergé*.) Raised up; applied to leaves and flowers that are raised above the surface of the water.

**Em'erus.** Old name for the *Colutea arborescens*, or bastard senna.

**Em'ery.** (F. *emeril*, *esmeril*; from L. *smerrigius*; from Gr. *σμήρις*. G. *Schmergel*.) A coarse variety of corundum, being nearly pure crystallised alumina coloured with some ferric oxide. It is very hard, and is used for polishing metals, stones, and glass.

**Emes'ia.** Same as *Emesis*.

**Emesiolog'ia.** Same as *Emetology*.

**Em'esis.** (Ἐμεσις, from ἐμίω, to vomit. F. *vomissement*; G. *Erbrechen*, *Vomiren*.) The act of vomiting.

**Emes'ium.** Same as *Emetin*.

**Emes'ma.** (Ἐμεσμα.) That which is vomited.

**Emetatroph'ia.** (Ἐμετος, sickness; ἀτροφή, an atrophy. F. *émétatrophie*.) Consumption or wasting caused by chronic vomiting.

**Emet'ia.** Same as *Emetin*.

**Emet'ic.** (Ἐμετικός, provoking sickness,

# EMETICAL—EMINENTIA.

from *εμεῖν*, to vomit. F. *émétique*; G. *emetisch*, *brechenmachend*.) Having power to induce or excite vomiting.

Also (G. *Brechkittel*), a substance capable of producing vomiting.

**E. cup.** The *Cup, antimonial*.

**E. goblet.** The *Cup, antimonial*.

**E. root.** The *Euphorbia corollata*.

**E. tartar.** The *Antimonium tartaratum*.

**E. weed.** The *Lobelia inflata*.

**E. wine.** The *Vinum antimoniale*.

**Emetical.** Same as *Emetic*.

**Emeticology.** (Εμετικός, producing sickness; λόγος, a discourse.) The doctrine of emetic medicines.

**Emetics.** (Εμετικός.) Substances which produce vomiting.

**E., direct.** Medicines which produce vomiting by irritation of the nerves of the stomach in the stomach; such are mustard, salt, alum, and sulphate of zinc.

**E., indirect.** Medicines or agents which produce vomiting by reflex action, as irritation of the fauces, or by their influence on the nervous centre for vomiting, as ipecacuanha, tartarised antimony and apomorphia.

**Emeticum.** (Εμετικός. F. *émétique*; G. *Brechkittel*.) A medicine which has the power to induce or excite vomiting; a vomit.

**Emetin.** (Εμετικός, provoking sickness. F. *émétine*; G. *Brechstoff*.)  $C_{30}H_{44}N_2O_4$  or  $C_{28}H_{40}N_2O_3$ . An alkaloid obtained from the root of *Cephaelis ipecacuanha*. It is a greyish or whitish uncrystallisable powder having a bitter burning taste and no smell; soluble in water, alcohol, and chloroform. Concentrated sulphuric acid turns it dirty brown, nitric acid yellowish brown. It produces vomiting, great muscular debility, and death from failure of respiration.

**Emetina.** Same as *Emetin*.

**Emetinum.** Same as *Emetin*.

**E. coloratum.** (L. *coloratus*, coloured.) An impure product obtained by exhausting ipecacuanha with alcohol, evaporating to a syrup, diluting with water, filtering, evaporating the filtrate to dryness, and powdering.

**Emetise.** (Εμετικός.) To produce sickness by means of emetics.

Also, to add tartar emetic to a medicine.

**Emeto-catharsis.** (Εμετός, sickness; καθάρσις, evacuation, purging. F. *émétocatharse*; G. *Brechpurgiren*.) A compound term signifying the accession both of vomiting and purging, as from large doses of tartar-emetic.

**Emeto-cathartic.** (Same etymon. F. *émétocathartique*.) Of, or belonging to, *Emetocatharsis*, or having power to cause both purging and vomiting.

**Emetology.** (Εμετός, a vomit; λόγος, a discourse.) The doctrine of, or a treatise of, vomiting and emetics.

**Emetomania.** (Εμετός, sickness; μανία, madness. G. *Brechwuth*.) The rage or longing for emetics or vomiting.

**Emetophobia.** (Εμετός, φόβος, fear. G. *Breckscheu*.) The fear of emetics or vomiting.

**Emetus.** (Εμετός.) Vomiting.

**Emication.** (L. *emictio*, a springing forth.) Flying off in sparks.

**Emiction.** (L. *e*, out; *mingo*, to make water.) The act of voiding the urine.

**Emictory.** (L. *e*; *mingo*.) A diuretic. Also, having diuretic properties.

**Emidine.** See *Emydin*.

**Emigration.** (L. *e*, away; *migro*, to depart.) Same as *Migration*.

**Emilia.** A Genus of the Nat. Order *Compositae*.

**E. purpurea.** Cass. (L. *purpureus*, purple.) The *E. sonchifolia*.

**E. sonchifolia.** De Cand. (*Sonchus*; L. *folium*, a leaf.) Hab. Asia. A decoction of the leaves is used as a febrifuge; juice of leaves used in ophthalmic affections.

**Eminence.** (L. *eminentia*; from *eminere*, to stand out. F. *éminence*; I. *eminenza*; G. *Erhabenheit*, *Erhöhung*.) A projection or prominence.

**E., acari'dian.** (*Acarus*.) The small whitish prominence at the extremity of a furrow in the skin, under which lies the itch-insect, *Sarcoptes* or *Acarus scabiei*.

**E., articular, of temporal bone.** (L. *articulum*, a joint.) The cylindrical elevation in front of the glenoid fossa of the temporal bone formed by the anterior root of the zygomatic process.

**E., blastoder'mic.** (*Blastoderm*. G. *Keimhugel*.) A circular thickening of the wall of the vesicular blastoderm in which the embryo is developed.

**E., canine.** See *Canine prominence*.

**E., Doyere's.** See *Doyere's eminence*.

**E., fron'tal.** (L. *frons*, the forehead. G. *Stirnhoeker*.) The most prominent part of each lateral half of the frontal bone in the forehead.

**E., hypoth'enar.** (Υπό, beneath; ἔνναρ, the flat of the hand.) The eminence on the ulnar side of the palm of the hand formed by the muscles of the little finger.

**E., ilio pectine'al.** (*Ilio-pectineal*.) A slight ridge on the upper surface of the os pubis at its point of junction with the ilium.

**E., ilio-pubic.** Same as *E., ilio-pectineal*.

**E., na'sal.** (L. *nasus*, the nose.) The *Glabella* of the frontal bone.

**E., occip'ital.** The external occipital protuberance.

**E. of aquæduc'tus Fallo'pii.** A rounded ridge on the inner wall of the tympanum above the fenestra ovalis which curves over also on to the posterior wall; it indicates the position of the aqueduct of Fallopius.

**E., pari'etal.** (G. *Scheitelhoeker*.) The most prominent part of the outer surface of the parietal bone near its centre.

**E.s, por'tal.** (*Portal vein*.) The Spigelian lobe and the caudate lobe of the liver, from their relationship to the *Vena portæ*.

**E., the'nar.** (Θένναρ, the flat of the hand.) The ball of the thumb; the prominence on the radial side of the palm of the hand caused by thumb-muscles.

**Eminentia.** Same as *Eminence*.

**E. annula'ris.** (L. *annulus*, a ring.) The *Pons Varolii*, from its shape.

**E. arcua'ta.** (L. *arcuatus*, arched.) An arched eminence on the anterior or upper surface of the petrous portion of the temporal bone over the superior semicircular canal.

**E. articula'ris.** See *Eminence, articular, of temporal bone*.

**E. bicipita'lis.** The bicipital tuberosity of the radius.

**E. capita'ta.** (L. *capitatus*, having a head) The head of a bone.

**E. capitata humeri.** (*L. capitatus*.) The capitellum of the humerus.

**E. carpi externa.** (*L. carpus*, the wrist; *externus*, outer.) The prominence on the outer edge of the anterior surface of the wrist formed by the tubercle of the scaphoid bone and a ridge on the trapezium, which give attachment to the anterior annular ligament.

**E. carpi interna.** (*L. carpus*; *internus*, inner.) The prominence on the inner edge of the anterior surface of the wrist formed by the pisiform bone and the hook of the ulnar bone, which give attachment to the anterior annular ligament.

**E. cinerea.** (*L. cinereus*, ashy grey. *G. grauer Flügel*.) The lower elevated portion of the *Ala cinerea*.

**E. collateralis.** (*L. collatero*, to admit on both sides.) The *Pes accessorius*.

**E. collateralis Meckelii.** (*Meckel*.) Same as *E. collateralis*.

**E. concha.** (*L. concha*, a shell.) The projection at the back of the pinna of the ear, caused by the depression of the concha in front.

**E. iosæ triangularis.** The projection at the back of the pinna of the ear, caused by the depression of the fossa of the antihelix or fossa triangularis in front.

**E. frontalis.** See *Eminence, frontal*.

**E. innominata.** (*L. innominatus*, unnamed.) The *Funiculus teres*.

**E. intercondylica.** (*L. inter*, between; *condyle*.) The spine separating the two condylar surfaces of the upper end of the tibia.

**E. intermedia.** (*L. intermedius*, that is in between.) Same as *E. intercondylica*.

**E. jugularis.** The extremity of the process jugularis of the occipital bone; also called the *Jugular spine*.

**E. lateralis Meckelii.** (*L. lateralis*, belonging to the side; *Meckel*. *G. Seitenhögel*.) The *Pes accessorius*.

**E. longitudinalis.** The *Funiculus teres*.

**E. nasalis.** (*L. nasalis*, belonging to the nose. *G. Stirnglatze*.) The *Glabella*.

**E. papillaris.** (*L. papilla*, a small pimple.) The *Pyramid* of the posterior wall of the tympanum.

**E. parietalis.** The *Eminence, parietal*.

**E. pyramidalis.** The *Pyramid* of the tympanum.

**E. pyramidalis vestibuli.** (*L. pyramidalis*, like a pyramid.) The upper end of the crest of the vestibule.

**E. scaphæ.** (*Σκαφή*, a light boat.) The projection at the back of the pinna of the ear, caused by the depression of the fossa of the helix or scaphoid fossa in front.

**E. stapedii.** The *Pyramid* of the tympanum, so called because it gives passage to the *Stapedius* muscle.

**E. supracondyloidea externa.** (*L. supra*, above; *condylus*, a knuckle; *Gr. εἶδος*, likeness; *L. externus*, outer.) The external condyle of the humerus.

**E. supracondyloidea interna.** (*L. internus*, inner.) The internal condyle of the humerus.

**E. thyroidea.** (*Thyroid cartilage*.) The *Pomum Adami*.

**E. trochlearis.** The *Trochlea* of the humerus.

**E. tympani.** (*Tympanum*.) The pyramid of the tympanum.

**E. unciniformis.** (*L. uncus*, a hook; *forma*, likeness.) The *Vermis inferior* of the cerebellum.

**E. vermicularis inferior.** The *Vermis inferior* of the cerebellum.

**E. vermicularis superior.** The *Vermis superior* of the cerebellum.

**Eminentia.** Plural of *Eminencia*.

**E. bigemina.** (*L. bis*, twice; *geminus*, a twin.) The *Tubercula quadrigemina*.

**E. candicans.** (*L. candicans*, part of *candico*, to be whitish.) The *Corpora albicanantia*.

**E. lenticularis.** (*L. lenticularis*, like a lentil.) The *Corpora striata*, from their shape.

**E. magnæ cerebri.** (*L. magnus*, great; *cerebrum*, the brain.) The *Thalami optici*.

**E. mamillares.** (*L. mamilla*, a teat.) The *Corpora albicanantia*, from their shape and appearance.

**E. medianæ internæ.** (*L. medianus*, middle; *internus*, within.) The anterior pyramids of the medulla oblongata; because they are near to the median line.

**E. olivares.** The olivary bodies.

**E. ovales laterales.** (*L. ovalis*, egg-shaped; *lateralis*, belonging to the side.) The olivary bodies from their shape and position.

**E. pisiformes.** (*L. pisum*, a pea; *forma*, shape.) The *Corpora albicanantia*, from their shape.

**E. pyramidales.** The anterior pyramids of the medulla oblongata.

**E. quadrigemina.** (*F. eminentes bigeminae*.) The *Tubercula quadrigemina*.

**E. teretes.** (*L. teres*, rounded.) The *Funiculi teretes*.

**Emissaria.** Plural of *Emissarium*.

The term was originally applied by Santorini ('*Observ. Anat.*' 1724) to the veins communicating between the sinuses of the dura mater and the veins of the scalp.

**E. duræ matris.** Old term for the processes of the dura mater, which accompany the cerebral nerves through the foramina of the cranium.

**E. Santorini.** The *Emissory veins*.

**Emissarium.** (*L. emissarium*, a channel for water; from *emitto*, to send forth. *F. émissaire*; *G. Ausführgang*.) Old name for a canal by which any fluid passes out.

**E. caroticum.** A plexus of emissary veins connecting the cavernous sinus through the carotid canal with the internal jugular vein.

**E. condyloideum anterius.** (*L. anterior*, in front.) An emissary vein connecting the anterior internal vertebral venous plexus with the sinus or bulb of the jugular vein.

**E. condyloideum posterius.** (*L. posterior*, hinder.) An emissary vein, not always present, connecting the end of the lateral sinus with the plexus venosus vertebralis cervicalis through the posterior condyloid foramen.

**E. foraminis lacertianici.** A venous communication between the cavernous sinus and the pterygoid plexus through the foramen lacertianicum.

**E. foraminis ovalis.** A venous communication between the cavernous sinus and the veins of the pterygoid plexus through the foramen ovale.

**E. hypoglossi.** A venous plexus surrounding the hypoglossal nerve in the interior

condylar foramen, and connecting the occipital sinus with the deep veins of the neck.

**E. mastoi'deum.** A large vein connecting the lateral sinus and the occipital or posterior auricular veins through the mastoid foramen.

**E. occipita'le.** A vein connecting the torcular Herophili with one of the occipital veins through a foramen in the occipital protuberance.

**E. occipita'le infe'rius.** (L. inferior, lower.) The *E. condyloideum posterius*.

**E. occipita'le supe'rius.** (L. superius, upper.) The *E. occipitale*.

**E. parietal'e.** A small vein connecting the superior longitudinal sinus with the superficial temporal vein through the parietal foramen.

**E. Santorini.** The *E. parietale*.

**E. vom'icæ fac'ere.** (L. vomica, an abscess; facio, to make.) Term employed by Scribonius Largus to signify the opening of an abscess.

**Emissarius.** (L. emissarius, from *emitto*, to send forth. F. *émissaire*.) Sending or conducting away.

**Emissary.** Same as *Emissarium*.

**E. veins.** The veins which connect the sinuses of the brain with the veins of the outer surface of the cranium; they pass through foramina in the skull. See under *Emissaria*.

**Emis'sio.** Same as *Emission*.

**E.san'guinis.** (L. sanguis, blood.) Blood-letting.

**E. sem'inis.** (L. semen, seed. G. *Ausfluss*.) The ejaculation of the semen during coition or without.

**Emis'sion.** (L. emissio, from *emitto*, to send forth. F. *émission*; G. *Ausleeren*.) A sending forth.

**E.s, sem'inal.** See *Seminal emissions*.

**E. the'ory of light.** The theory of the origin of light which assumes the existence of an imponderable molecular substance which is emitted from all luminous bodies, and which, impinging on the retina, produces the sensation of sight. Also called *Corpuscular theory*.

**Emis'sive.** (L. *emitto*.) Having power to emit; radiating.

**E. the'ory.** Same as *Emission theory*.

**Emis'sory.** Same as *Emissary*.

**Emmanuel.** The name of an ointment much used in the latter part of the 16th century, which was formed by boiling various herbs, as dittany, centaury, plantain, and spurge in wine, and afterwards adding pitch, resin, oilbalm, turpentine, suet, mastich, and myrrh to form an ointment. (Dunglison.)

**Emmenagog'ic.** (Έμμηνα, the menses; ἄγω, to expel.) Having the property of, or related to, an *Emmenagogue*.

**Emmenagogology.** (Έμμηνα; ἄγω; λόγος, a discourse.) A treatise on *emmenagogues*.

**Emmenagogue.** (Έμμηνα, the menses; ἄγω, to expel or put out. F. *emmenagogue*, *monatsreinigungsförderend*.) Having power to excite the menstrual discharge.

**Emmenagogues.** (Έμμηνα; ἄγω) Agents which increase or renew the menstrual discharge.

**E., direc't.** Drugs which reproduce the menstrual secretion by direct action on the generative organs; such are savin, rue, parsley root, and cantharides.

**E., in'direct.** Medicines which reproduce

the menstrual secretion by an indirect action on the generative organs; such are chalybeates, aloetic purgatives, and hot baths.

**Emmenia.** (Έμμηνα, from *εν*, in; *μήν*, a month. F. *menstrues*, *regles*; G. *Monatsblutfluss*.) Old term for the menses.

**Emmen'iagogue.** Same as *Emmenagogue*.

**Emmeniolog'ical.** Relating to *Emmenology*.

**Emmeniopathi'a.** (Έμμηνα, the menses; πάθος, affection.) Disordered menstruation.

**Emmenolog'ical.** (Έμμηνα; λόγος.) Relating to menstruation.

**Emmenology.** (Έμμηνα; λόγος, a discourse.) A treatise on, or the doctrine of, menstruation.

**Emmesos'tomous.** (Έμμεσος, in the middle; στόμα, a mouth. F. *émmissostome*; G. *mittelmündig*.) Having the mouth in the middle of the body.

**Em'met.** (Sax. *æmete*, a translation of L. *formica*, an ant.) The ant, *Formica rufa*.

**Emmetrop'ia.** (Έμμετρος, in measure; from *εμ*, for *εν*, in; *μετρον*, a measure; *ωψ*, the eye.) The normal or healthy condition of the refractive media of the eye in which parallel rays are brought to a focus upon the retina when the eye is at rest and in a passive condition.

**Emmetrop'ic.** (Same etymon.) Relating to *Emmetropia*.

**Emmorphosis.** (Έμμορφος, in bodily form. F. *emmorphose*.) A metamorphosis in which the insect remains nearly the same, that is in which the larvæ differ from the pupæ only by the dimensions of parts, or by the absence, rudiments, or the complete development of the wings, the same habits and kind of nourishment being preserved throughout.

**Em'motos.** (Έν, in or upon; μοτός, shredded linen, lint.) Spread on lint; anciently applied to a medicament in this form that was employed for a wound.

**Emmyx'ium.** (Έν, in; μόξα, mucus.) A collection of mucous fluid in a part.

**E. articula're.** (L. *articulum*, a joint.) An old term for such diseases of the joints as were formerly called white swelling.

**Em'odin.** (C<sub>15</sub>H<sub>10</sub>O<sub>2</sub>.) Obtained by treating chrysophanic acid with benzol; it crystallises in orange-coloured prisms. According to Liebermann, it is a trioxymethylanthraquinone, and is identical with frangulinic acid.

**Emolles'cence.** (L. *emollesco*, to become soft.) A state of softening; the softened condition of a melting body before it fuses.

**Emollient.** (L. *emollio*, to soften. F. *émollient*; G. *erweichend*.) Having the power of softening or relaxing the living animal textures.

**E. spe'cies.** See *Species emollientes*.

**Emollientia.** (L. *emollia*.) Remedies which are *Emollient*.

**Emollients.** (L. *emollia*.) Softening applications which have been divided into *Humectant*, as warm water and tepid vapours; *Relaxing*, as althæa, malva; *Lubricating*, as bland oils, fat, and lard; and *Atonic*, as opium and pediluvia.

**Emolli'ties.** Same as *Mollities*.

**E. morbo'sa.** (L. *morbus*, disease.) A synonym of *Mollities*.

**E. os'sium.** Same as *Mollities ossium*.

**E. u'teri morbo'sa.** (L. *uterus*, the

womb; *morbosus*, diseased.) A synonym of *Hysteromuliea*.

**Emollitio.** (L. *emollio*, to make soft.) Same as *Mollities*.

**E. ventriculi.** (L. *ventriculus*, the stomach.) Softening of the coats of the stomach as a post-mortem change.

**Emoptoë.** See *Hæmoptoe*.

**Emotio.** (L. *emoveo*, to move away.) An old term for a dislocation.

Also, same as *Emotion*.

**Emotion.** (L. *emotus*, part. of *emoveo*, to move away. F. *emotion*; G. *Wandung*, *Gemuths-bewegung*.) A moving of the mind; an excited feeling, whether of pleasure or pain, or astonishment; it is accompanied usually by acceleration or irregularity of the breathing and of the heart's action; and is the result of an active condition of that part of the encephalon which presides over the instincts and sentiments.

**Emotional.** (L. *emotus*.) Relating to, or characterised by, or attended with, *Emotion*.

**E. insanity.** See *Insanity*, *emotional*.

**Emotivity.** (L. *emoveo*.) The capacity of a person to be affected by an emotion.

**Empasma.** (Εμπάσμα, to sprinkle upon. F. *empasme*; G. *Streupulver*.) Old term for a perfumed powder to be sprinkled on the body to restrain sweating, or to destroy its smell.

**Empatheia.** (Εμπαθής, moved with affection or passion.) Ungovernable passion. Applied to a genus of disease in Good's Nosology, and characterised by the judgment being perverted or overpowered by the force of some predominant passion; the features of the countenance changed from their common character.

**E. atonicum.** (A, neg.; τόνος, tone.) Impassioned depression; the predominant passion accompanied with diminished excitement, anxiety, and love of solitude; eye fixed and pensive; countenance pale and furrowed (Good).

**E. entonicum.** (Εντονός, strained.) Impassioned excitement; the predominant passion accompanied with increased excitement, ardour, and activity; eye quick and daring; countenance flushed and tumid. (Good.)

**E. inanë.** (L. *inanis*, empty.) Hare-brained passion; wayward and unmeaning passion, urging to indiscriminate acts of violence; air hurried and tumultuous; countenance flushed; eyes glaring and prominent. (Good.)

**Empeiria.** (Εμπεριός, experienced.) Term (Gr. *ἐμπειρία*) for the practice of medicine founded on experience alone, according to Galen, *ad Therap.* c. xi; empirical medicine.

**Empetra'ceæ.** A Nat. Order of monochlamydeous Exogens of the Alliance *Euphorbiales*, or a Family of the Order *Tricocca*, having definite ascending anatropal ovules, and an inferior radicle.

**Empetron.** Same as *Empetrum*.

**Empetrous.** (Εμπετρος, growing on rocks.) A term applied to animals like the seal, which have such short members or limbs that they lie directly upon the ground.

**Empetrum.** (Εμπετρος, growing on rocks.) A Genus of the Nat. Order *Empetra'ceæ*.

Also, a name for the *Saxifraga*.

Also, the *Herniaria glabra*.

**E. nigrum.** Linn. (L. *niger*, black.) Crowberry. Fruit esculent, said to be antiscorbutic and diuretic; a fermented liquor is made from it in Greenland.

**Emp'ing.** Bavaria, near Traunstein,

about 1200 feet above sea-level. An indifferent mineral water; there are arrangements for vapour, douche, mud, and pine-leaf baths.

**Empheromenon.** (Εμπίπω, to bring in.) Term for sediment in the urine.

**Emphysis.** (Εμ, in; φάσις, an eruption on the skin.) Term for a vesicular tumour or eruption. A Genus of the Order *Ezanthematica*, Class *Hæmatica*, of Mason Good.

**E. aph'ha.** Good's term for *Thrush*.

**E. erysip'elas.** Good's term for *Erysipelas*.

**E. miliary.** Good's term for *Miliary fever*.

**E. pem'phigus.** Good's term for *Pemphigus*.

**E. vaccin'ia.** Good's term for *Vaccinia*, or cowpox.

**E. vaccin'ia inser'ta.** (L. *insertus*, part. of *ins-ero*, to put into.) Inoculated cowpox.

**E. vaccin'ia nat'va.** (L. *nativus*, native.) Cowpox accidentally taken from an affected cow.

**E. varicel'la.** Good's term for *Varicella*, or chicken-pox.

**Emphractic.** (Εμφρακτικός, from ἐμ-φράττω, to obstruct. F. *emphracticque*; I. *emfrattico*; G. *verstopfend*.) Having power to obstruct; (Gr. *εμφρακτικός*) applied by Galen, *de Simpl. Fac.* v. 11, to a medicine which shuts up the pores of the skin.

**Emphractic'ia.** Remedies whose action is *Emphractic*.

**Emphrag'ma.** (Εμφραγμα, a barrier.) An obstruction.

Applied by Hippocrates to the obstructing part of the fetus when by its malposition labour is impeded.

**E. lachrymale.** Fistula from obstruction of the lachrymal duct.

**E. salivar'ë.** (Saliva.) A synonym of *Ranula*.

**Emphrax'is.** (Εμφραξις, a stopping.) An intarction or congestion or collection in a canal or cavity of its natural contents, or of other material, so as to produce an obstruction.

**Emphyllocar'pus.** Same as *Entophyllocarpus*.

**Emphyema.** (Εμ, φάω, to implant, to grow in.) A generic term for a tumour originating below the integuments and unaccompanied by inflammation, at least at its commencement, such as sarcomatous, encysted, bony, and other morbid growths.

**Emphysem.** Same as *Emphysema*.

**Emphysema.** (Εμφύσημα, an inflation; from ἐμφύω, to blow in; from ἐμ, for ἐν, in; φάω, wind. F. *emphysème*; I. *enfisuma*; G. *Emphysion*, *Windgeschwulst*.) The swelling of a part caused by the presence of air in the interstices of the connective tissue; it crackles on pressure, does not pit, but can be displaced by compression.

**E. abdom'inis.** (L. *abdomen*, the belly.) A synonym of *Tympanites*.

**E., alveolar.** (L. *alveolus*, a small cavity.) Same as *E. vesicular*, in allusion to its physical condition, distension of the air cells or alveoli of the lungs.

**E., atrophous.** (A, neg.; τροφή, nourishment.) A term applied to those forms of emphysema of the lung in which the walls of the air cells become wasted from interstitial decay, and very often from fatty degeneration, without

# EMPHYSEMATOSE—EMPHYTY.

apparent increase of size or shape of the lung or thorax.

Also, the same as *E. vesicular, small-lunged*.

**E. cellularé.** (*L. cellula, a small cell*.) Same as *E. subcutaneous*.

**E., compensatory.** (*L. compenso, to weigh one thing against another*.) Vesicular emphysema caused by over-distension of the air vesicles, the result of imperfect expansion of some other part of the lung.

**E., extra-alveolar.** (*L. extra, on the outside; alveolus, a small cavity*.) Same as *E. intralobular*, in reference to its existence outside the alveoli or air cells of the lung.

**E., extra-vesicular.** (*L. extra, on the outside; vesicula, a small blister*.) Same as *E. interlobular*, in reference to its existence outside the air cell or vesicles of the lung.

**E., false.** An emphysematous swelling from the generation in the tissues of the gases of putrefaction.

**E., hyper'trophous.** (*Υπέρ, above; τροφή, nourishment*.) Same as *E. vesicular, large-lunged*.

**E., interlob'ular.** (*L. inter, between; lobulus, a small lobe*.) The presence of air in the interlobular connective tissue of the lung. It sometimes spreads from here to the subcutaneous tissue of the neck and face and further through the posterior mediastinum; and it frequently extends to the subpleural connective tissue, producing prominent air bullæ. It generally results from the rupture of air vesicles, as in the straining of labour or during a violent cough; but it may be caused by the generation of gases during the progress of gangrene or after death.

**E., local, chronic.** The form of *E. of lung* characterised by over-distension of a few air vesicles only, and caused by degeneration of their tissue. Such may occur in the apex of the lung as a consequence of the obsolescence of tubercle and the toughening, thickening, and puckering of the neighbouring lung tissue.

**E. of lung.** The unnatural presence of air in the lungs; either in the distended or ruptured air-vesicles, *E. vesicular*; or in the interlobular connective tissue of the organ, *E. interlobular*.

**E. pectoris.** (*L. pectus, the chest*.) A synonym of *Pneumothorax*.

**E. pulmonum.** (*L. pulmo, the lung*.) See *E. of lung*.

**E. pulmonum neonatorum.** (*L. pulmo; neonatus, new born*.) A condition of distension of the air cells of the lungs of a child which has been born dead and which has never breathed; it is believed to be an imaginary occurrence.

**E. scro'ti.** (*L. scrotum*.) A windy swelling of the scrotum; probably applied to a scrotal intestinal hernia with much flatulent distension of the gut.

**E. seni'lë.** (*L. senex, an old man*.) The form which occurs in old age from atrophy of the structure of the air vesicles, and frequently caused by recurring attacks of chronic bronchitis.

**E., subcutaneous.** (*L. sub, under; cutis, the skin*.) Distension of the subcutaneous areolar tissue with air or gas. It may be caused by rupture of the lung tissue by such means as a knife, a broken rib, or the straining of labour; by an ordinary wound of the chest not touching the lung, in consequence of the breathing movements; by the spreading of gas into the areolar tissue from rupture of the lower end of the duodenum, or of the

cæcum, or of the rectum; and from the gases of putrefaction or gangrene.

**E., subpleu'ral.** (*L. sub, under; pleura*.) The form in which air is found in the subpleural connective tissue; it generally depends on the rupture of one or more superficial air vesicles.

**E., traumatic.** (*Τραυματικός, belonging to wounds*.) Emphysema resulting from a wound of the lung whence air is extravasated into the tissues.

Also, the condition resulting from the development of gases in a gangrenous part after injury.

**E., true.** An emphysematous swelling from the presence of atmospheric air in the tissues.

**E. tympani'tes.** A synonym of *Tympanitis*.

**E. u'teri.** (*L. uterus, the womb*.) A distension of the womb with gas.

**E. uteri'num.** Same as *E. uteri*.

**E., vesic'ular.** (*L. vesicula, a small blister*.) The form of emphysema of the lung which consists in enlargement of the air vesicles either from dilatation of the individual vesicles or from destruction of the intervening septa.

**E., vesic'ular, acute.** The form of *E. of lung*, according to Jenner, in which there is over-distension of previously healthy air vesicles from too much air being drawn into the over-distended air vesicles by inspiratory effort, or being driven into them by violent expiratory efforts, with an impediment to escape of the air from the lungs. Such may occur in acute bronchitis or from hooping-cough.

**E., vesic'ular, large-lung'ed.** Jenner's term for the form of *E. of lung* in which there is over-distension of the air vesicles, with great increase in the bulk or capacity of the lungs. It is due to frequent attacks of bronchitis, which tend to produce thickening and inelasticity of the lung tissue, which then gives way before the expansive efforts of the cough.

**E., vesic'ular, small-lung'ed.** Same as *E. atrophous*.

**E., vica'rious.** (*L. vicarius, substituted*.) Same as *E. compensatory*.

**Emphyse'matose.** Same as *Emphysematous*.

**Emphyse'matous.** (*Εμφύσημα. F. emphysemateux; G. emphysematisch*.) Of the nature of or like *Emphysema*; having, or full of, windy swelling, or containing air or gas in the tissues.

**E. vagini'tis.** See *Vaginitis, emphysematous*.

**Emphysemodyspnœ'a.** (*Εμφύσημα; δύσπνοια, difficulty of breathing*.) Dyspnœa from emphysema of the lungs.

**Emphytiatreu'sis.** (*Εμφύτος, in-born; ιατρικός, medical treatment*.) Instinctive medication; a term applied to the treatment of disease on the authority and by order of a person in a state of mesmeric trance.

**Emphytic.** (*Εμ, for εν, in; φυτόν, a plant*.) A term applied to a disease which is frequent among the plants of a country.

**Emphytonthermon.** Same as *Emphytothermon*.

**Emphytother'mon.** (*Εμφύτος, in-nate; θερμός, heat. F. emphytothermon; G. Lebenswärme*.) Innate, in-born, or animal heat.

**Emphytother'mum.** Same as *Emphytothermon*.

**Emphyty.** (*Εμ; φυτόν, a plant*.) A disease prevalent among the plants of a country.

# EMPIESMA—EMPLASTRUM.

**Empies'ma.** (Ἐμπιέσμα, from ἐπιτίω, to press on. F. *empiesme*; G. *Niederdrückung*.) Pressure or depression.

In Pharmacy, the expressed juice of plants.

In Surgery, pressure on the brain from fracture of the skull with depression.

**Empimelion polysar'cia.** (Ἐμ, for *eu*, denoting the possession of a quality; πῆμα, fat; πολός, much; σὰρξ, flesh.) A term for excessive fatness or obesity.

**Empire spring.** See *Saratoga springs*.

**Empiria.** See *Empiria*.

**Empir'ic.** (F. *empirique*; from L. *empiricus*; from Gr. ἑμπειρικός, deduced from experience alone, practical; from ἐν, by; πείρα, a trial. G. *Empiriker*, *Quacksalber*.) Term applied to a practitioner whose practice is the result of mere experience. Generally, however, it is used synonymously with a quack.

Also, the same as *Empirical*.

**Empirical.** (ἑμπειρικός. F. *empirique*; G. *empirisch*.) Of, or belonging to, an empiric; or, by custom, to a quack.

Also, that which is founded on experience.

**E. formula.** See *Formula, empirical*.

**Empiric'ō.** (ἑμπειρικῶ, practice.) Same as *Empiricism*.

**Empiricism.** (ἑμπειρικῆ, reliance on experience. F. *empirisme*; G. *Erfahrungskunde*.) Term for the practice of physic acquired by mere experience; also commonly applied, however, to quackery.

**Empirics.** (ἑμπειρικός.) An ancient sect of physicians opposed to the *Dogmatists*, and founded by Philinus of Cos, a disciple of Herophilus, and by Serapion. Excluding speculation, which they left to their adversaries, they admitted experience as the sole base of medicine; it had, according to them, three sources: chance, which furnished the facts, and the progress of the disease as observed or reported; trials, having for their object the knowledge of the issue; and imitation, or analogism and epilogism. They ignored, as valueless, anatomy and physiology.

**Emplast'ic.** (ἑμπλαστικός, stopping the pores; from ἐμπλάσσω, to plaster up. G. *verschmerzen*, *verpfasternd*.) The same as *Emphrastic*. That which is intended to plaster, or to form a coating.

**Emplas'tro-ender'mic.** (ἑμπλαστρον, a plaster; ἐν, in; δέρμα, the skin.) Applied to a mode of administering remedies by plastering them on to the sound or denuded skin so that they may be absorbed by or into it.

**Emplast'rum.** (ἑμπλαστρον, from ἐμπλάσσω, to plaster up. F. *emplâtre*; I. *emplastro*; S. *Yflaster*.) A plaster of any kind.

**E. aconit'i.** U.S. Ph. (F. *emplâtre d'aconit*; G. *Aconitpflaster*.) Aconite root, in fine powder, 16 troy oz., is soaked in alcohol for four days, and then percolated till two pints of tincture are obtained; 1-5 pint is distilled off, and the residue evaporated on a water bath to a soft consistence and mixed with sufficient melted emplastrum resine to make 16 troy oz. Anodyne and di-entient in rheumatism, painful joint diseases, and neuralgia.

**E. ad fontic'ulos.** (L. *ad*, to; *fonticulus*, a little spring. G. *Fontanelpflaster*.) The *Ceratum Galeni*, from its application to issues.

In G. Ph., Burgundy pitch 3 parts, suet 1, lead plaster 36, melted together.

**E. adhæ'rens.** (L. *adhæro*, to stick to.) The *E. resine*.

**E. adhæsi'vum.** G. Ph. (L. *adhæro*, to stick to. G. *Heftpflaster*.) Emplastrum lithargyri 500 parts, heated until the water is evaporated and it is melted, is mixed with yellow wax 50 parts, dammar resin 50, colophony 50, and turpentine 5.

Also (F. *emplâtre adhésif*; G. *harzig Bleipflaster*), the *E. resine*.

**E. adhæsi'vum anglicum.** G. Ph. (L. *anglicus*, English. G. *Englisches Pflaster*.) Court plaster. Thirty grammes of isinglass are dissolved in water to make 360 grms; one half is spread on taffetas 104 centimeters long and 42 wide, in several coatings, the remainder is mixed with 3 grms. of glycerin and 120 of alcohol and spread over the other; the back is painted with tincture of benzoin to make it waterproof.

**E. adhæsi'vum edinburghen'se.** The *E. adhesivum*, G. Ph., black pitch 3 parts being substituted for the resin and suet.

**E. adhæsi'vum Woodcock'il.** The *E. adhesivum anglicum*.

**E. æru'ginis.** (L. *æruo*, verdigris.) The *E. cum acetate cuprico*.

**E. al'bum coc'tum.** (L. *albus*, white; *coc'tus*, part. of *cogo*, to boil.) The *E. cerussa*.

**E. alexan'drium.** Old name for a plaster made of wax, alum, &c.; also called *E. viride*.

**E. althæ'æ.** The *Unguentum althææ*, Fr. Codex, and U. *flavum*, G. Ph.

**E. ammoni'aci.** U.S. Ph. (F. *emplâtre fontant*; G. *Ammoniakpflaster*.) Ammoniacum plaster. Ammoniacum 100 parts, is dissolved in dilute acetic acid 140 parts, strained and evaporated to a proper consistence. A stimulant-discutient in scrofulous joints and glands. It often produces a papular eruption.

**E. ammoni'aci cum hydrag'yro.** B. Ph., U.S. Ph. (F. *emplâtre de gomme ammoniacque mercuriel*; G. *Quecksilberammoniakpflaster*.) Ammoniacum and mercury plaster. Heat olive oil 8 parts with sublimed sulphur 1 part; with it triturate mercury 180 parts, and mix with ammoniacum 720 parts, digested in diluted acetic acid 1000 parts, and strained and evaporated; the mixture is to be made up to 1000 parts by the addition of sufficient lead plaster. A discutient in syphilitic swellings.

**E. An'dræe de cru'cè.** (L. *de*, of; *crux*, a cross. F. *emplâtre d'André de la croix*.) The *E. de pice et resinis glutinans*.

**E. anglicum.** (G. *englisches Pflaster*.) The *E. adhesivum anglicum*.

**E. antihyster'icum.** The *E. assafetide*, the antihysterie plaster.

**E. antimon'ia'le.** The *E. antimonii*.

**E. antimon'ii.** U.S. Ph. (F. *emplâtre antimonial*; G. *Brecheinsteinpflaster*.) Antimonial plaster. Tartar emetic a troy ounce stirred with 4 oz. of melted Burgundy pitch. Used for the production of a pustular eruption.

**E. ar'nicæ.** U.S. Ph. (F. *emplâtre d'arnique*; G. *Arnica-pflaster*.) Arnica plaster. Alcoholic extract of arnica root 50 parts, mixed with melted resin plaster 100 parts. Used in muscular pains.

**E. aromati'cum.** G. Ph. (F. *emplâtre aromatique*; G. *Magrapflaster*, *Aromatisches-pflaster*.) Spice plaster. Yellow wax 32 parts, suet 24, and turpentine 8, melted together, and, when nearly cold, expressed oil of nutmeg 6 parts, powdered oilbani 16, powdered benzoin 8, and

# EMPLASTRUM.

oils of pepperminut and cloves, of each 1 part, are added. Used in rheumatic pains.

**E. a'sæ fœtidæ.** The *E. fatidum*, G. Ph. **E. assafœtidæ**, U.S. Ph. (F. *emplâtre fétide*; G. *Stinkasantpfaster*.) Assafetida plaster. Assafetida 35 parts, galbanum 15 parts, dissolved in alcohol 120 parts by means of a water bath, is strained, and evaporated to a honey consistence, and mixed with lead plaster 35 parts, and yellow wax 15 parts, melted together. Used in hysteria, flatulent colic, and whooping-cough.

**E. attractivum.** Same as *E. attrahens*. **E. attrahens.** (L. *attraho*, to draw to. G. *Zugpfaster*.) The *E. ceræ*, the drawing plaster.

**E. auricula'rë.** (L. *auriculum*, the outer ear.) A plaster applied under or behind the ear.

**E. belladonnæ.** B. Ph. (F. *emplâtre de belladonne*; G. *Belladonnapfaster*.) Belladonna plaster. Extract of belladonna 3 oz. is rubbed with rectified spirit 6 oz. in a mortar and allowed to subside; the clear solution is decanted, the spirit removed by distillation or evaporation, and the residue mixed with resin plaster 3 oz. by the aid of a water bath. Used for the relief of pain and the reduction of inflammatory swellings.

In U.S. Ph. belladonna root, in No. 60 powder, 100 parts, is macerated in a percolator with 40 parts of alcohol for 48 hours; it is then percolated till exhausted, evaporated to a soft extract, and mixed with sufficient resin plaster to make 100 parts.

In G. Ph., yellow wax 4 parts, frankincense and olive oil, of each 1 part, are melted together and mixed, when half cold, with belladonna leaves 2 parts.

**E. calefa'ciens**, B. Ph. (L. *calefacio*, to make warm. F. *emplâtre échauffant*; G. *Warmpfaster*.) Cantharides 4 oz. is infused in a pint of boiling water for six hours, squeezed through calico, and evaporated to a third; it is then mixed in a water bath with expressed oil of nutmeg, yellow wax, and resin, of each 4 parts, soap plaster 3-25 lb., and resin plaster 2 lbs. Used as a mild counter-irritant.

Also, the *E. picis cum cantharide*, U.S. Ph.

**E. cantharida'tum.** The *E. cantharidis*. **E. cantharidis**, B. Ph. (F. *emplâtre vésicatoire*; G. *Spanischfliegenpfaster*, *Blasenpfaster*.) Blistering plaster, cantharides plaster. Cantharides, in powder, 12 oz., yellow wax, prepared suet, of each 7-5 oz., prepared lard 6 oz., resin 3 oz., melted and mixed together. A blistering agent.

**E. cantharidis vesicatorii compositum.** The *E. lytta compositum*.

**E. cantharidum ordinariū**, G. Ph. (L. *ordinarius*, usual. G. *Spanischfliegenpfaster*.) Cantharides 50 parts, olive oil 25, heated in a warm bath for an hour, and then mixed with previously melted yellow wax 100, and resin 25 parts.

**E. cantharidum perpetuum**, G. Ph. (L. *perpetuus*, continuing. G. *immerwährendes Spanischfliegenpfaster*.) Resin 70 parts, yellow wax 50 parts, frankincense 35, suet 20, melted together and mixed with cantharides, powdered, 20 parts, and euphorbium, in fine powder, 6. A mild counter-irritant.

**E. cap'sici**, U.S. Ph. Resin plaster is thinly spread upon muslin, and then coated with oleo-resin of capsicum, so that 4 grains are con-

tained in 4 square inches, or 25 centigrammes on 10 square centimeters of the plaster.

**E. cephalicum.** (Κεφαλί, the head. G. *Kopfpfaster*.) The *E. picis compositum*. Also, the *E. opii*.

**E. ceræ.** (L. *cera*, wax.) Yellow wax and prepared suet, of each 3 parts, resin 1; melted, mixed, and strained. A stimulating plaster.

**E. cera'ti saponis**, B. Ph. (F. *emplâtre de savon saturé*; G. *Seifencrempfaster*.) Soap-erate plaster. Oxide of lead 15 oz. is boiled with vinegar 1 gallon until chemical combination is complete, then hard soap 10 oz. is added, and it is again boiled till most of the moisture is evaporated; yellow wax 12-5 oz., and olive oil 1 pint, melted together, are added, and the whole evaporated to a proper consistence.

**E. céro'neum**, Fr. Codex. (L. *cera*, wax. F. *emplâtre céroène*.) Burgundy pitch 400 grms., black pitch 100, yellow wax 100, mutton suet 50, Armenian bole 100, powdered myrrh 20, powdered frankincense 20, porphyrised red lead 20.

**E. cerus'sæ**, G. Ph. (L. *cerussa*, white lead. G. *Bleiweißpfaster*, *Froschlächpfaster*.) Plaster of litharge 60 parts, boiled in olive oil 10 parts, until the former is dissolved; lead carbonate 35 parts is then added, and the whole boiled to a proper consistence. Used to prevent bed-sores.

**E. cicu'tæ**, Fr. Codex. (F. *emplâtre de ciguë*; G. *Schierlingspfaster*.) Hemlock plaster. Resin 940 parts, Burgundy pitch 440, yellow wax 640, oil of hemlock 130, are melted together in a copper vessel, fresh leaves of hemlock 2000 parts are added, and the heat continued until the moisture is expelled; the mixture is strongly expressed and then mixed with purified ammoniacum 500 parts. Used as a resolvent in cancerous tumours.

**E. cicu'tæ cum ammoni'aco.** The *E. conii ammoniacatum*.

**E. cinere'um.** (L. *cinereus*, ash-colored.) The *E. hydrargyri*.

**E. citrinum.** (L. *citrinus*, lemon-colored.) The *Unguentum althææ*, Fr. Codex.

Also, the *Ceratium resina pini*, G. Ph.

**E. communë.** (L. *communis*, common.) The *E. plumbi*.

**E. communë cum resina.** The *E. resinae*.

**E. con'i.** (Κόνιον, hemlock.) The *E. cicuta*.

In G. Ph. it is made as *E. belladonnæ* by substituting conium leaves.

**E. conii ammoniacatū**, G. Ph. (G. *mit Ammoniakgummi versetztes Schierlingspfaster*.) Ammoniacum 2 parts, dissolved in vinegar of squills 2 parts, and mixed with *E. conii* 9 parts.

**E. consol'idans.** (L. *consolido*, to make very solid. G. *Heilpfaster*.) A healing or strengthening plaster.

**E. cum aceta'te cuprico.** (F. *emplâtre d'acetate cuivre, cuivre vert*.) Verdigris plaster. Porphyrised subacetate of copper 25 parts is mixed with larch turpentine 25, and to it is added yellow wax 100, and Burgundy pitch 50 parts previously melted.

**E. cum extracto cicu'tæ**, Fr. Codex. (F. *emplâtre d'extract de ciguë*.) Alcoholie extract of hemlock 90 grms., purified elemi 20, white wax 10.

**E. cum gummat'ibus.** The *E. gummosum*.

# EMPLASTRUM.

**E. cum gummi ammoniaco.** Fr. Codex. (F. *emplâtre de gomme ammoniac.*) Yellow wax 10 grms., yellow resin 10, larch turpentine 10, purified gum ammoniacum 20, melted together.

**E. cum gummi-resini.** The *E. diachylon gummatum*.

**E. cum hydrargyro.** Fr. Codex. (F. *emplâtre mercurel.*) Beldium 30 grms., olibanum 30, myrrh 30, and saffron 20, are reduced to powder; mercury 600 is triturated in a slightly heated iron mortar with storax 300, larch turpentine 100, and volatile oil of lavender 10; emplastrum simplex 2000, yellow wax 1000, yellow resin 100, and gum ammoniacum 30, are melted together; the pulverised substances are then added, and when it is half cold the mercurial mass is mixed with it.

**E. cum oxydo ferri.** Fr. Codex. (F. *emplâtre de Canet, onguent de Canet.*) Emplastrum simplex, *e. diachylon gummatum*, yellow wax, colcothar, of each 100 grms., olive oil 80.

**E. cum sapone.** Fr. Codex. (L. *cum*, with; *sapo*, soap. F. *emplâtre de savon.*) Emplastrum simplex 2000 parts, white wax 100, white soap 150; melt and mix.

**E. cum sapone camphoratum.** Fr. Codex. (F. *emplâtre de savon camphoré.*) Soap plaster 100 grms., powdered camphor 1.

**E. cumini.** Cumin plaster. Cumin seeds, caraway seeds, and laurel berries, of each 3 oz., made into a plaster with yellow wax 3 oz., and Burgundy pitch 3 lbs. A warm discutient.

**E. cupri acetatis.** The *E. cum acetate cuprico*.

**E. datuæ.** Ind. Ph. Dhatura plaster. Extract of dhatura 3 oz., mixed with soap plaster and resin plaster, of each 1-5 oz., previously melted in a water bath. A local anodyne in rheumatism, neuralgia, and asthmatic conditions.

**E. de minio rubrum.** The *E. minii rubrum*.

**E. de Vigo cum mercurio.** The *E. cum hydrargyro*, Fr. Codex.

**E. defensivum.** (L. *de fundo*, to ward off. G. *Zertheilpflaster.*) A protecting plaster.

**E. diabolium.** (L. *diabolus*, a devil.) Another name for the *E. oxyroceum*.

**E. diabolanon.** (*Διά*, through; *βοτάνη*, a herb.) A plaster of the old Paris Codex, containing some sixty ingredients.

**E. diachylon.** The *E. plumbi*. See also *Diachylon*.

**E. diachylon compositum.** The *E. galbani compositum*, U. S. Ph.

Also, the *E. luthargyri compositum*, G. Ph.

**E. diachylon gummatum.** Fr. Codex. (F. *emplâtre diachylon gomme.*) Emplastrum simplex 1500 grms., yellow wax 250, white pitch 100, resin 150, elemi 100, olive oil 50, ammoniacum 30, galbanum 30, sagapenum 30; melted and mixed together.

**E. diachylon simplex.** (L. *simplex*, simple.) The *E. plumbi*, B. Ph.; also, the *E. luthargyri simplex*, G. Ph.

**E. diapalma.** In Fr. Codex, emplastrum simplex 800 grms., white wax 50, sulphate of zinc 25. See *Diapalma*.

**E. divinum Nic'olai.** A plaster, containing powdered magnetic iron, used to draw bullets and arrow heads from the body.

**E. e gummatibus resinosis.** The *E. gummosum*.

**E. elephantinum.** See *Elephantinum emplastrum*.

**E. e min'lo.** (L. *e*, from; *minium*, red lead.) A plaster prepared with red lead like *E. plumbi*, and kept hot until it was black.

**E. emolliens.** (L. *emollio*, to soften.) The *Unguentum althææ*.

**E. epispasticum.** (*Επισπαστικός*, drawing to one's self.) The *E. cantharidis*.

**E. euphorbii.** The *E. cantharidis perpetuum*, from the euphorbium which it contains.

**E. ex oxido plumbi rubro compositum.** The *E. fuscum camphoratum*.

**E. ex oxido plumbi semivitreo.** The *E. plumbi*.

**E. ferat'um.** The *E. ferri*.

**E. ferri.** B. Ph. (L. *ferrum*, iron. F. *emplâtre de Canet*; G. *Eisenpflaster.*) Chalybeate plaster, iron plaster. Burgundy pitch 2 oz., lead plaster 8 oz., melted together and mixed with hydrated peroxide of iron 1 oz. Used as a strengthening and protecting plaster.

In U. S. Ph., hydrated peroxide of iron 10 parts is added to Burgundy pitch 10 parts, Canada turpentine 10 parts, and lead plaster 70 parts, melted together.

**E. ferri oxidi rubri.** See *E. oxidi ferri rubri*.

**E. flavum.** (L. *flavus*, yellow.) The *Unguentum althææ*.

**E. foetidum.** (L. *foetidus*, stinking.) The *E. assafetida*, U. S. Ph.

In G. Ph. (G. *Stinkasentpflaster*), yellow wax and Burgundy pitch, of each 4 parts, melted together, strained, and, when half cold, mixed with assafetida 6, ammoniacum 2, dissolved, in a water bath, in frankincense 4. Not now official.

**E. fuscum.** G. Ph. (L. *fuscus*, swarthy. G. *schwarzes Mutterpflaster.*) Red oxide of lead 32 parts, boiled with olive oil 64, until the mass becomes dark brown, when yellow wax 16 parts is added. Not now official.

The *E. fuscum*, P. Boruss, is the *E. fuscum camphoratum*, G. Ph.

In Fr. Codex, olive oil 1000 grms., lard 500, butter 500, yellow wax 500, litharge 500, mutton suet 500, black pitch 100.

**E. fuscum camphoratum.** G. Ph. (G. *Universalpflaster, Nürnberger Pflaster.*) Finely powdered minium 30 parts, olive oil 60, boiled together until the mass becomes dark brown, and then yellow wax 15 parts, and camphor, mixed with a little olive oil, one part added. Used in gangrene.

**E. galbani.** B. Ph. (F. *emplâtre de galbanum*; G. *Mutterharzpflaster.*) Galbanum plaster. Galbanum and ammoniacum, of each 1 oz., melted together and mixed with yellow wax 1 oz., and lead plaster 8 oz., also previously melted together. Used as a resolvent in swellings and tumours.

In U. S. Ph., galbanum 16 parts, and resin 2, are melted together and strained, then mixed with Burgundy pitch 6 parts, and lastly with lead plaster 76 parts.

**E. galbani compositum.** U. S. Ph. Galbanum plaster. Galbanum 8 oz., turpentine 1 oz., melted together and strained, to which is added melted Burgundy pitch 3 oz., and then melted lead plaster 36 oz.

**E. galbani crocatum.** G. Ph. (L. *crocatius*, mixed with saffron. G. *mit Safran versetztes Mutterharzpflaster.*) Lead plaster 24 parts, and yellow wax 8 parts, are melted, and,

# EMPLASTRUM.

when half cool, galbanum 24 added; to this frankincense 6 parts, and powdered saffron 1, mixed with a little alcohol, is added.

**E. galbani rubrum.** (*L. ruber*, red.) The *E. oxycrocum*.

**E. glutinans**, Fr. Codex. (*L. glutino*, to glue together. *F. emplâtre agglutinatif*, c. d' *André de la croix*.) White pitch 200 grms., elemi 50, larch turpentine 25, oil of laurel fruit 25.

**E. glutinosum.** (*L. glutinosus*, gluey.) Court plaster.

**E. gummosum.** (*L. gummosus*, full of gum.) Litharge plaster 4 oz., ammoniacum, galbanum, and bee's-wax, of each 15 ounce.

**E. hydrargyri**, B. Ph. (*F. emplâtre mercuriel*; *G. Quecksilberpflaster*.) Mercurial plaster. Sublimed sulphur 8 grs. is mixed with heated olive oil 1 fluid drachm, and then triturated with mercury 3 oz., to this melted lead plaster 6 oz. is added. A discent and resolvent. Applied to syphilitic swellings.

In U.S. Ph., olive oil and resin, of each 10 parts, are melted together, triturated with 30 parts of mercury, and then mixed with 50 parts of melted lead plaster.

In G. Ph., mercury 100 parts, and oil of turpentine 1, are triturated with resin 50, and then mixed with plaster of litharge 300, and yellow wax 50, melted together.

For that of Fr. Codex, see *E. cum hydrargyro*.

**E. hydrargyri compositum.** The *Linimentum hydrargyri compositum*.

**E. hyoscyami**, G. Ph. (*G. Bilsenkrampflaster*.) Henbane plaster. Made as *E. belladonnae*, G. Ph., with the substitution of henbane leaves.

**E. ichthyocolle**, U.S. Ph. (*ἰχθῆς*, a fish; *κόλλα*, glue.) Court plaster. Isinglass 10 parts is dissolved in sufficient hot water to make the solution weigh 120 parts. Half is spread in successive layers on taffetas, the remaining mixed with alcohol 40 parts, and glycerin 1, is spread over the first; and the back of the taffetas is coated with tincture of benzoin.

**E. ichthyocolle telae induc'tum.** (*L. ichthyocolla*, isinglass; *tela*, a web; *inductus*, part, of *induco*, to spread something over.) Court plaster; see *E. ichthyocolla*.

**E. irritans.** (*L. irrito*, to stir up.) The *E. cantharidis*.

**E. lithargyri.** (*Litharge*.) The *E. plumbi*.

In G. Ph., equal parts of olive oil, suet, and litharge are melted together with a little water.

**E. lithargyri compositum**, G. Ph. (*G. Gummipflaster*, *Zugpflaster*.) Lead plaster 120 parts, yellow wax 15, melted together, and, when half cooled, mixed with 10 parts each of powdered ammoniacum, powdered galbanum, and resin.

**E. lithargyri cum gummi.** The *E. gummosum*.

**E. lithargyri cum hydrargyro.** The *E. hydrargyri*.

**E. lithargyri molle**, G. Ph. (*L. mollis*, soft. *G. Weisses Mutterpflaster*.) Lead plaster 3 parts, lard 2, suet and yellow wax, of each 1.

**E. lithargyri simplex**, G. Ph. (*L. simplex*, simple. *G. Bleipflaster*.) Olive oil, lard, and litharge, equal parts, melted and mixed together.

**E. lithargyricum cum resina pini.** (*L. pinus*, the fir tree.) The *E. resine*.

**E. lyttæ.** (*Lytta*.) The *E. cantharidis*.

**E. lyttæ compositum.** Cantharides plaster, containing verdigris and mustard.

**E. martialle.** (*L. Mars*, an old name of iron.) The *E. ferri*.

**E. matris album.** (*L. mater*, a mother; *albus*, white.) A name in the Saxon Ph. for *E. lithargyri molle*, G. Ph.

**E. matris fuscum.** The name in the Saxon Ph. for *E. fuscum*, G. Ph.

**E. meliloti**, G. Ph. (*G. Melilotenpflaster*.) Melilot plaster; made like *E. belladonnae*, with the substitution of melilot leaves.

**E. meloes vesicatorii.** (*Meloes*; *L. vesica*, a blister.) The *E. cantharidis*.

**E. meloes vesicatorii compositum.** The *E. lyttæ compositum*.

**E. mercuriale.** The *E. hydrargyri*.

**E. meze rei cantharida'tum**, G. Ph. (*G. mit Canthariden versetztes Seidelbastpflaster*.) Cantharides 30 grms., mezeoreon bark 10, macerated in acetic ether 100, for eight days; in the filtrate dissolve gum sandarach 4 grms., elemi 2, and resin 2, and paint it on a piece of taffetas of 3000 square centimeters in size, which has been previously coated on the other side with a solution of 20 grms. of isinglass in 200 of distilled water and 50 of alcohol.

**E. mineaceo-camphora'tum**, Fr. Codex. (*F. emplâtre de minium camphré*.) Emplastrum simplex 600 grms., yellow wax 300, olive oil 100, minium 150, and camphor 12.

**E. minii adustum.** (*L. adustus*, browned.) The *E. fuscum camphoratum*.

**E. minii rubrum**, G. Ph. (*L. ruber*, red. *G. rothes Mennigpflaster*.) Yellow wax and suet, of each 100 parts, are melted with olive oil 40, and red oxide of lead 100, and camphor 3, triturated with olive oil 60, are mixed.

**E. mucilaginosum.** (*Mucilage*.) The *Unguentum de althæa*.

**E. nigrum.** (*L. niger*, black.) The *E. fuscum camphoratum*, G. Ph.

**E. nigrum of Aug'sburg.** A plaster made by mixing powdered magnetic iron with resins. Used to extract bullets and arrow heads.

**E. noricum.** Nuremberg plaster. The *E. fuscum camphoratum*.

**E. norimbergen'se.** Nuremberg plaster. The *E. fuscum camphoratum*.

**E. nygmaticum.** (*Nýγμα*, a prick.) The *E. resine*, because it was used for wounds.

**E. odontalgicum.** (*Ὄδούς*, a tooth; *ἀλγος*, pain.) The *E. opii*.

**E. opiatum**, G. Ph. (*G. Opiumpflaster*, *Hauptpflaster*.) Elemi 8 parts, frankincense 15, yellow wax 5, melted together, strained, and mixed with olibanum 8, benzoin 4, opium 2, and balsam of Peru 1.

**E. opii**, B. Ph. Nine ounces of resin plaster is melted in a water bath, and then mixed with 1 oz. of finely powdered opium. An anodyne.

In U.S. Ph., extract of opium 6 parts is mixed with 8 parts of water; to this is added Burgundy pitch 18 parts, and lead plaster 76 parts, and the whole is melted together in a water bath.

**E. oxidi ferri rubri.** (*L. ruber*, red.) The *E. ferri*.

**E. oxidi plumbi semivitrei.** (*L. semi*, half; *vitreus*, glassy.) The *E. plumbi*.

**E. ox'idi plm'bi semivitr'el gum-mo'sum.** The *E. gummosum*.

**E. oxycro'ceum,** G. Ph. (*G. Safran-plaster.*) Yellow wax, colophony, and Burgundy pitch, of each 6 parts, melt and strain; add ammoniacum and galbanum, of each 2, dissolved in frankincense 3, then add a mixture of mastich, myrrh, and oilivum, of each 2, and powdered saffron 1.

**E. phœnic'cum.** A synonym of *Dia-palma*.

**E. pica'tum,** Fr. Codex. (*L. picatus*, pitchy. *F. emplâtre de poix de bourgogne.*) Yellow wax 1000 parts, melted with Burgundy pitch 3000.

**E. pic'is,** B. Ph. (*G. Pechplaster.*) Pitch plaster. Burgundy pitch 26 oz., frankincense 13 oz., resin and yellow wax, of each 4.5 oz., melted together, mixed with expressed oil of nutmeg 1 oz., olive oil and water, of each 2 oz., and evaporated, constantly stirring, to a proper consistence. A stimulant and mechanically supporting plaster.

**E. pic'is burgun'dica,** U.S. Ph. (*F. emplâtre de poix de bourgogne.* *G. Burgunder Pechplaster.*) Burgundy pitch plaster. Burgundy pitch 90 parts, melted with yellow wax 10 parts. A slightly stimulating plaster.

In the Fr. Codex, 1 part of yellow wax is melted with 3 of Burgundy pitch.

**E. pic'is canadensis,** U.S. Ph. Canada or hemlock pitch plaster. Canada pitch 90 parts, yellow wax 10; melt and mix. Slightly stimulating.

**E. pic'is compos'itum.** A synonym of *E. pic'is*, B. Ph.

**E. pic'is cum canthar'idé,** U.S. Ph. Burgundy pitch 92 parts mixed with 8 parts of cerate of cantharides, previously melted and strained.

**E. pic'is irritans,** G. Ph. (*L. irrita*, to inflame. *G. ruscus Pechplaster.*) Burgundy pitch 32 parts, yellow wax and frankincense, of each 12 parts, melted together and mixed with powdered euphorbium 3.

**E. plum'bi,** B. Ph. (*L. plumbum*, lead. *F. emplâtre de plomb;* *G. Bleiplaster.*) Lead plaster. Oxide of lead 4 pounds, olive oil one gallon, water 3.5 pints, boiled together until they are of a proper consistence. A discenting and protective. Used in bedsores.

In U.S. Ph., oxide of lead 32 oz. is rubbed with 30 parts of olive oil, then mixed with other 30 parts of olive oil and 10 parts of boiling water, and the whole boiled to a proper consistence.

**E. plum'bi compos'itum.** The *E. gal-bani compos'itum*, U.S. Ph.

Also, the *E. lithargyri compos'itum*, G. Ph.

**E. plum'bi iodi'di,** B. Ph. Iodide of lead plaster. Soap plaster and resin plaster of each four ounces are melted, and iodide of lead one ounce mixed with them. A solvent in serofulous swellings and articular rheumatism.

**E. plum'bi simplex.** The *E. lithargyri simplex*, G. Ph.

**E. polychres'tum.** (Πολύς, much; χρυσός, useful.) A synonym of *E. resinae*.

**E. potas'sil iodi'di.** Iodide of potassium 1 oz., wax 6 drachms, olive oil 2 drachms. Mix with heat. Applied to indolent swellings.

**E. rana'rum simplex.** (*L. rana*, a frog.) An old plaster made with frogs, earthworms, and several resins.

**E. resinae,** B. Ph. (*F. emplâtre résineux*;

*G. Heftpflaster.*) Resin plaster. Resin 4 oz., lead plaster 2 pounds, hard soap 2 oz., melted together.

In U.S. Ph., resin 14 parts is melted with lead plaster 80 parts, and yellow wax 6 parts.

**E. resino'sum.** The *E. resinae*.

**E. resolvens,** Fr. Codex. (*L. resolveo*, to melt. *F. emplâtre résolutif, e. des quatre fondants.*) Soap plaster, hemlock plaster, emplastrum diachylon gummatum, and merecurial plaster, of each equal parts.

**E. roborans.** (*L. robora*, to make strong.) The *E. ferri*.

**E. rubefi'ans.** (*L. ruber*, red; *facio*, to make.) The *E. cantharidis*.

**E. saponat'um.** The *E. saponis*.

Also, G. Ph., lead plaster 70 parts, yellow wax 10, melted together, and, when half cold, mixed with powdered Castile soap 5 parts and camphor 1 part.

**E. sapo'nis,** B. Ph. Soap plaster. Hard soap 6 oz., lead plaster 2.25 pounds, resin 1 oz. Melt and mix. A protective.

In U.S. Ph., soap 10 parts, mixed with water, lead plaster 90 parts, and boiled to a proper consistence.

**E. simplex.** (*L. simplex*, simple.) The *E. cerae*.

In Fr. Codex, litharge 2000 parts is added to a heated mixture of lard 2000, olive oil 2000, and water 4000, and boiled to a proper consistence.

**E. sperma'tis cet'i.** The *Ceratum cetacei*.

**E. stibia'tum.** (*L. stibium*, antimony.) The *E. antimonii*.

**E. stomach'icum.** (Στόμαχος, the stomach.) The *E. aromaticum*.

**E. thu'ris.** (*L. thus*, frankincense.) Lead plaster 2 lbs., frankincense 5, red oxide of iron 3 oz., mixed together.

**E. universa'lē.** (*L. universalis*, universal.) The *E. fuscum camphoratum*.

**E. vesicans.** (*L. vesica*, a blister.) The *E. cantharidis*.

In Fr. Codex (*emplâtre vesicatoire*), elemi 100 grammes, olive oil 40, basilicon ointment 300, yellow wax 400, and cantharides 420.

**E. vesicans medrolan'ese,** Fr. Codex. (*F. mouches de Milan.*) White pitch and yellow wax, of each 50 grammes, are melted together, cantharides 50 added and digested for two hours in a water bath; larch turpentine 10 is then added, and, when half cold, oils of lavender and thyme of each 1 gramme.

**E. vesicator'ium.** (*L. vesica*, a blister.) The *E. cantharidis*.

**E. vesicator'ium ordinari'um.** The *E. cantharidum ordinari'um*.

**E. vir'idē.** (*L. viridis*, green.) The *Ceratum aruginis*, G. Ph.

**Emplattom'ena.** Old term (Gr. ἐμ-πλαττούμενα), applied by Galen, *Meth. Med.* viii, 2, to medicaments in the same way as *Emplastic* and *Emphractic*.

**Empleur'um.** A Genus of the Nat. Order *Rutaceæ*.

**E. serrula'tum,** Ait. (*L. serrula*, a small saw.) Hab. South Africa. Leaves sometimes mixed with those of *Burrosma serratifolia*, forming long buchu; they are narrower and longer, acuminata, and have no oil-glands.

**Empneumatosis.** (Εν, in; πνεύμα-τωσις, an inflation.) Old term for an inflation with gas of the stomach, the womb, or abdomen.

Also, the same as *Emphysema*.

**Emporet'ic.** (Ἐμπορία, commerce.) Commercial.

**Empo'rium.** (Ἐμπορίον, a market; from ἔμποριον, to transact. F. *empore*; G. *Handelsort*.) A mart. Anciently applied to an imaginary reservoir in the brain, in which the animal spirits were stored; they being produced by the grey substance and filtered through the white matter. (Quincy.)

Also, the brain generally.

**E. spir'ituum.** (L. *spiritus*, soul.) The sensorium.

**Emp'osis.** (Ἐμπίω, to drink in.) A synonym of *Imbibition*.

**Empresiomania.** Same as *Empres-momania*.

**Empres'is.** (Ἐμπρησις, a conflagration.) Same as *Empresma*.

**Empres'ma.** (Ἐμπρήθω, to burn.) A term employed by Mason Good as the generic name for visceral inflammation.

**Empresmomania.** (Ἐμπρησμός, a conflagration; *mania*, madness. F. *empresmo-manie*; G. *Fenerwuth*.) Mania with irresistible impulse to set fire to things.

**Empres'mus.** (Ἐμπρησμός) Same as *Empresma*.

**Em'prion.** (Ἐν, in; *πρίων*, a saw.) Ser-rated. Anciently applied to a particular kind of irregular pulse, giving a sensation of sharp unevenness to the finger.

**Empro'phyte.** (Ἐμπροσώ, to set on fire; *φυτόν*, a plant. F. *emprophyte*; G. *Fen-craft*.) Name by Necker for plants the acid juices of which exert a caustic action on animal tissues.

**Emprostho'cline.** (Ἐμπροσθεν, forwards; *κλίνη*, a bed. F. *emprostho'cline*; G. *Bauchbette*.) A bed for lying on the belly in spinal diseases or distortions.

**Emprosthocyr'toma.** (Ἐμπροσθεν, forwards; *κύρτωμα*, convexity. F. *emprosthocyr-tôme*; G. *Ausbeugung*.) A bending or projecting forwards, as of the spine.

**Emprosthocyr'to'sis.** The formation or progress of *Emprosthocyr'toma*.

**Emprosthomeloph'orus.** (Ἐμπροσθεν, forwards; *μέλος*, a limb; *φορέω*, to bear.) A monstrosity bearing one or more extra limbs on the upper and fore part of the body.

**E. tetrach'irus.** (Ἑτέρα, four; *χειρ*, the hand.) A species having four superior limbs.

**Emprosthotonos.** (Ἐμπροσθό-tonos, drawn forwards; from ἔμπροσθεν, forwards; *τείνω*, to stretch or bend.) A condition in tetanus in which the body is drawn forwards by excessive action of the anterior muscles of the trunk; its occurrence is very rare.

**Empsycho'sis.** (Ἐμψυχός, to animate.) An old term for the act of union of soul with body.

**Emp'toë.** (Ἐμπτώ, to spit upon.) A synonym of *Heomptysis*.

**Emptoica pas'sio.** (Ἐμπτώ; L. *passio*, a disease.) Spitting of blood.

**Empt'ysis.** (Ἐμπτυσις, from ἔμπτώ, to spit upon. G. *Blutspien*.) An old term, used by Aræteus, for a discharge of blood by spitting when it comes only from the mouth, fauces, or parts adjacent. (Quincy.)

**Emptys'ma.** (Ἐμπτυσμα, spittle; from ἔμπτώ, to spit upon.) Saliva; also the same as *Sputum*.

**Empu'sa.** (Ἐμπουσα, the name of a hob-

goblin who assumed different shapes.) A Genus of the Family *Entomophthoræ*.

**E. mus'cæ.** Cohn. (L. *muscæ*, a fly.) A species which grows on the body of the house-fly and destroys it in large numbers; the insects become rigid, stick to a window pane or other surface, and the white spores of the fungus cover the neighbouring surface.

**Empyë.** (Ἐμπύη, suppuration.) Same as *Empyema*.

**Empyë'ma.** (Ἐμπύημα, a gathering; from *ἐν*, within; *πύον*, pus. F. *empyëme*; L. *empyëma*; G. *Empyë-m*, *Eiterbrust*.) A collection of pus in the cavity of the pleura, the result of *Pleurisy*.

The term has also been used to denote any chronic inflammatory effusion, whether serous, sanguineous, or purulent, in the chest.

**E. false.** Pus in the pleural cavity derived from outside, as from an abscess of the lung.

**E. of an'trum.** Suppuration in the *Antrum Highmoreanum*.

**E., true.** Pus in the pleura, originating there from some inflammatory process.

**Empyë'sis.** (Ἐμπύησις, suppuration; from ἔμπύω, to suppurate.) A term applied by Dr. Good to a genus of diseases characterised by phlegmonous pimples, which gradually fill with purulent fluid, as *Varicella*, *Varicella*.

Also, a deep-seated abscess.

**E. oculi.** (L. *oculus*, the eye.) A syno-nym of *Hypopyon*.

**E. pectoris.** (L. *pectus*, the chest.) A synonym of *Empyema*.

**Empy'isis.** (Ἐμπύισκω, to cause an abscess.) A causing or progressing of internal sup-puration, particularly of the lungs.

**Empyis'mus.** Same as *Empyisis*.

**Em'pyocle.** (Ἐν, in; *πύον*, pus; *κύλη*, a tumour. F. *empyocle*; G. *Eiterbruch*.) Term for a collection of pus within the serotum.

**Empyom'phalus.** (Ἐν, in; *πύον*, pus; *ὄμφαλος*, the navel. F. *empyomphale*; G. *Eiter-nabel*.) Term for a collection of pus under or about the navel.

**Empy'ous.** (Ἐμψος, suppurating.) Having pus, forming matter.

**Empyr'eal.** (Low L. *empyræus*; from Gr *ἐμπυρος*, by the fire.) Formed of pure fire, per-taining to the highest region of the heavens.

**E. air.** A name for oxygen gas.

**Empyreu'ma.** (Ἐμπύρευμα, a coal to preserve a smouldering fire; from ἔμπυρῶ, to kindle. F. *empyreume*; G. *Empyreuma*, *Brand-geruch*, *brenzlicher Geruch*.) Term for a pecu-liar and indescribably disagreeable smell which animal and vegetable matters give rise to when burned.

**Empyreumatic.** (Same etymon. F. *empyreumatique*; G. *brenzlich*, *empyreuma-tisch*.) Of, or belonging to, or having the quality of, *Empyreuma*.

**E. oils.** Oils obtained by the distillation of substances the result of the decomposition by heat of animal or vegetable matters.

**Empyrus.** (Ἐμπυρος, burning.) One who has fever.

**Ems.** Germany, in Nassau, on the right bank of the Lahn, about 300' above sea level. It is prettily situated on the river's edge, with steep wooded hills close behind it, and wooded slopes in front; in summer it is at times close and hot. There are many springs, of which four are chiefly used; the Kesselbrunn, temp. about 47° C.

# EMULGENT—ENADELPHIA.

(116·6° F.); the Kränchen, temp. 29·5° C. (85·1° F.); the Fürstenbrunnen, temp. 35·25° C. (95·45° F.); and the Felsenquelle, temp. 46·5° C. (115·7° F.), chiefly used for the baths. The chemical composition of the springs is very similar; they contain about 27 grains of solid matter in 16 ounces, consisting of, in round numbers, sodium bicarbonate 15 grains, sodium sulphate 1, sodium chloride 7, potassium sulphate 4, calcium bicarbonate 1·5, and magnesium bicarbonate 1·5, a small quantity of iron, and traces of strontian and baryta, with free carbonic acid. The waters of Eins are used in chronic affections of the several mucous membranes, gastric, intestinal, respiratory, and urinary, in lymphatic enlargements, in uterine congestions and benign enlargements, in gouty dyscrasia, chronic rheumatism, chronic bronchial catarrh, dyspepsia, and skin affections. They are said to be serviceable in some early cases of pulmonary phthisis.

**Emulgent.** (*L. emulgeo*, to milk out. *F. emulgent*; *G. ausmilchen*.) Straining through; milking out.

Applied to the vessels of the kidneys, which are supposed to strain or milk the serum through the kidneys.

**E. arteries.** The *Renal arteries*.

**E. veins.** The *Renal veins*.

**Emulsification.** (*L. emulsus*, part. of *emulgeo*, to milk out; *facio*, to make.) A term applied to the last stage of fatty degeneration in which the structures become softened and semi-liquid, consisting of an albuminous fluid containing oil-globules.

**Emulsify.** (*L. emulsus*, part. of *emulgeo*, to milk out; *facio*, to make.) To form, or to make, an emulsion.

**Emulsin.** A synonym of *Squaptase*.

**Emulsio.** Same as *Emulsion*.

**E. acaciæ.** An old name for *Mistura amygdalæ*.

**E. ammoniac.** The *Mistura ammoniac*.

**E. amygdalæ.** The *Mistura amygdalæ*.

**E. amygdalarum.** The *Mistura amygdalæ*.

**E. amygdalarum composita.** *G. Ph.* (*G. zusammengesetzte Mandel-emulsion*.) Compound almond emulsion. Sweet almonds 4 parts, henbane seeds 1 part, rubbed into an emulsion with aqua amygdalarum amararum diluta 64 parts, and white sugar 6, and calcined magnesias 1 part added.

**E. antihysterica.** (*Ἀντί*, against; *hysteria*.) The *M. assafoetida*.

**E. arabica.** (*Gum arabic*.) The *Mucilago acacia*.

**E. camphoræ.** Camphor a scruple, decocted almonds and white sugar, of each 4 drachms, water 6 ounces.

**E. chloroformi.** The *Mistura chloroformi*, *U.S. Ph.*

**E. communis.** (*L. communis*, common.) The *Mistura amygdalæ*.

**E. cum oleo e seminibus ricini.** *Fr. Codex.* (*L. cum*, with; *oleum*, oil; *e*, from; *semen*, seed; *ricinus*, the castor-oil plant. *F. emulsion purgative avec l'huile de ricinus*.) Castor oil 30, powdered gum arabic 8, peppermint water 15, water 60, syrup 30 parts.

**E. cum resina jalapæ.** *Fr. Codex.* (*F. emulsion purgative avec la résine de jalap*.) Resin of jalap 5, white sugar 30, orange flower water 10, water 120 parts, mixed with the aid of half the yolk of an egg.

**E. guaiaci-na.** The *Mistura guaiaci*.

**E. leniæ.** (*L. lenio*, to make soft.) The *Looch ex oro*.

**E. olei amygdalarum.** Oil of sweet almonds an ounce, gum acacia 2 drachms, syrup an ounce, distilled water 1 ounces.

**E. olei ricini.** Castor oil emulsion. Castor oil half an ounce, the yolk of an egg, water an ounce.

**E. olei terebinthinæ.** Turpentine emulsion. Rectified spirit of turpentine 2 scruples, white sugar half an ounce, the yolk of an egg, water 6 ounces. Dose, 1·5 ounce.

**E. oleosa.** *G. Ph.* (*L. oleum*, oil. *G. Oleum*.) Almond oil 2 parts, gum arabic 1, and distilled water 17.

**E. purgæ cum scammonia.** *Fr. Codex.* (*F. emulsion purgative avec la scammonée*.) Scammony 1 gramme, cow's milk 120, white sugar 15, cherry laurel water 5, triturated together.

**E. resinae guaiaci.** The *Mistura guaiaci*.

**E. simplex.** (*L. simplex*, simple.) The *Mistura amygdalæ*.

**Emulsion.** (*F. emulsion*, from *L. emulsus*, part. of *emulgeo*, to milk out. *F. emulsion*; *G. Saucemilch*.) A white milky-looking liquid, consisting of water holding in suspension minute particles of oil or resin by the aid of some albuminous or gummy material.

The *G. Ph.* orders emulsions of seeds to be made with 1 part of the seeds, and water sufficient to make 10 parts when strained; and emulsions of oils to be made with 2 parts of the oil, 1 of gum arabic, and 17 of water.

**Emulsum.** Same as *Emulsion*.

**Emunctorium.** Same as *Emunactory*.

**E. cerebri.** (*L. cerebrum*, the brain.) The nose or the nasal fossæ.

**Emunactory.** (*L. emunctorium*, from *emungo*, to blow the nose. *F. émonctoire*; *G. Reinigungsweeg*.) A cleansing organ or canal; a term applied to the excretory ducts and organs of the body.

**Emundant.** (*L. emundo*, to cleanse or purge. *G. reinigend*.) Cleansing or purifying; applied to a lotion or wash which cleans a wound or ulcer, and also removes the sordes.

**Emundation.** (*L. emundo*, *F. émondation*; *G. Auspützung, Ausschneitelung*.) In Pharmacy, the process of removing superfluous, injured, and useless parts from a crude drug to prepare it for medicinal use.

**Emuscate.** (*L. emusco*; from *e*, out; *muscus*, moss.) To clear from moss.

**Emuscation.** (*L. emusco*.) The freeing from moss.

**Emusculate.** (*L. e*, neg.; *musculus*, a muscle.) Having no muscles; very emaciated.

**Emydin.** (*Ἐμψ*, the fresh-water tortoise.) A substance obtained from the eggs of the tortoise, having probably a similar constitution to vitellin.

**Emys.** (*Ἐμψ*, the fresh water tortoise. *G. Flusschildkröte*.) A Genus of the Order Chelonina.

**E. europæa.** *Duméril.* (*F. tortue ronde*.) Used as food; and to make strengthening soups.

**E. palustris.** (*L. palustris*, marshy.) The salt water terrapin. *Hab. America.* An article of food.

**Enadelphina.** (*Ἐν*, in; *ἀδελφός*, a brother. *F. emboliment*.) A name given to a theory of generation which regards the embryos of suc-

cessive periods as resulting from the simple development of germs encased one in the other.

Also, the condition of a monstrosity which contains within it parts or organs belonging to another fetus.

**Enæmon.** Same as *Enæmos*.

**Enæmos.** (Έν, for; αἷμα, blood.) Old term (Gr. *Enaemos*), applied by Galen, *Meth. Med.* iv, 5, to a topical medicine employed to stop the bleeding of a wound by agglutinating its parts, or gently astringing them.

**Enæorema.** (Έναορέωμα, to float or be suspended in. F. *enôreime*; G. *Aufgehängte, Hängengebliebene*.) The cloudlet, generally of mucus, which floats or is suspended in the middle of the urine on cooling.

**Enaima.** (Έναϊμος, having blood.) One of Aristotle's classes of animals, being the Vertebrata.

**Enalochrome.** (Έναλλος, different; χρώμα, colour.) A synonym of *Esculin* or *Bicolorin*.

**Enallostegia.** (Έναλλος; στέγη, a roof.) A term applied to the condition of those shells of *Rhizopoda* in which the chambers succeed each other in alternate series on two or three alternate axes, but not forming a spiral.

**Enamel.** (F. *en*, upon; *anail*; from Old G. *emal*, enamel. F. *émail*; G. *Schmelz*.) A glass-like substance used as a coating for metals or other substances.

In Anatomy, the substance which forms the outer covering of the dentine on the exposed part or crown of the tooth; it is thickest on the grinding surface or cutting edge, gets thinner on the sides and ceases at the neck of the tooth. It is translucent, white, or somewhat bluish, and exceedingly hard, except in very early life. It is made up of elongated prisms, the *E. prisms*, closely applied to each other laterally, disposed in overlying layers, and arranged vertically to the surface on the crown, and somewhat less so on the sides; near the dentine the columns of adjacent ranges cross each other so as to give rise to alternate light and dark striae. A series of brown concentric lines crosses the rows of columns. In the substance of the enamel minute fissures are found, some proceeding from the depressions between the cusps of double-teeth, and others in the deeper part, probably connected with the canaliculi of the dentine. Excepting on the grinding surfaces of worn teeth, the enamel is covered by the *E. cuticle*. Enamel consists almost entirely of mineral matter, only from 2 to 6 per cent. of animal matter being left after the prolonged action of dilute acids; probably 90 per cent. or more is made up of calcium phosphate and carbonate, perhaps in a compound salt,  $\text{Ca}_{10}\text{CO}_3\cdot 6(\text{PO}_4)$ , some 2 per cent. of magnesium phosphate and a smaller quantity of calcium carbonate and soluble salts, with a small amount of a fluoride.

**E. cells.** The cells of the *E. organ*.

**E. columns.** Same as *E. prisms*.

**E. cuticle.** (L. *cuticula*, the skin. F. *cuticule de l'émail*; G. *Schmelzhaut, Schmelzoberhäutchen, Schmelzüberzug*.) A thin, very resisting cuticle, which covers the outer surface of the enamel; it is structureless, insoluble in water, and in nitric and hydrochloric acids; and swells without solution or destruction in alkalies; nitrate of silver solution brings out faint epithelial markings. It is about .001 mm. thick.

**E. cutter.** A steel instrument, used in

Dentistry, for cutting the edge of the enamel around the cavity of a carious tooth to remove disease and fit it for stopping. It consists of a steel stem set in a handle and terminating by a strong triangular cutting extremity in a right line or at an angle with the stem.

**E., development of.** See under *Enamel organ*.

**E. fibres.** Same as *E. prisms*.

**E. germ.** (G. *Schmelzkeim*.) Each separate portion of the common enamel germ for each tooth; in the process of development the dental papilla grows from the bottom of the primitive dental groove, and is received into a hollow which is gradually formed on the under surface of the enamel germ; this is then cut off from connection with the oral epithelium from whence it sprang by the gradual development of the dental sac.

**E. germ, common.** The process of thickened oral epithelium which at about the seventh week of fetal life fills the primitive dental groove in both jaws; as it grows its deeper portion dilates and, on transverse section, forms a sort of flask-shaped body with a twisted neck or isthmus of connection; subsequently it becomes specially developed at particular places, where it forms the special enamel germs of the temporary teeth.

**E. membrane.** Purkinje's term for the layer of columnar cells on the under surface of the enamel organ where it lies upon the dental pulp.

**E. nodule.** (L. *nodulus*, a small knot.) A small pearl-like outgrowth on the fang of a tooth, consisting of a core of dentine covered with enamel; it is of the nature of a supernumerary or irregularly placed cusp.

**E. organ.** (F. *organe de l'émail*; G. *Schmelzorgan*.) A term applied to the *E. germ*, when it is cut off from the originating oral epithelium by the dental sac, and forms a cap for the dental papilla or dental bulb from which the dentine is developed. At this time it becomes differentiated into a layer of tessellated or cubical epithelial cells on the surface nearest to the dental sac, which ultimately forms the *E. cuticle*; a central mass of stellate cells developed from the original spheroidal cells, the branches of which join each other and enclose connected spaces filled with a clear jelly-like fluid; and a layer of columnar or prismatic cells covering the dental pulp, and from which the enamel prisms are developed at the expense of the central stellate cells which gradually dwindle away.

**E. prisms.** (F. *prismes de l'émail*; G. *Schmelzprisma*.) Long, regular, solid, five- or six-sided bodies which compose the substance of the enamel; their length is that of the thickness of the enamel, their diameter .003 mm. to .005 mm.; they are marked by regular, equidistant, transverse, alternate, dark and light shadings, the result of refraction in consequence of shallow constrictions. Although most of the prisms run from the dentine to the surface, some shorter ones not reaching the dentine are found on the outer surface.

**Enamellar.** Resembling, or consisting of, *Enamel*.

**Enantesis.** (Έν, in; ἀντάω, to meet. F. *énantesis*.) Old term for the confluence of ascending and descending blood-vessels, as in the anastomosis of the internal mammary and the epigastric arteries.

**Enanthema.** (Εν, in; ἄνθημα, from ἄνθη, to blossom. F. *enanthème*; G. *enanthem*.) An eruption within the body; as on the inner walls of the mouth or the stomach.

**Enanthesis.** (Εν, in; ἄνθησις, to flourish.) Term for a rash or eruption on the skin not connected with any internal affection; the opposite of *Eranthosis*.

**E. rosacea.** (L. *rosalis*, belonging to a rose.) Scarlet fever.

**Enantioblastæ.** (Εναντίος; βλαστός, a sprout. G. *Gegenspross*.) An Order of the Series *Meranthe* of Braun's classification of Monocotyledons. The plants are grass-like or succulent, with cymose inflorescence, a superior bi- or tribulular capsule with loculicidal dehiscence and an orthotropous ovule. The Order contains the Families Restiaceæ, Eriocaulaceæ, Xyridæ, and Commelinaceæ.

**Enantioblastic.** (Εναντίος; βλαστός, a sprout.) A term applied to the radicle of ovule which is not turned towards the micropyle.

**Enantiopathic.** (Εναντίος, opposite; πάθος, affection. F. *enantiopathique*.) A term applied to a remedy which cures a disease by acting on the body in a manner opposite to it.

**Enantiopathy.** (Εναντίος; πάθος.) An opposite passion or affection.

Also, a synonym of *Allopathy*; being the treatment of disease by contraries.

**Enantiosis.** (Εναντίσις, contrariety.) The mode of treatment of disease by remedies which produce an action contrary to it.

**Enarthrititis.** (Ενάρθρωσις, a ball-and-socket joint.) Inflammation of an enarthrodial joint.

**Enarthro'dia.** Same as *Enarthrosis*.

**Enarthro'dial.** (Ενάρθρωσις.) Relating to *Enarthrosis*.

**E. joint.** A ball-and-socket joint. See *Enarthrosis*.

**Enarthroma.** Same as *Enarthrosis*.

**Enarthrosis.** (Ενάρθρωσις; from ἐν, in; ἄρθρον, a joint. F. *arthrose*; G. *Knochen-fugung*.) Term for what is called the ball-and-socket joint, as the globular head of the femur in the acetabulum of the os innominatum; a variety of the Class *Diarthrosis*.

**Enarthrum.** (Εν, in; ἄρθρον, a joint.) A foreign body in a joint.

**Enatbühl.** Switzerland, Canton St. Gallen; 3000 feet above sea-level. An alkaline saline sulphur water.

**Enate.** (L. *enatus*, part. of *enascor*, to grow up.) Growing or sprouting out as the apophysis of a bone.

**Enation.** (L. *enatus*, part. of *enascor*, to sprout up.) Excess of development in the form of outgrowths from the surface of an organ, as in the growth of adventitious lobes in the dandelion leaf.

**Enausma.** (Εναύσασθαι, a spark.) A term applied to those things, as woollen clothes, which collect and transmit disease-germs; otherwise called *Fomites*.

**Encanthis.** (Εν, in; ἄνθος, the angle of the eye. F. *encanthis*; G. *Enkanthis*.) A small red excrescence in the inner canthus of the eye, growing from the caruncula lacrymalis and semilunar fold of the conjunctiva.

**E. benigna.** (L. *benignus*, kind-hearted.) A simple inflammatory swelling of the lacrymal caruncle.

**E. calculosa.** (L. *calculosus*, stony.) Inflammation and thickening of the caruncula lacrymalis from the development of a chalky or calcareous concretion within it.

**E. carcinomato'sa.** (G. *Krebs der Thränenkarunkel*.) Cancer of the caruncle.

**E. fungosa.** (L. *fungosus*, spongy.) The same as *E. carcinomato'sa*.

Also, a simple swelling of the caruncle so as to look like a fungus.

**E. hydatido'sa.** (Hydatid. G. *Warmbildung in der Thränenkarunkel*.) Term applied by Carron du Villards to cases in which the *Filaria medinensis* or *Pulcr penetrans* had lodged in the caruncle.

**E. inflammato'ria.** (F. *inflammation de la caruncule lacrymale*; G. *Entzündung der Thränenkarunkel*.) Inflammation of the caruncle which may be either acute or chronic.

**E. maligna.** The same as *E. carcinomato'sa*.

**E. sclerho'sa.** The same as *E. carcinomato'sa*.

**En'car.** (Εγκάρσιος; from ἐν, in; κάρα, the head.) The brain.

**Encardion.** (Εγκάρδιον; from ἐν, in; καρδιά, the heart.) Old name for the pith of vegetables.

**Encarditis.** A synonym of *Endocarditis*.

**Encardium prem'non.** (Εγκάρδιον, the pith of wood; πρέμνον, the stem or stock.) Old botanical term for the heart and marrow of the trunk of a tree.

Also, the soft growing end of the stem of the palm tree.

**Encarpous.** (Εγκάρσιος, containing fruit; from ἐν, in; καρπός, fruit.) Pregnant.

**Enca'sing.** (F. *en*, in; *casse*, a chest.) Enclosing, putting into a case.

**E. of germs.** Same as *Enadelpia*.

**Encatalepe'sis.** (Εν, in; καταλαμβάνω, to seize.) Old term (Gr. *εγκάταληψις*), used by Hippocrates, *Epid. vi*, s. 2, t. 12, in the same sense as *Catalepsia*.

**Encathis ma.** (Εν, in; καθίζωμαι, to sit down. G. *Einsetzen*, *Hineinsetzen*.) Old term (Gr. *εγκάθισμα*), used by Galen, *de C. M. per Gen. v*, 13, for a semicupium or bath for half the body; or, according to some, a vapour bath taken sitting.

**Encauma.** (Εν, in; καίω, to burn. F. *encaume*; G. *Engebrannte*.) Old name for the scoria of silver.

Also, a term formerly used for the mark left by a burn, or the tub or vesicle produced by it.

Also, applied by Aëtius to a deep, foul ulceration of the cornea, which is followed by escape of the humours and destruction of the eye.

**Encausis.** (Εν, in; καίω, to burn. F. *encaume*; G. *Enbrennen*.) Old name (Gr. *ἐγκύσις*), used by Galen, *de Diff. Febr. i*, 3, for a burn.

Also, a term for heart-burn with much thirst.

Also, the mark left by the potential cautery, according to Libavius, *Synt. Arc. Ch. i*, 23, and vi, 6.

Also, the application of the moxa.

**Encausse.** France, Département Haute-Garonne. Mineral waters, of a temperature 32°–55° C. (89.6°–131° F.), containing small amounts of calcium sulphate, magnesium sulphate, and traces of arsenic, bromine, and iodine. They are used as purgatives and diuretics in

dyspepsia, malarious conditions, and genito-urinary diseases.

**Encaustum.** (Ἐγκαυστος; from *ἵκαω*, to burn in.) The enamel of the teeth.

**Enceinte.** (F. *enceinte*; from L. *incinctus*, girt about.) Pregnant.

**Encelialgia.** See *Encualgia*.

**Encelitis.** See *Encalitis*.

**Encephala.** (Ἐγκεφάλος, the brain.) A Division of *Mollusca*, including those which have a distinct head.

**Encephalæmia.** (Ἐγκεφάλος, the brain; αἷμα, blood. F. *encéphalémie*; G. *Blutandrang zum Gehirn*.) Fullness of blood or congestion of the brain.

**Encephalanalosis.** (Ἐγκεφάλος; ἀνάλωσις, expenditure. G. *Hirnschwinden*.) Wasting of the brain.

**Encephalalgia.** (Ἐγκεφάλος; ἄλγος, pain. F. *encephalalgie*; G. *tiefe Kopfschmerz*.) Pain deep-seated within the head.

**E. hydropica.** (L. *hydrops*, dropsy.) Hydrocephalus internus.

**Encephalartos.** (Ἐγκεφάλος; ἄρτος, bread.) A Genus of the Nat. Order *Cycadaceæ*. Several of the species supply what is called *Caffre bread*.

**Encephalaurē.** (Ἐγκεφάλος; αὔξη, increase.) Hypertrophy of the brain.

**Encephalecchosis.** (Ἐγκεφάλος; ἑλκωσις, ulceration. G. *Hirngeschwür*.) An ulcer or abscess of the brain.

**Encephalic.** (Ἐγκεφάλος.) Situated within the head. Relating to the *Encephalon*.

**E. nerves.** Same as *Cranial nerves*.

**E. vesicles.** (L. *vesicula*, a small blister.) The dilated portions of the anterior extremity of the tubular rudiment of the nervous system of the Vertebrata; at first a partial constriction divides it into two vesicles, and subsequently a second constriction produces three vesicles, the fore-brain, the mid-brain, and the hind-brain, as they are sometimes called. From the anterior vesicle the prosencephalon, or fore-brain, and the thalamencephalon, or interbrain, are developed; from the middle vesicle the mesencephalon or mid-brain; and from the posterior vesicle the epencephalon, or hind-brain, and the metencephalon, or after-brain.

**Encephalion.** (Dim. of *encephalon*.) The cerebellum.

**Encephalitic.** (Ἐγκεφάλος.) Having relation to parts or processes in the encephalon.

**E. foci.** (L. *focus*, a hearth.) The points at which encephalitic inflammations and processes always commence. The initial change is an alteration of colour from capillary apoplexies which are accompanied by softness and swelling of the surrounding neuroglia. This is red softening. Under the microscope the vessels appear dilated, and groups of corpuscles, more or less altered, are seen. There is a considerable amount of migration of white corpuscles, with subsequent formation of pus, and a proliferation of the neuroglia nuclei in the vicinity of the foci has been seen. The nervous elements take no part in the inflammation, but the cylinder-axes become finely granular, and present irregular swellings. Small foci may disappear entirely, but more frequently the cellular elements in a focus are transformed into granule cells, which disintegrate, and a cicatrix may form.

**Encephalitis.** (Ἐγκεφάλος, the brain. F. *encephalite*; G. *Gehirnentzündung*.) A term

for inflammation of the brain and its membranes, all being implicated at one time.

Also, and latterly almost exclusively, used to denote inflammation of the substance of the brain as distinct from its membranes. It may assail the brain tissue generally, or it may be confined to one spot or to one nervous tissue; it is usually the result of injury, or of the extension of other disease, or of pyæmia, or of the irritating presence of an embolus. It is very rarely idiopathic.

**E. ab insolationē.** Same as *E. insolationis*.

**E., diffus'd.** (L. *diffusus*, spread out.) Same as *E. general*.

**E., diphtheritic.** The brain inflammation which sometimes occurs in the progress of diphtheria.

**E. exsudatoria.** (L. *exsuda*, to sweat out.) A synonym of *Hydrocephalus*.

**E., general.** The form in which inflammation attacks the whole or the greater part of the intracranial nervous mass.

**E. infantum.** (L. *infans*, an infant.) A synonym of *Hydrocephalus*.

**E. insolationis.** (L. *insolatio*, a placing in the sun.) A synonym of *Sun-stroke*.

**E., interstitial.** (L. *interstitio*, a standing between.) Virchow's term for a form of inflammation of brain substance found in infants; it is mostly congenital, but sometimes arises soon after birth. It is characterised by fatty change of the cells of the neuroglia, which not unfrequently extends to the white substance, and produces spindle-shaped bodies, which are parts of degenerated cylinder-axes.

**E., local.** (L. *locus*, a place.) Inflammation of the intracranial nervous substance, confined to a larger or smaller spot. The symptoms vary with the seat; they are often very obscure. It may be the result of direct injury, or pyæmia, of embolism, of cerebral hemorrhage, and of tumours. It usually ends in cerebral abscess.

**E. membranosa.** (L. *membrana*, a membrane.) Meningitis.

**E., partial.** Same as *E., local*.

**E. peripherica.** (Περὶφérica, the outer surface.) Meningitis.

**E. potatorum.** (L. *potator*, a drinker.) A synonym of *Delirium tremens*.

**E., pyæmic.** (Πύον, pus; αἷμα, blood.) Inflammation and suppuration of brain occurring in the course of pyæmia.

**E., reflex.** (L. *reflecto*, to turn back.) Brain inflammation of one side, produced by injury of a nerve of the other side.

**E., suppurative.** (L. *suppuro*, to form pus.) A term applied to those cases of acute encephalitis or cerebritis which end in *Cerebral abscess*.

**E., traumatic.** (Τραυματικός.) Relating to a wound.) Inflammation of the brain and its membranes, produced by injury. It may be sudden or slow in its access, acute or chronic in its progress, and may end in resolution, serous effusion, or suppuration.

**Encephalocle.** (Ἐγκεφάλος, the brain; κλή, a tumour. F. *encéphalocèle*; G. *Gehirnbruch*.) Protrusion of a portion of the brain through a preternatural opening in the skull. It may be congenital or the result of injury.

**E., acquired.** (L. *acquirō*, to get.) Hernia of the brain, the result of injury or disease of the bones of the skull, from which loss of substance has resulted.

**E., congenital.** (L. *con*, together with ;

*genitus*, born.) Hernia of the cerebrum, rarely of the cerebellum, in an infant at birth; it is a rounded, soft, pulsating, cranial tumour, consisting of brain substance covered or uncovered with skin, and extruded through a hole, caused by deficiency of some part of the cranial bones. It is most usually situated in the median line of the occiput, from a defect of union of the supra-occipital and interparietal elements of the occipital bone; it occurs also between the two halves of the frontal bone, at the fontanelles, and at other portions of the fetal skull where bone is absent.

**E., spontaneous.** (L. *spontaneus*.) Same as *E., acquired*.

**E., traumatic.** (Γραῦμα, a wound.) An *E., acquired*, the direct result of injury.

**Encephalochysis.** (Ἐγκέφαλος; χύσις, a pouring out. *F. encephalochyse*.) Effusion on the brain.

Also, a synonym of *Hydrocephalus*.

**E. senilis.** (L. *senilis*, belonging to old age.) Senous apoplexy.

**Encephalodes.** Same as *Encephaloid*.

**Encephalodialis.** (Ἐγκέφαλος; δαίσις, a loosening.) Extreme softening of the brain.

Also, the destruction of brain tissue from injury.

**Encephalodynia.** (Ἐγκέφαλος; δόνησις, pain.) Pain in the head.

**Encephalœdema.** (Ἐγκέφαλος; οἰδήμα, from οἰέω, to swell.) An œdematous condition of the brain.

**Encephalohæmia.** See *Encephalæmia*.

**Encephaloid.** (Ἐγκέφαλος, the brain; εἶδος, likeness. *G. gehirnhäulich*.) Like to a brain, or to brain-structure.

**E. cancer.** See *Cancer, encephaloid*.

**E., hard.** A term applied to encephaloid cancers which are unusually firm.

**E. sarcoma.** See *Sarcoma, encephaloid*.

**E. tumours.** Same as *Cancer, encephaloid*.

**Encephalolith.** (Ἐγκέφαλος; λίθος, a stone.) A calcareous concretion in the brain.

**Encephalolithiasis.** (Ἐγκέφαλος; λίθος, a stone.) The formation of a concretion in the brain.

Also, an extreme hardening of the brain.

**Encephalology.** (Ἐγκεφαλος; λόγος, a discourse.) A description of the encephalon.

**Encephaloma.** (Ἐγκέφαλος.) A medullary cancer or a similar tumour of the brain.

**Encephalomalacia.** (Ἐγκέφαλος; μαλακία, softness. *G. Gehirnerweichung*.) Softening of the brain, which results from fatty degeneration produced by embolic and hæmorrhagic conditions, as in encephalitis, and by cardiac and vascular disease, as in advanced age. In the more inflammatory form the softening may assume a red colour from infarction of blood-vessels, which after a few weeks becomes yellow, from inhibition of blood-colouring matter, and ultimately white.

**E. senilæ.** (L. *senilis*, aged.) Softening of the brain that occurs in old age.

**Encephalomalacosis.** (Ἐγκεφαλος; μαλακός, soft.) Softening of the brain.

**Encephomalaxia.** (Ἐγκέφαλος; μαλαξίς, softness.) The condition of softening of the brain.

**Encephalomeningitis.** (Ἐγκέφαλος; μῆνιγξ, a membrane.) Inflammation of the brain and its membranes together.

**Encephalon.** (Ἐγκέφαλος; from ἐν, in; κεφαλή, the head.) The parts within the head or skull; consisting of the cerebrum, including mesencephalon, thalamencephalon, and cerebral hemispheres, the cerebellum, with the pons Varolii, and the medulla oblongata.

**E., development of.** See *Brain, development of*.

**E., specific gravity of.** The average sp. gr. of the whole encephalon is said to be 1036, that of the white matter 1040, and that of the grey matter 1034.

**E., weight of.** Reid gives as the average weight of the adult male human encephalon 50 oz. 3·5 drachms, and of the adult female 44 oz. 8·5 drachms.

**Encephalonarco'sis.** (Ἐγκέφαλος; νάρκωσις, to benumb.) Stupor from brain affection.

**Encephaloosteoneurysm.** (Ἐγκέφαλος; ὀστίου, a bone; ἀνέυρσμα, an aneurysm.) A pulsating tumour of bone, in which a soft, brain-like, vascular substance is formed in the bone, of a malignant character, and from its numerous and large blood-vessels yielding a distinct pulsation.

**Encephalopathia.** (Ἐγκέφαλος; πάθος, suffering. *G. Gehirnleiden*.) Disease of the brain in general.

**E. literatorum.** (L. *literator*, a teacher of the letters.) Disease of brain brought on by over-study.

**E. puerperalis.** Same as *Insanity, puerperal*.

**E. saturnina.** (L. *Saturnus*, an old name of lead.) Brain disease produced by chronic lead poisoning; the commoner conditions are disturbed sleep, immobile countenance, melancholic habits, squinting, non-febrile delirium, coma, or epileptiform convulsions.

**Encephalopathy.** Same as *Encephalopathia*.

**E. rheumatic.** Same as *Rheumatism, cerebral*.

**Encephalophtharsia.** (Ἐγκέφαλος; φθάρσις, corruption.) Gangrene of the brain.

**Encephalophthisis.** (Ἐγκέφαλος; φθίσις, a wasting away.) Abscess of the brain accompanied by emaciation and hectic.

**Encephalophyma.** (Ἐγκέφαλος; φῦμα, a tumour.) A tumour of the brain.

**Encephalophymata.** (Ἐγκέφαλος; φῦμα.) Tubercles of the brain.

**Encephalopyosis.** (Ἐγκέφαλος; πύωσις, suppurating.) Suppuration or abscess of the brain.

**Encephalorachidian.** (Ἐγκέφαλος; ράχις, the spine.) Belonging to the brain and spine.

**Encephalorrhachiomeningitis.** (Ἐγκέφαλος; ράχις, the spine; μῆνιγξ, a membrane. *F. encephalorrhachio-meningite*; *G. Hirnrückenmarkhautentzündung*.) Inflammation of the membranes of the brain and spinal marrow.

**Encephalorrhagia.** (Ἐγκέφαλος; ῥήγνυμι, to burst forth.) Sudden discharge of blood from the brain. Same as *Apoplexy*.

**Encephalorrhœia.** (Ἐγκέφαλος; ῥοία, a flow.) A hæmorrhoidal condition of the brain.

**Encephalos.** (Ἐν, in; κεφαλή, the head.) Same as *Encephalon*.

**Encephalocopy.** (Ἐγκέφαλος, the

brain; σκοπέω, to behold.) Examination of the encephalon; same as *Cranioscopy*.

**Encephalosepsis.** (Ἐγκέφαλος; σήψις, putrefaction.) Softening of the brain.

**Encephalosis.** The condition or growth of an *Encephaloma*.

**Encephalosismus.** (Ἐγκέφαλος; σεισμός, a shaking.) Concussion of the brain.

**Encephalospongia.** (Ἐγκέφαλος; σφογγίου, a fungus.) Fungoid or encephaloid disease of the brain.

**Encephalo-spinal.** (Ἐγκέφαλος, that which is within the skull; *L. spina*, the spine.) Relating to the nervous structures lying within the skull and the spine.

**E. system.** The whole system of central nervous system; divisible into cerebro-spinal and cerebello-spinal systems.

**Encephalostromosis.** (Ἐγκέφαλος; *stromosis*.) Tubercular meningitis.

**Encephalothipsis.** (Ἐγκέφαλος; θλίψις, pressure.) Compression of the brain.

**Encephalotomy.** (Ἐγκέφαλος; τομή, a cutting.) The excerebration of a fœtus for the rendering possible of delivery.

**Encephalotrauma.** (Ἐγκέφαλος; τραύμα, a wound. *G. Hirnwunde*.) A wound of the brain.

**Encephalotrausis.** (Ἐγκέφαλος; τραύμα, a wound.) The wounding of the brain.

**Encephalotubercula.** (Ἐγκέφαλος; *L. tuberculum*, a small lump.) Tubercles of the brain.

**Encephalotum.** (Ἐγκέφαλος.) Same as *Cephalot*.

**Encephalotylomata.** (Ἐγκέφαλος; τύλωμα, a callus.) Tubercles in the brain.

**Encephalotypus.** (Ἐγκέφαλος; typhus.) Same as *Typhus cerebri*.

**Encephalous.** (Ἐγκέφαλος.) Possessing a head.

Applied to those molluscs which have a distinct head.

**Encephalozo'a.** (Ἐγκέφαλος; ζῷον, an animal. *F. encephalozoaire*.) Animals possessing a brain.

Also, parasites in the brain.

**Encephalum.** (Ἐγκέφαλος.) Same as *Encephalon*.

**Encephalus.** (Ἐγκέφαλος.) Same as *Encephalon*.

**E. opis'thius.** (Ὀπίσθιος, hinder.) The cerebellum, from its position.

**Encephalyperpathia.** (Ἐγκέφαλος; ὑπέρ, in excess; πάθος, affection.) Excessively severe morbid affection of the brain.

**Encerides.** (Ἐν, in; κηρός, wax.) The small lumps which are found in plasters as they are being liquified.

**Encerosis.** (Ἐν, in; κηρός, beeswax.) The process of incorporating wax with another body.

**Enchanter's nightshade.** The *Circæa lutetiana*.

The *Atropa mandragora* was the plant originally known under this name, according to Prior; and was so called from its Greek name κηράτια, from κίρκη, the enchanteress.

**Encharaxis.** (Ἐγχάραξις; from ἐν, in; χάρασσω, to scratch or grave.) Old term for *Scarification*, according to Galen and Oribasius.

**Enchondroma.** (Ἐν, in; χόνδρος, cartilage. *F. enchondrome*; *G. Knorpelgeschwulst*.) A cartilage tumour, a tumour having a structure

resembling cartilage. *Enchondromata* most frequently arise from the long bones, but occasionally also from cartilage, from aponeuroses, from the subcutaneous connective tissue, and from that of the lungs, parotid, testicle, and mamma. They are generally translucent and bluish or yellowish white; sometimes hard, sometimes pulpy; they are usually enclosed in a fibrous capsule, which frequently dips into the interior and divides them into lobes; occasionally when the capsule is absent they are surrounded by embryonic cells, which spread irregularly into the surrounding structures. They consist essentially of cells embedded in a matrix, which may be hyaline, mucoid, or fibrous, the fibres being sometimes reticulated as in the cartilages of the larynx, and sometimes arranged as in fibro-cartilage. The cells vary in size and number, generally they are round or oval, especially when the matrix is hyaline; but sometimes they are stellate and branched when the matrix is mucoid; or small and sometimes spindle-shaped when the matrix is fibrous. They may be single or grouped, and are generally surrounded by a lamellar capsule; they contain one or more nuclei, and have somewhat granular contents. *Enchondromata* undergo calcification, fatty degeneration commencing in the cells, and mucoid softening commencing in the matrix; sometimes true bone forms in them. The matrix in the majority of instances is converted by boiling into chondrin, occasionally into mucin, and very rarely it is found to be albuminous.

**E., albuminous.** (*L. albumen*, white of egg.) A rare form of enchondroma of bone, the matrix of which contains an albuminous substance and no chondrin.

**E., central.** (*L. centrum*, a centre.) An enchondroma which originates within a bone.

**E., cystic.** (Κύστις, a bladder.) A term applied to those enchondromata in which mucoid softening of the matrix has occurred in defined spots, with a smooth surrounding wall.

**E., fibrous.** (*L. fibra*, a filament.) An enchondroma with a matrix containing fibres either interlaced or surrounding the cartilage cells, which are usually small and sometimes spindle-shaped.

**E., gelatinous.** Same as *E., soft*.

**E. hæmatodes.** (Αἱματώδης, blood-like.) A form of enchondroma of bone in which contiguous cell cavities have joined to form branched canals containing blood.

**E., hard.** The form containing a considerable amount of fibro-cartilage.

**E., heterotopic.** (Ἑτερος, other; τόπος, a place.) An enchondroma which has grown in or from a part where cartilage is not normally present.

**E., homotopic.** (Ὁμός, similar; τόπος, a place.) An enchondroma which has grown in or from a part where cartilage is naturally present.

**E., hyaline.** (Υαλός, glass.) An enchondroma with a hyaline matrix, and generally large round or oval cells.

**E. mollé.** (*L. mollis*, soft.) Same as *E., soft*.

**E., mucoïd.** (*L. mucus*, slime; *Gr. εἶδος*, likeness.) An enchondroma in which the matrix is soft and gummy, and the cells are often branched and stellate.

**E. mucosum.** (*L. mucosus*, slimy.) Same as *E., mucoid*.

**E. myxomatodes.** (*Myroma*; *Gr.*

*ἰδέος*, likeness.) A mucoid enchondroma which approaches in structure very closely to a myxoma.

**E., os'teoid.** (Ὀστίου, a bone; ἰδέος, likeness.) Same as *Osteo-chondroma*.

**E., peripheric.** (Περιφέρεια, the circumference of a circle.) An enchondroma which grows from the outer surface of a bone.

**E. pseudopapillosum.** (Ψευδής, false; *L. papilla*, a small pimple.) A form of enchondroma of bone in which the surface has become roughly papillary from a repeated proliferation of the primary and smaller nodules.

**E., soft.** The form in which the matrix is mucoid with large stellate cells.

**E. teleangeiectodes.** (Τήλε, far; ἀγγείου, a vessel; ἑκτασις, extension.) An enchondroma, usually of the mucoid form, containing in parts a close plexus of blood-vessels.

**Enchondromatous.** (Ἐν, in; χόνδρος.) Relating to *Enchondroma*.

**E. tumour.** Same as *Enchondroma*.  
**Enchondros'is.** (Ἐν; χόνδρος.) The formation of an *Enchondroma*.

Also, applied to those enchondromata which are simply outgrowths from a natural cartilage or a fibrocartilage such as the articular, costal, and laryngeal cartilages.

**Enchondrous.** (Ἐν, in; χόνδρος, cartilage.) Of the nature of cartilage; cartilaginous.

Also (χόνδρος, a grain), having grains, granular.

**Encho'rial.** Same as *Enchorious*.

**Encho'ric.** Same as *Enchorious*.

**Enchorion'osis.** (Ἐν, in; χωρίον, a particular place; νόσος, disease. *F. enchorionosis*; *G. enchorionische Krankheit*.) Term for endemic disease.

**Enchorious.** (Ἐγχώριος, of the country.) Of, or belonging to, a district or region, and therefore the same as *Endemic*.

**Enchris'tum.** (Ἐγχρίω, to rub in.) Old term, used by Celsus, v, 24, for an ointment or liniment.

**Enchu'sa.** Same as *Anchusa*.

**Enchylis'ma.** (Ἐγχυλίζω, to convert into juice. *F. enchylisme*.) Conversion into juice.

**Enchylo'ma.** (Ἐν, from; χυλός, juice.) Old term for an inspissated juice; also, used by Lemery, for an elixir. (Hooper.)

**Enchylo'sis.** (Ἐγχυλίζω, to convert into juice by pressing.) The expression of juice.

Also, a synonym of *Sugillation*, or the effusion of blood or serum under the skin.

**Enchylus.** (Ἐν, in; χυλός, juice. *G. saftreich*.) Moist; sapid; succulent. Applied formerly (Gr. ἔγχυλος), by Galen, *de Diff. Puls.* iv, 2, to medicines which are wet, or of a moist consistence.

**Enchyma.** (Ἐγχυμα, an infusion.) An infusion.

Also, the primitive formative juice from which the tissues are built up; or, according to Hayne, from which the cellular tissue is formed.

Also, a synonym of *Plethora*.

**E. cells.** Purkinje's term for glandular epithelial cells.

**Enchymapoz'ema.** (Ἐγχυμα, an infusion; ἀποζυμα, a decoction. *F. enchymapozione*; *G. Infusussubst.*.) An infuso-decoction.

**En'chymatism.** (Ἐγχυματισμός.) An infusion.

**Enchymo'ma.** (Ἐν, in; χυμός, juice. *F. enchymome*; *G. Ergiessung der Säfte*.) Old term (Gr. ἐγχύμαμα), used by Hippocrates, *Epid.* ii, s. 4, n. 26, for the infusion of vital humours into the solid parts, such as takes place in anger, shame, and joy; a sudden injection of blood into the cutaneous vessels, as in the instance called blushing; also called *Enchymosis*.

Also, a spontaneous extravasation of blood into the tissues from some internal cause, as from mental emotions.

**Enchymo'sis.** (Ἐγχύσις. *F. enchymose*; *G. die Bildung des Enchymoma*.) The same in all respects as *Enchymoma*, though held by Aëtius to mean the formation of *Enchymoma*.

**Enchy'sa.** Same as *Anchusa*.

**Enchysis.** (Ἐγχυσις, a pouring in.) An infusing.

**Enchyta.** (Ἐγγίω, to pour in. *F. enchyte*; *G. Spritze*.) A syringe for dropping liquids into the eyes, nose, or ears.

**Enchytes.** Same as *Enchyta*.

**En'chytus.** (Ἐγγίω, to pour in. *G. eingespitzt*.) Dropped or poured in. Applied formerly to medicines (*Enchyta medicamenta*) which are dropped into the eyes.

**Encip'ient.** Erroneously used for *Ex-cipient*.

**Enck'ea, Kunth.** A Genus of the Nat. Order *Piperaceæ*.

**E. glauces'cens.** (*L. glaucus*, bluish grey.) Root sialagogue and diuretic. Used in amenorrhœa and leucorrhœa.

**E. unguicula'ta.** (*L. unguis*, a nail.) Used as *E. glaucescens*.

**Enclitic.** (Ἐγκλιτικός, that which leans.) Affixed; leaning on.

**Encl'ydas'tic.** (Ἐγκλυστικός, swelling like waves.) Floating in, as of pus or serum in a cavity.

**En'clysis.** (Ἐγκλισις, inclination.) A bending, an inflexion.

**Enclys'ma.** (Ἐγκλυσμα; from ἐγκλῦζω, to rinse the inside of a thing; from ἐν, in; κλῦζω, to cleanse out. *F. enclysme, lavement*; *G. Klystier*.) Old name, used by Dioscorides, for a clyster.

**Encœlia.** (Ἐν, in; κοιλία, the belly. *G. Bauchingeweide*.) That which is within the abdomen or belly. Applied (Gr. ἐγκοιλία), by Lindenus, *Ex.* ix, 57, 58, to the abdominal viscera, or whole contents of the belly.

**Encœlial'gia.** (Ἐν; κοιλία; ἄλγος, pain. *G. Bauchschmerz*.) Pain in the abdomen.

**E. inflammato'ria.** Inflammation of the abdominal viscera.

**Encœlious.** (Ἐγκοίλιος, in the belly.) Contained or situated in the abdomen.

**Encœlit'is.** (Ἐγκοιλία, the intestines.) Inflammation of the abdominal viscera.

**Encoleo'sis.** (Ἐν, in; κολέος, a sheath. *F. incagination*; *G. Einschliessung in eine Scheide*.) Invagination; enclosure within some part, as with a sheath.

**Encolpism'us.** (Ἐγκολπίζω, to go into a bay. *F. encolpisme*.) Old term (Gr. ἐγκολπισμός), used by Moschion, *de Morb. Mul.* c. 132, for the introduction of any medicament into the vagina; a uterine injection.

**Encolpitis.** (Ἐν, in; κόλπος, a bosom, the vagina.) Inflammation of the living membrane of the vagina.

**En copé.** (Ἐγκοπή, from ἐγκόπτω, to cut

into or to impede. *F. encope*; *G. Einschnitt*, *Hiebende*.) An incision; also used by Hippocrates, in *Præcept.* xi, 3, for an impediment.

**Encotyllabē.** (*Εν, in*; *κοτύλη, a hollow*; *λαβή, a handle*.) A sexually mature Genus of *Trematoda*.

**E. Nordmanni**, Diesing. Found in the throat of *Brama rayi*.

**Encranis.** Same as *Encranium*.

**Encranium.** (*Εγκράνιον*, from *ἐν, within*; *κράνιον*, the skull.) Old term for the *Cerebellum*.

**Encrasicholus.** (*Εν, in*; *κράς, the head*; *χολή, bile*.) The anchovy, *Clupea encrasicholus*, which was supposed to have the gall in its head.

**Encrasis.** (*Εγκρασις, a mixing in*.) A mixture, a mixing.

**Encyesis.** (*Εγκύησις*.) Pregnancy; also fecundation.

**Encymon.** (*Εγκύμων*.) Pregnant.

**Encymoplasma.** (*Εγκύμων, pregnant*; *πλάσμα, anything formed*. *F. encymoplasme*; *G. Schwangerschaftsfrucht*.) The product of the gravid uterus.

**Encymosis.** (*Εγκύμων*.) Pregnancy, fecundation.

**Encycolica.** (*Εγκυκος, pregnant*; *κολικός, suffering from colic*. *F. encycolique*; *G. Kolik der Schwangeren*.) The colic of pregnant women.

**Ency'sis.** (*Εγκυσις*.) An old term for pregnancy, and also for parturition.

**Encyst.** (*Εν, in*; *κύστις, a bag*.) To enclose in a bag, cyst, or capsule.

**Encystation.** (*Εν, in*; *κύστις*.) The process of becoming motionless and surrounded by a dense capsule or bag, as occurs in some of the *Protozoa*.

**Encysted.** (*Εν, in*; *κύστις, a bag*. *F. enkysté*.) Contained in a bag or cyst.

**E. aneurysm.** (*Ανεύρυσμα*.) Ordinary aneurysm consisting of one bag or cyst, communicating by one aperture, with one artery.

**E. bronchocele.** Same as *Goitre, encysted*.

**E. calculus.** See *Calculus, encysted*.

**E. hernia.** See *Hernia, encysted*.

**E. tumour.** See *Tumour, encysted*.

**Encystis.** (*Εν, in*; *κύστις, a bag*. *F. loupe*; *G. Balggeschwulst*.) A term for an encysted tumour or a wen. (Quincy.)

**Encystment.** (*Εν, in*; *κύστις*.) The condition of an encysted tumour.

In Biology, the process of becoming surrounded by a cyst, such as occurs when two Gregarinae conjugate.

**End.** (*Sax. ende*. *F. bout*; *I. estremita*; *G. Ende*.) The last part, or extremity, or termination of a thing.

**E. artery.** A term by Cohnheim for an artery which alone supplies a small piece of structure without anastomosing with its neighbours.

**E. bud.** (*G. Endknospe*.) Same as *E. bulb*.

**E. bulb.** (*Βολβός, an onion*, a bulbous root. *G. Endkolbe*.) A bulbous termination of a nerve; such are the corpuscles of Krause in the conjunctiva, the corpuscles of Grandry, the tactile corpuscles, and the Pacinian bodies.

**E. bulbs, cylindrical.** The ovoid *Corpuscles of Krause*.

**E. bulbs of Krausē.** Same as *Corpuscles of Krause*.

**E. bulbs, round.** The spherical *Corpuscles of Krause*.

**E. cap'sule.** (*L. capsula, a little bag*.) Same as *E. bulb*.

**E. gut.** (*G. End-darm*.) The lower end of the intestinal canal.

**E. organ, tactile.** See *Tactile end-organ*.

**E. plate, motorial.** (*L. motorius, moving*. *G. Nervenendplatte, Nervenigel*.) The branched, expanded, termination of a nerve fibre or one of its branches on a muscular fibre; the nerve fibre on reaching the sarcolemma loses the white matter of Schwann, and the primitive sheath, according to Ranvier, becomes continuous with the sarcolemma; the axis cylinder perforates the sarcolemma, under which it ramifies in a layer of granular matter to form the end plate; in the granular matter are several large clear nuclei with one or more bright nucleoli; small granular nuclei are attached to the branches of the axis cylinder; and a third series of flattened nuclei, like the nuclei of the nerve sheath, lie under the sarcolemma. The appearance of the end plates varies from this in some of the lower vertebrata.

**Endadelphía.** (*Ενδόν, within*; *ἀδελφός, a brother*.) Same as *Eumadelphía*.

**Endaholla.** The *Kalanchoe glandulosa*.

**Endangium.** (*Ενδόν, within*; *ἀγγεῖον, a vessel*.) The inner coat of blood-vessels or lymphatics.

**Endaortitis.** (*Ενδόν, ἀορτή, the aorta*.) Inflammation of the internal coat of the aorta. See *Aortitis*.

**Endarteritis.** (*Ενδόν, arteritis*.) Inflammation of the inner coat of an artery in which it originates, and from which it may extend to the outer coats also. It may depend on some general cachectic condition, such as syphilis and chronic alcoholism, or on some local cause, such as the presence of an embolus or of a thrombus. It produces inflammatory proliferation of the cellular elements of the inner coat, which results in a general thickening, or in irregular projecting patches, of a semitranslucent substance; the muscular coat becomes degenerated, the outer coat thickened, and the whole translucent. The artery may be felt as a rigid, irregular tube, it may be entirely blocked, or aneurysm may arise, or warty vegetations may project into the lumen and arrest the fibrin, or there may be rupture or ulceration of the vessel.

**E. chronica deformans.** Same as *Arteritis deformans*.

**E. chronica nodosa.** (*L. nodosus, knotty*.) Same as *Arteritis deformans*.

**E. obliterativa.** Same as *Arteritis obliterativa*.

**Endecagon.** (*Ενδεκα, eleven*; *γωνία, an angle*.) A figure having eleven sides.

**Endecagynous.** (*Ενδεκα, eleven*; *γυνή, a female*. *F. endecagyne*; *G. elfweibig*.) Having eleven pistils.

**Endecandrous.** (*Ενδεκα, eleven*; *άνηρ, a male*. *F. endecandrie*; *G. elfmannig*.) Having eleven stamens.

**Endecandrous.** Similar to *Endecandrous*.

**Endecane.** (*Ενδεκα*.)  $C_{11}H_{24}$ . One of the higher paraffins, having a sp. gr. of .765 at 16° C. (60.8° F.), and boiling between 180° C. (356° F.) and 184° C. (363.2° F.).

**Endecaphyllous.** (*Ενδεκα, eleven*; *φύλλον, a leaf*. *F. endecaphylle*; *G. elfblätterig*.) In Botany, having leaves composed of eleven folioles or leaflets.

**Endeictic.** (Ἐνδείκτης, from ἐνδείκνυμι, to point out.) Indicative, pointing out.

**Endeiology.** (Ἐνδείξις, a pointing out, λόγος, a discourse.) The doctrine of curative indications.

**Endeixis.** (Ἐνδείξις, from ἐνδείκνυμι, to show. F. indication; G. Anzeige.) Old term for a demonstration or indication, as for the treatment of a disease.

**Endemia.** (Ἐνδημία, a dwelling anywhere. G. Landeskrankheit.) An endemic disease.

**Endemial.** Same as *Endemic*.

**Endemic.** (Ἐν, in; ἔθνος, a people. F. *endémique*; G. *endemisch*.) Peculiar to a people, or to a country, or to a neighbourhood.

**E. disease.** A disease peculiar to a country or neighbourhood, and dependent upon some cause special to that part.

**E. influences.** The conditions, or circumstances, or agencies which determine the origin of special diseases in special neighbourhoods or localities. These influences may be exerted by the place itself, such as its elevation, its geological formation, the condition and amount of its water, or the direction and force, and temperature of its winds; or they may arise from the indwellers, or their habits, such as their occupations, their personal cleanliness, the disposal of their refuse, or their mental conditions.

**E. tetanus.** See *Tetanus, endemic*.

**Endemical.** (Ἐν; ἔθνος.) Same as *Endemic*.

**Endemicity.** (Ἐνδημιος, dwelling in; from *in*; ἔθνος.) The condition or capacity or in a disease of being *Endemic*.

**Endemiochloasma.** (Ἐνδημιος, belonging to a people; χλωάσις, to be pale green.) Endemic chloasma.

**Endemiology.** (Ἐνδημιος; λόγος, a discourse.) The doctrine of endemic disease.

**Endemionology.** (Ἐνδημιος; λόγος, a disease; λόγος, an account.) Same as *Endemiology*.

**Endemophysical.** (Ἐνδημιος; φυσικός, natural, physical.) Applied to an endemic cause of disease which is physical or material.

**Endemy.** Same as *Endemia*.

**Endepidermis.** (Ἐνδόν, within; *epidermis*.) Name for the *Epithelium* or internal epidermis.

**Enderian.** (Ἐνδόν, within; ἔριος, the skin.) Underneath the skin, within the body.

**Endermatic.** (Ἐν, in; ἐρυματικός, of the skin.) Same as *Endemic*.

**Endermic.** (Ἐν, in; ἔριμα, the skin.) That which acts on the skin, or by penetrating beneath the skin.

**E. method.** The method of using medicines by rubbing them into the skin, or by sprinkling them on the denuded surface where a blister has previously been formed.

**Endermism.** Same as *Endermismus*.

**Endermismus.** (Ἐν, in; ἔριμα, the skin. F. *endermisme*.) The application of medicinal substances by the endermic method.

**Endermosis.** Same etymon and meaning as *Endermismus*.

**Enderon.** (Ἐν, in; ἔριος, the skin.) The inner layer of the ectoderm of *Actinozoa*. It consists of granular striated connective tissue. Also, the inner part of the outer or epidermic integument of any animal.

Also, the same as *Endoderm*.

**Enderonic.** (Ἐν; ἔριος.) Relating to the *Enderon*.

**E. calcifications.** (L. *calx*, lime; *flo*, to become.) False teeth, consisting of deposits of calcareous matter in the pharynx or œsophagus of some snakes and other animals.

**Endesis.** (Ἐνδῆσις, a binding on.) A ligature; a bandage; a means of connection.

**Endexoteric.** (Ἐνδόν, within; ἐξωτερικός, belonging to the outside.) A term applied to a series of periodic vital phenomena, or changes; intended to denote such as result from causes both internal or proper to, and external or independent of, the organism; that is, compounded of an esoteric and exoteric series.

**Endhymenine.** (Ἐνδόν; ὑμῆν, a membrane.) The inner membrane of the envelope of a pollen grain; also called *Intine*.

**Endive.** (F. *endive*, from L. *intybus*. F. *chicorce des jardins*; G. *Endivie*.) The *Cichorium endivia*.

**E., wild.** The *Cichorium intybus*.

**Endivia.** The endive, *Cichorium endivia*.

**Endixis.** See *Endeixis*.

**Endlicher.** A German botanist of the early part of the nineteenth century.

**E.'s classification of plants.** *Thallophyta*, including *Protophyta* and *Hystero-phyta*; and *Cormyphyta*, including *Aerobrya*, *Amphibrya*, and *Aeramphibrya*.

**Endo.** (Ἐνδόν, within.) A prefix signifying within.

**Endoarthitis.** (Ἐνδόν, within; *aorta*.) Inflammation of the inner coat of the aorta.

**Endoarteritis.** Same as *Endarthitis*.

**Endoblast.** (Ἐνδόν, within; βλαστός, a sprout.) A term for the nucleus of a cell, especially applied to the nuclei of the cells of a glandular follicle.

**Endobranchiate.** (Ἐνδόν, within; βραγχία, gills. F. *endobranché*.) Having gills within. Applied to a Family of the Class *Annelida*, which have no external gills.

**Endocardiac.** Same as *Endocardial*.

**E. pressure.** See *Pressure, endocardial*.

**Endocardial.** (Ἐνδόν, within; καρδία, the heart.) Within the heart.

Also, relating to the *Endocardium*.

**E. murmurs.** Murmurs which take their origin in some diseased or defective condition of the parts within the heart or at the origin of the great vessels. See *Murmurs, endocardial*.

**E. thrill.** See *Thrill, endocardial*.

**Endocarditis.** (Ἐνδόν, within; καρδία, the heart. F. *endocardite*.) Inflammation of the lining membrane of the heart.

**E., acute.** (L. *acutus*, sharp.) This form generally occurs in connection with acute rheumatism, but it may become developed in the course of any of the acute specific febrile diseases, during pregnancy, after parturition, in Bright's disease, in chorea, in syphilis, from cold, and from injuries such as rupture of the cardiac valves and the chordæ tendineæ. It is generally limited to the left side of the heart, and in it to the valves and chordæ tendineæ. At first there is increased vascularity of the affected membrane, which becomes swollen and soft from infiltration of leucocytes and growth of tissue, and presents on its surface or edges points of deposit which grow to warty vegetations which may coalesce and entangle fibrin, or may grow firm and hard, with puckering and contraction of the valves; ulceration and perforation or adhesion may ensue.

Sometimes particles of fibrin or small vegetations separate and, being carried away in the blood-current, are arrested in a small vessel and produce embolism. In addition to the symptoms of the disease in the course of which endocarditis has become developed, the condition is only to be recognised by physical signs until valvular obstruction or incompetence is pronounced; there may be increased extent of perhaps an unequal impulse, a prolonged and indistinct first sound at the left apex, a similar alteration of the second sound at the base, and when the disease has produced definite physical change a mitral or aortic murmur.

**E., chronic.** (L. *chronicus*, long-lasting.) This form may follow the acute form, or it may be caused by gouty or other dyscrasia. It tends to produce fibroid thickening and hardening of the valves, and ultimately fatty or calcareous degeneration.

**E., diphtheritic.** (Διφθερία, a prepared hide.) A term applied to *E., ulcerative*, in reference to the fringed vegetations combined with the destructive processes.

**E. fibrinosa.** (Fibrin.) The ordinary form of endocarditis in which there are lymph and fibrinous deposits on the inflamed surface.

**E. gonorrhoeal.** (Gonorrhœa.) Endocardial inflammation occurring in the course of gonorrhœa, and caused by the same conditions as those which produce gonorrhœal rheumatism.

**E., infective.** (L. *infectus*, part. of *inficio*, to taint.) A synonym of *E., ulcerative*, having reference to its termination in embolic abscesses of remote organs.

**E. maligna.** (L. *malignus*, of an evil nature.) A synonym of *E., ulcerative*, in reference to its fatal character.

**E. productiva.** (L. *productivus*, from *producere*, to bear.) Endocarditis with deposit on the inflamed surface.

**E. septic.** (Σηπτικός, putrefying.) A synonym of *E., ulcerative*; especially applied to those cases which own a septic origin, such as puerperal endometritis.

**E. syphilitica.** (Syphilis.) A chronic form of the disease supposed to be caused by constitutional syphilis.

**E., ulcerative.** (L. *ulcus*, a sore.) A special form of the disease in which the inflammation becomes destructive, so that the edges of the valves are eroded, or their area occupied by an ulcer with a granular base and fringed edges; perforation or abscess may occur. In the detritus of the ulceration, fungoid growths, chiefly micrococci, which are by some believed to be the cause of the disease, are frequently found; these accompanying the fragments of detritus from the ulceration are arrested in the smaller capillaries of the kidneys, spleen, brain, or heart, rarely in those of the lungs or liver, and there form foci of hæmorrhage or suppuration. It is accompanied by severe constitutional symptoms, which speedily assume a typhoid or pyemic character, when splenic enlargement, diarrhœa, jaundice, and albuminuria precede death.

**E., ulcerative, primary.** (L. *primus*, first.) The form of *E., ulcerative* which is developed without any obvious cause.

**E. verrucosa.** (L. *verruca*, a wart.) Ordinary endocarditis in which there are warty or papillary deposits on the valves.

**Endocardium.** (Ἐνδον, within; καρ-

δία, the heart. F. *endocarde*; I. *endocardio*.) The smooth membrane lining the cavities of the heart, and continuous at their openings with the lining membrane of the arteries and veins. It consists of connective tissue with a network of elastic tissue, enclosing here and there a non-striated muscular fibre, and having a covering of flattened, polygonal, wavy-outlined, epithelial cells, .03 mm. to .05 mm. long, and .02 mm. to .03 mm. broad; the deeper layers are more hyaline. The endocardium is thicker in the auricles than in the ventricles; and of these latter it is thickest in the left. The endocardium possesses neither blood-vessels nor lymphatics; numerous nerve fibres are seen just beneath it.

**Endocarp.** (Ἐνδον; καρπός, fruit. F. *endocarpe*; G. *Innerhaut*, *Wandhaut*.) The inner layer of a pericarp which lines the cavity containing the seeds; it is very distinct in apples and pears.

Also called, when hard, *Putamen*.

**Endocausis.** (Ἐνδον; καύσις, a burning. F. *endocausis*; G. *innere Hitze*.) Internal heat.

**Endocervicitis.** (Ἐνδον; L. *cervix*, the neck.) Inflammation of the lining membrane of the neck of the womb. See *Endometritis*, *cervical*.

**Endochondral.** (Ἐνδον; χόνδρος, cartilage.) Arising or growing, or being, within cartilage.

**E. bone.** That part of a growing bone which is formed within the substance of cartilage.

**Endochorion.** (Ἐνδον; χόριον, the membrane that encloses the fetus.) The inner of the two layers into which Burdach believed that the chorion was divided.

**Endochroa.** (Ἐνδον; χροά, the colour of a thing.) The inner layer of the cuticle of a plant, containing colouring matter.

**Endochrome.** (Ἐνδον; χρομα, colour.) The granular matter contained in the vegetable cell; so called because it is usually coloured. But specially applied to the colouring matter of vegetable cells when any other colour but green.

**Endocladia.** A Genus of *Lichens*.

**E. vernicata.** One of the species forming Japanese isinglass.

**Endocolitis.** (Ἐνδον; κολον, the colon.) A synonym of *Dysentery*, from the seat of the disease.

**Endocranitis.** (Ἐνδον; κράνιον, the skull.) Same as *Pachymeningitis externa*.

**Endocranium.** (Ἐνδον; κράνιον, the skull.) The inner surface of the cranial parietes.

**Endocyclia.** (Ἐνδον; κύκλος, a circle.) An Order of the Class *Echinoidea*, having the mouth and anus central, and two rows of ambulacral plates alternating with two rows of interambulacral plates.

**Endocymia.** (Ἐνδον; κύμα, the product of conception.) Geoffroy St. Hilaire's term denoting the enclosure of one foetus, or of part of one, in another fetus.

**Endocyst.** (Ἐνδον; κύστις, a bag.) The inner layer of the integument of the *Polyzoa*; it lines the body cavity, and is continuous with the outer membranous layer of the tentacles; it consists of large, irregular connective-tissue cells.

**Endocyte.** (Ἐνδον; κύτος, a cell.) The granular protoplasmic substance occupying

the median region of the body of the *Gregarinidae*.

**Endodéc'a.** A Genus of the Nat. Order *Aristobolachaeae*.

**E. serpentina.** Klotzsch. The *Aristobolus serpentina*, Linn.

**Endoderm.** (Ἐνδόν; δέρμα, the skin.) The inner layer of the skin, or of the cuticular covering of an animal.

The term is also specially applied to the two or more layers of large cells forming the inner part of the periphery of the larvae of *Colenterata*.

Also, the innermost layer of the *Blastoderm*.

In Botany, a layer of large cambium cells lying beneath the liber.

Also, the inner layer of the wall of a vegetable cell.

**Endoder'mic.** (Ἐνδόν; δέρμα.) Relating to the *Endoderm*.

**Endoder'mis.** (Ἐνδόν; δέρμα.) A synonym of *Bundle-sheath*.

**Endodontitis.** (Ἐνδόν; ὀδούς, a tooth. F. *endodontite*.) Inflammation of the membrane lining the internal cavity or pulp of a tooth.

**Endoenteritis.** (Ἐνδόν; ἔντερον, the intestine.) Inflammation of the mucous coat of the intestines.

**Endogastri'tis.** (Ἐνδόν; γαστήρ, the stomach. F. *endogastrite*.) A term for inflammation of the lining membrane of the stomach. See *Gastritis*.

**Endogen.** (Ἐνδόν; γεννάω, to produce.) A plant in which new wood is developed in the form of bundles in the interior of the stem which is not differentiated into wood and bark; the leaves are commonly parallel-veined, the flowers are trilocular; the embryo has only one cotyledon, and the radicle is enclosed in a sheath.

**Endogenesis.** (Ἐνδόν; γένεσις, generation.) The development of one or more cells in the interior of a parent cell.

**Endogenous.** (Ἐνδόν; γεννάω, to produce. F. *endogene*.) Growing from within; relating to an *Endogen*.

**E. cell formation.** The development of daughter cells within a mother cell.

**E. members.** A term applied in Botany to those lateral parts of the axis of a plant, such as branches and side roots, which originate in the internal tissue of the axis, and penetrate the outer surface as they develop.

**E. stem.** See *Stem, endogenous*.

**Endogenously.** (Ἐνδόν; γεννάω.) In an *Endogenous* manner.

**Endogeny.** (Ἐνδόν; γεννάω.) The condition of growing or developing from within, as when young or daughter cells are developed in the interior of a mother cell, either by fission of the maternal nucleus or by the development of a new nucleus.

**Endogna'thal.** (Ἐνδόν; γνάθος, the jaw.) Relating to the inner part of the jaw.

**E. palp.** (L. *palpus*, to feel.) The palpi-form appendage to the gnathostegite of Brachyurous Crustacea, consisting of three undeveloped terminal joints.

**Endogonium.** (Ἐνδόν; γόνος, a begetting. F. *endogone*.) The reddish closed sporiferous sac which, with the epigone, forms the archegonium of mosses.

**Endokardi'tis.** See *Endocarditis*.

**Endolymph.** (Ἐνδόν, within; L. *lymph*, water.) The fluid contained in the membranous labyrinth; that of the haddock contains

1·5 per cent. of solid matter, of which the greater part is sodium chloride, with a little mucin, but no albumen.

**Endolymphang'ial.** (Ἐνδόν; *lymph*; ἀγγίον, a vessel.) Relating to the internal lymphatics.

**E. nodules.** (L. *nodulus*, a little knot.) Small elevated masses containing lymph corpuscles, found in the serous membranes.

**Endometrit'is.** (Ἐνδόν, within; μήτρα, the womb. G. *Gebärmutterinnenflächenentzündung*.) Inflammation of the lining membrane of the uterus.

**E., acute'.** (L. *acutus*, sharp.) The form of inflammation of the uterine lining membrane which runs a short but somewhat severe course. It is caused by local irritations, such as the passing of a sound or of an intra-uterine stem, the application of caustics, excessive coitus and gonorrhoea, by infectious fevers, and by chill; or it may be the result of imperfect uterine contraction after labour. There is weight and pain in the pelvis, back, and thighs, strangury, tenesmus, bearing-down pains, abdominal tenderness, and a purulent or bloody discharge, which irritates the neighbouring skin. The body of the womb is enlarged and tender, and the os oedematous and red. It may affect the cervix or the body only, or both; and may end in resolution or become chronic.

**E., adhæ'sive.** (L. *adhæro*, to stick to.) The same as *E. decidua* *chronica diffusa*.

**E., catarr'hal** (Κατάρροος, a running down.) A synonym of *E., acute*.

**E., cervic'al.** (L. *cervix*, the neck.) The form in which the lining membrane of the neck of the womb is the part chiefly affected. It may be acute or chronic; in the latter case the mucous follicles, and especially the ovules of Naboth, become much enlarged.

**E. cervic'al'is granulo'sa.** (L. *granulum*, a small grain.) The condition called granular ulceration of the os uteri when occurring during the course of *E., cervical*.

**E., chron'ic.** (F. *chronique*, long-lasting.) A slowly-progressing catarrhal inflammation of the lining membrane of the uterus, in which there is excessive secretion of glairy mucus, and swelling, softening, and abrasion of the epithelial surface. It occurs in anæmic and scrofulous persons, from too-frequent childbearing and subsequent subinvolution, from excessive nursing, and from mental depression. It may affect the cervix only, when it produces a granular condition of the os; or it may be confined to the body of the womb, when atrophy of the uterine glands may occur.

**E., corpo'real.** (L. *corpus*, the body.) The form in which the lining membrane of the body of the womb is affected; it may be acute or chronic.

**E., croup'ous.** (Croupous.) Same as *E., exudative*.

**E., cyst'ic.** (Κύστις, a bladder.) The form in which the mucous follicles become distended and enlarged, forming rounded, sessile, or pedunculated, elastic tumours, varying in size from a rape seed to a hazel nut, and containing a transparent, thin, mucoid liquid. They are more common in the cervical membrane, but may occur in that of the body of the womb.

**E. decidua'lis.** (*Decidua*.) Inflammation of the decidua membrane of the impregnated uterus, not infrequently commencing

before conception. The acute form may end in effusion of blood into the fetal membranes and produce abortion or destruction and disorganisation of the embryo, so as to constitute a mole. From the chronic form, in addition to the following varieties, hypertrophy of the decidua may result.

**E. decidua'lis catarrha'lis.** (Κατάρρεος, a running down.) A chronic form of decidual inflammation which produces a secretion of a yellowish or bloody fluid between the decidua and the chorion, which from time to time escapes externally, and is one form of the condition known as *Hydorrhœa gravidarum*.

**E. decidua'lis chron'ica diffu'sa.** (L. *chronicus*, long-lasting; *diffusus*, spread about.) A slowly progressing inflammatory change of the whole of the decidua vera and, it may be, of the reflexa, producing thickening of the membrane, with great enlargement of the decidual cells, and often increase of the cavernous structure of the decidua, so that a cystic condition results; there is often fatty degeneration of the membrane. Frequently abortion is the result, but in some cases pregnancy proceeds to the full term.

**E. decidua'lis polypos'a.** (Polypus.) The form of decidual inflammation in which the internal surface of the decidua vera becomes the seat of polypoid outgrowths, from hyperplasia of the interstitial tissue, with a development of large spindle-shaped or star-shaped cells.

**E. decidua'lis tuberos'a.** (L. *tuberosus*, full of swellings.) Same as *E. decidua'lis polypos'a*.

**E., diphtherit'ic.** (Διφθέρια, a prepared hide.) Same as *E. exudative*.

**E., exu'dative.** (L. *exudo*, to sweat out.) The form in which a false membrane is thrown out on the surface of the uterine mucous membrane; such as occurs in the acute exanthemata, in malignant cholera, or in the course of diphtheria.

**E., fun'dal.** (L. *fundus*, the foundation.) Inflammation of the mucous membrane of the fundus of the womb.

**E. fungo'sa.** (L. *fungus*, a mushroom.) Same as *E. decidua'lis polypos'a*.

Also, Olshausen's synonym of *E., interstitial*.

**E., glandu'lar.** (Gland.) Ruge's term for the form of *E., chronic*, in which the uterine follicles lengthen, and widen, and branch from pressure of contained secretion.

**E., hæmorrhag'ic.** (Αἱμορραγικός, liable to violent bleeding.) A term applied to those cases of *E. decidua'lis catarrhalis*, in which there is a more or less profuse discharge of blood.

**E. hypertrophica.** (Υπέρ, above; τροφή, nourishment.) A term applied to those forms of *E. decidua'lis* in which there is increase, either general or partial, in the size or bulk of the decidua.

**E., interstitial.** (L. *interstitio*, a standing between.) Ruge's term for the form of *E., chronic*, in which the mucous tissue becomes full of cells, some of which are proliferating and some undergoing fatty degeneration; there is no enlargement of the glands.

**E. placenta'ris hypertroph'ica.** (Placenta; Gr. ὑπέρ, above; τροφή, nourishment.) Inflammation and thickening of the placenta.

**E., puerper'al.** (L. *puerpera*, a lying-in woman.) Inflammation of the uterine mucous membrane, occurring after labour, and caused by retention of a decomposing clot or membranes,

or from other septic infection. It frequently extends along the Fallopian tubes, and produces a general septic condition of the system.

**E., purulent.** (L. *pus*, matter.) The form which is characterised by the discharge from the cavity of the womb of considerable quantities of pus, sometimes tinged with blood. It occurs chiefly in elderly persons.

The term is also applied to those cases of acute or chronic endometritis at any age in which the discharge is copious and consists of pus.

**E. septica.** (Σηπτικός, putrefying.) The form which occurs in pregnant women, usually in the latter half of pregnancy, with a quick pulse, a high temperature, a fetid discharge, resonance of uterine percussion, and tympanitis; it produces abortion or premature labour, and generally death of the mother. It is probably caused by the reception of some septic poison or fungus.

**E., septicæmic.** (Σηπτικός, putrefying; αἷμα, blood.) Same as *E. septica*.

**E. serosa.** (L. *serum*, the watery part of a thing.) The same as *E. decidua'lis catarrhalis*.

**E., syphilit'ic.** (Syphilis.) Endometritis caused by syphilis.

**E. villos'a.** (L. *villosus*, hairy.) The form of *E., chronic*, in which, from cellular deposit in the mucous membrane, it grows on the free surface into small, close-set, papillary excrescences, without any epithelial covering.

**Endomet'rium.** (Ἐνδόν; μήτρα.) The lining membrane of the uterus.

**Endometrorrha'gia.** (Ἐνδόν, within; μήτρα, the womb; ῥήγνυμι, to burst forth. F. *endometrorrhagie*.) Haemorrhage within the womb.

**Endomy'sium.** (Ἐνδόν; μῦς, a muscle.) The prolongation of the sheath of areolar tissue around a muscle, the perimysium, between the muscular fibres; it consists chiefly of white fibrous tissue, but contains a few elastic fibres, and many plasma cells.

**Endonarteri'tis.** Same as *Endarteritis*.

**Endonenteri'tis.** (Ἐνδόν, within; ἔντερον, an intestine. F. *endonenterite*.) Inflammation of the living membrane of the intestines.

**Endonephrit'is.** (Ἐνδόν; νεφρίτις, a disease in the kidneys.) Inflammation of the lining membrane of the pelvis of the kidney. A synonym of *Nephritis*.

**Endoneu'rium.** (Ἐνδόν; νῆυρον, a nerve.) The thin layer of connective tissue which separates the nerve-fibres in the funiculus; it is continuous with the septa of the perineurium and supports the capillaries.

**Endocesophagitis.** (Ἐνδόν; οἰσοφάγος, the gullet. F. *endocesophagite*.) Inflammation of the lining membrane of the œsophagus.

**Endoparasite.** (Ἐνδόν; παράσιτος, one who lives at another's expense.) A dweller in the internal organs of an animal, as a tape-worm.

**Endopath'ic.** (Ἐνδόν; πάθος, suffering.) Relating to the production of disease from causes within the body.

**Endopericardi'tis.** (Ἐνδόν; περί, around; καρδιά, the heart.) Inflammation of both the inner and the outer membranes of the heart, being conjoined endocarditis and pericarditis.

Also, according to some, inflammation of that part of the pericardium only which covers the heart substance.

**Endoph'eride.** A synonym of *Sycomitis*.

**Endophlebitis.** (Ἐνδόν; φλέψ, a vein. F. *endophlébite*.) Inflammation of the lining membrane of a vein.

**Endophloe'um.** Same as *Endophragmum*.

**Endophloe'um.** (Ἐνδόν; φλωός, bark. G. *Innenrinde*.) The inner bark or liber of a tree.

**Endop'hora.** (Ἐνδόν, within; φέρω, to bear.) Name by some for the *Endopleura*.

**Endophrag'ma.** (Ἐνδόν; φράγμα, a partition. F. *endophragme*.) The transversal diaphragms or septa which in some simple plants between the application, end to end, of the cells of which it is formed.

Also, the chitinous covering of the neural canal in the thorax of some Crustacea.

**Endophyllous.** (Ἐνδόν; φύλλον, a leaf.) In Botany, a term applied to young leaves of Monocotyledons, because they are developed within a sheath.

**Endoplasm.** (Ἐνδόν; πλάσμα, anything formed.) Strasburger's term for the inner layer of the protoplasm of a vegetable cell, being that which contains the chlorophyll granules.

**Endoplas'ma.** (Ἐνδόν; πλάσμα.) Same as *Endosarc*.

**Endoplast.** (Ἐνδόν; πλάσσω, to form.) A large protoplasmic corpuscle in the external parenchyma of the body of the Infusoria. It varies in shape; generally it is rounded or oblong, sometimes it is band-like or horseshoe-shaped, and sometimes it is divided into many parts. It consists of a fine membranous bag, enclosing a finely granular viscous fluid. It is supposed to be concerned in the female part of the reproductive process, and is also known as the nucleus.

**Endoplas'tica.** (Ἐνδόν; πλάσσω, to form.) One of Huxley's two divisions of *Protozoa*, being those which contain an *Endoplast*, or it may be several; generally also they possess contractile vacuoles.

**Endoplas'tule.** (Ἐνδόν; πλάσσω.) A bright rod-like mass lying in the interior or on the outside of the *Endoplast* of Protozoa. It has been supposed to be a male sexual organ, and at certain times to enlarge, to become granular, and to be transformed into fusiform filaments or spermatozooids. It is also called the nucleolus.

**Endopleu'ra.** (Ἐνδόν, within; πλευρά, the side. F. *endopleure*; G. *Kernhaut*, *Leiderhaut*.) A term formerly applied to the internal layer of the spermoderm. It consists of a coalescence between the membrane of the nucleus and the embryo sac, or of one of these parts alone.

Also called *Tymen*.

**Endopleu'rite.** (Ἐνδόν; πλευρά, a rib.) The portion of the apodeme of the thorax of Astacus and other Crustacea, which arises from the interepimeral membrane, connecting every pair of somites.

**Endop'odite.** (Ἐνδόν; πούς, a foot.) The innermost of the two processes appended to the basal process of the hinder limbs of some of the Crustacea. It is sometimes represented by tufts of bristles.

**Endoproc'ta.** (Ἐνδόν; πρωκτός, the anus.) A division of Polyzoa, according to

Nitsche, in which the anus lies within the circle of tentacles; the endocyst is composed of only one layer, and the endoderm of the alimentary canal has no external coat; the perivisceral cavity is occupied by branched mesodermal cells.

**Endoptile.** Same as *Endoptilus*.

**Endoptilus.** (Ἐνδόν; πτεῖλον, a small plume. F. *endoptile*.) Name by Lesteboudois for the embryo of monocotyledonous plants, because its plumule, before germination, is contained in a *Coloptilus*.

**Endorrhiza.** (Ἐνδόν; ῥίζα, a root.) The sheath-enclosed radicle of an endorhizous plant which does not lengthen, but gives origin from its termination or from its sides to small rootlets.

**Endorrhiz'al.** Same as *Endorrhizous*.

**Endorrhizous.** (Ἐνδόν; ῥίζα, a root. F. *endorhizée*.) Applied to plants in which the radicle is enclosed in a sheath, or *Coborrhiza*.

**Endosarc.** (Ἐνδόν; σάρξ, flesh.) The protoplasmic interior or sarcode of the *Protoplastmata*, containing the nucleus and such other structures as they possess.

Also, Joliet's name for the network of fusiform cells derived from the endocyst of *Bryozoa*, which bring the several persons of the colony into communication, and which, according to him, is influential in the formation of the reproductive buds, and in the development of the sexual organs. This structure was thought by Müller to be of the character of a common nervous system.

**Endoscope.** (Ἐνδόν, within; σκοπέω, to view.) An instrument so arranged as to give a view of some internal part of the body through a natural canal. It consists of a tube blackened within, and as wide as can be conveniently introduced into the passage. The external or ocular end is funnel-shaped, and is sometimes filled with lenses; the internal or visceral end is rounded, and sometimes fitted with a reflector, and sometimes with an apparatus by which it can be dilated. A strong light is directed down the tube, as in ophthalmoscopic or laryngoscopic examinations, from a mirror placed on the forehead of the observer.

**E,uterine.** (L. *uterus*, the womb.) A tube for insertion into the canal of the cervix uteri with an adjustable reflecting mirror attached so as to illuminate the cavity of the womb.

Another instrument consists of two semicircular blades, which can be separated when introduced through the os uteri.

**Endoscopic.** (Ἐνδόν; σκοπέω.) Relating to the *Endoscope*.

Also, the same as *Entoptic*.

**Endoscopy.** (Ἐνδόν; σκοπέω.) The examination of internal parts by means of the endoscope. The chief organs that may thus be examined, are the urethra and bladder, the rectum, and the oesophagus and stomach. The whole length of the urethra can be leisurely examined; and in the female the openings of the ureters have been seen. It affords a means of applying topical remedies to erosions, ulcers, and to strictures, of removing polypi, of perceiving the position of false passages, and of introducing minute instruments, such as scissors, forceps, and knives to definite points.

**Endosis.** (Ἐνδίδωμι, to remit. F. *endose*; G. *Verminderung*.) Old term (Gr. *ἐνδοσις*), used by Galen, *Comment. in Epid.* i, 2, c. 3, for a remission or intermission, as of a fever.

**Endoskeleton.** (Ἐνδόν, within; σκελετόν, a skeleton.) The internal bony skeleton

# ENDOSMIC—ENDOTHELIUM.

of the *Vertebrata*, as distinct from the outer or exo-skeleton and the splanchno-skeleton.

**Endosmic.** (F. *endosmique*.) Of, or belonging to, *Endomose*.

**Endosmo-exosmosis.** (Ενδον; έξω, from without.) A synonym of *Osmosis*.

**Endosmometer.** (Ενδον; ώσμός, a thrusting in; μέτρον, a measure.) An instrument contrived by Dutrochet for exhibiting and measuring the phenomena of endomose. It consists of a graduated glass tube, to one end of which is attached a bag of animal membrane, such as a bladder; the bag is filled with the substance to be experimented on, and immersed in distilled water; the amount of loss or gain by endomose is read off on the tube by the rise or fall of the contained fluid.

**Endosmometric.** (Ενδον; ώσμός; μέτρον.) Relating to the *Endosmometer*.

**Endomose.** (Ενδον; ώσμός.) See under *Osmosis*.

**E. electrical.** See *Electric osmosis*.

**Endosmosis.** (Ενδον; ώσμός.) Same as *Endomose*.

**Endosmosmic.** (Ενδον; ώσμός.) Same as *Endosmotic*.

**Endosmotic.** (Ενδον; ώσμός.) Relating to *Endomose*.

**E. equivalent.** (L. *equus*, equal; *valere*, to be worth.) Jolly's term for the number which denotes the proportionate amount of water that passes through the endosmometer in exchange for one part by weight of the substance; thus the equivalent number of alcohol is 4.2, of caustic potash 215, of sodium chloride 4.3, and of sugar 7.1.

**E. force.** The influence or force which causes endomosis; in the majority of instances it is an attraction for or an affinity to the liquid which lies at the other side of the membrane.

**Endosperm.** (Ενδον; within; σπέρμα, a seed. F. *endosperme*.) The nutritive substance found in many seeds between the integuments and the embryo; also termed the *Albumen*. It is developed, in Angiosperms, from the layer of cells which lines the wall of the embryo-sac, and which sprung from the division of the nucleus after fertilisation. It consists of albuminoid matter, and often contains oil. The endosperm is analogous to the prothallium of cryptogams.

Also, Pfeffer's name for the inner coat of the spore of a lycopodium or a fern.

**E. cells.** The cells which proceed from the division of the nucleus in the embryo-sac of angiosperm, and develop into the *Endosperm*.

**Endospermic.** (Ενδον; σπέρμα.) Relating to the *Endosperm*.

**Endospora.** (Ενδον; within; σπορά, a seed. F. *endospore*.) Applied to fungi the spores of which are situated in the interior.

**Endospore.** (Ενδον; σπορά, a seed.) The thin internal lining membrane of the wall of a spore or of a pollen grain.

**Endosporium.** Same as *Endospore*.

**Endosporous.** (Ενδον; σπορά.) Having an *Endospore*.

**Endosteitis.** (Ενδον; όστίον, a bone.) Inflammation of the medullary membrane of a bone.

**Endoster'nal.** (Ενδον; στήρνον, the breast.) Geoffroy St. Hilaire's term for the segment of the plastron of turtles, now known as the *Entoplastron*.

**Endoster'nite.** (Ενδον; στήρνον, the breast.) The portion of the apodeme of the thorax of Astacus and other Crustacea which arises from the intersternal membrane, connecting every pair of somites.

**Endosteum.** (Ενδον; όστίον, a bone.) The fine layer of highly vascular areolar tissue which lines the medullary cavities of bones; it is not possible to detach it as a continuous membrane; its blood-vessels supply the contiguous bony tissue and the fat cells.

**Endostitis.** Same as *Endosteitis*.

**Endostoma.** (Ενδον; within; ostoma, for *ostoma*, F. *endostome*.) A chronic, morbid, osseous tumour within a bone. The opposite of *Exostoma*.

**Endostome.** (Ενδον; στόμα, a mouth. F. *endostome*.) The inner opening of the channel of the micropyle in the primine of an angiospermous ovule.

Also, a calcified plate supporting the labrum in some Crustacea.

**Endostosis.** (Ενδον; ostosis.) The formation of an *Endostoma*.

Also, a term applied to the ossification of bone when it commences in the intercellular spaces of the cartilaginous matrix.

**Endostyle.** (Ενδον; στήλος, a pillar, a pencil.) A rigid, hollow, whitish, rod-like structure on the floor of the ventral groove of Tunicata; it is the upper surface of a furrow or fold of the middle of the haemal wall of the pharynx; it projects into the haemal sinus.

**Endotheca.** (Ενδον; θήκη, a case.) The inner layer of the wall of the sac of the gonosome of the *Hydrozoa*.

Also, the inner membrane of the wall of the cells of the author.

**Endothecal.** (Ενδον; θήκη.) Relating to the *Endotheca*.

**E. dissepiments.** (L. *dissepimentum*, a partition.) Horizontal plates growing inwards from the septa of a *Corallite*.

**Endothecium.** (Ενδον; θήκη, a case.) The central part of the sporogonium of mosses which corresponds to the columella and sporogenous layer.

**Endothelial.** Relating to the *Endothelium*.

**E. can'cer.** (G. *Endothelkrebs*.) Cancer composed of cells proceeding from the germination or outgrowth of endothelium, lying in a connective-tissue stroma. The diagnostic points from alveolar sarcoma are that the epithelioid cells in endothelial cancer are quite distinct from those of the stroma, and that the stroma supports vessels, whilst the contents of the alveoli are destitute of vessels. It has been observed in the skin, dura mater, brain, in the pleura and peritoneum, lymphatic glands, liver, testicle, and ovary. It is probably often synonymous with the term *cholesteatoma*. Many primary gelatinous cancers of the serous cavities, especially of the peritoneum, are forms of endothelial cancer.

**E. pearls.** Small globular masses found on the serous membranes, especially of the brain, consisting of flattened and compressed endothelial cells; sometimes they become calcified.

**Endothelioma.** (*Endothelium*.) A malignant growth, of the same nature as *Epithelioma*, from the endothelial surface of the pleura, peritoneum, pericardium, pia-mater, and other serous surfaces. See *Endothelial cancer*.

**Endothelium.** (In contradistinction to

## ENDOTHORACIC FASCIA—ENEMA.

*epithelium*, from *ἐνθον*, within.) A term applied to a single layer of flattened, transparent, squamous cells, applied to each other by their edges, which lines the free surface of the serous and synovial membranes, and of those of the brain and spinal cord, the posterior surface of the cornea and anterior surface of the iris, the surfaces of tendons and tendon sheaths, the lymph sinuses or lymph sacs of amphibia, the cavity of the heart, and the interior of blood-vessels, and lymphatics. Each endothelial cell consists of a homogenous ground plate, in which an oval eccentric nucleus is embedded. The substance of the nucleus, and that of the ground plate, are both fibrillated. The form of the cells is usually more or less polygonal or slightly elongated, and the borders may be either straight, sinuous, or serrated. Between the cells are said to be at certain points openings or stomata.

**E., cement-substance of.** The intercellular substance of the endothelium lying between and connecting the edges of contiguous cells. It is said to be a fluid or viscid substance which permits the passage of solutions of fluids containing very small suspended particles.

**E., germinating cells of.** (*L. germina*, to sprout.) Polyhedral or short columnar cells found in some places, either isolated or forming small groups, and covering small patches, or nodular, villous, or cord-like structures of the pleura and omentum, or synovial membranes and elsewhere. These cells can be shown to be in an active state of division, and form, by their fission, small spherical lymphoid cells, which ultimately enter the lymphatics, and enter the blood system as white blood corpuscles. They often line the stomata; and those found on the mesogastrium, mesentery, and septum cisternæ of the frog are ciliated.

**E., subepithelial.** (*L. sub*, under; *epithelium*.) A single layer of very thin, flat, polyhedral cells, united to each other by a delicate substance, and lying below the epithelium of the mucous membranes.

**Endothoracic fascia.** See *Fascia endothoracica*.

**Endotoscope.** (*Ενδοσκόπος*, *οὐδς*, the ear; *σκοπεῖν*, to observe.) An instrument for illuminating the membrana tympani, in order that its condition may be observed.

**Endometritis.** (*Ενδομήτριον*; *L. uterus*, the womb.) Inflammation of the lining membrane of the uterus or womb; better *Endometritis*.

**Endyma.** (*Ενδύμα*, a garment.) A synonym of *Ependyma ventriculorum*.

**Eneche'ma.** (*Ενέχημα*, a sound in a thing.) Term for *Tinnitus aurium*.

**Enecia.** (*Ἐνεκία*, continuous.) A term applied by Mas in Good to continued fever, and characterised by having one series of increase and decrease; with a tendency to exacerbation and remission, for the most part appearing twice in the twenty-four hours. He divided it into the three following species.

**E.cau'ma.** (*Καύμα*, burning heat.) Inflammatory fever; heat greatly increased; pulse quick, hard, and strong; urine red; disturbance of mind slight. (Good.)

**E. synochus.** (*Συνόχος*, unintermitted.) Synochal fever; compounded of cauma and typhus; in its commencement resembling the former; in its progress, the latter. (Good.)

**E. typhus.** (*Τύφος*, stupor.) Typhus fever; pulse small, weak, and unequal; usually

frequent; heat nearly natural; great sensoria debility, and disturbance of the mental powers. (Good.)

**Encile'ma.** (*Ἐν, in*; *εἰλεῖν*, to contain. *F. encile'me*.) The internal membrane of the seed.

**En'ema.** (*Ἐνυμα*, from *ἐνίπτω*, to inject. *F. clystere*, *lavement*; *G. Klyster*.) Term for a medicine, in the liquid or gaseous form, thrown into the rectum in order to empty the bowels of feces, or otherwise; a clyster or glyster; an injection.

**E. al'oës.** *B. Ph.* (*F. lavement aloë'tique*; *G. Aloëklyster*.) Enema of aloes. Aloes 40 grains, carbonate of potash 15, mucilage of starch 10 ounces. Mix. A purgative and ascaridicide.

**E. anod'ynum.** (*Ἄν, neg*; *δένειν*, pain.) The *E. opii*.

**E. antihyster'icum.** (*Ἀντί*, against; *hysteria*.) The *E. assafœtide*.

**E. appar'atus.** The apparatus for administering an enema, consisting of a smooth metallic, bone, ivory, vulcanite, rigid, elastic or other tube for introduction into the rectum, and a syringe or elastic bag or bulbous tube for forcing the fluid into the bowel, or an elevated receptacle, whereby hydrostatic pressure is substituted for hand-force.

**E. assafœ'tidæ.** *B. Ph.* (*F. lavement d'ase fetide*; *G. Asafœtidsklyster*.) Enema of assafœtida. Assafœtida 30 grains in distilled water 4 ounces. In hysteria and constipation with flatulence.

**E. cathart'icum.** (*Καθαρτικός*, fit for cleansing.) The *E. magnesicæ sulphatis*.

**E. commun'é.** (*L. communis*, common.) Oatmeal gruel with a tablespoonful of common salt, and four or five tablespoonfuls of olive oil. Aperient.

**E. fœ'tidum.** (*L. fetidus*, stinking.) The *E. assafœtide*.

**E. magn'esicæ sulph'atis.** *B. Ph.* (*F. lavement de sulfate de magnésie*; *G. Bittersalklyster*.) Sulphate of magnesia 1 ounce, olive oil 1, mucilage of starch 15. Aperient.

**E. nicotia'næ.** (*Nicotiana*.) The *E. tabaci*.

**E. nu'triens.** (*L. nutrio*, to nourish.) An injection of twelve ounces of strong beef tea, thickened with hartshorn shavings or arrowroot.

**E., nu'tritive.** (*L. nutrio*.) As well as the special form *E. nutriens*, many food substances are used for injection into the rectum to support life; such are white of egg, raw meat beaten up with fresh pig's pancreas or pepsin, milk, farinaceous solution with maltine, and other substances, with or without wine or spirit.

**E. opii.** *B. Ph.* (*F. lavement opiacé anodin*; *G. Opiumklyster*.) Opium enema. Tincture of opium half a drachm, mucilage of starch 2 ounces. Sedative.

**E. pump.** Same as *E. syringe*.

**E. sedati'vum.** (*L. sedo*, to allay.) The *E. opii*.

**E. syringe.** A syringe used for the injection of fluids into the rectum.

**E. taba'ci.** *B. Ph.* (*F. lavement de tabac*; *G. Tabakklyster*.) Tobacco enema. Leaf tobacco 20 grains, boiling water 8 ounces. Infuse for half an hour and strain. Used for producing relaxation in hernia and ileus.

**E. terebinth'inæ.** *B. Ph.* (*F. lavement terebinthiné*; *G. Terpentinklyster*.) Turpen-

time 1 ounce, macilage of starch 15. Used in constipation with tympanites, in hysteria, in the pain from vesical calculus, and to destroy ascari-  
rides.

**E., tobacco.** See *E. tabaci*.

**E., turpentine.** See *E. terbinthine*.

**Enepidermic.** (*Ev*, in; *ἐπίδερμις*, the epidermis.) Applied to the mode of treating diseases by applications to the skin, such as by plasters and other modes.

**Energetics.** (*Ενέργεια*, action, force.) The science of the laws of mechanical or physical forces.

**Energia.** Same as *Energy*.

**Energy.** (*F. energie*, from Gr. *ἐνέργεια*, from *ἐνεργία*, to be active. *F. energie*; *G. Energie*, *Thutkraft*.) Inherent power, vigour, the degree of force exercised by any power.

In Physics, the capacity or power to do work, or to overcome resistance.

**E., actual.** (*L. actualis*, actual.) The energy which is accomplishing motion. Same as *E., kinetic*.

**E., conservation of.** (*L. conseruo*, to keep thoroughly.) The principle asserted in this term is stated by Clerk Maxwell as follows—The total energy of any body or system of bodies is a quantity which can neither be increased nor diminished by any mutual action of those bodies, though it may be transformed into any one of the forms of which energy is susceptible.

**E., dissipation of.** (*L. dissipatio*, a scattering.) A term which conveys the idea that as there is a tendency for all forms of physical energy to become converted into heat there will come a time when heat will be the only form of physical energy, and that heat so diffused that all matter will be at the same temperature, and so no possibility of any physical phenomena.

**E., dynamic** (*Δυναμικ*, power.) Same as *E., kinetic*.

**E., kinetic.** (*Κινητικός*, putting in motion.) The power to do work possessed by a body in motion; its amount is measured by half the product of the moving mass into the square of its velocity.

**E. of motion.** Same as *E., kinetic*.

**E. of position.** Same as *E., potential*.

**E., possible.** Same as *E., potential*.

**E., potential.** (*L. potentia*, power.) The power of doing work possessed by a mass or a system of masses in consequence of the position of itself or of its parts, as when it is raised from the ground; it is measured by the product of the force tending to cause motion into the distance through which the point of application of the force is capable of being displaced in the direction in which the force acts. (Atkinson's Ganot.)

**E., transformation of.** (*L. transformo*, to change in shape.) Change of one form of energy into another, as when chemical energy becomes thermal energy during the act of chemical combination.

**E., unit of.** See *Unit of energy*.

**E., vital.** (*L. vita*, life.) The aggregate of forces which go to the production and continuance of life.

**Enervate.** (*L. e*, neg.; *nervus*, a nerve. *F. énerè*; *G. rippenlos*.) Having no rib or nerve; ribless.

Also, to deprive of force, or of strength.

**Enerivating.** (*L. enervo*, to weaken.

*F. affaiblissant*; *G. entnervend*, *schwächend*.) Weakening or destroying the power, force, or energy of the nervous system.

**Enervatio.** (*L. i*, out of; *nervus*, a nerve.) Old term, used by Galen, *de Loc. Aff.* i, 6, for *Aponurosis* or *Tendo*.

Also, the same as *Enervation*.

**E. tendinea musculorum.** (*Tendon*; *L. musculus*, a muscle.) The tendinous intersections of the belly of a muscle.

**Enervatio.** (*L. enervo*, *F. enervation*; *G. Entnervung*, *Entkraftung*.) The act or state of being weakened, or of being weak from deficient nerve-force.

Also, the cutting across of a nerve, or of a tendon. The same as *Neurotomy*.

**Enervious.** (*L. enervo*.) Same as *Enervate*.

Also, weak, wanting in strength.

**Enervitas.** (*L. enervatio*, a state of weakness.) Sluggishness, inactivity.

**Enfolding.** Enclosing, wrapping up.

**E.æstivatio.** The variety of æstivation, called also *E., convolute*.

**Engalactum.** (*Ev*, for; *γάλα*, milk.) Name given to a certain plant, supposed to be the *Salsola kali* of Linnaeus; because it was eaten by nurses to increase their milk.

**Engastrimysm.** (*Εγγαστριμυσμός*.) Same as *Engastrimythism*.

**Engastrimyth.** (*Εγγαστριμυθος*, from *ev*, in; *γαστήρ*, the belly; *μυθος*, speech. *F. engastrimythe*; *G. Bauchredner*.) Old term applied to one who speaks with his mouth closed, because he appears to give forth his voice from his belly; a ventriloquist.

**Engastrimythism.** (*Εγγαστριμυθισμός*.) Same as *Ventriloquism*.

**Engeisoma.** (*Ev*, in; *γείσωμα*, the eaves of a house. *F. enbarrure*, *engisome*.) Old name for an instrument used in fractures of the skull, according to Galen, *Meth. Med.* vi, 6, and *Def. Med.*

Also, a term for a fracture in which the broken portion sinks deep, and the sound part is situated above it.

**Engelhardtia.** A Genus of the Nat. Order *Inglandiaca*.

**E. spicata**, Blume. (*L. spicatus*, pointed.) A species which probably furnishes some of the dammar resin.

**Eng'hien.** France, Département Seine-et-Oise, overlooking the Valley of Montmorency, near Paris. Cold sulphur waters, with sulphate of lime, and small quantities of other saline constituents; the amount of hydrogen sulphide is large. They are stimulating, producing, in too large or too frequent doses, febrile excitement; they produce diuresis and are laxative. Used in serofulous and glandular diseases, mucous catarrhs, and skin affections.

**Engisoma.** See *Engeisoma*.

**Engistein.** Switzerland, in Canton Bern. A chalybeate water, containing calcium carbonate and free carbonic acid.

**English.** Relating, or belonging to, England.

**E. arrowroot.** A term sometimes applied to potato-starch.

**E. chamomile.** The *Anthemis nobilis*.

**E. cholera.** See *Cholera*, *English*.

**E. disease.** An old term for rickets; according to some, because the disease is very

prevalent in England; but more probably because of the name of one of the earliest and best treatises on the matter, 'De Morbo Puerili Auglorum,' published by Whistler at Leyden in 1684.

**E. drops.** A name of an old remedy containing carbonate of ammonia and an ethereal oil.

**E. gal'angale.** The *Cyperus longus*.

**E. gar'lic.** The *Allium sativum*.

**E. mercury.** The *Chenopodium bonus Hœnicus*.

**E. pep'per.** The seeds of *Draba muralis*.

**E. plas'ter.** A name given to isinglass or court plaster.

**E. salt.** (G. *Englisch Salz*.) Sulphate of magnesia.

**E. scur'vy grass.** The *Cochlearia anglica*.

**E. spice.** (G. *Englisch Gewürz*.) A term for *Pimenta*.

**E. stick'ing-plas'ter.** A name given to isinglass or court plaster.

**E. sweat.** Same as *Sweating sickness*.

**E. tobac'co.** The *Nicotiana rustica*.

**Englottogast'or.** (Ev, within; γαστήρ, the tongue; γαστήρ, the belly.) Old name for a ventriloquist.

**Engompho'sis.** (Ev, in; γόμφος, a nail. G. *Enkehlung*, *Einzapfung*.) A synonym of *Gomphosis*.

**Engonioetheter.** Same as *Goniocætheter*.

**Engoniome'lë.** Same as *Goniomele*.

**Engonious.** (Ev, in; γωνία, an angle.) Having angles; angular; applied to the angle formed by the bending of a joint, whether it be right or oblique.

**Engorg'ed.** (F. *engorger*; from *en*, in; *gorge*, the throat. G. *verstopft*.) Filled to excess, as a blood-vessel with blood.

**Engorg'ement.** (F. *engorgement*, from *engorger*, to be choked up; from *en*, in; *gorge*, the throat. G. *Haufung*.) Term for a state of vascular congestion; a choking up.

**Engraft.** Same as *Graft*.

**Engraul'is.** (Εγγραυλ'is, the anchovy.) A Genus of the Order *Malacopectera*, Class *Pisces*.

**E. encrasich'olus**, Rond. (Εγκρασιχολος.) The *Anchovy*.

**Enhæmato'sis.** Same as *Hæmatisis*.

**Enhæmon.** (Ev, for; αἷμα, blood.) Name anciently applied to a plaster for stopping the bleeding of a wound.

**Enilema.** Same as *Encilema*.

**Enix'a.** (L. *enixus*, part. of *enitor*, to bring forth.) A former term for a woman in childbed; the same as *Puerpera*, according to P. M. de Calderia, *Oper.* ii, p. 74, 77.

**Enix'io.** (L. *enixus*.) A bringing forth.

**E. fœ'tus.** (L. *fœtus*, offspring.) The birth of a child.

**Enix'um.** Old term for a neutral salt.

**E. Paracel'si.** Old term for the *Caput mortuum* of the distillation of nitric acid.

**Enixus.** (L. *enixus*, a bringing forth.) Parturition.

**E. fœ'tus.** (L. *fœtus*, offspring.) The birth of a child.

**Enize'sis.** (Ενίζεις, a sitting in.) An old term specially applied to the sitting in warm oil to facilitate the passage of, and relieve the pain produced by, a urinary calculus.

**Enk'ea.** See *Enkeca*.

**Enkeph'alon.** See *Encephalon*.

**Emmetrit'is.** (Ev, in; μήτρα, the womb.) Inflammation of the inner coat of the uterus. Same as *Endometritis*.

**Enneagyn.** (Εννεία, nine; γυνή, a female.) A plant having nine pistils.

**Enneagyn'ia.** (Εννεία, nine; γυνή, a female. F. *enneagynie*; G. *Neunweibigkeit*.) A Linnæan Order of plants having nine pistils.

**Enneag'ynous.** (Εννεία; γυνή. G. *neunweibig*.) Having nine pistils.

**Enneame'nous.** (Εννεία; μήν, a month. G. *neunmonatlich*.) Having, or being, a period of nine months long.

**Ennean'der.** (Εννεία; άνήρ, a male.) A plant having nine stamens.

**Ennean'dria.** (Εννεία, nine; άνήρ, a male. G. *Neunmännigkeit*.) A Linnæan class of plants, comprising those which have hermaphrodite flowers with nine stamens.

**Ennean'drous.** (Εννεία; άνήρ. G. *neunmännig*.) Having nine stamens.

**Ennean'therous.** (Εννεία, anther. G. *neunstaubfädig*.) Having nine anthers.

**Enneapet'alous.** (Εννεία; πέταλον, a leaf. G. *neunblumenblättrig*.) Having nine petals.

**Enneaphar'macus.** (Εννεία; φαρμάκον, a medicine.) Old term applied to a medicine or plaster, Celsus, v, 19, t. 10, containing nine simple ingredients.

Also, a pessary of a similar constitution.

**Enneaphyll'ous.** (Εννεία; φύλλον, a leaf. G. *neunblättrig*.) Having nine leaves or leaflets.

**Enneaphyllum.** (Εννεία, nine; φύλλον, a leaf.) An old name for *Helicoborus fœtidus*, or bear's foot; because its flower consists of nine leaves.

**Enneasep'alous.** (Εννεία; sepal.) Having nine sepals.

**Enneaspermous.** (Εννεία; σπέρμα, a seed.) Having nine seeds.

**Enneuro'sis.** (Ev, in; νῆρον, a nerve.) Same as *Innervation*.

**Enode.** (L. *e*, neg.; *nodus*, a knot. F. *énode*; G. *Knotten*.) Having no knots, or nodes, or joints; knotless, jointless.

**Enophthalmus.** (Ev, in; ὀφθαλμός, the eye. G. *Zurücktreten des Bulbus*.) Retraction of the globe of the eye, owing to spasm of the extrinsic muscles of the eye.

**Enorm'is.** (L. *e*, neg.; *norma*, a rule. G. *unregelmässig*, *übermässig*.) Irregular, abnormal.

**Enorm'itas.** (L. *enormitas*, vastness.) Enlargement.

**E. cor'dis.** (L. *cor*, the heart.) Hypertrophy of the heart.

**Enor'mon.** (Ενορμάω, to rush in.) Ancient name for the *Aura vitalis*, or vital principle. (Hippocrates.)

**Eno'sis.** (Ενωσις, from *ενώω*, to unite.) Union, insertion.

**Enosmo'sis.** (Ev, in; ὥσμος, impulsion.) A synonym of *Endosmosis*.

**Enosto'sis.** (Ev, in; ὀστίον, a bone.) A tumour occurring in the medullary canal of a bone.

Also, a bony tumour originating in the substance of a bone.

**Enpies'ma.** Same as *Empiesma*.

**Enryth'mus.** (Ev, in; ρυθμός, number.)

Old term, applied by Galen, *de Diff. Puls.* i, 9, for a pulse which observes some degree of order, although it be not fully regular as to celerity, power, and equality.

**Ens.** (L. *ens*, part of *sum*, to be. F. *ens*; G. *Wesen*.) Being; an entity or existence; a substance. A Paracelsian term for a natural power capable of influencing the human body, of which there were said to be five, the *Ens astrale*, or astral; *E. venenale*, or poisonous; *E. naturale*, or natural; *E. spirituale*, or spiritual, and *E. deale*, or Godly.

In Alchemy, it was applied to certain substances conceived to be particularly active and powerful.

**E. mar'tis.** (L. *Mars*, a name for iron.) Old term for an oxide of iron, or the *Ferrum ammoniatum*.

**E. pri'mum.** (L. *primus*, first.) An alchemical term for the tincture by which the transmutation of metals was to take place.

**E. pri'mum auri.** (L. *aurum*, gold.) Ancient term for a certain antimonial powder.

**E. pri'mum sola'ris.** (L. *sol*, the sun.) Old epithet for *Antimonium*, or antimony.

**E. ven'eris.** (L. *Venus*, a name for copper.) Old term for the muriate of copper.

**E. ven'eris Boylei.** The *Ferrum ammoniatum*.

**En'sal.** (L. *ensis*, a sword.) Sword-like; sword-shaped.

**E. caut'ery.** (Καυτήριον, a branding iron.) A sword-shaped instrument for cauterising the lips.

**Ensa'tæ.** (L. *ensis*, a sword. G. *Schwertlilien*.) An Order of Monocotyledons with stiff, parallel-nerved, sword-shaped leaves; it includes *Iridiacea*, *Bromeliacea*, *Agaveæ*, and *Amayllidacea*.

**En'sate.** (L. *ensis*, a sword. F. *ensiforme*, *xiphoide*; G. *schwertförmig*.) Having the form or appearance of a sword; sword-shaped.

**En'sifoli'ate.** (L. *ensis*, a sword; *folium*, a leaf. F. *ensifolide*; G. *schwertblättrig*.) Having or bearing sword-like leaves.

**En'siform.** (L. *ensis*, a sword; *forma*, likeness. F. *ensiforme*, *xiphoide*; G. *schwertförmig*.) Formed like a sword; sword-like.

**E. apoph'ysis of sphe'roid.** (Ἀπόφυσις, an offshoot.) The smaller wing of the sphenoid bone.

**E. appen'dix.** (L. *appendix*, that which hangs to anything.) The *E. cartilage*.

**E. ear'tilage.** (F. *cartilage ensiforme*; G. *schwertförmiger Knorpel*.) The *Cartilago ensiformis*, or *C. xiphoide*; a cartilage shaped like a sword, forming the lower appendage, or when ossified in advanced life, the continuous extremity of the sternum or breastbone. It is the lower or sixth segment of the sternum; and is called the *Metasternum*.

**E. leaves.** Leaves which are thickened in the middle, sharp at the edges, and narrowing from base to summit, which is pointed.

**E. pro'cess of sphe'roid.** The lesser wing of the sphenoid bone.

**E. pro'cess of ster'num.** The *E. cartilage*.

**En'sister'nal.** (L. *ensis*; *sternum*, the breast bone.) Relating to the ensiform cartilage.

**Ensomato'sis.** (Ἐν, in; σῶμα, a body.) Same as *Incorporation*.

**Enstac'tum.** (Ἐν, in; στάζειν, to drop.)

Old term for a liquid medicine applied drop by drop, particularly a collyrium, according to Galen.

**Enstalax'is.** (Ἐνσταλάζειν, to drop in.) A dropping in or instillation; as an eyewater to the eyes.

**Enstethid'ia.** Same as *Entostethidia*.

**En'strophé.** (Ἐνστροφή, to turn in. G. *Einwärtsziehen*.) Inversion, as of the tarsal margins of the eyelids.

**Entacous'tic.** (Ἐντός, within; ἀκουστικός, relating to hearing.) A term applied to sound originating within, or in the neighbourhood of, the organ of hearing.

**Enta'da.** A Genus of the Nat. Order *Leguminales*.

**E. giga'lobum.** De Cand. (Γίγας, a giant; λοβός, a lobe.) Hab. India. Seeds emetic, bark and envelope of seeds muricaginous.

**E. pursæ'tha.** Hab. Java. Seeds emetic.

**En'talé.** (Arab.) Alchemical term, according to Paracelsus, for the *Alumen plumbosum*, or fossil alum. (Kuland.)

**En'tali.** Same as *Entale*.

**Entalium.** Same as *Entale*.

**Entankyloblephar'itis.** (Ἐνταγκυλοβλεφαρίτις. F. *entankyloblepharite*.) Inflammation of the inverted and adherent eyelids.

**Entankyloblepharon.** (Ἐντός, within; ἀγκύλα, a loop; βλεφρον, the eyelid. F. *entankyloblepharon*.) Internal ankyloblepharon, or adhesion of the eyelids to the surface of the eyeball.

**Entanthe'ma.** (Ἐντός; ἀνοήμα, a blooming.) An eruption or efflorescence on a mucous membrane.

**Entarthrochon'drus.** (Ἐντός, within; ἄρθρον, a joint; χονδρός, a cartilage. F. *entarthrochondrie*; G. *Zwischengelenknorpel*.) Interarticular cartilage.

Also (G. *Gelenknuss*), a loose cartilage in a joint.

**Entarthrotic.** (Ἐντός, within; ἄρθρον, a joint. G. *Zwischengelenkig*.) Lying between the two surfaces of a joint. The same as *Interarticular*.

**Entasia.** (Ἐντασις, a violent straining.) A vehement straining or stretching; applied by Mason Good as a generic name for constrictive spasm, consisting of irregular muscular action producing contraction, rigidity, or both.

**E. acrotis'mus.** (A, neg.; κρότος, the pulse.) Pulselessness, the perception and voluntary muscles remaining undisturbed.

**E. articu'laris.** (L. *articulum*, a joint.) Stiff-joint from permanent and rigid contraction of one or more muscles or their tendons.

**E. lox'ia.** (Λοξός, slanting.) Wry neck.

**E. lys'sa.** (Λύσσα, canine madness.) Good's term for *Hydrophobia*.

**E. priapis'mus.** Same as *Priapism*.

**E. rhachy'b'ia.** (Ράχης, the spine.)

Mason Good's term for muscular distortion of the spine.

**E. tet'anus.** Same as *Tetanus*.

**E. tris'mus.** Same as *Trismus*.

**En'tasis.** (Ἐντασις.) Old term for tonic spasm.

**Entatic.** (Ἐντατικός, stimulating; from *εντίνω*, to strain.) Causing to strain; provoking; applied formerly to medicines, internal or external, that are aphrodisiac, or excite the venereal inclination; a plaster of this kind is men-

tioned by Paulus Aegineta, vii, 17, Adams's Transl. vol. iii, p. 571.

**Entelechy.** (Εντελεχεια, probably from ἐν τέλει ἔχειν, to be complete.) The actual being of a thing as opposed to potentiality or capability of being.

**Entelmintha.** See *Entelmintha*.

**Entera.** (Έντρον, within.) Ancient name for the bag in which medicines were put for a fomentation.

**Enteradelphia.** (Έντός.) Same as *Enteradephut*.

**Enteradones.** (Έντερον, an intestine; ἀόνη, a gland. F. *enteradènes*; G. *Darmdrüsen*.) Old term for the intestinal glands.

**Enteradenography.** (Έντερον; ἀόνη; γράφω, to write.) A description of the intestinal glands.

**Enteradenology.** (Έντερον; ἀόνη; λόγος, a discourse.) An account of the intestinal glands.

**Enteræmia.** (Έντερον; αἷμα, blood.) Determination of blood to the intestines.

**Enteramotylphus.** (Έντερον; αἷμα.) Same as *Typholamnia*.

**Enterærcetasia.** (Έντερον; ἀήρ, the air; ἐκτασις, extension.) Flatulent distension of the belly, tympanites.

**Enteragra.** (Έντερον; ἄγρα, a seizure.) Gout in the bowels.

**Enteralgia.** (Έντερον; ἄλγος, pain. F. *enteralgie*; G. *Darmschmerz*, *Eingeeweideschmerz*.) Pain in the bowels, of a nervous non-febrile character.

A synonym of *Colic*.

**E. acuta.** (L. *acutus*, sharp.) A synonym of *Enteritis*.

**E. inflammatoria.** Same as *E. acuta*.

**E. nervosa.** (L. *nerveus*, a nerve.) A synonym of *Colic*.

**E. saturnina.** (L. *Saturnus*, lead.) Lead colic.

**Enteralgia.** (Έντερον; ἄλγος.) Same as *Enteralgia*.

**Enterangiemphraxia.** (Έντερον; ἀγγείον, a vessel; ἔμφραξις, a stopping.) According to Kraus, obstruction of the intestinal blood-vessels; according to Littré, obstruction of the canal of the bowels from strangulation.

**Enterata.** (Έντερον.) Those animals which possess an intestine distinctly separated from the outer body-wall.

**Enterauxé.** (Έντερον; αὐξή, increase.) Thickening of the intestinal coats.

**Enterchema.** (Έντερον; ἔχρημα, a sound. G. *Darmlaut*.) Gurgling or rumbling in the bowels, especially as heard through the stethoscope.

**Enterectasis.** (Έντερον; ἐκτασις, extension. G. *Darmausdehnung*.) Dilatation of the intestines.

**Enterectomy.** (Έντερον; ἐκτομή, a cutting out. G. *Darmausschneidung*.) Excision of part of the intestine throughout its whole circumference. The operation has been adopted for the purpose of removing an intestinal stricture; and in one case a meter and a half was removed and the two cut ends united by sutures; the result was successful.

**Enterelco'sis.** See *Enterhelcosis*.

**Enterelsia.** (Έντερον, an intestine; εἶλον, to roll up.) Alibert's term for *Volvulus*.

**Enterelosis.** Same as *Enterelsia*.

**Enterembolē.** (Έντερον, an intestine;

εμβολή, insertion. G. *Darmeinschiebung*.) A synonym of *Intussusception*.

**Enteremphraxia.** (Έντερον; ἐμφραξις, a stopping.) Intestinal obstruction from fecal or other contents.

**Enteren'chya.** (Έντερον, an intestine; ἔγχυον, to infuse into.) Old name for an instrument, described by Scultetus, for applying enemata.

**Enterepiplocele.** See *Enteropiplocele*.

**Enteropiplomphaloecele.** (Έντερον, an intestine; ἐπιπλουν, the omentum; ὀμφαλός, the navel; κύλη, a tumour.) Umbilical hernia containing both intestine and omentum.

**Entererthrosis.** (Έντερον, an intestine; ἐρυθρός, red. F. *entererthrose*; G. *Darmrothsecht*.) Reddening or arterial plethora of the intestines.

**Enter euppticum.** (Έντερον, an intestine; εὖ, well; πέπτω, to digest.) A medicine to promote good digestion in the intestines.

**Enterhelcos.** (Έντερον; ἔλκος, an ulcer. G. *Darmgeschwür*.) An ulcer of the intestine.

**Enterhelcosis.** (Έντερον; ἔλκος. G. *Darmgeschwürung*.) Ulceration of the intestines.

**E. nervosa.** A synonym of *Enteric fever*.

**Enterhyperpathia.** (Έντερον; ὑπέρ, above; πάθος, suffering.) An acute or severe affection of the bowels.

**Enterhyper'trophy.** (Έντερον; ὑπέρ, above; τροφή, nourishment.) Thickening of the coats of the intestines.

**Enterhypopathia.** (Έντερον; ὑπό, under; πάθος, disease.) A moderate, not very severe, disorder of the intestine.

**Enteria.** (Έντερον.) A term applied to mucous or catarrhal diarrhoea.

**Enteric.** (Έντερον, an intestine. F. *entérique*, intestinal.) Of, or belonging to, the intestines.

**E. fever.** (F. *fièvre typhoïde*, *f. gastrique*; G. *Abdominal-typhus*.) Typhoid fever, gastric fever. A fever characterised by lesion of the agminated and solitary glands of the intestines, by a cutaneous eruption of rose-coloured spots, and generally by diarrhoea. It is caused by the reception into the alimentary canal of a specific poison, which multiplies within the body, from whence it is given out in great part, if not altogether, by the bowels, and, after a longer or shorter period after its exit, probably not at first, is able to reproduce the disease if by any means it gains access to the alimentary canal of a susceptible person. This specific poison is now by many believed to be a minute fungoid growth; see *E. fever*, *bacillus of*. Some believe that the poison of enteric fever, whatever it be, is capable of generation *de novo* in such matters as foul sewage; the majority are of opinion that, as in a very large number of cases, its occurrence may be traced to contamination from a prior case, that this is the sole mode of propagation. In far the larger number of cases drinking water fouled with typhoid excreta is the source of infection, but it may well be that now and then dried or semidried products of a typhoid intestine may be carried by the air to the lips of a person, and being swallowed produce the disease. The outset is most generally insidious, but sometimes

## ENTERICA—ENTERITIS.

it is sudden with a rigor, after an incubative period of from one week to three weeks, generally well up to the latter. When the patient first complains of definite symptoms, he can usually call back again many days of unwell-ness, of stomach and bowel disturbance, and of general malaise; then there is a violent headache, aching limbs, chills, perhaps nose-bleeding, heaviness in the day time, restlessness at night, soreness and looseness of bowels, growing to diarrhoea, perhaps accompanied by vomiting, scanty and high-coloured urine, and a red or coated tongue; the pulse will be quickened and the temperature raised. At the beginning of the second week these symptoms will have become intensified and the fever increased; the temperature will have risen to its permanent height, varying with the severity of the disease from 102° F. to 105° F. at night, 1° to 1½° F. lower in the morning; the skin is generally hot and dry, but with occasional perspirations, the pulse and breathing get quicker, a little short cough comes with transient sibilus, the tongue is first moist with furred middle and red tip and edges, then it dries and cracks, thirst is more troublesome, some delirium may occur, the abdomen is tumid, resonant and gurgling, with tenderness in the right iliac fossa, there may be enlargement of spleen and the characteristic rose-coloured, elevated, pointed, lentil-shaped spots, from '1" to '15" in diameter, disappearing on pressure, lasting two or three days, and appearing in successive crops, exhibit themselves on the chest and abdomen. At this time the motions are generally very liquid, frequent, offensive, light yellow or pale drab in colour, and contain flocculi. At or before the beginning of the third week blood will probably have appeared in the stools. Towards the end of the third week the symptoms may begin to subside and shortly convalescence may commence; or the abdomen may become tense and tympanitic, the stools more frequent and containing much blood, the tongue dry and cracked, the lips covered with sordes, the face anxious, pale, and dusky, the breathing short, the pulse quicker and weaker, the prostration greater, the intellectual faculties more disturbed, it may be by muttering delirium, it may be by drowsiness and stupor; tremors of the muscles occur, and bedsores may form; from this condition the patient may slowly recover, or he may get worse and die from asthenia or coma. One or more relapses not infrequently occur. There is a very great variety in the symptoms, and complications are very common, the chief of these being serious intestinal hæmorrhage, perforation of the intestines, peritonitis with or without perforation, pneumonia, bronchitis, kidney congestion with albuminuria, and embolism in different places. The one invariable morbid condition in enteric fever is lesion of the agminated and solitary glands of the intestines, the former being most frequently and most importantly affected; the main stress of the disease falls upon the lower part of the ileum, but in not a few cases affects also the cæcum and the ascending colon; at the same time the mesenteric glands in the neighbourhood become enlarged, softened, and vascular, and suppuration may ensue. The changes in the glands consist at first of hyperplasia of the glandular elements, growth in numbers of the lymphatic corpuscles, and growth in size, whereby giant cells containing small corpuscles are formed; the gland patches are swollen, reddish,

fawn or grey in colour, with a thickened edge raised above the surrounding mucous membrane, firm and opaque; they attain their largest size about the tenth day, and slowly resolve, or proceed to bursting and ulceration or sloughing. The spleen is generally enlarged and soft; granular degeneration of the cells of the liver and kidney is not uncommon, and there is not infrequently a similar change in the cardiac muscles and the voluntary muscles. The glands and spleen are by some said to contain fungoid growths. See *E. fever, bacillus of*.

**E. fever, bacillus of.** (*L. bacillum*, a little stick.) A bacillus found by Klebs and others in the intestinal mucous membrane, the mesenteric glands, and the spleen, in cases of enteric fever. The individual rods are short with rounded ends, and form chains of two or three links; masses of spherient micrococci accompany them. They attain their greatest number about the twelfth or thirteenth day of the disease, and after that slowly decline. They do not absorb aniline colours uniformly, circular or elliptic uncoloured spaces being seen in them.

**E. neuralgia.** See *Neuralgia, enteric*.

**Enterica.** (Ἐντερικός, in the intestines.) Good's term for diseases affecting the alimentary canal; being an Order of the Class *Celata* of his Nosology.

**Enterici.** (Ἐντερικός.) Diseases affecting the intestines.

**Enterine.** (Ἐντερον, the intestine.) Farr's name for the supposed specific poison of dysentery.

**Enteris'cheocœle.** See *Enteris'cheocœle*.

**Enteritic.** Relating to *Enteritis*.

**Enteritis.** (Ἐντερον, the intestine. *F. enterite*; *G. Darmentzündung*.) Inflammation of the bowels. The term is now generally restricted to inflammation of the small intestines.

**E. acute.** (*L. acutus*, sharp.) Acute inflammation of the small intestines, either general or local. It is produced by chill, irritating substances, or the presence of exanthemata, or by mechanical injuries, such as intussusception and the passage of gall-stones; infants during teething are very prone to it. There is abdominal pain, increased by pressure, especially about the umbilicus, nausea, and vomiting, and frequently diarrhoea, with a furred tongue and offensive breath; the pulse is quickened and the temperature raised. There is deep and often arborescent redness, thickening, and dryness of the mucous membrane at first, and then a mucous or serous, or bloody secretion; spots of extravasation are frequent; and local infiltrations of pus or patches of gangrene. It may end in the chronic form.

**E. adhésiva.** (*L. adharo*, to stick to.) The old term for those cases of acute enteritis in which there was great pain and fever, combined with constipation.

**E. arthritica.** (Ἀρθριτικός, gouty.) Gouty inflammation of the bowels; gout in the abdomen.

**E. catarrhal.** (Κατάρροος, a running down.) The ordinary form of *E. acute*, with affection of the mucous coat only or chiefly.

**E. choleric.** (*Cholera*.) A term applied to infantile diarrhoea with symptoms of collapse.

**E. chronic.** (*L. chronicus*, long-lasting.) Chronic inflammation of the small intestines may be a sequel of the acute form, or it may be set up

# ENTERITIS—ENTEROCÆLA.

by similar causes, or it may accompany some general disorder, such as Bright's disease, or it may be caused by some local mischief, such as obstructive disease of the liver or of the heart, or it may be induced by a tropical and malarious climate. The mucous membrane becomes thickened and widened by deposit of round-celled tissue, darkened by deposit of pigment, and either roughened by distension of the Lieberkühnian follicles and agminated and solitary glands, or somewhat pitted by their atrophy. There is generally looseness of the bowels, rumbling, and griping, but there may be constipation. The motions are usually offensive and yeasty, and they may be watery or slimy. There is always emaciation, generally a muddy complexion, and frequently a short cough.

**E. colica.** (Κόλον, the colon.) Same as *Colitis*.

**E., croup'ous.** Same as *E., pellicular*.

**E., diffuse.** (L. *diffusus*, spread abroad.) General inflammation of the small intestines.

**E., diphtheritic.** (Διφθερία, a prepared hide.) Diphtheritic inflammation of the intestine, in which the mucous membrane is covered with a firmly-adherent, flaky-white or whitish-grey deposit. It begins in the form of scattered islands, which extend in the small intestine laterally along the valvule conniventes, and in the large intestine over the ilio-cæcal valve and along the plicæ sigmoidæ. It occurs in the course of various chronic exanthematic and septic diseases, as carcinoma, tuberculosis, Bright's disease, typhoid and scarlet fever, smallpox, septic pyæmia, and especially purpural fever.

**E., diphtheritic-ulcerative.** An inflammatory affection of the intestinal mucous membrane occurring in the course of scurvy, attended by violent symptoms, especially by hæmorrhage per anum, and rapidly proving fatal.

**E. epiplo'itis.** (Επίπλοον, the omentum.) Inflammation of the epiploon or omentum.

**E. erythematica.** (Ερυθμα, redness of the skin.) Cullen's term for the form of inflammation of the bowels, called at a later period *E., catarrhal*.

**E., follicular.** (L. *folliculus*, a small bag.) The form of chronic enteritis in which the solitary glands are swollen and ulcerated.

Also, a synonym of *Enteric fever*.

**E. folliculo'sa.** (L. *folliculus*, a little bag.) A synonym of *Enteric fever*.

**E. mesenterica.** Same as *Mesenteritis*.

**E., mu'cous.** (L. *mucus*, slime.) Same as *E., catarrhal*.

**E., pellicular.** (L. *pellicula*, a small skin.) A form of chronic inflammation of the small intestines in which patches of false membrane are found on the margins of the valvule conniventes, and intimately connected with the Lieberkühnian follicles; they consist of leucocytes in a connecting plasma. At times they are very extensive, and are passed as large casts of the intestine. Probably similar to *E., diphtheritic*.

**E. phlegmono'dea.** Same as *E., phlegmonous*.

**E., phleg'monous.** (Φλεγμονή, a suppuration.) Interstitial purulent inflammation of the walls of the intestine. A rare affection, usually attacking the duodenum. It generally occurs as a metastatic inflammation or results from intense irritation of the intestinal wall, in connection with ulcers.

**E. polypo'sa.** (Polypus.) Chronic enteritis with localised deposit in the submucous tissue, in the form of papillary swellings.

**E. polypo'sa cystica.** (Κύστις, a bag.) A variety of *E. polypo'sa* in which the Lieberkühnian follicles are so distended with mucus as to look like small cysts.

**E., pseudomembranous.** (Ψευδής, false; L. *membrana*, a membrane.) Same as *E., pellicular*.

**E. pustulo'sa.** (L. *pustulosus*, full of blisters.) An old term for an inflammatory condition of the intestines marked by pustules or ulcers of Peyer's patches; probably in most cases enteric fever.

**E. submuc'o'sa purulenta.** (L. *sub*, beneath; *mucosus*, slimy; *purulentus*, festering.) The same as *Enteritis phlegmonous*.

**Enter'o.** (Εντέρον, an intestine.) This word used as a prefix in compound terms means relation to, or connection with, the intestines.

**Enter'o-anastomo'sis.** (Εντέρον, intestine; αναστομός, to bring to a mouth.) The reunion of the ends of the intestine after excision of a segment. It is practised in cases of volvulus which cannot be withdrawn and in gangrene of the intestine, and consists, after enterectomy has been performed, either in uniting the two ends by suture (Maisonnevire), or inserting the upper end through an opening in the cæcum and tying the other.

**Enteroar'ctia.** (Εντέρον; L. *arcto*, to narrow.) Piorry's term for *Enterostenosis*.

**Enterobro'sis.** (Εντέρον; βρῶσις, corrosion.) Perforation of the intestinal walls.

**Enterocace.** Same as *Cacenteria*.

**Enterocatar'rh.** (Εντέρον; κατάρροος, a running down.) Intestinal catarrh. Same as *Enteritis, catarrhal*.

**Enteroccele.** (Εντέρον, an intestine; κύλη, a tumour. *E. enterocæle*; G. *Darmbruch*.) Term (Gr. *ἐντεροκύλη*), used by Galen, *de Diff. Morb.* c. 10, for a hernia in which a portion of intestine is the object protruded. The part most usually found in the small intestine, and of that the ilium is the most frequent.

**E., rectal.** (L. *rectus*, straight.) A hernia containing a portion of the rectum.

**E., vagin'al.** (L. *vagina*, a sheath.) Term applied to a protrusion downward of the fold of Douglas when a portion of the intestine is contained in it.

**Enterocel'e'ta.** (Εντεροκύλη, intestinal hernia.) One who has hernia.

**Enterocel'e'tes.** Same as *Enterocæleta*.

**Enteroccephalopyra infan'tum.** (Εντέρον, for *έντος*, within; κεφαλή, the head; πυρ, fire; L. *infans*, an infant.) A synonym of *Hydrocephalus internus*.

**Enteroces'trion.** (Εντέρον, an intestine; κίστρον, a pointed instrument. G. *Darmbohrer*.) A piercer of the bowels for letting flatus out.

**Enteroces'trium.** Same as *Enteroces'trion*.

**Enterocle'isis.** (Εντέρον; κλείσις, a closing. G. *Darmverschlussung*.) Occlusion of the intestinal canal.

**Enteroclysm.** (Εντέρον; κλισμός, a clyster.) A rectal injection.

**Enterocœ'la.** (Εντέρον; κοιλία, the belly.) A Subprovince of the Province *Deutero-stomata*, in which the body cavity is formed as an outgrowth from the digestive s.c.

**Enterocœle.** (Ἐντερον; κοιλία, the belly.) The perivisceral or somatic cavity of the *Cœlenterata*; it communicates with the digestive cavity, and often also externally, and it contains a fluid representing the blood, which is circulated by the movements of the body and by the ciliary endoderm of the enterocœle.

**Enterocœliac.** (Ἐντερον; κοιλία, the belly.) Relating to the abdominal cavity.

**Enterocolitis.** (Ἐντερον; κόλον, the colon.) Inflammation of both the small intestines and the colon.

**Enterocystocœle.** (Ἐντερον; κύστις, the bladder; κήλη, a tumour.) Hernia containing a part of the urinary bladder as well as intestine.

**Enterocystoscheocœle.** (Ἐντερον, κύστις; σέχον, the scrotum; κήλη.) Scrotal hernia containing both bowel and bladder.

**Enterodarsis.** (Ἐντερον; διάρσις, excretion.) Excretion of the mucous membrane of the intestine.

**Enterodela.** (Ἐντερον, an intestine; δῆλος, manifest. F. *entérodele*.) Applied to a Section of the *Polygastrica*, having a perfect intestinal tube, terminated by a mouth and anus.

**Enterodialysis.** (Ἐντερον; διάλυσις, a separating.) Complete division of the intestine by a wound.

**Enterodomycodiritis.** (Ἐντερον; δῶς, a way; *mycodiritis*.) Inflammation of the mucous membrane of the intestinal canal.

**Enterodothienia.** (Ἐντερον, an intestine; δόθην, a boil.) Pustulous eruption of the bowels. A synonym of *Dothienteritis*.

**Enterodothienosis.** Same as *Enterodothienia*.

**Enterodothionia.** Same as *Enterodothienia*.

**Enterodothionosis.** Same as *Enterodothienia*.

**Enterodynia.** (Ἐντερον; δόνη, pain.) Colic; pain in the bowels.

**Enterœctasia.** Same as *Enterectasis*.

**Enteropiplocœle.** (Ἐντερον; ἐπίπλοον, the omentum; κήλη, a tumour. F. *entéropiplocœle*; G. *Netzdarmsbruch*.) A hernia in which portions of intestine and omentum are both protruded.

**Enteropiplomphalus.** (Ἐντερον; ἐπίπλοον; ὀμφαλός, the navel. F. *entéropiplomphale*; G. *Netzdarmsbruch*.) An umbilical hernia in which both intestine and omentum are protruded.

**Enterogastrocœle.** (Ἐντερον; γαστήρ, the belly; κήλη, a tumour. F. *entérogastrocœle*; G. *Bauchbruch, Darmbruch*.) A term for an abdominal hernia containing intestine.

Also, a hernia containing part of the stomach, as well as intestine.

**Enterograph.** (Ἐντερον; γράφω, to write.) A myograph arranged for registering the intestinal movements.

**Enterography.** (Ἐντερον; γράφω, to describe.) Term for a description of the intestines.

**Enterohæmorrhagia.** (Ἐντερον, αἱμορραγία, hæmorrhage.) Bleeding from the bowels.

**Enterohelcosis.** See *Enterhelcosis*.

**Enterohemia.** See *Enteremia*.

**Enterohydrocœle.** (Ἐντερον; ὕδωρ, water; κήλη, a tumour. F. *entérohydrocœle*; G. *Darm-und-Wasserbruch*.) Term for scrotal hernia with a collection of fluid in the sac; also

applied to congenital hernia, in which the bowel descends into the tunica vaginalis testis, with a collection of fluid within this membrane.

Also, intestinal hernia conjoined with hydrocœle.

**Enterohydromphalus.** (Ἐντερον, an intestine; ὕδωρ, water; ὀμφαλός, the navel. F. *entérohydromphale*.) Umbilical hernia, containing a portion of intestine and much serous fluid.

**Enteróischiocœle.** (Ἐντερον; ισχίον, the ischium; κήλη, a tumour. F. *entéroischio-cœle*.) Hernia of the intestine at the ischiadic foramen.

**Enterolith.** (Ἐντερον; λίθος, a stone. F. *enterolithe*; G. *Darmstein*.) A term for any kind of concretion resembling a stone generated in the stomach and bowels, as is common in several of the lower animals, and as also happens, but less frequently, in man; an alvine concretion.

**Enterolithiasis.** (Ἐντερον; λιθίασις, formation of stone. F. *enterolithiasis*; G. *Steinbildung im Darmkanal*.) The formation of intestinal concretions.

**Enterolithus.** (Ἐντερον; λίθος.) A stony concretion in the stomach or intestinal canal.

**E. bezoar'dus.** A *Bezoar*.

**E. calculus.** Same as *Calculus, intestinal*.

**E. scyb'alum.** (Σκύβαλον, excrement.) An intestinal concretion composed chiefly of mucous or fatty matter mixed with hardened feces.

**Enterology.** (Ἐντερον; λόγος, a discourse. F. *entérologie*.) A treatise on, or the consideration of the history of, the intestines.

**Enteromala'cia.** (Ἐντερον; μαλακία, softening. G. *Darmweichung*.) Softening of the coats of the bowels.

**Enteromalaxis.** Same as *Enteromala'cia*.

**Enteroman'tis.** (Ἐντερον; μάντις, one who divines.) Same as *Enteromymth*.

**Enteromelanorrhœa.** (Ἐντερον; μέλας, black; ροία, a flow.) A synonym of *Melæna*.

**Enterome'nia.** (Ἐντερον; μῆν, a month.) Metastatic discharge of the menses from the bowels.

**Enteromrocœle.** (Ἐντερον, the intestine; μηρός, the thigh; κήλη, a tumour. F. *entéromrocœle*; G. *Schenkelarmsbruch*.) A femoral hernia containing intestine.

**Enteromesenteric.** (Ἐντερον; μεσέντερον, the mesentery.) Relating to the intestines and the mesentery.

**E. fever.** Petit's term for what would now be called enteric fever with enlargement of mesenteric glands.

**Enteromorpha.** (Ἐντερον, an intestine; μορφή, form.) A Genus of the Family *Utracææ*, Order *Edogoniæ*.

**E. compressa.** A species which is sometimes eaten.

**Enteromphalocœle.** (Ἐντερον; ὀμφαλός, the navel; κήλη, a tumour.) Same as *Enteromphalus*.

**Enteromphalus.** (Ἐντερον, an intestine; ὀμφαλός, the navel. F. *entéromphale*; G. *Nabeldarmsbruch, Nabelbruch*.) Umbilical hernia, in which a portion of intestine only is protruded.

**Enteromyasis.** See *Enteromyiasis*.

**Enteromycoderma.** (Ἐντερον; μύ-

# ENTEROMYCODERMITIS—ENTEROSPHIGMA.

κλυσ, mucus; δέρμα, skin.) The intestinal mucous membrane.

**Enteromycodermatitis.** (Ἐντερων, an intestine; μύκωσις, mucus; δέρμα, skin. F. *enteromycodeermite*; G. *Darmschleimhaut, Entzündung der Darmschleimhaut*.) Inflammation of the mucous membrane of the bowel.

**Enteromycodora.** (Ἐντερων; μόκωσις; δέρμα, skin.) Same as *Enteromycodeermite*.

**Enteromycodoritis.** (Ἐντερων; μόκωσις; δέρμα, skin.) Same as *Enteromycodeermite*.

**Enteromyco'sis.** (Ἐντερων; μόκωσις.) A mucous-enteritis.

**E. hæmorrhag'ica.** (Ἀιμορραγικός, belonging to hæmorrhage.) A disease attended with febrile symptoms, in which rose garland like chains of micrococci have been found in the duodenum and articulated bacilli in the blood of the femoral vein.

**Enteromyiasis.** (Ἐντερων, an intestine; μύα, a fly. G. *Fliegenlarvenkrankheit des Darmkanals*.) A disease of the intestines from the presence of the larvæ of flies.

**Enteron.** (Ἐντερων, from ἐντός, within.) Old term for an intestine.

**Enterocolica.** (Ἐντερων.) Same as *Physico-colica*.

**Enteroncus.** (Ἐντερων; ὄγκος, a tumour. G. *Enterocarcinoma*.) An intestinal or abdominal tumour.

**Enteroneuria.** (Ἐντερων; νεῦρον, a nerve.) A nervous irritability of the intestinal canal.

**Enteroneuritis.** (Ἐντερων; νεῦρον, a nerve.) A nervous irritability of the intestinal canal.

**Enterorhæ'cheocele.** See *Enteroscheocele*.

**Enteroparalysis.** (Ἐντερων; παράλυσις, paralysis.) Paralysis of, or loss of power in, the intestines.

**Enteroparisisag'gë.** (Ἐντερων; παρὰ, amiss, into; αἶμα, to lead.) A synonym of *Intussusception*.

**Enteropathia.** (Ἐντερων; πάθος, suffering. G. *Darmleiden*.) Intestinal disorder or disease.

**E. cancro'sa.** Intestinal cancer.

**Enteroperistold.** (Ἐντερων; περι-στρέλλω, to take care of.) The soft mechanical influence on the bowels of the pressure of the surrounding structures.

Also, but erroneously, a constriction or obstruction of the intestines.

**Enteroperitonitis.** (Ἐντερων; περι-τόναιος, stretched over.) Inflammation of the small intestines, in which the peritoneal coat is chiefly affected.

**Enterophlæ'odes.** (Ἐντερων, an intestine; φλοιός, bark. F. *entrophloide*; G. *darmringig*.) Applied to the development of lichens that grow on the interior of the woody stems of other plants, on the medulla, alburnum, liber, wood. Probably *Entrophloides*.

**Enterophlog'ia.** (Ἐντερων, an intestine; φλόγω, a flame.) Same as *Enterophlogosis*.

**Enterophlogo'sis.** (Ἐντερων, an intestine; φλόγωσις, a burning.) Same as *Enteritis*.

**Enterophthisis.** (Ἐντερων; φθίσις, consumption. G. *Darmschwundsticht*.) Same as *Phthisis abdominalis*.

**Enterophy mata.** (Ἐντερων; φῆμα, a swelling.) Intestinal tubercle.

**Enterophy tum.** (Ἐντερων, an intestine; φυτόν, a plant.) Old name for the plant,

sea chitterling, which grows in the form of a gut. (Quincy.)

**Enteroplasty.** (Ἐντερων; πλάσσω, to form.) The restoration by plastic operation of a solution of continuity of the intestine.

**Enterople'gia.** (Ἐντερων; πλῆγη, a stroke.) Paralysis of the intestines.

**Enteropneumato'sis.** (Ἐντερων; πνευματισμός, an inflating.) The production of gas in the intestinal canal.

**Enteropneusti.** (Ἐντερων; πνευστικός, for breathing.) A Suborder of the Order *Turbellaria*, Class *Platyhelmintha*, or a Class of the Province *Deuterostomata*. They are worm-like, brittle, contractile, dioecious animals, having the respiratory organ supported on a basket of rods borne on the front part of the digestive canal.

**Enteroponus.** (Ἐντερων, an intestine; πόνος, pain.) Intestinal griping.

**Enteropy'ra.** (Ἐντερων; πῦρ, fever.) Intestinal fever; fever with intestinal symptoms.

**E. asiatica.** Asiatic cholera.

**E. biliosa.** See *Fever biliosa*.

**E. dentien'tium.** (L. *dentio*, to cut teeth.) Fever occurring in consequence of dentition.

**Enterorraphy.** (Ἐντερων, the intestine; ράπτω, a suture. F. *entérorraphie, entérorraphie*; G. *Darmnaht*.) The stitching or sewing together of the divided edges of the intestine.

**Enterorrhag'ia.** (Ἐντερων, an intestine; ῥήγνωμι, to burst forth. F. *entérorrhagie*; G. *Enterorrhagie*.) A term used for intestinal hæmorrhage; and also for any excessive discharge from the bowels, whether of mucus, feces, or flatus.

**E. simpl'ex.** (L. *simpl'x*, simple.) Hæmorrhage from the bowels.

**Enterorrhagy.** Same as *Enterorrhagia*.

**Enterorrhæ'ma.** (Ἐντερων, an intestine; ῥῆμα, humour. G. *Darmrheumatismus*.) Intestinal rheumatism.

**Enterorrhex'is.** (Ἐντερων; ῥήξις, a breaking.) Perforation or rupture of the intestinal walls.

**Enterorrhæ'a.** (Ἐντερων; ῥοία, a flow. F. *entérorrhée*.) An undue increase of the secretion of the mucous glands of the intestines.

Also, a synonym of *Melæna*.

**Enterorrh'o'is.** (Ἐντερων; ῥόος, a discharge. G. *Darmblutsickerung*.) A collection of blood in the intestinal canal.

**Enterosar'cocele.** (Ἐντερων; σάρξ, flesh; κύλη, a tumour. G. *Darmfleischbruch*.) An intestinal hernia with a fleshy swelling, perhaps a thickened omentum.

**Enterosarco'mia.** (Ἐντερων; σάρξ.) Cancer of the intestines.

**Enteros'cheocele.** (Ἐντερων, the intestine; σῆχειν, the serotum; κύλη, a tumour. F. *entéroschécele*; G. *Darmhüdensackbruch*.) The protrusion of some portion of the intestines into the serotum; serotal hernia.

**Enteroscirrhus.** (Ἐντερων; σκίρρhus. G. *Darmkrebs*.) Cancer of the intestines.

**Enteros'es.** (Ἐντερων.) Intestinal diseases and disorders.

**Enterospas'mus.** (Ἐντερων; σπασμός, a spasm. G. *Darmkrampf, Krampfcolik*.) Spasm of the intestines; colic.

**Enterosphig'ma.** (Ἐντερων; σφίγμα, that which is bound tight. G. *Darmeingklemmung*.) Incarcerated hernia.

**Enterospinx'is.** (Ἐντέρον; σφίγγις, a constriction.) The origination of an *Enterospinxia*.

**Enterosphongio'ma.** (Ἐντέρον; σφόνγιος, a sponge. G. *Darmschwammknöt.* Darmtuberkel.) A term applied to fungoid swelling or tubercles in the intestine.

**Enterostenosis.** (Ἐντέρον; στενός, a strait. G. *Darmverengerung.*) Contraction of the intestinal canal.

**E. organ'ica.** Organic contraction of the intestinal canal.

**E. scirr'hosa.** Scirrhus or hard contraction of the intestinal canal.

**E. vol'vulus.** (L. *volv.* to roll around.) Ileus.

**Enterostomy.** (Ἐντέρον; στόμα, a mouth.) The cutting into the upper part of the small intestine through the abdominal walls and stitching the edges of the opening to the outer edges of the wound, so that an artificial mouth may be made, by means of which nutriment may be introduced in cases where there is an impassable closure of the pyloric orifice of the stomach.

**Enterosymphore'ma.** (Ἐντέρον, an intestine; συμφορημα, a heap. F. *entérosymphoreme.*) Congestion in the intestines.

**Enterosymphore'sis.** (Ἐντέρον; συμφορησις, a heaping together.) The formation of *Enterosymphorema*.

**Enterotome.** (Ἐντέρον, an intestine; τέμνω, to cut. F. *enterotome*; G. *Darmschneider.* *Enterotöm.*) A kind of self-acting forceps, used in cases of artificial anus for destroying the angle between the two portions of intestine, and thus restoring the natural canal, preparatory to the closure of the external opening.

Also, a pair of scissors, of which one blade is much longer than the other, and occupies the lumen of the intestine when slitting them open for examination.

**Enterotomy.** (Ἐντέρον, an intestine; τέμνω, to cut. G. *Darmschnitt.*) The opening of the intestine to release its contents, as in hernia when the bowel is gangrenous.

Also, the opening of the intestine to remove a foreign body.

**Enterotuberculum.** Same as *Enterosphongiomma*.

**Enterotyphæ'mia.** Same as *Enteramotiphus*.

**Enteroty'phus.** (Ἐντέρον, an intestine; τυφός, F. *entérotyphus*; G. *Darm-Typhus*.) Intestinal typhus; now called *Enteric fever*.

**Enterovaginal.** (Ἐντέρον; L. *vagina*.) Relating to the intestine and the vagina.

**E. fist'ula.** (L. *fistula*, a pipe.) An artificial opening in the vagina, which communicates with the cavity of the small intestine.

**Enterozo'on.** (Ἐντέρον; ζῷον, an animal. G. *Darmthier*, *Eingeweidethier*.) An intestinal animal parasite.

**Enterozo'um.** Same as *Enterozoon*.

**Enterum.** Same as *Enteron*.

**Enteruria.** (Ἐντέρον, an intestine; οὖρον, the urine.) A metastasis of the urine into the intestines.

**Enterydrocele.** See *Enterohydrocele*.

**Enteryperpath'ia.** See *Enterhyperpathia*.

**Enterypopath'ia.** Same as *Enterhyperpathia*.

**Enterythro'sis.** See *Erythrenteria*.

**Enthelmin'thes.** (Ἐντός, within;

ἐλμυς, a worm. F. *enthelminthes*; G. *Einge- weidewormer*.) The intestinal worms.

**Enthem'ata.** (Ἐντίθημα, to put in.) Old term for medicines applied immediately to recent wounds, in order to prevent inflammation and stop hæmorrhage.

**Entheomania.** (Ἐνθεός, inspired or possessed; μανία, madness. F. *enthémanie*; G. *religiöse Wahnsinn*.) Term for religious or fanatical mania or demonomania.

**Enthetic.** (Ἐνθετικός, from ἐντίθημα, to put in.) Put in; introduced from without.

**E. disea'ses.** Diseases produced by inoculation or implantation, and specially syphilitic diseases.

**Enthlasis.** (Ἐν, in; θλάω, to break. F. *enthlasie*; G. *Schädelcindruck*.) Old term for a depressed fracture of the skull; an internal collision and confusion.

**E. cran'ii.** (Κρανίον, the skull.) Depressed fracture of the skull.

**Enthusiasm.** (Ἐνθουσίαζω, to rave. F. *enthousiasme*; G. *Enthusiasmus*, *Begeisterung*.) Ancient term for the delicious raving of fanaticism.

**Enthysterophy'ma.** (Ἐντός, within; ὠστέρη, the womb; φῶμα, a tumour. F. *enthysterophyme*.) A tumour in the cavity of the uterus.

**Entire.** (Old F. *entier*; from L. *integer*, whole.) Unbroken, undivided, complete; having an undivided margin.

**Entirr'hœa.** (Ἐντέρον, the intestine; ροία, a flow.) A continued or excessive discharge from the bowels, whether of feces, mucus, or other matter; it has been incorrectly used for hæmorrhage from the bowels.

**Entity.** (L. *ens*, part. of *sum*, to be. F. *entité*; L. *entitas*; S. *entidad*; G. *Entität*.) A being, a real substance, an existing thing.

**Ento-** (Ἐντός, within.) A prefix signifying within.

**Entobainant.** (Ἐντός, within; βαίνω, to go.) Passing or going inwards.

**E. nerves.** The sensory nerves, those whose nerve-current runs from the circumference to the centre of the body.

**Entobant.** Same as *Entobainant*.

**Entoblast.** (Ἐντός; βλαστός, a sprout.) A synonym of *Neurolus*.

Also, a term for the *Germinal spot*.

**Entocelé.** (Ἐντός, within; κήλη, a tumour. F. *entocèle*; G. *innerer Bruch*.) Internal hernia, or falling of one inner part into another.

**E. len'tis.** (Lens.) Displacement of the crystalline lens on to the anterior chamber of the eye.

**Entoceph'alum.** (Ἐντός, within; κεφαλή, the head. F. *entocéphale*; G. *Innere Kopf*.) A piece corresponding to the *Eutothorax*, which is found in the head of the *Herapoda*.

**Entocran'ial.** (Ἐντός; κρανίον, the skull.) Within the skull.

**Entocuneiform bone.** (Ἐντός; L. *cuneus*, a wedge; *forma*, shape.) The internal cuneiform bone of the tarsus.

**Entocyst.** (Ἐντός; κύστις, a bag.) The inner layer of the cuticular envelope of the *Polyzoon*.

**Entocyte.** (Ἐντός.) Same as *Endocyte*.

**Entoderm.** (Ἐντός; δέρμα, the skin.) The innermost layer of the blastoderm; also called *Hypoblast*.

**Entodiscal.** (Ἐντός, within; δίσκος, a disc. *F. entodiscal.*) Applied to the insertion of stamens when it takes place within the disc.

**Entogastic.** (Ἐντός; γαστήρ, the belly.) Relating to the interior of the stomach or of the gastric cavity.

**E. gemmation.** (*L. gemma*, a bud.) See *E. reproduction*.

**E. reproduction.** (*L. re*, back again; *pro*, to produce.) The mode of reproduction in some Hydrozoa by a process of budding from the inner wall of the gastric cavity; a conical process of mesoderm, covered by endoderm, forms and projects into the gastric cavity, grows into a medusoid, separates from the parent, floats free, and is ejected. It is a process of asexual multiplication.

**Entogastrium.** (Ἐντός, within; γαστήρ, the belly. *F. entogastre*; *G. Innerbauch*.) A piece corresponding to the *Entothorax*, which is found in the first ring of the abdomen of the *Hexapoda*.

**Entogenous.** (Ἐντός; γέννω, to produce.) Developed or produced from within.

**Entoglossal.** (Ἐντός; γλῶσσα, the tongue.) A term applied to one of the bones of the hyoid arch, in some fishes, which supports the tongue.

**Entogonyan con.** (Ἐντός, within; γόνυ, the knee; ἀγκών, a bend. *F. entogonyan-con*; *G. Einwärtsbengung des Knies*.) A bending of the knees inwards; in-knees.

**Entohyaloid.** (Ἐντός, within; ὑαλος, glass; εἶδος, likeness.) Within the hyaloid membrane.

**E. muscæ.** See *Muscer*, *entohyaloid*.

**Entomé.** (Ἐν, in; τέμνω, a cut.) A concealed knife for division of a stricture of the urethra.

**Entomere.** (Ἐντός; μέρος, a part.) The smaller and more granular of the two daughter cells into which the mammalian ovum first divides.

**Entomiasis.** (Ἐντομία, insects; from ἐν, in; τέμνω, to cut; because many, as ants and wasps, seem nearly cut in two.) Disease caused by insects infesting the body.

**Entomic.** (Ἐντομία.) Relating to insects.

**Entomobia.** (Ἐντομία, insects; βιώω, to live. *F. entombie*.) Parasites in the bodies of insects.

**Entomocrania.** (Ἐντομος, cut up; κρανίον, the skull.) A synonym of *Pharyngobranchii*.

**Entomoid.** (Ἐντομία, insects; εἶδος, likeness. *F. entomöide*; *G. insectenähnlich*.) Resembling an insect.

**Entomoline.** (Ἐντομία.) A synonym of *Chitin*, which composes the wing cases of insects.

**Entomology.** (Ἐντομία; λόγος, a discourse. *F. entomologie*; *G. Insectenkunde, Insectenlehre*.) The consideration of the nature and habits of insects.

**Entomomelina.** (Ἐντομία, insects; μέλας, black.) *Lassaignes'* term for *Chitin*.

**Entomomyeeta.** (Ἐντομία; μύκης, a fungus.) The fungi which grow on insects.

**Entomophaga.** (Ἐντομία; φάγεω, to eat.) A Tribe of the Order *Marsupialia*, having three pairs of teeth in both jaws, and a caecum; they feed on insects.

Also, a Suborder of the Order *Edentata*, the

ant-eaters, having a long worm-like tongue, and very large submaxillary glands which secrete a viscid fluid.

Also, a Division of *Hymenoptera* which feed on other insects.

**Entomophagous.** (Ἐντομία; φάγεω.) Insect-eating.

**Entomophilous.** (Ἐντομία; φιλέω, to love.) Insect-loving.

**E. flowers.** A term applied to those flowers which are chiefly fertilised by the agency of insects which carry the pollen of one plant or flower to the stigma of another while searching for honey.

**Entomophthorææ.** (Ἐντομία, insects; φθορά, corruption.) A Family of the Suborder *Ecidimycetes*, Order *Basidiomycetes*. The members of this family are epidemically-occurring parasites attacking insects, of which the *Empusa* is an example. The mycelium, consisting of cells like those of yeast, vegetates in the interior of the living animal, and sends forth Basidia through the skin, which support a spore. This falling on another insect immediately infects it, and begins to grow. Persistent spores are produced, which live through the winter, but their mode of development is unknown.

**Entomophyte.** (Ἐντομία; φυτόν, a plant.) A vegetable growth parasitic on an insect.

**Entomos-traca.** (Ἐντομία, insects; στράκον, a shell.) Insects with shells. A Subclass of the Class *Crustacea*, having a carapace surrounding the body, jointed, bristle-bearing limbs, branchiæ attached to limbs or to oral appendages, sexes distinct.

**Entomotracheous.** Relating to the *Entomostraca*.

**Entomozoaria.** (Ἐντομία; ζώριον, a little animal.) De Blainville's term for the Arthropoda and some Mollusca.

**Entonia.** (Ἐντονία, tension.) Tension, tonic spasm.

**Entonic.** (Ἐντονος, strained. *G. gespannt*.) Intense, having exaggerated action, or great tension or tone.

**Entonous.** Same as *Entonic*.

**Entoparasite.** (Ἐντός, within; παράσιτος, eating at the table of another.) An intestinal worm.

**Entoperiphræal.** (Ἐντός; περιφέρεια, the outer surface.) Situated or originating under or within the outer surface of the body.

**Entophylline.** (Ἐντός, within; φύλλον, a leaf. *F. entophylline*; *G. innerhalbfruchtig*.) Applied to those *Hepaticæ* which have the gemmæ plunged into the very substance of the plant.

**Entophlœodes.** See *Enterophlœodes*.

**Entophthalmia.** (Ἐντός, within; ὀφθαλμία, inflammation of the eye.) Inflammation of the inner parts of the eye.

**Entophthalmorrhœa.** (Ἐντός, within; ὀφθαλμός, the eye; ῥοία, a flow.) Haemorrhage into the interior of the eye.

**Entophyllocarpous.** (Ἐντός; φέλλον; καρπός, fruit.) Applied to those mosses the fructification of which grows in the bosom of the leaves in a duplicature or fissure.

**Entophyte.** (Ἐντός, within; φυτόν, a plant. *F. entophyte*.) A plant growing within the substance of other plants or animals.

**Entophyteusis.** (Ἐντός; φυτόν.) Same as *Entophytococcus*.

**Entophytic.** (Ἐντός; φῶτον.) Of, or belonging to, an *Entophyte*.

**E. diseases.** Diseases caused by the growth of an *Entophyte*.

**Entophytogenesis.** (Ἐντός; φῶτον, a plant; γένεσις, generation. F. *entophytogenèse*; G. *Entophytenpflanzenerzeugung*.) The production or development of entophytous plants.

**Entophyto'sis.** (Ἐντός; φῶτον.) Same as *Entophytogenesis*.

**Entophytous.** (Ἐντός; φῶτον.) Of, or belonging to, an *Entophyte*.

**Entoplas'tron.** (Ἐντός; πλαstrόν.) The median plate of the plastron of tortoises.

**Entoproc'ta.** (Ἐντός.) Same as *Entoproc'ta*.

**Entopter'ygoid bone.** (Ἐντός, within; pterygoid bone.) Owen's term for Parker's mesopterygoid bone in osseous fishes. It is not the homologue of the internal pterygoid plate of man, but of an additional bone found in some mammals, as the pig, fox, opossum, on the upper or basilarian edge of the pterygoid bone proper.

**Entoptic.** (Ἐντός, within; ὀπτικός, relating to sight. F. *entoptique*; G. *entoptisch*.) Applied by Göthe to colours formed in prisms or cubes of glass rapidly cooled, when a ray of light, obliquely reflected, penetrates there and is refracted.

Also, relating to the appearance of the different internal structures of the eye.

**E. parallax.** (Παράλλαξις, the parallax.) The displacement of the shadow of a body within the eye according to its position in regard to the nodal point.

**E. phenom'ena.** The visual impressions produced by shadows cast on the retina from some of the less transparent media of the eye; such are the floating bodies in the vitreous humour, muscae volitantes, the retinal vessels, the blood corpuscles in the retinal vessels, tears on the cornea, irregularities of the pupil. Other entoptic phenomena, such as Haidinger's brushes, are caused by unequal absorption of polarised light in the yellow spot, and by deficient centration of the dioptric surfaces on the optic axis.

**Entoptical.** (Ἐντός; ὀπτικός.) Same as *Entoptic*.

**Entoptics.** (Same etymon.) The investigation of the conditions which enable the objects that exist in the eye itself to be perceived by the eye; the determination of the relative distances of objects from the retina.

**Entoptos'copy.** (Ἐντός, within; ὀπτικός, relating to sight.) The entoscopic investigation of the appearances presented by the structures in the eye in health and disease.

**Entor'ganism.** (Ἐντός, within; ὀργανισμός, F. *entorganisme*.) An internal or parasitic organism.

**Entorrhœ'a.** A misspelling of *Entorrhœa*.

**Entoscope.** (Ἐντός; σκοπεῖν, to observe.) Same as *Endoscope*.

**Entosomia.** (Ἐντός, within; σῶμα, a body. F. *entosomie*.) Adhesion of bodies to others; the opposite of *Anasomia*.

**Entosteomyces.** (Ἐντός, within; ὀστέον, a bone; μύκης, fungus. F. *entostéomyce*.) Internal fungus of a bone.

**Entosthia.** (Ἐντόσθια.) The entrails

**Entosthid'ia.** (Ἐντοσθίδια.) The entrails.

**Entosthoblast.** (Ἐντοσθε, from with-

in; βλάστη, growth.) A term for a granule within the nucleolus of a nucleated cell.

**Entosto'sis.** (Ἐντός, within; ὄσσιον, a bone.) A morbid growth projecting into the medullary canal of a bone.

**Entothorax.** (Ἐντός, within; θώραξ, the chest. F. *entothorax*.) A piece which in the *Hexapoda* exists above the sternum and at its internal surface, and which grows ordinarily from the posterior extremity of the sternum to each of the segments of the thorax.

**Entotic.** (Ἐντός; οὖς, the ear.) Relating to the inner ear.

**E. diagno'sis.** (Διάγνωσις, a distinguishing.) The transmission of vocal sounds in a deaf person through an ear-trumpet attached to a catheter placed in the Eustachian tube, so as to determine the condition of the malleus and incus, which may be assumed to be effective if the sounds are heard in this manner.

**E. phenom'ena.** Auditory impressions produced by vibrations falling on the auditory nerve and originating in the ear, or within the body near it; such are the rushing sounds produced by air vibrations in the ear when the meatus auditorius externus or the Eustachian tube is blocked, the noise of the blood current in the carotid artery, and the sound caused by contraction of the tensor tympani.

**Entotorrhœ'a.** (Ἐντός, within; οὖς, the ear; ῥοία, a flow. F. *entotorrhée*.) Internal otorrhœa.

**Entotympan'ic.** (Ἐντός; τύμπανος a drum.) Within the tympanum.

**Entoxicis'mus.** (Ἐν, in; τοξικόν, poison.) Poisoning.

**Entozœ'na.** (Ἐντός, within; ὄζα, F. *entozéne*.) Internal ozæna.

**Entozœ'a.** (Plural of *Entozoön*. G. *Eingeweidewormer*.) Animal parasites of the interior of a living body. Sometimes restricted to the class of internal parasitic worms.

**Entozoal.** Relating to an *Entozoön*.

**Entozoaria.** Same as *Entozoa*.

**Entozoögenesis.** (Ἐντός; ζῶον, an animal; γένεσις, generation. F. *entozoogénèse*; G. *Eingeweidetherieerzeugung*.) The generation of entozoa.

**Entozoöl'ogy.** (Ἐντός; ζῶον; λόγος, a discourse.) A branch of science that treats especially of the natural history of intestinal worms.

**Entozoö'ma.** (Ἐντός; ζῶον.) A tumour containing an entozoön, such as an hydatid tumour.

**Entozoön.** (Ἐντός, within; ζῶον, an animal. F. *entozoaire*; G. *Eingeweidewurm*.) A parasitic animal that lives within another.

**E. folliculo'rum.** The *Demodex folliculorum*.

**Entozoö'sis.** (*Entozoön*.) The generation of entozoa.

**En'trails.** (Old F. *entrailles*; from Low L. *intrala*, or *intranea*, contraction of *interna*, plural of *internum*, a gut. F. *entrailles*; L. *viscera*; S. *entrañas*; G. *Eingeweide*.) The inward parts of an animal, especially those of the abdomen; and of these, especially the intestines.

**En'trichi'asis.** Same as *Trichiasis*.

**En'tricho'ma.** (Ἐντρίχωμα, the eyelashes.) The border of the eyelids with the eyelashes.

Also, a synonym of *Trichiasis*.

**Entrop'ion.** Same as *Entropium*.

**E. of eye'lid.** See under *Entropium*.

**E. of lips.** See *Entropion of lips*.

**Entropion.** (F. *renversement en dedans du bord des paupières*; I. *entropio*; G. *Einwärtskehrung*, or *Einstülpung der Augenlider*.) Inversion of the eyelids. In this affection the edges of the lids bend inwards so that the eyelashes are in contact with the cornea and conjunctiva. It may be caused by trachoma, or by chronic inflammation of the palpebral conjunctiva, or by relaxation of the skin of the lids, or by burns or other injuries, or by prolonged bandaging. The contact of the cilia with the surface of the eye sets up inflammation, which is distressing when the lashes remain long, but which is increased tenfold when they either break off by themselves, or are broken by unskillful attempts to remove them. Keratitis is often established, and vision becomes seriously impaired.

**E. bulba le.** (L. *bulbus*, a bulb.) Entropion resulting from defective support of the lids owing to atrophy or absence of the globe of the eye.

**E. chron'ic.** (Xρονικός, concerning time.) Persistent entropion, often arising from cicatricial tissue, or from malformation of the tarsus.

**E. congen'itum.** (L. *congenitus*, born together with.) The eyelids of the fetus have a slight tendency to turn inwards, and if this state continues after birth it is said to be congenital.

**E. for'ceps.** A pair of forceps with slightly curved broad extremities by which a portion of skin parallel to the edge of the lid can be seized and raised preparatory to being removed with scissors.

**E. muscula'rē.** (L. *musculus*, a muscle.) Entropion depending on reflex contraction of the ciliary portion of the orbicular muscle in various inflammatory and painful affections of the eye.

**E. of lips.** A contraction of the circumference of the mouth whereby the red edge of the lips is inverted.

**E. organ'ic.** (L. *organicus*, mechanical.) Term applied by Jüngchen to entropion caused by contraction or malformation of the tarsal cartilage.

**E. palpebræ cicatric'eum.** (L. *cicatrix*, a scar.) The same as *E. chronicum*, when this is due to a cicatrix.

**E. partia'le.** (L. *pars*, a part.) Term applied to the inversion of only a part of the length of the lid, as may occur after burns or other injuries.

**E. senil'ē.** (L. *senilis*, aged.) Term applied to that form of entropion which occurs in old age, usually from chronic swelling or oedema of the lower lid.

**E. spasmod'ic.** (Σπασμος, cramp.) The same as *E. musculare*.

**E. spasticum.** (L. *spasticus*, afflicted with cramp.) Entropion caused by spasmodic action of the orbicular muscle.

**E. tarsi'le.** (Ταρσός, a broad surface; hence L. *tarsus*, the lid.) Entropion caused by contraction and inflexion of the lid.

**E. tota'le.** (L. *totus*, whole.) Term applied to the inversion of either lid or of both lids along their whole length.

**Entypo'sis.** (Εντύπωσις, an impression; from *εντυπω*, to carve in. F. *entypose*.) Old name for the glenoid cavity of the scapula, from its depth; also, the shoulder-joint. (Görreus.)

**Enucleatio.** Same as *Enucleation*.

**E. bulbi.** (L. *bulbus*, a bulb, the ball of the eye.) Same as *Enucleation of eyeball*.

**Enucleation.** (L. *e*, out of; *nucleus*, a kernel. G. *Entwurrung*, *Ausschälung*.) The shelling out of a tumour, or a structure, or a part, from its capsule or enclosing substance.

In Pharmacy, the extracting a kernel of a nut from its shell.

**E. of eye'ball.** (F. *enucleation*; I. *enucleazione*; S. *enucleacion*.) In this operation the conjunctiva is divided with scissors close to the cornea. The several muscles are then raised successively on a strabismus hook and cut across, and finally the optic nerve is divided. The hæmorrhage is sharp, but not serious, and it is seldom that any vessel requires tying; after it has subsided some operators bring the edges of the conjunctiva together, with a suture, like the mouth of a pudding bag, which shortens the after treatment. When the eye is greatly enlarged it is sometimes necessary to divide the outer canthus.

**E., spont'aneous.** (L. *spontaneus*, of one's free will.) An event that occasionally happens in the growth of some tumours, as uterine fibroids. The mucous membrane tears, or becomes gangrenous through pressure, and then retracts; contractions of the uterus then drive the fibroid completely into the vagina, and thence outward.

**Enula.** (Ενούλα, the inner side of the gums.) The internal surface of the gums.

**En'ula.** (Corr. *Helenium*.) A synonym of *Inula*.

**E. campa'na.** The *Inula helenium*, or elecampane.

**Enulis.** Same as *Enulismus*.

**Enulismus.** (Ενούλισμος, a curling. G. *Kräuseln*.) The condition called goose-skin.

**Enulon.** (Εν, within; ούλον, the gum.) Old term for the gum inside the teeth. (Görreus.)

**Enure'sis.** (Ενουρέσις, to be incontinent of urine. F. *énurésie*; G. *unwillkührlicher Harnabgang*, *Einpissen*.) Term for incontinency or involuntary flow of urine.

**E. contin'ua.** (L. *continuus*, uninterrupted.) Incontinence of urine both by night and by day.

**E. diur'na.** (L. *diurnus*, daily.) Incontinence of urine occurring only in the daytime, as during strong exertion, or in laughing or coughing.

**E. noctur'na.** (L. *nocturnus*, belonging to the night.) The involuntary escape of water from the bladder at night, occurring not infrequently in children, and especially in boys, due to atony of the sphincter and weakened nerve centres, or to some unusual stimulation and irritability of the bladder.

**E. paralytica.** (L. *paralyticus*, struck with palsy.) Enuresis resulting from or associated with general or local paralysis.

**E. spastica.** (Σπαστικός, stretching.) Incontinence of urine, accompanied or caused by spasm of the urinary bladder.

**Envelope.** (F. *enveloppe*, to cover. F. *enveloppe*; G. *Hülle*.) The shell, cover, or teguments of such a thing as a seed, a fetus, or a hernia.

**Environment.** (F. *environner*, to surround; from Old F. *en*, in; *viron*, about; or *vire*, to turn.) A surrounding.

In Biology, applied to the various influences or

forces which surround and influence the living body.

**Enypnion.** (Ἐνύπνιον, a thing seen in sleep.) A dream.

**Enystrom.** (Ἐνυστρον, from *ánōw*, to perfect.) Old name for the *Abdominum*, or fourth stomach of the *Ruminantia*. (Gorræus, Bartholin.)

**Enzoötia.** (Ἐν, in; ζῷον, an animal.) A disease of the class called *Enzoötic*.

**Enzoötic.** (Ἐν, upon; ζῷον, an animal. F. *enzoötique*; G. *enzoötisch*.) Applied to diseases of cattle peculiar to a district, climate, or season, in the same manner as *Endemic* is employed to indicate those of human beings.

**Enzyma.** (Ἐν, in; ζῷον, heaven.) A term applied to the class of unorganised, soluble, hydrolytic ferments.

**Eocene.** (Ἡώς, the dawn; καινός, recent.) Term for the lower tertiary strata, from the very small percentage of living testacea contained in them, and therefore to be regarded as the dawn or beginning of the existing condition of creation.

**Eolipyle.** (Αἰολος, Æolus, the god of the winds; πύλη, an entrance.) An instrument consisting of a hollow sphere provided with a fine tubular orifice; when filled with spirit and heated a jet of vapour escapes by the aperture, which, being lighted, is used to heat a body.

**Eon.** (Ἡῶν, a shore, or bank.) The time during which a thing exists; the period of existence of the universe; a long indefinite time.

Old term applied to the circumference of the orbit, or the whole compass of the eye. (Gorræus.)

**Eosin.** (Ἡώς, the morning red, the dawn.)  $C_{20}H_{13}BrO_5$ . A red dye stuff produced by the addition of bromine to a solution of fluorescein in glacial acetic acid.

Eosin of commerce is a potash salt. It is used as a staining agent in the preparation of animal tissues for the microscope.

**Eosinophil cells.** (*Eosin*; φίλος, to love.) Ehrlich's term for cells staining deeply with eosin.

**Epacmastic.** (Ἐπακμάζω, to grow vigorous. G. *zunehmend*, *steigend*.) Becoming vigorous. Applied to a fever which increases in severity till it reaches the crisis.

**Epacmê.** (Ἐπακμάζω, to grow vigorous. G. *Zunahme*.) Old term for the increase or exacerbation of a disease.

Also, Hæckel's term in Phylogeny for the period in the development of a race corresponding to the period in the development of an individual from birth to maturity.

**Epacridaceæ.** An Order of hypogynous Exogens of the Alliance *Ericales*, or a Family of the Order *Bicornes*, Subclass *Gamopetalæ*, having monopetalous flowers, perfect free stamens, and one-celled longitudinally-opening anthers.

**Epacrids.** The plants of the Order *Epacridaceæ*.

**Epactal.** (Ἐπακτός; from ἐπάγω, to bring in over and above.) Imported; foreign.

**E. bone.** (F. *os epactal*.) The Wormian bone at the superior angle of the occipital bone.

**Epagogi'tis.** (Ἐπαγωγίτις, the fore-skin.) Inflammation of the prepuce.

**Epagogiocarcinoma.** (Ἐπαγωγίγιον; καρκίνωμα, a cancer.) Cancer of the prepuce.

**Epagogiolith.** (Ἐπαγωγίγιον; λίθος, a stone. G. *Förkautstein*.) Calculous concretion underneath the prepuce.

**Epagogion.** (Ἐπαγωγίγιον, from ἐπί, upon; ἄγω, to draw.) Old name, used by Dioscorides, iii, 25, for the prepuce.

**Epagogium.** Same as *Epagogion*.

**Epalbate.** (L. *e*, neg.; *pulpus*.) Having no palpi.

**Epalpcbrate.** (L. *e*, neg.; *palpebra*, an eyelid.) Having no eyelids.

**Epanacle'sis.** (Ἐπανάκλησις, a recall.) The unexpected return of a disease.

**Epanadidon tes.** (Ἐπαναδίδωμι, to increase more and more.) An epithet of fevers which continue to increase in their degree of heat.

**Epanadiplo'sis.** (Ἐπαναδιπλόω, to reduplicate. F. *épanadiplosie*.) Reduplication, Gr. *ἐπαναδιπλωσις*, applied by Galen, *de Morb. Temp.* c. 8, to the renewal of the cold fit of ague before the hot fit has gone off.

**Epanalep'sis.** (Ἐπανάληψις, regaining.) Same as *Anadiplosis*; and also as *Analepsia*.

**Epanastasis.** (Ἐπανίστημι, to set up again, to rise on the skin. F. *épanastase*.) Old term, Gr. *ἐπανάστασις*, used by Hippocrates, *Coac. Prænot.* 220, for the formation of a tumour, the development of a tubercle, or the eruption of a small pustule.

**Epanastema.** (Ἐπανόστημα, a swelling.) A warty growth about the eye; also a pustule.

**Epancylo'tus.** (Ἐπί, upon; ἀγκύλος, crooked.) Old name, Gr. *ἐπαγκύλωτος*, according to Oribasius, for a kind of serpentine bandage. (Gorræus.)

**Epanesis.** (Ἐπάνεσις, abatement; from ἐπανάημι, to relax.) Remission of a disease.

**Epanetus.** (Ἐπανάημι, to remit.) Applied as a generic term for remittent fevers, by Mason Good.

**E. hec'tica.** A synonym of *Hæctic fever*.

**E. malignus.** Malignant remittent; pulse small, hurried, irregular; debility extreme; often with signs of putrescency. (Mason Good.)

**E. malignus flavus.** (L. *flavus*, yellow.) Good's term for yellow fever.

**E. mitis.** (L. *mitis*, gentle, mild.) Mild remittent fever; pulse regular though frequent; debility slight; remission distinguished by sweating, or a cloud in the urine. (Good.)

**Epanodon'ta.** (Ἐπί; ἄν, neg.; ὀδούς, a tooth.) A Family of *Opoterodonta*, having no teeth in the upper jaw.

**Epanody.** (Ἐπανόδος, a rising up.) The return of an irregular flower to a regular form.

**Epanorthosis.** (Ἐπανόρθωσις, a setting right; from ἐπανορθόω, to set up.) Replacement, as of a dislocated bone.

**Epanorthotic.** (Ἐπανορθωτικός, corrective.) Setting right; applied to the class of remedies usually called *Corrigent*.

**Epanthema.** (Ἐπανθία, to bloom.) Same as *Ecanthema*.

**Epanthes'ma.** Same as *Epanthisma*.

**Epanthisma.** (Ἐπánθησιμα, from ἐπánθηω, to deck as with flowers. G. *Aufblühen*.) An efflorescence.

**Epanthous.** (Ἐπί, upon; ἄνθος, a flower. F. *épanthe*; G. *aufblühend*.) Applied to fungi that grow on the flowers of vegetables.

**Epaphæresis.** (Ἐπί, signifying addition; ἀραιῶσαι, to draw from. F. *epaphræsis*.) Old term, Gr. ἱπαφάρσις, for a repeated evacuation, particularly of blood, according to Galen, *de Cur. Rat. per Sang.* c. 1.

**Epaphris'mus.** (Ἐπαφρίζω, to foam up.) Despumation; frothing.

**Epappous.** (L. *e*, neg.; *pappus*, down.) Having no *pappus*.

**Eparapetalous.** (L. *e*, neg.; *parapetalom*. F. *éparapétale*; G. *ohne Afterkronenblatt*.) Having no *Parapetalum*.

**Eparma.** (Ἐπαίρω, to raise up, or to erect. F. *éparme*.) Old term used by Hippocrates, Gr. ἱπαρμα, *Coac. Prænot.* 626, for a tumour of any part; but more particularly applied to one of the parotid gland.

**Eparsis.** (Ἐπαίρω. F. *éparsie*.) Old term used by Hippocrates, Gr. ἱπαρσις, *Coac. Prænot.* 86, 142, for a tumour.

**Eparterial.** (Ἐπί, upon; ἀρτηρία, an artery.) Lying or being above an artery.

**E. bronch'us.** The first branch of the right bronchus in man; it is given off above the point of crossing of the bronchus by the pulmonary artery, and, according to Åby, it is not found in the left bronchus.

**Epaulette.** (F. *épaulette*, a shoulder knot; from *épaule*, the shoulder; from L. *spatula*, a blade; from Gr. σπάθη, a broad blade.) A term applied to a lateral piece near to the origin of the wings in Diptera.

Also, a ciliated plate on the upper surface of the larval form of some *Echinuoides*.

**Epaxial.** (Ἐπί, upon; ἄξιν, *L. axis*; from Gr. ἄξιν, an axle-tree.) Above an axis.

**E. arches.** A term applied to the vertebral arches of animals which enclose the spinal cord, and to their homologues.

**E. cartilages.** The cartilaginous outgrowths from the notochord from which are developed the *E. arches*.

**E. muscles.** Those muscles which lie above the central axis of the embryo and the plane of its lateral extension; they are divisible into two masses, a *Dorso-lateral muscle* and a *Ventro-lateral muscle*.

**Epechontocic.** (Ἐπίχω, to hold back; τόκος, birth.) Having power to restrain uterine contraction during labour.

**Epen.** A synonym of *Epenchyma*.

**Epencephalie.** (Ἐπί, upon; ἐγκέφαλος, that which is in the head.) Situated on or over the contents of the head, or the brain. Relating to the *Epencephalon*.

**E. arch.** The bony arch covering the *Epencephalon*.

**Epenceph'alon.** (Ἐπί, upon; ἐγκεφαλός. G. *Hinterhirn*.) The anterior of the two enlargements into which the posterior primary vesicle of the brain divides. Also called hind-brain. It constitutes the rudiments of the cerebellum, the pons Varolii, and the anterior part of the fourth ventricle.

**Epenchyma.** (Ἐπί; ἔγχυμα, an infusion.) Nägel's term for the cambium, and everything that directly or indirectly originates from it; in other words, the fibro-vascular tissues of plants.

**Epenera'nis.** (Ἐπί, upon; ἐν, in; κρανίον, the skull.) Ancient name, ἱπενερανίς, used by Eristratus for the cerebellum, according to Galen, *de Usu Part.* viii, 13.

**Ependyma.** (Ἐπένδυμα, an upper gar-

ment; from ἱπένδυω, to put on over. F. *épendyme*; L. *ependyma*.) A covering.

Virchow's name for the lining membrane of the cerebral ventricles and of the central spinal canal. It consists of a fine layer of soft connective tissue or neuroglia covered by a layer of epithelial cells, which are probably vibratile; by some it is supposed to form in a thickened condition, the tania semicircularis.

According to some, the term *ependyma* is applied to the layer of neuroglia only, excluding the epithelium.

**E. folliculi.** (L. *folliculus*, a small bag.) The membrana granulosa of the Graafian follicles.

**E., spinal.** The lining membrane of the central canal of the spinal cord.

**E., ventricular.** (*Ventricle*.) The lining membrane of the ventricles of the brain.

**E. ventriculorum cerebri.** (L. *ventriculus*, a ventricle; *cerebrum*, the brain.) The lining membrane of the ventricles of the brain.

**Ependymitis.** (Ἐπένδυσις.) Inflammation of the *ependyma*. It is the basis of many cases of hydrocephalus.

**Eperlanus.** (F. *eperlan*; from G. *spierling*.) The smelt, *Salmo eperlanus*.

**Eper'na.** A Genus of the Nat. Order *Leguminosæ*.

**E. falcata**, Aubl. (L. *falcatus*, sickle-shaped.) Wallaba tree. Hab. Guiana. Bark bitter and astringent. Used as an emetic.

**Eperon.** (F. *éperon*, a spur.) A term applied by French surgeons to the fold or angle formed by the undamaged side of the intestine opposite its external opening by means of an artificial anus.

**Ephebæon.** Same as *Ephebeum*.

**Ephebe'um.** (Ἐφηβαῖον; from ἐπί, over, or upon; ἦβη, the pubes.) Old term, Gr. ἱφηβαῖον, for the parts about the pubes: the organs of generation, the pubic hair, and the mons veneris. (Goræus, Castellus.)

**Ephebeia.** (Ἐφηβεία.) The age of puberty.

**Ephebus.** (Ἐφηβος.) One arrived at puberty.

**Ephedra.** (Ἐφίδρα, a sitting by or upon. G. *Meertraubchen*.) A Genus of the Nat. Order *Gnetales*.

Also, an old name for an instrument for replacing or setting dislocated members.

**E. antispylliatica.** Meyer. Hab. Western America. Decoction used in gonorrhœa, and as a substitute for sarsaparilla in constitutional syphilis.

**E. distach'ya**, Linn. (Δίς, twice; στάχυς, an ear of corn.) Shrubby horsetail. Hab. Europe. Berries used in menorrhagia and in chronic diarrhœa.

**E. monostach'ya**, Linn. (Μόνος, single; στάχυς.) Used as *E. distachya*.

**Ephedra'ous.** (Ἐπί, upon; ἔδρα, a seat. F. *éphédre*.) Formed of articulated segments placed one upon another.

**Ephed'rana.** (Ἐφίδρανα, that on which one sits. F. *éphédrane*.) Old term for the nates; or the prominences of the buttocks. (Goræus.)

**Ephedroceph'alus.** (Ἐφεδρον, a bench; κεφαλή, the head.) A sexually mature form of cestoid worm.

**E. microceph'alus**, Diesing. (Μικρός;

κεφαλῇ, the head.) Found in the intestines of *Phractocephalus hemipterus*.

**Ephelcis.** (Ἐπί, upon; ἔλκος, an ulcer. *F. ephelce*; *G. Kruste, Borke.*) Old name, *Gr. ἰφελκίς*, used by Galen, *de Sympt. Causs.* iii, 2, for the crust which forms on an ulcer; also, for the hardened purulent matter sometimes rejected by coughing, *de Loc. Affect.* iv, 5.

**Ephelides.** Plural of *Ephelis*.

**Ephelidophacosis.** (Ἐφῆλις, a freckle; φακός, a lentil. *F. ephelidophacose*; *G. Sonnenflecken.*) The coming on of lentil-coloured freckles. Same as *Ephelis*.

**Ephelis.** (Ἐφῆλις, a freckle; from ἐπί; ἥλος, a nail or wart, because they stud the face; or from ἐπί, upon; ἥλιος, the sun, because the sun causes their appearance. *F. ephélide*; *G. Sonnenflecken, Sommersprossen.*) A term for the freckles, little yellow lentiginous, or spots which appear on persons of fair skin; likewise for the larger brown patches which arise from exposure to the sun; and also for those large dusky patches, similar in appearance, that occur on other parts of the surface of the body which are covered.

**E. a solē.** (*L. a, from; sol, the sun.*) The sun-spots described under *Ephelis*.

**E. alba.** (*L. albus, white.*) A whiteness of the skin.

**E. hepatica.** (Ἡπατικός, relating to the liver.) A synonym of *Chloasma*.

**E. ignea.** (*L. ignis, fire.*) The brown patches of skin which are caused by exposure to heat, as on the legs of old men who sit much by the fire-side.

**E. lentigo.** See *Lentigo*.

**E. scorbutica.** (Scorbutus.) Alibert's name for *Melasma*.

**E. solaris.** Same as *E. a solē*.

**E. umbrōsa.** (*L. umbrōsus, shady.*) The large, irregular, brown patches on the skin produced by exposure to the sun.

**Ephelotes.** (Ἐφῆλότης.) A synonym of *Albugo*.

**Ephemera.** (Ἐφήμερος, living but a day; from ἐπί, upon, or through; ἡμέρα, a day.) A fever which lasts a day, or a very short period.

**E. anglica pestilens.** (*L. anglicus, English; pestilens, unwholesome, pestilential.*) An old term for the *Sweating sickness*.

**E. britanica.** (*L. britannicus, British.*) An old term for the *Sweating sickness*.

**E. dichōmena.** (Διχόμενος, dividing the month, that is, at the full moon.) A synonym of *E. erratica*.

**E. erratica.** (*L. erraticus, wandering.*) An anomalous ephemerā, in that the symptoms are very severe, beginning with rigor, which precedes great heat of body, but yet all fever ends in twenty-four hours.

**E. maligna.** (*L. malignus, of an evil nature.*) An old term for the *Sweating sickness*.

**E. mortifera.** (*L. mors, death; fero, to bring.*) A synonym of *Plague*.

**E. pestilentialis.** (*L. pestilentia, a plague.*) The *Plague*.

**E. puerperalis.** (*L. puerpera, a lying-in woman.*) Same as *Milk fever*.

**E. sudatoria.** (*L. sudor, sweat.*) The *Sweating sickness*.

**Ephemeral.** (Ἐφήμερος. *F. éphémère*; *L. efimero*; *S. efimero*; *G. eintägig.*) Short-lived, living only one day.

**E. fever.** A term applied to those cases

of *Milk fever* which are mild and run a very short course.

**E. mania.** See *Mania, ephemerā*.

**Ephemerides.** (Ἐφήμερις, a diary.) Van Helmont's term for those diseases which attack the patient during special phases of the moon, so that they act as diaries or almanacs.

**Ephemeris.** (Ἐφήμερις, a diary; from ἐπί, upon, or through; ἡμέρα, a day. *G. Tagebuch.*) Term for a diary, or day-book, or daily register of the motion of the planets, and other circumstances connected therewith.

**Ephemeroenidosis.** (Ἐφήμερος, for the day; κνίσις, an itching. *F. ephémérocnidose*; *G. das eintägige Nisselfieber.*) Ephemeral urticaria, or nettle rash.

**Ephemermorph.** (Ἐφήμερος; μορφή, form.) A low form of life having a very short existence, such as a Bacterium.

**Ephemerōn.** (Ἐφήμερον.) A poisonous plant of the ancients, variously said to be a convallaria or a colicicum.

**Ephemero-pyra.** (Ἐφήμερος; πῦρ, a fever.) Same as *Ephemera*.

**Ephemeros.** (Ἐφήμερος.) Daily.

**Ephesium emplastrum.** Old term for a stimulating plaster discovered by Celsus, v, 19, *t. 22*, as proper to be applied to bites.

**Ephestia.** A Genus of the Order *Lepidoptera*.

**E. elutella.** Hübner. The chocolate moth. The larva commits great ravages in cocoa and in biscuits.

**Ephialtes.** (Ἐφιάλτης, from ἐφάλασμαι, to leap upon; from the peculiar sensation of oppression, as if some thing had leapt and kept its seat on the chest. *F. ephialte*; *G. Alpdrücken.*) Nightmare. A distressing state of feeling during sleep, generally preceded by some fearful dream, wherein there is a severe struggle during which the dreamer feels a great weight or oppression on his chest, as if some demon were sitting upon him, and attempts to cry, but only utters an indistinct kind of noise.

**E. hypochondriaca.** (Ἐπιοχονδριακός, affected in the hypochondria.) A synonym of the condition called *Daymare*.

**E. nocturnus.** (*L. nocturnus, belonging to the night.*) The condition called *Nightmare*.

**E. vigilantium.** (*L. vigilans, wakeful.*) The condition called *Daymare*.

**Ephialtia.** (Ἐφιάλτης, the nightmare.) An old name for the peony, because it was supposed to cure attacks of *Ephialtes*.

**Ephidroses.** (Ἐπί, intens.; ἰδρώω, to sweat.) Diseases accompanied by morbid perspiration. A Genus of the Order *Apocynoses*, Class *Locules*, of Cullen's Nosology.

**Ephidrosis.** (Ἐφίδρωσις, superficial perspiration. *F. ephidrose*; *G. Schwitzen.*) A term which has been loosely used to signify a violent or a gentle, a partial or a general, sweating; it has also been applied to a sweating of the upper part of the body only.

**E. arena.** (*L. arena, sand.*) Good's term for cutaneous perspiration, in which substances supposed to be absorbed by the lungs, as common salt, are excreted in sandy particles by the skin, or from which crystals of uric acid are deposited on the skin.

**E. cruenta.** (*L. cruentus, bloody.*) A synonym of *Hæmatidrosis*.

**E. discolor.** (*L. discolor, of a different colour.*) A synonym of *Chromidrosis*.

**E. o'leus.** (L. *oleo*, to smell.) A synonym of *Osmibrosis*.

**E. partialis.** (L. *pars*, a part.) Sweating limited to a particular spot or part of the skin.

**E. profusa.** (L. *profusus*, profuse.) A synonym of *Hyperidrosis*.

**E. saccharata.** (L. *saccharum*, sugar.) Sweating of a fluid containing sugar, as in some cases of diabetes.

**E. unilateralis.** (L. *unus*, one; *latus*, a side.) Sweating of one side of the body only.

**Ehippial.** Relating to the *Ehippium*.

**Ehippium.** (Ἐπίππιος, for putting on a horse; from *ἐπί*, upon, *ἵππος*, a horse. G. *Sattel*.) A saddle. An old name for the *Sella turcica*, according to Bartholin. *Libat.* iv, 8.

Also, a term for the envelope enclosing the winter ova of the Daphniidae, which is situated between the back of the animal and the carapace, and probably is a development from the latter; it is shed with the carapace.

**Ephodos.** (Ἐφοδός, a way towards; from *ἐπί*, upon; *ὁδός*, a way.) Old term for the passages and openings by which the excrements of the body are thrown off.

Also, used to express the accession or increase of things similar, or dissimilar, which might be useful or hurtful to the body.

Also, formerly applied to the access or periodical attack of fever, as if it were a hostile invasion, incursion, or assault, which the word ordinarily means.

**Ephodus.** Same as *Ephodos*.

**Ephypogæocarpous.** (Ἐπί, upon; *ἐπός*, under; *γη*, the earth; *καρπός*, fruit. F. *ephypogocarpus*.) Having fruit both above and under the earth.

**Ephypogæous.** (Ἐπί; *ἐπός*; *γη*.) Same as *Ephypogocarpous*.

**Ephyra.** The free swimming disc-like body which is the last stage of the development of the immature form of certain Hydrozoa; after separation from the hydra tube, it by degrees assumes the adult form.

**Epi'la.** Same as *Epi'ales*.

**Epi'als.** (Ἐπιάλεις.) Nightmare.

**Epi'alos.** (Ἠπίος, mild or gentle.) Old term. Gr. *ἡπίος*, for a certain fever, described by Galen, *de Diff. Feb.* ii, 6, in which the patient feels hot and shivers with cold at the same time; called by the Latins *Quercera*; it was a mild and gentle fever of the quotidian type.

**Epi'alties.** Same as *Epi'alties*.

**Epi'alus.** Same as *Epi'alos*.

**Epi'an.** A term signifying raspberry; used as a synonym of *Ficus*.

**Epi'an'drous.** (Ἐπί, upon; *ἀνὴρ*, a male.) Inserted or placed on the stamens.

**Epi'basal.** (Ἐπί, upon; *βάσις*, a base.) Situated upon a base.

**E. cell.** The upper or anterior of the two cells into which the fertilised oosphere of the *Daphnia* is first divided. A similar structure exists in the Equisetaceae and the Filices; and in all the epibasal cell subsequently divides into four, from which the ascending part of the plant arises.

**Epi'del'la.** (Ἐπί, upon; *βδέλλα*, a leech.) A Genus of *Acanthids* living on the skin of fishes.

**Epi'blast.** (Ἐπί, upon; *βλαστός*, a sprout. F. *epiblaste*.) The outermost of the three layers constituting the wall of the blasto-

derm when fully formed. It consists of a layer of cells, from which in the process of time are developed the nervous tissue, the epithelium of the sense organs, of the central spinal canal, of the cerebral ventricles, of the skin, and of the mouth.

Also, the same as *Epiblastanus*.

**Epiblastanus.** (Ἐπί, upon; *βλαστός*, a sprout. F. *epiblaste*; G. *Oberspross*, *Oberkeim*.) An unguiform appendage of the germ, in front of its middle, in certain *Gramineae*; perhaps an abortive second cotyledon.

**Epiblastema.** (Ἐπί; *βλάστημα*, growth.) Warming's term for the outgrowth from a plant, called an *Emergence*.

**Epiblaste'sis.** (Ἐπί; *βλαστός*, a sprout. F. *epiblastese*.) The increase of lichens which occurs by the development of the gonidia in the interior of the system where they have taken origin.

**Epiblastic.** (Ἐπί; *βλαστός*.) Relating to, or belonging to, the *Epiblast*.

**E. cells.** The cells of the *Epiblast* derived from the subdivision of the *E. sphere*.

**E. sphere.** The larger and more transparent of the two spheres into which the vitellus of the impregnated mammalian ovum first divides.

**Epible'ma.** (Ἐπίβλημα, that which is thrown over; from *ἐπί*, upon; *βάλλω*, to place.) The same as *Catoblema*.

Also, in Botany, Schleiden's term for the variety of imperfect epidermis which forms the outer layer of certain roots, as those of the sarsaparilla, and of submerged plants. It consists of thin-walled cells and root-hairs, but has no stomata.

**Epiblepharon.** (Ἐπί, upon; *βλέφαρον*, the eyelid.) Same as *Epicanthus*.

**Epibolē.** (Ἐπιβάλλω, to press upon.) Old term for *Night-mare*. (Quincy.)

**Epibolic.** (Ἐπιβολή, from *ἐπιβάλλω*, to cast upon.) Investing; growing over.

**E. invagination.** (L. *in*, on; *vagina*, a sheath.) A form of growth of some invertebrate ova, in which the epiblast spreads over and invests the hypoblast.

**Epiboly.** (Ἐπιβολή, a laying on.) The same as *Epibolic invagination*.

**Epibos'cis.** (Ἐπιβοσκός.) The proboscis or sucking organ of flies and other insects.

**Epibot any.** (Ἐπί, upon; *βοτάνη*, grass.) Same as *Epiphyty*.

**Epibranch'ial.** (Ἐπί, upon; *βράγχια*, the gills.) Term applied by Professor Owen, in his Homologies, to the second segment (from above downwards) of the branchial arch of a fish; its place is between the pharyngo-branchial above, and the cerato-branchial below.

Also, a subdivision of the branchial region of the carapace of Brachyura.

**Epicalycia.** (Ἐπί, upon; *κάλυξ*, a flower-cup. F. *epicalici*.) Applied to a Jussieuian Class now called *Epistamina*.

**Epicalyx.** (Ἐπί, κάλυξ.) A second or outer calyx surrounding the true calyx in some plants, as the *Molvaceae*. Also called *Calyculus*.

**Epican'this.** (Ἐπικανθίς; from *ἐπί*, upon; *κανθός*, the angle of the eye. L. *epicanthia*.) Old and somewhat indistinct term for the canthus or angle of the eye, according to Gorræus; its Greek analogue in the pl., *ἐπικανθίδες*, is rendered the roots of the canthi by Hedericus.

Also, applied by Von Aumon to a congenital duplication or fold of skin, always symmetrical,

extending over the inner canthus, and in part or entirely concealing the lachrymal caruncle; it is associated with depressed nasal bones, but with their growth from childhood to adult life the deformity sometimes disappears. High grades are rare, and are often associated with other deformities, as with slight ptosis and insufficiency of one or more of the muscles of the eye.

**E. externus.** (L. *externus*, external.) The partial concealment of the external angle of the eye by a fold of skin.

**Epicanthus.** Same as *Epicanthis*.

**Epicardial.** (Ἐπί, upon; καρδία, the heart.) Alvarenga's term for a vertical displacement of the heart without lateral displacement.

**Epicardium.** (Ἐπί, upon; καρδία, the heart.) The pericardium, especially the visceral layer.

**Epicarp.** (Ἐπί, upon; καρπός, fruit. F. *epicarp*; G. *Fruchthülle*, *Fruchthaut*, *Fruchtrinde*.) The external epidermal layer of the pericarp, as the rind of apples and pears.

**Epicarpanthus.** (Ἐπί, upon; καρπός, fruit; ἄνθος, a flower. F. *epicarpanthe*.) Applied to plants the flower of which is supported by the ovary.

**Epicarpic.** Same as *Epicarpious*.

**Epicarpious.** (Ἐπί, upon; καρπός, fruit. F. *epicarpie*; G. *fruchttragend*.) Applied to flowers and stamens when they are borne by the fruit.

**Epicarpium.** (Ἐπί, upon; καρπός, the wrist. F. *epicarpe*; G. *Armband*.) Old term for a medicine of any kind, but usually in form of a cataplasm, or a plaster, applied to the wrist; used anciently in cases of intermittent fever, debility, and convulsions, with the view of affecting the pulse.

Also, the same as *Epicarp*.

**Epicarpurus.** A Genus of the Nat. Order *Moraceæ*.

**E. orientalis.** (L. *orientalis*, belonging to the East.) Hab. India. Said to be astringent and antiseptic. Juice applied to sand-cracks in the feet and excoriations.

**Epicauline.** (Ἐπί, upon; καυλός, a stalk. F. *épicaule*; G. *oberstammig*.) Applied to fungi or other parasitic plants that grow on the stems of other vegetables.

**Epicauma.** (Ἐπίκαυμα, a blister caused by a burn; from ἐπί, upon; καίω, to burn. F. *épicaume*.) A phlyctæna on the cornea which is succeeded by an opacity or an ulceration.

**Epicausis.** (Ἐπίκαυσις, a scorching up.) Same as *Encausis*.

**Epicauta.** A Genus of coleopterous insects.

**E. nepaulensis.** A vesicating agent, sometimes used instead of cantharides.

**Epicephala.** (Ἐπί, upon; κεφαλή, the head.) A synonym of *Epicoema*.

**Epiceras.** (Ἐπί, upon; κέρα, a horn.) The *Trigonella fenum Græcum*, from the shape of its pods.

**Epicerastic.** (Ἐπικεραστικός; from ἐπί, upon; κέραννυμι, to mix. F. *épicerastique*.) Tempering the acrimony of the humours; emollient.

**Epiceratohyal.** (Ἐπί, upon; κέρα, a horn.) The main part of the hyoid arch, so called in certain cases, when there is no segmental line between the two regions, as in the tadpole, and also in the adult frog.

Also, an ectostosis in the upper part of the

undivided cartilage, at first named ceratohyal, in the head of the fish.

**Epicerbral.** (Ἐπί, upon; L. *crebrum*, the brain.) Upon the brain.

**E. space.** A space said by His to exist between the pia mater and the surface of the brain.

**Epiche'mis.** (Ἐπί, upon; χέιμα, a shell. F. *épichème*.) An accessory articulation at the base of the tibia in certain *Arachnida*.

**Epichilium.** (Ἐπί, upon; χείλος, the lip. F. *épichile*; G. *Oberlippe*.) The superior part of the labellum of the *Orchidæ* when it is divided into two dissimilar parts like lips.

**Epichlamydæ.** (Ἐπί, upon; χλαμύς, a mantle. F. *épichlamydé*.) A Class of phanerogamous, incomplete plants, as the *Ulmaceæ*, *Laurineæ*, *Elaeagneæ*, *Thymeleæ*, and *Proteaceæ*.

**Epicholous.** (Ἐπί, abounding in; χολή, bile. F. *épichole*.) Having much bile; full of bile; bilious.

**Epichordal.** (Ἐπί, upon; χορδή, a string.) A term applied to the formation of the vertebral column upon the dorsal surface of the notochord, as in some of the *Anoura*, in contradistinction to the perichordal type.

**Epichordis.** (Ἐπί, upon; χορδή, the intestine. F. *épichorde*.) Old term for the mesentery.

**Epichorion.** (Ἐπί, upon; χορίον, the chorion. F. *épichorion*.) A term used by M. Chaussier for the *Decidua uteri*.

Also, a term for the epidermis as being situated on the corium.

**Epichorios.** (Ἐπί, upon; χώρα, a region. F. *épichorique*.) The same as *Enchorions*.

**Epichorium.** Same as *Epichorion*.

**Epichrosis.** (Ἐπίχρωσις, a surface stain; from ἐπί, on; χρώω, to paint.) A term applied by Mason Good to a macular or spotted state of the skin, or to a simple discoloration of its surface.

**E. alphas.** Same as *Alphas*.

**E. aurigo.** (L. *aurum*, gold.) Good's term for a yellow condition of skin not dependent on jaundice, as the orange-coloured skin of newborn infants.

**E. ephe'lis.** Same as *Ephelis*.

**E. lentic'ula.** Same as *Lentigo*.

**E. leucas'mus.** (Λευκασμός, whiteness.) A synonym of *Vitiligo*.

**E. pœcil'ia.** (Ποικιλία, a being marked with various colours.) Piebald skin, marbled with alternate patches of black and white; it occurs in negroes.

**E. spil'us.** (Σπίλος, a spot.) The skin-lumpy called a *Mole*.

**Epichysis.** (Ἐπίχυσις, a pouring upon; from ἐπιχέω, to pour over.) A term for affusion.

**Epicleid'ium.** (Ἐπί, upon; κλέις, the collar-bone.) An epiphysis of the scapular end of the clavicle in many passerine birds.

**Epiclinal.** (Ἐπί; κλίνη, a bed.) Same as *Epiclinaus*.

**Epiclinal.** (Ἐπί, upon; κλίνη, a bed.) A nectary which is placed on the receptacle.

**Epiclinal.** (Ἐπί, upon; κλίνη, a bed. F. *épichline*; G. *oberständig*.) A term applied to the nectary when it is placed on the receptacle or torus of the flower.

**Epicæ'la.** Same as *Epicæle*.

**Epicœle.** ('Επί; κοιλία, the hollow of the belly.) The body-cavity or perivisceral cavity of those Deuterostomata in which it is formed by an invagination of the epiblast.

**Epicœlis.** A misspelling of *Epicutis*.

**Epicœma.** ('Επισκοιμάω, to fall asleep over a thing.) The lying down to sleep.

**Epicolic.** ('Επί, upon; κόλον, the colon. *Epicolique*.) Applied to a region of the body, being that which is over, or in the course of, the colon.

**Epicolle'sis.** ('Επικολλαίνω, to glue on.) Agglutination, adhesion to.

**Epicoma.** ('Επί, upon; κόμη, the hair.) Term applied by Geoffroy St. Hilaire to monsters having the head surmounted by a second imperfectly formed one, each attached by their summits.

**Epicondulus.** Same as *Epicondyle* and *Epicondylus*.

**E. fem'oris lateralis.** (L. *femur*, the thigh bone; *lateralis*, belonging to the side.) The tuberosity above the external condyle of the femur.

**E. fem'oris medialis.** (L. *femur*, the thigh bone; *medius*, in the middle.) The tuberosity above the internal condyle of the femur.

**Epicondylar.** ('Επί, over; κόρυμβος, a bony knob.) Relating, or attached, to the *Epicondyle*.

**E. mus'cles.** The muscles which have attachment to the epicondyle by a common tendon; they are the anconeus, the extensor carpi ulnaris, the common extensors of the fingers, and the extensor proprius minimi digiti.

**Epicondyle.** ('Επί, over; κόρυμβος, a bony knob.) Chaussier's term for the external condyle of the humerus.

**Epicondylus cubitalis.** (F. *epicondylus cubitalis*.) The anconeus muscle.

**E. cubito-metacarpal mus'cle.** A synonym of the *Extensor carpi ulnaris* muscle.

**E. phalange'al mus'cle.** The superficial flexor of the phalanges of sipedes.

**E. phalangettianus communis.** (L. *communis*, common.) The *Extensor communis digitorum*.

**E. radialis.** (F. *epicondylus radialis*.) The *Supinator radialis brevis*.

**E. supracarpeus.** A synonym of the *Flexor obliquus metacarpi* in sipedes.

**E. supra-metacarpianus.** (F. *epicondylus-metacarpianus*.) The *Extensor carpi radialis brevis*.

**E. supra-phalangettianus.** (F. *epicondylus-phalangettianus communis*.) The *Extensor digitorum communis*.

**E. supra-phalangettianus minimi digiti.** (F. *epicondylus-phalangettianus du petit doigt*; L. *epicondylus-phalangettianus minimi digiti*.) The *Extensor proprius minimi digiti*.

**Epicondylus.** Same as *Epicondyle* and *Epicondulus*.

**E. humeri externus.** (L. *humerus*, the upper arm-bone; *externus*, outer.) The external supracondylar eminence of the humerus.

**E. humeri internus.** (L. *internus*, inner.) The internal supracondylar eminence of the humerus.

**Epicophosis.** ('Επί, upon; κόφωσις, dulness, as of sight or hearing.) Old term, Gr. *ἐπικώφωσις*, used by Hippocrates, *Prophet.* iii, 49, for deafness, but especially for deafness consequent on some other affection.

**Epicor'aco-hu'meral mus'cle.** The *Subclavius* muscle.

**Epicoracoid.** ('Επί, upon; coracoid process. F. *epicoracoïde*.) Term applied by Professor Owen, in his Homologies, to that inconstant bone, or pair of bones, which is posterior to the coracoid bone of fishes.

Also, the broad lower (sternal) margin of the coracoid; it is subdistant in Amphibia and reptiles, through arrest of ossification; it reappears in some mammals (bats and Insectivora) as a distal rudiment, but in them the body of the coracoid is suppressed.

**Epicorollar.** ('Επί, upon; corolla. F. *epicorolle*.) Applied to monopetalous, dicotyledonous plants, in which the stamens are epigynous, or inserted above the ovary.

**Epicorollate.** Same as *Epicorollar*.

**Epicorolleous.** Same as *Epicorollar*.

**Epicorollia.** ('Επί, upon; corolla.) A group of monopetalous, dicotyledonous plants in the classification of Jus-sieu, having the corolla epigynous. It includes two classes, those which are *Chorisanthous*, and those which are *Synanthous*.

**Epicorolline.** Same as *Epicorollar*.

**Epicotyledonary.** ('Επί; cotyledon.) Above the cotyledons.

**E. portion of stem.** The portion of the stem of a plant embryo which lies above the cotyledons.

**Epicotyledones.** ('Επί, upon; cotyledon.) A division of animals, according to Van Beneden, in which the vitellus re-enters by the superior face of the body. It includes Insecta, Myriapoda, Arachnida, Crustacea, and Rotifera.

**Epicranial.** ('Επί, upon; κρανιον, the cranium. F. *epicranien*.) Lying or situated on the cranium, or skull; belonging to the *Epicranium*.

**E. aponeuro'sis.** ('Απονευρώσις, the end of a muscle.) The tendinous expansion of the occipito-frontalis muscle.

**E. mus'cle.** The *Occipito-frontalis* muscle.

**E. su'ture.** (L. *sutura*, a seam.) A suture in the epicranium of the cockroach.

**Epicranium.** ('Επί, upon; κρανιον, the cranium. F. *epicrane*; G. *Schädelhaute*, *Schädelhaut*.) A term for the integuments, aponeurosis, and muscular expansion upon the cranium; but it is frequently used to express only the aponeurosis, or tendinous expansion of the occipito-frontalis muscle.

Also, the dorsal surface of the head of the cockroach.

**Epicranius.** ('Επί; κρανιον. I. *epicranicus musculo*.) The occipito-frontalis muscle.

**Epicrasis.** ('Επικράνισις, to temper. F. *epicrase*.) Old term, Gr. *ἐπικράσις*, used by Galen, *Meth. Med.* ix, 10, for a critical evacuation, or for an amelioration, of bad humours; a cure effected by alteratives is called *per Epicrasin*.

**Epicratis.** ('Επί, upon; κράσις, the head.) Old name used by Hippocrates, in *Præcept.* ix, 14, for a napkin for wiping off or absorbing the perspiration; also, a covering for the head made of fine thread.

**Epicrasis.** ('Επικράσις, determination; from ἐπικρίνω, to discern. F. *epicrise*; I. *giudizio*; G. *Epikrise*.) Term for discernment of the nature of a disease, its causes, character, and issue; judgment.

Also, a term for any distinct phenomenon which lasts beyond the crisis of a disease, and completes it.

**Epicrousis.** (Ἐπικρουσίς, a striking against.) A term for *Percussio*.

Also, the same as *Epicrusis*.

**Epicrusis.** (Ἐπικρουσίς.) A mode of heaving disease by blows on the surface of the body with the hand or other medium.

**Epictenium.** (Ἐπί, upon, or over; αἶς, the pubes.) Old name, Gr. ἑπικτινιον, used by Hippocrates, *de Morb. Mul.* i, lxxxvi, 3, for the region above and around the pubes.

**Epictetus.** (Ἐπικτήτος, gained in addition.) Acquired.

**Epicyme.** The product of an *Epicystis*.

**Epicystis.** (Ἐπικύστις; from ἐπί, upon; κύω, to conceive. F. *epigone*.) Old term for superfetation, or the occurrence of a second conception in a woman already pregnant.

**Epicylion.** (Ἐπικύλιον.) The upper eyelid.

**Epicylis.** (Ἐπί, upon; κύλα, the parts under the eyes.) The upper eyelid.

**Epicystotomy.** (Ἐπί; κύστις, a bladder; τομή, a cutting.) The suprapubic operation for opening the urinary bladder.

**Epicyte.** (Ἐπί, upon; κύτις, a box.) The double-outlined, colourless, amorphous, tough, cuticular investment of the Gregarinidae.

**Epidema.** (Ἐπί, upon; δέμα, to construct. F. *épide*.) The small lamellar prolongations within the thorax of the Articulata, which do not grow from a point of union of two pieces, and are more or less mobile.

**Epidemia.** (Ἐπιδημία, the prevalence of an epidemic; from ἐπί, upon; ἄνθρωπος, a people. F. *épidémie*; I. *epidemia*; G. *Epidemie*, *Folkskrankheit*, *Seuche*.) An advent. An *Epidemic disease*.

**Epidemic.** (Ἐπί, upon; ἄνθρωπος, a people. F. *épidémique*; G. *epidemisch*.) Common to, or prevailing among, a people or a community.

Also, the same as *Epidemic disease*.

**E. cerebro spinal meningitis.** A synonym of *Cerebro-spinal fever*.

**E. cholera.** Same as *Cholera epidemic*.

**E. constitution.** (L. *constitutio*, disposition, nature.) The condition of the atmosphere which was supposed to lead to, or cause, the propagation of epidemic diseases.

**E. disease.** A disease prevalent among a people or a community at a special time, and produced by some special cause or causes not naturally or generally present in the affected locality, as distinguished from an *Endemic disease*.

**E. influence.** Same as *E. constitution*.

**E's, moral.** A term applied to such epidemic delusions as the dancing mania of the middle ages, and to the propagation of fantastic actions among the inmates of an establishment, such as an epidemic of mewing like a cat which occurred among the members of a nursery.

**Epidemicity.** (Ἐπί; ἄνθρωπος.) Same as *Epidemic constitution*.

**Epidemiography.** (Ἐπί, upon; ἄνθρωπος, a people; γράφω, to write. F. *épidémiographie*.) A description of epidemic diseases, their nature and character.

**Epidemiology.** (Ἐπί, upon; ἄνθρωπος, a people; λόγος, a discourse. F. *épidémiologie*; G. *die Lehre von den Epidemien*.) The doctrine or knowledge of epidemic diseases.

**Epidemy.** (Ἐπί; ἄνθρωπος. G. *Folkskrankheit*.) An epidemic disease, or the prevalence of *Epidemic disease*.

**E. of Perin'thos.** A disease described by Hippocrates as an epidemic in Perinthos, in Thrace. It began with cough, which at first declined, then became very severe, and was accompanied by nyctalopia, sore throat, and great weakness or paralysis of the limbs; secondary abscesses were not uncommon.

**Epidendron.** Same as *Epidendrum*.

**Epidendrous.** (Ἐπί, upon; δένδρον, a tree. F. *épéndre*.) Growing on trees.

**Epidendrum.** (Ἐπί, upon; δένδρον, a tree.) A Genus of the Nat. Order *Orchidaceae*, so called because they grow on the branches and trunks of trees.

**E. bif'idum.** Aubl. (L. *bis*, twice; *findo*, to cleave.) Hab. West Indies. Juice purgative.

**E. claviculatum.** Swartz. The *Vanilla claviculata*.

**E. sterilis.** (L. *sterilis*, unfruitful.) See *Bouka*.

**E. vanilla.** The *Vanilla planifolia*.

**Epidéris.** (Ἐπί, upon; δέρας, the skin.) Old name for the clitoris. (Goraeus.)

Also, a name of the prepuce of the clitoris.

Also, a term for the nymphæ.

**Epiderm.** Same as *Epidermis*.

**Epiderma.** Same as *Epidermis*.

**Epidermal.** (Ἐπί, upon; δέρμα, the skin.) Situate upon the skin; relating to, or consisting of, or representing, epidermis.

**E. appendages.** The various forms of hairs and glands which grow from the epidermis of a plant; and the nails, horns, hairs, and feathers which grow from the epidermis of an animal.

**E. tis'sue.** The tissue composing the epidermis, whether of plants or of animals.

**Epidermata.** (Ἐπιδέρμεις, the cuticle.) A class of diseases which are outgrowths from the skin, such as warts and corns.

**Epidermatic.** (Ἐπί, upon; δέρμα, the skin.) Upon the skin.

**E. meth'od.** The mode of administering remedies by applying them to the unbroken skin, whether in the form of powder, paste, plaster, ointment, liquid, or gas.

**Epidermatis.** The *Epidermis*.

**Epidermeous.** Same as *Epidermic*.

**Epidermic.** (Ἐπιδέρμεις, the cuticle. F. *épidermique*.) Of, or belonging to, the *Epidermis*.

**E. cells.** The epithelial cells of the *Epidermis*.

Also, the cells of the *Epidermis* of plants.

**E. globes.** Same as *Cell-nests*.

**E. meth'od.** Same as *Epidermatic method*.

**E. sphere.** (F. *globe épidermique*.) Same as *Cell-nests*.

**E. tu'mour.** A term for *Epithelioma*.

Also, a synonym of *Papilloma*.

**E. ul'cer.** An ulcerated epithelioma.

**Epidermidal.** Same as *Epidermic*.

**Epidermidoid.** (Ἐπιδέρμεις, the cuticle; εἶδος, likeness. F. *épidermoïde*.) Resembling the epidermis, or cuticle.

**Epidermidolysis.** (Ἐπιδέρμεις; λύσις, a loosing. F. *épidermidolyse*.) A separating of the epidermis from the corium, either from disease, or by the action of caustics, burning, scalding, or such like.

**Epidermidomycosis.** (Ἐπιδέρμεις;

# EPIDERMIDONOSI—EPIDIDYMIS.

adens, a fungus.) A generic term for the epiphytic diseases of the skin.

**Epidermidonosi.** (Ἐπιδερμίδωνος; νόσος, a disease.) Diseases of the epidermis.

**Epiderminosis.** (Ἐπιδερμίνος.) Diseases of the skin produced by a vegetable parasite.

**Epidermion.** The same as *Epidermis*.

**Epidermis.** (Ἐπιδερμίς, the cuticle; from ἐπί, upon, and δερμα, the skin. F. *épiderme*; L. *epidermide*; S. *epidermis*; G. *Oberhaut*, *Hautchen*.) A non-vascular membrane covering in all parts the corium or true skin. It varies in thickness and in consistence, being thin and supple on the eyelids, thick and horny on parts of the palm and sole, or where there is much pressure. The outer part is firmer and more transparent than the inner and deeper, and is called the horny layer, or stratum corneum; the deeper part is softer and more opaque, and is called the mucous layer or the rete mucosum, or stratum Malpighii, and between them are the stratum lucidum and the stratum granulosum. The epidermis is closely moulded on the outlines of the corium, it covers the papillae, dips into the furrows, and lines the sweat glands, so that when separated by maceration it exhibits on its under surface corresponding hollows and projections. It is composed of many layers of epithelial cells attached to each other by cement-substance; the lowest layer consists of one row of elongated cells, .007 mm. to .01 mm. long, and .05 mm. to .06 mm. broad, having denticulations at their base, which are received into corresponding depressions in the corium, and one or two large ovoid nuclei, the latter produced by segmentation. Immediately above them are several layers of nucleated oval or polyhedral cells, the latter being chiefly in the more superficial layers; they are marked on their surface with ridges and furrows, and are furnished with spines, prickle cells, which are arranged in relation to those of other cells so as to leave the branching channels, which contain nutritive plasma with leucocytes, or which, as some think, interdigitate with each other. The uppermost layers of these cells become more flattened and lose their outline, so that a transparent zone is formed, the stratum lucidum; between it and the more distinctly developed prickle cells an imperfect series of granular flattened cells is found, the stratum granulosum of Langerhans. It is at the level of the stratum lucidum that the two layers of the epidermis, horny and mucous, may be separated by maceration. The superficial or horny layer consists of flattened cells, flatter and harder as they reach the surface, in many of which no nucleus is visible, so adherent to each other that they form a tough membrane; the superficial horny cells are unaffected by acetic acid, in which the softer deeper cells are soluble. Pigment is deposited in the cells of the rete mucosum, the amount determining the racial colour of man. The epidermis contains no vessels, but nerves from the corium penetrate between the deeper cells of the rete mucosum, branch, and end in knob-like swellings or in the tactile cells of Merkel. The epidermis is continually growing from below, the more superficial scaly cells being thrown off by desquamation, and the new cells being formed by a division of the deeper ones.

Epidermis consists mainly of keratin; in 100 parts it contains C. 59.28, H. 6.76, N. 17.21, O. 25.01, and S. .74.

In Botany, the term is applied to the outer layer of cells which surrounds all parts of a plant. In the lower forms it is not sharply differentiated from the inner tissue; in the higher forms it consists of one layer of chlorophyllous cells in close lateral contact, except where it is pierced by the stomata. In some plants, as *Ficus*, the original single layer of cells splits into two or more. The outermost wall of the cells of the epidermis becomes thickened and forms the cuticle, and in many cases contains particles of wax. The epidermis is furnished with glands and hairs.

**E., grafting of.** See *Skin-grafting*.

**E., hypertrophy of.** (Υπέρ, above; τροφή, nutrition.) Increase in bulk of the epidermis by an increase in the number of the cells; generally produced by intermittent yet frequently recurring pressure or friction.

**E. linguae.** (L. *lingua*, the tongue.) The epithelium of the mucous membrane of the dorsum of the tongue.

**E. of hair.** See *Hair, epidermis of*.

**Epidermmycosis.** Same as *Epidermidomycosis*.

**Epidermoid.** (Ἐπιδερμίδος; εἶδος, likeness.) Like the epidermis.

**Epidermata.** Same as *Epidermata*.

**Epidermophyte.** (Ἐπιδερμίδος; φυτόν, a plant.) A parasitic vegetable growth on the skin.

**Epidermophyton.** (Same etymon.) The *Microsporon furfur*.

**Epidermose.** (Ἐπιδερμίδος.) Same as *Epidermal*. It contains less carbon and more nitrogen and sulphur than the proteids generally, and it forms the greater part of horns, feathers, nails, wool, and epidermis. When heated it melts, and burns with a bright flame. Fused with potash it yields tyrosin, leucin, hydrogen, and fat acids, and the leucin decomposing yields aniline. With nitric acid it stains of a yellow colour.

Also, Bouchardat's term for the part of the epidermis insoluble in diluted hydrochloric acid.

**Epiderhion.** (Ἐπί, upon; δέριον, dim. of δέρις, a leather covering.) Same as *Epideris*.

**Epiderhis.** (Ἐπί; δέρις.) Same as *Epideris*.

**Epiderhitis.** (Ἐπιδερμίδος, the clitoris.) Inflammation of the clitoris and the parts near to it.

**Epidesis.** (Ἐπιδέσις, bandaging; from ἐπί, upon; δέω, to bind. F. *épiderse*; G. *das Verbinden einer Wunde*.) Old term for the arresting of a discharge of blood by means of a bandage.

Also, applied to the use of every kind of bandage, according to Castells.

**Epidesma.** Same as *Epidesmus*.

**Epidesmis.** Same as *Epidesmus*.

**Epidesmum.** Same as *Epidesmus*.

**Epidesmos.** (Ἐπιδέσμος, a bandage. F. *épiderme*; G. *Bindestüßungsbinde*.) Old name for a bandage, by which splints and dressings are secured.

**Epididymis.** (Ἐπί; δίδυμος, the testicles. F. *épidyme*; L. *epididymus*; G. *Nebenhoden*.) A long, narrow structure attached to the posterior border and the adjoining outer surface of the testicle, and consisting chiefly of coils of the efferent duct, which emerge from it as the vas deferens.

It has a rounded upper end, the head or globus major, a lower, somewhat pointed end, the tail or globus minor, connected by means of the body. It is attached to the testicle at the head and tail by the reflection of the tunica vaginalis and by fibrous tissue, and at the head also by the efferent ducts of the testicle which run into it; it takes its origin from a communication between the seminal tubes of the testicle and some of the upper tubes of the Wolffian body.

The tubes of the epididymis are lined with a ciliated, fibrillated, columnar epithelium lying upon a layer of small polygonal epithelial cells.

**E., artery of.** A branch of the spermatic artery as it approaches the testicle.

**E., canal of.** See *Canal of epididymis*.

**E. distensa.** (L. *distendo*, to stretch out.) A synonym of *Spermatocele*.

**E., hydrocele of.** See *Hydrocele, encysted, of epididymis*.

**Epididymitis.** (Επί; δίδουμι. G. *Nebenhörentzündung*.) Inflammation of the epididymis. It may occur as a result of irritation of the prostatic and membranous portion of the urethra from gonorrhoea, bruising, the irritation of instruments, or the passage of sand or rough fragments of calculi, generally by extension of inflammation along the vas deferens. There is pain of the part, often sickening and generally severe, swelling, and febrile symptoms.

**E. acuta.** (L. *acutus*, sharp.) Epididymitis pursuing an acute course. See *E., acute*.

**E., acute.** The form which is usually the result of urethral irritation from gonorrhoea, the use of a catheter or lithotrite, prostatic calculi, or of local injury.

**E., blennorrhagic.** Inflammation of the epididymis from *Blennorrhagia* or *Gonorrhoea*.

**E. blennorrhagica.** (Βλένω, mucus; πίπτει, to burst forth.) Same as *E., gonorrhoeal*.

**E. caseosa.** (L. *caseum*, cheese.) Same as *E. tuberculosa*.

**E., chronic.** A slowly progressing form which may follow gleet, or other chronic inflammatory affections of the urethra, and may end in suppuration.

**E., gonorrhoeal.** (*Gonorrhoea*.) Inflammation of the epididymis caused by extension of gonorrhoeal inflammation along the urethra, the ejaculatory ducts, and the spermatic canal, and known as swelled testicle; in some cases the inflammation may extend to the testicle itself. It is usually ushered in by some rigor and fever, with tenderness of the spermatic cord, then the epididymis begins to swell, grows painful with a sickening pain, the surrounding tissues are affected, effusion may take place into the tunica vaginalis, and the superficial structures are oedematous, and of a reddish purple. It rarely proceeds to suppuration, but thickening and hardening of the globus minor may last a long time.

**E. intra-abdominalis.** (L. *intra*, within; *abdomen*, the belly.) Inflammation of the epididymis while the testicle still remains in the inguinal canal or abdomen, as in cryptorchids.

**E., syphilitic.** A chronic condition which occasionally occurs in the course of syphilis; the swelling is generally round or oval, painless, small, smooth, hard, and it generally attacks the globus major.

**E. tuberculo-sa.** Tubercular deposit in, and inflammation of, the epididymis often resulting in incurable fistulous openings.

**Epidis'cal.** (Επί; upon; δίσκος, a disc. F. *epidiscal*.) Upon a disc. Applied to the insertion of stamens, or of a stamiferous corolla when at the circumference of the disc.

**Epid'osis.** (Επιδίδωμι, to grow upon. F. *epulose*; G. *Zugabe*.) Old term (Gr. επι-δosis), used by Hippocrates, *Aph.* ii, 31, 39, for the increase of a disease; also the preternatural enlargement of any part.

**Epidromé.** (Επιδρομή, a running over; from επιτρέχω, to run upon. F. *épidrome*; G. *Anlauf*.) Old term for an afflux of humours, but especially congestion of blood, as when a ligature is placed on any part.

**Epidromia.** Same as *Epidromé*.

**Epifagus.** (Επί; L. *fagus*, the beech tree.) Same as *Epiphagus*.

**Epifrontalia.** (Επί; upon; L. *frons*, the forehead.) Remedies which are applied to the forehead.

**Epigæa.** (Επίγειος, upon the earth; from επι, upon; γαία, earth.) A Genus of the Nat. Order *Ericaceæ*.

**E. repens.** Linn. (L. *reps*, to creep.) The ground laurel. Leaves contain tannin, arbutin, urson, and ericofin. Used in strangury and vesical catarrh.

**Epigæal.** Same as *Epigeous*.

**Epigæan.** Same as *Epigeous*.

**Epigæous.** (Επί; upon; γαία, the earth. F. *épige*; G. *überirdig*.) Close upon or just above the ground.

**E. cotyledons.** Cotyledons that make their way above ground, by lengthening of the stalk which attaches them to the radicle.

**Epigastralgia.** (Επιγαστήριον, the epigastrium; άλγος, pain. F. *epigastralgie*.) Pain at the epigastrium.

**Epigastrial.** (Επί; γαστήρ.) Of, or belonging to, the *Epigastrium*.

**Epigast'ric.** (Επί; upon; γαστήρ, the stomach. F. *épigastrique*.) Of, or belonging to, the *epigastrium*.

**E. artery, deep.** (F. *artère épigastrique*; G. *Bauchdeckenschlagader*.) Arises from the inner and fore part of the external iliac artery about 5 cm. above Poupart's ligament; passes inwards for a short distance, then curves upwards on the inner side of the internal abdominal ring, and, proceeding in its course, perforates the transversalis fascia, enters the sheath of the rectus muscle, and anastomoses with the superior epigastric branch of the internal mammary artery. It gives off a cremasteric, a pubic, muscular, and superficial branches.

**E. artery, inf'erior.** (L. *inferior*, lower.) The *E. artery, deep*.

**E. artery, inf'erior ext'nal.** The *E. artery, superficial*.

**E. artery, inf'erior inter'nal.** The *E. artery, deep*.

**E. artery, superf'ial.** (F. *artère tégumentaire abdominale*; G. *die oberflächliche Bauchdeckenschlagader*.) A small artery which arises from the femoral 5" below Poupart's ligament, passes forwards through the fascia lata or the upper part of the saphenous opening, and runs upwards in the superficial fascia of the abdomen to the neighbourhood of the umbilicus. Its branches communicate with those of the deep epigastric and the circumflex iliac arteries.

**E. artery, super'ior.** (G. *obere Bauchdeckenschlagader*.) One of the terminal branches of the internal mammary artery; it descends be-

tween the sternal and costal portions of the diaphragm to the abdominal wall, penetrates the sheath of the rectus and enters the muscle, in the substance of which it ramifies and anastomoses with the branches of the deep epigastric artery.

**E. cen'tre.** The solar plexus, so called from its position.

**E. hernia.** See *Hernia, epigastric.*

**E. plexus.** The solar plexus, from its situation.

**E. pulsa'tion.** (*L. pulso*, to beat.) A rhythmic beating visible in the epigastric region; it may be caused by the violent action of a healthy heart, by a dilated heart, by alteration of the position of the heart, so that it becomes more vertical, or more depressed, or more to the right side, by increased systolic distension of the abdominal aorta, or of the coeliac axis, by an aneurysm, by a tumour over the subjacent arteries, and, according to Senac, by regurgitation of blood into the hepatic veins, consequent on dilatation of the right side of the heart, or from exceptionally good conduction of the normal pulsations of those vessels, owing to hypertrophied liver. Only one sound is audible on auscultation.

**E. reces'sion.** (*L. recedo*, to fall back.) A falling back of the parietes of the epigastric region at each cardiac systole, probably caused by pericardial adhesions.

**E. re'flex.** See *Reflex, epigastric.*

**E. re'gion.** (*L. regio*, a territory. *F. région epigastrique.*) That portion of the abdomen below the diaphragm, above the umbilical region, and between the hypochondriac regions; being bounded above by the lower end of the sternum and part of the lower edges of the cartilages of the ribs; on each side by the upper part of a vertical line drawn from the middle of Poupart's ligament to the lower border of the thorax; and below by the middle part of a horizontal line between the highest points of the iliac crests. It contains below its surface the chief part of the left lobe and a small part of the right lobe of the liver, the gall bladder, part of the stomach, with both its orifices, the first and second parts of the duodenum, the pancreas, the upper end of the spleen, the upper part of the kidneys and the adrenals, the receptaculum chyli, and the solar plexus.

According to some, it includes the hypochondriac regions.

**E. vein, superfi'cial.** A vein which accompanies the artery of that name and empties itself into the internal saphenous vein.

**E. veins.** Two veins which accompany the artery of that name and unite into one trunk just before they join the external iliac vein.

**Epigas'tricus.** Same as *Epigastric.*

**Epigastriocèle.** (*Επιγαστρίος*, from *ἐπί*, upon; *γαστήρ*, the belly; *κῆλη*, a tumour. *F. epigastriocèle.*) An abdominal hernia near the epigastrium.

**Epigas'trium.** (*Επιγαστήριον*, from *ἐπί*, upon; *γαστήρ*, the stomach. *F. epigastre*; *G. Oberbauch.*) That part of the abdomen which is immediately over the stomach. This term has been used to denote the whole of the front part of the abdomen from the sternal extremity and the false ribs to the pubes. It has also been described as the region lying above a line stretching between the lower edge of the false ribs at the level of the navel; and it has

been limited to the middle part of the latter space, the sides being the hypochondria. It is also synonymous with *Epigastric region*.

**Epigas'trius.** (*Επί; γαστήρ.*) A rudimentary parasitic fetal monstrosity implanted upon the epigastrium of another.

**Epigas trocele.** Same as *Epigastriocèle.*

**Epig'e'a.** Same as *Epigaea.*

**Epig'e'al.** See *Epigaeal.*

**Epigene'ma.** See *Epigenema.*

**Epigenesis.** (*Επιγένεσις*; from *ἐπιγίγνομαι*, to be born after. *F. épigénèse.*) A term anciently used in the same sense as *Epigenema.*

Also, a term for a formation or growth upon an organ or tissue. (Gorreaus and Quincy.)

Also, applied to the theory of generation which regards the *fœtus* as the joint production of matter afforded by both sexes. The generation of organisms by new and successive formations, in opposition to syngensis, in which each germ is supposed to contain the germs of all subsequent generations. On the theory of epigenesis the first parents possess the possibility of creating all their progeny, but their descendants do not pre-exist in them. The germ supplies the directing agency only, the force by which the fabric is gradually evolved is heat, and the materials are derived from the external world.

**Epigenne'ma.** (*Επιγίννημα*, a result; from *ἐπιγίγνομαι*, to be born after. *F. épigénomène*; *G. Nacherzeugte.*) Old term (*Gr. ἐπιγίννημα*), applied by Hippocrates, *Coac. Prænot.* 230, to those symptoms which naturally succeed, or may be expected, in the progress of a disease, such as the emaciation which occurs in diabetes.

**Epig'enous.** (*Επί*, upon; *γίνομαι*, to be born. *F. épigène.*) Applied to a crystal in which the phenomenon of *Epigenia* has occurred.

Also, growing upon the outer surface of a thing.

**Epig'eny.** (*Επί*, upon; *γίνομαι*, to be born. *F. épigène.*) Term for the phenomenon which occurs when a crystallised mineral has undergone, after its crystallisation and without alteration of its form, chemical changes consisting either in the loss of one of the principles, with admission of another, or in the latter only.

**Epig'eous.** See *Epigaeous.*

**Epigenom'enon.** (*Επιγίγνομαι*, to succeed. *F. épigénomène*; *G. Nacherzeugte.*) Old term, similar to *Epigenema.*

Also, formerly applied to an accession of some other affection to a disease already healing which is not a natural sequence of the disease, but depends on some evident external cause, such as an imprudence on the part of the patient.

**Epiglos'sa.** (*Επί*, upon; *γλῶσσα*, the tongue. *F. épiglosse.*) A peculiar organ of the mouth of the Hymenoptera.

**Epiglossis.** (*Επιγλωσσίς.*) Same as *Epiglottis.*

**Epiglos'sum.** (*Επί*, upon; *γλῶσσα*, the tongue.) A name for the *Ruscus aculeatus*, or Alexandrian laurel, because a smaller leaf grows upon the larger, like a tongue.

**Epiglottic.** (*F. épiglottique.*) Of, or belonging to, the *Epiglottis*.

**E. gland.** See *Epiglottidean gland.*

**E. glands.** The glands of the mucous membrane covering the posterior surface of the epiglottis; they are lodged in pits in the cartilage.

**E. ligaments.** The *Thyro-epiglottic ligament*, the *Hyo-epiglottic ligament*, and the three *Gloss-epiglottic folds*.

**Epiglottidean.** Of, or belonging to, the *Epiglottis*.

**E. gland.** A term formerly applied to the mass of yellowish fat lying between the base of the epiglottis and the os hyoides.

**Epiglotis.** (Ἐπιγλωττίς; from ἐπί, upon; γλωττίς, the glottis, or superior aperture of the windpipe. F. *epiglote*; I. *epiglottide*; S. *epiglottis*; G. *Kehildeckel*.) The erect, leaf-like cartilage at the root of the tongue which during the act of swallowing is depressed, and forms a lid, or cover for the glottis or superior opening of the larynx; its upper margin is free and rounded, and its lower end is long and pointed, and attached by the thyro-epiglottic ligament to the thyroid cartilage behind and below the median notch; its sides are convex and bent backwards; its anterior surface is attached at its lower end to the hyoid bone by the hyo-epiglottic ligament; its posterior surface is concave from side to side, concavo-convex from above to below, and is pitted for the reception of the epiglottic glands. It is composed of yellow elastic cartilage, covered with mucous membrane, underneath which on the posterior surface is much diffuse adenoid tissue.

**E., cushion of.** The *E. tubercle of*.

**E., muscles of.** The *Thyro-epiglottidean muscle* and the *Arytaeno-epiglottidean muscle*.

**E., tubercle of.** The prominence of the lower end of the hinder surface of the epiglottis which projects backwards into the larynx.

**Epiglottitis.** (F. *epiglottite*; G. *Kehildeckelentzündung*.) Inflammation of the epiglottis; it may be chiefly of the mucous membrane accompanying other faucial or laryngeal inflammations; but it is more commonly an inflammation of the membrane covering the cartilage. See *Perichondritis of epiglottis*.

**Epiglotome.** (Ἐπιγλωττίς; τομή, section.) A curved steel rod terminated by a pointed cutting surface, .25 long, for scarifying the mucous membrane of the epiglottis and fauces in inflammation of those parts.

**Epiglotum.** (Ἐπιγλωττίς.) Old name for an instrument for elevating the eyelids, which was shaped like the epiglottis.

**Epigloutis.** (Ἐπί, upon; γλωττός, the buttocks.) Old term for the superior part of the nates or buttocks. (Goræus.)

**Epignathus.** (Ἐπί; γνάθος, the jaw. I. *epignate*.) A monstrosity consisting of a fetus having connection with a second and abortive one by the jaw only.

**Epigœal.** Same as *Epigeous*.

**Epigonatis.** (Ἐπί, upon; γόνυ, the knee.) Old name (Gr. *ἐπιγονατίς*), used by Hippocrates, *de Ven.* xxiv, 3, xxv, 2, and by Bartholin, *Anat.* iv, 21, for the patella or kneecap.

**Epig'onë.** (Ἐπιγονή, increase.) A term for a child, with the exception of the first born.

Also, a synonym of *Superfetation*.

Also, the same as *Epigonium*.

**Epig'onides.** (Ἐπιγονίς, the parts above the knee.) Old name for the muscles inserted into the knee.

**Epig'onis.** Same as *Epiginis*.

**Epig'onium.** (Ἐπί, upon; γόνυ, offspring. F. *epigone*.) The transparent, membranous, cellular case of the arehegonium of mosses.

**Epig'onon.** (Ἐπίγονος, born afterwards.) Old term (Gr. *ἐπίγονον*), used by Hippocrates, *de Diet.* i, xxiv, 1, for superfetation.

**Epig'onum.** Same as *Epigonon*.

**Epigounis.** Same as *Epiginis*.

**Epigramma.** (Ἐπί, upon; γράμμα, a leaf. F. *epigramme*; G. *Oberstrich*.) A temporary opercle, almost membranous, which certain Mollesca, inhabiting cold climates, have the faculty of forming in certain seasons to close the orifice of their shell. (Mayne.)

**Epig'unis.** Same as *Epigonatis*.

**Epigynic.** Same as *Epogynous*.

**Epigynophoric.** (Ἐπί, upon; γυνή, a female; φορέω, to bear. F. *epigynophorique*.) Applied by Mirbel to the nectary when placed under the ovary at the top of a gynophore.

**Epig'ynous.** (Ἐπί; γυνή, a female.) Situated on the female organs of a flower, the ovary being actually inferior.

**E. disc.** A disc which is situated on the summit of the ovary, as in the *Umbellifere*.

**E. flower.** A flower the perianth and stamens of which surmount the ovary.

**E. stamens.** Stamens attached to the summit of the ovary when the calyx is adherent, as in *Campanula* and *Daucus*.

**Epihyal.** (Ἐπί; hyoid bone.) Upon the hyoid bone.

**E. bone.** A segment of the hyoid arch in fish, as the skate, which is attached by an interhyal ligament behind the hyomandibular to the postero-external angle of the skull or pterotic ridge, and is in part represented by the stylohyoid ligament of man.

**Epilaryngeal.** (Ἐπί; λάρυγξ, the larynx.) Situate above the larynx.

**Epilation.** (L. *e*, out of; pilus, a hair. G. *Enthaarung*.) The removal of hair.

**Epilatorium.** (L. *e*; pilus. G. *Enthaarungsmittel*.) An application for destroying the hair. It generally consists of a paste or ointment of caustic potash, sulphuret of arsenic, calcium or sodium, or some similar caustic.

**Epilatory.** Same as *Epilatorium*.

**Epilempsis.** A name (Gr. *ἐπιληψίς*), by Hippocrates, *Coac. Praenot.* 599, for *Epilepsy*.

**Epilentia.** A synonym of *Epilepsy*.

**Epilepsia.** Same as *Epilepsy*.

**E. brevis.** (L. *brevis*, short.) Seunert's term for the act of coition.

**E. dromica.** (Δρόμος, running.) A form of epilepsy, described by Semmola, presenting close similarity to chorea.

**E. gravior.** (L. *gravis*, severe.) The typical form of epilepsy, when the fits are complete; the *huit mal* of the French.

**E. larvata.** (L. *larvatus*, masked.) See *Epilepsy, masked*.

**E. mitior.** (L. *mitis*, mild.) The imperfectly developed form of epilepsy, when the fits are abortive or irregular; the *petit mal* of the French.

**E. saltatoria.** (L. *saltator*, a dancer.) A synonym of *Chorea*.

**E. saturnina.** See *Epilepsy, saturnine*.

**E. spina'le.** (L. *spina*, the spine.) A term applied by Brown-Séquard to the condition described under *Reflex, ankle*.

**E. trochaica.** (Τρόχος, a wheel.) An epileptiform affection, described by Semmola, resembling chorea.

**E. vertiginosa.** See *Vertigo, epileptic*. Also, a synonym of *E. mitior*.

## EPILEPSY.

**Epilepsy.** (Ἐπιληψία, *epilēpsia*, epilepsy; from *ἐπιλαμβάνω*, to lay hold of, to seize. *L. morbus sacer, morbus caduicus major, morbus comitialis*; *F. épilepsie, mal Saint Gilles, malade sacré, mal divin, mal saint, mal caduc*; *I. epilepsia, mal caduca, alto male*; *S. epilepsia*; *G. Fallsucht, Epilepsie*.) A non-febrile nervous affection characterised by attacks or fits of sudden and temporary loss of consciousness or disturbance of the mind, and tonic or clonic convulsions, lasting for a more or less short period, and occurring at irregular intervals. The phenomena constituting the epileptic fit vary indefinitely in severity and in character, the typical and more severe being true epilepsy, the *haut mal* of the French; the defective and less severe, being the *petit mal* of the French, epileptic vertigo, or abortive epilepsy of English authors. A typical epileptic fit is usually preceded for a longer or shorter period by some premonitory phenomenon—the so-called *Epileptic aura*, irascibility of temper, coldness of the feet, muscular cramp, giddiness, sensorial illusions, and such like; but the attack itself is sudden; generally the sufferer becomes pale, loses consciousness, utters a cry, falls down, the muscles of one side or of the whole of the body slowly contract and become rigid, the breathing is stopped until lividity of the face and distension of the veins of the head and neck occur; then there are clonic, often unilateral, convulsions of the muscles, frequently accompanied by biting of the tongue, evacuation of the contents of the bladder or of the bowels, stertorous breathing, and violent action of the heart; in a short time, a minute or two, as the breathing is restored, the convulsions cease, the blueness of the face passes off, the limbs become flaccid, and consciousness returns, either speedily or after a longer or shorter interval of stupor, or of coma, or of intellectual disturbance, and is followed before complete restoration by great weariness and aching of limbs and of the head; or the coma may proceed to death.

At the other extreme the fit is represented by a passing giddiness, a temporary loss of consciousness or of memory, a fleeting spasm of some muscle or set of muscles, a delusion of one or more of the senses, a sensation of sickness, or of faintness, or some other representative of one of the characteristics of the complete attack; and between these two there are infinite gradations. The condition of the nervous system causing epilepsy is unknown; a favoured hypothesis is that of a discharge of nerve force from the brain-cortex along the centrifugal nerve paths.

**E., abortive.** (*L. abortio*, to miscarry.) The epileptic fit which does not proceed to loss of consciousness.

**E., acute.** A term applied to the convulsions called *Eclampsia*.

**E., alcoholic.** Epilepsy caused by chronic excess in alcoholic drinks, which is often hereditary. The sufferers are prone to delusions, and have a quick, soft, dicrotic pulse.

**E., auditory.** (*L. audio*, to hear.) Epilepsy depending upon disease of the middle ear.

**E., cerebral.** (*L. cerebrum*, the brain.) A term for that form of epilepsy, in which only the first symptom, proposed by Dr. M. Hall to be designated *Sphagismus*, occurs; the *Petit mal* of the French.

**E., cortical.** (*L. cortex*, bark.) A

synonym of *E. Jacksonian*, from the position of its exciting cause in the cortex of the brain.

**E., diurnal.** (*L. diurnus*, daily.) Epilepsy in which the fits occur chiefly in the daytime.

**E., feign'd.** Epilepsy is frequently simulated. In genuine epilepsy the face is pallid, the pupils are dilated and motionless, the muscles are rigid, coma and albuminuria usually occur after each attack. In simulated attacks the imposter usually feigns the severe typical attack, lividity being produced by holding the breath, and frothing at the mouth by soap, and over-acts his parts, mixes up the stages and neglects the sequelæ.

**E., gastric.** (Γαστήρ, the belly.) Epilepsy arising from some irritation in the alimentary canal, such as that of worms.

**E., hemiplegic.** (Ἡμι, half; πλῆγῃ, a stroke.) Epilepsy, generally of syphilitic origin, in which one half of the body or one limb only is convulsed.

**E., hysterical.** See *Hysterio-epilepsy*.

**E., idiopathic.** (Ἰδιος, peculiar; πάθος, suffering.) An epileptic fit.

**E., infantile, acute.** A synonym of *Convulsions, infantile*.

**E., intestinal.** (*L. intestina*, the bowels.) An old term for infantile convulsions depending on irritating matters in the intestines.

**E., Jacksonian.** (After *Hughlings Jackson*, who demonstrated its cause.) A term applied to a form of epilepsy in which the convulsions are confined to one half of the body, and in which consciousness is retained throughout or only lost after some time; it is chiefly seen in children, and is caused by syphilitic deposit in, or syphilitic degeneration of, the cortex of the brain or its immediate neighbourhood, especially the part supplied by the middle cerebral artery.

**E., laryngeal.** See *Laryngeal epilepsy*.

**E., lead.** See *E., saturnine*.

**E., maniacal.** See *Epileptic mania*.

**E., mask'd.** (*F. épilepsie larvée*.) A term applied to those cases of epileptic seizure in which the patient does not fall to the ground, but often walks about violently and aimlessly.

Also, applied to certain psychical or moral disturbances which occur periodically and paroxysmally, and are accompanied by complete forgetfulness of what has happened.

**E., matutinal.** (*L. matutinus*, belonging to the morning.) Epilepsy in which the fits occur only in the early morning.

**E., nocturnal.** (*L. nocturnus*, belonging to the night.) The form in which the fit occurs solely or chiefly in the night.

**E., partial.** The form in which the convulsions are limited to one side of the body or one limb.

**E., pleural.** (*Pleura*, *F. épilepsie pleurétique*.) Aubouin's term for epileptic cramps occurring after injection of fluids into the pleural cavity in empyema, of which several cases have been recorded.

**E., psychic.** (Ψυχή, the soul.) The paroxysmal and periodical occurrence of psychic disturbances, or mental or sensory illusions, occurring without or rarely with muscular spasm, and accompanied by entire forgetfulness of the circumstances of the attack.

**E., reflex.** (*L. reflecto*, to bend back. *I. epilepsia reflexa o simplica*.) Epilepsy resulting from reflex action of the nerves, as from neuro-

# EPILEPTIC—EPILOBIUM.

mata, or cicatrices and tumours compressing and irritating peripheral nerves, or from intestinal worms, or from ovarian or uterine irritation.

**E., renal.** See *Renal epilepsy*.

**E., saturnine.** (L. *Saturnus*, a name for lead.) One of the later results of chronic lead poisoning, consisting of clonic convulsions very like those of epilepsy, occurring very frequently, and speedily ending in death from asphyxia or from coma.

**E., sexual.** The epilepsy which sometimes occurs during sexual intercourse.

**E., simulated.** The same as *E., feigned*.

**E., spinal.** (L. *spina*, the spine.) A term proposed by Dr. M. Hall for the full development of epilepsy, or that form of it in which *Laryngismus*, or its second marked symptom, with *Olatismus*, or bitten tongue, has supervened upon the first. *Sphagismus*, or the muscular contraction of the neck; the *Grand mal*, or *Haut mal*, of the French.

Also, a term given by Frank to those cases of epilepsy which depend on some definite lesion of the spinal cord or its membranes.

Also, see *Epilepsia spirans*.

**E., spinal, provoked.** A term for the condition described under *Reflex, ankle*.

**E., symptomatic.** (Συμπτωμα, a symptom.) Epilepsy caused by, or a symptom of, some other ailment.

**E., syphilitic.** (Syphilis.) Epilepsy depending on intra-cranial syphilis; the fit is often preceded by localised pain in head.

**E., thalamic.** (Θάλαμος, a bed.) Hammond's term for a form of epilepsy which has its origin in the optic thalamus, and is distinguished by hallucinations, and loss of consciousness, and absence of muscular contractions.

**E., traumatic.** (Τραυματικός, relating to wounds.) Epilepsy resulting from an injury, as when it is caused by depressed fracture of the skull.

**E., uterine.** See *Uterine epilepsy*.

**E., vaso-motor.** (L. *vas*, a vessel; *moveo*, to move.) A term applied to cases of epilepsy in which the vaso-motor centre is supposed to be solely or chiefly implicated to the exclusion of the motor centres; these are accompanied by loss of consciousness, but not by muscular spasm; the temperature is high, and the pulse soft, full, and quick.

**E., zone of.** See *Epileptogenous zone*.

**Epileptic.** (F. *épileptique*; G. *epileptisch*.) Of, or belonging to, *Epilepsy*. One afflicted with *Epilepsy*.

**E. aura.** See *Aura epileptica*.

**E. change.** An alteration in the central nervous system, especially in the pons and medulla oblongata, rendering it more unstable or liable to induce epileptic seizure on slight irritation.

**E. cry.** A cry or scream occurring at the outset of an epileptic fit, and caused by a spasmodic contraction of the respiratory and laryngeal muscles.

**E. fit.** The paroxysm or attack described under *Epilepsy*.

**E. hemiplegia.** Hemiplegia occurring after an attack of epilepsy. When permanent it is probably associated with some coarse lesion of the brain.

**E. imbecility.** The imbecility which often occurs as the result of repeated epileptic fits.

**E. insanity.** See *Insanity, epileptic*.

**E. mania.** (G. *epileptische Geistesstörung*.) See *Mania, epileptiform*.

**E. seizure.** The same as *Epilepsy*.

**E. state.** See *Status epilepticus*.

**E. vertigo.** See *Vertigo, epileptic*.

**E. zone.** Same as *Epileptogenous zone*.

**Epileptica.** (Επιληπτικά, epilepsies.) Remedies or medicines for epilepsy.

**Epileptical.** Same as *Epileptic*.

**Epilepticism.** (Επιληπτική. F. *état de mal (épileptique)*.) Althaus's term for the condition produced by very frequent epileptic fits, in which there is no recovery of consciousness between the attacks, but the pulse becomes very quick, the temperature very high, and there is stupor, collapse, and generally death in two or three days.

**Epileptiform.** (L. *epilepsia*, epilepsy; *forma*, likeness.) Resembling epilepsy.

**E. convulsions.** Convulsions resembling those of epilepsy.

**E. neuralgia.** See *Neuralgia, epileptiform*.

**E. seizure.** The form of epilepsy in which there is passing loss of consciousness only.

Also, a term applied to *Epilepsy, Jacksonian*.

**E. syphilitis.** Same as *Syphilis, epileptiform*.

**E. tic.** Same as *Neuralgia, epileptiform*.

**Epileptogenic.** Same as *Epileptogenous*.

**Epileptogenous.** (Επιληπτική, epilepsy; *γενναω* to produce.) That which causes or produces epilepsy.

**E. zone.** Brown-Séquard's term for the part of the skin of the face and neck of guinea pigs which, on being irritated, after partial or complete section of the spinal cord near the twelfth dorsal vertebra, produces, in the course of two or three weeks, epileptiform convulsions, the tendency to which may be transmitted to the offspring. It is bounded above by a line from the eye to the ear.

**Epileptoid.** (Επιληπτική, epilepsy; *εικός*, likeness.) Resembling *Epilepsy*.

Also, a term by Griesinger for a class of persons who suffer periodically and paroxysmally from migraine, vertigo, syncope, hallucinations, or other nerve trouble.

**Epiletia.** A synonym of *Epilepsy*.

**Epiobiaeae.** A synonym of *Onagraceae*.

**Epiobium.** (Επί, upon; λοβίον, dim. of λοβός, a pod.) A Genus of the Nat. Order *Onagraceae*.

**E. angustifolium**, Linn. (L. *angustus*, narrow; *folium*, a leaf. F. *herbe de St. Antoine*, *laurier de St. Antoine*; G. *Weidenroschen*, *Antonskraut*.) Great willow herb. Hab. Europe, Asia, America. Demulcent, tonic, and astringent; used in diarrhoea and in aphthous conditions; and as a vulnerary, and a local application in unhealthy ulcers.

**E. coloratum.** (L. *coloratus*, coloured.) Same properties as *E. angustifolium*.

**E. hirsutum**, Linn. (L. *hirsutus*, hairy.) Used as *E. angustifolium*.

**E. montanum**, Linn. Hab. Europe. Applied to foul ulcers.

**E. spicatum**, Lam. (L. *spicatus*, pointed.) The *E. angustifolium*.

**E. tetragonum**, Linn. (Τέτρα, four; γωνία, a corner.) Hab. Europe. Applied to foul ulcers.

**E. villosus.** (L. *villosus*, hairy.) Hab. South Africa. Used as an application to foul ulcers.

**Epilogism.** (Ἐπιλογισμός, a reckoning over, calculation.) The form of reasoning which infers a hidden fact from an acknowledged and evident one.

**Epilose.** (L. *e*, neg.; *pilosus*, hairy. G. *un'haart*.) Deprived of, or wanting, hair; bald.

**Epimanes.** (Ἐπιμανής, raving; from *ἐπιμανομαι*, to be mad.) A term given to a person during a paroxysm of insanity.

**Epimedium.** (Ἐπιμήδιον. G. *Suckenblanc*.) A Genus of the Nat. Order *Berberidaceæ*.

**E. alpinum.** Linn. Hab. Europe. Roots and leaves astringent.

**Epimelis.** (Ἐπί, upon; *μηλís*, an apple tree.) Old name for a plant supposed by some to be the *Arbutus undedo*, or the *Mespilus Germanica*, because it grows about or near apple trees.

**Epiménia.** (Ἐπιμήνιος, monthly.) A term for the *Menses*.

**Epimenocnido'sis.** (Ἐπιμύνω, to remain; *κνίσις*, an itching.) Persistent nettle-rash.

**Epimenophaco'sis.** (Ἐπιμύνω.) Persistent lentigo.

**Epimeral.** (Ἐπί, upon; *μηρός*, the thigh.) Situate above the body articulation of the limb of one of the *Articulatæ*.

**Epimere.** (Ἐπί, upon; *μηρός*, the thigh. F. *epimere*.) Name given by Hæckel to the segments of the transverse axis, or the so-called homonymous parts, as, for example, to the several segments of the extremities in Vertebrata and Arthropoda, and to similar segments in plants, such as the segments of a segmented leaf.

**Epimerite.** (Ἐπί; *μηρός*.) The same as *Epimere*.

**Epimeron.** (Ἐπί; *μηρός*.) That part of the lateral wall of a somite of a crustacean which is situated between the articulation of the appendage and the pleuron.

**Epimetrium.** (Ἐπί, upon; *μέτριος*, moderate. F. *epimetrie*.) Name by Bernhardt for a part in form of a membrane, sometimes of a hair, or a brush, which surrounds the ovary on one side in many of the *Compositæ*. (Maync.)

**Epimorios.** (Ἐπιμόριος, containing an integer and a fraction over; from *ἐπί*, over; *μέρος*, a constituent part.) A term applied to an unequal pulse as to time of beat.

**Epimyliis.** (Ἐπιμυλís; from *ἐπί* upon; *μύλη*, a mill-stone, the knee-pan.) Old name for the patella.

**Epinarthécia.** (Ἐπί, upon; *άρθρῆς*, the stem of a *Ferula*, used as a wand and to make splints of.) A term applied by N. R. Smith to a mode of treatment of fractures, especially of the lower limb, and consisting in the suspension of the limb by a series of straps from a light iron framework on its upper surface, which itself is suspended by a cord passing round a pulley.

**Epina'stic.** Relating to, or possessing, *Epina'sty*.

**Epinasty.** (Ἐπί, upon; *πίσσω*, to squeeze close.) In Botany, a term used to denote the more rapid growth of the inner or upper surface of a bilateral organ, such as a leaf, than of the outer or lower, so that a bending outwards or downwards is produced.

**Epine'ma.** (Ἐπί, upon; *νῆμα*, a thread.)

Name by L. C. Richard for the upper dissimilar part of the staminous filaments of the *Compositæ*.

**Epine'me'sis.** (Ἐπιμήμησις, a distributing.) A term for the dispensing of medicines.

**Epineph'clos.** (Ἐπιnéφελος; from *ἐπί*, upon; *νεφέλη*, a cloud.) Covered with clouds; having many clouds; cloudy. Applied formerly to the enæorema, or cloudy appearance of the urine, in which nubeculæ are suspended. (Quincy.)

Also, used to denote specially the upper part of the cloudy appearance of urine.

**Epinephridium.** (Ἐπί, upon; *νεφρός*, the kidney. G. *Nierenschmalz*.) The fat which lies on, and partly covers, the kidney.

**Epineurium.** (Ἐπί; *νεῦρον*, a nerve.) The sheath of a nerve binding together the several funiculi or bundles which form it, and sending off-shoots between them; it consists of ordinary connective tissue, and serves to support the blood-vessels and the lymphatics of the nerve; it contains also fat cells and plasma cells.

**Epinoë'ma.** (Ἐπινοήμα, a contrivance.) Old term for a kind of ladder, or frame, by means of which certain distortions were reduced.

**Epino'tium.** (Ἐπινώσιος, placed on the back, from *ἐπί*, upon; *νώσιος*, the back.) Old name for the scapula or shoulder-blade.

**Epinyctides.** Plural of *Epinyctis*.

**Epinyctis.** (Ἐπινυκτίς; from *ἐπί*, upon; *νύξ*, night. F. *epinyctide*; G. *Nachtblattern*.) A pustule containing a bloody sanies, rising in the night, and disappearing in the morning, forming an angry tumour on the arms, hands, and thighs, of a dusky red, or of a livid colour, with much inflammation and pain.

Also, any pustule which is more painful at night.

Also, an eruption which appears only at night.

**E.pruriginosa.** (L. *prurigo*, an itching.) A synonym of *Urticaria*.

**Epice'cia.** (Ἐπί, upon; *οἰκία*, a house.) Ozanam's term for an epidemic disease limited to a very small locality, such as a house or a ship.

**Ep'iola.** Same as *Ep'ioles*.

**Ep'ioles.** (Ἐπίολης.) A name for night-mare.

**Ep'io'mide.** (Ἐπί; *ὤμος*, the shoulder.) The upper part of the shoulder, the shoulder-joint.

**Ep'ione.** (Ἐπίωνη, the wife of Esculapins; from *ἥπιος*, gentle.) Osiander's term for any mucous membrane.

Also, Dutrochet's term for the inner surface of the decidua vera.

**Ep'ios.** (Ἐπίος.) Mild, gentle; applied (Gr. *ἥπιος*), by Hippocrates, *Epid.* vii, 6, 14, to epidemic diseases of this character.

**Ep'iotic.** (Ἐπί; *οὖς*, the ear.) Above the ear.

**E. centre.** Huxley's term for one of the three centres of ossification of the petriotic bone or petro-mastoid portion of the temporal bone; from it is developed the lower part of the mastoid portion of the bone which surrounds the posterior semicircular canal.

**E. fenestra.** (L. *fenestra*, a window.) A small unchondrified space over the posterior semicircular canal in the primordial cranium of the salmon, in Parker and Bellamy's second stage of development of the salmon.

# EPIPACTIS—EPIPHORA.

**Epipactis.** (Ἐπιπακτίς. *G. Samperi.*) A Genus of the Nat. Order *Orchidaceae*.

**E. latifolia.** All. Bastard hellebore. Hab. Europe. Roots yield *Salep*.

**E. ovata.** All. (*L. ovalis*, egg-shaped.) Tway-blade. Hab. Europe. Roots yield *Salep*.

**Epiparoxysmus.** (Ἐπί, upon; *παροξυσμός*, an incitement, exacerbation, or paroxysm.) Old term, according to Blancardus, for a paroxysm of fever, occurring more frequently than usual, as if one were superadded to the ordinary paroxysm.

**Epipastic.** (Ἐπιπάσσω, to sprinkle or moisten. *G. aufgestreut*.) Sprinkled, or spread over; moistened.

A term applied to sheets of paper covered with a thin plaster, over which cantharides powder has been dredged. Employed as an epispastic or vesicant, or to keep a blister open.

**Epipas-tos.** (Ἐπιπάσσω, to sprinkle over. *G. aufgestreut*.) A name (*Gr. ἐπίπαστος*), by Lindemus, *Ec.* xiii. 323, formerly applied to medicines placed on wounds; also to medicines sprinkled in the form of powder over the body, or any part of it. (*Goræus*.)

**Epipas-tus.** Same as *Epipas-tos*.

**Epipēchy.** (Ἐπίπυχυ, from *ἐπί*, above; *πύχης*, the cubit, or fore-arm.) Old term for the part of the arm just above the elbow.

**Epipēphycos.** (Ἐπί, upon; *φύω*, to grow.) Growing upon; formerly applied to the *Tunica adnata*.

**Epipetalous.** Same as *Epipetalous*.

**Epipetalia.** (Ἐπί, upon; *πέταλον*. *F. epipetalé*.) Proposed by Desvauux for a Juss. Class containing dicotyledonous, polypetalous plants with epigynous stamens.

**Epipetalous.** (Ἐπί, upon; *πέταλον*, a petal. *F. épipétale*.) Growing on, or in front of, the petals. Applied to polypetalous dicotyledonous plants, in which the stamens are epigynous, or inserted above the ovary.

**Epipetiola-neous.** (Ἐπί, upon; *petiolo*. *F. épipétiole*.) Applied to stipules when adherent to the upper part of the petiole.

**Epiphænomenon.** (Ἐπιφαίνω, to show forth. *F. epiphénomène*.) A term for a superadded symptom; thus paralysis is regarded as an epiphænomenon of apoplexy.

**Epiphania.** (Ἐπιφάνεια, appearance.) The outward configuration and appearance of the body.

**Epipharyngeal.** (Ἐπί; *φάρυγξ*, the gullet.) Situated above the pharynx. A term applied to the uppermost articulation of the four anterior pairs of branchial arches in teleostean fishes.

**Epipharynx.** (Ἐπί; *φάρυγξ*.) A lobate process on the upper side of the pharynx of some insects.

**Epiphegus.** (Ἐπί, upon; *φηγός*, a kind of oak, perhaps *Quercus esculus*; sometimes translated beech.) The orobanche, a parasite on the beech. A Genus of the Nat. Order *Orobanchaceæ*.

**E. america-nus.** Nutt. The *E. virginiana*.

**E. virginia-na.** Bart. (*F. orobanche de Virginie*; *G. Krebswurz*.) Cancer root. Hab. North America. A parasite on the roots of beech trees. Used as an astringent in diarrhœa, and as an application to fungous and unhealthy ulcers.

**Epiphenomenon.** See *Epiphænomenon*.

**Epiphlebus.** (Ἐπίφλεβος, from *ἐπί*; *φλέψ*, a vein.) Having prominent veins.

**Epiphlegia.** (Ἐπιφλέγω, to burn up.) Inflammation.

**Epiphlo'em.** Same as *Epiphlo'em*.

**Epiphlo'edal.** (Ἐπί, upon; *φλοιός*, bark. *F. épiphloécide*.) Applied by Wallroth to lichens that grow on the surface of the epidermis of other vegetables.

Lobstein used the word to signify inflammation without engorgement.

**Epiphlo'eum.** (Ἐπί; *φλοιός*.) The outermost layer of the bark underneath the epidermis; the corky layer.

**Epiphlogis-ma.** (Ἐπιφλογίζω, to burn. *F. epiphlogisme*.) Old term for a burning heat of any part.

Also, anciently applied to a violent inflammation attended with pain, tumour, and redness, such as erysipelas.

Also, an old term for the *Shingles*.

**Epiphlog'osis.** (Ἐπί, upon; *φλόγωσις*, burning heat. *F. épiphlogose*.) Term for the higher degrees of inflammation.

**Epiphlo'sis.** (Ἐπί, upon; *φλόσις*, the outside of a thing. *F. épiphlose*.) Name by Dupetit-Thouars for the epidermis of vegetables.

Also, a name by Lamarck for the epidermis in form of hairs, or scales, which covers the external surface of certain shells.

**Epiph'ora.** (Ἐπιφορά, a sudden burst; from *ἐπιφέρω*, to carry to. *F. épiphora*, *larmoiement*; *I. epifora*; *G. Thränenfluss*.) Watery eye. A superabundant flow of tears, or of an aqueous or serous humour from the eyes; a flux of tears.

Also, a sudden afflux of humours.

**E. alvi.** (*L. alvus*, the belly.) Diarrhœa.

**E. arthritica.** (*L. arthriticus*, gouty.) Gouty epiphora. An affection of middle and advanced age, which is usually chronic.

**E. catarrhalis.** (*L. catarrhus*, a flowing.) The flow of tears accompanying a cold in the head.

**E. e dacryoadenitidē.** (*δάκρυον*, a tear; *ἀδένη*, a gland.) An overflow of tears from inflammation of the lacrymal gland.

**E. erethica.** (Ἐρεθίζω, to excite.) Overflow of tears consequent on congestion of the vessels of the eyes, such as is occasioned by irritation of the eye by any mechanical stimulus, by exposure to bright light, violent muscular efforts, or psychical excitement.

**E. exanthematica.** (*Exanthem*.) Overflow of tears occurring in the course of any of the exanthemata. It is especially common during an attack of measles.

**E. impetiginosa.** (*L. impetiginosus*, one who has had impetigo.) Epiphora occurring coincidently with the formation of scabs and crusts on the lids, from irritation of the conjunctiva, and inflammation of the lacrymal gland.

**E. intermittens.** (*L. part. of intermitto*, to discontinue.) Overflow of tears occurring at certain times in the day, as is seen in some fevers.

**E. ptyalis-mus.** (*Πτύαλον*, saliva.) Salivation.

**E. sanguinea.** (*L. sanguineus*, bloody.) An overflow of tears stained with blood. It has been observed in scurvy and petechial fevers.

**E. scorbutica.** (*Scorbutus*.) Epiphora occurring in scurvy. The tears have been seen to be bloody.

**E. vene'ra.** (*L. venerea*.) Epiphora occurring with inveterate attacks of syphilis, affecting the face and eyelids.

**Epiphragm.** Same as *Epiphragma*.

**Epiphragma.** (Ἐπί, upon; φράγμα, a partition. F. *Epiphragme*; G. *Zwischfell*.) The delicate membrane which is sometimes attached to the points of the teeth and partly closes the opening of the peristome of mosses, as in the *Polytrichum*.

Also, a term applied to the upper part of the peridium, in some Gastromycet. in the stage when it is stretched and flat.

Also, the hardened secretion which is secreted by snails to close the aperture of the shell during hibernation.

**Epiphyllocar'pous.** (Ἐπί; φῶλλον, a leaf; καρπός, fruit. G. *Blattfrüchtig*.) Bearing fruit upon the leaves.

**Epiphyllosp'ermae.** (Ἐπί; φῶλλον, a leaf; σπέρμα, a seed.) Plants which have the reproductive organs on the back of the leaf, as ferns.

**Epiphyllosp'ermatous.** (Same etymon.) Having seeds on the leaves.

**Epiphyllous.** (Ἐπί, upon; φῶλλον, a leaf. F. *epiphylla*.) Upon a leaf. Applied to flowers which grow on the surface of a leaf, and also to parasitical fungi which grow on the leaves of other plants.

**Epiphy'mata.** (Ἐπιφύω, to produce on.) Skin diseases.

**Epiphys'al.** Same as *Epiphys'al*.

**Epiphys'ary.** (Ἐπίφυσις, an outgrowth.) Relating to an *Epiphysis*.

**Epiphys'al.** (Ἐπίφυσις.) Relating to an *Epiphysis*.

**E. disc.** See *Disc, epiphys'al*.

**E. fracture.** A rare accident, since in youth fracture takes place more readily through the bone than through the epiphys'al line of cartilage. It has been usually observed after the application of great force during delivery of the foetus, or shortly after birth.

**E. line.** The point of junction between the diaphysis of a bone and an epiphysis.

**E. nerves of the femur.** Two branches, one of the nerve supplying the cruralis muscle, and the other of the nerve to the subcruralis muscle, both of which are distributed to the lower epiphysis of the femur.

**Epiphysis.** (Ἐπίφυσις, an outgrowth; from ἐπί, upon; φῶω, to grow. F. *epiphyse*; G. *Ausatz, Auswuchs, Knochenansatz, Epiphyse, Zuwachs*.) An extremity or other portion of a long bone which has originated in a centre of ossification separate and distinct from the primary centre which forms the diaphysis. The cartilaginous matrix of the bone may persist between the diaphysis and the epiphysis until the body is full grown, when osseous union takes place.

Also, a term for the *Pineal gland*.

**E. cer'ebri.** (*L. cerebrum*, the brain. G. *Epiphyse des Gehirns*.) A term for the *Pineal gland*.

**E. cru'ris longio'ris in'cudis.** (*L. crus*, a leg; *longior*, longer; *in'cus*, the bone of that name.) The orbicular bone of the ear.

**E. il'e anterior.** (*L. ilium*, the bone of that name; *anterior*, foremost.) The same as *O. acetabuli*.

**Epiphys'itis.** Inflammation of an *Epiphysis*. It is generally a disease of early life, coming in the neighbourhood of the epi-

phys'al line, or in the osseous nucleus of the epiphysis itself, and produced by local injuries, chill, struma, syphilis, or pyæmic conditions. It commences with a hyperæmic condition of the affected part, and is accompanied by proliferation and then purulent degeneration of the medulla; the inflammatory products may find their way into the joint, or may travel down the diaphysis, or may burst externally. It is believed to be in one of its forms a very common cause of hip-joint disease in children.

**Epiphy'ta.** (Ἐπί; φυτόν, a plant.) The vegetable parasites which live on the surface of the animal body.

**Epiphy'tal.** (Ἐπί, upon; φυτόν, a plant.) Pertaining or relating to an *Epiphyte*.

**Ep'iphyte.** (Ἐπί, upon; φυτόν, a plant. G. *Schmarotzergewächs*.) A vegetable parasite on the surface of an animal body.

Also, a plant which grows on another plant for support only and not for purposes of nutrition.

Also, occasionally used but erroneously, a parasitic plant or fungus which grows on the leaves of other plants.

**Epiphy'tic.** (Ἐπί, upon; φυτόν, a plant. F. *epiphyte*; G. *Schmarotzend.*) Growing upon other vegetables.

Also, relating to an *Epiphyte*.

**Epiphy'tism.** (Ἐπί; φυτόν.) The production of an *Epiphyte*.

**Epiphy'ty.** (Ἐπί; φυτόν.) The occurrence of disease among plants of the same species at the same time and to a great extent.

**Epipig'ma.** (G. *ein Werkzeug zur Einrichtung des Schultergelenks*.) Old name for an apparatus formed like the Greek letter Π, used for reducing a luxated humerus, according to Orribasius, *de Machinam*. 4; also called *Epipoma*. See *Epinoëma*.

**Epip'lasma.** (Ἐπίπλάσμα, a plaster; from ἐπιπλάσσω, to spread upon. F. *épiplâsme*; G. *Breiumschlag, Umschlag*.) The same as *Cataplasma*; also, a preparation of wheat meal, boiled in hydrocum, formerly applied to wounds, according to Galen, *de C. M. sec. Loc.* iii. 2.

**Epip'lastron.** (Ἐπί; πλάστρον.) The first lateral piece of the plastron of the chelonian.

**Epip'legia.** (Ἐπί; πληγή, a stroke.) An old term, according to some, synonymous with hemiplegia; according to others, meaning paralysis of the upper extremities.

**Epip'lerosis.** (Ἐπιπλήρωσις, an overfilling. G. *Überfüllung*.) Excessive repletion, as of blood-vessels; distension, as of intestines with gas.

**Epip'leura.** (Ἐπί; πλευρά, the side.) The side of an elytron of Coleoptera.

**Epip'locœ.** (Ἐπιπλοκή, a plaiting together.) A synonym of *Cunion*.

Also, a term for entanglement of the intestines.

**E. intestina'lis.** (*L. intestina*, the bowels.) Entanglement of the intestines.

**Epip'locele.** (Ἐπίπλοον, the omentum; κήλη, a tumour. F. *épiplocele*; G. *Netzbruch*.) A hernia in which a portion of the omentum is protruded.

**Epip'locomis'ta.** (Ἐπίπλοον; κομίζω, to bear.) A large paunch from a fat omentum.

**Epip'locomis'tes.** One who has an *Epiplocomista*.

**Epip'locystos'cheocele.** (Ἐπίπλοον; κύστις, the bladder; σάκχος, the scrotum; κήλη, a tumour. F. *épiplocystoschéocele*; G.

*Netzblasenhodensackbruch.*) Hernia of the omentum and bladder in the serotum.

**Epiplœmphraxis.** (Ἐπίπλοον; ἐμφράξις, a stoppage. F. *epiploëmphraxis*.) An excessive fullness and obstruction in the omentum.

**Epiplœnterocele.** (Ἐπίπλοον; ἐντέρον, an intestine; κύλη, a tumour.) Hernia containing both omentum and intestine.

**Epiplœnteroschecele.** (Ἐπίπλοον; ἐντέρον; ὄσχεον, the serotum; κύλη, F. *epiploënteroschecele*; G. *Netzdarmschodensackbruch.*) Scrotal hernia, containing both omentum and bowel.

**Epiplœic.** (Ἐπίπλοον, the omentum. F. *épiplœique*.) Of, or belonging to, the epiplœon or omentum.

**E. appendages.** The *Appendices epiplœicæ*.

**E. arteries.** The long slender branches of the gastro-epiplœic arteries which supply the omentum.

**Epiplœischiocele.** (Ἐπίπλοον, the omentum; ἰσχίον, the ischium; κύλη, a tumour. F. *épiplœischiocele*.) A hernia in which the omentum protrudes through the ischiatic foramen.

**Epiplœitis.** (Ἐπίπλοον, the omentum. F. *épiplœite*; G. *Netzentzündung*.) Inflammation of the epiplœon, or omentum.

**Epiplœerocele.** (Ἐπίπλοον; μῆρός, the thigh; κύλη, a tumour. F. *epiploërocele*.) A femoral hernia containing omentum.

**Epiplœophalocœle.** Same as *Epiplœomphalon*.

**Epiplœomphalon.** (Ἐπίπλοον, the omentum; ὀμφαλός, the navel. F. *epiploëmphale*; G. *Netznabelbruch*.) A defective term (Gr. ἐπιπλόομφαλον), used by Galen for a hernia in which the omentum is protruded at the navel.

Also, called *Epiplœomphalocœle*.  
**Epiplœomphalon.** The old spelling of *Epiplœomphalon*.

**Epiplœon.** (Ἐπίπλοον, the membrane enclosing the entrails; from ἐπιπλέω, to float upon.) The *Omentum*.

**E., colic.** The *Omentum, colic*.

**E., gastro-colic.** (Γαστήρ, the stomach; κόλον, the colon.) The *Omentum, great*.

**E., gastro-hepatic.** (Γαστήρ; ἥπαρ, the liver.) The *Omentum, lesser*.

**E., gastro-splenic.** The *Omentum, gastro-splenic*.

**E. majus.** (L. *major*, greater.) The same as *Omentum majus*.

**E. minus.** (L. *minor*, less.) The same as *Omentum gastro-hepatic*.

**Epiplœosarcophalon.** (Ἐπίπλοον; σάρξ, flesh; ὀμφαλός, the navel. F. *épiplœosarcophalon*.) Hernia of the umbilicus, with fleshy excrescence of that part.

**Epiplœoschecele.** (Ἐπίπλοον, the omentum; ὄσχεον, the serotum; κύλη, a tumour. F. *epiploëschecele*; G. *Netzshodensackbruch*.) A scrotal hernia containing a portion of omentum.

**Epiplœom.** The *Epiplœon*.

**Epiplœoi'a.** (Ἐπίπλοια, a blowing upon.) Inspiration.

An old term applied to the blast of air which, by blowing upon the body, produces disease.

**Epiplœodia.** (Ἐπί, upon; πούς, the foot.) Lateral appendages to the foot of some Mollusca.

**Epiplœodite.** (Ἐπί; πούς.) A long, curved appendage to the basal joint or coxopodite of the anterior ambulatory limbs of some Crustacea.

**Epiplœodium.** (Ἐπί, upon; πούς, a foot. F. *épiplœodie*.) Name by L. C. Richard for one or many distinct tubercles having no immediate connection either with the ovary or calyx, which grow within the latter on the summit of the peduncle, as in the *Crucifera*.

**Epiplœolasis.** (Ἐπιπλόασις; from ἐπιπλέω, to float on the surface. F. *épiplœolase*.) An old term for the supposed force which caused a substance exposed to the action of heat to separate itself from the liquid containing it and rise to the surface, where it floated, at least for a while, without volatilising.

Also, applied by Hippocrates, *de Hum.* ii, 51, to a fluctuation of humours.

**Epiplœasmus.** Same as *Epiplœolasis*.

**Epiplœolic.** (Ἐπιπλόασις.) Relating to *Epiplœolism*.

**E. dispersion.** Herschel's term for the condition of a ray of light in a liquid exhibiting *Fluorescence*.

**Epiplœolism.** (Ἐπιπλόασις.) Herschel's term for the condition now called *Fluorescence*.

**Epiplœoma.** The same as *Epiplœolism*.

**Epiplœoroma.** (Ἐπιπλόωρωμα; from ἐπιπλέω, to make hard.) A callus about a fractured bone.

Also, a hard tumour about the joints.

**Epiplœorosis.** The formation of *Epiplœoroma*.

**Epiplœosopium.** (Ἐπί, upon; πρόσ-πον, the face. F. *épiplœosopie*.) A medicine or plaster for the face.

**Epiplœisilous.** (Ἐπί; ψιλός, bald.) Bald, or wanting in hair, on the upper surface.

**Epiplœyschê.** (Ἐπί, upon; ψυχê, the soul. F. *arrivée carcéen*.) Term used by Hæckel to include the corpora pyramidalia, corpora olivaria, corpora testiformia, and fourth ventricle.

**Epipteric.** (Ἐπί, upon; πτερόν, a wing.) Situated on or over a wing.

**E. bone.** Flower's term for a small scale-like Wormian bone often found between the antero-inferior angle of the parietal bone and the great wing of the sphenoid bone.

**Epipterosus.** (Ἐπί; πτερών.) Bearing wings at its summit, as do some seeds.

**Epipterygoid bone.** (Ἐπί, upon; pterygoid bone.) A bone of lizards and turtles. It commences as a rod of cartilage on the angular process of the pterygoid bone which ascends to join the quadrato bone, then becomes ossified, and is subsequently developed into an oblong plate of bone wedged in between the parietal and the ascending process of the pterygoid bone.

**Epirhizous.** (Ἐπί, upon; ῥίζα, a root. F. *épirhize*.) Upon a root. Applied by Mirbel to parasites that grow on the roots of living vegetables, as the *Cytinus hypocystis*.

**Epirrhansis.** (Ἐπιρρᾶνω, to sprinkle upon.) A sprinkling; irrigation.

**Epirrhœology.** (Ἐπιρρῶω, to flow upon; λόγος, a discourse.) Term proposed by Picconi for that branch of science, especially botanical, which treats of the influence of external agents, or media, on organised beings.

**Epirrhœo.** (Ἐπιρρῶω, afflux.) Afflux or determination of humours.

**Epirrhœa.** (Ἐπιρρῶα.) Same as *Epirrhœo*.

**Episarcidium.** (Ἐπί, upon; σάρξ, the flesh.) The same as *Anasarcæa*.

**Epischeses.** (Ἐπισχέσις. F. *épischèses*; G. *Zurückhaltungs*.) Suppressions of the excre-

tions; an Order of the Class *Locales* of Cullen's Nosology.

**Epischesis.** (Ἐπίσχεσις, a checking; from ἐπισχέω, to restrain. G. *Zurückhaltung*.) A retention or suppression of a natural excretion or evacuation.

**Epischetic.** (Ἐπισχετικός, checking.) Having power

**Epischion.** (Ἐπί, upon; ισχίον, the ischium.) Old name for the os pubis. (Goræus.)

**Epischomēnia.** (Ἐπίσχω, to restrain; μηνῆαι, the menses.) Suppression of the menstrual flow; amenorrhœa.

**Epischyon'ta.** (Ἐπισχύω, to make strong.) Strengthening remedies.

**Episcleral.** (Ἐπί, upon; σκληρός, hard.) Upon the sclerotic coat of the eye.

**Episcleritis.** (Ἐπί, upon; σκληρός, hard.) An inflammation of the connective tissue covering the sclerotic coat of the eye. It is usually of limited extent, not exceeding a split pea in diameter, slightly raised above the adjoining tissue, of rose pink tint, with large vessels ramifying over and around it, with no tendency to suppurate, attended with pain of a rheumatic character in and around the eye, slow in progress, affecting those who are debilitated and liable to rheumatism, and disappearing after a time without leaving any mark.

**Episclerotic.** (Ἐπί; σκληρός.) Upon the sclerotic tunic of the eye.

**Episcopales valvulæ.** (Ἐπίσκοπος, a bishop; L. dim. of *valva*, a valve.) An old term for the mitral valves. (Hunney.)

**Episcotister.** (Ἐπισκοτίζω, to throw a shadow over. G. *Verjastener, Verdunkler*.) An instrument devised by Aubert. It consists of two blackened discs, from each of which four octants are excised. They are placed in front of a light, super-imposed, clamped together and rotated; one disc may be made to cover all or none of the holes in the others, the result being variations in the degree of light transmitted. It enables the sensitiveness of the eye for light to be tested.

**Episcion.** (Ἐπίσιον.) Old name, used by Hippocrates, *de Morb. Mul.* lxxxix, 5, for the region of the pubes.

**Episeium.** Same as *Episcion*.

**Episema'sia.** (Ἐπισημασία, a marking.) A synonym of *Signa*.

Also, the invasion of a fever paroxysm.

**Episepalous.** (Ἐπί, upon; *sepal*. F. *épispale*; G. *überkelchblattig*.) Growing upon the sepals of the calyx, as the glands of the *Malpighia urens*.

Also, growing in front of the sepals.

**Episiocele.** (Ἐπίσιον, the region of the pubes; κύλη, a tumour.) Pudendal hernia; also a vulvar swelling or tumour, such as prolapsus of the vagina.

**Episioedema.** (Ἐπίσιον; οἰδήμα, a swelling.) Oedema of the vulva.

**Episioelytror'rhapsy.** (Ἐπίσιον; ἑλντρον; ῥαφή.) A combination of the operations on the perineum and vagina, adopted by Veit, Hegar and Spiegelberg for the support of a prolapsed uterus.

**Episiohæmato'ma.** (Ἐπίσιον; hæmatoma.) Same as *Hæmatoma vulvæ*.

**Episioitis.** (Ἐπίσιον.) Inflammation of the vulva.

**Episio'n.** (Ἐπίσιον.) Same as *Episcion*.

**Episio'cus.** (Ἐπίσιον; ὄγκος, a tumour.) A vulvar swelling or tumour.

**Episiophy'ma.** (Ἐπίσιον; φῦμα, a growth.) A tumour of the vulva.

**Episiorrhag'ia.** (Ἐπίσιον; ῥήγνυμι, to burst through.) Hemorrhage from some part of the vulva.

**Episior'rhapsy.** (Ἐπίσιον; ῥαφή, a suture.) An operation for the relief of prolapsus uteri; consisting in the suture of the opposing surfaces of the labia pudendi after removing the mucous membrane, and thus giving support to the womb.

**Episiostenosis.** (Ἐπίσιον; στένσις, a being straightened.) The closure of the vulva by operation. It has been proposed by Vidal to pare the edges of the vaginal opening, bring them together, and secure union, so as to make the vagina a closed cavity, and thus to prevent escape of the urine from a vesico-vaginal fistula that could not be cured.

**Episiotomy.** (Ἐπίσιον; τομή, section.) Incision of the frenum of the labia majora in the direction of the tuber ischii, to facilitate the birth of the child, and to prevent rupture of the perineum when the vulva is very small.

**Episkeletal.** (Ἐπί, upon; σκελετόν, a dried body, a skeleton.) Upon or over the skeleton.

**E. muscles.** Term applied by Huxley to those muscular fibres which take their origin in the upper part of the protovertebral mass, and are therefore situated above the endoskeleton, and lie above the horizontal plane of the vertebral axis. Such are the sacro-lumbalis and longissimus dorsi, the complexus splenius, and levatores costarum.

**Epispad'ia.** (Ἐπισπῖω, to draw the prepuce forward.) One the subject of an *Epispadias*.

**Epispad'ias.** (Ἐπισπῖω; from ἐπί, upon; σπῖω, to draw out. F. *épispadias*.) An unnatural perforation of the upper part of the penis, so that the mucous membrane of the floor of the canal is exposed; it is not infrequently accompanied by extroversion of the bladder from deficiency of the lower abdominal walls.

**E. glandis.** (L. *glans*, a nut.) Epispadias in which the fissure extends to the glans penis only.

**E. penis.** Epispadias in which the fissure extends to a greater or less extent along the dorsum of the penis.

**Epispadi'asis.** (Ἐπισπῖω.) The condition of *Epispadias*.

**Epispad'ic.** (Ἐπισπῖω.) Relating to *Epispadias*.

**E. fissure.** (L. *fissura*, a cleft.) Same as *Epispadias*.

**Episp'asis.** (Ἐπί; σπῖω.) Rochard's name for a skin eruption resulting from the action of remedies, and indicating a disturbance or change in the tissues of the body, such as the eruption which occurs during the use of certain mineral waters.

**Epispas'mus.** (Ἐπισπασμός, a drawing in of the breath. F. *épisparme*.) A hurried and violent inspiration.

**Epispas'tic.** (Ἐπισπαστικός; from ἐπισπῖω, to draw to. F. *épispastique*; G. *reizend*.) Having the power of producing a serous or puriform discharge by exciting a previous state of inflammation, vesication, and suppuration.

**E. pa'per.** See *Charta epispastica*.

**Epispas'tica.** (Ἐπισπαστικός, drawing

to one's self. *G. Reizmittel.*) Agents whose properties are *Epispastic*.

**E. pustulan'tia.** (*L. pustula*, a pustule. *G. pustelbildende Mittel.*) Epispasties which produce a pustular eruption on the skin, such as tartar emetic and croton oil.

**E. rubefacientia.** (*L. rubefacio*, to make red. *G. hautröthende Mittel.*) Epispasties which produce redness and smarting of the skin, such as mustard, dilute solutions of ammonia, and very hot fomentations with turpentine added.

**E. suppurantia.** (*L. suppus*, to form matter. *G. eiterziehende Mittel, geschwürbildende Mittel.*) Epispasties which produce a prolonged and continuous suppuration from the skin surface, such as mezereum and savin.

**E. vesicantia.** (*L. vesica*, a blister. *G. blasenziehende Mittel.*) Epispasties which produce a blister, such as cantharides.

**Episperm.** (*Ἐπί, upon; σπέρμα*, a seed. *F. episperme; G. Samendecke, Samenhaut.*) A term for the whole integuments of a seed taken together.

Also, the outer integument only or testa of a seed.

**Epispermic.** (*Ἐπί; σπέρμα.*) Relating to the *Episperm*.

**E. embryo.** An embryo of a seed which lies immediately underneath the episperm.

**Episphæria.** (*Ἐπί, upon; σφαῖρα*, a sphere.) Old term for the convolutions of the brain, according to Blancardus.

Also, the windings of the cerebral blood-vessels.

**Episplenitis.** (*Ἐπί, upon; σπλήν*, the spleen.) Inflammation of the capsule of the spleen.

**Episporangium.** (*Ἐπί, upon; σπóρος*, seed; *ἀγγείον*, a vessel. *F. episporange.*) Name by Bernhardt for the indusium of ferns.

**Epispore.** (*Ἐπί; σπόρος*, seed. *G. Sporenhaut.*) The outer membrane or covering of a spore of a lichen or a fern.

**Epistactischesis.** (*Ἐπιστάσις*, bleeding at the nose; *σχέσις*, a checking. *F. epistactische.*) An allaying or a stopping of nose-bleeding or *Epistaxis*.

**Epistagmos.** (*Ἐπισταγμός*; from *ἐπιστάζω*, to drop, or trickle.) Old name for a catarrh, according to Dioscorides, iii, 23.

Also, a bleeding at the nose.

**Epistagmus.** Same as *Epistagmos*.

**Epistaminal.** (*Ἐπί, upon; stamēn.* *F. epistaminal; G. überstäubfädig.*) Growing upon the stamens, as the glands of the *Dictamnus albus*.

**Epistaminæous.** (*Ἐπί, upon; stamen.* *F. epistaminé.*) Applied to dicotyledonous, apetalous plants, in which the stamens are epigynous, or inserted above the ovary.

**Epistaminia.** (Same etymon. *F. epistaminé.*) A Jussieuian Class of apetalous, dicotyledonous plants with epigynous stamens.

**Epistaphylinus.** (*Ἐπί, upon; σταφυλή*, the uvula. *F. epistaphylin.*) A term for each half of the *Azygos uvulæ* muscle.

**Epistasis.** (*Ἐπίσταναι*, to move to, or collect.) Old term (*Gr. ἐπίστασις*), used by Hippocrates, *Coac. Fractot.* 487, in the same sense as *Epischesis*.

Also (*Ἐπί, upon; ἵστημι*, to stand), the pellicle or any other substance that is borne on the surface of the urine.

**Epistation.** (*L. e*, for *ex*, thoroughly; *pisto*, to pound.) The bruising in a mortar of

soft and parenchymatous substances until they have assumed a pasty condition.

**Epistaxis.** (*Ἐπιστάσις*; from *ἐπιστάζω*, to let fall in drops upon. *F. epistaxis; I. epistassi; G. Nasenbluten.*) Bleeding from the nostrils.

**E. acciden'tal.** Bleeding from the nostrils caused by a blow, or by violent efforts.

**E. spontaneus.** (*L. spontaneus*, willing.) Bleeding from the nostrils produced by other than mechanical causes.

**E. vica'rious.** (*L. vicarius*, substituted.) The bleeding from the nose which occurs sometimes in young females as a substitute for, or a supplement to, the normal menstrual discharge.

**Epistemonic.** (*Ἐπί, upon; στέρμα*, a thread. *F. epistemonique.*) Resting or lying on the stamen.

**Episternal.** (*Ἐπί, upon; στέρνον*, the breast.) Upon the chest or upon the *Sternum*.

**E. bones.** The *Ossa suprasternalia*.

**E. gran'ules.** (*L. granulum*, a small grain.) The rudiments of the omosternal bones.

**Episternite.** (*Ἐπί; στέρνον.*) The lateral piece of the lower part of each segment of the head of an Arthropod.

**Episternum.** (*Ἐπί, upon; στέρνον.* *F. episternum; G. Oberbrustbein.*) A term for the *Interclavicular bone*.

Also, a lateral piece of the thorax of Arthropods, above the cotyloid cavities.

**Episthotonus.** A synonym, and perhaps a derivative, of *Emprosthotonus*, of barbarous manufacture.

**Epistoma.** (*Ἐπί, upon; στόμα*, a mouth. *F. Epistome, surbouche; G. Untersicht.*) The name of a projecting lobe from the mouth of certain freshwater Bryozoa.

Also, a name for the hood of the *Condylapoda*. Also, a pentagonal surface in front of the labrum and mandibles of some Crustacea, the centre of which bears a point, and each side a small spine.

Also, the prominent upper border of the cavity at the base of the rostrum of certain Acari.

Also, generally, the part connecting the upper lip to the clypeus in mandibulate insects.

**Epistome.** Same as *Epistoma*.

**Epistomis.** Same as *Epistoma*.

**Epistomium.** Same as *Epistoma*.

**Epistomous.** (*Ἐπί; στόμα.* *F. epistome; G. übermundig.*) A term applied by Bridel to mosses which have the mouth of the urn closed by a horizontal membrane.

**Epistrophalus.** The same as *Epistropheus*.

**Epistrophë.** (*Ἐπιστροφή*, a turning about.) A relapse.

Also, a term employed by Frank to denote the collection in a plant cell of the chlorophyll granules and the protoplasm on the upper and lower surfaces, and not at the sides, in other words, on the free cell walls; and he applies the word apostrophe to the condition in which they are collected at the lateral parts of the cells only, that is, on the parts of the cell walls adjacent to other cells.

**Epistropheus.** (*Ἐπιστροφεύς*, a turning, a pivot; from *ἐπιστρέφω*, to turn round. *F. épistrophe; G. Umdreher, Umwenden.*) An old name for the atlas, or first vertebra of the neck, because it and the head by their intimate connection rotate on the second vertebra, as upon a pivot.

Also, applied to the second vertebra, the body

of which coalesces with the detached body of the first vertebra or atlas to form the *Processus odontoides*.

**Epistrophia.** Same as *Epistropheus*.

**Epistrophis.** Same as *Epistropheus*.

**Epistrophy.** (*Ἐπιστροφή*, a turning about.) The reversion of an irregular form to a normal one.

**Episynanchē.** (*Ἐπί; συνάγχη*, inflammation of the internal muscles of the throat.) A synonym of *Parasynanche*.

Also, employed to denote spasm of the pharynx with inability to swallow, and forcible rejection of the fluid through the nose and mouth.

**Episynthesis.** (*Ἐπισύνθεσις*.) A further combination or composition.

**Episynthetic.** (*Ἐπισυνθετικός*, combining; from *ἐπί*, upon; *σύν*, with; *τίθημι*, to place.) Combining, compounding.

**E. sect.** An old sect of physicians who professed to combine the principles of the methodists with those of the empirics and the dogmatists.

**Epitasis.** (*Ἐπιτέσις*, to increase in intensity.) Old term (*Gr. ἐπίτασις*), used by Hippocrates, *de Rat. Vict. in Acut.* iv, 114, for the beginning and increase of the fit of a fever.

Also (*ἐπιτέσις*), old term for a stretching of the nerves, as opposed to a relaxation.

**Epithellum.** Same as *Epithelium*.

**Epithalline.** (*Ἐπί, upon; θαλλός*, a green leaf.) Growing on the thallus of a plant.

**Epithallus.** (*Ἐπί; θαλλός*.) The cuticular layer of the thallus of lichens.

**Epithēca.** (*Ἐπί, upon; θήκη*, a case.) An investing layer outside the exotheca of some *Actinozoa*.

**Epithecal.** (*Ἐπί; θήκη*.) Relating to the *Epithēca*.

**E. dissepiments.** (*L. dissepimentum*, a partition.) Horizontal plates uniting the zooids of a colony in the *Actinozoa*.

**Epithēcium.** (*Ἐπί, upon; θήκη*, a case.) The surface of the fructifying disc in Pezizæ and Lichens. (Cooke.)

**Epithelia.** (*Ἐπί; ἐπιθήκη*, a seat.) A term applied by Ruysch to the cuticular covering of the red part of the lips to distinguish it from epidermis, and to denote the fact that it covers the papillæ which are there abundant.

**E. spuria.** (*L. spurius*, false. *G. unächte epithelien*.) The same as *Endothelium*.

**Epitheliac.** (*Ἐπί; ἐπιθήκη*.) Relating to the *Epithellum*.

**Epithelial.** (*Ἐπί; ἐπιθήκη*.) Of, or belonging to, the *Epithellum*.

**E. cancer.** See *Cancer, epithelial*, and *Epithelioma*.

**E. casts.** See *Renal casts, epithelial*.

**E. cells.** The cells of *Epithellum*.

**E. laminae.** (*L. lamina*, a thin plate. *G. Epithelut platten*.) Term applied by His to the epiblast and hypoblast of the embryo, since these are chiefly engaged in the development of the skin and cellular lining of the intestine.

**E. membrane.** See *Membrane, epithelial*.

**E. muscle cells.** (*G. Epithel muskellzellen*.) The same as *Nervo-muscular cells*.

**E. nests.** Same as *Cell-nests*.

**E. pearls.** A term applied to the *Cell-nests* of epithelial cancer when they contain much amorphous colloid matter.

**E. tis'sues.** See *Tissues, epithelial*.

**E. tumour.** Same as *Cancer, epithelial*.

**E. ulcer.** See *Ulcer, epithelial*.

**Epitheliated.** (*Ἐπί; ἐπιθήκη*.) Possessing an *Epithellum*.

**Epithe'lioid.** (*Ἐπί; ἐπιθήκη; εἶδος*, likeness.) Resembling epithelium.

**E. cells.** A term applied to cells of membranous connective tissue when they are flattened and form a sort of covering.

Also, applied to the cells of the lining membrane of the heart and blood-vessels, and the serous membranes. See *Endothelium*.

**E. layers.** A term applied to the lobular arrangement of the osteoblasts on the surface of the trabeculae of calcified cartilage during endochondral ossification.

**Epithelioma.** (*Ἐπί; ἐπιθήκη*.) A form of cancer of the skin and mucous membranes in which the characters of their epithelial tissue are reproduced in the structure of the tumour, but in which it assumes the form of indefinite masses and not of definite organs. Epithelioma is subject to colloid degeneration, to desiccation, to ulceration, and to partial or total gangrene. See *Cancer, epithelial*.

**E., can'croid.** Same as *Cancer, epithelial*.

**E., colloid.** (*Κόλλα*, glue; *εἶδος*, likeness.) An epithelioma in which the cells undergo a colloid degeneration, the nucleus is distended by the nucleolus which has become vesicular, and this condition extends to the cell itself, the protoplasm of which becomes like a translucent mucus.

**E., colum'nar.** A synonym of *Cancer, adenoid*.

**E., cor'neous.** (*L. cornu*, horn.) An epithelioma in which the cells have become dried up and horny in texture.

**E., cylin'drical.** The form of epithelioma in which the cells are cylindrical, and generally form only one row. The same as *Cancer, adenoid*.

**E., cys'tic.** (*Κύστις*, a bladder.) An epithelioma in which some parts have undergone mucoid degeneration so as to form small cavities filled with a mucous fluid.

**E., flat-celled.** Same as *E., tessellated-celled*.

**E., mili'ary vis'ceral.** (*L. milium*, a millet seed; *viscus*, a bowel.) The small, whitish, opalescent, granular masses on the surface of a serous membrane or in the lungs, usually called miliary tubercles, which are, according to some, really minute epitheliomas.

**E. mollus'cum.** Virchow's term for *Molluscum contagiosum*.

**E. myxomato despsammo'sum.** (*Μύξα*, mucus; *εἶδος*, likeness; *ψάμμος*, sand.) A rare tumour of the brain, described by Rindfleisch as consisting of globes and cylinders of epithelial cells enclosed in a bulky stroma of mucous tissue, and containing hard granules which are calcified cell-nests.

**E., papill'e mateous.** Same as *Papilloma*.

**E., pave'ment-celled.** Same as *E., tessellated-celled*.

**E., pave'ment, pearly.** Same as *E., tessellated-celled, pearly*.

**E., squa'mous-celled.** Same as *E., tessellated-celled*.

**E., tes'selated-celled.** (*L. tessellatus*, made of square stones.) The form of epithelioma in which the cells are flattened and arranged in stratified layers.

## EPITHELIUM.

**E., tessellated-celled, lobular.** (L. *lobulus*, a little lobe.) The form where the epithelial masses form small lobules, growing from their periphery, in which the outer cells are more or less spherical or polyhedral, got flattened towards the centre of the lobule and there become dry and scaly, so as to form an epidermic globe or cell-nest; these lobules are connected to each other by means of a vascular stroma, but the blood-vessels do not penetrate the epithelial masses. By some it is supposed to be a development from the epithelial tissue of the part affected, by others to be a new formation of embryonal tissue; by whichever way it arises it grows in connection with the deep layers of the rete Malpighii in the intercapillary spaces, from whence it penetrates the corium, the sebaceous glands, and the sudoriparous glands.

**E., tessellated-celled, pearly.** The form in which on section the tumour appears dry, whitish, and somewhat glistening from dried epidermic scales, and contains *Epithelial pearls*. It is one of the tumours included under the term *Cholesteatoma*, but it contains little cholesterol.

**E., tessellated-celled, tubular.** The same as *Cylindroma*.

**E., villous.** A lobular tessellated epithelioma in which the stroma has undergone excessive development, and projects on the free surface in the form of villi.

**Epithelium.** (Επί, upon; θηλή, the nipple. F. *épithélium*; I. *epitelio*; S. *epitelio*; G. *Oberhäutchen*, *Epithel*.) A term originally applied as an adjective, epithelios, to the cuticle of the red part of the lips, see *Epithelia*; but it is now generally used for the cuticle covering any dermic surface, be it skin or mucous membrane; it consists of a layer or layers of cells of variable shape, originally nucleated, consisting of protoplasm which, along with that of the nucleus is reticulated, and attached to each other by an interstitial, semifluid, cement substance. Epithelium possesses no blood-vessels, but is traversed in many instances by fine nervous fibrils. It consists chiefly of keratin; and in 100 parts contains C. 51.53, H. 7.03, N. 16.61, O. 22.32, and S. 2.48.

In Botany, Schleiden has applied the term to the innermost cellular lining of the ovary of a plant.

**E., alveolar.** The epithelium of the alveoli or air-cells of the lungs; they are flattened transparent cells having stomata between them.

**E., calyciform.** (L. *calyx*, a cup; *forma*, shape.) Cup-shaped epithelial cells occasionally found in the midst of a layer of cylindrical epithelium; they are probably cells in process of destruction, having undergone central softening.

**E., cement-substance of.** The semifluid substance which unites the adjoining surfaces of the epithelial cells; it is of the nature of globulin.

**E., ciliated.** (L. *cilium*, an eyelash. F. *épithélium à cils vibratiles*; G. *Flimmerepithel*, *Wimperepithel*.) Epithelium consisting of cells bearing at their free extremities many fine, hair-like, vibratile filaments called cilia, which are continuous with the striae of the protoplasm of the cell; it occurs on the mucous membrane of the air-passages from the nostrils to the commencement of the respiratory bronchial tubes, on the mucous lining and in the glands of the uterus, in the Fallopian tubes, in some of the testicular excretory ducts, in the ventricles of the brain and the central

canal of the spinal cord, in the excretory ducts of the pharyngeal and other racemose glands, and in the upper part of the alimentary mucous membrane of the embryo; it is found in the tubules of the kidney in some mammals, and on many of the respiratory surfaces of aquatic animals. The vibration of the cilia serves the purpose of propelling matter along the surface of the mucous membrane.

**E., columnar.** (L. *columna*, a pillar.) The form in which the cells are columnar or prismatic or cylindrical, set on end and sometimes so closely lying against each other as to be flattened or angulated, and to present a mosaic-like face aspect; they are sometimes long, sometimes short, and possess an oval reticulated nucleus; the reticulation of the protoplasm is more or less longitudinal, and produces vacuoles. The free surface of the cell is finely striated, and at its border often adheres to that of its neighbour so closely, that when hardened by reagents it may be stripped off as a cuticle. The cells may vary from the columnar shape, and may become conical, club-shaped, or spindle-shaped, and may have fine, simple, or branched extremities.

**E., columnar, simple.** Columnar epithelium in one row only, as on the inner surface of the stomach, and in the ducts and acini of mucous glands.

**E., columnar, stratified.** Columnar epithelium in several layers, as in the lining membrane of the larynx and trachea.

**E., corneal.** See under *Cornea*.

**E., cylindrical.** (Κύλινδρος, a cylinder. F. *épithélium prismatique*; G. *Zylinderepithel*.) Same as *E., columnar*.

**E., flattened.** A synonym of *E., tessellated*.

**E., germinal.** (L. *germino*, to bud. F. *épithélium germinatif*; G. *Keimepithel*.) A term applied by Waldeyer to the columnar epithelium covering the mesoblastic mass, in which the genito-urinary organs subsequently develop. As the embryo develops the columnar epithelium becomes limited to the inner and outer parts of the surface of the Wolffian body, the intermediate cells being flat. The canal of Müller, which becomes the oviduct, is formed by an involution of the external portion of the germinal epithelium; the ovary, with the contained primordial ovules, is developed from the internal portion of the germinal epithelium. According to Semper, the male organs are also formed from this epithelium.

**E., germinative.** The same as *E., germinal*.

**E., glandular.** The *E., spheroidal*, from its frequent occurrence in the alveoli of secreting glands.

**E., lamellar.** (L. *lamella*, a thin plate.) Same as *E., tessellated*.

**E., lamellose.** (L. *lamella*.) Same as *E., tessellated*.

**E., lymphatic.** The layer of endothelial cells lining a lymphatic.

**E., micans.** (L. *micans*, twinkling.) A synonym of *E., ciliated*, from its glistening appearance when the cilia are moving.

**E., nucleated.** (L. *nucleus*, a small nut.) Epithelium consisting of nucleated cells, such as is seen in the lymphatic glands.

**E. of plants.** The variety of epidermis which covers the young organs of plants and their secreting surface.

# EPITHEM—EPITROCHLEO-PHALANGEAL MUSCLE, COMMON.

**E., ova'rian.** (*Ovary.*) The one-rowed, columnar epithelium which covers the surface of the ovary; it is derived from the *E., germinative.*

**E., pa'vement.** (*F. épithélium pavimenté; G. Pflaster-epithel.*) Same as *E., tessellated.*

**E., pa'vement, simple.** Same as *E., tessellated, simple.*

**E., pa'vement, stratified.** Same as *E., tessellated, stratified.*

**E., pig'mented.** (*L. pigmentum, a paint.*) Epithelial cells which contain pigment granules. See *Pigment-cells.*

**E., polyhe'dric.** (*Πολύεδρος, with many bases.*) The form of spheroidal or short columnar epithelium in which the cells are so numerous and closely pressed together as to become flattened on many sides.

**E., prismatic.** (*Πρίσμα, a prism.*) Same as *E., cylindrical.*

**E., pyram'idal.** A synonym of *E., columnar.*

**E., sca'ly.** Same as *E., tessellated.*

**E., se'rous.** Same as *Endothelium.*

**E., simple.** The form which consists of one row of cells only.

**E., spheroid'al.** (*Σφαῖρα, a ball; εἶδος, likeness. F. épithélium sphérique; G. Kugel-epithel.*) The form which is chiefly found in the alveoli of secreting glands, in which the cells are more or less rounded; their protoplasm generally contains the matters which the gland secretes.

**E., squa'mous.** (*L. squama, a scale. G. Plattenepithel.*) The form in which the cells have become flattened or scaly, as in the superficial layers of the epidermis. Same as *E., tessellated.*

**E., squa'mous, simple.** Same as *E., tessellated, simple.*

**E., stratified.** (*L. stratum, a bed; facio, to make.*) The form in which the cells are arranged in more or less distinct layers, the uppermost generally consisting of more or less flattened cells by the pressure from below of new formations, as in the mouth and vagina; it may also be columnar. It is usually of ectodermic origin.

**E. tabula'rē.** (*L. tabula, a plate. G. Plattenepithel.*) Same as *E., tessellated.*

**E., tegumentary.** (*L. tegumentum, a covering.*) The epidermis and its prolongations into the outlets of the body; it is a development of the epiblastic layer of the blastoderm and consists chiefly of keratin.

**E., tes'selated.** (*L. tessellatus, made of square stones. G. Pflaster-epithel.*) The form in which the cells are cubical, or are reduced to polygonal plates or scales attached by their edges, which may be straight, wavy, or dentated. It occurs in the serous membranes, in the alveoli of the lungs, and in the mammary ducts.

**E., tes'selated, simple.** Squamous or tessellated epithelium in one row only, as in the air-cells, and the acini of the mammary gland.

**E., tes'selated, stratified.** Tessellated epithelium in several layers one upon another, as the epidermis.

**E., transi'tional.** (*L. transitio, a passing over.*) A term applied to certain forms of epithelium which are intermediate between the one-rowed and the many-rowed forms, or between simple and stratified epithelium. Such is the epithelium lining the urinary bladder and the ureters.

**E., vas'cular.** The epithelial lining of the vessels. See *Endothelium.*

**E., vi'brans.** (*L. vibro, to set in tremulous motion.*) The *E., ciliated.*

**E., vi'bratile.** (*L. vibro.*) The *E., ciliated.*

**Epithem.** (*Ἐπίθεμα; from ἐπί, upon; τιθεῖν to place. F. épithème; G. Umschlag.*) Term for any kind of moist, or soft, external application not a plaster or salve.

**E., dry.** A powder applied in bag.

**E., liq'uid.** A fomentation.

**E., soft.** A poultice, especially applied to a cold poultice of scraped raw potatoes, applied to burns and scalds.

**Epithēma.** Same as *Epithem.*

**Epithematium.** The same as *Epithem.*

**Epithēsis.** (*Ἐπίθεσις; from ἐπιτίθεσθαι, to place upon.*) Old term for the straightening of crooked limbs by aid of instruments.

**Epithymia.** (*Ἐπιθυμία, desire; from ἐπιθυμῆναι, to long for. F. épithymie; G. Begierde.*) A desire or longing.

**Epithymia ma.** (*Ἐπιθυμίαμα, an incense-offering.*) A fumigation.

**Epithymum.** (*Ἐπί, upon; θυμός, thyme.*) The dodder of thyme, *Cuscuta epithymum.*

**E. officina'rum.** (*L. officina, a shop.*) The *Cuscuta epithymum.*

**Epitrichium.** (*Ἐπί, upon; θρίξ, hair.*) A superficial layer of epidermis which in the earlier stages of development of many mammals becomes detached and forms a sheath or case for the whole embryo, enclosing even the hairs. In Bradypus it persists till birth, but is thrown off at an earlier stage in the pig; it has also been seen in other Edentata and Suidæ. It has been regarded as a survival of an ecdysis, analogous to the ecdysis of reptiles.

**Epitroch.** (*Ἐπί, upon; τροχός, a wheel.*) A term applied to those circlets of cilia in the larvæ of some Echinodermata and Vermes, which are in addition to and below the branchio-troch.

**Epitrochlea.** (*Ἐπί, upon, or additional; τροχαλία, a pulley. F. épitrochlee.*) Chaussier's name for the lesser or internal condyle of the humerus.

**Epitrochlear.** (*Ἐπί; τροχαλία.*) Relating to the *Epitrochlea.*

**E. mus'cles.** The five muscles attached by a tendon to the epitrochlea; they are the pronator radii teres, the flexor carpi radialis, the palmaris longus, the flexor carpi ulnaris, and the flexor sublimis digitorum.

**Epitrochleo-ancone'us.** (*Ἀγκών, the elbow.*) A small muscle lying over the ulnar nerve at the elbow; it arises from the back part of the inner condyle, and is inserted into the neighbouring part of the olecranon. It is always present in the Edentata, becomes less regular in the ascending scale of animals, and is only occasionally found in man.

**Epitrochleo-metacar'pal mus'cle.** (*F. épitrochleo-metacarpien.*) Chaussier's name for the *Palmaris longus.*

**Epitrochleo-palmar mus'cle.** (*F. épitrochleo-palmaire.*) The *Palmaris longus*, from its attachments.

**Epitrochleo-phalangeal mus'cle, com'mon.** The *Flexor sublimis digitorum.*

**Epitrochleo-radial muscle.** The *Pronator radii teres*.

**Epitrochous.** (Ἐπί; τροχός.) Having an *Epitroch*.

**Epitropous.** (Ἐπί; τροπός, a turn; from *τροπῶν*, to turn.) Agardh's term for an anatroplus ascending ovule having its raphe turned from the placenta, and for an anatroplus suspended ovule when its raphe is turned to the placenta.

**Epitympanic.** (Ἐπί, upon; *tympa-nic*. F. *epitympanique*.) Applied by Professor Owen, in his Homologies, to the uppermost subdivision of the tympanic pedicle which supports the mandible in fishes.

**Epius.** Same as *Epius*.

**Epivertebral.** (Ἐπί; L. *vertebra*, a spine bone.) Grant's term for the superior portions of the spinous process of a vertebra.

**Epivitelline.** (Ἐπί, upon; L. *vitellus*, the yolk of an egg.) Situated on the yolk or vitellus.

**E. animals.** Animals in which the body of the embryo is applied to the vitellus by its ventral face, so that it lies upon it, as it were; such are the Vertebrata.

**Epixyloous.** (Ἐπί, upon; ξύλον, wood.) Applied to plants that grow on wood.

**Epizoa.** (Plural of *Epizoon*.) A Group of the Subclass *Entomostraca*, which are parasitic on other animals; or a Subclass of the Class *Crustacea*, having an elongate, subarticulate body, a snout-like mouth, and antennae and limbs terminated by suckers, hooks, or bristles; they have no respiratory organs.

**Epizoan.** (Ἐπί; ζῶον, an animal.) An *Epizoon*.

Also, relating to the *Epizoa*.

**Epizoidic.** (*Epizoon*; L. *cadō*, to kill.) An agent capable of and fitted for the destruction of an animal parasite of the skin.

**Epizoon.** (Ἐπί, upon; ζῶον, an animal. F. *epizooire*; G. *Schmarotzerthier*.) An animal that lives upon another; an external parasite.

**Epizoonosis.** (Ἐπί; ζῶον; νόσος, a disease.) Diseases produced by *Epizoa*.

**Epizootia.** (Ἐπί; ζῶον.) Same as *Epizooty*.

**Epizootic.** (Ἐπί; ζῶον. F. *épizootique*.) Applied to any contagious disease that attacks numbers of cattle at the same time and in the same place.

Also, sometimes, relating to an *Epizoon*, or to the *Epizoa*.

**E. aphtha.** See *Aphtha, epizootica*.

**Epizootiology.** (Ἐπί; ζῶον; λόγος, discourse.) The doctrine of epizootics.

**Epizooty.** (F. *épizootie*; G. *Thier-seuche*.) An epizootic disease.

**E. chancreous.** (*Chancre*.) Same as *Mal de coït*.

**Epliate.** (L. *e*, neg.; *plio*, to fold.) Not folded or plaited.

**Epoche.** (Ἐποχή, a check, cessation.) A term used to express suspension of judgment; and also suppression of an excretion.

**Epochetousis.** (Ἐποχέτευσις, to derive from another.) Old term (Gr. *ἐποχέτευσις*), used by Hippocrates, *de Venis*, xxi, 9, for a derivation, or a drawing away of the juices to other parts.

**Epodē.** (Ἐπωδή, an enchantment. G. *Bezauberung*.) Old term for the method of

curing diseases by incantation, according to Langius, i, 33, and ii, 46.

**Epoikia.** (Ἐπί, upon; οἶκος, house.) The same as *Epidenia*.

**Epollicate.** (L. *e*, neg.; *pollex*, the thumb. F. *époucé*; G. *ungedumt*.) Having no thumb.

**Epoimis.** (Ἐπί, upon; ὤμος, the shoulder.) Old term (Gr. *ἐπωμῖς*), used by Hippocrates, *de Art.* i, 4, and iii, 41, for the acromion or point of the shoulder.

**Epomphalicum.** Same as *Epomphalum*.

**Epomphalion.** (Ἐπομφάλιον.) The umbilical region; also the uterus.

**Epomphalum.** (Ἐπί, upon; ὀμφαλός, the navel.) Old term for an application to the navel, mentioned by Paulus Aegineta, vii, 9, Adams's Transl., vol. iii, p. 502.

Also, a plaster for umbilical hernia.

Also, the umbilical region.

**Eponychium.** (Ἐπί; ὄνυξ, a finger-nail.) The mass of thickened and hardened epidermis on the dorsal surface of the extremity of the first phalanges in the foetus, which precedes the formation of the true nail beneath it.

**Epoophoron.** (Ἐπί, upon; ὄοφορος, bearing eggs. G. *Nebenstock*.) Waldeyer's name for the organ of Rosenmüller, or *Paraovarium*, to indicate that it is the analogue in the female of the epididymis in the male.

**Epopitic.** (Ἐπί, upon; ὀπταίω, to see.) Term applied to Newton's rings, or the coloured concentric rings that are seen when a slightly convex transparent body is applied to another having a plane surface.

**Eporosa.** (L. *e*, neg.; *porus*, a pore.) A Suborder of the Order *Sclerodermata*, having the corallum imperforate.

**Epostoma.** (Ἐπί, upon; ὀστίον, a bone. F. *epostome*.) An excrescence of a bone; an exostosis.

**Epostosis.** The formation of *Epostoma*.  
**Eppenhäusen.** Germany, in Westphalia. A mineral water, containing sulphate of lime 2 grains, carbonate of lime .6, and carbonate of iron .333 grain, in 16 ounces.

**Eproboscitate.** (L. *e*, neg.; *proboscis*, a trunk.) Having no proboscis.

**Epsēma.** (Ἐψήμα, anything boiled.) A decoction.

**Epsēsis.** (Ἐψήσις, a boiling.) The act of boiling or making a decoction.

**Epsom.** England, in Surrey. Mineral waters containing sulphate of magnesia. Seldom now used.

**E. salts.** The crystalline compound obtained by evaporating Epsom mineral water; it consisted chiefly of magnesium sulphate; this salt is no longer made in this manner, but it still retains the name. Its presence in the Epsom mineral water was first described by Grew in 1695.

**E. salts, double.** The crystals obtained by the solution and recrystallisation of *E. salts, single*.

**E. salts, single.** The first crystallisation in the manufacture of sulphate of magnesia from bitters.

**Epsomite.** A term for natural magnesium sulphate, or Epsom salts; it often contains also sodium and calcium sulphates. It is found in rod-like, acicular, or fibrous masses in gypsum, and effloresces when exposed to the air.

**Epulis.** (Επί, upon; οὔλα, the gums. F. *epule*; L. *epulide*; G. *Epulis*, *Zahnfleischschwamm*.) A firm fibrous tumour growing from the edge of the alveolar process between two teeth, most usually on the outer side, involving the periosteum and the gum, sometimes lobulated, and generally insensitive. It takes its origin probably from the periosteal lining of the alveolus; it consists mainly of dense fibrous tissue, with sometimes spiculae or plates of bone. It is generally a spindle-celled sarcoma.

The term has been used by some to denote any tumour of, or outgrowth from, the gum.

**E., malignant.** Same as *E., myeloid*.

**E., myeloid.** (Μυελός, marrow; εἶδος, likeness.) A myeloid or giant-celled sarcoma growing from the alveolar process.

**Epulosis.** (Επυλώσις. F. *epulose*; G. *Vernarbung*.) A scarring over, or cicatrizing.

**Epulotic.** (Επυλωτικός. F. *epulotique*; G. *vernarrend*.) Having power to cicatrize; applied to medicines that dry or harden the flesh, and induce cicatrization.

**Eputation.** (L. *e*, out.) Same as *Depuration*.

**Equal.** (L. *aequalis*, equal. F. *égal*; I. *eguale*; G. *gleichförmig*.) The same in size, quality, worth, number, and other properties; even; uniform.

**E. leaf.** A leaf in which the parts on each side of the midrib is symmetrical and alike.

**Equally.** (L. *aequus*.) Alike.

**E. pin'ate.** Same as *Purpin'ate*.

**Equation.** (L. *aequatio*, an equalising; from L. *aequus*, equal.) A making equal; an exposition of equality.

**E., chemical.** A formula by which the reaction between two or more substances is represented by symbols, those denoting the reacting substances being placed on the left of a sign of equality, and those representing the new products on the right; as, for instance,  $FeI_2 + K_2CO_3 = 2KI + FeCO_3$  shows that when iodide of iron is decomposed by potassium carbonate there results, by a rearrangement of elements, potassium iodide and ferrous carbonate.

**Euator.** (L. *aequo*, to make equal. F. *equateur*; G. *Gleicher*.) That which maketh equal.

**E., celest'ial.** (L. *caelestis*, heavenly.) The great circle of the heavens, being an extension of the plane of the terrestrial equator, having for its axis an extension of the earth's axis to the heavens, which it divides into northern and southern hemispheres.

**E., equinoc'tial.** (L. *aequus*, equal; *nox*, night.) The *E. celest'ial*.

**E., magnet'ic.** See *Magnetic equator*.

**E. of magnet.** See *Magnet, equator of*.

**E., terres'trial.** (L. *terrestris*, earthly.) The great circle of the earth, perpendicular to its axis, equidistant 90° from the two poles, and separating the globe into northern and southern hemispheres; hence its axis and poles are those of the earth.

**Equi clibanus.** (L. *equus*, a horse; *clibanus*, an oven.) An old chemical term for the heat supplied by a heap of fermenting horse dung.

**Equian'gular.** (L. *aequus*, equal; *angulus*, an angle.) Having the angles equal.

**Equidæ.** (L. *equus*, a horse. F. *équidés*.) Resembling, or belonging to, a horse; applied to

a family of animals having the *Equus*, or horse, for their type.

**Equidif'ferent.** (L. *aequus*, equal; *differens*, part. of *differo*, to differ.) Having the same or similar differences.

**Equilat'eral.** (L. *aequus*, equal; *lateralis*, belonging to the side.) Having the sides equal.

**Equilibrat'ion.** (L. *aequus*, equal; *libro*, to balance.) The act or condition of keeping an equal balance. Applied to the actions and influences which concur in keeping the body in equilibrium; these are chiefly impressions originating in the labyrinth, assisted by the senses of touch and sight.

**Equilibrity.** (L. *aequus*; *libro*.) The state of being equally balanced; equilibrium.

**Equilibrium.** (L. *aequilibrium*, an even balance; from *aequus*, equal; *libro*, to balance.) Even balancing, an absence of inclination to one side or to the other.

**E., indif'ferent.** Same as *E., neutral*.

**E., mobile, of temperature.** (L. *mobilis*, movable.) The condition of two neighbouring bodies of different temperatures when they have arrived at the same temperature, at which time each will give to the other as much heat as it receives from it.

**E., neutral.** (L. *neuter*, neither.) The state of equilibrium of a body which will continue at rest when placed in other and adjacent positions, as a sphere on a horizontal plane.

**E. of float'ing bodies.** The state of rest of a floating body which exists when the volume of liquid it displaces is equal to its own weight, and when its centre of gravity and that of the displaced liquid are in the same vertical line.

**E. of forces.** The condition of two or more forces acting on a body in different directions which exists when they are mutually and evenly balanced, so that they cannot move the body.

**E. of liquids.** The state of rest of a liquid in its containing vessel which only obtains when its upper surface is perpendicular to the resultant of the forces acting on its molecules, and when every molecule is subject in every direction to equal and contrary pressures.

**E., sta'ble.** (L. *stabilis*, firmly standing.) The state of equilibrium of a body which will return to its original position after it has been slightly disturbed.

**E., unsta'ble.** The state of equilibrium of a body which has a tendency to depart still more from its original position when it has been disturbed.

**Equina cau'da.** See *Cauda equina*.

**Equination.** (L. *equus*, a horse.) A term applied to the inoculation with lymph from a form of the disease called *Grease* in the horse, which was supposed to be the analogue of the cowpox of the cow, and had the same protective effect against smallpox.

**Equinc.** (L. *equus*, the horse.) Belonging to, or resembling, the horse.

Also, a term for the *Grease*.

**Equinia.** (L. *equus*, the horse.) A term which has been applied both to *Glanders* and *Farcy*.

**E. glandulo'sa.** (L. *glandulosus*, full of glands.) A synonym of *Glanders*.

**E. mit'is.** (L. *mitis*, mild. G. *gutartiger Wurm*, *Druse*.) A pustular affection of the skin

produced by inoculation with the disease of horses called *Grease*. The pustules are large, ecthymatous, and have an elevated purplish base.

**Equinoctial.** (L. *equinoctium*, the equinox, or period when day and night are of equal length. F. *équinoctiel*; G. *Nächtegleichig*.) Belonging to the equinox.

**E.colure.** See *Colures*.

**E. equator.** See *Equator*.

**E. points.** Term for the first points of *Aries* and *Libra*, because when the sun is near them the days and nights are equal.

**Equinox.** (L. *æquus*, equal; *nox*, night. F. *équinox*; G. *Nachtleiche*.) Term for the time when the sun enters the first points of *Aries* and of *Libra*, about March 21st and September 23rd, when the days and nights are of equal length all over the earth, except just under the pole.

**Equipedal.** (L. *æquus*; *pes*, a foot.) Equal footed, having the pairs of feet equal.

**Equipotential.** (L. *æquus*, equal; *potentia*, power.) Having equal power or value.

**Equisetaceæ.** (L. *equisetum*, the horsetail.) The horsetail order. A Nat. Order of the Subclass *Cormophyta*, Class *Acotyledones*, or of the Alliance *Muscales*. Herbaceous plants with striated, fistular, simple, or verticillately branched aerial siliceous stems; fructification in cone-like or club-like terminal masses; spore-cases peltate, dehiscing internally with a longitudinal fissure; spores each with an elater.

**Equisetaceus.** (*Equisetum*.) Relating to the *Equisetaceæ*.

**Equisetic acid.** (L. *equisetum*.) A substance found by Braconnot in the *Equisetum arvense*, said by Regnault to be identical with acetic acid.

**Equisetiform.** (L. *equisetum*, the horsetail; *forma*, likeness.) Like to the *Equisetum*.

**Equisetum.** (L. *æquus*, a horse; *seta*, a bristle. F. *prêle*; G. *Schachtelhaln*.) A Genus of the Nat. Order *Equisetaceæ*.

**E. arvense**, Linn. (L. *arvum*, a corn-field. F. *prêle commun*; G. *Schachtelhaln*.) Corn or common horsetail. Astringent, diuretic and vulnerary. Used in dropsy, hæmaturia, hæmoptysis, diarrhœa, and as an emmenagogue.

**E. fluviatilis**, Linn. (L. *fluviatilis*, belonging to a river. F. *prêle d'eau*.) Used as *E. arvense*.

**E. hyemale**, Linn. (L. *hyems*, winter. F. *prêle d'hiver*.) Dutch rush, scouring rush, shave grass. Used as *E. arvense*, and also in inflammatory conditions of the kidneys, in diabetes, and in the nocturnal incontinence of urine of children.

**E. limosum**, Linn. (L. *limosus*, delighting in mud.) Used as the *E. arvense*.

**E. majus**. (L. *major*, greater.) The *E. hyemale*.

**E. minus**. (L. *minor*, less.) The *E. arvense*.

**E. palustris**, Linn. (L. *paluster*, belonging to a marsh.) Marsh horsetail. Astringent, diuretic, and emmenagogue. Used as a vulnerary.

**Equitant.** (L. *equito*, to ride. F. *équitatif*; G. *reitend*.) Riding; folded one upon another, bestriding one another.

In Botany, applied to undeveloped leaves which overlap each other in this fashion.

**Equitatio.** (L. *equito*, to ride. F. *équitation*; G. *Reiten*.) Term for exercise on horseback; riding.

**Equitative.** Same as *Equitant*.

**Equivalence.** (L. *æquus*, equal; *valeo*, to be worth.) Same as *Equivalency*.

**Equivalency.** (L. *æqualeo*, to be of equal worth.) The capacity of a chemical element to combine with another in definite proportions.

**Equivalent.** (Old F. *équivalent*; from L. *æqualeo*; from *æquus*, equal; *valeo*, to be worth.) That which is equal in value or worth with another.

**E.s., chemical.** A series of numbers indicating the relative quantities of the elements which will take the place of each other in chemical combination; these numbers are either identical with the numbers indicating the atomic weight, or they are multiples or submultiples of them.

**E., electro-chemical.** See *Electro-chemical equivalent*.

**E. numbers.** The numbers described under *E.s., chemical*.

**Equivalve.** See *Equivalved*.

**Equivalved.** See *Equivalved*.

**Equivocal.** (L. *æquivocus*, of various meanings; called equally one thing or the other; from *æquus*, equal; *voco*, to call.) Of doubtful meaning, of uncertain signification.

**E. generation.** See *Generation, equivocal*.

**Equivorous.** (L. *æquus*, the horse; *voro* to devour.) Eating or feeding on horseflesh.

**Æquus.** (L. *æquus*; akin to Sans. *agwa*; Gr. *ἵκκος*, a form of *ἵκκος*; Old Sax. *ehu*. F. *cheval*; G. *Pferd*.) The horse. A Genus of the Suborder *Perissodactyla*, Order *Ungulata*.

**E. asinus**, Linn. (L. *asinus*, the ass. F. *âne*; G. *Esel*.) The systematic name of the ass; the female affords a light nutritious milk; the flesh is used as food. The hoof was considered a di-cu-tient, and when burned was used in epilepsy and hysteria.

**E. caballus**, Linn. The horse. The milk is used fresh, or fermented as the original koumiss; the flesh is eaten as food; it, as well as the dung, was used in snake bites; the fume of the fat was used to expel the placenta, and the hoof was given in epilepsy.

**Eradicate.** (L. *eradicco*, to pluck up by the roots. F. *déraciner*; I. *eradicare*; S. *désarracher*; G. *entwurzeln*, *vertilgen*.) To root up, to destroy thoroughly.

**Eradication.** (L. *eradicco*, to root up.) The rooting up of a thing; the complete destroyal of a disease.

**Eradicative.** (L. *eradicco*, to pull up by the root.) Having the power to root up or destroy. Applied formerly by Fallopius, *de Purg. Simp.* i, c. 16, p. 61, to purging medicines of violent power.

**Eranthemum.** (Ἠρ, the spring; ἀνθήων, a flower.) Old name for a spring flower; applied to a species of chamomile.

**Eranthin.** (Ἠρ, the spring; ἀνθος, a flower.) A synonym of *Helleborin*.

**Eranthis.** (Ἠρ; ἀνθος.) A Genus of the Nat. Order *Ranunculaceæ*.

**E. hyemalis**, Salisb. (F. *ellebore d'hiver*; G. *Sturmhut*.) The winter aconite. Plant contains an acrid poisonous juice, from which Vanquelin obtained a very acrid oil.

**Erasion.** (L. *e*, out; *rado*, to scrape.) The act of scraping.

**Erasistatus.** Greek physician, grandson of Aristotle. Died A.C. 257.

**Eravay.** African name for a small species of *Ricinus* growing in Guinea, and used as a purgative.

**Erbine.**  $\text{ErO}_2$ . The oxide of *Erbium*.

**Erbium.** (A name given by Mosander, its discoverer, from the terminal letters of *Ytterby* in Finland, the place where the gadolinite, in which it was found, was obtained.) Symb. Er., atomic weight 169, or 166 (leve). A metal of the cerium group not yet known in the free state.

**E. oxide.**  $\text{Er}_2\text{O}_3$ . A white powder when pure.

**E. salts.** Very like those of yttrium, but distinguished by their pale-rose colour.

**Erdöbenye.** Hungary, County Zemplin, near Toky. A mineral water containing 1.69 grain of sulphate of iron, and 1.4 grain of alum, in 16 ounces. Used in atonic conditions of the urinary and generative organs, in profuse menstruation, in chronic mucous discharges, and in chronic diarrhoea.

**Ercbinthus.** (Ἐρβινθος.) A name for the *Cleer aratimum*, or yetch.

**Erect.** (L. *erectus*, part. of *erigo*, to set up. F. *droit*; G. *aufrecht*, *gerade*.) Perpendicular; standing straight; upright; erect.

Also, to raise, to set upright.

**E. posture.** This position is the characteristic attitude of man. It is maintained by the action of many muscles, which preserve the bones of the legs and the vertebrae in an extended and vertical position. If the muscles cease to act, as in fainting or death, the joints double up and the body falls. In the erect posture the weight of the body rests upon the arched soles of the feet, which form with one another an angle of about 50°, opening forwards. A perpendicular dropped from the centre of gravity of the body, which is probably situated near the promontory of the sacrum, falls just behind the centre of rotation of the knee-joint and between the feet. The several curves of the spine are, moreover, so adjusted that in the erect posture a vertical line from the summit of the movable part of the vertebral column falls through the centre of its base.

**Erethites.** A Genus of the Nat. Order *Composite*.

**E. hieracifolia.** Raffles. (*Hieracium*; L. *folium*, a leaf.) Fireweed. Hab. United States. An acrid tonic and astringent; in large doses emetic; has been recommended in dysentery. It is a very troublesome weed in mint fields, and injures the oil.

**Erecti.** (L. *erectus*, part. of *erigo*, to set up.) An Order of *Mammalia* consisting of man, so called from his erect gait.

**Erectile.** (L. *erectus*, part. of *erigo*, to set up. F. *erectile*; I. *erectile*; S. *erectil*; G. *aufrechtbar*.) Capable of being made stiff or upright.

**E. system.** The part of the animal body which is composed of erectile tissue. In animals it includes the glans penis, the corpora cavernosa, the corpus spongiosum, and the bulb of the urethra in the male; the bulb of the vestibule and the clitoris in the female; the combs and wattles of birds, the external genital organs of male plagiostomatous fishes, and the erecs of certain lizards, as the chameleon.

**E. tissue.** (F. *tissu erectile*.) The tissue which forms the chief part of the organs of the *E. system*. It consists essentially of a plexus of very large and very distensible capillary blood-

vessels occupying and lining the arcole of a loose, wide-meshed connective tissue, which carries in its trabeculae the arteries, veins, and nerves; and is composed of ordinary connective tissue, yellow elastic tissue, and unstriated muscular fibre, in some places chiefly of the latter. The capillary lining of the arcole exhibits an epithelium of flattened nucleated cells attached by their borders. The arteries of erectile tissue are of the form called helicine, from their spiral course, and are provided with a thick muscular coat. The nerves are derived from the sympathetic; they are numerous, and are specially distributed on the arteries. See *Erection*.

**E. tis'sue, accidental.** The tissue of an *E. tumour*.

**E. tu'mour.** A term applied generally to vascular tumours, and especially to cavernous angioma.

**Erectility.** (L. *erectus*. F. *érectilité*; I. *erecilita*; S. *erecilitud*; G. *Erectilität*.) The faculty of becoming *Erect*.

**Erecting.** (L. *erectus*.) Making upright.

**E. arrangement.** An arrangement of the microscope whereby the object is seen in the natural position instead of, as ordinarily, in the reversed. It consists of a prism or plane mirror placed at the bottom of the binocular microscope tubes, which are set nearly parallel with the stage, so as to deflect at almost a right angle the rays passing from the object.

**E. prism.** An arrangement of Nachet for producing an erect image by the microscope. It consists of a rectangular prism interposed between two of the lenses of the eye-piece of the microscope.

**Erection.** (L. *erectus*. F. *érection*; I. *erezione*; S. *erection*; G. *Steyfwerden*, *Aufrichtung*.) The condition of being upright, the act of becoming upright.

Especially applied to the condition in which the penis, or the clitoris, or the nipple, becomes under sexual or other excitement, full of blood, large and firm or hard.

**E., centre of.** See *Centre, erection*.

**E. of clitoris.** This process is identical in character with the erection of the penis.

**E. of nipple.** This condition is essentially effected by the contraction of the unstriated muscular tissue of the skin of the nipple.

**E. of penis.** The essential condition of the erection of the penis consists in a full and complete injection of the vessels, and especially of the sinuses of the corpus cavernosa. It is effected in a direct or reflex manner, the afferent impulses proceeding from the brain or from the sensory nerves of the penis or nipple, and the efferent impulses travelling along the nervi erigentes, which arise from the lower part of the lumbar region of the cord, and proceed to the penis. The injection of the vessels of the corpora cavernosa is partly owing to compression of the veins returning the blood from the penis, and partly to an increased flow of blood to the organ and relaxation of the vascular walls. The arteries terminate in capillaries, which are in part continuous with efferent veins, and partly open directly into the cavernous sinuses. In the passive state the blood passes from the arteries into the capillaries, and from these into the veins; but during erection the muscular trabeculae of the penis relax, and the blood passes from the arteries through the helicine arteries contained in the trabeculae into the cavernous

sinuses, or directly into the sinuses. During erection the pressure in the vessels of the penis rises to one sixth that of the carotid artery. The corpus spongiosum participates, though to a comparatively small extent, in the process of erection.

**Erectopa'tent.** (L. *erectus*, upright; *patens*, open. F. *erecto-patent*.) Applied to the wings of insects which in repose have the fore wings erect, and the hind wings horizontal.

**Erector.** (L. *erigo*, to erect. F. *erecteur*; I. *erettore*; G. *aufrecht. nd.*) A raiser up; applied to certain muscles which are employed in performing this function.

**E. clitoridis.** (Κλειτορίς, the clitoris. F. *erecteur du clitoris*.) A muscle of the female answering, except in its smaller size and greater length, to the *E. penis*, or *Ischio-cavernosus*.

**E., Ister's.** A tube, about 3" long, having a meniscus at one end and a plano-convex lens at the other, with their convex sides upwards. When placed in the tube of the microscope it effects a second inversion, and exhibits the object in its natural erect position.

**E. nerves.** See *Nervi erigentes*.

**E. penis.** (L. *penis*, the male organ. F. *erecteur de la verge*.) The *Ischio-cavernosus*.

**E. pilil.** (L. *pilus*, a hair. F. *muscle de l'horripilation*; G. *Haarbalgmuskel*.) A slender bundle of unstriated muscular fibre arising by several fasciculi from the corium, a little away from the hair on the side to which it inclines. It partly embraces the sebaceous gland, and is inserted into the outside of the hair follicle, the lower part of which it partially encloses. It causes erection of the hair, and aids in producing cutis anserina.

**E. spinæ.** (L. *spina*, the spine. G. *Rückenstrecker*.) The large complex muscle of the back which, arising by a strong flattened tendon, attached to the sacral, lumbar, and two or three lower dorsal vertebral spines, to the hinder fifth of the crest of the ilium, to the lower and back part of the sacrum, and to the sacrococcygeal ligament, and also from the tough posterior part of the inner surface of the ilium, forms a fleshy mass passing upwards, and at the level of the last rib becomes divided into two columns, the outer of which is subdivided into the *Ilio-costalis*, the *Accessorius*, and the *Cervicalis ascendens* muscles; the other column becomes the middle column by giving off on the upper dorsal the inner column or *Spinalis dorsi* muscle; and itself is again subdivided into the *Longissimus dorsi*, the *Transversalis cervicis*, and the *Trachelo-mastoid* muscles. It is the chief extensor or erector of the spine.

**Eredophyte.** (Ἐρείδω, to prop; φυτόν, a plant. F. *éredophyte*.) Term for a plant the stamen and pistil of which are raised and sustained by a proper disc.

**Bremacausis.** (Ἡρεμα, slowly; καύσις, a burning.) Liebig's term for a slow combustion, or oxidation, such as occurs in the gradual decay of wood, and in the process of nitrification of animal matters.

**Eremia** (Ἡρεμία, stillness.) Rest, absence of motion.

**Eremopompholyx.** (Ἐρήμος, solitary; pompholyx. F. *éremopompholyx*.) Solitary pompholyx.

**Ere'mus.** (Ἐρήμος, solitary. F. *érem.*) A name applied to each pericarp of a *Cenobium*.

**Eretæ.** (Ἐρέτης, a rower. F. *éretes*.)

Aquatic birds that are organised almost solely for swimming.

**Erethical.** (Ἐρεθίζω, to vex or irritate.) Of a vexing or irritating character; applied to the state or condition of fevers.

**Erethilytic.** (Ἐρευνθος, a redness; λυτικός, able to loose.) Having power to diminish the redness of the complexion or the number of the red corpuscles of the blood.

**Erethisis.** The same as *Erethismus*.

**Erethisis.** The same as *Erethismus*.

**Erethism.** (Ἐρεθισμός, irritation; from Ἐρεθίζω, to vex. F. *érethisme*; I. *eretismo*; G. *Erethismus, Reizung*.) The increase of the nervous tone or irritability of a part and the effects produced by it.

**Erethismata.** (Ἐριθίσμα, a stirring up.) Rubefacients.

**Erethismic.** (Ἐρεθισμός, irritation.) Relating to, or of the nature of, *Erethism*.

**E. shock.** See *Shock, erethismic*.

**Erethismus.** See *Erethism*.

**E. ebriosorum.** (I. *ebriosus*, drunken.) Delirium tremens.

**E. hydrophobia.** A synonym of *Hydrophobia*.

**E. mercurialis.** A term applied by Pearson to severe and often fatal constitutional disorder brought on in some persons by the use of mercury, especially in a syphilitic ward where the patients were all treated with mercury to salivation, and the air was laden with effluvia. It was characterised by great depression, precordial anxiety, irregular cardiac action, muscular tremors, small, quick, and irregular pulse, vomiting, and sometimes sudden death, especially after some exertion.

**E. oneirodynia.** (Ὀνειρος, a dream; δόυν, pain.) A synonym of *Nightmare*.

**E. simplex.** (L. *simplex*, simple.) The state called *Fidgets*.

**E. tropicus.** (Tropic.) A synonym of *Sunstroke*.

**Erethis'tic.** (Ἐρεθιστικός, for irritation. G. *reizend*.) Producing irritation, rubefacient.

Also, associated with, or produced by, an irritable condition of the constitution; relating to *Erethism*.

**E. form of hæmophil'ia.** Hæmophilia connected with an active condition of the vital processes, as opposed to the torpid form of hæmophilia.

**Erethitic.** Relating to *Erethism*.

**Eretria terra.** (Eretria, a city of Eubœa, or Negrepont; L. *terra*, earth.) Anciently applied to two kinds of earth, much esteemed as an alkaline and absorbent, according to Dioscorides, v. 171; Galen, *de Simp.* Fac. ix.

**Ereug'mos.** (Ἐρευγμός; from ἐρεύνω, to belch. F. *éruclation*; G. *Aufstossen*.) Old term for the act of belching; an eructation.

**Ereug'mus.** Same as *Ereugmos*.

**Ereumena'ura.** Urine that assumes a cloudy consistence in the middle. (Parr.)

**Ereux'is.** (Ἐρευξίς, eructation.) Same as *Ereugmos*.

**Eri'urt.** Prussia. A weak sodium chloride water.

**Erg.** (Ἐργον, work.) Same as *Unit of work*.

**Ergasioma'nia.** (Ἐργάζομαι, to do;

*mania*, madness. *F. ergasiomanie*; *G. Operiruth.*) Term for the furor operandi, or too great desire to perform an operation.

**Ergasiophobia.** (*Εργασίφωβια*, to do; *φοβος*, fear. *F. ergasiophobie.*) A fear of operations, or timidity in operating.

**Ergasm.** (*Εργάζουαι*, to work.) An old term for a flux of humours determined by and indicating a condition of work of the organism.

**Ergasterion.** Same as *Ergasterium*.

**Ergasterium.** (*Εργαστήριον*, a workshop; from *εργάζουαι*, to labour. *F. laboratoire*; *G. Werkstatt.*) Old term for a laboratory; also, that part of a furnace in which the cupel, alambic, or retort containing the substances to be acted on, is placed. Morley, in *Coll. Leid. protog.* c. 2.

**E. spir'itus.** (*L. spiritus*, breath.) An old term for the lungs.

**Ergot.** (*F. ergot*, a spur of a cock.) A name given to the fungoid growth, being the sclerotium of *Claviceps purpurea*, within the palea of the common rye, from its likeness to a cock's spur. A similar growth is found in other graminaceous plants, such as wheat, oats, maize, *Lolium perenne*, *Triticum repens*, *Dactylis glomerata*, and many species of *Cyperus*. For its development see *Claviceps purpurea*.

See *Ergota*.

Also, applied to a small horny capsule on each side of the claw or horny envelope of the digits in Ruminants and Pachyderms. Each ergot contains a small bone, which is the representative of those digits that are apparently absent both in the solid and in the cloven foot. The ergot in the horse is about the size of a chestnut, is situated behind and below the pastern-joint, and is concealed beneath the tuft of the fetlock.

Also, a synonym of *Hippocampus minor*.

**E., an'tidotes for.** Eliminate contents of stomach and intestines by emetics and purgatives; give tannin; remove cardiac asthenia by alcohol, ether, camphor, preparations of ammonia, and coffee.

**E., ex'tract of.** See *Extractum ergotæ*.

**E., flu'id ex'tract of.** See *Extractum ergotæ fluidum*.

**E. mould.** The *Claviceps purpurea*.

**E. of diss.** The sclerotium of *Claviceps purpurea* in the seeds of *Ampelodesmos tenax*, or *Diss.* growing in Algeria; it is 3—9 cm. long, and 2—2.5 mm. broad, somewhat quadrangular, and of a blackish colour. It is used as the ergot of rye.

**E. of maize.** A fungous degeneration, being the sclerotium of the *Claviceps purpurea*, of the maize, the seed of *Zea mays*; it was said to contain Winckler's secalin, now believed to be propylamin, a thick viscid oil, and a resin. It is said to cause abortion in cows; the fungus has been called *Ustilago maidis*. See also *Spermoecidia maidis*.

**E. of oats.** (*F. ergot d'avoine.*) A similar growth to the ergot of rye, and said to have the same properties.

**E. of rice.** (*F. ergot du riz.*) A similar growth to the ergot of rye in rice.

**E. of rye.** (*F. ergot de seigle.*) See *Ergota*.

**E. of wheat.** (*F. ergot du blé, du froment.*) A similar growth to the *E. of rye*, and said to have similar properties, but not to be poisonous, and to be more stable.

**E., oil of.** A liquid fat obtained by expression, or by treatment with ether, from the ergot of rye. It is inert, but was at one time thought to be the active principle, probably because the menstruum by means of which it was extracted dissolved also some of the active principle of the ergot.

**E., sug'ar of.** The glucose found in ergot; it crystallises in rhomboidal octohedra, and reduces copper after long boiling. Also called *Mycose*.

**E., tests for.** In cases of poisoning the remains of the ergot ingested must be sought for in the vomited matters and the feces. In one case the organic substances suspected to contain the poison were heated with alcohol, which was then evaporated. A substance resembling Wigger's ergotin was obtained, which was insoluble in alcohol, ether, and acetic acid; soluble in water, only when mixed with mucus, with unpleasant odour and sharp bitter taste.

**E., wine of.** See *Vinum ergotæ*.

**Ergotæ, B. Ph.** (*F. ergot*, a cock's spur. *F. seigle ergoté, blé cornu*; *G. Mutterkorn, Kornmutter, Roggenmutter, Zapsenkorn.*) Ergot of rye. The sclerotium (compact mycelium or spawn) of *Claviceps purpurea*, Tulasne, produced within the palea of the common rye, *Secale cereale*, Linn.

In U.S. Ph., the sclerotium of *Claviceps purpurea*, Tulasne, replacing the grain of the common rye, *Secale cereale*, Linn.

Ergot of rye is a solid, somewhat fusiform body, 4" to 1.5" long, subtriangular, curved like a cock's spur, with a longitudinal furrow on the concave side; violet-brown on the surface, pinkish or whitish within, solid, breaking readily with a smooth fracture, having a faint, heavy odour and an oily unpleasant taste. Many uncrystallisable compounds and some alkaloids have been obtained from ergot; of the former, sclerotic acid and scleromucin have some activity, especially the former; and of the latter, ergotin appears to be an active poison, while ergotin and eboolin, probably the same compound, are by Dragendorff believed to be inert. It is probable that ergot develops few well-defined principles, and that these easily change. Ergot contains also a bland, yellowish, non-drying fixed oil, and lactic acid, sometimes also formic and acetic acids, the former in combination with propylamin; starch is never present, but sugar is found; the salts are chiefly phosphates. In large doses ergot produces profuse salivation, vomiting, dilatation of the pupils, quick pulse, tremors, staggering, great weakness, paraplegia, sometimes convulsions, and death. In smaller doses, and taken for some time, it produces the condition described under *Ergotism*. In medicinal doses it slows the heart's beat, produces contraction of the arteries and capillaries, raising the arterial pressure, increases the peristaltic action of the intestines, and excites to frequent and subsequently to tetanic, contraction the muscular tissue of a pregnant uterus, and less certainly that of an unimpregnated womb. Whether these actions are produced by direct influence on the muscular and nervous structures of the affected organs or through some nerve centre is as yet unknown. Ergot is used to increase, and to bring about, uterine contraction in indolent labour, uterine hæmorrhage and abortion; to arrest bleeding by causing the vessels to contract in hæmoptysis, nose-bleeding, and purpura; to restrain an excessive secretion as the

sweat, urine, or milk; as a tonic, or a contracting agent of unstriated muscular fibre in diarrhœa, dysentery, subinvolution of uterus, and congested conditions of the spinal cord. Ergot has been recommended in hooping cough, neuralgia, headache, and other diseases. Dose, half to two drachms. For an account of its development see *Claviceps purpurea*.

**Ergotætia.** (*Ergot*; *airia*, a cause.) A former genus of Fungi, supposed to cause the ergot of Gramineæ.

**E. abortans.** (*L. aborto*, to miscarry.) An old name for the fungus of ergot.

**E. abortificiens.** (*L. abortus*, a miscarriage; *facio*, to make.) Quekett's name for the fungus of ergot, *Claviceps purpurea*.

**Ergotate.** A term for a salt of *Ergotic acid*.

**E. of secalin.** The form in which the imaginary alkaloid secalin, which is propylamin, was supposed to exist in ergot, combined, that is, with ergotic acid.

**Ergotic acid.** (*Ergota*.) A volatile acid said to exist in ergot of rye in combination with ecobolin and ergotina.

**Ergotin.** (*Ergota*.) A name for certain preparations of the ergot of rye, which are supposed to contain the active principle of the drug.

Also, the same as *Ergotina*.

**E. Bonjean's.** A preparation of ergot made by exhausting it with water, concentrating it to a syrup, precipitating the albumen and gum with alcohol, decanting the clear liquid, and evaporating to a soft extract. It is also used in solution for hypodermic injections. Dose, '33—'65 gramme.

**E. Wenzel's.** An alkaloid with little activity found by Wenzel, along with ecobolin, in ergot.

**E. Wiggers'.** A substance obtained by Wiggers from ergot, by treating it successively with ether and boiling alcohol, and after partially distilling the latter adding to the concentrated solution cold water, by which it is precipitated. It is of brown colour, soluble in alcohol, caustic potash, and concentrated acetic acid, insoluble in water, ether, and the alkaline carbonates. Its taste is acrid and bitter, and it burns with a disagreeable odour.

**Ergotina.** (*Ergot*.)  $C_{50}H_{32}N_2O_3$ . An alkaloid obtained from ergot of rye; it is brownish, amorphous, bitter, soluble in water, and having an alkaline reaction. It diminishes the size of the pulse. It is said by Drageendorff to be the same thing as *Ecobolin*.

**Ergotinin.** (*Ergot*.)  $C_{35}H_{10}N_4O_6$ . A crystallisable, colourless alkaloid found by Tanret in the fixed oil obtained by ether from ergot of rye. It produces on frogs anaesthesia and paralysis. According to Drageendorff, it is a mixture of *Sclererythin* with other substances.

**Ergotism.** (*Ergot*. *F. ergotisme*; *l. ergotismus*; *G. Kriebelkrankheit*, *Kriebelsucht*.) The phenomena caused by the use of ergot in food, see *E. chronic* and its subheadings; or the result of poisonous doses of ergot, see *E. acute*.

**E. acute.** In poisonous doses ergot produces vomiting and diarrhœa, headache, giddiness, dilatation of the pupils, weakness of the pulse, pallor or lividity of the face, tendency to faintings, slowness of breathing, and death usually after convulsions. In pregnant animals the uterus empties itself.

**E. chronic.** The phenomena produced by the use of ergotised grain as food, generally diseased rye, sometimes wheat. The disorder is seldom seen now, but a century or more ago it was not infrequent, and in Europe epidemics of this disease have been described under various terms, *Ruphania*, *Morbus Saloniensis*, and others. Two chief varieties have been recognised, *E. gangrenous* and *E. spasmodic*, the early stages of which are alike in symptoms; nausea, vomiting, colicky pains, diarrhœa, giddiness, and headache.

**E. convulsive.** Same as *E. spasmodic*.

**E. gangrenous.** (*Γάγγραινα*, gangrene. *G. Mutterkornbrand*.) The form of *E. chronic*, in which, after the usual early symptoms, stiffness, numbness, and severe pains inside the limbs set in, and then the toes or fingers, the tip of the nose or the ears, become livid and gangrenous; at first bulks are formed, generally these dry up, and the part shrivels; occasionally the gangrene is of the wet variety, and septiciemia is the result. It may end in separation of the necrotic part or in death.

**E. spasmodic.** (*G. Kriebelkrankheit*.) The form of *E. chronic*, in which the early symptoms are followed by formication, itching, or numbness of the limbs, succeeded by severe cramps, and then tetanic contractions of the muscles of the limbs and body, accompanied by disturbances of the special senses, delirium, and cataleptic or epileptic paroxysms; the patient may become an idiot, or he may die from exhaustion in convulsions or coma.

**Ergotismus.** See *Ergotism*.

**E. spasmodicus.** See *Ergotism, spasmodic*.

**E. sphacelösus.** (*Σφάκελος*, gangrene.) See *Ergotism, gangrenous*.

**Erianthous.** (*Ἐριον*, wool; *ἄνθος*, a flower. *F. erianthe*.) Having flowers covered with woolly hair.

**Eriæa.** (*Ἐρίκη*, heath. *F. bruyère*; *G. Heidekraut*.) A Genus of the Nat. Order *Ericaceæ*. The heath plant.

**E. arborescens.** (*L. arbor*, a tree.) Formerly used as an alexipharmic.

**E. herba-cea.** (*L. herba*, springing grass.) Used as *E. vulgaris*.

**E. purpurascens.** (*L. purpurascens*, to grow purple.) Used as *E. vulgaris*.

**E. vulgaris.** Linn. (*L. vulgaris*, common.) Common heath. Used as an addition to fomentations and baths in chronic rheumatic and paralytic affections. The *Calluna vulgaris*.

**Ericaceæ.** (*Erica*. *G. Heidekrautgewächse*.) A Nat. Order of hypostaminate corolliferous Exogens of the Alliance *Ericales*, having monopetalous flowers, perfect, free stamens, two-lobed anthers opening by pores, and a fleshy or loculicidal capsular fruit.

**Ericaceous.** Belonging to, or resembling, the *Ericaceæ*.

**Ericales.** (*Erica*.) A cohort or alliance of hypogynous Exogens having dichlamydeous flowers, stamens generally in two whorls, ovary multilocular with projecting axile placentæ, albumen fleshy and large in quantity.

**Ericanthin.** The yellow product of the action of sulphuric acid on eritannic acid.

**Ericæa.** (*Erica*.) A Suborder of the Order *Ericaceæ* having naked buds and generally loculicidal fruit.

**Ericaceous.** The same as *Ericaceus*.  
**Ericærum** (*Ἐρίκη*, heath; from the fruit which Galen, *de C. M. sec. Loc. iv.*, enumerates among the astringents; or *ἔρις*, much; *κνίπος*, wax; because of their composition.) Old name (Gr. *ἑρικήρον* or *ἑρικήριον*) for several colluria, mentioned by Aëlius. (Goræus.)

**Ericēs.** The same as *Erica*.  
**Ericetinous.** (*Erica*. F. *éricétin*.) Growing on heath, applied to certain parasitic plants.

**Ericineous.** The same as *Ericaceous*.  
**Ericinol.**  $C_{10}H_{16}O$ . A greenish resinous oil formed, along with sugar, by the action of dilute sulphuric acid on ericolin.

**Ericinone.**  $C_{20}H_{32}O_9$ . A substance obtained, by Uloth, by dry distillation of various ericeaceous plants.

**Ericola.** A Genus of the Nat. Order *Gentianaceæ*.

**E. flavâ.** Don. (*L. flavus*, yellow.) The *Gentiana amarella*.

**Ericolin.**  $C_{21}H_{36}O_{21}$ . A gineose obtained from *Arctostaphylos uva ursi*, *Ledum palustre*, *Epigæa repens*, and other plants. It is brownish yellow, bitter, and soluble in water and alcohol.

**Ericophilous.** (*Ἐρική*; *φίλιον*, to love. F. *ericophile*.) Growing on the stems of the *Erica*.

**Ericu.** The *Calotropis gigantea*.

**Erigenes nervi.** See *Nervi erigenes*.

**Erigeron.** (*Ἠριγέρων*; from *ἦρι*, the spring; *γέρων*, an old man; because it bears hairy blossoms in spring. G. *Berufkraut*.) A Genus of the Nat. Order *Compositæ*.

Also, a name of the groundsel, *Senecio jacobæa*.

Also, formerly the pharmacopœial name, U.S. A., of the leaves and tops of *E. heterophyllum* and *E. philadelphicum*. The dried herb has a bitterish pungent taste, and yields a greenish-yellow viscid oil. Used as a diuretic in dropsy and urinary disorders, in infusion, an ounce to a pint. Dose, a wineglassful and upwards.

**E. acré.** Linn. (*L. acer*, sharp.) Blue fleabane. A species supposed to be the *Conyza cerulea* of old pharmacopœias.

**E. affiné.** De Cand. (*L. affinis*, kindred.) Hab. Mexico. Used as a sialagogue.

**E. ambiguum.** (*L. ambiguus*, uncertain.) The *E. philadelphicum*.

**E. amplexicaulé.** Poir. (*L. amplexus*, part. of *amplecto*, to embrace; *caulis*, a stem.) The *E. philadelphicum*.

**E. annuum.** Pers. (*L. annuus*, yearly.) The *E. heterophyllum*.

**E. bellidifolium.** (*L. bellis*, the daisy; *folium*, a leaf.) A species having properties similar to the officinal species.

**E. canadensé.** Linn. U.S. Ph. (F. *herbe de vergerette de Canada*; G. *Canadisches Berufkraut*.) Canada fleabane. It contains a volatile oil, see *Oleum erigerontis*, and tannic acid. An infusion of an ounce to a pint has been used in uterine hæmorrhage, menorrhagia, irritable bladder, and gonorrhœa.

**E. graveolens.** Linn. The *Inula graveolens*.

**E. heterophyllum.** Willd. (*Ἠτερος*, other; *φύλλον*, a leaf.) One of the species supplying *Erigeron*, U.S. Ph.

**E. integrifolium.** Big. The *E. strigosum*.

**E.**, oil of. See *Oleum erigerontis*.

**E. paniculatum.** Lamb. (*L. panicula*, a tuft.) The *E. canadense*.

**E. philadelphicum.** Linn. Philadelphia fleabane; one of the species supplying *Erigeron*, U.S. Ph.

**E. purpureum.** Ait. The *E. philadelphicum*.

**E. pusillum.** Nuttall. (*L. pusillus*, very small.) A variety of *E. canadense*.

**E. strigosum.** Muhl. (*L. strigosus*, full of furrows.) A species having the same properties as *Erigeron philadelphicum*.

**E. viscosum.** Linn. The *Inula viscosa*.

**E. vulgare.** Linn. (*L. vulgaris*, common.) The *E. acris*.

**Erigerum.** (*Ἠριγέρων*, early old.) The groundsel, *Senecio jacobæa*.

**Erimoides.** A Paracelsian term, supposed from the context to mean sand or sediment in the urine.

**Erinaeus.** (*L. erinaeus*, the hedgehog. F. *herisson*; G. *Igel*.) A Genus of the Order *Insectivora*, Class *Mammalia*. See *Echinus*.

**E. europæus.** Linn. (F. *herisson*; I. *riccio*; S. *erizo*; G. *Igel*.) The hedgehog, the flesh of which was once considered a great delicacy. The fat was formerly used in diarrhœa.

**Erineum.** (*Ἐρίναιος*, woolly.) A diseased condition of the cuticular cells of many plants, as those of the vine and lime tree, which assume a woolly aspect.

**Eriobotrya.** (*Ἐρίον*, wool; *βότρυς*, a cluster of grapes.) A Genus of the Nat. Order *Rosaceæ*.

**E. japonica.** Lindl. Hab. Japan. The Japan medlar or loquat. Fruit esculent, apple-shaped, with white, acidulous, slightly perfumed pulp.

**Eriocarpous.** (*Ἐρίον*, wool; *καρπός*, fruit. G. *wulfrüchtig*.) Having woolly fruit.

**Eriocaulacæ.** Same as *Eriocaulonacæ*.

**Eriocauline.** (*Ἐρίον*; *καυλός*, the stalk.) Having a woolly stem.

**Eriocaulon.** (*Ἐρίον*; *καυλός*, the stalk.) A Genus of the Nat. Order *Eriocaulaceæ*.

**E. setaceum.** (*L. seta*, a bristle.) Hab. India. Used when boiled in oil as an antipsoric.

**Eriocaulonæ.** The pipeworts. An Order of the cohort *Restiales*, Series *Spadiceifloræ*; or a Natural Order of diclinous, petaloid, Monocotyledones having unisexual capitate flowers, two-celled anthers, and a pendulous ovule.

**Erioccephalus.** (*Ἐρίον*, wool; *κεφαλή*, the head.) A Genus of the Nat. Order *Compositæ*.

**E. umbellatus.** (*L. dim.* of *umbella*, an umbel.) Hab. South Africa. A diuretic in dropsy.

**Eriodendron.** (*Ἐρίον*; *δένδρον*, a tree.) A Genus of the Nat. Order *Bombacææ*.

**E. anfractuosum.** De Cand. (*L. anfractus*, a bending round. G. *Wollbaum*.) Hab. India. Supplies Cotton-tree gum.

**Eriodictyon.** (*Ἐρίον*, wool; *ἑκτιον*, a net.) A Genus of the Nat. Order *Hydrophyllaceæ*.

**E. californicum.** Benth. The *E. glutinosum*.

**E. glutinosum.** Benth. (*L. glutinosus*,

gluey.) Consumption weed, bear's weed, mountain balm. Had at one time a reputation in chronic bronchitis and in pulmonary consumption; it is a stimulating expectorant, probably in virtue of an aerid, bitter resin which it contains.

**E. tomentosum.** (Mod. *L. tomentosus*, woolly.) Used as *E. glutinosum*.

**Eriolepis.** (Ἐρίον; λεπτε, a scale.) A Genus of the Nat. Order Compositae.

**E. lanigerum.** Cass. (*L. lana*, wool; *gero*, to bear.) The *Cirsium eriophorum*.

**Eriometer.** (Ἐρίον, cotton; μέτρον, a measure. *F. ériomètre*.) An instrument by Young for measuring the thickness of delicate fibres, or the diameter of very small globules, based on the fact that the radii of the luminous rays, seen in contact with the surface of the sun or moon viewed through the small globules of condensed vapour in a cloud, are inversely proportional to the small opaque particles to which they are due.

**Eriopetalous.** (Ἐρίον; πέταλον, a leaf.) Having woolly petals.

**Eriophorous.** (Ἐρίον; φορέω, to bear. *G. wolltragend*.) Bearing wool.

**Eriophorum.** Linn. (Ἐρίον, wool; φορέω, to bear. *G. Wollbinse*.) A Genus of the Nat. Order Cyperaceae. Cotton-grass. The leaves of some of the species have been used in diarrhoea, and the pith as a remedy for tapeworm.

**E. vaginatum.** (*L. vagina*, a sheath. *G. Wiesenscholle, Wollgras*.) Cotton grass.

**Eriophyllous.** (Ἐρίον; φύλλον, a leaf.) Having woolly leaves.

**Eriospermum.** (Ἐρίον, wool; σπέρμα, seed.) A Genus of the Nat. Order Liliaceae.

**E. latifolium.** (*L. latus*, broad; *folium*, a leaf.) Hab. South Africa. A decoction of the tuber is used in amenorrhoea, and the scraped tuber is applied to ulcers and abrasions.

**Eritannic acid.**  $C_{12}H_{16}O_7$ . The form of tannic acid found in the *Erica herbacea*; it colours ferric salts green.

**Erythrogen.** See *Erythrogen*.

**Erlach.** Austria, in the Tyrol. A chalybeate water containing alum. Used in hamorrhoidal bleedings, menorrhagia, chronic mucous discharges, and atonic ulcers.

**Erlau.** Hungary. Indifferent waters containing a little hydrogen sulphide, and much carbonic acid gas; there are three springs having a temperature ranging from 28° C. to 32° C. (82-4° F. to 89-6° F.) Used in troubles of the digestive organs, and in chronic skin diseases.

**Erlenbad.** Germany, in the Grand Duchy of Baden. A mineral water, temperature 22° C. (71-6° F.), containing a considerable quantity of common salt.

**Ernesia.** Old name (Gr. ἐρnesia) for a composition of pine-nut kernels triturated with honey, myrrh, saffron, and palm oil; it was drunk with milk for the purpose of begetting fair and good children. (Goraeus.)

**Ermetschwylerbath.** Switzerland, Canton St. Gallen, 2300' above the sea. A mineral water containing calcium carbonate and chloride, and free carbonic acid; it has a temperature of 24° C. (75-2° F.), and is used in chronic rheumatism.

**Ernabrunnen.** Germany, in Brunswick, near Alexisbad. A chalybeate water.

**Ernia.** See *Hernia*.

**Ernsdorf.** Austria, in Silesia, near to Bielitz, 1500' above sea level. A cow's, goat's,

and sheep's milk and whey and koumiss cure-place, in a pleasant climate, where pine-leaf baths are also employed.

**Erode.** (Old *F. eroder*; from *L. erodo*, to gnaw off. *F. eroder*; *S. corroer*, *comer*; *G. wegfressen*.) To eat away.

**Eroded.** (*L. erodo*, to gnaw off. *F. érodé*; *G. abgeissen*, *angefressen*.) Jagged; gnawed; notched; applied to the edges of leaves.

**Erodent.** (*L. erodo*, to eat into. *F. érode*; *L. erodente*; *G. wegfressend*.) Irritating; gnawing off; dissolving. Applied to medicines which cause erosion.

**Eroden'tia.** (*L. erodo*.) Medicines having the action called *Eroden't*.

**Ero'din.** A false spelling of *Ero'din*.

**Ero'dium.** (Ἐρώδιος the heron. *G. Retherschnabel, Storchschnabel*.) A Genus of the Nat. Order Geraniaceae, so called from the likeness of its fruit to a heron's beak.

**E. cicutarium.** Leman. (*L. cicuta*, hemlock.) Hemlock stork's bill. It contains an ethereal oil, a bitter principle called geranin, and tannic acid. Hab. Europe. Used as an astringent diuretic in dropsy.

**E. moschatum.** Willd. (Μόσχος, musk.) Musky stork's bill. Hab. Europe. An astringent and detergent in a poultice.

**Eromania.** Same as *Erotomania*.

**Eronosus.** (Ἐρῶ, spring; νόσος, a disease. *G. Frühlingskrankheit*.) A disease which generally appears in spring.

**Erophila.** A Genus of the Nat. Order Cruciferae.

**E. ver'na.** Linn. The *Draba verna*.

**E. vulgaris.** De Cand. (*L. vulgaris*, common.) Whitlow grass. Antiscorbutic and detergent.

**Erose.** Same as *Erose*.

Also, the same as *Eroded*.

**Erosio.** Same as *Erosion*.

**Erosion.** (*L. erosio*; from *erodo*, to gnaw off. *F. érosion*; *G. Atzen, Wegbeissen, Zerkressen*.) The act, or process, or state, of eating away. A superficial breach in the surface of a part, produced by friction, pressure, ulceration, or by corrosive agents.

Also, the morbid process by which the breach of surface is effected.

**E., catarrhal.** Circumscribed loss of epithelium of a mucous membrane, caused by catarrhal inflammation.

**E., gangrenous, of cheek.** A term for gangrenous stomatitis.

**E., hæmorrhagic.** (Αἱμορραγία, violent bleeding.) A term applied to those sharp-edged, circular excavations of the gastric mucous membrane, about the size of a pin's head, which are supposed to arise from a small effusion of blood which, clotting, produces death of the epithelial surface by separation, and so renders it subject to the dissolving action of the gastric juice. They are most common about the pylorus.

**E., herpetic, of os uteri.** (*Herpes*; *L. forma*, shape; *os*, the mouth.) A term applied to small, discrete or confluent, superficial, eroded, and sometimes bleeding patches on the lips of the os uteri in cervical endometritis.

**E. of stom'ach, hæmorrhagic.** See *E., hæmorrhagic*.

**E. of teeth.** See *Teeth*, erosion of.

**E., papillary.** (*L. papilla*, a small pimple.) A form which is developed from a simple

erosion by the swelling of the papillæ of the corium and their protrusion as a dark red, congested, and sometimes bleeding, granulation.

**Erosodentate.** (L. *erosus*, part. of *erodo*; *dentatus*, toothed.) In Botany, having the margin irregularly toothed, as if eaten away in places.

**Erostrate.** (L. *e*, neg.; *rostrum*, a beak.) Having no beak.

**Erotic.** (Ἐρωτικός; from ἔρως, love. F.  *erotique*; G. *erotisch*.) Pertaining to love.

**E. fever.** The fever which often accompanies *Erotomania*.

**E. mania.** Same as *Erotomania*.

**Eroticomania.** Same as *Erotomania*.

**Erotomania.** (Ἐρως, love; *mania*, madness. F. *erotomanie*; G. *Liebeswuth*, *Liebeswahnsinn*.) Melancholy, or madness, that is caused by the sentiment of love. By some authors the term is restricted to those cases in which the imagination alone is affected; by others the grosser forms nymphomania and satyriasis are included.

**E. personæ.** (L. *personæ*, relating to the person.) A term for *Satyriasis*, and for *Nymphomania*.

**Erotomany.** Same as *Erotomania*.

**Erpes.** See *Herpes*.

**Erpetology.** (Ἐρπετόν, a reptile; λόγος, a discourse.) The branch of science which treats of reptiles. See *Herpetology*.

**Erpetospondylia.** (Ἐρπετόν; σπονδύλιος, a vertebra.) The Subclass of Reptilia which have the dorsal vertebrae and the ribs movable.

**Errabundus.** (L. *errabundus*, wandering to and fro.) A term applied to diseases such as intermittent fevers, the paroxysms of which are irregular as to time and character.

**Errantes.** Same as *Errantia*.

**Errantia.** (L. *errans*, part. of *erro*, to wander.) A synonym of *Chetopoda*, from their free movements at the bottom of the sea.

**Erratic.** (L. *erraticus*, wandering to and fro; from *erro*, to wander. F. *erratique*; G. *unordentlich*, *unregelmässig*, *umherschweifend*.) Wandering; not fixed; moving or shifting from one place to another. Applied to diseases such as neuralgic pains, which are now here, now there; or such as agues which have irregular intervals.

**Errhine.** (Ἐρρινόν; from ἔρρ, in; ῥίν, the nose. F. *errhin*; I. *errino*; G. *Niessmittel*, *Schnupfmittel*, *nasenreinigendes Mittel*.) A medicine which when applied to the mucous membrane of the nose increases the natural secretions and produces sneezing; such are tobacco and veratrum.

Also, having the action of an errhine.

**Errhinum.** An *Errhine*.

**Errhipsis.** (Ἐρ, in; ῥίψις, a projection.) Old term (Gr. ἑρρίψις), used by Hippocrates, de *Humor.* iii, 15, for prostration and dejection of the body.

**Errhysis.** (Ἐρ, in; ῥύσις, a flowing. F. *errhysé*.) Term for a slow bleeding.

**Error.** (Old F. *error*; from L. *error*; from *erro*, to wander.) A mistake.

**E. loci.** (L. *locus*, a place. F. *erreur de lieu*; G. *Ortsverfehlung*.) A term of Boerhaave, who attributed inflammation and other diseases to the circumstance of too large globules of blood having got into too small vessels, where they formed an obstruction which originated the malady by this their error of place.

**E. of dispersion.** See *Dispersion*, *error of*.

**Ers.** The bitter vetch, *Ervum ervilia*.

**Erubescence.** (L. *erubescere*, to become red.) Redness of the skin.

**Erubescens.** (L. *erubescere*.) Becoming red.

**Eruca.** (L. *eruca*, of doubtful etymology. G. *Rauke*.) The specific name of the garden rocket, *Brassica eruca*; also, the mustard, *Sinapis nigra*.

Also, a Genus of the Nat. Order *Cruciferae*.

**E. arvensis vulgaris.** (L. *arvensis*, belonging to the fields; *vulgaris*, common.) The *Brassica sinapistrum*.

**E. barbarea.** The *Barbarea vulgaris*.

**E. foetida.** (L. *foetidus*, stinking.) The *Brassica eruca*.

**E. rapifollio.** (L. *rapum*, rape; *folium*, a leaf.) The *Sinapis nigra*.

**E. sativa.** Lamb. (G. *Kohlraupe*.) The *Brassica eruca*.

**E. sylvestris.** The systematic name of the wild rocket. See *Brassica eruca*.

**Eruic acid.** (*Eruca*. G. *Erucaessäure* or *Brassinsäure*.) C<sub>22</sub>H<sub>42</sub>O<sub>2</sub>. An acid contained in oil of mustard in combination with glycerin; it is identical with brassic acid, and is a homologue of oleic acid.

**Eruiform.** (L. *eruca*, a caterpillar; *formis*, resemblance. F. *éruiforme*.) Resembling a caterpillar.

**Eruin.** A substance free from sulphur, said to be extracted by ether from the seeds of *Sinapis nigra*.

**Eruivores.** (L. *eruca*, a caterpillar; *voro*, to devour.) A synonym of *Scansores*, having reference to their food.

**Eruitate.** (L. *eructo*, to belch out; from *e*, out; *ructo*, to belch.) To expel wind suddenly from the stomach with a noise.

**Eructation.** (L. *eructatio*; from *eructo*, to belch. F. *eructation*; I. *eruttazione*; S. *eructacion*; G. *Rülpsen*, *Aufstossen*, *Ausrülpsen*, *Auswürgen*.) A sudden voluntary or involuntary noisy burst or expulsion of wind from the stomach by the mouth, accompanied or not by any of the other contents.

**Erugatoria.** (L. *e*, neg.; *rugæ*, a wrinkle.) Remedies for the removal of wrinkles.

**Eruiginous.** See *Eruginous*.

**Erumpt.** (L. *erumpo*, to break out.) Bursting forth; breaking out; prominent.

**Eruptio.** See *Eruption*.

**E. exanthematis.** (Ἐξάνθημα, an eruption on the skin.) The breaking out of an exanthematous disease.

**E. sanguinis.** (L. *sanguis*, blood.) Bleeding; sudden hemorrhage.

**Eruption.** (L. *eruptio*; from *erumpo*, to burst out. F. *éruption*; I. *eruzione*; S. *erupcion*; G. *Ausbrechen*, *Ausbruch*.) A bursting forth. A breaking out of a rash, or of pimples on the skin.

Also (Gr. *Hautausschlag*), the skin affection itself.

Also, discharge of fluid from a cavity.

Also, the bursting forth of an organ from its capsule or surroundings in the course of development, as of a tooth.

**E. medicinal.** (F. *eruptions médicales*; G. *Arzneiausschläge*.) Skin rashes produced by medicines administered internally.

# ERUPTIVE—ERYSIPELAS.

Arsenic may cause an erysipelatous, a papular, or an urticaria-like rash.

Belladonna may cause a non-desquamative erythema.

Bromine compounds may cause acneiform pustules, or erythematous, papular, or bullous eruptions.

Chloral may cause erythema, or, more rarely, a papular, urticarious, vesicular, or pustular eruption.

Cinchona bark and quinine may cause a simple or a papular erythema locally or generally distributed, or large, isolated, elevated patches or lumps of an urticarious character; desquamation follows the rashes.

Copaiba may cause roseola or erythema.

Cubebs may cause a red rash, on which single or confluent papules may grow.

Iodine may produce erythematous, papular, vesicular, bullous, pustular, furuncular, hæmorrhagic, or purpuric spots.

Mercury may produce erythema or eczema, and perhaps pustular or furuncular eruptions.

Opium and morphia may cause an erythema which is accompanied by severe itching, and sometimes desquamates.

Salicylic acid may cause a vesicular or an urticarious eruption.

**E. of the teeth.** See *Teeth, eruption of*.

**Eruptive.** (*L. eruptio*. *F. eruptif*; *I. eruptivo*; *S. eruptivo*; *G. eruptif*.) Bursting forth. Relating to, or accompanied by, an Eruption.

**E. disease.** A disease with papules, or pustules, or scales on the skin.

**E. fever.** An infectious fever with a rash on the skin.

**Ervalenta.** A farinaceous preparation sold under this name contained the powder of French or German lentils, *Ervum lens*, mixed with a flour resembling maize, but which might have been durra, the *Sorghum vulgare*.

**Ervilia.** (*L. ervilia*, the bitter vetch.) The bitter vetch, *Ervum ervilia*.

**E. sativa.** Link. (*L. sativus*, that which is sown.) The *Ervum ervilia*.

**Ervum.** (*L. ervum*; from *ερως*, the bitter vetch, *F. lentille*; *G. Linse, Erve*.) A Genus of the Nat. Order *Leguminosæ*.

**E. ervilia.** Linn. (*F. ervillier, orobe*.) The bitter vetch. The seeds are said to be poisonous, producing loss of muscular power. The meal is used in poultices as a resolvent.

**E. lens.** Linn. (*L. lens*, a lentil. *L. lentille cultivée*; *I. lente*; *S. lenteja*; *G. Linse*.) The lentil. There are two varieties, the seeds of the one, small, of the other, large, are eaten in many places, as peas are. Their percentage composition, according to Fresenius, is starch 33.5, gum 7, sugar 1.5, legumin 25, fat 2.5, pectin and fibrin 12, ashes 2.3, water 14. A decoction of them is used as a lotion for the ulcerations after small-pox.

**Erygë.** (*Ἐρυγή*, from *ἐρεύνω*, to belch.) Eruption.

**Eryglucin.** The same as *Erythrite*.

**Erygmatus.** (*Ἐρυγμός*, an eructation.) Having eructations. Old term applied as an epithet of a flatulent disease, such as a hypochondriac affection. (Gorræus.)

**Eryngium.** (*Ἐρύγγιον*; from *ἐρυγγίζω*, to belch, the plant being a remedy for that disorder. *F. panicaut*; *G. Mannstreu*.) A Genus

of the Nat. Order *Umbelliferae*. The eryngo or sea-holly.

Also, the name of the rhizome of the *E. yuccæ-folium*; it has a heavy aromatic odour and a sweetish aromatic taste, and contains a volatile oil. It is diaphoretic and expectorant, and, in large dose, emetic.

**E. aquaticum.** Linn. (*L. aquaticus*, living in water.) The *E. yuccæfolium*.

**E. campestré.** Linn. (*L. campester*, belonging to the level field. *F. panicaut, char-don Roland, barbe de chèvre*; *G. Kraudistel, Feldmannstreu*.) Eryngo. Hab. Europe. Root diuretic, sudorific and aphrodisiac. Used as a diuretic, laxative, and emmenagogue, in dropsy, gravel, liver disease, and suppression of the menses.

**E. fœtidum.** Linn. (*L. fœtidus*, stinking. Stinking weed.) Hab. America. Infusion of leaves used as an antihysterie.

**E. maritimum.** Same as *E. maritimum*.

**E. maritimum.** Linn. (*L. maritimus*, maritime. *F. panicaut maritime*; *G. Seemannstreu*.) The sea-holly, the root of which has a grateful sweetness and light aromatic warmth or pungency. Formerly celebrated as aphrodisiac. Young shoots esculent.

**E. tricuspidatum.** Linn. Three-leaved eryngo. Hab. Europe. Properties same as *E. campestre*.

**E. virginianum.** Lam. Hab. North America. Properties same as *E. yuccæfolium*.

**E. vulgare.** Lam. (*L. vulgaris*, common.) The *E. campestre*.

**E. yuccæfolium.** Mich. (*L. yucca*, the plant of that name; *folium*, a leaf.) Button suakeroot. Hab. North America. The species furnishing *Eryngium*.

**Eryngo.** (*F. panicaut*; *G. Mannstreu*.) Common name for the plants of the Genus *Eryngium*, especially the *E. campestre*.

**E. sea.** The *Eryngium maritimum*.

**E. three-leaved.** The *Eryngium tricuspidatum*.

**E. water.** The *E. yuccæfolium*.

**Erysibë.** (*Ἐρσιβή*; from *ἐρυθρός*, red. *G. rother Mehltau*.) The red mildew, a disease of corn and fruits. Same as *Erysiphe*.

**Erysimum.** (*Ἐρύσιμον*, the hedge mustard. *G. Hederich*.) A Genus of the Nat. Order *Leguminosæ*.

**E. alliaria.** Linn. (*F. alliaire*; *G. Knoblauchskraut, Ramscheltwurzel*.) The *Sisymbrium alliaria*.

**E. barbarea.** Linn. The *Barbarea vulgaris*.

**E. cheiranthoides.** Linn. (*Χείρ*, the hand; *άνθος*, a flower; *είδος*, likeness.) Treacle mustard, wormseed. Plant vermifuge, stomachic.

**E. cordifolium.** (*L. cor*, the heart; *folium*, a leaf.) The *Sisymbrium alliaria*.

**E. latifolium.** The *Sisymbrium irio*.

**E. lyratum.** (*Λύρα*, a lyre.) The *Barbarea vulgaris*.

**E. officinale.** Linn. The *Sisymbrium officinale*.

**E. præcox.** The *Barbarea præcox*.

**Erysipela'ceæ.** (*Ἐρσιπέλας*.) A class of diseases containing erysipelas, smallpox, measles, and scarlatina.

**Erysipelas.** (*L. erysipelas*; from *Gr. ἐρσιπέλας*, erysipelas; from *ἐρυθρός*, red; *πίλ-*

# ERYSIPELAS.

*λα*, a hide; it has also, but probably erroneously, been derived from *ἐρυθρός*; *πέλος*, livid; and from *ῥέω*, to draw; *πέλας*, near. *E. erysipèle*, feu St. Antoine, feu sacré; *E. risipola*; *S. erisipela*; *G. Rose*, Hautrose, Rothlauf.) St. Anthony's fire, the rose. A diffuse inflammation of the skin, and generally of the subcutaneous tissues, having a tendency to spread freely, and in many cases to become contagious; it is preceded and accompanied by febrile disturbance. It may occur, and that most frequently, in connection with a wound, or may arise spontaneously on an uninjured surface. By many it is looked upon as an acute specific fever, by some as a local disease; it is undoubtedly in many cases caused by infection from another case, and in some it appears to be induced by cold, atmospheric conditions, or local irritation, and in both, constitutional conditions brought on by bad living and excessive drinking help much in its development. It varies in severity from a simple skin redness with little general disturbance to a severe destructive inflammation with dangerous constitutional symptoms. It is usually ushered in by some chilliness, often by a rigor, and by some swelling of the lymphatic glands in the neighbourhood of the affected part; then the affected skin, usually that of the face, becomes rosy, grows hot and tingling, and is painful on pressure. The general symptoms become more serious; there is headache and backache, and pains in the limbs, the temperature rises, the pulse becomes quick, soft, and compressible, the tongue dry and brown, the faces dark coloured, offensive, constipated, or perhaps diarrhetic, the urine scanty, high coloured, full of urea, and, it may be, albuminous. As the local conditions advance in severity, great œdema, subcutaneous suppuration, or gangrene occurring, typhoid symptoms may come on, drowsiness or low muttering delirium, muscular tremors or subultus, paralysis of the sphincters, colliquative sweating, and death, preceded in not a few instances by pneumonia, with oppressed breathing. At first the skin is bright red, thickened, and brawny, then it becomes dusky, and œdematous from infiltration of the subcutaneous areolar tissue, vesicles or bullæ may form, subcutaneous suppuration may occur, and then sloughing. Sometimes the inflammation spreads to deeper tissues, along the mucous membrane of the mouth to the fauces or larynx, and air passages, through the external auditory canal or the Eustachian tube to the middle and inner ear, or to the serous membranes of the skull, the chest, or the abdomen; generally the lymphatics and their glands are affected, very often the veins are inflamed, and local suppurations or pyæmic or thrombotic conditions are the result. Throughout the diseased structures bacteria are found, which by some are looked on as the cause of the disease, but which may be only the normal accompaniments of the putrefactive processes. See *E., contagium of*. The blood in the early stage if drawn, exhibits the buffy coat from excess of fibrin and white corpuscles; after death it is generally found dark, tarry, and uncoagulable, and staining deeply its containing cavities, the red corpuscles ill-defined, small, and adhering, if at all, in masses, not rouleaux; the internal organs are generally congested and soft. The close relationship or the identity of erysipelas with many other diseases, such as pyærial fever, certain pneumonias, and many

forms of inflammation of lymphatics and veins, would appear to be established, and itself is looked upon as a specific superficial capillary lymphangitis.

**E., ambulans.** (*L. ambulo*, to walk. *G. Wanderrose*.) The form in which the inflammation traverses a considerable part of the body, the first attacked parts being successively restored to a normal condition.

**E., anomalous.** (*Av*, neg.; *ὁμαλός*, even. *G. wilder Rothlauf*.) Formerly applied to *Eczema impetiginosum*.

**E., bilious.** (*L. bilis*, bile.) The form sometimes noticed in malarial localities, in which there is vomiting of bile, epigastric tenderness, yellowness of skin, conjunctiva, and urine.

**E., bronzed.** A term applied to the form in which the skin has a bronzed appearance.

**E. bullatum.** Same as *E. bullosum*.

**E. bullosum.** (*L. bulla*, a bleb. *G. Blatterrose*.) The form in which large blebs or blisters appear on the surface.

**E., cellular.** Nunneley's term for the disease otherwise called diffuse cellulitis. It is an inflammation of the cellular or areolar tissue, without primary inflammatory implication of the skin, as occurs in a *Dissection wound*; or of cellular tissue where there is no skin, as in *Pelvic cellulitis*. There is generally a very rapid pulse, much prostration, copious sweating, great mental agitation and distress, and frequent termination in death.

**E., cellulocutaneous.** Nunneley's term for *E., phlegmonous*, in reference to its extension to the subcutaneous cellular tissue.

**E., chirurgical.** (*Χειρουργία*, surgery.) Same as *E., surgical*.

**E. contagiosum.** See *E., contagium of*.

**E., contagium of.** The specific contagium of erysipelas, if such an one exists, has not yet been absolutely determined; bacteria are generally found in abundance. Koch has observed large quantities of a bacillus in a rabbit's ear which appeared to be affected with erysipelas. Fehleisen has lately described cateniform micrococci in the lymphatics, and zooglæa-masses with micrococci in the lymph-spaces; these he has cultivated, and inoculating with them he has propagated the disease.

**E. crustosum.** (*L. crustosus*, covered with a hard rind.) The form in which thin crusts are formed by the drying up of the vesicles or bullæ of *E. vesiculosum* and *E. bullosum*, or of the pustules of *E. pustulosum*.

Also, formerly applied to cases of acute eczema when the pus-holding vesicles have become dried up.

**E. cùrans arbor.** (*L. curo*, to cure; *arbor*, a tree.) A name for the shrub *Mallea-mothc*.

**E., cutaneous.** (*L. cutis*, the skin.) Nunneley's term for *E., simple*, in reference to its restriction to the skin chiefly.

**E. diffusum.** (*L. diffusus*, spread out.) The form in which the redness is extensive and fades out gradually into the surrounding healthy skin.

**E., epidemic.** (*Ἐπιδήμιος*, among a people.) The form in which, it may be from some atmospheric condition, erysipelas is very prevalent.

**E. erraticum.** (*L. erraticus*, wandering.) A superficial form which tends to spread irregularly by attacking in succession some more

# ERYSIPELAS.

or less distant part, not in continuity with the previously inflamed parts.

**E. erythematosum.** (Ἐρύθημα, a redness of the skin.) The form in which the skin inflammation is slight and superficial.

**E. exanthematicum.** (Ἐξάνθημα, an efflorescence.) A synonym of *E. idiopathic*; the term has also been applied to *E. simple*.

**E., external.** Erysipelas attacking the outer surface of the body, the skin and subcutaneous tissue.

**E., false.** A term for *Erythema*.

**E. fixum.** (L. *fixus*, immovable.) A term applied to erysipelas when it has attained its greatest intensity and gives no sign of disappearing or spreading.

Also, applied to those forms which have a fixed seat, in opposition to *E. migrans*.

**E., gangrænous.** (Γάγγραινα, gangrene.) The form of *E. phlegmonous*, in which more or less extensive gangrene results.

The term has also been applied to some forms of the plague.

**E. glabrum.** (L. *glabrus*, smooth.) A term applied to those cases in which the affected skin is very smooth and shining.

**E. habitu'alē.** (L. *habitus*.) Erysipelas arising from some permanent or constant cause of septic or purulent infection.

**E., idiopathic.** (Ἰδίος, peculiar; πᾶθος, affection.) The form which arises spontaneously, that is, without apparent external cause, such as injury or contagion.

**E. infantilis.** Same as *E. neonatorum*.

**E. inflammatorium.** A synonym of *E. œdematosum*.

**E., internal.** Erysipelatous or diffuse inflammations of the internal surface of the body, such as erysipelatous laryngitis and erysipelatous trachinitis.

**E. lævigatum.** (L. *lævigatus*, smooth.) Same as *E. glabrum*.

**E. legitimum.** (L. *legitimus*, pertaining to law.) A synonym of *E. simple*.

**E. malignum puerperalē internam.** (L. *malignus*, of an evil nature; *puerpera*, a lying-in woman; *internus*, inner.) Virchow's term for the *Parametritis* and *Metritis* of lying-in women, on account of the similarity of the phenomena to those of erysipelas of the external soft parts.

**E. mam'mæ.** (L.  *mamma*, the female breast.) Erysipelas of the skin of the female breast, often the result of an abscess of the gland.

**E. marginatum.** (L. *marginatus*, to furnish with a border.) The form in which the skin inflammation is surrounded by a well-defined edge or border.

**E., medical.** Erysipelas which has not arisen from injury of the skin.

**E., metastatic.** (Μεταστασις, a being put into a different place.) The form in which the skin inflammation suddenly subsides, and a severe internal inflammation takes its place.

**E. migrans.** (L. *migro*, to remove from one place to another.) Same as *E. ambulans*.

**E. migratorium.** (L. *migratio*.) The same as *E. ambulans*, or *E. repens*, or *E. erraticum*, or *E. vagans*.

**E. miliarē.** (L. *milium*, a millet seed.) The form in which vesicles like millet seeds arise on the skin, and either dry up or burst, and form scabs or scales.

**E. neonatorum.** (L. *neonatus*, new born.) A form of erysipelas arising from the changes connected with the separation of the umbilicus in new-born children, and probably caused by some septic influence, such as the contaminated air of a lying-in hospital, or the emanations from puerperal fever; it frequently ends in suppuration, gangrene, and death. It is thought by some to be a phlebitis.

**E. nosocomia'le.** (L. *nosocomium*, a hospital.) A synonym of *E. traumatic*, from its frequent appearance in the wards of a hospital.

**E. no'thum.** (L. *nothus*, bastard.) The same as *E. traumatic*.

**E. odontalgicum.** (Ὀδούς, a tooth; ἄλγος, pain.) Erysipelas proceeding from a gum-boil or caries of a fang of the tooth.

**E. œdematosum.** (Οἰδήμα, a swelling.) The form in which there is much subcutaneous infiltration of serum, such as frequently occurs when it attacks the eyelids and the genitals. The colour of the skin is often brownish in this form, and the serum bloody.

**E., œdematous.** Same as *E. œdematosum*.

**E. of lung.** See *Lung, erysipelas of*.

**E. of new-born infants.** See *E. neonatorum*.

**E. otalgicum.** (Ὀὶς, the ear; ἄλγος, pain.) Erysipelas proceeding from some disease of the ear.

**E. periodica nervosa chronica.** (L. *periodicus*, that returns at stated times; *nervosus*, nervous; *chronicus*, lasting.) A synonym of *Pellagra*.

**E. pestilens.** (L. *pestilens*, pestilential.) Lorrain's name for a disease which was probably the plague.

**E. phlegmonodes.** (Φλεγμονή, an inflamed tumour; εἶδος, likeness.) Same as *E. phlegmonous*.

**E., phlegmonous.** (Φλεγμονή, an inflamed tumour.) The form in which the inflammation spreads to the subcutaneous areolar and adipose tissues, and not infrequently produces diffuse suppuration and, from consequent destruction of its blood-vessels, gangrene of the skin.

**E. phlyctenodes.** (Φλύκταινα, a vesicle; εἶδος, likeness.) A synonym of *Herpes zoster*.

Also, a term for the form of erysipelas in which large phlyctenæ or bullæ form on the skin, sometimes containing a transparent serum, which becomes semi-purulent or bloody.

**E. plant.** The *Heliotropium indicum*, from its use as an application to inflamed parts.

**E., puerperal.** (L. *puerpera*, a lying-in woman.) The erysipelas which not infrequently attacks lying-in women in crowded and unhealthy hospitals. It may assail any uninjured part of the body, or it may start from perineal lacerations which are subjected to the irritation of lochial discharges.

**E. puerperalē.** (L. *puerpera*.) Same as *E. malignum puerperale internum*.

**E. pulmonis.** (L. *pulmo*, the lung.) Lommius's term for what were probably cases of pericarditis.

**E. pustulosum.** (L. *pustulosus*, full of pustules.) A term applied to the form in which the vesicles of *E. vesiculosum* have become turbid and filled with pus.

# ERYSIPELATODES—ERYTHEMA.

Also, formerly applied to those cases of acute eczema in which the contents of vesicles have become purulent.

Also, a synonym of *Herpes zoster*.

**E. rosa.** (L. *rosa*, a rose.) A synonym of *E. vesiculosum*.

**E. serpens.** (L. *serpo*, to creep.) Same as *E. ambulans*.

**E. serpiginous.** (L. *serpo*, to creep.) Erysipelas which creeps along the skin from one spot to another.

**E., simple.** The form in which the subcutaneous tissue is little, if at all, affected; the constitutional symptoms are not generally severe, especially when it occurs elsewhere than the head and face, and the suppurations are only circumscribed and small.

**E. simplex.** (L. *simplex*, simple.) See *E., simple*.

**E. spontaneus.** Erysipelas which has arisen without known external cause.

**E. spurium.** (L. *spurius*, false.) A synonym of *Erythema*.

Also, a synonym of *E., traumatic*.

**E. superficialē.** (L. *superficialis*, belonging to the surface.) Same as *E., simple*.

**E., suppurative.** (L. *suppuro*, to form matter.) Erysipelas when it ends in subcutaneous suppuration, a result which may happen in both simple and phlegmonous erysipelas.

**E. surgical.** (F. *erysipèle chirurgicale*.) Erysipelas which has arisen from a wound or bruise. Same as *E., traumatic*.

**E., traumatic.** (Γραῦμα, a wound. G. *Wundrose*.) The form which occurs in connection with wounds or injuries.

**E., true.** The same as *E., simple*.

**E., tuberculo-casæous.** A term applied to a form of erysipelas occurring in the course of tubercular phthisis, in which tubercular granulations, some undergoing caseous degeneration and intractable ulceration, are found in the skin.

**E. typhodes.** (*Typhus*.) A term applied formerly to some cases of erysipelas with typhoid symptoms.

**E. umbilicālē.** (L. *umbilicus*, the navel.) A synonym of *E. neonatorum*.

**E. universālē.** (L. *universalis*, belonging to the whole.) Erysipelas affecting the whole body; a very rare affection, to which the terms *Ignis sacer* and *Ignis Sancti Ignatii* were specially applied.

**E. vaccinalē.** (*Vaccinia*.) Erysipelas following vaccination.

**E. variegatūm.** (L. *variegatus*, to make of various colours.) The form in which the redness assumes the form of isolated stripes or patches.

**E. verrucosum.** (L. *verruca*, a wart.) The form in which the skin appears warty or pimply, from irregular swelling of its substance, or irregular attachment to the subjacent parts.

**E. verum.** (L. *verus*, true.) A synonym of *E., idiopathic*, and of *E., simple*.

**E., vesicular.** (L. *vesicula*, a little blister.) The form of *E., simple*, in which vesicles of various sizes appear on the surface, and dry up as scabs, or burst, leaving superficial sores.

**E. vesiculosum.** (L. *vesicula*, a small blister.) Same as *E., vesicular*.

**E., wandering.** Same as *E. erraticum*.

**E. zōna.** (Λώνη, a girdle.) Same as *Herpes zoster*.

**E. zoster.** Same as *Herpes zoster*.

**Erysipelatodes.** See *Erysipelatoid*.  
**Erysipelatoid.** (Ἐρυσίπεπλος; εἶδος, likeness.) Resembling erysipelas.

**Erysipelatopneumonia.** (Ἐρυσίπεπλος; πνευμονία.) Erysipelatous pneumonia.

**Erysipelatous.** (Ἐρυσίπεπλος.) Of the nature of, or resembling, *Erysipelas*.

**E. arachnitis.** Same as *Arachnitis*, diffuse.

**E. fe'ver.** The fever which attends *Erysipelas*.

**E. inflammation.** See *Inflammation*, *erysipelatos*.

**E. laryngitis.** See *Laryngitis*, *erysipelatos*.

**E. lymphangitis.** See *Lymphangitis*, *erysipelatos*.

**E. peritonitis.** See *Peritonitis*, *erysipelatos*.

**Erysipeline.** Farr's term for the specific poison of erysipelas.

**Erysipelogonorrhœa.** Erysipelatous gonorrhœa.

**Erysipeloparotitis.** Erysipelatous inflammation of the parotid.

**Erysipelorchitis.** (Ὀρχίς, the testicle. G. *rosenartige Hodenentzündung*.) Erysipelatous inflammation of the testicle.

**Erysipelous.** Same as *Erysipelatous*.

**Erysipelurethritis.** (Ἐρυσίπεπλος; οὐρήθρα, the urethra. G. *rosenartige Harnröhrenentzündung*.) Erysipelatous inflammation of the urethra.

**Erysiphē.** (Ἐρυσίβη, mildew.) A Genus of perisporiaceous ascomycetous Fungi growing on the surface of many plants. The spore tubes usually club-shaped or oviform, elliptic, or round, not intermingled with paraphyses, but enclosed in perithecia, which when ripe dehisce irregularly, and never have a porous opening at the vertex. The species are very numerous, and live on the surface of many plants, forming the ordinary mildew; the mycelium is ramified, and throws out minute suckers, which penetrate the cells of the epidermis of its host; it is reproduced by conidia seated on erect unbranched conidiophores; this stage is called *Oidium*. The sexually developed fruits have only been discovered in some of the species.

A case is reported of a child who ate some gooseberries covered with an Erysiphe, and had violent colic, rigors, headache, and convulsive movements, followed by prostration.

**E. Tuckeri.** The grape mildew known only in its conidia-bearing mycelial form as *Oidium Tuckeri*.

**Erysiphæ.** The mildews. A Group of ascomycetous Fungi, having no hymenium, and few and irregularly distributed asci.

**Erysos.** (Ἐρυθρός, red.) A synonym of *Erysipelas*.

**Erythanthema.** (Ἐρυθρός, red; ἄνθημα, a blossoming.) A red cutaneous efflorescence or rash.

**E. essentialē.** (L. *essentia*, the essence or being of a thing.) Auspitz's name for the angioneurotic dermatoses included by Hebra under the terms *Erythema multiforme* or *E. polymorphum*, and *Herpes iris* of other authors.

**E. neuriticum.** (Νεύρον, a nerve.) Auspitz's term for the group of papular or vesicular dermatoses which have an inflamed and red base.

**Erythema.** (Ἐρυθμα; from ἐρυθραίω, redness.)

# ERYTHEMA.

to make to blush. *F. erythème*; *I. eritema*; *G. Röthe, Hautröthe*.) A non-infectious, slight, and superficial inflammation of the skin, with redness, slight swelling, and generally some desquamation. It may appear on any part of the body, and may be caused by external influences, or internal disorders.

**E. a frigore.** (*L. frigus*, cold.) A synonym of *Chilblain*.

**E. ab acris.** (*L. ab*, from; *acris*, sharp.) Redness of the skin produced by irritating substances, such as mustard.

**E. acrodynia.** Same as *Acrodynia*.

**E. ambustio.** (*L. ambustus*, a burn.) A burn of the first degree, producing only redness.

**E. anatomicum.** The erythema which follows a dissection wound.

**E. angiectaticum.** (*Ἀγγεῖον*, a vessel; *εκτασις*, dilatation.) Auspitz's term for *Aloë rosacea*.

**E. annularé.** (*L. annulus*, a ring.) Same as *E. circinatum*.

**E. annulatum.** Same as *E. annulare*.

**E. an'thrax.** A synonym of *Anthrax*.

**E. caloriceum.** (*L. calor*, heat.) The redness produced by the application either of heat or of cold to the skin.

Also, Biett's term for *E. circinatum*.

**E. centrifugum.** (*L. centrum*, the centre; *fugio*, to flee.) A variety which commences as a small red patch, especially on the face, and gradually spreads, as if from a centre, in all directions.

Also, a synonym of *Lupus erythematosus*.

**E. choleraic.** The papular form of erythema which appears on the skin in many cases of malignant cholera.

**E. circinatum.** (*L. circinatus*, part. of *circino*, to make round.) The stage of Hebra's *E. multiforme* when it assumes a circular form with a red swollen margin, and spreads at the circumference whilst it fades in the centre; the rings often run together.

The term has also been applied to a form of *Tinea tonsurans*, which closely resembles it.

**E. congestivum idiopathicum.** (*L. congestio*, a crowding; *idios*, peculiar; *πάθος*, affection.) Hebra's generic term for all those rashes which arise from injuries affecting directly the cutaneous surface, and in which hyperæmia is the sole or chief morbid change; it includes *E. traumaticum*, *E. caloriceum*, and *E. ab acris*.

**E. congestivum papulatum.** (*L. congestio*.) Same as *E. papulatum*.

**E. congestivum traumaticum.** (*L. congestio*; *Gr. τραύμα*, a wound.) Erythema from pressure or friction, or such like.

**E. diffusum.** (*L. diffusus*, spread out.) Erythema of an extended surface.

**E. endem'icum.** (*ἔνδ*, among; *ῥήμος*, a people.) A synonym of *Pellagra*.

**E., epidem'ic.** (*ἐπιδήμιος*, prevalent among a people.) A synonym of *Acrodynia*.

**E. erysipelato'sum.** A term applied by Good to what were probably mild cases of erysipelas.

**E. exsudativum.** (*L. exsudo*, to sweat out.) The class in which, along with hyperæmia, there is some infiltration of the skin with serum; it includes *E. multiforme* and *E. nodosum*.

**E. exsudativum multifor'me.** (*L. exsudo*, to sweat out; *multus*, many; *forma*, shape.) Same as *E. multiforme*.

**E. folliculo'rum.** (*L. folliculus*, a small bag.) Inflammation of the hair follicles, with redness of the surrounding skin and the production of furfuraceous scales.

**E. fugax.** (*L. fugax*, flying.) Erythematous redness of the skin, which speedily fades, seldom desquamates, and after attacking one part disappears there, and invades others in succession. It may be caused by errors of diet, by disordered material in the stomach, in special persons by special things such as crab or mackerel, or it may arise in the course of important diseases of other parts of the body.

**E. gangrenoso'sum.** Good's term for gangrenous erysipelas.

**E. gyratum.** (*L. gyro*, to turn round in a circle.) The form of Hebra's *E. multiforme* in which the circles of *E. circinatum* have met and coalesced, and formed spiral or sinuous bands.

**E. hæmorrhagicum.** (*Ἀιμορραγία*, a violent bleeding.) The form of *E. multiforme* in which there are small patches of effused blood.

**E. hyperhæmicum.** (*ὑπερ*, above; *αἷμα*, blood.) The form of erythema in which there is redness of skin from dilated vessels, but no effusion.

Also, the same as *E. simplex*.

**E. ichoro'sum.** (*ἰχώρ*, corrupted blood. *L. ichor*, a bloody serum.) Marce's term for *Eczema mercuriale*.

**E., idiopath'ic.** (*ἰδίος*, peculiar; *πάθος*, affection.) Erythema arising from other than an external cause.

**E. infant'ile.** Same as *Rosola infantilis*.

**E. intertri'go.** Same as *Intertrigo*.

**E. iris.** (*L. iris*, the rainbow.) The form of Hebra's *E. multiforme* in which the enlargement of the patch has been accomplished by the development of successive rings of the same nature as that of *E. circinatum*, separated from each other by paler, nearly healthy skin. Kaposi has once found the mycelium of a fungus in this disease.

**E. lævè.** (*L. lævis*, light.) Very mild erythema, such as the superficial blush which is produced on the skin of the legs by the distension of anasarca.

**E., laryngo'al.** (*Λάρυγξ*, the larynx.) An occasional early manifestation of syphilis in the larynx, consisting of diffuse, brownish-red patches on the mucous membrane of the larynx, accompanied with slight swelling.

**E., mala'rial.** (*Malaria*.) Erythema accompanying a malarial fever; the papular and nodose varieties have been observed.

**E. mamilla'tum.** (*F. erythème mameloné*.) A larger form of *E. iris*.

**E. marginat'um.** (*L. margino*, to furnish with a border.) A more pronounced form of *E. circinatum*, with deeper coloured and more prominent borders.

Also, a synonym of *E. gyratum*.

**E., mens'trual.** (*L. menstrualis*, monthly.) The erythematous rash which breaks out on the skin of some women at the menstrual periods.

**E. mercurialé.** Same as *Eczema mercuriale*.

**E. multifor'me.** (*L. multus*, many; *forma*, shape.) A term by Hebra, which includes as stages of development *E. papulatum*, *E. circinatum*, *E. iris*, *E. marginatum*, and *E. gyratum*.

**E. multifor'me universalé.** (*L. universalis*, belonging to the whole.) A term ap-

# ERYTHEMATIC—ERYTHRIC ACID.

plied to *E. multiforme* when it invades the whole skin surface.

**E. neonatorum.** (L. *neonatus*, new-born.) A form of *E. papulatum* which is seen in new-born children, probably from the irritation of clothes or of soap.

**E. nodosum.** (L. *nodosus*, full of knots; *F. erythema noder.*) Occurs as roundish or oval raised lumps, 2"—3" in diameter, bright red at first, tense, painful, and accompanied by fever and digestive disturbances; as it subsides the lumps become brownish or yellowish and desquamate; it is common in young anæmic females, especially of a rheumatic habit. By some it is thought to be an inflammation of the lymphatics.

**E. oedematosum.** (Oίδημα, a swelling.) The red condition of skin produced by the distension of dropsical effusions.

The term is applied by Good to cases probably of simple or phlegmonous erysipelas where there is much effusion.

**E. of mania.** The neurotic form of the disease which not infrequently occurs in maniacal persons.

**E. papulatum.** (L. *papula*, a pimple.) The earliest stage of Hebra's *E. multiforme*, consisting of small, circular, bright-red, raised, and itching patches of skin.

**E. paratrimma** (Παράτριμμα, inflammation caused by friction.) The redness of skin caused by and called *Chafing*.

**E. pella-grum.** Same as *Pellagra*.

**E. pernio.** (L. *pernio*, a chilblain.) The unbroken form of *Chilblain*.

**E., polymorphic.** (Πολός, many; μορφή, form.) A term which includes the varieties which form Hebra's *E. multiforme*, with the addition of *E. nodosum*.

**E. purifluens.** (L. *pus*, matter; *fluo*, to flow.) A term applied to *Intertrigo* when there exudes from the inflamed surface a puriform fluid.

**E. reflex.** (L. *reflecto*, to bend back.) Erythema occurring as a reflex phenomenon of some internal disease.

**E. scarlatiniformis.** (*Scarlatina*; L. *forma*, form.) A synonym of German measles; see *Roscola, epidemica*.

**E. serpens.** (L. *serpo*, to creep.) Morant Baker's term for a form of erythema occurring after a surgical operation, in the form of pink oedematous blotches, on the finger-joints and knuckles, and unaccompanied by any glandular enlargement or by much constitutional disturbance. It has been suggested that it is a form of mild pyæmic poisoning.

Also, a synonym of *E. ambulans*.

**E. simplex.** (L. *simplex*, simple.) The ordinary form of erythema. It is a diffused, spreading redness of the skin, disappearing on pressure, with some swelling and a more or less well-defined margin; it may be caused by external irritants, or by digestive disturbances.

Also, the same as *Pityriasis simplex*.

**E. solaris.** (F. *solaris*, relating to the sun.) A term for *Pellagra*, in consequence of its being accompanied by red spots, brought out by exposure to the sun's rays.

**E., syphilitic.** See *Syphiloderm, erythematous*.

**E. traumaticum.** (Τραυματικός, relating to wounds.) Erythema resulting from tight bands, or friction, or pressure.

**E. tuberculatum.** (L. *tuberculum*, a

small hump.) A larger form of *E. papulatum*, occurring often in connection with it, in weakly persons, and accompanied by febrile symptoms.

**E. tuberosum.** (L. *tuberosus*, full of swellings.) Same as *E. tuberculatum*.

Probably also the same as *E. nodosum*.

**E. urticosum.** (L. *urtica*, a nettle.) A term applied to those cases of *E. papulatum* in which the itching is of a stinging nature.

Also, a synonym of *Purpura urticaria*.

**E. vaccinicum.** Same as *Roscola vaccinica*.

**E. variolosum.** (*Variola*.) The erythematous redness of the skin which frequently precedes the eruption of smallpox vesicles. See *Roscola variolosa*.

**E. venenatum.** (L. *venenatus*, poisoned.) Circumscribed redness of the skin produced by the ingestion of a substance which acts in some sort as a poison, as lobster, or mussels, or quinine with some persons.

Also, a synonym of *E. ab acribus*.

**E. vesicularé.** (L. *vesicula*, a small blister.) Good's term for cases some of which were probably acute eczema and others erysipelas.

**E. vesiculolum.** Same as *E. vesicularé*.

**E. volaticum.** (L. *volatus*, flying.) Same as *E. fugax*.

**Erythematic.** (Ερύθημα.) Of the nature of, or resembling, *Erythema*.

**Erythematous.** (Ερύθημα.) Of the nature of, or relating to, *Erythema*.

**E. diseases.** The skin diseases which consist in cutaneous hyperæmia. They are erythema, rosola, and urticaria.

**E. lupus.** See *Lupus, erythematous*.

**E. syphiloderm.** See *Syphiloderm, erythematous*.

**Erythemoid.** (Ερύθημα; είδος, likeness.) Resembling *Erythema*.

**Erythræa.** (Ερυθραία, red.) Centaury. A Genus of the Nat. Order *Gentianaceæ*; so called from the colour of the flowers.

**E. centaureum,** Pers. (Κενταύριον, the herb centaury; or L. *centum*, a hundred; *aurum*, gold. F. *petite centauree*; G. *Tausendguldenkraut*.) The lesser centaury. A bitter stomachic and vermifuge; it has also been used as a febrifuge. Used in liver affections, stomach disturbances, and hydrophobia; externally in decoction used in scabies and to kill lice.

**E. chilensis,** Pers. Properties as *E. centaureum*. Also called *Chironia chilensis*.

**E. Roxburghii,** Don. Hab. India. A bitter tonic.

**E. stricta,** Scheide. (L. *strictus*, narrow.) Hab. Mexico. A bitter tonic.

**Erythræmia.** (Ερυθρός, red; αἷμα, blood. F. *erythémie*.) Term for the excessive preparation of arterial blood in the lungs.

**Erythramylum.** (Ερυθρός; άμυλον, starch.) A substance produced, according to Brücke, by the action of malt extract on starch.

**Erythranche.** (Ερυθρός; άρχω, to strangle.) Erysipelatous sore throat.

**Erythrasma.** (Ερυθρός, red.) Bärensprung's name for *Eczema marginatum*.

**Erythema.** Same as *Erythema*.

**Erythric acid** (Ερυθρός, red. F. *acide erythrique*; I. *acido ossieritrico*.) Name given by Brugnatelli to an acid obtained by the action of nitric acid on lithic acid, yellow at first, but becoming red by being exposed to the sun's rays.

# ERYTHRIN—ERYTHROPHLEUM.

Also, a synonym of *Erythrin*.

**Erythrin.** (Ἐρυθρός.)  $C_4H_6(OH)_2$ . A white, tasteless, crystalline substance contained in *Roccella tinctoria* and other lichens. On boiling with baryta water it is decomposed into orsellinic acid and erythrite.

**Erythrina.** (Ἐρυθρός, red. *F. erythrina*; *G. Korallenbaum*.) A Genus of the Nat. Order Leguminosae.

Also, the same as *Erythrin*.

**E. corallodendron.** Linn. (Κοράλλιον, coral; δένδρον, a tree.) The *E. indica*.

**E. indica.** Lam. Coral tree. Hab. India, Brazil. Leaves and bark used in fevers as a sedative.

**E. inermis.** Mill. (*L. inermis*, unarmed.) Leaves sudorific, flowers used in coughs.

**E. monosperma.** Lam. (*Monos*, single; σπέρμα, seed.) The *Butea frondosa*.

**E. piscipula.** Linn. The *Piscidia erythrina*.

**Erythrine.** (Ἐρυθρός, red. *F. erythrin*.) That which is wholly or in great part red.

Also, term applied to the methylic or ethylic ethers of eosine, which are employed as red staining agents.

Also, Bochefontaine's name for a doubtful alkaloid contained in the bark of *Erythrina indica*.

**Erythrism.** (Ἐρυθρός.) The red coloration of the skin such as occurs in some monkeys.

**Erythrite.** (Ἐρυθρός.)  $C_4H_6(OH)_4$ . A solid white substance, sp. gr. 1.449—1.452, allied to the sugars, found in *Roccella tinctoria* and other lichens, the *Protococcus nivalis* and other algae.

**Erythrocentaurin.**  $C_{27}H_{48}O_8$ . A crystalline, colourless, inodorous, tasteless, neutral substance, turned red by light, obtained by Méhn from the *Erythraea centaurium* and *E. chilensis*; it is also contained in *Sabbatia angustata*.

**Erythrocephælin.** (Ἐρυθρός; κεφαλή, a head.) A deep straw-yellow, crystalline, colouring matter found in some kinds of ipecacuanha.

**Erythrochloropia.** (Ἐρυθρός; χλωρός, green; ὤψ, the eye.) Term applied by Mauthner to those who can only perceive black, white, red, and green, and who confuse other tints with red, green, or grey. They most commonly mistake blue for green and yellow for red. The spectrum is not shortened to them, but yellow is not the brightest part of it.

**Erythrochœras.** (Ἐρυθρός; χοιράδιος, swollen neck glands.) A term for inflammation of the parotid gland.

**Erythrodanum.** (Ἐρυθρόδανον.) Madder.

**Erythrodes.** Same as *Erythroides*.

**Erythrodextrin.** (Ἐρυθρός; δextrin.) Brücke's term for one of the two bodies which compose, as he believes, dextrin derived from the conversion of starch, the other being *Achroodextrin*. It is coloured red by iodine, while *achroodextrin* assumes no colour.

**Erythrogen.** (Ἐρυθρός, red; γεννάω, to generate. *F. erythrogene*; *G. Erythrogen*.) A term for a variety of the supposed colouring matter of vegetables, called *Chromogen*, because it produces a red colour with acids.

Also, the red colouring matter of flowers.

Also, applied to a green substance found by Bizio in the bile of a jaundiced person, and which

he considered to be the base of the colouring matter of the blood.

**Erythroglucin.** (Ἐρυθρός; γλυκός, sweet.) A synonym of *Erythrite*.

**Erythrogranulose.** (Ἐρυθρός; granulose.) Brücke's term for one of three substances, the others being cellulose and granulose, of which the starch-corpuscle is composed; it is turned red by iodine, and is less easily converted into grape sugar by the saliva than is granulose.

**Erythroid.** (Ἐρυθρός, red. *F. erythroides*.) Of a red colour; reddish.

**E. coat.** Same as *Erythroules*.

**E. vesicle.** (*L. vesicula*, a little bladder.) Name given to an enlargement of the (future) umbilical cord in the embryo of most of the *Ruminantia*, and of the pig, from the colour communicated to it by the omphalo-mesenteric vessels. This object was falsely supposed to be the allantoïd in the higher animals.

**Erythroides.** (Ἐρυθρός, red; εἶδος, appearance.) Ancient epithet for the tunica vaginalis testis, on the inside of which the red fibres of the cremaster muscle are dispersed.

**Erythrosis.** The same as *Erythroides*.

**Erythroleén.** Term applied by Kane to a colouring matter found in litmus and orcella.

**Erythrolitmin.** (Ἐρυθρός, red; litmus.) A red crystalline constituent of litmus. It is insoluble in ether, soluble in alcohol, and turned blue by alkalis.

**Erythromanite.** (Ἐρυθρός; μάννα, manna.) A synonym of *Erythrite*.

**Erythronium.** (Ἐρυθρός, red; from the colour of its juice.) A Genus of the Nat. Order *Liliaceae*.

**E. americanum.** H. K. A species, at one time included in *U.S. Ph.*, the root of which is used as emetic, and as a substitute for squill.

**E. dens canis.** Linn. (*L. dens*, a tooth; *canis*, a dog.) The dog's-tooth violet. Its root has been used against colic and epilepsy, as an aphrodisiac, and a vermifuge, and externally for scald-head. In some parts of Siberia it is used as food.

**E. flavum.** (*L. flavus*, yellow.) The *E. americanum*.

**E. indicum.** Rott. The *Ledebouria hyacinthoides*.

**E. lanceolatum.** Pursh. (*L. lanceolatus*, having a lance.) The *E. americanum*.

**E. longifolium.** (*L. longus*, long; *folium*, a leaf.) The *E. americanum*.

**Erythrophlein.** A colourless, crystalline alkaloid found in the bark of *Erythrophleum guineense*. It is soluble in water, alcohol, and acetic ether; insoluble in ether, chloroform, and benzol. Sulphuric acid and potassium permanganate colour it violet, changing to dirty brown. Potassium bichromate yields a yellowish precipitate. A most energetic cardiac poison, arresting the ventricles in systole, and the auricles in diastole.

**Erythrophleum** (Ἐρυθρός; φλοιός, the inner bark of trees.) A Genus of the Tribe *Cesalpinee*, Nat. Order *Leguminosae*.

**E. coumanga.** Menab. Hab. Seychelles Islands. Poisonous; contains an alkaloid very like to, if not identical with, *Erythrophlein*.

**E. guineense.** Don. The tree which furnishes *Sassy bark*.

**E. judiciale.** Procter. (*L. judicialis*,

belonging to the courts of justice.) The *E. guineense*, so called because of its bark being used as an ordeal poison.

**E. koumanga.** Same as *E. coumanga*.

**Erythrophlogoses.** (Ἐρυθρός, red; φλόγαισι, burning heat.) Inflammations with much redness and arterial action.

**Erythrophthalmia.** (Ἐρυθρός; ὀφθαλμία, disease of the eyes.) Conjunctivitis with much vascular engorgement.

**Erythrophyll.** (Ἐρυθρός; φύλλον, a leaf.) The red colouring matter of flowers of fruits and leaves.

**Erythrophyllin.** See *Phyllerythrin*.

**Erythrophyllum.** (Ἐρυθρός, red; φύλλον, a leaf.) The same as *Erythrophylleum*.

**Erythrophia.** (Ἐρυθρός; ὤψ, the eye. G. *Rothschen*.) A visual disturbance in which objects appear red. It has been observed after extraction of the lens of the eye, and in cases of aphakia.

**Erythropityriasis.** (Ἐρυθρός, red; πιτυρίασις. F. *erythropityriase*; G. *rother Bleinausschlag*.) Term for *Pityriasis rubra*.

**Erythroprotid.** (Ἐρυθρός, red; πρωτεΐν.) Name given to a reddish-brown extract obtained by adding protein to a concentrated solution of potash, subjecting to ebullition, neutralising by sulphuric acid, evaporating to one third of its volume, and then treating with boiling alcohol. Subsequently, leucin separates in a crystalline state.

**Erythropsin.** The same as *Rhodopsin*.

**Erythropyra.** (Ἐρυθρός, red; πύρ, a fever. F. *erythropyre*.) Term for fever with inflammation of the arterial blood as was supposed.

**Erythrorétin.** (Ἐρυθρός; ρητίνη, resin.)  $C_{35}H_{36}O_{14}$ . A reddish-yellow tasteless powder, found in the alcoholic extract of rhubarb. It is soluble in alcohol. Also called red resin of rhubarb.

**Erythrorrhiza.** (Ἐρυθρός; ῥίζα, a root.) A Genus of the Nat. Order *Pyrolaceæ*.

**E. rotundifolia.** (L. *rotundus*, round; folium, a leaf.) The *Galax aphylla*.

**Erythrosclerotia.** Same as *Sclererythria*.

**Erythrosc.** (Ἐρυθρός.) The reddish colouring matter obtained from rhubarb by the action of nitric acid.

**Erythrosin.** (Ἐρυθρός.) A red colouring matter, in many ways similar to hæmatin, a product of the action of nitric acid on tyrosin.

**Erythrosis.** (Ἐρυθρός, to make red. F. *erythrosc*; G. *Rothsucht*.) Term for arterial plethora.

**Erythrotan'nin.** (Ἐρυθρός, red; ταννίν.) The red form of tannin found in gom dammar and dogwood.

**Erythroxyanthraquinone.**  $C_{11}H_8O_2$ . A substance crystallising in yellowish-red, dendritic needles, obtained by treating phenol with phthalic anhydride and sulphuric acid. Fused potash converts it into alizarine.

**Erythroxyloceæ.** A Natural Order of thalamifloral Exogens, or an Order of the Cohort *Geraniales*, Series *Discifloræ*, or of the Alliance *Sapindales*, having actinomorphic flowers, petals with ligular appendage, pendulous, anatropous ovules, and straight embryo.

**Erythroxylin.** A synonym of *Cocain*, from the *Erythroxylon coca*.

**Erythroxylon.** (Ἐρυθρός; ξύλον,

wood.) A Genus of the Nat. Order *Erythroxylacæ*.

**E. anguifugum.** (L. *anguis*, a snake; *fugio*, to put to flight.) Hab. Brazil. Root used as an alexipharmic.

**E. arcolatum.** (L. *arcola*, a small surface.) Hab. South America. Bark tonic, juice of fruit purgative and diuretic, juice of leaves used in fava.

**E. campestré.** (L. *campestris*, belonging to a plain.) Hab. Brazil. Bark purgative.

**E. co'ca.** Lamk. Hab. Peru, Bolivia. The species which supplies *Coca*.

**E. fluid extract of.** The *Extractum erythroxylifluidum*.

**E. monogynum.** Roxb. The *Sethia indica*.

**Erythroxylum.** (Ἐρυθρός; ξύλον. F. *campeche*; G. *Compescheholz*.) The *Hæmatocorylon campechianum*, or logwood.

**Erythrozyme.** A ferment found, according to Schumek, in the root of madder, which acts on the rubian and sets free alizarin.

**Erythrus.** (Ἐρυθρός, red.) The *Rhus coriaria*, or sumach tree, so called from the colour of its juice.

**Esaphé.** (Ἐσαφή, to feel with the fingers.) The touch. An old term (Gr. *ἐσαφή*), used by Hippocrates, *de Nat. Mul.* xi, 12, for feeling the mouth of the womb with the fingers to ascertain its condition.

**Es'ca.** (L. *esca*, for *edca*, from *edo*, to eat.) Food.

**Escal'das.** France, Département des Pyrénées-Orientales, high on the southern side of the mountains near Puycedra in Spain. Alkaline sulphuretted springs, one of a temperature of 32° C. (89·6° F.), and another of 41° C. (105·8° F.), containing sodium sulphide. Used in chronic skin diseases, bronchial catarrhs, genito-urinary affections, and chronic rheumatism.

**Escalier.** (F. *escalier*, a staircase; from L. *scala*, a flight of steps.) A staircase.

**E. phenomena.** Bowditch's term for the gradual increase in the length of the vertical line registered by the sphygmograph at each cardiac systole with each repeated stimulation of the heart.

**Escallonia'ceæ.** A Nat. Order of epigynous, calycifloral Exogens of the Alliance *Grossales*, having a superior imbricated calyx, definite stamens, axile placentæ, and capsular or baccate fruit.

**Es cara.** Same as *Eschar*.

**Escarpment.** (F. *escarpement*; Old F. *escarper*, to cut steep; from Old H. Ger. *scharf*, sharp.) A steep cutting in a fortification, a precipitous cliff.

**Eschalot.** (F. *échalote*; a corruption of Old F. *escalone*; from *ascalonus*, of Ascalon, where the plant grows wild.) The *Allium ascalonium*, otherwise called shallot.

**Eschar.** (Ἐσχάρα, the hearth, the scab of a burn. F. *eschare*, *escarre*; L. *escara*; G. *Brandeschorf*.) A brown or black dry slough, resulting from the destruction of a living part, either by gangrene, by burn, or by caustics.

**Eschara.** (Ἐσχάρα.) The vulva, or the labia pudendi.

Also, the same as *Eschar*.

**Escharification.** (L. *eschara*, an eschar; *facio*, to make.) The making or production of an eschar.

**Escharoderm'itis.** (Ἐσχάρα; δέρμα,

the skin.) Escharotic inflammation of the skin.

**Escharopædophlysis.** (Ἐσχάρα; πᾶσις, a child; φλύσις, an eruption.) An escharotic vesicular eruption in a child.

**Escharosis.** (Ἐσχάρωσις.) The formation of an eschar.

**Escharotic.** (Ἐσχάρωτικός, fit to form an eschar. F. *escharotique*; I. *escharotico*; G. *Ätzmittel*.) A substance which forms an eschar or slough, or destroys vitality in the part to which it is applied.

**E. poisons.** See *Poisons, escharotic*.

**Escharotics.** (Ἐσχάρωτικοί.) Applied by *Ätzmittel*, *Brandmittel*.) Very severe caustics; medicines which have the action called *Escharotic*. Such are the actual cautery, caustic potash, and acid nitrate of mercury.

**Eschelloh.** Bavaria. An earthy saline water, with a small quantity of sulphate of magnesia.

**Eschomelia.** (Ἐσχάτος, worst; μέλος, a limb. F. *eschomélie*.) Applied by Malacarne to a Class of monsters having so great a deformity of some member as to render it unfit for its functions.

**Escorzone'ra.** Same as *Scorzonera*.

**Escouloubre.** France, Département de l'Aude. A sulphur water, of a temperature of 29° C.—45° C. (84-2° F.—113° F.)

**Es'culent.** (L. *esculentus*, fit to eat; from *esco*, to feed upon a thing. F. *bon à manger*; G. *essbar*.) Fit for food. Applied to that which may be eaten for food, whether animal or vegetable.

**Esculetin.**  $C_8H_6O_8$  or  $C_9H_6O_4$ . A product, along with grape sugar, of the action of dilute sulphuric acid on *asculin*.

**Esculic.** (*Esculus*, the horse-chestnut.) Of, or belonging to, the horse-chestnut.

**E. acid.**  $C_{52}H_{48}O_{24}$ . An acid found in the bark of the *Esculus hippocastanum*.

**Esculin.** See *Asculin*.

**Es'ebou.** Old name for common salt.

**Esenbeckia.** A Genus of the Nat. Order *Rutaceæ*.

**E. febrifuga.** Mart. (L. *febris*, fever; *fugio*, to put to flight.) Hab. Brazil. Bark, called Brazilian Angustura bark, is used instead of true Angustura bark.

**Esenbeckic acid.** A resinous substance resembling quinic acid, contained in the bark of *Esenbeckia febrifuga*.

**Esenbeckin.** An alkaloidal substance said to be found in the plant *Esenbeckia febrifuga*; but it is probable that the real origin is *Exostemma Souzannum*; it is said to be a compound, and according to some, contains *Quinin*.

**Eseria.** Same as *Eserin*.

**Eserin.** An alkaloid obtained by Vée and Leven from Calabar beans by treating them in the same manner as for *Physostigmin*. It forms colourless crystalline plates, of a bitter taste, melting at 90° C. (194° F.), soluble in ether and alcohol, but sparingly so in water. It is very poisonous; and in solution, when applied to the conjunctiva, produces great and lasting contraction of the pupil. It differs from the *Physostigmin* of Herse in that it is crystalline. See also *Physostigmatis faba*.

**Eserinum.** Same as *Eserin*.

**E. hydrobromicum.** A crystalline colourless substance obtained by treating *eserin* with an aqueous solution of bromine. It is so-

luble in water and in alcohol. Used as *eserin*, and being neutral it is said to produce no local irritation. Dose, 1-60th to 1-20th of a grain.

**E. hydrochloricum.** A salt of *eserin* with hydrochloric acid, having the same properties as the base.

**E. salicylicum.** See *Physostigmine salicylas*.

**E. sulf'uricum.** (G. *schwefelsaures Eserin*.) A yellowish-red, amorphous, hygroscopic substance. Used as *Eserin*. Dose, 1-60th to 1-20th of a grain.

**Esexual.** (L. *e*, neg.; *sexualis*, relating to sex.) Sexless, having no sexual characteristics.

**Esexuales.** (L. *e*; *sexualis*.) Lindley's term for those plants in which sexual distinctions are obscure, such as ferns, mosses, and fungi.

**Es'march.** A German surgeon, now living, 1883.

**E's appara'tus.** An elastic bandage of india rubber applied to a limb, or a part of a limb, which is about to be amputated, from its distal extremity to a point above the seat of removal, so that the blood is all squeezed out of it into the other parts of the body, and is retained there by the application of another elastic band or tubular ring; the first one is then removed, in order that the operation may be performed.

**E's band'age.** The same as *E's appara'tus*, and as *E's triangular bandage*.

**E's coil.** See *E's apparatus*.

**E's elas'tic band'age.** The limb bandage of *E's apparatus*.

**E's elas'tic tour'niquet.** (*Tourniquet*.)

The ring described under *E's apparatus*.

**E's meth'od.** The application of *E's apparatus*, for the purpose of diminishing the loss of blood in operations.

**E's triangular band'age.** A three-sided piece of linen or cotton, the base 48", and the two sides each 34" long. Used in many ways for the retention of dressings and support of injured parts.

**Esochades.** (Ἐσοχάδες; from *εἰσέχω*, to stretch into. F. *esochades*.) Internal piles.

**Esochas.** Singular of *Esochades*.

**Esochè.** (Ἐσώχη, a recess; from *εἰσέχω*, to stretch into.) A swelling within the anus, an internal pile.

**Esocolitis.** (Ἐσω, within; κόλον, the colon.) Inflammation of the mucous membrane of the colon, dysentery.

**Esoderma.** (Ἐσω, within; δέρμα, the skin. F. *esoderme*.) A fibrous cuticle within the external envelope of the body of some insects.

**Eso'dic.** (Ἐσω, within; δῶς, a way.) Marshall Hall's term for a nerve proceeding to or into the spinal marrow.

**Esoenteritis.** (Ἐσω; έντερων, an intestine.) Inflammation of the intestinal mucous membrane.

**Esogast'itis.** (Ἐσω; γάστρον, the stomach.) Inflammation of the mucous lining of the stomach.

**Esoptroc'naphalon.** (Ἐσοπτρον, a mirror, a speculum; κνήφαλλον, wool.) A cushion or plug for a speculum.

**Eso'sis.** (Ἐσω, within. F. *ésose*; G. *Einbiegung*.) A term for curvature.

**Eso'smo'sis.** (Ἐσω, into; ώσμός, a thrusting.) The outward current of *Osmosis*.

**Esoteric.** (Ἐσωτερικός, inner; from *εἰώτερος*, comparative of *ἔσω*, within.) Inner, secret; originally applied to the secret and more

scientific teaching of Pythagoras and others, in contradistinction to *Esoteric*, the public and more popular teaching.

In Medicine, applied to things which relate to, or have origin within, the organism.

**Esoterism.** (Ἐσωτερικός.) Hidden, secret, or esoteric doctrines.

**E., medical.** Simon's term for the mystery which some medical men think themselves bound to adopt towards their patients by reason of their prejudices and ignorance.

**Esothe'sis.** The same as *Esosis*.

**Esos.** (L. *esor*, a Rhine fish, probably salmon, according to Pliny.) A Genus of the Suborder *Abdominalia*, Order *Teleostei*, Class *Pisces*.

**E. lucius**, Linn. (L. *lucius*, a fish, probably the pike. F. *lucio*; I. *lucio*; S. *lucio*; G. *Hecht*.) The pike, from the liver of which an oil is got, the *Oleum lucii piscis*; used in some countries to disperse opacities of the cornea. Flesh eatable.

**Esparaguera y Ole'sa.** Spain, in the Province of Barcelona. Sulphur springs, having a temperature of 32° C. (89.6° F.), with only a small amount of mineral constituents. Used in skin diseases and chronic catarrhs, and in some phthisical and hæmoptoe cases.

**Esparto grass.** (G. *Spanisches Gras*.) A species of grass, indigenous in Spain, Algiers, used as a substitute for rags in making paper. It is the *Stipa tenacissima* or *Macrochloa tenacissima*.

**Esphlasis.** (Ἐσφλασις, a pressure inwards.) A comminuted fracture of the skull with depression.

**Espnoic medicine.** (Ἐσ, or *eis*, into; *πνοή*, a blast, a vapour.) A term sometimes used synonymously with iatroleptic method and epidemic method, denoting treatment of disease by the use of friction and ointments. (Hoblyn.)

**Esprin'son.** An epidemic disease which prevailed in Metz in 1473-74, and which appears to have been a kind of dysentery. (Litré.)

**Esquirol.** French physician, who devoted himself to the study of insanity. He was born at Toulouse in 1772, and died in Paris in 1840.

**Essence.** (F. *essence*; from L. *essentia*, from *esse*, to be. G. *Wesen*.) The being or quality of a thing.

Also (F. *essence*; G. *Essenz*), the chief properties or virtues extracted from any substance, and reduced to a small compass.

**E. of anise.** See *Essentia anisi*.

**E. of ano'na.** Ylang-ylang. An essence obtained from the *Anona odoratissima*. It is insoluble in water, soluble in ether, and partially in alcohol; sp. gr. at 15° C. 0.980. It is levogyrous. It is the only essence in which benzoic acid is found.

**E. of bitter almonds.** (F. *essence d'amandes amères*.) See *Aldehyde benzoic*.

**E. of cin'namon.** The *Spiritus cinnamomi*.

**E. of colts'foot.** Equal parts of compound tincture of benzoin and balsam of tolu, with double the quantity of rectified spirit. Used as an expectorant.

**E. of gin'ger.** The *Tinctura zingiberis fortior*.

**E. of lem'on.** The *Spiritus limonis*.

**E. of malt.** See *Malt extract*.

**E. of mint.** See *Essentia menthae piperitæ*.

**E. of mir'bane.** (F. *essence de mirbane*.) A synonym of *Nitrobenzol*.

**E. of musk.** See *Tinctura moschi*.

**E. of nut'meg.** See *Essentia myristicæ moschatæ*.

**E. of pennyroy'al.** See *Essentia menthae pulegii*.

**E. of pep'permint.** The *Essentia menthae piperitæ*.

**E. of roses.** Otto of roses.

**E. of spear'mint.** The *Spiritus menthae viridis*.

**E. of spruce.** A fluid extract of the twigs of the Norway spruce, *Abies excelsa*.

**E. of sug'ar.** Common name for oxalic acid.

**E. of vanilla.** An ounce of vanilla cut fine and rubbed with two ounces of sugar, is exhausted with alcohol of 60 per cent. till a piut is produced. Used as an aromatic flavour; it is said to promote the digestion of fatty and farinaceous substances.

**Essentia.** See *Essence*.

**E. ab'ietis.** (L. *abies*, the fir.) Same as *Essence of spruce*.

**E. absinthii ama'ra.** The *Tinctura absinthii composita*.

**E. absinthii compos'ita.** The *Tinctura absinthii composita*.

**E. aloës.** The *Tinctura aloes*.

**E. an'isi.** B. Ph. Oil of anise 1 fluid oz., rectified spirit 4 fluid oz.; mix. Dose, 10 to 20 minims. Oil of anise is formed chiefly of a hydrocarbon, C<sub>10</sub>H<sub>16</sub>.

**E. antimo'ni.** The *Tinum antimoniale*.

**E. antisept'ica Huxham'i.** Huxham's antiseptic essence. The *Tinctura cinchonæ composita*.

**E. aromati'ca.** (L. *aromaticus*, fragrant.) The *Tinctura cinchonæ composita*.

**E. bi'na.** A term for *Caramel*.

**E. camphoræ.** One part of camphor dissolved in 20 parts of rectified spirit. Used in diarrhæa. Dose, 5 minims in water every quarter of an hour till relieved.

**E. car'ui.** Oil of caraway 1 oz., rectified spirit 9 ounces. Dose, 20 to 60 drops.

**E. casto'rei.** The *Tinctura castorei*.

**E. cathol'ica purgans Roth'ii.** (L. *catholicus*, relating to all; *purgo*, to purge.) The *Tinctura jalapii composita*.

**E. chinæ.** (China.) The *Tinctura cinchonæ composita*.

**E. cinnamo'mi.** The *Spiritus cinnamomi*.

**E. cort'icis peruvia'næ antisept'ica Huxham'i.** Huxham's antiseptic tincture of Peruvian bark. The *Tinctura cinchonæ composita*.

**E. cort'icis peruvia'ni compos'ita.** The *Tinctura cinchonæ amara*.

**E. de ce'dro.** The *Oleum cedrinum*.

**E. foenic'uli.** Oil of fennel 1 part, rectified spirit 9. Mix. Dose, 10 to 60 drops.

**E. men'thae piperitæ.** B. Ph. Essence of peppermint. Oil of peppermint 1 part, rectified spirit 4 parts; mix. Dose, 10 to 20 minims.

**E. men'thae pulegii.** Essence of pennyroyal 1 oz., rectified spirit 9 ozs.; mix. Dose, 15 to 30 drops.

**E. men'thae viridis.** The *Spiritus menthae viridis*.

**E. myris'ticæ moscha'tæ.** Essence of nutmeg. Oil of nutmeg 1, rectified spirit 9 parts, mix. Dose, 20 to 30 minims.

**E. neroli.** (*Neroli*.) The *Oleum aurantii florum*.

**E. pepsi'ni.** Same as *Vinum pepsini*.

**E. pimentæ.** Oil of pimento 1, spirit of wine 9 parts. Dose, 30 to 50 drops.

**E. ro'risma'ri'ni.** Same as *E. rosmarini*.

**E. rosmari'ni.** Oil of rosemary 1, spirit of wine 9 parts. Dose, 30 to 50 drops.

**E. zingib'eri's.** The *Tinctura zingiberis fortior*.

**Essential.** (*L. essentia*, a being; essence. *F. essentiel*; *G. wesentlich*.) That which is necessary to the constitution, or existence, of a thing.

In Medicine, applied to the necessary or idiopathic symptoms of a disease.

**E. anæ'mia.** A synonym of *Anæmia*, *idiopathic*.

**E. disea'se.** A general disease, one not depending on local troubles.

Also, a disease complete in itself, and not depending upon or symptomatic of another.

**E. fever.** See *Fever, essential*.

**E. hypot'ony.** See *Hypotony, essential*.

**E. oil.** A term applied to a volatile oil obtained by distillation, because it was thought to be a necessary constituent of the substance whence it was derived, and was possessed of its special or essential properties.

**E. paralysis.** See *Paralysis, essential*.

**E. salt.** An old term applied to a salt, obtained from a vegetable, which was believed to exist ready-formed in the plant.

**E. salt of bark.** A watery extract of Peruvian bark.

**E. salt of lem'ons.** A mixture of cream of tartar and binoxalate of potash.

Also, a term for both the binoxalate and the quadroxalate of potash.

**E. vertigo.** See *Vertigo, essential*.

**Essentialisation.** (*L. essentia*.) A term which expresses the idea that the vital properties are endowed with a peculiar and special essence or individuality.

**Essentialism.** (*L. essentia*.) A term for the doctrine that diseases are separate entities or individual essences differing in qualities from each other, and not to be cured except by specifics.

**Essentialist.** (*L. essentia*.) A believer in, or a disciple of, *Essentialism*.

**Essentiality.** (*L. essentia*.) The quality of being *Essential*.

**E. of a disease'.** That which constitutes its individuality and unity.

**Es'sentuk.** Russia, in the Caucasus, near Pjatigorsk. Cold sulphur springs, containing sodium carbonate 44, and sodium chloride 37 parts in 10,000. Used in abdominal engorgements.

**Es'sera.** (Arab. *eshera*, a word synonymous with *Papulæ*. *G. Forcellanfeber*.) Old term for a cutaneous eruption attacking the face and hands, resembling that caused by the sting of nettles, but the spots not elevated, and usually unattended by fever. (Ruland.)

**Estheomene.** See *Esthiomene*.

**Estheostomous.** (*Ἐσθίς*, clothing; *στόμα*, a mouth. *F. esthèstome*.) Applied to mosses that have but one simple appendage at the orifice of their urn.

**Esthe'sis.** See *Æsthesis*.

**Esthesodic.** See *Æsthesodic*.

**E. nerve-tubes.** See *Nerve-tubes, æsthesodic*.

**E. nerves.** See *Nerves, æsthesodic*.

**Esthetic.** See *Æsthetic*.

**Esthetics.** See *Æsthetics*.

**Esthiomene.** (*Ἐσθία*, to eat.) A term for lupus of the genitals.

**Esthiomeneous.** (*Ἐσθία*, to eat. *F. esthiomène*; *G. essend, fressend, sich verzehrend*.) Eating away. Formerly applied to a disease which eat or quickly destroyed the flesh, as cancer and lupus. (Ruland, Galen, Paracelsus.)

**Esthymene.** (*Ἐσθία*, to eat.) A name for *Lupus credens*.

**Estival.** See *Æstivalis*.

**Estivation.** See *Æstivation*.

**Estrac.** Spain, near Barcelona. Thermal springs, with sodium chloride, of a temperature of 41° C. (105.8° F.)

**Estuary.** See *Æstuarium*.

**Esula.** (*L. edo*, to eat.) The herb spurge, because eaten by some as a medicine.

**E. cypariss'ias.** The *Euphorbia cyparissias*.

**E. major.** (*L. major*, greater.) A name for the *Euphorbia palustris*, or greater spurge.

**E. minor.** (*L. minor*, lesser.) The *Euphorbia cyparissias*, or cypress spurge.

**E. solise qua.** (*L. sol*, the sun; *sequo*, to follow.) The *Euphorbia helioscopia*.

**Esuries.** (*L. esuries*.) Hunger.

**Esurigo.** (*L. esurigo*.) Hunger.

**Esurina.** (*L. esurio*, to hunger.) Old term, applied by Paracelsus, *de Tartareis Morb.* c. 16, to medicines which excited hunger.

**Esurinus.** (*L. esurio*, to hunger.) Causing to eat, or making hungry.

Formerly applied to salts and other substances of a corrosive quality.

Also, by Dr. Charlton, *Æcon. An.* ii, 6, to the gastric juice.

**Esuritio.** (*L. esuritio*.) A hungering, hunger.

**Esurit'is.** (*L. esuries*, hunger.) Ulceration of the stomach produced by starvation.

**Estario.** (*Ἐταρία*, companionship. *F. ctavon*.) Name by Mirbel for a fruit composed of many camare, or free foliicles, achenie, or drupes, disposed around the natural axis of the fruit, as in *Aquilegia* and *Fragaria*.

**Estaristria.** (*Ἐταριστρία*, from *ἑταρίω*, to be a comrade.) Same as *Tribas*.

**Eta'irium.** Same as *Eterio*.

**Eternal.** (Old *F. eternal*; from *L. æternus*, everlasting.) Lasting for ever.

**E. flower.** The *Helichrysum stæchas*.

**Ete'sii.** (*Ἐτησία*, periodical winds; from *ἔτος*, a year.) Northerly winds observed in Greece, which blow for about forty days after the dog days; they were supposed by Hippocrates to induce epidemics.

**Etesticulation.** (*L. e*, out of; *testiculus*, a testicle.) Castration.

**Ethal.** (*Ether*; *alcohol*.) Chevreul's term for *Cetyl alcohol*, to indicate its composition.

**Ethaldehyde.** A synonym of *Aldehyde, acetic*.

**Ethalic acid.** A former name for *Palmitic acid*.

**Ethalyl.** A synonym of *Cetyl*.

**Ethamid.** Same as *Ethylamine*.

**Ethamin.** Same as *Ethylamine*.

**Ethane.**  $C_2H_6$ . A colourless, odourless gas always present in the liquid petroleum of Pennsylvania, and in their gaseous emanations. It may be made by heating ethyl iodide, zinc, and water, under pressure, or by the action of sulphuric acid on mercuric ethyl. It burns with a bluish, faintly luminous flame. It is slightly soluble in water, and alcohol takes up about its own volume.

**Ethemosynë.** (Ἐθμοσύνη, eustom.) A term for *Habut*.

**Ethene.** Same as *Ethylene*.

**E. chlor'ide.** A synonym of *Ethylene bichloride*.

**E. dichlo'ride.** Ethylene bichloride or Dutch liquid.

**Ethenyl.**  $C_2H_3$ . A trivalent radical, which may be constituted in one of two forms— $CH_2=C$ , or  $CH_2=CH$ ; to the latter form the term *Vinyl* is given by some.

**Ether.** (L. *ether*; from Gr. *αἰθήρ*, the upper air. F. *ether*; I. *etere*; S. *eter*; G. *Äther*.) The term was originally applied to the upper air or blue sky, but afterwards was used by the Greek physicians to indicate the spirit which they believed to permeate and animate the whole world.

In Physics, it is a hypothetical fluid or medium which is supposed to be diffused through all intermolecular and all interplanetary space; it is very subtle, of extreme tenuity, perfectly elastic, entirely incompressible, and is supposed to be the medium of transmission of the rays of light and heat.

In Chemistry, the term was applied by Frobenius in 1730 to the fluid first obtained by Valerius Cordus in 1450, when equal parts of alcohol and sulphuric acid were distilled, and probably had reference to its lightness and its volatility; for an account of which see *E., ethylic*.

At present the word ether is used as a generic term for certain organic compounds, which are looked upon as oxides of the alcohol radicals, and are formed when the hydrogen of an alcoholic hydroxyl is replaced by an alcohol radical. Thus,  $C_2H_5.H.O$  is alcohol,  $C_2H_5.C_2H_5.O$  is ether. The term also includes the salts of alcohol radicals, such as acetate of ethyl or acetic ether.

**E., ab'solute.** Ether as free from alcohol as it can be obtained. Same as *Æther purus*.

**E., acetic.**  $C_2H_5.O_2.CH_3$ . See *Æther aceticus*.

**E., aceto-ac'etate.** Same as *Ethylie aceto-acetate*.

**E., adip'ic.** (L. *adeps*, fat.)  $C_6H_8O_4$  ( $C_2H_5$ )<sub>2</sub>. A colourless liquid of pleasant odour, and boiling at 245° C. (473° F.), obtained by heating the alcoholic solution of adipic acid with chlorine gas.

**E., allylic.** Same as *Ethyl-allyl*.

**E., amylic.** See *Amylic ether*.

**E., am'yo-nit'rous.** A synonym of *Amyl nitrite*.

**E., anæsthetic.** (Ἀνασθησία, want of feeling.) Pure ether.

Also, the same as *E., Aran's*.

**E., anæsthetic, compound.** A mixture of absolute ether with an equal quantity of amyl hydride. Recommended by B. W. Richardson for use with the *E. spray*.

**E., Arau's.** A mixture of trichlorethane and tetrachlorethane, the ethylic equivalents of

the methylic compounds, chloroform, and tetrachloride of carbon. It has a sp. gr. of 1.55 to 1.6, and a boiling point of 130° C. (266° F.) Used as an anæsthetic like chloroform.

**E., benzo'ic.** A colourless oily liquid, boiling at 185° C. (365° F.), formerly official in the London Pharmacopœia, made by distilling alcohol, benzoic acid, and hydrochloric acid together.

**E., bichlo'ric.** (F. *ether bichlorique*.) Soubeiran's original name for chloroform.

**E., bo'ric.** Same as *Ethyl borate*.

**E., bro'mic.** Same as *Ethyl bromide*.

**E., buty'ric.** ( $C_4H_9$ )<sub>2</sub>O. Obtained by mixing 100 parts of butyric acid with 100 of alcohol and 50 of sulphuric acid; the butyric ether rises to the top, and is purified by washing and passing through chloride of calcium. It has a boiling point of 121° C. (249.8° F.), and a sp. gr. of .9019 at 0° C. (32° F.) It is used in solution in alcohol to impart a pine-apple flavour.

**E., cap'sules.** Same as *E., pearls of*.

**E., carbamic.** A term for *Urethane*.

**E., carbon'ic.** See *Ethyl carbonate*.

**E., chlo'ric.** A synonym of *Spiritus chloroformi*.

**E., chlorohy'dric.** See *Ætherchlorhydricus alcoholicus* and *Æ. chlorhydricus chloratus*.

**E., chol'ic.** Same as *Ethyl cholate*.

**E., cit'ric.** See *Ethyl citrate*.

**E., comp'ound.** An ethereal salt in which an alcohol radical replaces, in whole or in part, the hydrogen of an acid.

Also, a mixture of ether, chloroform, and sometimes alcohol, used as an anæsthetic.

**E., cyan'ic.** Same as *Ethyl cyanate*.

**E., diam'yl.** ( $C_4H_9$ )<sub>2</sub>O. Same as *Amylic ether*.

**E., ethyl'ic.** ( $C_2H_5$ )<sub>2</sub>O. The substance usually known as ether. A very mobile liquid, obtained by distilling a mixture of about 5 parts of 90 per cent. spirit with 9 parts of concentrated sulphuric acid; the process becomes continuous (see *Etherification*) by allowing alcohol to flow slowly into the receiving vessel, but not so much at a time as to lower the temperature; the distillate is treated with milk of lime and chloride of calcium to remove alcohol and sulphur dioxide. Ether has a refreshing, peculiar odour, a burning taste, a sp. gr. of .73568 at 0° C. (32° F.), and boils at 34.9° C. (94.82° F.) It is soluble in alcohol, chloroform, benzine, and oils, and in eight times its volume of water at 15° C. (59° F.) It is very inflammable, burning with a white luminous flame, the products being water and carbonic acid. The vapour mixed with air forms a very explosive mixture. It is a stimulant and antispasmodic when given by the mouth, and is said to kill tapeworm. It is used in colic, gall-stone pain, asthma, angina pectoris, hysteria, neuralgia, and spasmodic neuroses. Its vapour is used to produce local anæsthesia from cold in the *E. spray*; and when inhaled to produce general anæsthesia, for which see *Etherisation*.

**E., for'mic.** (L. *formica*, an ant. F. *ether formique*; G. *Ameisenäther*.)  $C_3H_5O_2$ ,  $C_2H_5CHO$ . A colourless, thin, inflammable liquid, obtained by distilling sodium formate with alcohol and strong sulphuric acid. It has a strong, pleasant smell of peach kernels, is soluble in water, alcohol, ether, and oils, has a sp. gravity at 0° C. (32° F.) of .9447, and boils at 51.9° C. (130.82° F.) When inhaled it lowers the temperature, relaxes

the muscles, and produces a slow, imperfect anaesthesia.

**E., gelatinised.** Ether mixed with white of egg. Used as an external application for the relief of pain.

**E., ha'loid.** (*Haloid*.) A compound of an alcohol radical with ether.

**E., hydrate.** (*Υδρωπ.*, water.)  $(C_2H_5)_2O \cdot 2H_2O$ . A term applied by Lanret to the hoarfrost-like substance which is observed on the upper part of the filter when an ether compound is being passed through, especially if there be much moisture in the atmosphere.

**E., hydric.** A synonym of *Æther*, B. Ph.

**E., hydriodic.** Same as *Ethyl iodide*.

**E., hydrobromic.** A term for *Ethyl bromide*.

**E., hydrochloric.** Same as *Ethyl chloride*.

**E., hydrochloric, monochlorinated.**

A synonym of *Ethylidene chloride*.

**E., hydrochloric, spirit of.** Same as *Spiritus ætheris muriatici*.

**E., hydrocyanic.** Same as *Ethyl cyanide*.

**E., hyponitrous.** Same as *E., nitrous*.

**E., iodydric.** Same as *Ethyl iodide*.

**E., isocyanic.** The *Ethyl cyanate*.

**E., luminiferous.** (*L. lumen*, light; *fero*, to carry.) A term having the same signification as *Æther* in Physics.

**E., marine.** Same as *Ethyl chloride*.

**E., methylated.** Ether made from methylated instead of from pure alcohol; it contains a little methylic ether. Used in *E. spray*.

**E., methylated, absolute.** Methylated ether washed to remove the methylic ether, and re-distilled.

**E., methylene dimethyl.** A synonym of *Methylal*.

**E., methyl-ethyl.** A solution of methylic ether gas in ether. A quick anaesthetic.

**E., methylic.** (*F. ether méthylique*; *G. Methylather*.)  $(CH_3)_2O$ . Molecular weight 48. A colourless, inflammable gas, obtained by distilling a mixture of one part of methylic alcohol and four parts of sulphuric acid, and purifying by milk of lime. It is heavier than air, of an ethereal smell, and aromatic taste. It is soluble in water, wood spirit, alcohol, and ether. It was found by B. W. Richardson to be a safe and pleasant anaesthetic, not producing lividity or convulsions. After death the lungs were not found congested, and the heart contained blood.

**E., methyl-salicylic.** A synonym of *Methyl salicylate*.

**E., methyl-sulphuric.** See *Methyl-sulphuric ether*.

**E., mixed.** An ether in which the composing alcohol radicals are different, as distinguished from *E., simple*, such is methyl ethyl ether  $CH_3 \cdot C_2H_5 \cdot O$ .

**E., muriatic.** See *Æther muriaticus*, *Æ. muriaticus alcoholicus*, and *Æ. muriaticus trichloratus*.

Also, a synonym of *Ethyl chloride*.

**E., muriatic, spirit of.** The *Spiritus ætheris muriaticus*.

**E., neurostearyl.** Same as *Ethyl neurostearate*.

**E., nitric.** A term formerly and erroneously applied to *E., nitrous*.

Also, a synonym of *Ethyl nitrate*.

**E., nitrous.** A synonym of *Ethyl nitrite*.

**E., œnanthic.**  $C_9H_{17}(C_2H_5)O_2$ . Pelargonate of ethyl. A colourless liquid, having a vinous odour and a mild taste, gradually becoming acid; it boils at  $222.7^\circ C.$  ( $433^\circ F.$ ), and has a sp. gr. of .872; it is soluble in alcohol and ether, insoluble in water. A solution in alcohol forms quince essence. It exists in all wine.

**E., oxalic.** See *Ethyl oxalate*.

**E., ozonic.** (*Ozone*.) A solution of peroxide of hydrogen in ether with a little alcohol. Used by B. W. Richardson as a disinfectant in spray, and mixed with spermaceti or other fatty matter as a disinfecting injection in the peeling stage of scarlatina. Used also in hooping cough, and in some stages of phthisis. Dose, 5–20 minims.

Mixed with tincture of guaiacum it is used as a test for blood, which it turns blue.

**E., pearls of.** Ether enclosed in small capsules of gelatin, for facility of swallowing; they are rapid in action.

**E., pelargonic.** Same as *E., œnanthic*.

**E., petroleum.** The Benzinum of the U.S. Ph., described under *Benzene*.

**E., phosphoric.** Same as *Ethyl phosphate*.

**E., prussic.** A synonym of *Ethyl cyanide*.

**E., pure.** See *Æther purus*.

**E., pyroacetic.** A synonym of *Acetone*.

**E., rectified.** A synonym of *Æther purus*.

**E., simple.** An ether in which the composing alcohol radicals are the same, as distinguished from *E., mixed*; such is ethylic ether,  $C_2H_5 \cdot C_2H_5 \cdot O$ .

**E., spirit of.** See *Spiritus ætheris*.

**E., spirit of, compound.** See *Spiritus ætheris compositus*.

**E., spirit of nitrous.** See *Spiritus ætheris nitrosi*.

**E., spray.** A mode of producing local anaesthesia by cold, suggested by Richardson, by propelling a finely divided spray of ether or an ethereal compound on the part from a Clark's spray producer.

**E., stronger.** The *Æther fortior*, U.S. Ph.

**E., sulphuric.** A synonym of *E., ethylic*.

**E., syrup of.** See *Siropp d'ether*, Fr. Codex.

**E., terebinthinated.** Alcohol 2 parts, mixed with spirit of turpentine .5 part, and nitric acid 2 parts gradually added. Formerly used, both externally and internally, in gallstones, jaundice, and rheumatism. Dose 20–40 drops in yolk of egg or honey.

**E., triethyl.** A name given by B. W. Richardson to a substance obtained by the action of chloroform on sodium or potassium ethylate. It is a heavy aromatic fluid, boiling at  $174^\circ F.$ , and having a vapour density of 71, hydrogen being 1. It is an anaesthetic.

**E., trimethyl.** A name given by B. W. Richardson to a fluid obtained by the action of chloroform on sodium or potassium methylate. It boils at  $140^\circ F.$ , and has a vapour density of 53, hydrogen being 1. It is an anaesthetic having a somewhat unpleasant odour.

**E., vinic.** (*L. vinum*, wine.) A synonym of *E., ethylic*.

**E., xylostatic.** The *Styptic collod*, because made with *Xyloidin*.

**E'therat.** Same as *Etherolat*.

**E'thereal.** (L. *æther*, ether, air, or heaven. F. *éthère*; G. *ätherisch*.) Term applied to any highly rectified essential oil, or spirit, or to a substance containing or resembling, or having the smell or properties of, ether.

Also, containing or filled with the physical Ether.

**E. oil.** See *Oleum æthereum*.

Also, the heavy oil of wine.

**E. oil, animal.** A term for *Dippel's animal oil*.

**E. oils.** Same as *Oils, volatile*.

**E. salt.** Same as *Ether, compound*.

**E'therene.** Same as *Ethylene*.

**E'thereous.** Same as *Ethereal*.

**E'theric acid.** A synonym of what used to be called *Lampic acid*, because it was produced by the combustion of alcohol.

**E'therification.** (*Ether*; L. *facio*, to make. F. *etherification*; I. *eterificazione*; G. *Ätherbereitung*.) The process of the continuous formation of ether; at one time it was supposed that the action of sulphuric acid on the alcohol in the formation of ether was catalytic; at present the theory of Williamson is generally accepted that, at first, by the substitution of the ethyl of the alcohol for the hydrogen of the sulphuric acid, water and ethyl sulphuric acid are formed; and then, by the substitution of the ethyl of the ethyl sulphuric acid for the hydrogen of another atom of alcohol, ether is formed and sulphuric acid reformed; the process thus goes on indefinitely, excepting that the sulphuric acid becomes slowly diminished by the evaporation of the ethyl sulphuric acid.

**E'therin.** (*Ether*, ether.) Arnold's name given to a quadro-carburetted hydrogen, which was regarded as the base of most ethereal compounds.

Also, a polymeric form of ethylene found in heavy oil of wine; it is a solid, boiling at 260° C. (500° F.) It crystallises in long, transparent, colourless, tasteless prisms, soluble in alcohol and ether, insoluble in water.

**E., hydrocyanate of.** Same as *Æther hydrocyanicus*.

**E., muriate of.** Same as *Æther muriaticus*.

**E'therine.** Same as *Etherin*.

Also, a synonym of *Ethylene*.

**E'therisation.** (F. *éthérisation*; I. *eterizzazione*; G. *Ätherisierung*.) The administration of ether in vapour, so as to produce insensibility and anaesthesia.

It was first used in this way and for this purpose in October, 1846, by Dr. Warren of Boston, U.S.A., but its application would appear to have been suggested some little time previously by Dr. Jackson of that city. A hollow sponge alone or enclosed in some receptacle, so that air might be freely mixed with the ether vapour, was used at first, and by some still continues to be so used, in order to prevent the occurrence of asphyxia; but latterly, and chiefly by means of Clover's inhaler, the ether and such air as may be mixed with it is breathed over and over again by receiving it into an india-rubber balloon. By this method anaesthesia is more rapidly induced, and the chances of pneumonia and acute bronchitis, from the breathing of air reduced to a very low temperature by the constant evaporation of the ether, diminished.

In the first stage of etherisation there is some

enough and irritation of the fauces, then a lightness in the head and buzzing in the ears, with illusions and delirious talk and actions, and flushing of the face; this is succeeded by unconsciousness, muscular relaxation after rigidity, slow respiration, and a good, perhaps quickened, pulse. When the narcotism is pushed to death the breathing ceases some time before the heart fails, and the lung capillaries are found full of blood.

**E., localised.** The application of ether by means of compresses or in spray to a part of the skin so as to deaden the sensibility prior to an operation; except where it produces intense cold there seems to be little anaesthetic result from this mode of application.

**E'therise.** (F. *éthériser*.) To charge with ether; to render insensible by means of the inhalation of ether.

**E'therised.** Exhibiting the phenomena induced by *Etherisation*.

**E'therism.** (F. *éthérisme*; I. *eterismo*; G. *Ätherismus*.) The successive phenomena developed in the animal body by the administration of the vapour of ether.

**E'therochloroform.** A mixture of equal parts of ether and chloroform used for the production of anaesthesia by the inhalation of its vapour. It was said to be safer than chloroform when there was need for prolonged insensibility.

**E'therohyposulphuric.** A synonym of *Isothionic*.

**E'theroid.** (*Ether*; Gr. *εἶδος*, likeness.) Resembling ether.

**E'therol.** (C<sub>2</sub>H<sub>4</sub>)<sub>n</sub>. A polymeric form of ethylene. It is a pale yellow oily fluid, boiling at 280° C. (536° F.), and having an aromatic smell. It is insoluble in water, soluble in ether and alcohol.

**E., ethylsulphate of.** Liebig's term for the heavy oil of wine.

**E'therolat.** Bérál's term for a preparation made by distilling ether with an aromatic substance.

**E'therolature.** An ethereal tincture.

**E'therolea.** Liquid medicines formed by solution of a drug in ether.

**E'therolic.** (F. *éthérolique*.) Bérál's term for a medicament prepared with ether or with acetic ether.

**E'therolotive.** (*Ether*; L. *lotus*, part. of *lavo*, to wash. F. *éthérolotif*.) Bérál's term for an ethereal medicament for external use only.

**E'therone.** A volatile liquid, boiling at 30° C. (86° F.), obtained, along with heavy oil of wine, by distilling an ethylsulphate. It is probably amylene.

**E'therosulphuric acid.** Liebig's term for *Sulphovinic acid*.

**E'thics.** (L. *ethicus*; from Gr. *ἠθικός*, moral; from *ἦθος*, custom, moral nature.) The science of the laws and conditions of human duty.

**E., medical.** The laws of the duties of medical men to the public, to each other, and to themselves in regard to the exercise of their profession. Many codes have been drawn up, and much detailed description of these duties, but they are probably all summed up in the one duty of being an honest gentleman.

**E'thidene.** CH<sub>3</sub>.CH.O. The radical of aldehyde, isomeric with *Ethylene*.

**E. dichlo'ride.** Same as *Ethylidene chloride*.

**Ethimpem'phigus.** (Ἐθίμος, usual; *pemphigus*.) Habitual *Pemphigus*.

**Ethine.** A synonym of *Acetylene*.

**Ethionic acid.**  $C_2H_6S_2O_7$ . Formed from *E. anhydride*, by its taking up the elements of water.

**E. anhydride.** (Ἄν, neg.; ὕδωρ, water.)  $C_2H_6S_2O_5$ . A deliquescent, crystalline substance formed by passing the vapour of sulphur trioxide into an anhydrous alcohol.

**Ethio'pian.** A native of, or belonging to, Ethiopia or Abyssinia.

**E. pepper.** The capsules of *Unona ethiopica*.

**E. sage.** The *Salvia ethiopica*.

**E. sour-gourd.** The *Aibonsonia digitata*.

**Ethiops.** See *Ethiops*.

**E., antimo'nal.** See *Ethiops antimonialis*.

**E., graphit'ic.** Graphite 2 parts and mercury 1 part, are triturated until the globules disappear. An old remedy used in herpes and chronic eczema. Dose, 5—10 grains.

**E., martial.** See *Ethiops martialis*.

**E., min'eral.** See *Ethiops mineralis*.

**E., vegetable.** See *Ethiops vegetabilis*.

**Ethisis.** (Ἡθίσις, a straining off; from ἡθίω, to strain.) A term for *Filtration*.

**Ethis'mus.** (Ἡθίω, to strain.) *Filtration*.

**Ethmoceph'alous.** (Ἡθμός, a sieve; κεφαλή, the head.) Geoffroy St. Hilaire's term for a monstrosity with two distinct, but closely approximated, eyes, and with atrophied nasal organs like a small trunk.

**Ethmoid.** (Ἡθμός, a sieve; εἶδος, likeness. *F. ethmoide*; *G. siebförmig*.) Sieve-like, finely perforated.

**E. bone.** (*F. os ethmoide, os cribreux*; *I. etmoide*; *S. etmoides*; *G. Siebbein, Riechbein*.) An unpaired bone situated in the ethmoidal notch of the frontal bone in front of the sphenoid, and entering into the formation of the cranium, the orbits, and the nasal fossæ. It is cuboid in form, very light, being composed in large part of thin bony plates enclosing cavities and containing many perforations, whence its name sieve-like bone. It consists of a cellular mass on each side, the lateral ethmoid, or *Ethmoturbinal bone*, connected at its upper surface by a horizontal perforated plate, the *Cribriform plate*, and a central vertical plate, the median ethmoid, or *Mesethmoid bone*. It articulates with the frontal, sphenoid, vomer, lachrymal, superior maxillary, palate, and inferior turbinated bones.

**E. bone, cribri'form plate of.** The horizontal plate of the ethmoid bone which fills the ethmoid notch of the frontal bone, and bears on its upper surface the crista galli of the mesethmoid bone, and below the vertical plate of the same bone. Its upper surface is hollowed on each side of the crista galli for the olfactory bulb, and is perforated for the transmission of branches of the olfactory nerves through canals in its substance, the central ones of which are simple, the outer and inner ones branched; the nasal branch of the ophthalmic nerve perforates its anterior border. The cribriform plate is found in all the higher Mammals; in some of the lower ones, as the porpoise, it is absent; the crista galli is large in some seals.

**E. bone, lat'eral.** Same as *Ethmoturbinal bone*.

**E. bone, me'dian.** (*L. medius*, in the middle.) The *Mesethmoid bone*.

**Ethmoid'al.** (*F. ethmoïdal, ethmoïdien*.) Of, or belonging to, the ethmoid bone.

**E. an'trum.** (Ἀντρον, a cave.) The ethmoidal cellis.

**E. apoph'ysis.** (Ἀπόφύσις, an offshoot.) The *E. spine*; also, the *E. process*.

**E. artery, ante'rior.** (*L. anterior*, in front. *F. artère ethmoïdale antérieure*; *G. vordere Siebbeinarterie*.) A branch of the ophthalmic artery which enters the cranium with the nasal nerve, where it divides into the anterior meningeal arteries, and the anterior nasal artery.

**E. artery, poste'rior.** (*L. posterior, hinder*. *F. artère ethmoïdale postérieure*; *G. hintere Siebbeinarterie*.) A branch of the ophthalmic artery on the inside of the optic nerve; it enters the posterior internal orbital canal, and is distributed to the mucous membrane of the posterior ethmoidal cells and the upper part of the nose; some branches go to the dura mater.

**E. canal, ante'rior.** (*L. anterior*, in front.) A canal formed by a groove on the inner edge of each orbital plate of the frontal, which is converted into a canal by the outer edge of the ethmoid bone. It transmits the nasal nerve and the anterior ethmoidal vessels.

**E. canal, poste'rior.** (*L. posterior, hinder*.) A canal behind the *E. canal, anterior*, and formed in a similar manner. It transmits the posterior ethmoidal vessels.

**E. cells, ante'rior.** (*L. anterior*, in front. *F. cellules ethmoïdales antérieures*; *G. vordere Siebbeinzellen*.) The anterior cavities of the ethmoturbinal bones which are completed by the frontal and the nasal process of the superior maxillary bone; they open into the middle meatus of the nose; and are lined by an extension of its mucous membrane.

**E. cells, poste'rior.** (*L. posterior, hinder*. *F. cellules ethmoïdales postérieures*; *G. hintere Siebbeinzellen*.) The posterior cavities of the ethmoturbinal bones which are completed by the sphenoid and lacrymal bones; they open in the upper meatus of the nose, and are lined by an extension of its mucous membrane.

**E. crest.** (*F. crête ethmoïdale*.) A slight ridge on the inner surface of the palate bone at the roots of the orbital and sphenoidal processes; it articulates with the middle turbinate bone.

**E. lab'yrinth.** Same as *E. cells*.

**E. lob'ule.** The *Olfactory lobe*.

**E. nerve.** (*G. Riechbeinnerv*.) The anterior nasal nerve.

**E. nerve, ante'rior.** The *Anterior nasal nerve*.

**E. nerve, poste'rior.** Krause's name for a branch of the nasal nerve which passes through the posterior internal orbital canal to the mucous membrane of the sphenoidal sinus and the posterior ethmoidal cells.

**E. notch.** (*G. Siebbeinausschnitt*.) The space between the orbital plates of the frontal bone for the reception of the ethmoid bone.

**E. pro'cess.** (*F. apophyse ethmoïdale*.) A small conical projection in the middle of the convexity of the inferior turbinate or maxilloturbinal bone, which articulates with the unci-

nate process of the ethmoid bone, and helps to diminish the orifice of the maxillary sinus.

Also, the *E. spine*.

**E. spine.** The anterior pointed projection of the upper surface of the body of the sphenoid bone which articulates with the cribriform plate of the ethmoid bone.

**E. suture.** (*L. sutura*, a seam) The suture between the cribriform plate of the ethmoid bone and the adjacent parts of the frontal bone.

**E. veins.** Veins accompanying the anterior and posterior ethmoidal arteries.

**Ethmoides.** (*ἠθμός*, a sieve; *εἶδος*, likeness.) Resembling a sieve.

**E. os.** (*L. os*, a bone.) See *Ethmoid bone*.

**Ethmoidofrontal suture.** See *Suture, ethmoidofrontal*.

**Ethmopalatine.** Relating to the ethmoid and to the palatine bones.

**E. ligament.** A ligament in the foetal condition of *Elasmobranchii*, running from the pterygoquadrate bar to the antorbital region of the skull.

**E. process.** Same as *Antorbital process*.

**Ethmosphenoidal suture.** See *Suture, ethmoidofrontal*.

**Ethmoturbinal bone.** (*ἠθμός*, a sieve; *L. turbo*, a whirl.) Each lateral mass of the ethmoid bone, connected horizontally with each other at the upper surface by the cribriform plate. The outer surface consists chiefly of a thin, smooth, quadrilateral surface, the *Os planum*, which forms part of the inner wall of the orbit, having in front of it the uncinat process, which articulates with the inferior turbinate bone. The inner surface consists of a thin, irregular lamina of bone, grooved for branches of the olfactory nerve, forming part of the outer wall of the nasal fossa, and having on its surface the two folded, curved prominences called the superior and inferior turbinate process; between them is the superior meatus of the nose, and below the inferior one, the middle meatus, from the front of which a canal, the infundibulum, passes to the frontal sinus through the anterior ethmoidal cells, which with the posterior ethmoidal cells occupy the chief substance of the bone. In some lizards and fishes they form distinct bones, the prefrontals, and in some chameleons they project beyond the surface as two bony horns.

**Ethmomerine plate.** (*Ethmoid bone; vomer*.) The median plate of cartilage in the embryo, at the extremity of the conjoined trabeculae crani after they have united and thrown up the cartilages for the sphenoidal wings, and which sends downwards three other plates to form the mesethmoid and the ethmoturbinal bones.

**Ethmyphæ.** (*ἠθμός*, a sieve; *ὕψη*, a web.) Name for alveolar or areolar tissue; also, for the mucous membrane.

**Ethmyphitis.** (*ἠθμός; ὕψη*.) Inflammation of the *Ethmyphæ*, or areolar tissue.

**Ethmyphlogosis.** Same as *Ethmyphitis*.

**Ethmyphotylosis.** (*ἠθμός; ὕψη; τάλωσις*, a making callous.) Induration of the areolar tissue.

**Ethmyphyperphlogosis.** (*ἠθμός; ὕψη; ὑπέρ*, above; *φλόγωσις*, burning heat.) Excessive inflammation of the cellular tissue.

**Ethnic.** (*ἔθνος*, a people.) Relating or pertaining to race.

**Ethnography.** (*ἔθνος*, a nation; *γράφω*, to write.) The history, description, and classification of the races of men.

**Ethnological.** Relating to *Ethnology*.

**Ethnology.** (*ἔθνος; λόγος*, a discourse.) The science of the races of man, and of the laws of their mental and physical differences.

**Ethochlorin.** (*Ether*; Gr. *χλωρός*, green.) Thudichum's name for a green-coloured substance extracted from ox gall-stones.

**Ethokirin.** (*κίρρος*, tawny.) A yellow, crystallisable colouring matter obtained by Riegel from the flowers of the *Linaria vulgaris*.

**Ethos.** (*ἔθος*, custom.) A term for *Habit*.

**Ethriroscope.** See *Ethriroscope*.

**Ethusa.** See *Ethusa*.

**Ethydene.** Same as *Ethylidene*.

**E. chloride.** Same as *Ethylidene chloride*.

**Ethyl.** (*ἄθιπ*, air, or ether; *ἔλη*, the material of which a thing is made. *I. etile*.)  $C_2H_5$ . The radical of ordinary alcohol and ether, as yet unisolated in this form.

In its double molecule form,  $C_4H_{10}$ , it is known as *Diethyl* or *Butane*; it was to this form that Frankland first gave the term ethyl.

**E. acetate.**  $C_2H_5O_2CH_3$ . The *Ether aceticus*.

**E. alcohol.**  $C_2H_6O$ . Ordinary Alcohol.

**E. amyl.**  $C_7H_{16} = C_2H_5 \cdot C_5H_{11}$ . A liquid obtained by treating a mixture of ethyl iodide and amyl iodide with sodium. It boils at  $88^\circ C$ . ( $190.4^\circ F.$ ), has a sp. gr. of  $\cdot 7069$  at  $0^\circ C$ . ( $32^\circ F.$ ), and a vapour density of 3.522.

**E. azotate.** (*Azote*.) Same as *E. nitrate*.

**E. azotite.** (*Azote*.) A synonym of *E. nitrite*.

**E. ben'zylate.**  $C_7H_7 \cdot O \cdot C_2H_5$ . Same as *Ether, benzoic*.

**E. bichloride.** A synonym of *Olefant gas*.

**E. borates.** Two are known—triethyllic borate,  $(C_2H_5)_3BO_3$ , a thin liquid of pleasant odour; and monoethyllic borate,  $C_2H_5BO_2$ , a heavy syrupy liquid.

**E. bromide.** (*F. bromure d'éthyle*; *G. Bromäthyl*.)  $C_2H_5Br$ . A colourless, volatile liquid obtained by the action of bromine upon alcohol in the presence of phosphorus. It has a strong ethereal odour, and a sweetish pungent taste; it has a sp. gravity of 1.419 at  $15^\circ C$ . ( $59^\circ F.$ ), a vapour density of 3.751, and boils at  $38.37^\circ C$ . ( $101.06^\circ F.$ ) It burns with a green flame, evolving a smell of bromine. Nunnely was the first to use it. It produces anaesthesia when inhaled, accompanied on recovery by some excitement. When pure it is a safe anaesthetic, but by keeping it becomes decomposed and dangerous, from free bromine. In small quantities it has been used as an inhalation in dyspnoea, epilepsy, laryngeal spasm, and migraine.

**E. butyrate.** Same as *Ether, butyric*.

**E. carbamide.**  $CO \cdot N_2H_3(C_2H_5)$ . A solid body obtained by acting on ethylamine with cyanic acid. It crystallises in striated monoclinic prisms, soluble in water and alcohol, and melting at  $92^\circ C$ . ( $197.6^\circ F.$ ) Also called *E. urca*.

**E. carbonate.**  $(C_2H_5)_2CO_3$ . A colourless, pleasant-smelling liquid obtained by acting

on ethyl iodide with silver carbonate. It boils at 126° C. (258·8° F.), has a sp. gr. of ·9998 at 0° C. (32° F.), and a vapour density of 4·09.

**E. chloride.**  $C_2H_5Cl$ . A thin, colourless liquid, obtained by passing dry hydrochloric acid gas into cold strong alcohol. It has a pleasant odour, a sweetish, aromatic, somewhat burning taste; is inflammable, burning with a green-edged flame; dissolves in 50 parts of water, and in all proportions with ether and alcohol; boils at 12·5° C. (54·5° F.), and has a sp. gr. at 0° C. (32° F.) of ·9214, and a vapour density of 2·219. It is a stimulant like ether, and according to Richardson, it is a good but slow anæsthetic in vapour.

**E. cholæte.** (*Χολή, bile*.) A substance crystallising in fine needles, obtained by passing hydrochloric acid gas into an alcoholic solution of cholic acid to saturation, and then mixing with alcohol.

**E. cin'namate.**  $C_9H_7O_2$ . A liquid obtained by passing gaseous hydrogen chloride through an alcoholic solution of cinnamic acid.

**E. citrate.** Citric acid in which one or more of its hydrogen atoms are replaced by a corresponding number of atoms of ethyl.

**E. cyanate.**  $C_2H_5CN.O$ . Normal cyanie ether obtained by acting with cyanogen chloride on a solution of sodium ethylate in a mixture of ether and alcohol. It is a colourless oily liquid with ethereal smell and sharp bitter taste; sp. gr. 1·1271 at 15°.

**E. cyanide.**  $C_2H_5.CN$ . A colourless liquid obtained by distilling potassium cyanide with ethyl oxalate. It boils at 82° C. (179·6° F.), and is very poisonous.

**E. cyan'uret.** Same as *E. cyanide*.

**E. diacetic acid.** Same as *Ethyllic aceto-acetate*.

**E. ether.** See under *Ether, ethylic*.

**E. for'mate.** Same as *Ether, formic*.

**E. hy'drate.** A synonym of *E. alcohol*.

**E. hy'dride.** The same as *Ethane*.

**E. hydrosulphide.**  $C_2H_5.SH$ . Discovered by Zeise, and called by him *Mercaptan*. A colourless liquid having a garlic-like smell and a disagreeable taste, obtained by distilling ethyl sulphate of calcium with a solution of hydrosulphide of barium. It has a sp. gr. of ·835 at 21° C. (69·8° F.), a vapour density of 2·188, and boils at 36·2° C. (97·16° F.).

**E. iodide.** (*F. iodure d'éthyle*.)  $C_2H_5I$ . A colourless, non-inflammable liquid, obtained by distilling a mixture of absolute alcohol and concentrated hydriodic acid, or a mixture of alcohol, amorphous phosphorus, and iodine. It has a penetrating, pleasant odour; is soluble in alcohol, insoluble in water; boils at 71·6° C. (160·88° F.), sp. gr. at 15° C. (59° F.), 1·93, vapour density 5·417, molecular weight 156. It burns with difficulty, giving off vapours of iodine. It has been used in chronic bronchitis and pulmonary phthisis in the form of inhalation. According to B. W. Richardson, it is a slowly acting anæsthetic, producing much irritation during inhalation. It is a good disinfectant.

**E., mercap'tan.** Same as *E. hydrosulphide*.

**E. neuroste'arate.** (*Νευροστέαρ, a nerve; πτεαρ, suet*.)  $(C_2H_5)_2C_{18}H_{35}O_2$ . A body obtained by Thudichum from the chemolysis of pure phrenosin by sulphuric acid in alcoholic solution. It is of the colour and consistence of bleached beeswax, and melts at 52° C. (125·6° F.).

**E. ni'trate.**  $C_2H_5NO_3$ . A mobile, plea-

sant-smelling liquid, with a sweet first taste and a bitter after taste, obtained when spirit is distilled with nitric acid to which a little nitrate of urea has been added to destroy the lower oxides of nitrogen present in the nitric acid. It has a sp. gr. of 1·1322 at 0° C. (32° F.), and boils at 86·3° C. (187·34° F.). It burns with a bright white flame. It has a similar but slower action to amyl nitrite.

**E. ni'trite.**  $C_2H_5.NO_2$ . A pale yellow liquid, smelling of apples, obtained by treating alcohol with nitric acid; it boils at 18° C. (64·4° F.), and has a sp. gr. of ·9 at 15·5° C. (59·9° F.), and a vapour density of 2·627. It is soluble in alcohol and ether, and in 48 parts of water. It forms about 5 per cent. of *Spiritus atheris nitrosi*. Acts on the animal economy in vapour, as amyl nitrite.

**E. oenan'thate.** See *Ether, ovanthic*.

**E. ox'alate.**  $(C_2H_5)_2C_2O_4$ . A colourless oily liquid obtained by distilling together potassium binoxalate 5 parts, sulphuric acid 5 parts, and strong alcohol 4 parts. It has a pleasant aromatic smell, is of sp. gr. 1·09, slightly soluble in water, and boils at 183·8° C. (362·84° F.). B. W. Richardson found it to produce coma and death when hypodermically injected in frogs.

**E. oxide.**  $(C_2H_5)_2O$ . A term for *Ether, ethylic*.

**E. ox'ide, ac'etate of.** Same as *Ether acetieus*.

**E. oxide, benzo'ate of.** Same as *Ether, benzoic*.

**E. oxide, carbon'ate of.** Same as *Ether, carbonic*.

**E. oxide, cy'anate of.** Same as *Ether, cyanic*.

**E. ox'ide, ni'trate of.** Same as *Ether, nitric*.

**E. oxide, sulphocarbon'ate of.** A synonym of *Xanthogenic acid*.

**E. pelargonate.** The same probably as *Ether, ovanthic*.

**E. phosph'ate.**  $(C_2H_5)_3PO_4$ . A colourless liquid formed by heating silver phosphate with ethyl iodide. It has a peculiar pleasant smell and a burning taste; it boils at 215° C. (419° F.).

**E. phosph'ite.**  $(C_2H_5)_3PO_3$ . A colourless liquid obtained by acting on absolute alcohol with phosphorus trichloride. It has a disagreeable odour, boils at 191° C. (375·8° F.), and burns with a bluish-white flame.

**E. phosphoric acid.** See *Ethylphosphoric acid*.

**E. sulphhy'drate.** A synonym of *Mercaptan*.

**E. sul'phide.**  $(C_2H_5)_2S$ . A colourless, garlic-smelling liquid, obtained by the action of ethyl chloride on an alcoholic solution of potassium hydrosulphide. It has a sp. gr. of ·8367 at 0° C. (32° F.), a vapour density of 3·1, and boils at 92° C. (197·6° F.). B. W. Richardson found it a slow anæsthetic in the lower animals, producing a long-continued suspended animation, with a very rapid recovery.

**E. sulphite.**  $(C_2H_5)_2SO_3$ . A mobile, peppermint-smelling liquid, obtained by acting on absolute alcohol with sulphur monochloride. It has a sp. gr. of 1·1063 at 0° C. (32° F.), a vapour density of 4·78, and boils at 161·3° C. (322·34° F.). It burns with difficulty.

**E. sulphuric acid.** See *Ethylsulphuric acid*.

**E. sulphurous acid.** See *Ethylsulphurous acid*.

**E. ure'a.** Same as *E. carbamide*.

**Ethylal.** A synonym of *Aldehyde, ethylic*.

**Ethylalyl.**  $C_2H_5 \cdot C_3H_7$ . A substance formed, along with ethylene and propylene, when allyl iodide and zinc-ethyl are heated together in a strong closed tube.

**Ethylamide.** Same as *Ethylamine*.

**Ethylamine.**  $C_2H_5 \cdot NH_2$ . A mobile liquid formed when ethyl isocyanate is heated with potash-ley. It has a strong ammoniacal smell and is very caustic; it is soluble in water, alcohol, and ether; boils at  $18.7^\circ C.$  ( $65.66^\circ F.$ ); and burns with a yellow flame.

**Ethylammonium.** Same as *Ethylamine*.

**Ethylate.** A combination of a metallic element with ethylic alcohol, in which it replaces hydrogen.

**E., potassium.**  $C_2H_5OK$ . Transparent colourless crystals obtained by dissolving potassium in absolute alcohol, so that it replaces the hydrogen which is set free. The crystals separate out on cooling the concentrated liquor. B. W. Richardson has recommended the use of this salt and of the sodium ethylate as caustics in the removal of naevi, and in the treatment of lupus and malignant ulcers.

**E., sodium.**  $C_2H_5ONa$ . Transparent needles obtained by dissolving sodium in absolute alcohol, as *E., potassium*. It has the same use as a caustic, but is milder.

**E., zinc.**  $(C_2H_5)_2O_2Zn$ . A white amorphous mass formed by the slow oxidation of zinc-ethyl. It is a caustic like sodium ethylate, but is unmanageable, in consequence of its explosive properties.

**Ethylatropium.**  $C_{17}H_{22}(C_2H_5)NO_3$ . Obtained by treating *E. iodide* with silver oxide. Ringer has found that it produces no tetanus, but that it paralyses the motor nerves and the spinal cord, leaving the sensory nerves unaffected, and that when given internally it has no effect on the pupil, but that when locally applied it widely dilates it.

**E. iodhydrate.**  $C_{17}H_{22}(C_2H_5)NO_3 \cdot HI$ . A crystalline substance obtained by treating an alcoholic solution of atropin with iodide of ethyl; it is soluble in water. Fraser has found that it paralyses the terminations of the motor nerves and the cardiac inhibitory nerves of the vagus, leaving unaffected the spinal cord and the sensory nerves; and that it does not tetanise.

**Ethylbrucin.**  $C_{23}H_{25}(C_2H_5)N_2O_4$ . Obtained by treating a solution of hydriodate of ethyl-brucin with recently precipitated oxide of silver. It cannot be obtained in the solid state. It gives the same red colour with nitric acid as brucin.

**E. iodhydrate.**  $2(C_{23}H_{25}(C_2H_5)N_2O_4 \cdot HI)$ . A crystalline substance obtained by treating an alcoholic solution of brucin with ethyl iodide. It is insoluble in water, soluble in hot alcohol.

**Ethylein'chonin.**  $C_{20}H_{22}(C_2H_5)N_2O$ . Obtained by treating iodhydrate of cinechonin with silver oxide.

**E. iodhydrate.**  $C_{20}H_{22}(C_2H_5)N_2O \cdot HI$ . Obtained by treating cinechonin with ethyl iodide.

**Ethylcodeia.** Obtained by treating iodhydrate of codeia with silver oxide.

**E. iodhydrate.**  $C_{18}H_{20}(C_2H_5)NO_3 \cdot HI$ . A crystalline salt obtained by heating in a sealed tube a saturated alcoholic solution of codeia with ethyl iodide. It is very soluble in water.

**Ethylconia.**  $E_{10}H_{19}N = C_8H_{14}(C_2H_5)N$ . An oily, almost colourless, very refractile liquid obtained by treating a watery solution of iodide of ethyleonia with caustic potash. It is slightly soluble in water.

**Ethylenc.**  $C_2H_4 = CH_2 \cdot CH_2$ . Olefant gas. A colourless, etherally and somewhat garlic-smelling gas, slightly soluble in water, soluble in alcohol, and obtained by heating alcohol with strong sulphuric acid. Its sp. gr. is .9784, and its vapour density 1.397. It is one of the chief luminous constituents of coal gas.

**E. alcohol.**  $C_2H_5O_2$ . Formed when ethylene dibromide and potassium acetate in equal numbers of molecules are heated to boiling for eighteen hours with alcohol of 91 per cent. Also called *Glycol*.

**E. bichloride.** Same as *E. dichloride*.

**E. chloride.** Same as *E. dichloride*.

**E. dichloride.**  $C_2H_4Cl_2$ . A colourless, thin, oily liquid, obtained by bringing olefant gas into contact with chlorine. It has a sweetish ethereal taste and a smell like chloroform, is slightly soluble in water, freely in alcohol and ether, has a density of 1.27, and boils at  $85^\circ C.$  ( $185^\circ F.$ ). It is a safe and rapid anæsthetic for inhalation, and seldom produces vomiting. Locally it has been used to relieve the pain of neuralgia and cancer. Also called *Dutch liquid*.

**E. hydride.** A synonym of *Ether, B. Ph.*

**E. hydrocyanate.** A synonym of *Ethyl cyanide*.

**E.-lactic acid.** One of the three isomeric acids known generically as *Lactic acid*; it is optically inactive, and yields malonic acid, when oxidised by means of chromic acid.

**E., muriate of.** A synonym of *Ethyl chloride*.

**Ethylenelactic acid.** See *Ethylene-lactic acid*.

**Ethylenic.** Relating to *Ethylene*.

**E. chloride.** Same as *Ethylene dichloride*.

**Ethylic.** Relating to *Ethyl*.

**E. acetate.** Same as *Ether aceticus*.

**E. aceto-acetate.**  $C_6H_{10}O_5 = CH_3 - CO - CH_2 - CO_2C_2H_5$ . A colourless liquid obtained by heating sodium with excess of ethyl acetate and mixing with glacial acetic acid and then with water. It has a fruity smell, and boils at  $180.8^\circ C.$  ( $357.44^\circ F.$ ). It has been obtained from diabetic urine.

**E. alcohol.** Ordinary *Alcohol*.

**E. aldehyde.** See *Aldehyde, ethylic*.

**E. bromide.** Same as *Ethyl bromide*.

**E. chloride.** Same as *Ethyl chloride*.

**E. ether.** See *Ether, ethylic*.

**E. formate.** Same as *Ether, formate*.

**E. hydride.** A synonym of *Ethane*.

**E. iodide.** Same as *Ethyl iodide*.

**E. neurostearate.** Same as *Ethyl neurostearate*.

**E. nitrate.** Same as *Ethyl nitrate*.

**E. oxide.** Same as *Ether, ethylic*.

**Ethylidene.**  $C_2H_4 = CH - CH_3$ . Lieben's name for the radical of aldehyde, isomeric with *Ethylene*.

**E., chloride.**  $C_2H_4ClCl$ . Isomeric with *Ethylene dichloride*. A colourless mobile fluid, having an aromatic odour, and a hot, sweet taste; it is sparingly soluble in water, readily in ether and alcohol. Its sp. gr. is about 1.255, and its boiling point about  $84^\circ C.$  ( $183.2^\circ F.$ ), but both vary much. It is an anæsthetic like chloroform.

**E.-lactic acid.** One of three isomeric acids forming *Lactic acid*; it is the *Acidum lacticum* of the U.S. Ph. It differs from *Sarcocactic acid*, also an ethylidene lactic acid, in that it is optically inactive.

**E. oxide.** A synonym of *Aldehyde*.

**Ethylidenic.** Relating to *Ethylidene*.

**E. dichloride.** Same as *Ethylidene chloride*.

**Ethylmorphia.**  $C_{17}H_{18}(C_2H_5)NO_3$ . Obtained by treating *E. iodhydrate* with silver oxide.

**E. iodhydrate.**  $(C_{17}H_{18}(C_2H_5)NO_3, HI)_2 + H_2O$ . A crystalline salt obtained by treating finely powdered morphia with ethyl iodide and absolute alcohol. It is soluble in boiling water and in alcohol.

**Ethylnicotin.**  $C_{10}H_{12}(C_2H_5)_2N_2$ . Obtained by treating iodhydrate of ethylnicotin with silver oxide.

**E., iodhydrate of.**  $C_{10}H_{12}(C_2H_5)_2N_2 \cdot 2HI$ . Obtained by heating nicotin with ethyl iodide in sealed tubes to  $100^\circ C.$  ( $212^\circ F.$ ) It occurs in colourless prisms, soluble in water, sparingly soluble in alcohol and ether.

**Ethylphosphoric acid.** An oily colourless liquid obtained by heating glacial phosphoric acid and alcohol for some minutes to  $60^\circ C.$  to  $80^\circ C.$  ( $140^\circ F.$  to  $176^\circ F.$ ), diluting with water, neutralising with barium carbonate, allowing the barium salt to crystallise out, then dissolving it in water and decomposing it with sulphuric acid. It has a pungent acid taste.

**Ethylquinine.**  $C_{20}H_{23}(C_2H_5)_2N_2O_2$ . Obtained by heating iodhydrate of ethylquinine with silver oxide. It crystallises in colourless needles, which have an acid and bitter taste, and are soluble in water and alcohol.

**E. iodhydrate.**  $C_{20}H_{23}(C_2H_5)_2N_2O_2 \cdot III$ . Obtained by treating an alcoholic or ethereal solution of quinine with ethyl iodide. It crystallises in light, colourless, silky needles, which have a bitter taste, and are soluble in water and alcohol, but not in ether.

**Ethylstrychnia.** Strychnia in which one equivalent of hydrogen is replaced by one of ethyl.

**E. hydrate.**  $C_{23}H_{27}N_2O_2 \cdot OH$   $C_{21}H_{22}N_2O_2(C_2H_5)OH$ . A crystalline substance obtained by treating iodide of ethylstrychnia with oxide of silver. It produces no tetanus, but paralysis of the ends of the motor nerves.

**E., iodide of.**  $C_{23}H_{27}N_2O_2I$ . White four-sided prisms, obtained by treating strychnia with ethyl iodide.

**Ethylsulphate.** A salt of *Ethylsulphuric acid*.

**E. of sodium.** Same as *Sodium sulphovinate*.

**Ethylsulphuric acid.**  $H(C_2H_5)SO_4$ . An oily, very acid liquid obtained by heating concentrated sulphuric acid with strong alcohol. Also called *Sulphuric acid*.

**Ethylsulphurous acid.**  $H(C_2H_5)SO_3$ . Not known in the free state.

**Ethylthebain.**  $C_{19}H_{20}(C_2H_5)NO_3$ . Obtained by treating thebain with iodide of ethyl and precipitating with silver oxide.

**Ethylurea.**  $C_3H_8N_2O = CONH_2(CH_3)$ . A compound urea in which one equivalent of hydrogen is replaced by one of ethyl. It is a crystalline substance obtained by evaporating a mixture of ethyl cyanide and ammonia. Also called *Ethyl carbamide*.

**Ethylvanillin.** A pleasant smelling substance found in storax.

**Etiolate.** (*F. étioier*, to blanch; from Norm. *F. s'etier*, to grow into stalks or straw; from *étiole*, stubble; from *L. stipula*, a straw.) To blanch, to become whitened by exclusion of the sun's rays.

**Etiolated.** (*F. étioier*.) Blanched by exclusion of the sun's rays.

**Etiolation.** (*F. étiolement*. *G. Bleichwerden*.) The state of being blanched, from exclusion of the light. In animals it results from diminution of the colouring matter of the blood; in plants from imperfect development of the chlorophyll, which becomes yellow instead of green.

**Etiolin.** (*F. étioier*.) Pringsheim's term for the yellow colouring matter of the leaves of an etiolated plant; it is a form of chlorophyll.

**Etiology.** See *Etiology*.

**Etiquette.** (*F. étiquette*, a label, a ticket.) Ceremony.

**E., medical.** The duties of a medical man to others and to himself. See *Ethics, medical*.

**Etnagh berries.** The fruit of the common juniper, *Juniperus communis*.

**E'tron.** (*ἑτρον*, the part of the body below the navel.) Old term for the *Hypogastrium*; also, the *Abdomen*.

**E'troncus.** (*ἑτρον*; *ὄγκος*, a mass.) An abdominal tumour.

**Etuves.** Switzerland, not far from Aigle, in the Rhone Valley, 3300 feet above the sea. A sulphur water.

**Euæmia.** (*Εὐ*, well; *αἷμα*, blood.) A good condition of the blood.

**Euæsthesia.** (*Εὐαίσθησία*; from *εὖ*, well; *αἰσθesis*, perception by the senses.) Vigour of the senses.

**Euæsthetus.** (*Εὐαίσθητος*; from *εὖ*; *αἰσθesis*.) One who has vigorous sensations and quick perceptions.

**Euanalepsis.** (*Εὐ*; *ἀνάληψις*, repair.) A quick recovery.

**Euan themon.** Same as *Euanthemum*.

**Euan themum.** (*Εὐ*, well; *ἄνθεμος*, a blossom.) An old name for the *Anthemis*, or chamomile.

**Euaphion.** (*Εὐ*, well; *ἄφῃ*, touch.) Old name of a medicament for piles, from its gentle operation.

**Eubbranchiata.** (*Εὐ*, well; *βράγχια*, the gills.) A synonym of *Decapoda*, in reference to the enclosure of the branchia in a special cavity.

**Eu'calyn.**  $C_6H_{12}O_6$ . Berthollet's term for a saccharine syrupy liquid obtained in the fermentation of mellitose; it is dextrogyrous and isomeric with *Sorbine*.

**Eucalyp'tene.**  $C_{12}H_{18}$ . A derivative with phosphoric anhydride of *Eucalyptol*.

Also,  $C_8H_{16}O$ , a terpene boiling at  $172^\circ C.$ — $175^\circ C.$  ( $341.6^\circ F.$ — $347^\circ F.$ ), forming a large part of *Eucalyptol*.

**Eucalyp'tin.** A name given by Pereira to a pectin-like substance obtained from Botany Bay kino.

**Eucalyp'tol.** (*Eucalyptus*; *oleum*, oil.)  $C_{12}H_{20}O$ . A thin, liquid, colourless oil, with a strong camphoraceous smell, slightly soluble in water, readily in alcohol, and having a dextro-rotatory polarisation; it is a chief constituent of *Eucalyptus oil*, boiling at  $178^\circ C.$  ( $352.4^\circ F.$ ) It is probably a mixture of *Eucalyptene* and *Cymene*.

**Eucalyp'tolene.** One of the derivatives with phosphoric anhydride of *Eucalyptol*.

**Eucalyp'tus.** (Εὖ, well; καλυπτός, covered.) A Genus of the Nat. Order *Myrtaceæ*. Also, see *E. leaves*.

**E. amygdalina**, Labillardière. A species said to furnish much of the commercial *E. oil*.

**E. camphor.**  $C_{10}H_{16}O$ . A substance found in *E. oil*.

**E. citriodora**, Hooker. (L. *citrus*, a citron; *odorus*, fragrant.) Supplies some *E. gum*.

**E. corymbo'sa**, Smith. (L. *corymbus*, a cluster.) Supplies a red astringent gum like kino.

**E. dumo'sa**, Cunningham. (L. *dumosus*, bushy.) Hab. New Holland. A form of manna is produced on its leaves, consisting of sugar, gum, starch, mulin, and lignin.

**E., fluid extract of.** The *Extractum eucalypti fluidum*.

**E. gigante'a**, Hook. (L. *giganteus*, very tall.) Supplies a red astringent gum.

**E. globosus.** The *E. globulus*.

**E. globulus**, Labill. (L. *globulus*, a little sphere.) Blue gum tree. Hab. Tasmania, South Australia. The chief source of eucalyptus oil. It also furnishes a small quantity of red gum. See *E. leaves* and *E. oil*.

**E. gum.** A red astringent exudation from the bark of *E. rostrata* and other species. It is used in diarrhoea and dysentery, and as a lozenge in relaxed throat.

**E. kino.** Same as *E. gum*.

**E. leaves.** The leaves of *E. globulus* when mature. They are 6" to 12" long, thick, leathery, yellowish green, falcate, lanceolate, oblique at the base, tapering to an acute apex, and contain numerous pellucid oil glands. They have been used in intermittent fever, in enteric fever, septicaemia, gastric or intestinal ulcer, and indeed wherever putrefactive destruction of tissue is supposed to exist. The dry leaves when smoked are said to relieve asthma.

**E. man'na.** (L. *manna*; from Gr. *μάννα*; from Heb. *man*.) A sweet substance exuding from punctures in the leaves and young bark of *E. mannifera* and *E. viminalis*. It occurs in small, rounded, opaque masses, and is laxative.

**E. mannif'era**, Mudie. (L. *manna*; *fero*, to bear.) Hab. Australia. Leaves furnish *E. manna*.

**E. obli'qua**, L'Herit. Supplies some of the *E. gum*.

**E. oil.** The oil obtained from the leaves of *E. globulus*, *E. Labillardiere*, and other species. It is volatile, colourless, or pale-yellowish, aromatic in odour, pungent and cooling in taste, dextro-rotatory, and consists chiefly of *Eucalyptol*, or according to recent investigations of a terpene boiling at 150° C., eucalyptene, eymene, and a camphor-like body. It is a stimulant, producing vascular excitement. It is said to increase the secretion of urea. It is used for the same purposes as the leaves, and is inhaled in gangrene of the lung, in fetid bronchitis, chronic cystitis, and in whooping-cough. As a local application it is used to indolent ulcers; and as an injection in leucorrhoea and hemorrhoids. It is a powerful antiseptic. The *Oleum eucalypti*, U.S. Ph.

**E. piperi'ta**, Smith. (L. *piper*, pepper.) Furnishes a red astringent gum.

**E. resinif'era**, Hook. (L. *resina*, resin;

*fero*, to bear.) Furnishes a red astringent gum.

**E. robu'sta**, Smith. (L. *robustus*, hard.) Furnishes a red gum.

**E. rostrata**, Schlecht. (L. *rostratus*, beaked.) Furnishes a red astringent gum.

**E. viminalis**, Labillardière. (L. *viminalis*, bearing twigs.) Hab. Australia. Leaves and young bark supply *E. manna*.

**Eucamp'tus.** (Εὐκαμπτος, easily bent.) A sexually mature nematoid worm.

**E. obtu'sus**, Dujardin. (L. *obtus*, part. of *obtund*, to blunt.) Found in the oesophagus of *Caprimulgus europæus*.

**Eucheuma.** (Εὐχέμος, well flavoured.) A Genus of the Family *Sphaerococcidæ*, Order *Floridææ*.

**E. gelat'inae**, Ag. Supplies some *Agar-agar*.

**E. spino'sum**, Ag. Supplies some *Agar-agar*.

**Euchlo'rine.** (Εὖ, intens; χλωρός, green.) Davy's name for the yellow gas obtained by heating potassium chlorate with hydrochloric acid, and which he believed to be a distinct oxide of chlorine; it is a variable mixture of chlorine and chlorine peroxide.

**Euchrœ'a.** (Εὖ; χροῖά, colour.) A good colour and complexion of the skin.

**Euchy'lia.** (Εὖ, well; χυλός, juice.) Old term applied to a healthy condition of the chyle, or of the juices generally.

**Euchy'los.** Same as *Euchylus*.

**Euchylus.** (Εὖ, well; χυλός, juice.) Old term (Gr. *εὐχυλος*), applied by Hippocrates, *de Morb. Mul.* xxxiii, 1, 3, to one endued with a good or healthy quality of the juices.

**Euchym'ia.** (Εὖ, well; χυμός, juice.) Old term (Gr. *εὐχymia*), used by Galen, *de Simp. Fac.* ii, 13, for the good qualities of the juices of the body.

**Euchymous.** (Εὖ, well; χυμός, juice.) Old term applied, similarly with *Euchylus*, and to one having a good or healthy quality of chyle.

**Eucine'sia.** See *Eukinesia*.

**Eucoi'lia.** (Εὖ, well; κοιλία, the belly, the bowels.) An old name for cherries, because they keep the bowels open.

**Eucoleus.** (Εὐκολία, agility.) A sexually mature form of nematode worm found only in Mammals.

**E. aëroph'ilus**, Creplin. (Αἶψα, the atmosphere; φίλος, a friend.) Found in the trachea of *Canis vulpes*.

**E. ten'uis**, Dujardin. (L. *tenuis*, slender.) Found in the bronchia of *Erinaceus europæus*.

**Eucepe'oda.** Same as *Copepoda*.

**Eucra'sia.** (Εὖ, well; κρασις, from *κράνωμι*, to mix.) Old name (Gr. *εὐκρασία*), used by Galen, *de San. Tit.* i, 5, for a good temperament, or agreeable, well proportioned mixture of qualities, by which the body is said to be in good order, or in a good state of health.

**Eucra'sic.** (Εὖ; κρασις.) Relating to, or capable of assisting, *Eucrasia*.

**Eucra'sis.** Same as *Eucrasia*.

**Eucyathos'tomum.** (Εὖ, beautiful; κύαθος, a small cup; στόμα, a mouth.) A sexually mature form of nematode worm found only in Mammals.

**E. copula'tum**, Molin. (L. *copulatus*, united.) Found in the intestines of *Dasyproctus aguti*.

**E. longesubula'tum**, Molin. (*L. longus*, long; *subula*, an awl.) Found in the intestines of *Cervus campestris*.

**Eucyclæ.** (Εὐ; κύκλος.) A division of cleutheropetalous Dicotyledons; flowers generally hypogynous, cyclic, four- or five-rowed, with both calyx and corolla, two rows of stamens, and syncarpous ovaries.

**Eucyclic.** (Εὐ, well; κύκλος, a circle.) Quite *Cyclic*.

**E. flowers.** Cyclic flowers, the alternating whorls of which each contain the same number of members arranged in alternate order.

**Eucyclicæ.** Same as *Eucyclæ*.

**Eucyesia.** (Εὐ; κύσις, pregnancy.) Regular, normally preceding pregnancy.

**Eudiapneus'tia.** (Εὐδιάπνευστος; from εὐ; διαπνέω, to blow through.) Free evaporation or transpiration.

**Eudiometer.** (Εὐδία, calm weather; μέτρον, a measure.) Cavendish's term for an instrument for determining the composition of atmospheric air. It consists of a graduated glass tube, closed at one end and having the other end in a bath of mercury. Two platinum wires are inserted near the closed end, and between these two wires, on connection with a battery, a spark may be made to pass inside the tube. A mixture of the air to be analysed and hydrogen is made in the tube, and this mixture, on exposure to the electrical spark, explodes, with the formation of water. The volume of gas remaining is read off and compared with the amount of air introduced, and the necessary calculations are made.

**Eudiometric.** (Εὐδία; μέτρον.) Relating to *Eudiometry*.

**E. analysis.** For the analysis of air a quantity sufficient to fill about one sixth of the tube of the eudiometer is introduced, and its volume accurately determined by reading off the number of divisions on the tube to which the mercury reaches. The height of the column of mercury in the tube above the bath and the height of the barometer and the temperature must also be noted. A quantity of pure hydrogen sufficient to unite with all the oxygen is now added, and the volume of the gas and the pressure on it are read off as before. An electric spark is now passed through the mixture by means of the platinum wires, and this causes the combination of the oxygen and hydrogen to form water and produces a diminution of volume, which is again read off. Then, since the hydrogen is in excess, and two volumes of that gas unite with one volume of oxygen to form water, one third of that diminution must be the volume of the oxygen contained in the air introduced.

**Eudiometry.** (Εὐδία; μέτρον.) The use of the *Eudiometer*.

**Eudipleura.** (Εὐ, well; δῖς, twice; πλευρά, the side.) Term applied by Hækel to those fundamental forms of organic life which are composed of two equal and symmetrical halves. Such a disposition is found in most Vertebrates and Arthropods and in many Molluscs, and is very favourable to a mechanical point of view to the movements of the animal, whether active or passive, since it divides the body into two antagonistic halves, which, on the principle of the parallelogram of forces, act on each other at a favourable angle.

**Euectics.** (Εὐεντικός, healthy; from εὐ; ἔχω, to have.) Gymnastics.

**Euelces.** (Εὐέλκης, easily healing; from

εὐ; ἔλκος, a wound.) One on whom wounds and ulcers readily heal.

**Euembalos.** (Εὐ, well; ἔμ, for ἐμ, in; βάλλω, to cast.) A surgeon skilled in setting broken bones.

**Euemēs.** (Εὐεμēs, from εὐ; ἐμείω, to vomit.) One who vomits readily.

**Eue'thes.** (Εὐήθης; from εὐ; ἥθος, custom.) A person with a good habit of body; also, a benign disease.

**Eue'xia.** (Εὐ, well; ἔξις, a habit.) Old term (Gr. ἐνέξια), used by Galen, *de San. Tu. c. 8*, for a sound and healthy habit or constitution, as opposed to cachexia, or bad habit.

**Eufemia.** Italy in Calabria. A salt spring of a temperature of 35° C. (95° F.) Used in lymphatic swellings and scrofula.

**Eugenes'ic.** (Εὐ; γένεσις, generation.) A term applied to those cross-breeds which are fertile.

**Euge'nia.** (After Prince *Eugene*, of Savoy.) A Genus of the Nat. Order *Myrtaceæ*.

**E. a'cris**, W. and A. The *Myrtus acris*.

**E. acuta'ngula**, Gärtn. The *Barringtonia acutangula*.

**E. aromatica**, Willd. The *Caryophyllus aromaticus*.

**E. caryophylla'ta**, Thunb. (Καρφόφυλλον, the clove tree. F.  *giroflie*; G. *Gewürz-nagelbaum*.) The *Caryophyllus aromaticus*.

**E. caudifo'ra.** The *Myrtus cauliflora*.

**E. jambola'na.** The *Syzygium jambolanum*.

**E. jam'boo**, Roxb. The *Jambosa vulgaris*.

**E. jam'bos**, Linn. The *Jambosa vulgaris*, De Cand.

**E. pimen'ta**, De Cand. The tree which yields *Pimenta*.

**E. racemo'sa**, Linn. The *Barringtonia racemosa*.

**Eugen'ic acid.** (*Eugenia*.) A synonym of *Eugenol*.

**Eugenin.** (*Eugenia*. F. *camphre de girofle*.)  $C_{10}H_{12}O_2$ . A crystalline substance obtained from the watery distillate of cloves in the form of white pearly scales, with a slight clovy odour. It is isomeric with *Eugenol*.

**Eugenol.** (*Eugenia*.)  $C_{10}H_{12}O_2$ . A colourless oil obtained from, and smelling like, oil of cloves by treating it with aqueous potash, acidulating with hydrochloric acid, and distilling. It is isomeric with *Eugenin*.

**Eugetic acid.** Same as *Eugetinic acid*.

**Eugetin'ic acid.**  $C_{11}H_{12}O_4$ . A derivative of *Eugenol*, consisting of crystals, slightly soluble in water, which is coloured deep-blue by iron chloride.

**Euge'us.** (Εὐ, well; γῆ, the earth.) Fruitful; fertile. Formerly applied to the womb, from its fertility.

**Eugion.** (Εὐ; γῆ.) A term applied to the uterus, the vulva, and also to the hymen.

**Eugium.** Same as *Eugion*.

**Euich'thes.** (Εὐ, well; ἰχθύς, a fish.) A Subclass of the Class *Pisces*, including Selachii, Ganoidæ, Teleostei, and Dipnoi, according to Claus.

**Eukine'sia.** (Εὐ, well; κίνησις, motion.) Regularity and rhythm of movement.

**Eulachon.** Same as *Oulachon*.

**Eulæ.** (Εὐλæ, a worm.) Old term (Gr. εὐλία), used by Hippocrates, *de Morb. Mul. i. c.*

43, 47, for worms which are bred in a wound or ulcer.

**Euph'ia.** (Εὐφροσ, well-plumed.) A Genus of the Nat. Order *Orchidaceæ* which supplies the salep of Cashmere.

**E. campestris**, Lindley. (*L. campester*, relating to a level plain.) Hab. India. Supplies *Salap*.

**E. herba'cea**, Lind. (*L. herba*, vegetation.) Hab. India. Supplies *Salap*.

**Eulysin.** (Εὐ, well; λύσις, solution.) Berzelius's term for a yellowish-green resinous compound accompanying bilin in bile; it is very soluble in alcohol and ether.

**Eunuch.** (Εὐνοῦχος, from εὐνή, a couch or bed; ἔχω, to care for, or guard. *F. eunuque*; *L. euneco*; *G. Eunuch, Verschüttener, Casträt.*) A man in whom the genital organs have been removed, or so injured as to render him impotent.

**Eunuchis'mus.** (Same etymon.) A term for *Castration*. The condition of a *Eunuch*.

**Eunu'chium.** (Εὐνοῦχος, a eunuch.) An old name for the *Lactuca sativa*, because it was said to render those who eat it impotent.

**E. meco'nis.** (*L. meconis*, a kind of white lettuce.) The lettuce, *Lactuca sativa*.

**Euodes.** (Εὐώδης, sweet smelling; from εὖ, well; ὀσφω, to smell.) Having a pleasant odour.

**Euodia.** (Εὐώδης, fragrant.) Ancient term applied to a certain collyrium.

**Euonym'eæ.** (*Euonymus*.) A Suborder of the Order *Celastraceæ*, having capsular fruit.

**Euon'ym.** (*Euonymus*.) An uncrystallisable bitter resin found in the bark of *Euonymus atropurpureus*.

Also, a name given to the precipitate obtained by adding water to a concentrated tincture of euonymus bark. It is used as a cholagogue.

**Euon'ymite.** A saccharine crystallisable substance resembling mannite, found in the fresh inner bark of *E. europæus*.

**Euonymus.** (Εὐ, well; ὄνομα, a name.) A Genus of the Nat. Order *Celastraceæ*.

Also, U.S. Ph., Wahoo (*F. corce de fusain, é. de bonnet de prêtre*; *G. Spindelbaumrinde*), the bark of the *E. atropurpureus*. Used as a tonic, hydragogue cathartic, cholagogue, diuretic, and antiperiodic, in decoction or infusion.

**E. america'nus**, Linn. Strawberry bush. Properties similar to *E. atropurpureus*.

**E. atropurpureus**, Jacq. (*L. ater*, black; *purpureus*, purple. *F. fusain*; *G. Spindelbaum*.) Wahoo, spindle tree. Hab. North America. Bark used as *Euonymus*, U.S. Ph.

**E. europæ'us**, Linn. (*F. fusain d'Europe*.) Spindle tree. Emetic and purgative. An ointment made with the fruit is used to kill lice.

**E. extract of.** The *Extractum euonymi*.

**E. tin'gens.** (*L. tingo*, to stain.) Hab. India. Furnishes a yellow dye. Used in ophthalmic affections.

**Eupath'ia.** (Εὐπάθεια.) Sensitiveness to impressions.

**Eupatorin.** A white powder of bitterish aromatic taste, soluble in water, insoluble in alcohol and ether, extracted from the *Eupatorium cannabinum*.

Also, a supposed alkaloid discovered by Riphini in the *Eupatorium cannabinum*.

**Eupatoriophala'cron.** (Εὐπατόριον, agrimony; φαλακρός, bald.) Old name

for a kind of *Eupatorium*, or agrimony with naked heads.

**Eupatorium.** (*Eupator*, a king who first found it. *F. herbe à fièvre, herbe parfait*; *G. durchwachsener Wasserhanf*.) A Genus of the Nat. Order *Compositæ*.

Also, U.S. Ph. (*G. Wasserhunkraut*), the tops and leaves of the *Eupatorium perfoliatum*, thoroughwort, gathered after flowering has commenced. It contains a small quantity of volatile oil and a bitter principle not yet isolated. It is a stimulant tonic in small, laxative, diaphoretic, and emetic in larger, doses. Used in ague, in the commencing febrile state of bronchitis, influenza and muscular rheumatism, and in dyspepsia. Dose of powder, 20 to 30 grains.

**E. agerato'idēs.** (*Ageratum*, the plant of that name; εἶδος, likeness.) White snake-root. Antispasmodic, diuretic, and diaphoretic. Said to produce the disorder called *Milk sickness*.

**E. arab'icum.** The *Eupatorium cannabinum*, or hemp agrimony.

**E. aromati'cum.** De Cand. Hempweed. Similar properties to *E. perfoliatum* and to *E. incarnatum*.

**E. avicen'næ.** The *E. cannabinum*.

**E. ay'a-pa'na.** Vent. Hab. Brazil. An aromatic tonic, having a tonka-bean smell. Used as an antidote to snake bites.

**E. cannab'inum**, Linn. (Κάναβας, hemp. *F. chanvrein, eupatoire d'aricenne*; *G. Wasserhanf*.) Water hemp, hemp agrimony. Hab. Europe. Root and leaves diuretic, cathartic, and emetic, in bronchial complaints, jaundice, and dropsy.

**E. cannab'inum femine'um.** (*L. femineus*, feminine.) The *Bidens tripartita*.

**E. coll'num.** De Cand. (*L. collinus*, growing on a hill.) Hab. Mexico. A decoction of the leaves is used in atonic diarrhœa.

**E. conna'tum**, Michx. (*L. connatus*, born with.) The *E. perfoliatum*.

**E., fluid ex'tract of.** See *Extractum eupatorii fluidum*.

**E. fenicula'ceum**, Willd. (*L. feniculum*, fennel.) Dog fennel. Hab. United States. Juice used to relieve the pain from insect bites.

**E. glutino'sum.** (*L. glutinosus*, gluey.) Hab. South America. Leaves used to stop bleeding; one of the plants called there *Matico*.

**E. græco'rum.** The *Agrimonia eupatoria*, or common agrimony.

**E. gua'co.** The *Mikania guaco*.

**E. incarna'tum**, Walt. (*L. incarnatus*, in the flesh, flesh-coloured.) Hab. North America. Used in Texas, under the name of *Mata*, for flavouring tobacco; the aromatic principle is probably identical with comarin.

**E. japon'icum.** The *E. cannabinum*.

**E. mes'ues.** The *Achillea ageratum*, or mandarin tansy.

**E. nervo'sum.** Hab. Jamaica. Used in cholera and continued fevers; it is said to be cholagogue.

**E. perfolia'tum**, Linn. (*L. per*, very; *foliatus*, leafy. *F. herbe à la fièvre, herbe parfuit*.) Thoroughwort, boneset, Indian sage. Supplies *Eupatorium*, U.S. Ph.

**E. pilo'sum**, Walt. (*L. pilosus*, hairy.) The *E. tencrifolium*.

**E. pubes'cens**, Pers. (*L. pubescens*, downy.) The *E. tencrifolium*.

**E., purple-stalk'ed.** The *E. purpureum*.

# EUPEPSIA—EUPHORBIA.

**E. purpureum**, Linn. (*L. purpureus*, purple. *F. herbe à la gravelle*.) Mohawk tassel, trumpet weed, gravel root. Used as a diuretic in urinary disorders, and as *E. perfoliatum*. It is bitter, aromatic, and astringent.

**E. rotundifolium**, Linn. (*L. rotundus*, round; *folium*, a leaf.) Wild horehound. Used as *E. purpureum*, and also in consumption.

**E. satureifolium**, Linn. The *Mikania guaco*, H. B.

**E. sessilifolium**. (*L. sessilis*, sessile; *folium*, a leaf.) Used as *E. perfoliatum*.

**E. teucrifolium**, Willd. (*L. teucron*, the germander, the spleenwort; *folium*, a leaf.) Wild horehound, rough boneset. Properties as *E. perfoliatum*.

**E. trifoliatum**. (*L. tres*, three; *folium*, a leaf.) The *E. cannabinum*.

**E. triplinerve**. (*L. triplex*, threefold; *nervus*, a nerve.) The *E. ayu-pana*.

**E. urticifolium**. (*L. urtica*, a nettle; *folium*, a leaf.) The *E. ageratoides*.

**E. verbenacifolium**, Mich. (*L. verben*, the plant of that name; *folium*, a leaf.) The *E. teucrifolium*.

**E. veterum**, (*L. veteres*, the ancients.) The *Agrimonia eupatoria*, or common agrimony.

**Eupepsia**. (*Εὐψυχία*, from *εὖ*, good; *πίπτω*, to digest.) Old term for good digestion. (Quincy.)

**Eupeptic**. (Same etymon.) Of, or belonging to, *Eupepsia*, or good digestion. One who digests well.

**Euphlogia**. (*Εὖ*, well; *φλογιά*, a flame.) Term for mild, favourable *varicella*. Also, benign inflammation.

**Euphonia**. (*Εὖ*, well; *φωνή*, the voice.) A good, clear voice.

**Euphorbia**. (Name by Juba, king of Mauritania, who first found it, after his physician, *Euphorbus*.) A Genus of the Nat. Order *Euphorbiaceae*.

**E. acuminata**. (*L. acuminatus*, pointed.) The *E. falcata*.

**E. amygdaloides**, Linn. (*Ἀμυγδαλός*, an almond; *εἶδος*, likeness.) Wood spurge. Emetic.

**E. antiquorum**, Linn. (*L. antiqui*, the ancients. *F. euphorbe des anciens*.) Supposed to produce some of the gum-resin *Euphorbium*.

**E. apios**, Willd. Hab. Candia. Juice irritant and caustic.

**E. arvensis**, Schleich. (*L. arvensis*, belonging to the fields.) The *E. falcata*.

**E. cajogala**, Ehr. The *E. Gerardiana*.

**E. canariensis**, Linn. Hab. Canary Isles. Said to furnish some of the gum *Euphorbium*.

**E. canescens**. (*L. canesco*, to become hoary.) Said to be antisiphilitic. Used against snake bites.

**E. capitata**. (*L. capitatus*, having a head.) Can-cica. Hab. Brazil. Astringent. Used in snake bites.

**E. caput-medusæ**. (*L. caput*, the head; *Medusa*.) Hab. South Africa. Used for arrow poison.

**E. catimandu**, W. Elliott. Hab. Vizagapatam. Fresh juice used as a vesicant.

**E. cereifor-mis**. (*L. cereus*, the plant; *forma*, shape.) Used to make arrow poison.

**E. chamaesyce**, Willd. (*Χαμαίσικη*, the ground fig.) Thyme spurge. Root cathartic.

**E. characius**, Linn. (*Χαρακίς*, fit for a stake.) Wood spurge. Hab. Europe. Root cathartic.

**E. chilensis**. Hab. South America. Juice a drastic purgative.

**E. corollata**, Linn. (*L. corolla*, a small wreath. *F. euphorbe à grand fleurs*; *G. grossblühige Wolfsmilch*.) Large flowering spurge, wild ipecac, wild hippo. Hab. North America. Bruised root used as a vesicant; internally as a diaphoretic in five-grain doses, as a cathartic in ten, and as an emetic in twenty-grain doses. In U.S. Ph. the root was formerly official.

**E. cotinifolia**. Hab. Brazil. Juice used as arrow poison.

**E. cyparissias**, Linn. (*Κυπαρισσίας*, a kind of spurge. *F. petite esule*.) Cypress-spurge. Juice a drastic purge and a severe local irritant.

**E. cypres-sina**. Same as *E. cyparissias*.

**E. dendroides**, Willd. (*Δένδρον*, a tree; *εἶδος*, likeness.) The tree spurge. Hab. South Europe. Violently cathartic.

**E. edulis**. (*L. edulis*, eatable.) Hab. Cochinchina. Used as a pot herb.

**E. esula**, Linn. Leafy-branched spurge. Hab. Europe. An irritant poison.

**E. falcata**, Linn. (*L. falcatus*, scythe-shaped.) Anciently used as a purgative when salted.

**E. Gerardiana**, Jacq. Hab. Europe. Root emetic and cathartic. Used for ipecacuanha.

**E. glaucescens**, Willd. (*Γλαυκός*, bluish grey.) The *E. Gerardiana*.

**E. gum**. The substance described as *Euphorbium*.

**E. helioscopia**, Linn. (*Ἡλιος*, the sun; *σκοπία*, to observe. *F. vereil-matin*.) Sun spurge. Juice given in syphilis, and applied to warts to destroy them, and to the skin to produce a blister.

**E. heptagona**, Linn. (*Ἑπτὰ*, seven; *γωνία*, a corner.) Hab. Cape of Good Hope. Juice used as arrow poison.

**E. hirta**. (*L. hirtus*, hairy.) Creeping hairy spurge. Purgative.

**E. humistrata**, Engelm. (*L. humus*, the earth; *stratus*, part, of *sterno*, to spread out.) Hab. America. An emetic.

**E. hypericifolia**, Linn. (*L. hypericum*, the plant; *folium*, a leaf.) Hab. United States, West Indies. Astringent and tonic.

**E. ipecacuanha**, Linn. (*F. euphorbe vomitive*; *G. Brechwurfsmilch*.) Ipecacuanha spurge. An emetic and cathartic, as *E. corollata*. Formerly in U.S. Ph.

**E. lathyris**, Linn. (*Λαθύρις*, a kind of spurge. *F. epurge*; *grand esule*, *catapuce*.) Caper spurge, garden spurge. Seeds cathartic; they yield an oil of the same property; they are also said to be abortifacient; juice irritant.

**E. ligularia**, Roxb. (*L. ligula*, a little tongue.) Hab. India. Used in snake bite. The *E. nerifolia* probably.

**E. linariæfolia**, Lamb. (*L. linaria*, the plant; *folium*, a leaf.) The *E. Gerardiana*.

**E. linearis**, Retz. (*L. linea*, a line.) Hab. Brazil. Used in syphilis.

**E. maculata**, Linn. (*L. maculatus*, spotted.) Spotted spurge, milk purslane. Hab. North America. Astringent and tonic. A decoction is used in scabies.

**E. mucronata**, Lamb. (*L. mucronatus*, pointed.) The *E. falcata*.

**E. myrsinitis**, Willd. (*Μυρσίνιτις*.) Hab. Europe. A drastic cathartic.

**E. myrtifolia**, (L. *myrtus*, the myrtle; *folium*, a leaf.) The *Pedanthus tithymaloides*.

**E. nereifolia**, Linn. (L. *nerium*, the plant; *folium*, a leaf.) Hab. India. Juice purgative, leaves diuretic. Pulp and stem used as a preventive of hydrophobia after a mad dog's bite.

**E. nivulica**, Benth. The *E. nereifolia*.

**E. obturata**, (L. *obturatus*, stopped up.) The *E. helioscopia*.

**E. officinarum**, Linn. (L. *officina*, a shop. F. *euphorbes des officines*.) A species yielding *Euphorbium*.

**E. oil of**. A fixed oil obtained from the seeds of *E. lathyris*. It is colourless, inodorous, and almost tasteless when recent, but very acrid when it becomes rancid. An active purgative. Dose, 5—10 drops.

**E. ophthalmica**, (*Ὠφθαλμός*, the eye.) Used in eye diseases and blindness.

**E. palustris**, Willd. (L. *paluster*, belonging to a marsh.) Great spurge. Hab. North Europe. Cathartic; used locally as an antidote to the bite of a rabid dog.

**E. paniculata**, (L. *panicula*, a tuft.) The *E. palustris*.

**E. papillosa**, St. Hil. (L. *papilla*, a pimple.) Hab. Brazil. Used as a purgative.

**E. paralias**, Linn. (*Παράλιος*, by the sea.) Sea spurge. Hab. Europe. An active purgative.

**E. pep'lis**, Linn. (*Πεπλῖς*, the purple sea spurge.) Purple sea spurge. Hab. Europe. Violently cathartic.

**E. peplus**, Linn. Same as *E. pep'lis*.

**E. pilosa**, (L. *pilosus*, shaggy.) Same as *E. villosa*.

**E. pilulifera**, Willd. (L. *pilula*, a pill; *fero*, to bear.) Hab. India, Australia. Used as an antisyphilitic and in snake bites. Latterly it has been employed in asthma and bronchial affections.

**E. piscatoria**, Willd. (L. *piscator*, a fisher.) Used to stupefy fish.

**E. pithyrisa**, Willd. Lesser spurge. Hab. Europe. Juice purgative.

**E. platyphylla**, Linn. (*Πλατύς*, broad; *φύλλον*, a leaf.) Broad-leaved warty spurge. Hab. Europe. Used to stupefy fish.

**E. prostrata**, Ait. (L. *prostratus*, spread out.) Hab. Mexico. Emetic and cathartic. Used in snake bites.

**E. resinifera**, Berg. (L. *resina*, resin; *fero*, to bear.) Hab. Mexico. Supplies *Euphorbium*. G. Ph.

**E. segetalis**, Willd. (D. *seges*, a corn field.) Narrow-leaved wood spurge. Hab. South Europe. Cathartic.

**E. sylvatica**, Linn. (L. *sylvaticus*, belonging to woods. F. *euphorbe des bois*.) Root emetic and purgative.

**E. thymifolia**, Linn. (L. *thymus*, thyme; *folium*, a leaf.) Hab. India. Purgative and vermifuge.

**E. tirucalli**, Hab. India. Juice applied locally, said to produce uterine contraction; internally an emetic, cathartic, and antisyphilitic.

**E. tithymaloides**. The *Pedanthus tithymaloides*.

**E. tortilis**, (L. *tortilis*, twisted.) Hab. India. Used as *E. tirucalli*.

**E. verrucosa**, Willd. (L. *verrucosus*,

warty.) Rough-fruited spurge. Hab. South Europe. Cathartic.

**E. villosa**, (L. *villosus*, shaggy.) Used as a preventive of hydrophobia externally and internally.

**E. viro'sa**, Willd. (L. *virusus*, poisonous.) Used as an arrow poison.

**Euphorbiaceæ**. (*Euphorbia*.) A Nat. Order of mono-chlamydeous Exogens of the Alliance *Euphorbiales*, or a Family of the Order *Tricocceæ*, having suspended, anatropal ovules, scattered flowers, and tricoceous fruit.

**Euphorbiales**. (*Euphorbia*.) An Alliance of diclinous Exogens, having consolidated superior carpels and axile placentæ.

**Euphorbic acid**. Riegel's term for an acid found in *Euphorbia cyprarissius*, which is probably impure malic acid.

**Euphorbin**. Buchner's term for a vitreous, acrid, bitter substance obtained from *Euphorbium*.

**Euphorbium**, G. Ph. (F. *euphorbe*, *gumme-résine d'euphorbe*; G. *Euphorbiumharz*.) The gum resin obtained by exudation from incisions in the branches of the *Euphorbia resinifera*. It is a brownish yellow, translucent, brittle substance with a burning acrid taste, the dust is very irritating and poisonous. It contains *E. resin*, *Euphorbon*, as well as malates, gum, and mineral matters. It has been used as a drastic purgative in dropsy, as a local irritant in sciatica and paralysis, to promote suppuration, and to procure absorption of rheumatic, gouty, and serofulous swellings. It has also been used as a sternutatory.

**E. resin**.  $C_{10}H_{16}O_2$ . A very acrid resin, soluble in alcohol, composing nearly half of *Euphorbium*.

**Euphorbon**.  $C_{15}H_{22}O$ , or according to Hesse,  $C_{15}H_{24}$ . A constituent of *Euphorbium*, and found in the root of *Euphorbia ipecacuanha*. It is a colourless, neutral body, fusible about  $106^{\circ} C.$  ( $223^{\circ} F.$ ); it has a sharpish taste after some time.

**Euphor'ia**. (*Εὐφορία*, easily carried. F. *euphorie*; G. *Wohlbefinden*, *Wohlbekommen*.) A word used to express well-being, or the perfect ease and comfort of healthy persons, especially when the sensation occurs in a sick person. Also, the power of bearing pain or anxiety easily.

Also, a Genus of the Nat. Order *Sapindaceæ*.

**E. if'tchi**, Desfont. The *Nephelium litchi*.

**E. punic'ea**, Lamb. The *Nephelium litchi*.

**Euphrag'ia**. Same as *Euphrasia*.

**Euphrasia**. (*Εὐφράσιον*, from *εὐφραίνω*, to exhilarate, because it exhilarates the spirits. F. *euphrase*.) A Genus of the Nat. Order *Scrophularinæ*.

**E. officinalis**, Linn. (L. *officina*, a shop. F. *euphrasie officinale*; I. *eufragia*; S. *eufrasia*; G. *Augenrost*.) The eye-bright, esteemed by the people as a sure remedy for all diseases of the eyes. Used in toothache and in chronic catarrh.

**Euphylla**. (*Εὖ*, well; *φύλλον*, a leaf.) True or foliage leaves.

**Eupion**. (*Εὖ*, well, or fairly; *πίον*, fat, or greasy. F. *eupion*; G. *Fein-Fett*, *Edel-Fett*.)  $C_{12}H_{22}$ . Reichenbach's term for a liquid substance obtained by the dry distillation of wood, tar, resins, caoutchouc, and such like; it is greasy or oily, tasteless, colourless, and with-

out smell, and is a mixture of several paraffins, of which the essential one is amyl hydride.

**Eupla'sia.** (Εὐ; πλάσις, a moulding.) Healthy healing of a part.

**Euplastic.** (Εὐ, well; πλαστικός, fit for forming.) Fitted for well-forming.

**E. matter.** Lobstein's term for morbid deposits of plastic lymph which are of perfect structure and of easy organisation, as well as for healthy blastema in general.

**Euplexoptera.** (Εὐ, well; πλέξις, a plaiting; πτερόν, a wing.) A Suborder of the Order Orthoptera, having the under wings folded both transversally and longitudinally, the upper wings very short, leathery, and without veins, and the anal segment provided with a forceps.

**Eupnoë'a.** (Εὐ, well; πνέω, to breathe.) Old term for natural easy respiration.

**Eupno'ic.** (Same etymon.) Breathing easily and freely; relating to *Eupnoea*.

**Eupur'purin.** An oleo-resin obtained from the alcoholic tincture of the root of the *Eupatorium purpureum*. Used as a diuretic. Dose, 3 grains.

**Eurhyth'mia.** (Εὐ, well; ῥυθμός, order.) An old term (Gr. εὐρυθμία), applied by Galen, *de Diff. Puls.* i, 9, to the proper order and regularity of the pulse.

**Euribali.** Same as *Juribali*.

**Eurodes.** (Εὐρώς, dank decay.) Carious, mouldering.

**Eurodon'tic.** (Εὐρώς, dank decay; ὀδούς, a tooth.) Suffering from, or pertaining to, carious teeth.

**Europæ'an.** Belonging to *Europe*.

**E. scam'mony.** The *Cynanchum acutum*, var. *Monspetianum*.

**Euros.** (Εὐρώς, mould.) Old term, used by Willis, for filthiness, or a corrupt and putrefying humour.

Also, applied to *Caries*.

**Euro'tium**, Lam. (Εὐρώς, mould.) A Genus of the Family *Erysiphe*, Suborder *Perisporiacei*, Order *Ascomycetes*.

**E. aspergill'us.** The same as *E. herbariarum*.

**E. herbaria'rūm**, Lk. (*L. herbarius*, belonging to plants.) The fungus which, in its conidiophorous stage is called *Aspergillus glaucus*.

**E. herba'rūm.** (*L. herba*, grass.) Same as *E. herbariarum*.

**E. re'pens.** (*L. repo*, to creep.) A species growing on many vegetable substances, especially cooked fruit.

**Eurrhythm'ia.** See *Eurhythmia*.

**Eury'ale.** (Ευρύαλος, broad.) A Genus of the Nat. Order *Nymphaeaceæ*.

**E. le'rox**, Salisb. (*L. ferox*, fierce.) Hab. India. Seeds farinaceous, eaten when baked in hot sand and husked; are believed to invigorate the body and cure spermatorrhœa.

**Euryan'gium.** (Εὐρύς, wide; ἀγγεῖον, a vessel.) A Genus of the Nat. Order *Umbellifereæ*.

**E. sum'bul**, Kauffmann. The *Ferula sumbul*.

**Euryceph'alous.** (Ευρύς, broad; κεφαλή, the head.) Having a large, broad head.

**Eurycho'ria.** (Εὐρύχωρος, ample, or spacious.) Old term (Gr. εὐρυχωρία), for a sinus, space, or internal cavity, according to Gorræus.

Also, for capacity, according to Casp. Hoffmannus, *Com. ad Galen. de Us.* n. 1167.

**Eurycles.** The proper name of a famous ventriloquist, and hence used as appellative of such.

**Eurygna'thous.** (Εὐρύς; γνάθος, the jaw.) Having large, wide, upper jaws, so that the superior part of the face is predominant; it is the Mongolian type.

**Eurynter.** (Εὐρύνω, to widen. F. *euryntère*; G. *Ausdehnungswerkzeug*.) An instrument for wide ring or extending a canal.

**Eurypter'ida.** (Ευρύς, wide; πτερόν, a wing.) An Order of the Subclass *Entomostraca*, including only animals now extinct.

**Eurysma.** (Εὐρύσω, to widen. F. *euryisme*; G. *Erweiterung*.) A dilating or widening.

**Eurystom'ata.** (Ευρύς, wide; στόμα, a mouth.) An Order of the Class *Ctenophora*, having a very large mouth and no tentacles.

**Eurythalia.** (Εὐρύς; θάλλειν, blooming.) A Genus of the Nat. Order *Gentianaceæ*.

**E. amare'lla**, Borkh. (*L. amarus*, bitter.) The *Gentiana amarella*.

**E. campe'stris**, Borkh. The *Gentiana campestris*.

**E. pratensis**, Don. (*L. pratensis*, growing in meadows.) The *Gentiana amarella*.

**Euryth'mia.** (Εὐρυθμία; from εὐ, well; ῥυθμός, rhythm.) Regularity in beat of the pulse.

**Eusar'cous.** (Εὐσαρκος, fleshy.) Robust, in good condition.

**Eusemia.** (Εὐσημία; from εὐ, good; σημα, a sign.) A good prognostic.

**Eusit'ous.** (Εὐσιτος.) Having a good appetite.

**Eusom'phalus.** (Εὐός, good; ὄμφαλος, the navel.) L. G. St. Hilaire's term for a monstrosity consisting of two foetuses so incompletely united that each performs separately its own vital functions, and each has its own umbilicus and umbilical cord.

**Eusplanch'nia.** (Εὐσπλαγχνία.) A healthy condition of the internals.

**Eusporangia'ta.** (Εὐ, well; sporangium.) One of Göbel's divisions of vascular Cryptogams, in which the sporangium is developed from several cells which are almost always superficial.

**Eustachi.** An Italian anatomist, who died in 1574.

**Eustach'ian.** Of, or belonging to, the anatomist *Eustachi*.

**E. canal.** The same as *E. tube*.

**E. cath'eter.** See *Catheter, Eustachian*.

**E. tube.** (F. *trompe d'Eustache*; G. *Eustachische Röhre, Ohrtrumpete, Schlundröhre*.) A transversely flattened canal, partly bounded by bone, and partly by cartilage and fibrous membrane, leading from the tympanum forwards, inwards, and a little downwards, to the upper part of the pharynx. Its total length is .035 m., of which the cartilaginous part accounts for .021 m., and the osseous part for .011. Its calibre is smallest at the junction of the osseous and the cartilaginous parts, the isthmus, where it is .002 m. high and .001 m. broad; it gradually dilates towards each end, the pharyngeal opening being .009 m. high and .005 m. broad, and the tympanic aperture .005 m. high and .003 broad. The posterior or osseous part of the tube is placed

at the angle of junction of the petrous and squamous portions of the temporal bone; the anterior or cartilaginous portion is formed of a piece of hyaline cartilage, the upper fourth folded on itself so as to make a tube, which is completed to a flattened canal by a dense fibrous tissue and a muscle, the *Dilatator tube*. The tube is narrowest behind at the tympanum, widest at its anterior extremity, where it is fixed to the internal pterygoid plate of the sphenoid bone, and opens behind the inferior turbinate bone a little above the level of the hard palate. The mucous membrane which lines it, continuous at one end with that of the palate, and at the other with that of the tympanum, is attached by loose connective tissue, is lined by vibratile columnar epithelium whose action is toward the pharynx, and contains much adenoid tissue, and numerous racemose glands, especially near the pharyngeal orifice. The Eustachian tube is developed in connection with the inner part of the hyo-mandibular or first post-oral visceral cleft.

**E. tube, cartilaginous.** The inferior cartilaginous portion of the Eustachian tube. The pharyngeal opening is 7 mm. high and 5 mm. broad. The thickness of the cartilage at its proximal portion near its attachment to the bone is 1 mm., but it increases distally till at the pharyngeal opening it is 7 mm. thick.

**E. tube, osseous.** (L. *os*, a bone.) See under *E. tube*.

**E. valve.** (F. *valvule d'Eustache*.) A crescentic fold of the lining membrane of the right auricle in front of the opening of the vena cava inferior, which in the fœtus directs the current of blood from this vessel to the foramen ovale, and left auricle.

**Eustachius.** Same as *Eustachi*.

**Eustathe.** (Εὐσταθής, well built.) Har-tig's term for the most external part of the cellulose composing the wall of a vegetable cell; it is very resistant to the action of acids and to the blue staining by iodine.

**Eustemia.** (Εὐ, beautiful; *στῆμα*, a gutland.) A sexually mature form of trematode worm.

**E. caryophyllum.** Diesing. Found in the intestines of *Neophron pileatus*.

**Eusthenia.** (Εὐσθενεία, to be strong.) Marked by strong good health.

**Eustochia.** (Εὐστοχία, skill in shooting at a mark.) A happy guess at the nature of a disease.

**Eusto'ma.** (Εὐ, beautiful; *στόμα*, mouth.) A sexually mature form of nematode worm.

**E. truncatum.** v. Bened. (L. *truncatus*, cut off.) Found in the intestines of *Raja clatala*.

**Eustomachous.** (Εὐστόμαχος.) Having a good digestion; easy of digestion.

**Eustrongylus.** (Εὐ, well; *στρογγύλος*, round.) A sexually mature worm of the Family *Strongylidae*, Order *Nematoda*, Class *Nematelmintha*.

**E. gigas.** Diesing. (L. *gigas*, a giant. G. *grosser Palisadenicurm*.) A large, round worm found in man, the dog, horse, ox, seal, wolf, otter, and many other animals; in man it is found in the kidneys, in other animals it has been seen also in the urinary bladder, lungs, liver, bowels, and free or encysted in the abdominal cavity. The male is 1' long and the female more than 3'; the body is cylindrical, thickest behind, where it

is .5" in diameter, and reddish; the mouth is roundish or three-cornered, without lips, and presents six papillæ; the tail of the male possesses a cup-shaped bursa, the edge and inner surface of which is papillose, it partially conceals the long thin spiculum; the tail of the female is blunt; the vulva is near the head on the ventral surface. The intermediate host is some freshwater fish, and the immature form is known as *Filaria cystica*.

**E. longevagina'tus.** See *Strongylus longeraginatus*.

**E. papillo'sus.** Diesing. (L. *papilla*, a nipple.) Found in the intestines of *Coracias garrula*.

**E. tu'bifex.** Nitsch. (L. *tuba*, a trumpet; *facio*, to make.) Found in the species of *Colymbus*, one of the Grebes.

**Eutaxia.** (Εὐταξία, good arrangement.) The perfect replacement of a displaced part.

A good order of bodily function, each being well and properly done.

Also, the regular and orderly disposition and relationship of the various parts of the body.

**Euterpē.** (Εὐτέρπη, the well-pleasing; one of the Muses.) A Genus of the Nat. Order *Palmaceæ*.

**E. monta'na.** (L. *mons*, a mountain.) The cabbage palm. Terminal buds eaten as food.

**E. olera'cea.** (L. *oleraceus*, herb-like.) Hab. America. Terminal buds eaten as food.

**Euthana'sia.** (Εὐ, well; *θάνατος*, death.) An easy death, or that occurring without the severer symptoms, as convulsions.

**Euthenia.** (Εὐθηνία, to abound.) Old term (Gr. *εὐθηνία*), used by Hippocrates, *de Acr. Loc. et Aq.* xxxii, 9, for strength, vigour, or exuberance of health.

**Euthesia.** (Εὐ, well; *θέσις*, position, or condition.) Old term for a good habit and state of health of body; a good constitution; harmony of the parts of the body.

**Euthopnœ'a.** Similar to *Euthopnoë*.

**Euthyenteron.** (Εὐθύς, straight; *έντερον*, an intestine.) Term for the *Rectum*.

**Euthyenteropolypus.** (Εὐθύς; *έντερον*; *πολύπους*, a polypus.) Polypus of the rectum.

**Euthyenterostenoma.** (Εὐθύς; *έντερον*; *στένωμα*, a narrow pass. F. *euthyenterosténome*; G. *Mastdarmverengerung*.) Contraction of the rectum.

**Euthymia.** (Εὐθυμος, he who is of a good and lively disposition.) Old term (Gr. *εὐθυμία*), used by Hippocrates, *Epid.* xxxi, v, 15, for gladness, joyfulness, or tranquillity of mind.

**Euthypnoë.** (Εὐθύς; *πνοή*, a breathing.) Easy breathing.

Also, a synonym of *Orthopnea*.

**Euthypnous.** (Εὐθύπνοος.) Breathing easily.

Also, breathing as in *Orthopnea*.

**Euthyporos.** (Εὐθύς, right; *πόρος*, a way or direction.) Old epithet (Gr. *εὐθύπορος*), used by Galen, *Meth. Med.* vi, 5, for extension, when the fractured limb is drawn in a straight direction.

**Eutoc'ia.** (Εὐ, well; *τόκος*, childbirth.) Easy, normal childbirth; also fecundity.

Barnes defines eutocia as labour proceeding smoothly and terminating favourably under the natural forces.

**Eutocous.** (Same etymon.) Having an easy labour; fruitful, fecund.

**Eutolmia.** (Εὐτολμία, bold, or intrepid.) Old term for an affection of the mind which is favourable to the preservation or recovery of health; confidence or an emotion of the mind when it is excited to the attainment of some great good, or the overcoming of evil.

**Eutomous.** (Εὐ, easily; τέμνω, to cut.) Easily cut.

**Eutonia.** (Εὐτόνος, firm.) Firmness; tone; vigour.

**Eutonus.** (Εὐ, well; τείνω, to stretch.) Having tone; strong; firm; robust. Formerly applied (Gr. εὐτόνος), *Aph.* iii, 17, used by Hippocrates, to strong exercise with great fatigue.

**Eutrophia.** (Εὐ, well; τρέφω to nourish. *F. eutrophie; G. Wohlgenuhrtheit.*) Old term for good and plentiful nutrition.

**Eutrophic.** (Εὐ; τροφή, nourishment.) A term introduced into medical terminology by Dunglison for an agent whose action is exerted on the system of nutrition without necessarily occasioning manifest increase of any of the secretions. The chief eutrophics are mercurials, the preparations of iodine, bromine, cod-liver oil, the preparations of gold and silver, sulphur, sugar, and sarsaparilla.

**Eutrophy.** (Εὐ; τροφή.) Good nutrition.

**Eutropic.** (Εὐ, well; τρέπω, to turn.) In Botany, applied to those climbing plants which turn well or properly, that is, with the sun.

**Euxanthic acid.** (Εὐ, well; ξανθός, yellow.)  $C_{15}H_{16}O_{10}$ . Erdmann's name for an acid found in Indian yellow or Purree. The *Purree acid* of Stedman.

**Euxanthin.** Same as *Euxanthic acid*.

**Euzeu.** France, Département du Gard. A cold sulphur water. Used in abdominal congestions and in skin diseases.

**Euzomis.** Same as *Euzomum*.

**Euzomum.** (Εὐζωμος, making good broth.) The *Brassica crua*.

**Euzoödynamia.** (Εὐ, well; ζῶον, an animal; δύναμις, strength.) Gilbert's term for corporeal health; the healthiness of the animal part of the man.

**Evacuant.** (L. *evacuo*, to empty. *F. évacuant; I. evacuante; G. ausleerend.*) Medicines that have the property of increasing evacuations from the bowels or other organs, such as emetics, purgatives, and diuretics.

**Evacuation.** (L. *evacuo*, to empty. *F. évacuation; I. evacuazione; S. evacuation; G. Ausleerung, Entleerung.*) An emptying, a discharging from any cavity or equal. Usually applied to the act of discharging the contents of the bowels or defæcation, but also, to the discharge of faeces itself; a defecation or stool.

**Evalvate.** (L. *e*, neg.; *valva*, a valve.) Having no valves.

**Evalvular.** Same as *Evalvate*.

**Evanescent.** (L. *evanesco*, to vanish away; from *e*, away; *vanesco*, to vanish. *F. évanescent; G. verschwindend.*) Vanishing, passing away quickly.

In Botany, applied to the nectary when it diminishes as the fruit advances in size, and at last disappears entirely.

**Evanidinerivate.** (L. *evanidus*, ef-

faced; *nervus*, a nerve.) Having the nervures of the leaves almost effaced.

**Evandroot.** The *Geum virginianum*.

**Evaporable.** (L. *evaporo*, to disperse in vapour.) Capable of *Evaporation*.

**Evaporate.** (L. *evaporatus*, part. of *evaporo*, to disperse in vapour.) To resolve into vapour.

**Evaporating.** (L. *evaporo*.) Being resolved into vapour; having the capacity to evaporate; being in the act of becoming vaporised.

**E. dressing.** See *Dressing, evaporating*.

**Evaporation.** (L. *evaporatus*, part. of *evaporo*; from *e*, away; *vapor*, vapour. *F. évaporation; I. evaporazione; S. evaporation; G. Abdampfung, Abdunstung, Verdunstung.*) The act of resolving, or the state of being resolved, into vapour. Especially applied to the slow production of vapour from the surface of a liquid.

**E. in vacuo.** (L. *in*, in; *vacuus*, empty. *F. évaporation dans le vide.*) The operation of evaporating a substance by placing it in a receiver, which is then exhausted of its air; it is usual to have in the chamber a vessel containing sulphuric acid, calcium chloride, or some hygroscopic substance, to absorb the watery vapours as they are given off.

**E., latent heat of.** The quantity of heat which a liquid gives out in passing into a state of vapour.

**Evaporometer.** Same as *Atmometer*.

**Evau.** France, Département de Creuse. Hot springs, temperature 56° F. (132° F.) containing sodium chloride and calcium carbonate, and in one a little sulphur. Used in chronic bronchial diseases and in rheumatism.

**Evening.** (Sax. *æfning*; from *æfen*, eve; *ung*, a suffix.) The latter part of the day before the night.

**E. primrose.** The *Enothera biennis*, and others of the same genus, from the yellow colour of the flower and its habit of opening in the evening.

**Eventratio.** See *Eventration*.

**E. orbitæ.** (L. *orbita*, an orbit.) The removal of the whole contents of the orbit. It is practised in the case of tumours of the orbit.

**Eventration.** (L. *e*, out of; *venter*, the belly.) A term for the condition of a monster foetus, in which the abdominal viscera are extruded from the natural cavity, and enclosed in a projecting membranous sac.

Also, the pendulous condition of the lower abdomen which occurs in some women who have borne many children, and caused by extreme relaxation of the abdominal walls, or the giving way of the linea alba.

Also, the condition of a large ventral hernia.

Also, the escape of a large amount of intestines from an abdominal wound.

**Eventuality.** (L. *eventus*, part. of *evenio*, to come out, or happen.) Term for a faculty common to man and the lower animals (its organ confined to the middle line of the forehead, on the two sides of the falx cerebri), taking cognisance of occurrences designated by active verbs, as the horse *walks, trots, or gallops*, its lungs *play*, its blood *circulates*, its muscles *contract*; its function is said to prompt to investigation by experiments, and to aid in producing a talent for all practical business involving details.

**Eventus.** (L. *eventus*, an occurrence; from *evenio*, to happen.) The issue of a disease.

**Evergreen.** Applied to plants which retain their leaves throughout the year.

**E. oak.** The *Quercus ilex*.

**E. privet.** The *Rhamnus alaternus*.

**E. rose.** The *Rosa sempervirens*.

**E. spurge laurel.** The *Daphne laureola*.

**E. thorn.** The *Crataegus pyracantha*.

**E. wood spurge.** The *Euphorbia amygdaloides*.

**Everitt's salt.** A yellowish-white powder, being an insoluble compound of cyanide of iron and cyanide of potassium, produced, along with potassium sulphate, when potassium ferrocyanide is decomposed by sulphuric acid.

**Everlasting.** Continuing for ever.

**E., diaceous.** The *Antennaria dioica*.

**E. flower.** The plants of the Genus *Gnaphalium*, so called because they keep their shape and colour when dried.

**E. pills.** Pills made of metallic antimony. Formerly used as a purgative, and so called because they were supposed to act by contact merely, and to lose no weight in their use. Also called metallic pill. [I have been credibly informed of the host of a country inn in Yorkshire who being asked by a guest, early in the present century, to send for some pills for him, replied, "You had better have our metallic pill, we've used it for forty years in our family, and it is as good as ever; I'll lend it to you."—L. W. S.]

**Evernia.** Ach. A Genus of the Family *Ramalinae*, of the gymnocarpous Group of the *Lichenes*.

**E. furfuracea**, Fr. (*L. furfuraceus*, branny. *F. physice grenue*.) Formerly used as a febrifuge.

**E. prunastri**, Ach. (*G. weisses Lungenmoos*.) Formerly, as *Muscus arboreus*, used in pulmonary diseases and as an astringent and febrifuge. Used also as a basis of perfumed powders, from its faculty of absorbing odours.

**Evernic acid.**  $C_{17}H_{16}O_7$ . Yellow crystalline spheres obtained by the action of hydrochloric acid on a decoction of *Evernia prunastri*. It is isomeric with lecanoric acid.

**Evernin.**  $C_6H_{14}O_7$ . A yellowish-white, amorphous, tasteless powder obtained by Stüde from the *Evernia prunastri*.

**Everriculum.** (*L. everriculum*, a sweep-net; from *everro*, to sweep away.) Old name, used by Paré, *Chir.* xvi, 42, for a kind of spoon or scoop for clearing the bladder from the small particles of calculeous matter after the operation of lithotomy.

**Everzio.** (*L. eversio*, from *everto*, to turn out. *G. Auswärtskehrung*.) An overthrowing; a turning out.

**E. palpebræ.** (*L. palpebra*, an eyelid.) Same as *Ectropion*.

**E. vesicæ.** (*L. vesica*, a bladder.) Same as *Bladder, extroversion of*.

**Eversion.** (*L. eversio*.) A turning outwards.

In Botany, the external protrusion of organs from the cavity in which they are developed.

**E. of eyelid.** Same as *Ectropium*.

**Evian.** France, Département de Haute-Savoie, on the Lake of Geneva, nearly opposite Lausanne. Cold, slightly alkaline waters. Used in gastralgia and neuralgic conditions.

**Evidement.** (*F. evider*, to hollow out; from *L. e*, out; *viduus*, bereft.) Sédillot's term

for the scooping out of the whole interior of a carious bone, leaving the outer shell.

**Evil.** (*Sax. yfel*.) Badness; mischief.

**E., king's.** Scrofula, in reference to the power professed by Edward the Confessor, and other kings, to cure it by touching the sufferer.

**E., the.** Scrofula.

**Eviration.** (*L. e*, out of; *vir*, a man.) A term for *Castration*.

Also, the loss of sexual power in the male from age or other cause.

**Evisceration.** (*L. e*, out; *viscera*, the bowels.) The removal of the abdominal viscera. In Midwifery, the term includes the removal of the thoracic viscera also.

**Evittate.** (*L. e*, without; *vitta*, a fillet.) Having no *Vitta*.

**Evoëdia.** A Genus of the Nat. Order *Rutaceæ*.

Also, a synonym of *Agathophyllum*.

**E. aromatica.** The *Agathophyllum aromaticum*.

**E. febrifuga**, St. Hilaire. (*L. febris*, fever; *fugio*, to put to flight.) Hab. Brazil. A bitter astringent. Used as a febrifuge. The *Esenbeckia febrifuga*.

**E. ravensara**, Gärtn. The *Agathophyllum aromaticum*.

**E. triphylla**, Roxb. The *Xanthoxylon triphyllum*.

**Evoëdin.** A synonym of *Esenbeckia*.

**Evolena.** Switzerland, Canton Ticino, 3900 feet above the sea. Acidulated mineral waters of little value.

**Evolutivity.** (*L. evolvo*, to unfold.) The faculty possessed by all substances which are capable of self-nourishment to manifest the nutritive acts by changes of form, or of volume, or of structure.

**Evolution.** (*L. evolutus*, part. of *evolvere*, to unroll. *F. Evolution*; *G. Entwicklung*.) The action of unfolding. A term used synonymously, generally, with *Development*, to designate the gradual unfolding of successive phases of the growth of a living being, or of any of its parts.

**E., aberrant.** (*L. ab*, from; *erro*, to wander.) The development of a tissue, or of an organ, in a wrong place, or at a wrong time, or of the wrong form.

**E., disease' of.** A disease which occurs during the evolution of another, or which is a direct consequence of a phase of that evolution.

**E., hypothesis of.** (*Ἐποθεσις*, a placing under, a supposition.) That which supposes that the germ is not organised in the body of the parents, but pre-existent, already organised, and only developed by the process of generation; it is opposed to *Epigenesis*, which see.

For an account of the theory or hypothesis of present described by this term see *Darwinism*.

**E., spontaneous.** See *Spontaneous evolution*.

**E., the'ory of.** See *E., hypothesis of*.

**E., vesicle of.** Same as *Vesicle of development*.

**Evolvulus.** (*L. evolvo*, to unroll.) A Genus of the Nat. Order *Convolvulaceæ*.

**E. alsinoides**, Linn. (*Alsine*; Gr. *εἶδος*, likeness.) Hab. India. Plant used in dysentery and fever.

**E. hirsutus**, Linn. (*L. hirsutus*, shaggy.) The *E. alsinoides*.

**Evomitio.** (*L. evomo*, to vomit forth.) Vomiting.

**Evonymus.** Same as *Euonymus*.

**Evulsion.** (L. *evulsio*, from *evello*, to pluck up, or out. F. *évulsion*, *arrachement*; I. *evulsione*; G. *Ausreissen*, *Ausziehen*.) A plucking out. A term for the act or process of drawing out forcibly; applied to a mode of removing polypi.

**Evulsive.** (L. *evulsio*. F. *évulsif*.) An instrument used for *Evulsion*, such as a tooth forceps.

**Exacerbation.** (L. *exacerbatus*, from *exacerbo*, to become violent. F. *exacerbation*; I. *esacerbazione*; S. *exacerbacion*; G. *Steigerung*, *Verstärkung*.) Term for an increased force or violence of the symptoms of a disease, generally of febrile symptoms.

Also, a synonym of *Paroxysm* in a fever when the remission is imperfect.

**Exacinata.** (L. *ex*, out of; *acinus*, a stone of a fruit.) Fruits with their stones or seeds removed.

**Exacum.** (L. *ex*, out of; *ago*, to drive.) A Genus of the Nat. Order *Gentianaceæ*, so called because the species was supposed to drive out poisons.

**E. bicolor.** Roxb. (L. *bis*, twice; *color*, colour.) Hab. India. A febrifuge and stomachic tonic.

**E. hyssopifolia.** Willd. The *Cicendia hyssopifolia*.

**E. pedunculatum.** (L. *pedunculus*, a little foot.) Hab. India. A bitter tonic.

**E. ramosum.** Vahl. The *Contoubea ramosa*.

**E. spicatum.** The *Contoubea spicata*.

**E. tetragonum.** (Τετραγόνος, γώνος, a corner.) A stomachic and febrifuge.

**Exæmato'sis.** (Εξ, out of; *aima*, blood.) A synonym of *Hæmato'sis*.

Also (G. *Ferwundung*), a wounding so as to produce bleeding.

**Exæmia.** (Εξαιμος, bloodless; from *εξ*; *aima*.) Bloodlessness, anemia.

**Exæmous.** (Εξαιμος.) Bloodless.

**Exæresis.** (Εξαιρεσις, a taking out; from *εξαίρω*, to remove. F. *excise*; G. *Her- ausnehmen*.) Old term for that division of the surgical art, which comprises the removal of whatever is injurious or superfluous to the body, as the extraction of foreign bodies, excision of tumours, amputation of limbs. (Quincy.)

**Exaggerated.** (L. *exaggeratus*, part. of *exaggero*, to heap up.) Intensified, magnified, larger in every way.

**E. respiration.** See *Respiration*, *exaggerated*.

**Exago'gë.** (Εξαγωγή, a leading out.) Evacuation, as of feces.

**Exago'gis.** (Εξαγωγίς, a drum.) A duct; a cloaca.

**Exalate.** (L. *ex*, out; *ala*, a wing.) Having no wing or ala.

**Exalbuminous.** (L. *ex*, without; *albumen*.) Having no albumen or endosperm, as the seeds of the Compositæ, Leguminosæ, Cucurbitaceæ, and other plants.

**Exalip'sis.** (Εξάλιψις, a blotting out.) Obliteration, as by plastering over; healing, as by means of an ointment.

**Exalip'trum.** (Εξάλιπτρον.) A box or vase for ointment.

**Exallaxis.** (Εξάλλαξις, a changing.) The retrograde or destructive changes of the tissues.

**Exal'ma.** (Εξαίμα, a leap in the air.) A leaping out, as it were, or displacement of a vertebra, or a wrist, or tarsal bone.

**Exalsis.** (Εξάλσις, a leaping out.) A dislocation, especially of a vertebra.

**Exaltation.** (Old F. *exalter*; from L. *exalto*, to raise.) A lifting up.

In the olden Chemistry, an operation by which a substance was raised to a greater potency.

Also, the same as sublimation or volatilisation. In Pathology, the immoderate increase of the action of an organ.

**Examblo'ma.** (Εξαμβλωμα, to abort.) Old term for *Abortion*.

**Examblo'sis.** Same etymon and meaning as *Examblo'ma*.

**Examination.** (L. *examinio*, to test. F. *examen*; I. *esame*; G. *Untersuchung*, *Prüfung*.) A careful enquiry.

**E. physical.** (Φυσικός, natural.) The investigation of disease by means of the senses, as when the cardiac and respiratory sounds and movements are examined with the ear, or by means of instruments devised to render them more conspicuous.

**Exanastomo'sis.** (Εξ, out of; *αναστομόω*, to furnish with a mouth, to bring to an opening.) Old term for the relaxing or opening of the mouths of vessels so as to let out their contents.

Also, the same as *Anastomosis*. (Castellus.)

**Exanastrophë.** (Εξαναστρίψω, to turn upside down.) A term which has been used to signify a second convalescence or recouvalence.

**Exang'ia.** (Εξ, out of; *ἀγγίον*, a vessel.) Having a breach or opening. Applied by Mason Good as a generic term for diseases consisting in a partial breach, or morbid perforation, of a large blood-vessel without external opening, including aneurysma, cyania, and varix.

**Exang'ious.** (Εξ; *ἀγγίον*.) Bloodless, appearing as if the blood were all out of the vessels.

**Exang'ues.** (L. *ex*, out; *sanguis*, blood.) A term in olden times applied to the bones and cartilages, because they were supposed to be nourished only by a white fluid and not blood.

**Exa'nia.** (L. *ex*, out of; *anus*, the opening of the bowel. F. *exanie*; G. *Aftervorfall*.) A term for prolapsus of the rectum.

**Exanimation.** (L. *ex*, out; *animus*, the mind.) A term for death. Also, apparent death from swooning.

**Exannulate.** (L. *ex*; *annulus*, a ring.) Having no ring, or annulus, as in some ferns.

**Exanthalose.** (Εξανθήω, to burst forth from the surface.) Beudant's term for native sodium sulphate when it has become efflorescent.

**Exanthem.** Same as *Exanthema*.

**E., anom'alous.** (Ανόμαλος, irregular.) A synonym of *Rothela*.

**E., carbun'cular.** (Carbunculo.) A synonym of *Plague*, on account of the eruption of bubbles.

**E., ich'orous.** (Ιχώρ, lymph.) A synonym of Good's *Emphythisis*.

**E., pus'tulous.** (L. *pustula*, a pustule.) A synonym of Good's *Emphythisis*.

**E., rash.** A synonym of Cullen's *Enanthesis*.

**Exanth'e'ma.** (Εξανθήμα, eruption; from *εξανθήω*, to break forth from the surface.

*F. exanthème*; *I. esantema*; *S. exantema*; *G. Exanthem, Ausschlag*.) A term which has been used for any breaking out on the skin, be it efflorescence, scale, papule, vesicle, or pustule. Now by some restricted to the eruptions which are characteristic of infectious febrile diseases; whilst others include also the rashes of urticaria, erythema, and roseola.

In Botany, the term is applied to blotches and eruptive excrecences on the surface of leaves.

**E. antivariolousum.** (*L. anti*, against; *variola*, smallpox.) A term for cow-pox.

**E. hæmorrhagicum.** (*Ἀιμορραγία*, violent bleeding.) A form probably of purpura described by Graves, in which, with a dry brown tongue, a hard, wiry, thrilling pulse, and bleeding from all the mucous surfaces, a peculiar exanthematous eruption, resembling that of measles, but without its crescentic outline, and without extravasation of blood, appeared on the skin.

**E. internum.** (*L. internus*, within.) A synonym of *Eisanthema*.

**E. iodicum.** The red rash which is sometimes produced by the taking of iodine.

**E. labialis.** Same as *Herpes labialis*.

**E. miliaria.** Same as *Miliary fever*.

**E. pestis.** (*L. pestis*, the plague.) A synonym of *Plague*.

**E. serosum.** (*L. serosus*, watery, containing serum.) A synonym of *Pomphigus*.

**E. strophulus.** Same as *Strophulus*.

**E. urticatum.** (*L. urtica*, the stinging nettle.) Same as *Urticaria*.

**E. vaccina.** (*L. vacca*, a cow.) Cow-pox.

**E. varicella.** Same as *Varicella*.

**Exanthemata.** (Same etymon.) Rashes. An Order of the Class *Pyrexæ*, of Cullen's Nosology.

A class of diseases including smallpox, cow-pox, chicken-pox, measles, röteln, and scarlet fever. See *Exanthema*.

**E., acute.** A term which, according to some, includes smallpox, measles, röteln, scarlet fever, enteric fever, miliary fever, and chicken-pox.

**E., syphilitic.** Rashes caused by syphilis.

**E., toxic.** (*Toξικόν*, arrow-poison.) Exanthemata produced by the poisonous action of articles of diet or drugs, such as mackerel, lobster, crab, mussels, quinine, and bromine.

**Exanthematic.** (Same etymon. *F. exanthématique*.) Of, or belonging to, *Exanthema*; eruptive.

**E. disease.** An *Exanthema*.

**E. fever.** The fever which accompanies an exanthem.

**E. typhus.** A synonym of *Typhus fever*.

**Exanthematica.** (Same etymon.) An Order of Good's Class *Hæmatica*, being cutaneous eruptions essentially accompanied with fever.

**Exanthematis'chesis.** (*Ἐξάνθημα*; *σχίσις*, a checking.) Suppression of an exanthema.

**Exanthematology.** (*Ἐξάνθημα*, a rash; *λόγος*, a speech.) Term for the doctrine, or consideration, of the *Exanthemata*.

**Exanthematophthalmia.** Exanthematous ophthalmia; inflammation of the eye occurring in the course of, and caused by, some exanthematous disease.

**Exanthematos'chesis.** Same as *Exanthematischesis*.

**Exanthematous.** (*Ἐξάνθημα*, a rash. *F. exanthemateux*.) Of, or belonging to, or of the nature of, having or full of, *Exanthema*; eruptive.

**E. disease.** An *Exanthema*.

**E. jaw-necrosis.** (*Νέκρωσις*, the state of death.) The necrosis and exfoliation of portions of the alveolar processes and of the jaws in children, as a consequence of an attack of one of the acute exanthemata, especially scarlet fever. It occurs within six or eight weeks of the febrile attack with tenderness of the mouth and fetor of the breath; soon the gum separates from the teeth and exposes dead bone, which usually includes the permanent tooth germs, as well as the alveoli of the temporary ones. It is often symmetrical in the places of its assault.

**E. laryngitis.** See *Laryngitis*, *exanthematous*.

**E. ophthalmia.** See *Ophthalmia*, *exanthematous*.

**Exanthemoid.** (*Ἐξάνθημα*; *εἶδος*, likeness.) Resembling an *Exanthema*.

**Exanthemoporphyrtyphus.** (*Ἐξάνθημα*; *porphyrotypus*.) Exanthematous porphyrotypus.

**Exanthesis.** (*Ἐξάνθησις*, from *ἐξάνθω*, to put out flowers, to burst forth. *G. Aufblühen*.) The act of cutaneous efflorescing, or breaking out in a rash; by some restricted to a superficial rash.

**E. arthrosia.** (*Ἄρθρον*, a joint.) A term for *Dengue*, in allusion to the rash and the joint pains.

**E. roseola.** Same as *Roseola*.

**E. rubeola.** Same as *Rubeola*.

**Exanthisma.** (*Ἐξάνθισμα*.) The same as *Exanthema*.

**Exanthro'pia.** (*Ἐξ*, without; *ἄνθρωπος*, a man.) Old term for what was called the third degree of melancholia, consisting in a dislike to society.

**Exapophysiate.** (*Ἐξ*, out; *ἀπόφυσις*, an outshoot.) Having no *Apophysis*.

**Exapsis.** (*Ἐξάψις*, a kindling.) A term for *Inflammation*.

**Exarag'ma.** (*Ἐξάραγμα*, from *ἐξαράσσω*, to shatter.) A fracture, especially a comminuted fracture.

**Exarchia'ter.** (*Ἐξαρχος*, a leader; *ιατρός*, a physician.) The chief physician of an emperor or king.

**Exarillate.** (*L. ex*, out; *arillus*.) Having no arillus.

**Exaristate.** (*L. ex*, out; *arista*, an awn.) Having no awn or arista.

**Exarma.** (*Ἐξάρμα*, a swelling; *ἐξαρῖω*, to raise up, or elevate. *F. exarme*; *G. Erhebung*.) Old name (*Gr. ἔξαρμα*), used by Hippocrates, *Epid. iv, xx, 14*, for an elevated tumour.

**Exarsio.** (*L. ex*, intens.; *ardeo*, to burn.) Extreme burning heat.

**Exarte'ma.** (*Ἐξάρτημα*, a thing suspended.) An amulet.

**Exarteritis.** (*L. ex*, out; *arteritis*.) Inflammation of the external coat of an artery. The external and middle coat of the artery become thickened and reddened, the lumen of the vessel is narrowed, and the internal coat is thrown into puckering; pus may form between the coats, and cicatricial tissue be ultimately developed, which may again lead to aneurysm.

The disease is rarely spontaneous, but is usually secondary to some lesion, or to the propagation of inflammation from the surrounding connective tissue.

**Exarthre'ma.** (Ἐξάρθρωμα, to put out of joint.) Old term (Gr. ἔξαρθρῆμα), for a luxation or dislocation, according to Galen, *Meth. Med.* ii, 2, and especially of a diarthrodial joint.

**Exarthrematol'ogy.** (Ἐξάρθρωμα, a dislocation; λόγος, an account.) The doctrine of dislocations.

**Exarthro'ma.** (Ἐξάρθρωμα.) Same as *Exarthre'ma*.

**Exarthromatol'ogy.** (Ἐξάρθρωμα; λόγος, a discourse.) The doctrine of dislocations.

**Exarthro'sis.** (Ἐξάρθρωσις.) Same as *Exarthre'ma*.

**E. par'e'tica.** (Πάρητος, relaxed.) Dislocation and relaxation of the articular ligaments.

**Exarticulate.** (L. *ex*, without; *articulus*, a joint. F. *articulé*.) Applied to antennæ having no visible articulations.

Also, to remove a limb, or a part of a limb, at a joint.

**Exarticula'tio.** (L. *ex*, out of; *articulus*.) The removal of the joint ends of two adjoining bones. It is chiefly used by the German authors, and is synonymous with *Excision* and *Resection of joints*.

**Exarticulation.** (L. *ex*, out of; *articulus*, a joint.) An old term for a dislocation.

Also, latterly used to signify amputation at a joint.

**Exarysis.** (Ἐξάρυσις, a draining.) *Exhaustion*.

**Exasperate.** (L. *exaspero*, to make rough.) Furnished with short, thick, strong bristles or thorns.

**Exasperation.** (L. *exaspero*, to make fierce.) Same as *Exacerbation*.

**Exast'osy.** (Ἐξαστίς, the rough edge of torn linen.) Ferriand's term for the extension of an organ when it occurs during its development, as when during the growth of a petiole it becomes encasheathing or grows to stipules.

**Exatmoscopium.** (Ἐξ, out; ἀτμός, vapour; σκοπέω, to see.) The same as *Atmometer*.

**Exbibition.** (L. *ex*, out; *bibo*, to drink.) The giving up, or out, of liquid, in opposition to *Imbibition*.

**Excæcaria.** See *Excæcaria*.

**Excal'carate.** (L. *ex*, without; *calcar*, a spur.) Destitute of spurs.

**Excandescen'tia furibun'da.** (L. *excandescen'tia*, passionateness; from *excandescere*, to glow; *furibundus*, raging.) Plattner's term for the insanity of anger, the temporary aberration of intellect or loss of mental power which at times accompanies violent rage or passion.

**Excarna'tion.** (L. *ex*, out; *caro*, flesh.) The displaying of the injected blood-vessels of an anatomical preparation by removing the other structures by putrefaction or corrosion.

**Excastra'tio.** (L. *excastratus*, castrated.) Castration.

**Excathis'ma.** (Ἐξ, out; κάθισμα, a seat, or saddle.) Old term for a *Semicupium*.

**Excava'tio.** (L. *excavatio*, from *excavo*, to hollow out.) A hollowing out; a shallow cavity.

**E. Douglas'ii.** The same as *Douglas's pouch*.

**E. is'chio-recta'lis.** (Ἰσχίον, the hip; L. *rectum*, the straight gut. G. *Mittelfleischgrube*.) See *Ischio-rectal fossa*.

**E. rec'to-ischiad'ica.** (L. *rectum*, the straight gut; ἰσχίον, the hip.) The same as *Ischio-rectal fossa*.

**E. rec'to-uteri'na.** Same as *Douglas's pouch*.

**E. rec'to-uteri'na peritone'i.** The same as *Douglas's pouch*.

**E. rec'to-vagina'lis fas'ciæ pel'vis.** A depression between the rectum and the vagina, into which the fascia pelvis dips.

**E. rec'to-vesica'lis.** The same as *E. recto-vesiculis peritone'i*.

**E. rec'to-vesica'lis peritone'i.** The depression between the rectum and bladder in the male. It is bounded laterally by the plicæ recto-vesicales.

**E. vesico-uteri'na.** The same as *E. vesico-uterina peritone'i*.

**E. vesico-uteri'na peritone'i.** (L. *vesica*, the bladder; *uterus*, the womb; *peritoneum*.) A depression formed by a fold of the peritoneum existing between the bladder and the uterus in the female.

**Excava'tion.** (F. *excavation*; from L. *excavatio*; from *ex*, out; *cavo*, to make hollow.) A hollowing out; the state of being hollowed out.

**Excavator.** (L. *excavo*, to hollow out.) He who, or that which, hollows out.

**E., den'tal.** (L. *dens*, a tooth.) An instrument for removing the carious parts, and so preparing cavities in a tooth for filling. It consists of a steel rod set in a handle with a bent and cutting extremity; the shape and size of the instrument varies.

**Excava'tus.** (L. *excavo*, to hollow out.) Applied in the nomenclature of insects to a depression the arc of which is not the segment of a circle, as the prothorax of *Sinodendrum cylindricum*.

**Excen'tral.** Same as *Excentric*.

**Excent'ric.** (Ἐξ, out; κέντρον, the centre.) Away from, or deviating from, or out of, the centre. Same as *Eccentric*.

**Excentrostom'atous.** (Ἐξ, without; κέντρον, the centre; στόμα, the mouth. F. *excentrostome*.) Applied to the condition of those *Echinodermata*, in which the mouth, in place of being in the centre of the body, approaches more or less to the anterior extremity.

**Excerebrate.** (L. *ex*; *cerebrum*.) Delirious, out of his mind.

**Excerebration.** (L. *ex*, out; *cerebrum*, the brain.) The removing of the contents of the skull, the brain, and the other structures.

Also, a term which has been used to designate abnormal *Cerebration*.

**Excernent.** (L. *excerno*, to separate by sifting.) Same as *Excreting*.

**Excernic'ulum.** (L. *excerno*, to sift.) A sieve.

Formerly applied to certain excretory organs, as the anus, uterus, and penis. The supra-renal capsules were also so called by Petruccius, *Spicil. Anat.* p. 72.

**Excess'.** (Old F. *excez*; from *excessus*, a standing out, part. of *excedo*, to go beyond. F. *excès*; G. *Übermass*.) Superfluity; redundancy.

In Medicine, incontinence; intemperance in food or drink or sexual intercourse.

**Excestrense.** Old term for a certain preparation made from many vegetable ingredients macerated in oil and boiled; formerly in the London Pharmacopoeia.

**Exchange.** (Old F. *eschange*; from *es*, for L. *ex*, out; *changer*, to change, from L. *cambio*, to barter.) To change for something else, the act of giving up a thing for another.

**Es, theory of.** Prevost's hypothesis in reference to radiant heat, which is that all bodies at all temperatures give out heat in all directions; when two bodies of uneven temperatures are near each other, the hotter one gives out more and the cooler one gives out fewer heat rays than it receives until they are of the same temperature; then they still continue to give out heat rays, but each receives as much as it gives out.

**Excident'ia.** (L. *excido*, to fall down.) Same as *Prolapsus*.

**Excipient.** (L. *ex*, of, or out of; *capio*, to take.) In Pharmacy, the substance used for the purpose of mingling with medicines, so as to give consistence, or to hide their nauseous qualities in its more pleasant taste, as the confections and conserves. Nearly synonymous with vehicle, but applicable more particularly to solid or thickly fluid substances.

**Exciple.** Same as *Excipulum*.

**Excipuliform.** (L. *excipulum*, a vessel; *forma*, likeness.) Cup-shaped; like to an *Excipulum*.

**Excipulum.** (L. *excipulum*, a cup; from *excipio*, to receive.) Old name, used by Paré, *Chirurg.* xxvi, 5 and 9, for a receiver.

In Botany, the part of the apothecium of lichens which is most external, enclosing the thalamium.

**Excis'io.** Same as *Excision*.

**E. ovarii.** A synonym of *Ovariectomy*.

**Excision.** (L. *excisus*, part. of *excido*, to cut out. F. *excision*; I. *excisione*; G. *Ausschneiden*, *Ausschliessung*, *Ausschneiden*, *Ab schneiden*.) The cutting off or out any part from the body.

**E. of ankle-joint.** (F. *résection tibio-tarsienne*; G. *Resection des Fussgelenks*.) Is performed by means of a short incision curving round the internal malleolus, and a longer external incision running from two inches above the ankle-joint to the base of the fifth metatarsal bone. No tendons should be divided in the operation.

**E. of calcaneum.** May be performed by making an incision from the inner edge of the tendo Achillis along the outer side of the foot to the calcaneo-cuboid joint. A second incision should be drawn vertically across the foot, commencing near the anterior end of the former incision, and terminating at the outer border of the inner concave surface of the os calcis. The flap thus formed is reflected, and the calcaneum is removed through it.

**E. of elbow.** (F. *résection du coude*; G. *Ellbogengelenkresection*.) Langenbeck's operation. A single longitudinal incision is made along the back of the joint, extending upwards on the humerus for three or four inches, and downwards along the ridge of the ulna. The joint is opened above the olecranon; the internal and external condyles are cleaned, taking care not to divide the ulnar nerve. The articular surfaces of the

bones are separately sawn off, the ulna first, the humerus last.

**E. of fifth metacarpal bone.** May be performed in a similar manner to *E. of metacarpal bone of thumb*, the incision being carried along the ulnar border of the bone.

**E. of hip.** (L. *resectio coxae*. F. *résection de la hanche*; I. *resezione dell' anca*; G. *Resection des Hüftgelenks*.) A curved incision, five inches in length, is carried over the back of the hip-joint close behind the great trochanter. The muscles being divided the joint is opened and the head of the bone is sawn off, the leg being forcibly flexed and adducted.

**E. of knee.** (F. *résection du genou*; G. *Resection des Kniegelenks*.) A semilunar flap is made commencing opposite a condyle of the femur, carried over the tubercle of the tibia, and terminating at the opposite one. The flap is dissected up and the tendon of the quadriceps is divided, thus opening the joint. The exposed end of the femur is sawn off, and the upper portion of the tibia, with the patella attached to it, is removed in like manner, taking care not to injure the popliteal artery.

**E. of metacarpal bone of thumb.** Make an incision on the dorsal aspect of metacarpal bone, commencing midway between styloid process and radius and the carpo-metacarpal articulation, and extending along the palmar border of the extensor primi internodii up to or rather beyond the first phalanx. Dissect any of the soft parts from the shaft of the bone; disarticulate it after dividing the insertion of the extensor ossis metacarpi pollicis.

**E. of phalangeal joints.** May be effected by making a lateral incision on either side of the articulation parallel with the long axis.

**E. of phalanges of the finger.** Dissect the tendons from the bones and divide the ligaments whilst the joint is flexed, and saw off the articular ends.

**E. of shoulder.** Langenbeck's operation is performed by making an incision from the most prominent point of the acromion, extending downwards for four or five inches over the bipectoral groove, removing the biceps tendon from the groove in which it lies, dividing the muscles over the greater and lesser tuberosities, and sawing off the head of the humerus. The joint may also be excised by a semilunar incision made by transfixing the deltoid.

**E. of the tongue.** See *Tongue, excision of*.

**E. of wrist.** Lister's operation. Make an incision from the middle of the dorsal aspect of the radius, on a level with the styloid process, directed towards the inner side of the metacarpo-phalangeal articulation of the thumb, running parallel with the extensor secundi internodii pollicis; on reaching the radial border of the second metacarpal bone, it is carried longitudinally downwards for half the length of the bone, thereby avoiding the radial artery. Detach the soft parts at the radial side of the incision, dividing the tendons of the extensor carpi radialis longior and brevior at their insertions. Separate the trapezium and dissect up the tendons on the ulnar side of the incision. Enter the knife two inches above the end of the ulna on its subcutaneous margin, and carry it downwards between the tendons of the extensor and flexor carpi ulnaris as far as the middle of the fifth metacarpal bone on its palmar aspect.

## EXCISOR—EXCOCHLEATION.

Divide the insertion of the extensor carpi ulnaris and dissect it off from its groove in the ulna. Clear the ulna. Open the articulation of the pisiform bone, clip through the uniform process, divide the ligaments, and remove the carpus. Saw off the ends of the radius and ulna, and the extremities of the metacarpal bones. Dissect out the trapezium without cutting the flexor carpi radialis tendon. Remove the articular surface of the metacarpal bone of the thumb. Cut away the articular surface of the pisiform bone.

**E., subperiosteal.** (L. *sub*, under; *periosteum*.) An excision of a part of a bone, accomplished after separating the periosteum from the part to be removed, and then dividing the bone; by the retention of the periosteum reproduction of bone is facilitated, attachment of tendons to the new bone is made more secure, and chance of injury to surrounding parts is diminished; an objection to the plan is that the periosteum sometimes sloughs.

**Excisor.** (L. *excudo*, to cut out.) That which cuts out.

**E. prostaticæ.** (Prostate gland. F. *exciseur du prostate*; G. *Exciseur der Prostata-schwellung*.) An instrument consisting of a catheter with a chain like an éraseur, or with a concealed knife like a urethrotome, which has been used by Civi de and Mercier for the removal of the third lobe of the prostate.

**Excitability.** (F. *exciter*, to excite; from L. *excito*, to rouse up. F. *excitabilité*; I. *eccitabilità*; S. *eccitabilität*; G. *Reizbarkeit*.) The capability of being excited. The capacity which organised beings possess of being affected by certain agents termed stimuli, excitants, or exciting powers.

Also, a similar condition of their parts, such as nerves and muscles.

**E., cell.** The property of the living cell whereby it is enabled to pick up an excess of nutritive matter from the blood and assimilate it as protoplasm. Also called *Irritability*.

**Excitant.** (L. *excito*, to rouse up. F. *excitant*; I. *eccitante*; S. *eccitante*; G. *aufreizend, reizend*.) Raising up; exciting; provoking; stimulating the bodily or mental actions.

**E., artificial.** A mechanical, or physical, or chemical stimulant of the body, or of a part of it.

**E., physiological.** The nerve centre of the part excited, or the nervous force or influence supplied by it.

**Excitantia.** (Same etymon.) Medicines which excite the actions of the system. They are general, or acting on the whole system, as alcohol; or particular, acting only on certain parts, as diuretic and expectorant medicines.

**Excitation.** (L. *excito*, to excite. F. *excitation*; I. *eccitazione*; S. *eccitation*; G. *Erregung*.) The act of rousing, or inducing into active exercise, some power, or action. The same nearly as *Excitement*, but rather applied to the action of inorganic bodies, while this term is employed in reference to the emotions or influence of living bodies.

**E., electric.** See *Electric excitation*.

**Excitator.** (L. *excito*.) Same as *Excitor*.

**Excited.** (L. *excito*.) Roused.

**E. diseases.** A term for feigned diseases.

**Excitement.** (L. *excito*, to raise up, or

excite. F. *excitement*; G. *Reizung*.) Term for the state of being excited; the act of awakening excitability. See *Excitation*.

**Exciting.** (L. *excito*, to excite, or raise up. F. *excitant*; G. *aufregend, reizend*.) Applied to that which has the power of greatly increasing or altering the action of a part or organ.

**E. cause.** See *Cause, exciting*.

**Excito-calorical.** (L. *excito*; *color*, heat.) Having the power or property of exciting heat.

**E. centre.** A nerve-centre having the power of exciting heat; its existence is conjectural.

**Excito-motion.** (L. *excito*, to call forth; *motus*, motion.) Muscular motion excited by reflex action.

Also, applied to muscular motion excited by volition.

**Excito-motor.** (L. *excito*; *motus*.) Having the power of exciting motion.

**E. power.** The special faculty of the *E. system*.

**E. system.** Marshall Hall's term for that part of the nervous system, consisting of the afferent and efferent nerves with the grey matter of the spinal cord, which is concerned in the production of reflex action; by means of an impression on the periphery of an afferent or sensitive nerve, received in the grey centre of the spinal cord to which it passes, reflected along a corresponding efferent or motor nerve, and eventuating in muscular action.

**Excito-motors.** (L. *excito*; *motus*.) Those medicines which increase the reflex activity of the nervous and especially of the spinal centres, the most important of which is strychnia.

**Excito motory.** Same as *Excito-motor*.

**Excito-nutrient.** (L. *excito*; *nutritio*, to nourish.) Exciting nutrition. Applied to the reflex influence conveyed through the nervous system, whereby the processes of nutrition are modified.

**Excito secretory.** (L. *excito*; *secretus*, part. of *secreo*, to separate.) Exciting secretion. Applied to the reflex influence exerted through the central nervous system on the function of secretion, whereby the organs are stimulated to action.

**Excito-sensory.** (L. *excito*; *sensus*, sensation.) Laycock's term for combined involuntary sensations or ideas which are excited secondarily from without.

**Excitor.** (L. *excito*.) One who, or that which, excites.

A term applied to the terminals of electrodes.

**Exclusive.** (L. *exclusus*, part. of *excludo*, to shut out.) Shutting out, preventing entrance.

**E. method.** A method, according to Dr. Bigelow, of healing disease, which applies one remedy to all or to a majority of diseases. (Dunghison.)

**Exclusorium.** (L. *excludo*, to shut out.) Old name for a medicine for expelling the fætus, or promoting abortion.

**Excochleation.** (L. *ex*, out; *cochlear*, a spoon.) The removal of granulations or small mucous polypi, in cases of menorrhagia or leucorrhagia, from the mucous lining of the womb by means of a sharp-edged spoon used as a scraper, as suggested by Simon.

**Excrecaria.** (L. *ex*, out; *cæco*, to make blind.) A Genus of the Nat. Order *Euphorbiaceæ*.

**E. agallocha.** Linn. (*E. agalloche d'Amboine*.) Tiger's milk tree. Hab. India. Juice acrid and vesicant; applied to indolent ulcers. It is very irritating to the eyes.

**E. cameratia.** Willd. The *E. agallocha*.

**Excoriating.** Producing *Excoriation*.

**Excoriation.** (L. *ex*, from; *corium*, the skin. F. *excoriation*; I. *excoriazione*; S. *excoriacion*; G. *Hautabschürfung*, *Abhaütung*.) Abrasion, or removal, partial or complete, of the superficial surface of the skin.

**E. chancreous.** Same as *Chancre*, soft.

**Excoriatura.** Same as *Excoriation*.

**Excortication.** (L. *ex*, out; *cortex*, bark.) The stripping off, or falling off, of the bark.

**Excrea'tion.** Same as *Excretion*.

**Excrement.** (L. *excrementum*, from *ex-cerno*, to void by stool. F. *excrément*; I. *escremento*; G. *Auswurf*, *Ausgeleerte*.) That which is cast out of the animal body by any of the natural emunctories, especially applied to the alvine feces, or the waste matter discharged from the bowels. See also *Excreta* and *Fæces*.

**Excrementitial.** (L. *excrementum*.) Similar to, or consisting of, *Excrement*.

**E. humours.** Those humours or secretions which do not serve a nutritive purpose, but are expelled from the body.

**Excrementitious.** (L. *excrementum*, excrement, or alvine feces. F. *excrémentieux*, *excrémentitiel*.) Of, or belonging to, or resembling, excrement.

**Excrement-to-recrementitial fluids.** (L. *excrementum*; *re*, back again; *cerno*, to separate.) Those secretions of the animal body which are in part absorbed and in part excreted.

**Excre'scence.** (Old F. *exerescence*; from L. *exerescens*, from *exerescere*, to grow out. F. *excroissance*; I. *escrecenza*; S. *escrencia*; G. *Auswuchs*.) Any preternatural formation or outgrowth on any part of the body.

In Botany, a wart or collection of nodules on a stem.

Also, the same as Good's *Ephyma*.

**E., genital.** (L. *genitalis*, belonging to birth.) Good's term for a vaginal or a uterine polypus.

**Excre'scent.** (L. *exerescens*.) A term applied to a peduncle or a pedicel when it continues to increase in size or length during the ripening of the fruit which it supports.

**Exerescencia.** An *Excre'scence*.

Also, a synonym of *Exacerbation*.

**E. carnosæ.** (L. *carnosus*, fleshy.) A synonym of *Sarcoma*.

**E. fungosæ.** Same as *Fungosity*.

**E. gingivæ.** (L. *gingiva*, a gum.) A synonym of *Eupitis*.

**E. vesicæ urinariæ carnosæ.** (L. *vesica*, a bladder; *urinarius*, urinary; *carnosus*, fleshy.) A synonym of *Cysthypersarcomosis*.

**Excre'ta.** (L. *excretus*, part. of *excerno*, to sift out.) Halle's term for the things sifted out or excreted from the body, feces, urine, bile; to which may be added the exhalation from the lungs. But the term is often now restricted to that which passes from the bowels. It has been calculated that 311 grammes of water are eliminated by the lungs, 660 by the skin, 128 by the intestines, and 1766 by the kidneys; 953

grammes of carbonic acid by the lungs and 6 by the skin; and .04 of nitrogen by the lungs, .7 by the skin, 3 by the intestines, and 15 grammes by the kidneys.

**E. animalia.** Animal excretions, especially those animal substances, such as musk and castor, which are used in medicine.

**E., quantity of.** The amount of fecal and urinary excreta varies in different persons, under different foods, and at different ages. An adult male European probably disposes of 4 oz. by the bowels and 50 fl. oz. by the bladder daily; women and children pass a less amount. Letheby calculates the mean per head in Great Britain as 2.784 oz. of feces, and 31.851 oz. of urine; Frankland estimates it as 3 oz. of feces and 40 fl. oz. of urine; Wolf and Lehmann compute the amount for an adult as feces 150 grammes, urine 1500 grammes, daily.

**Excretin.** (L. *excretus*.)  $C_{75}H_{156}O_2S$ . A crystallisable, silky-looking substance obtained from human feces by Marcet, but not found in those of the dog or other animals. It is insoluble in water and almost so in cold alcohol, soluble in boiling alcohol and in ether, has an alkaline reaction, and is not decomposed by dilute mineral acids. According to Hinterberger it is a mixture.

Also,  $C_{20}H_{36}O$ , a crystallisable substance found in human feces by Hinterberger; it is by some thought to be impure cholesterol.

**Excretio.** Same as *Excretion*. And also, as *Excrement*.

**E. alvina.** (L. *alvinus*, pertaining to the belly.) The feces. Also the act of defecation.

**E. fæcum alvinarum.** (L. *fæx*, refuse; *alvinus*.) The act of defecation.

**E. urinæ involuntaris.** (L. *urina*, urine; *involuntaris*, unwilling.) Incontinence of urine.

**Excretion.** (L. *excerno*, to sift. F. *excréter*; G. *Absonderung*.) The separation of those fluids from the blood which are supposed to be useless, as the urine and sweat.

Also, a term for the excreted substances themselves.

**Excretolic acid.** An oily substance, of feculent odour, probably a mixture of fatty acids, obtained by Marcet when an alcoholic extract of feces was precipitated by means of lime; it melts at 25° C.—26° C. (77° F.—78.8° F.), burns with a bright flame, is insoluble in water, soluble in ether and in hot alcohol; its solution gives an acid reaction.

**Excretory.** (L. *excerno*, to sift. F. *excréter*; G. *abführend*, *absondernd*.) Having the power of separating and throwing off what is superfluous; belonging to the function or process of excretion.

**E. duct.** A small vessel that conducts the secretion out of a gland, either to the surface as the lachrymal duct, or into a cavity prepared from it, as the bile-duct.

**E. organ.** An organ or structure which produces an *Excretion*.

**Excretum.** (L. *excretus*, part. of *excerno*, to sift.) *Excrement*.

**Excurrent.** (L. *ex*, out from; *currere*, to run.) Projecting, or running, beyond the edge of a thing.

**E. stem.** A stem of a tree which is prolonged straight upwards by the recurrent growth of a terminal bud, with branches disposed regularly around it, as in the firs.

**Excursion.** (L. *ex*, out; *curvatio*, a bending.) A bending outwards.

**E., spinal.** Posterior curvatura of the spine.

**E., spinal, posterior.** Same as *E., spinal*.

**Excursed.** (L. *ex*, out; *curro*, to bend.) Term applied to the antennae of insects when they curve outwards.

**Excusio ventriculi.** Same as *Excusio ventriculi*.

**Excutia.** (L. *excutio*, to shake off.) A brush.

**E. ventriculi.** (L. *ventriculus*, the stomach. F. *brosse de l'estomac*; G. *Magenbürste*.) A brush for the stomach. A name for an instrument, formed of a ferule of iron or brass wire, with hog's bristles at its ends like a brush, described by Heister. Formerly used to extract foreign bodies from the oesophagus. It was even attempted by some to cleanse away vicious matters by sweeping the inside of the stomach with this brush, hence its name. (Quincy.)

**Excystis.** See *Eccystis*.

**Exdermoptosis.** (Eg; out; *derma*, the skin; *πτωσις*, a falling.) Ilugnier's term for hypertrophy of the subcutaneous sebaceous glands, which sometimes consists only of a hard spot, and sometimes forms a small, more or less spherical tumour; the enlarged gland occupies the centre of the lump, and generally is filled with curdy secretion containing fat globules, and tessellated epithelium. The genital organs are the chief parts affected.

**Exchebronchos.** (Eg; *ex*, to stand out or forward; *βοήγχο*, the throat.) Having a prominent throat. Formerly applied, by Hippocrates, to one so affected.

**Exchebronchosis.** Same as *Exchebronchosis*.

**Exchegluti.** (Eg; *ex*, to stand out or forward; *γλουτός*, the rump.) Having large buttocks.

**Exedens.** (L. *exedens*, part. of *exedo*, to eat up. G. *fressend*, *wegfressend*.) Eating; consuming; wasting. Applied to diseases in which there is ulceration, as *lupus exedens*.

**E., herpes.** See *Herpes exedens*.

**E., lupus.** See *Lupus exedens*.

**Exedent.** (L. *exedens*.) Eating up; consuming; ulcerating.

**E. lupus.** See *Lupus exedens*.

**Exelcosis.** (Eg; out of; *ελκος*, an ulcer.) Old term, the same as *Exulceration*.

**Exelcysmus.** (Eg; *ex*, out of; *ελκυσμός*, a drawing out.) The elevation of a depressed cranial bone.

**Exembryonariae.** (Eg; without; *εμβρυον*, an embryo.) Applied to the *Cryptogamia*, which are produced by sporules, or simple bodies without radicle, gemmule, or cotyledon.

**Exembryonate.** (Eg; *εμβρυον*.) Having no embryo.

**Exencephalon.** (Eg; out; *εγκεφαλος*, the brain.) Hernia of the brain, protrusion of the brain from the cranial cavity.

**Exencephalosis.** (Eg; out of; *εγκεφαλος*, the brain. F. *exencephalose*; G. *Enthirnung*.) The removal of the brain from the cranium.

**Exencephalus.** (Eg; *εγκεφαλος*.) I. G. St. Hilaire's term for a monstrosity in which the brain lies wholly or chiefly outside the cranial cavity at the back of a very flattened head.

**Exendospermae.** (Eg; *ενδον*, within; *σπέρμα*, a seed.) One of Richard's divisions

of Monocotyledons, being those of which the seeds have no endosperm.

**Exenteration.** (Eg; out; *εντερων*, an intestine.) The removal of the intestines, especially their removal from the fetus in order to facilitate delivery.

In Midwifery, the term is sometimes used to include the removal of the thoracic viscera also.

**Exenteric.** (Eg; without; *εντερων*, an intestine. F. *exenterique*.) Situated outside the intestine.

**Exenterisis.** Same as *Exenterismus*.

**Exenterismus.** (Eg; *εντερων*.) The operation of disembowelling. The same as *Exenteration*.

**Exenteritis.** (Eg; *εντερων*.) Inflammation of the outer or peritoneal coat of the intestines.

**Exera'ma.** (Eg; *εραμα*, to evacuate.) Old name (G. *Exera'ma*), used by Hippocrates, de Morb. iv, xxiii, 6, for a vomit, or the matter rejected by vomiting.

**Exerasis.** (Eg; *ερασις*, a vomiting; from *εραω*.) An emptying, whether by vomiting, expectorating, defecating, or urinating.

**Exercise.** (Old F. *exercice*; from L. *exerceo*, to drive on, to keep busy. I. *esercizio*; S. *esercizio*; G. *Übung*.) The using of the muscles in subordination to the will; employment of the body or a part of it, or of an organ.

**E., active.** (L. *activus*, active.) The forms of exercise in which the muscles are brought into action by the effort of the will to move a limb in a certain fashion, as in walking, running, swimming.

**E. bone.** (G. *Exercierknochen*.) Same as *Drill bone*.

**E., cumulative.** (L. *cumulo*, to heap together.) A term applied by Reilly to a scientific application of the laws of muscular contraction to physical culture. It is the basis of the "health lift," or "lifting cure," of Butler.

**E., passive.** The form of exercise in which the patient is borne by some one or something, as in riding or driving.

Also, an exercise or movement of a limb by some one else not one's self. See *Massage* and *Shampooing*.

**Exercitatio.** (L. *exercito*, to exercise often.) Old term for exercise, both of body and mind.

**Exerrho'sis.** (Eg; *ρῖον*, to flow.) The discharge which takes place by insensible perspiration.

**Exfœtation.** (L. *ex*, out; *fœtus*, the child in the womb.) Same as *Pregnancy, extra-uterine*.

**Exfoliation.** (L. *exfoliatus*, part. of *exfolio*, to strip of leaves. F. *exfoliation*; I. *esfoliazione*; S. *exfoliation*; G. *Abblatterung*.) The separation of a dead piece of bone from the living, in more or less leaf-like plates.

Also, the shedding of any dead structure in a sensible mass.

**E., insensible.** (L. *insensibilis*, that cannot be felt.) An old term for exfoliation of bone, in which the necrosed part is thrown off in very minute particles.

**E. of bone.** The separation of a piece of dead bone from the living as a sequestrum. It is effected by an osteitis at the place of junction whereby the Haversian canals and the medullary spaces enlarge, the earthy matter of the bone becomes disintegrated, and granulation tissue is

developed between the dead and the living structures.

**E., sensible.** (L. *sensibilis*, that which can be perceived by the senses.) An old term for exfoliation of bone in large fragments.

**Exfoliativa.** (L. *exfolio*.) An old term to include such remedies as alcohol, turpentine, balsam of peru, tincture of myrrh, and such like, which were supposed to facilitate the exfoliation of bone.

**Exfoliative.** (L. *exfolio*.) Capable of causing, or favourable to, exfoliation.

**E. trepan.** See *Exfoliativum trepanum*.

**Exfoliativum trepanum.** (L. *exfolio*.) The same as the *Desquamatorium trepanum*, being a raspatory, or instrument for scraping exfoliating portions of bone.

**Exhalant.** (F. *exhaler*; from L. *exhalo*, to breathe out. F. *exhalant*; I. *esalante*; G. *ausdünstend*.) Giving off fumes; breathing forth.

**E. ves'sels.** Applied by Bichat to certain vessels, constituting a distinct system, which proceed from the arterial system and are distributed over all the tissues of the body, exercising the function of exhalation, in opposition to the absorbents.

**E. ves'sels, external.** Bichat's term for the exhalants which he supposed to open on the mucous and cuticular surfaces, and to pour out the perspiration from them.

**E. ves'sels, internal.** Bichat's term for the exhalants which he supposed to open into the areolar and medullary tissues, and into closed serous and synovial sacs.

**E. ves'sels, nutritive.** (L. *nutrio*, to nourish.) Bichat's term for the exhalants which he supposed to exist in every organ, and to pour out the fluids therein contained.

**Exhalatio.** Same as *Exhalation*.

Also, a term for *Evaporation*.

**Exhalation.** (F. *exhaler*; from L. *exhalo*, to breathe out. F. *exhalation*; I. *esalazione*; S. *exhalation*; G. *Ausdünstung*, *Ausdunsten*, *Aushauchen*.) A vapour, fume, or steam.

Term for a subtle spirit or air, proceeding from the surfaces of organs and parts of the body.

Evaporation, or the vapour raised from the earth or water by the sun's heat, or subterraneous fire.

**E.s from the dead.** See *Putrefaction*, *gases of*.

**E., hæmorrhage by.** See *Hæmorrhage by exhalation*.

**E., pulmonary.** (L. *pulmo*, the lung.) The aqueous vapour contained in the air of expiration.

**Exhaust-fans.** An apparatus by means of which vanes or fans, made to revolve rapidly, create a current of air, which drives foul air out of mines and ensures ventilation.

**Exhaustibility.** (L. *exhaustus*.) Capable of being exhausted.

Benedict's term for the condition where the electro-muscular contractility diminishes greatly after a short application.

**Exhausting.** (L. *exhaustus*, part. of *exhaustio*, to draw out.) Drawing out.

**E. syringe.** See *Syringe, exhausting*.

**Exhaustion.** (L. *exhaustus*, part. of *exhaustio*, to draw out. F. *épuisement*; I. *esautione*; G. *Erschöpfung*, *Entkräftung*.) The act

of drawing out; the act of emptying of contents.

In Medicine, great and extreme loss of strength; it may be general, as in collapse from shock; or local, as in writer's cramp.

In Pharmacy, the term is applied to any process, such as percolation, whereby the active constituents of a drug are removed in solution, leaving it exhausted.

**E., cerebral.** See *Cerebral exhaustion*.

**E., solar.** (L. *sol*, the sun.) A term for *Sunstroke*.

**E., spinal.** See *Spinal exhaustion*.

**Exhibit.** (L. *exhibitus*, part. of *exhibeo*, to present, or give.) To administer, or give, to a patient some medicine, or medicinal substance.

**Exhilarant.** (L. *exhilaratus*, part. of *exhilaro*, to cheer greatly.) That which enlivens, or makes cheerful.

**E. gas.** Nitrous oxide or laughing gas.

**Exhumation.** (L. *ex*, out of; *humus*, the ground. F. *exhumation*; I. *esumazione*; S. *exhumacion*; G. *Wiederausgrabung*.) The digging up of that which has been buried, as a dead body. Exhumation may be performed for sanitary, medico-legal, or other reasons, or may occur by accident. Exhumation conducted many weeks after interment of the body have enabled the observer to determine the presence or absence of a hymen, of a uterus, of peritonitis and injury to the uterus, of recent or ancient fractures, of wounds, cicatrices, tattoo marks, and of the presence of certain poisons, especially of arsenic, which acts as a preservative against putrefaction. The age and sex can usually be ascertained, as well as whether the bones are human or not. Attention should be paid to the state of the coffin, and some of the earth around it should be preserved for analysis in cases of suspected poisoning. The body should be identified in the surgeon's presence, if possible, by a relative. A charcoal respirator may be worn by the exhumers with advantage.

The stomach and duodenum should be removed after tying above and below; these and the liver and the spleen should be placed in clean glass or porcelain vessels, which should be closely secured, and only the vapour of chloroform should be used as a preservative. If poisoning be suspected, no disinfectant should be used, but under other circumstances the features may be somewhat restored by immersion of the body in a saturated alcoholic solution of alum and nitre; or, as B. W. Richardson advises, a liquid made by dissolving a drachm of iodine in a mixture of 10 oz. of methylated ether, sp. gr. .720, and 1 oz. of absolute alcohol, to which 4 drachms of sulphuric acid have been slowly added, may be poured over the body, when decomposition will take place, the alkaline products of decomposition will be fixed by the sulphuric acid, and the spirit will render the tissues firmer.

**Exhymenine.** (EG, out; *hymēn*, a membrane.) Richard's name for the outer membrane of the wall of the pollen grain; it is thick, resistant, and gives the shape to the pollen.

**Exidia.** A Genus of the Suborder *Tremelini*, Order *Basidiomycetes*.

**E. auriculæ-judæ**, Fr. The *Hirneola auriculae judæ*.

**Exiguous.** (L. *exiguus*, scanty.) Small; mean.

**Exile tree.** The *Thevetia nereifolia*.

**Exilis.** (L. *exilis*, thin.) Lank, meagre.  
**Eximious.** (L. *eximius*, excepted, distinguished.) Remarkable in size or in beauty.  
**Exinanitio.** Same as *Exinanition*.  
**E. virium.** (L. *vis*, force.) Extreme exhaustion of the bodily powers.  
**Exinanition.** (L. *exinanitus*, part. of *exinere*, to make quite empty. G. *Ausleerung*.) Extreme exhaustion.  
 Also, a thorough and complete emptying.  
**Exindusiate.** (L. *ex*, out; *indusium*.) Having no *Indusium*.  
**Exine.** (EG, out.) Fritzsche's name for the *Exhymentine*, or outer layer of a pollen grain.  
**Exinguinal.** (L. *ex*, out; *inguen*, the groin.) The second segment or trochanter of the limbs of the Arachnida.  
**Exintine.** (L. *ex*, out; *intus*, within.) The membrane of the pollen grain which lies between the *Extine* and the *Intine*.  
**Exipotic.** (EG, *ἔπιωω*, to press out.) Having power to press out. Formerly applied to medicines which were esteemed digestive, or detergent.  
**Exiris.** (EG, out; *iris*.) A synonym of *Iruloptosis*.  
**Exischios.** (EG, out of; *ischion*, the hip-joint.) Old term for the displacement of the head of the femur, so as to produce a prominence of the hip.  
 Also, a prominent hip from any cause.  
**Exischium.** (EG, out; *ischion*.) Prominence of the hip.  
**Exischius.** Same as *Exischios*.  
**Exit.** (L. *exit*, he goes out; from *eo*, to go.) A departure, a going out.  
**Exitial.** (L. *exitialis*, deadly.) Destructive to life.  
**Exitious.** Same as *Exitial*.  
**Exitura.** (L. *exeo*, to go out.) Old name for any abscess or apostema from which a sanious matter flows out. (Ruland.)  
**Exitus.** (L. *exitus*, a departure; from *exeo*.) Same as *Exit*.  
 Also, the termination of a disease, especially when well marked.  
**E. pelvis.** The outlet of the pelvis.  
**E. vaginae.** (G. *Scheidenmündung*.) The external opening of the vagina.  
**Exo.** (EG, *ἔξω*, outward.) A prefix signifying outward, or on the outside.  
**Exoarteritis.** (EG, *ἔξω*, without, outside; *arteritis*.) Inflammation of the external coat of an artery. Same as *Exarteritis*.  
**Exocardia.** (EG, *ἔξω*, without, outside; *καρδία*, the heart.) Same as *Ectopia cordis*.  
**Exocardiac.** Same as *Exocardial*.  
**Exocardial.** (EG, *ἔξω*, without; *καρδία*, the heart.) Without, or external to, the heart.  
**Exocardines.** (L. *ex*, out; *cardo*, a hinge.) A subclass of the Class *Lamellibranchiata*, being Molluscs with a non-reticulated shell, umbones marginal, ligament external, and valve-opening hinge-like.  
**Exocarditis.** (EG, *ἔξω*; *καρδία*.) Inflammation of the pericardial covering of the heart. Same as *Pericarditis, visceral*.  
**Exocarp.** (EG, *ἔξω*; *καρπός*, fruit.) The external layer of the pericarp. Same as *Epicarp*.  
**Exoccipital.** (EG, *ἔξω*, without, or external; *occipital bone*. F. *exoccipital*.) Term proposed by Professor Owen for the lateral part of the occipital bone. It constitutes the condylar

part of the occipital bone, forms the lateral boundary of the foramen magnum, and is united behind to the basilar part of the occipital bone, or basioccipital, and in front to the tubular part of the same bone, or supraoccipital. It arises from one osseous nucleus, which in the human foetus makes its appearance about the seventh or eighth week, and becomes united with the supraoccipital from the second to the fourth year of life, and to the basioccipital from the third to the eighth year. In all animals the exoccipital transmits the eighth cranial nerve, and the ninth when it exists.

**Exochas.** (EG, *ἔξω*, to project.) Old name for a pile, or condyloma, or excrescence about the anus. (Castellus.)

**Exoché.** (EG, *ἔξω*, a standing out; from *ἔξωω*.) A prominence or projection.  
 Also, the same as *Exochas*.

**Exochorion.** (EG, *ἔξω*; *χόριον*, the membrane that encloses the foetus.) Burdach's term for the outer of the two layers of which he believed the chorion to be composed.

**Exochorrhypia.** (EG, *ἔξω*, standing out; *rhypia*.) Term for prominent mussel-shell-shaped *Rupia* or *Rupia prominens*.

**Exocista.** See *Exocystis*.

**Exocolitis.** (EG, *ἔξω*; *κόλον*, the colon.) Inflammation of the peritoneal coat of the colon.

**Exocorium.** (EG, *ἔξω*; L. *corium*, the skin.) The external narrow border of the hemelytron of some Hemiptera.

**Exoculation.** (L. *ex*, without; *oculus*, the eye.) Old term for a total ablation or extirpation of the eye.

Also, the privation of sight.

**Exocystē.** Same as *Exocystis*.

**E. Noëlia'na.** (Noel, its describer.) Protrusion of the lining membrane of the fundus of the bladder.

**E. Solingenia'na.** (Solingen, its describer.) Protrusion of the lining membrane of the neck of the bladder.

**Exocystis.** (EG, *ἔξω*, without; *κύστις*, the bladder. F. *exocyste*; G. *Blasenwurzfall*.) Old term for a prolapsus of the internal membrane of the bladder. (Quincy.)

**Exoderm.** (EG, *ἔξω*, without; *δέρμα*, the skin.) The external crust of the body of an insect.

Also, the same as *Ectoderm*.

**Exodic.** (EG, *ἔξω*, out of; *ὁδός*, a way.) Proceeding out of or from the spinal marrow. A term proposed by Dr. M. Hall as preferable to that of *Reflex motor*, in contradistinction to *Eisodic*.

**Exodonto'sis.** (EG, *ἔξω*, outside; *ὀδούς*, a tooth.) An outgrowth from a tooth.

**Exoedēsis.** (EG, *ἔξω*; *οἰδήσις*, to swell. F. *ex-œdèse*; G. *Ausschwellung*.) A swelling or tumour; intumescence.

**Exemum.** (EG, *ἔξω*, without; *οὖμα*, to issue. F. *exame*.) Name for the two small bundles of hair which seem sometimes to form a verticillum. (Mayne.)

**Exoenteritis.** (EG, *ἔξω*, without; *ἑντερων*, an intestine.) Inflammation of the peritoneal coat of an intestine.

**Exogastritis.** (EG, *ἔξω*; *γαστήρ*, the stomach.) Inflammation of the outer coat of the stomach.

**Exogen.** (EG, *ἔξω*, outside; *γεννάω*, to produce. F. *exogene*.) A plant whose stem grows by deposit on its outside.

**Exog'enæ.** (Έξω; γεννάω.) De Candolle's term for the class of plants in which the stem grows by exogenous formation, the veins are netted, the fructification grows on a quinary or a quaternary type, the embryo is dicotyledonous, and the germination is exorhizal.

**Exogenetic.** (Έξω; γεννάω.) Arising from without.

**E. diseas'es.** Diseases which are caused by influences external to the body.

**Exog'enous.** (Έξω; γεννάω, to produce. F. *exogène*; I. *esogeno*; G. *aussen erzeugt*.) Growing from without; or by additions from without.

In Biology, applied to processes of bone which shoot out as continuations of, or outgrowths from, preceding elements.

In Botany, applied to stems in which the new matter, whereby they increase in diameter, is added at the external surface.

Also, the same as *Exogenetic*.

**E. stem.** See *Stem, exogenous*.

**Ex'ogens.** See *Exogenie*.

**Exogonium.** (Έξω; γονία, a corner.) A Genus of the Nat. Order *Convolvulaceæ*.

**E. officina'le.** (L. *officina*, a shop.) The *E. purga*.

**E. pur'ga.** Benth. (L. *purgo*, to purge.) Hab. Mexico. Grows in India. Supplies jalap root. See *Jalap*.

**Exogonyan'con.** (Έξω, outside; γόνυ, the knee; ἄγκων, the elbow.) Term for outward curvature of the knees.

**Exog'yncus.** (Έξω, without; γυνή, a female. F. *exogyne*.) Having the style projecting prominently out of the flower.

**Exol'cē.** (Έξέλκω, to drag out.) A term for extraction.

**Exolcys'mus.** See *Ereleysmus*.

**Exol'ution.** (L. *exolutio*, a release; from *exsolvo*, to unloose.) A term for fainting.

**Exomē'tra.** (Έξω, out of; μήτρα, the womb. F. *exomètre*.) Inversion of the womb; also, prolapsus of the womb.

**Exometrit'is.** (Έξω; μήτρα.) Inflammation of the peritoneal surface of the womb.

**Exomol'osis.** (Έξομολοσις, from *ἐξομολοῖν*, to make quite like.) A term for *Assimilation*.

**Exom'phaloccele.** (Έξόμφαλος, with prominent navel; κύλη, a tumour.) An umbilical hernia.

**Exom'phalos.** (Έξ, out; ὄμφαλος, the navel. F. *exomphale*; I. *esofalo*; S. *exofalo*; G. *Nabelbruch*.) A hernia occurring at the umbilicus.

**Exom'phalus.** Same as *Exomphalos*.

**Exonco'ma.** (Έξόγκωμα, anything raised or swollen.) A prominent tumour; a prominence of the spine from dislocation.

**Exonco'sis.** (Έξόγκωσις, a swelling.) The production of a swelling.

**E. ling'uae.** (L. *lingua*, a tongue.) Swelling of the tongue.

**Exoneirog'mos.** (Έξονειρωγμός, the emission of semen in sleep.) Old term, used by Gorræus, for nocturnal pollution.

**Exoneirog'mus.** (Έξονειρωγμός.) Same as *Exoneirogmos*.

**Exoneiro'sis.** Same as *Exoneirogmos*.

**Exoneurysm.** (Έξω, without; νεύρον, a nerve.) A synonym of *Animal magnetism*.

**Exopath'ic.** (Έξω, without; πάθος, suffering.) A term applied to those causes of disease which originate outside of the body.

**Exopha'cin.** (Έξω; φακός, a lentil-shaped thing.) Frémy's name for the outer portion of the crystalline lens of mammals.

**Exophthalmia.** (Έξ, out; ὀφθαλμός, the eye. F. *exophthalmie*; I. *esofthalmia*; S. *exofthalmia*; G. *Augenvorfall*, *Augapfelvorfall*.) A swelling or protrusion of the eyeball, so that the eyelids cannot cover it, caused by inflammation, a collection of pus, or a congestion of blood.

Beer restricts the term to those cases of protrusion in which the eye is inflamed. See *Exophthalmus*.

Also, the same as *Goitre, exophthalmic*.

**Exophthalmic.** (Έξ; ὀφθαλμός.) Relating to *Exophthalmia*.

**E. bron'chocele.** Same as *Graves's disease*.

**E. goi'tre.** See *Graves's disease*.

**Exophthalmi'tis.** (Έξ; ὀφθαλμός.) A term formerly applied to cases of protrusion of the eyeball from inflammation of the eye.

**Exophthalmomē'ter.** (Έξ; ὀφθαλμός; μέτρον, a measure.) An instrument by means of which the presence and degree of any protrusion of one eye beyond the plane of the other can be determined. The apex of the cornea is situated from 10—18 mm. beyond the plane of the external margin of the orbit, and Cohn's first instrument was so arranged that the prominence of the eye could be read off by a sliding scale placed on the temple, but this was found, owing to the frequent asymmetry of the two sides of the head, to be a not very sure guide. Subsequently he applied a bar to the forehead and measured the distance from the front of the cornea of a vertical piece which could be shifted from one to the other side along a bar. Cohn's numeration was that when the vertex of the cornea was on the same plane as the supra-orbital ridge, the protrusion was nil, P = 0; if the plane of the cornea was in front of the brow, P = + Mm.; if behind it, P = - Mm. The extremes in health were found to be P = - 10 Mm. to P = + 12 Mm.

**Exophthal'mos.** (Έξ; ὀφθαλμός.) See *Exophthalmus*.

**Exophthal'mus.** (Έξόφθαλμος, with prominent eyes; from *ἐξ*; ὀφθαλμός.) One who has prominent eyes.

Also, Beer's term for a protruded eye which is in its natural state. The causes of protrusion of the eye may be congenital, or due to disease of the eye itself, or to disease within the orbit, or to disease external to the orbit. If congenital, it may either be real or apparent, as in cases of shortening of the levator palpebrae and lids. If due to disease of the eye itself, it may result from inflammation of the globe; or from phlebotic ophthalmitis; or from hydrophthalmus; or from tumours in the eye, which may be serofulous, melanotic, gliomatous, osseous degeneration, or hydatid. If from disease within the orbit, it may be from inflammation of the cellular tissue, whether idiopathic or traumatic, from suppuration and abscess, from erysipelous and phlegmonous inflammation, from foreign bodies, from excessive development of fat, from tumours, which may be encysted or hydatid, osseous, chondromatous, sarcomatous, carcinomatous, myxomatous, cavernous, or from aneurysm and effusion of blood, or from venous congestion, or from paralysis of the ocular muscles, constituting ophthalmoplegia, or from spasms of the muscles of the eyeball or from tetanus. If from causes external to the orbit, it may be from nodes, hydrocephalus,

lus, fungus of dura mater, polypi in frontal cells, and diseases thereof, and tumours of the brain, from diseases of the antrum, from nasal polypi and tumours, from exostosis, and from contraction of the lids and eye slipping through, constituting hernia oculi. Lastly, it may result from wounds.

**E. cachecticus anæmicus.** (Καχεκτικός, consumptive; ἀ, without; αἷμα, blood.) The same as *Grave's disease*.

**E. paralyticus.** (Παρηλυτικός, affected with paralysis.) This form occurs in cases of complete paralysis of the muscles attached to the eye, in which case the elasticity of the fat of the orbit causes the eye to project.

**E., pulsating.** (L. *pulso*, to beat. G. *pulsirende Exophthalmus*.) This form of exophthalmus is recognised by the presence of an aneurysmal bruit heard on the application of a stethoscope to the eye and adjoining regions, and by pulsations which are sometimes perceptible both to the patient and to an observer. It may result from an arterial aneurysm or from dilatation of the veins. It is often a consequence of an injury.

**Exophyllous.** (Ἐξω, without; φύλλον, a leaf.) Applied to leaves which are not developed within a sheath.

**Exoplasm.** (Ἐξω, without; πλάσμα, anything formed.) The outermost layer of the cuticular protoplasm of some Protozoa.

**Exopodite.** (Ἐξω, without; ποῦς, a foot.) The outermost of the two processes appended to the basal process of the hinder limbs of some of the Crustacea.

**Exoptilate.** (Ἐξω, without; πτίλον, a wing. F. *exoptile*.) Applied by Lestiboudois to vegetables and embryos the gemmule of which is free, not contained in the cotyledonarian cavity.

**Exoptilus.** Term by Lestiboudois for the embryo of a plant which is not enclosed in a Coleoptilus.

**Exorbitismus.** (L. *ex*, out of; *orbit*.) Same as *Exophthalmia*.

**Exorescentia.** (L. *exorior*, to come out.) Old term for the exacerbation of a fever.

**Exormia.** (Ἐξορμῶ, to send forth.) A papule; sometimes applied to *Ecthyma*.

Also, Good's term for papulous skin; being small acuminated elevations of the cuticle, not containing a fluid, nor tending to suppuration; commonly terminating in scurf.

**E. lichen.** The skin disease *Lichen*.

**E. milium.** (L. *milium*, a millet seed.) Same as *Miliaria*.

**E. prurigo.** Same as *Prurigo*.

**E. strophulus.** Same as *Strophulus*.

**Exorrhizal.** Same as *Exorrhizous*.

**Exorrhizous.** (Ἐξω, without, or external; ρίζα, a root. F. *exorrhize*.) Term applied to plants in which the radicle is free and naked, not being enclosed in any sheath, and gives rise directly to the root by cell-multiplication at the apex.

**Exortus.** (L. *exortus*, part. of *exorior*, to spring up.) A springing up, a rising.

**E. unguium.** (L. *unguis*, a nail.) The whitish lunule at the base of a nail.

**Exosis.** (Ἐξωσις, a putting out.) A synonym of *Dislocation*.

**Exoskeletal.** Relating to the *Exoskeleton*.

**E. muscles.** Muscles which are connected with the exoskeleton or external skeleton;

they may consist of striped or of unstriped muscular fibres; of the former are the platysma myoides, the orbicularis oris, and other muscles of the face; of the latter are the arrectores pilorum.

**E. parts.** The parts of the *Eroskeleton*.

**Exoskeleton.** (Ἐξω; *skeleton*.) The integument of an animal and the parts connected with it. See also *Skeleton, external*.

**Exosmic.** (F. *exsmique*.) Of, or belonging to, *Exosmose*.

**Exosmometer.** (Ἐξ, out; ὠσμός, a thrusting.) An apparatus for measuring exosmosis; same as the *Endosmometer*.

**Exosmose.** (Ἐξ, out; ὠσμός, a thrusting.) The transudation of a fluid through the walls of its receptacle. See *Osmosis*.

**Exosmosis.** Same as *Exosmose*.

**Exosmotic.** Relating to *Exosmose*.

**Exosmus.** Same as *Exosis*.

**Exospore.** (Ἐξω, without; σπόρος, a spore.) The outer wall of a spore.

**Exosporous.** (Ἐξω; σπόρος.) Applied to a division of the Myxomycetes in which the spores occupy the outer surface of the sporangium.

**Exossatio.** (L. *ex*, out; *os*, a bone.) A synonym of *Exostosis*.

**Exosseous.** (L. *ex*, out; *os*, a bone.) Having no bones.

**Exostema.** Same as *Exostemma*.

**Exostemma.** (Ἐξω, without or external; στήμα, a thread.) A Genus of the Nat. Order *Rubiaceæ*, so called from its prominent stamens.

**E. bicolorata.** Yields *Cinchona bicolorata*.

**E. brachycarpum.** (Βραχύς, short; καρπός, fruit.) Hab. Jamaica. Bark emetic.

**E. caribæum.** Röm. Hab. West Indies, Mexico. Supplies *Cinchona caribæa*.

**E. coriaceum.** Röm. (L. *corium*, skin.) Hab. St. Domingo. Bark febrifuge.

**E. floribundum.** Röm. (L. *flos*, a flower; *abundus*, abundant.) The *Cinchona floribunda*.

**E. peruvia-num.** Humb. Hab. Peru. Bark bitterish and sweet, smell nauseous.

**E. souza-num.** Mart. Supplies a kind of cinchona bark.

**E. triflorum.** Berg. The *Cinchona triflora*.

**Exostoma.** A synonym of *Exostosis*.

Also, the same as *Exostome*.

**Exostome.** (Ἐξω, without, or external; στόμα, a mouth.) That part of the *Micropyle* which is constituted by a channel through the outer integument or primine of the seed; not infrequently the outer integument does not grow over to the micropylar opening.

**Exostosis.** (Ἐξόστωσις, a diseased ex-erescence on a bone; from ἔξ, out; ὅστιον, a bone. F. *exostose*; I. *exostosi*; G. *Knöchel-auswuchs*.) A bony tumour arising from some part of a pre-existing bone, the periosteum, the articular cartilage, the epiphysal cartilage, or the medullary canal.

In Botany, a term applied to the woody masses developed on the outer surface of the trunk and branches of some trees, and to the warty ex-erescences of the roots of the Leguminosæ.

**E. bursa'ta.** (L. *bursa*, a bag.) An exostosis which begins by an outgrowth from an articular cartilage which, as it grows, carries before it a portion of synovial membrane, which eventually covers it as a distinct synovial sac.

**E., but'ton-like.** The small, rounded, flattened, stud-like form of ivory exostosis which occurs on the skull.

**E., cancellous.** (L. *cancelli*, dim. of *cancer*, a lattice.) Same as *E., spongy*, from its structure.

**E. cartilagin'ca.** Same as *E., epiphysial*.

**E., cartilag'inous, or medullary membrane.** Astley Cooper's term for osteoid sarcoma.

The term is also synonymous with some forms of *E., medullary*.

**E., cauliflower.** A synonym of *E., spongy*, from its usual shape.

**E., cellular.** (L. *cellula*, a small cell.) Same as *E., spongy*, from its appearance.

**E. clava'ta.** (L. *clavus*, a nail.) A term applied to flat cranial exostoses, from their likeness to the head of a nail.

**E., dental.** (L. *dens*, a tooth.) Same as *Odontoma*.

**E. den'tium.** (L. *dens*.) Same as *Odontoma*.

**E. ebur'nea.** (L. *ebur*, ivory.) Same as *E., ivory*.

**E., epiphys'ial.** (Ἐπίφυσις, an out-growth.) A tumour arising in young persons from excess of development of the borders of the cartilage of epiphyses. It is at first cartilaginous, and then ossifies.

**E., false.** A bony tumour not growing from bone or cartilage.

**E., hard.** Same as *E., ivory*.

**E., hyponych'ial.** (ὑπό, beneath; ὄνυχ, nail.) The same as *E., subungual*.

**E., ivory.** The form of bone tumour which is hard and dense like ivory. It is usually found on the face or skull bones; is a low, rounded or flattened elevation, and frequently occurs in numbers; occasionally it grows from the scapula or the pelvic bones. It is covered by an extension of the original periosteum, and is usually marked off from its place of growth by a distinct line.

The term has also been applied to an *Odontoma* consisting of the ivory of a tooth.

**E. lam'inar.** (L. *laminar*, a layer.) An exostosis composed of superposed bony layers.

**E. maligna.** (L. *malignus*, of an evil nature.) Scarpa's term for osteoid sarcoma.

**E., medullary.** (L. *medulla*, marrow.) An exostosis which originates in the medullary tissue of a bone.

**E. medullo'sa.** (L. *medulla*, marrow.) An exostosis in which a central cavity exists continuous with the medullary cavity of the original bone, and filled with marrow.

**E., mul'tiple.** (L. *multiplex*, many; from *multus*, many; *plico*, to fold.) Exostosis occurring in many bones simultaneously. They have often been observed to develop with a certain approach to symmetry.

**E. mul'tiplex.** Same as *E., multiple*.

**E. of cemen'tum.** (Cementum.) The condition described as *Odontoma*.

**E., parenchym'atous.** (Παρίχρυσμα, anything poured in beside.) An exostosis which takes origin in the substance of the bone. Same as *E., spongy*.

**E., paros'teal.** (Παρά, near; ὀστίον, a bone.) An exostosis arising from the connective tissue, and unconnected with the periosteum.

**E., pedun'culated.** (L. *pedunculus*, a little foot.) A synonym of *E., spongy*, in reference to its having a more or less distinct stem.

**E., perios'teal.** (Περί, around; ὀστίον.) An exostosis arising from the periosteum.

**E., spongy.** An exostosis which consists chiefly of cancellous tissue. It is generally an epiphysial exostosis, consisting of cartilage when young, and is most frequently seen at the upper end of the humerus, at the lower end of the femur, at the extremities of the tibia and fibula, and on the distal phalanx of the great toe. It has usually a short stem of cancellous tissue leading directly from that of the bone to its own cancellous substance, and is covered with a thin layer of compact tissue.

**E. steatomatodes.** A synonym of the disease described as *Osteosteoma*.

**E., subun'gual.** (L. *sub*, beneath; *unguis*, the nail. F. *exostose sous onguéale*.) A growth of bone taking place beneath the nail, especially of the great toe and thumb.

**E., syphilitic.** Exostosis occurring in patients affected with syphilis. Chassagnac described a special exostosis situated in the medio-palatine region.

**E., true.** A bony tumour growing from bony tissue in any stage.

**Exostotic.** (Ἐξοστωτικός.) Relating to, or affected with, *Exostosis*.

**Exoteric.** (Ἐξωτερικός, external. F. *exotérique*; G. *exoterisch*.) Exterior; applied to those periodic, vital phenomena, which result from causes external to, and independent of, the organism.

**Exothe'ca.** (Ἐξω, without; θήκη, a bag.) Purkinje's term for the outer membrane or coat of an anther.

Also, the outer layer of the theca of a persona of a Corallite.

**Exothécium.** (Ἐξω; θήκη.) The cuticular or outer layer of the anther; it frequently contains stomata.

**Exothé'sis.** (Ἐξ, out of; ἄθesis, a thrusting.) Dislocation.

**Exotic.** (Ἐξωτικός, foreign. F. *exotique*; L. *esotico*; S. *exotico*; G. *ausländisch*, *exotisch*.) Of, or belonging to, what is outside one's own country, or foreign.

In Botany, applied to plants that are not native or indigenous to a country.

**Exoticadenia.** (Ἐξωτικός; ἄδην, enough; from ἀδείω, to be sated.) Same as *Exoticudenia*.

**Exotichæmatic.** Of, or belonging to, *Exotichæmatosis*.

**Exotichæmatosis.** (Ἐξωτικός, foreign; αἱματοσις, a changing into blood.) Term for transfusion of blood.

**Exoticomania.** (Ἐξωτικός; μανία, madness.) An excessive love of foreign remedies.

**Exoticsym'physis.** (Ἐξωτικός; σύμφυσις, a growing together.) The union of foreign bodies in the organism or with the organism.

**Exoticudenia.** (Ἐξωτικός; οὐδένεια, nothingness.) Dislike of foreign remedies.

**Expalpa'te.** (L. *ex*, without; *palpo*, to feel.) Term applied to the mouth of certain insects, as, for example, the Hemiptera, when an imperfect mouth is destitute of palpi.

**Expanded.** (L. *expando*, to spread out.) Stretched out; wide.

**E. wave.** See *Wave, expanded*.

**Expanding.** (L. *expando*, to spread out.) Spreading out.

**Expansibility.** (L. *expando*, to spread

# EXPANSIO—EXPECTORATION.

out. *F. expansibilität*; *I. espansibilità*; *S. expansibilität*; *G. Ausdehnbarkeit*.) The capacity of being extended. That faculty by which organs expand or dilate themselves for the admission of certain substances necessary for their growth, or preservation, and for the exercise of their respective functions; as the œsophagus in deglutition, the lungs in respiration.

Also, applied to the condition of an organ which allows of erection.

**E. of gas'es.** See *Gases, expansibility of*.

**Expansio.** Same as *Expansion*.

**E. meatum.** (*L. meatus*, a passage.) Dilatation of vessels or ducts.

**E. musculo'sa.** (*L. musculosus*, fleshy.) The *Platysma myoides*.

**Expansion.** (*L. expando*, to spread out. *F. expansion*; *I. espansione*; *G. Ausdehnung, Ausspannung*.) Term for the increase of bulk, or of surface, of which bodies are susceptible.

In Anatomy, applied to an extended surface of a structure; such as the tendinous expansion of the occipito-frontalis muscle.

**E., absolute.** (*L. absolutus*, unfettered.) The actual expansion which takes place in a liquid when it is heated, independently of the expansion of the vessel in which it is contained.

**E., apparent.** (*L. appareo*, to appear.) The amount of increase in bulk of a liquid when heated which is actually seen, and which is less than is really the case, because the vessel in which it is contained expands also.

**E., coefficient of.** The coefficient of linear expansion is the amount of lengthening which a body undergoes when raised from 0° C. to 1° C. (32° F. to 33·8° F.), the coefficient of superficial expansion is twice that amount, and the coefficient of cubical expansion is three times that amount.

**E., cubical.** (*L. cubus*, a die) Expansion in all dimensions, or in volume.

**E., linear.** (*L. linea*, a line.) The expansion of one dimension, that of length.

**E., real.** Same as *E., absolute*.

**E., superficial.** (*L. superficies*, the surface.) Expansion in two dimensions, in length and width.

**Expatriatio.** (*L. ex*, out; *patratio*, an achieving, copulation.) The ejaculation of semen.

**Expectant.** (*L. exspecto*, to await; from *ex*, thoroughly; *specto*, to look out. *F. expectant*; *I. aspettante*; *S. expectante*; *G. expectierend*.) Waiting; looking for.

**E. medicine.** Same as *E. method*.

**E. method.** A system of medical treatment which consists in carefully watching the progress of a disease, and leaving its cure to nature, unless some definite and distinct symptom points unhesitatingly to a special treatment.

**E. treatment.** Same as *E. method*.

**Expectation.** (*L. expectatio*; from *exspecto*, to look for; from *ex*, out; *specto*, to look. *F. expectation*; *I. aspettazione*; *G. Expectation, Erwartung*.) The state of looking for a thing to happen.

Used in the same sense as *Expectant method*.

**E. of life.** The average number of years which a person at a given age may expect to live. See *Life, expectation of*.

**Expectorant.** (*L. expectoro*, to discharge from the breast; from *ex*, out of; *pectus*, the breast. *F. expectorant*; *I. espettorante*; *S.*

*espectorante*; *G. expectorirend, lösend*.) A medicine which facilitates or promotes the ejection or expectoration of mucus, or other fluids, from the lungs and trachea.

**Expectorants.** (Same etymon. *G. Brustmittel, Auswurfsbeförderndemittel*.) Medicines which render less adhesive, and promote the ejection of, the secretions from the air-passages.

**E., sedative.** (*L. sedo*, to allay.) Expectorants which reduce the activity of the circulation in the bronchial mucous membrane, as ipecacuanha and chloride of ammonium.

**E., stimulating.** Expectorants which increase the activity of the circulation in the bronchial mucous membrane, such as squill and tolu.

**Expectoratio.** Same as *Expectorant*.

**E. sanguinis.** (*L. sanguis*, blood.) Spitting of blood; hæmoptysis.

**E. solida.** (*L. solidus*, firm.) A term for membranous croup.

**Expectoration.** (*L. expectoro*, to expectorate; from *ex*, out of; *pectus*, the breast. *F. expectoration*; *I. espettorazione*; *S. expectoracion*; *G. Auswurf*.) The act of ejecting substances from the lungs, bronchial tubes, or trachea, by coughing and spitting.

Also, the substance which is thus ejected.

**E., albuminous.** (*Albumen*.) Expectoration which is clear, tenacious, and much like white of egg, such as is seen in the early stage of bronchitis.

**E., bloody.** Expectoration containing or consisting of blood. It may occur in streaks, as in bronchitis and phthisis; or it may be uniformly diffused, as in pneumonia; or it may constitute the mass entirely or almost entirely, as in the bursting of an aneurysm, or the opening of a blood-vessel in the progress of a tubercular cavity.

**E., concocted.** (*L. concoctus*, part of *concoquo*, to boil together.) An old term applied to the expectoration of the later stage of acute bronchitis when the inflammation is subsiding and the sputa become opaque, yellowish, or greenish from admixture of pus.

**E., crude.** (*L. crudus*, raw.) An old term applied to the expectoration in the early stages of acute bronchitis and pneumonia when it is transparent, viscous, and frothy.

**E., fibrinous.** (*Fibrin*.) Same as *E., plastic*.

**E., foetid.** (*L. foetidus*, stinking.) Evil-smelling expectoration, such as occurs in gangrene of the lung.

**E., nummular.** (*L. nummus*, money.) Expectoration which consists of a flattened mass of opaque or purulent appearance surrounded by transparent mucus.

**E., nummulated.** Same as *E., nummular*.

**E., plastic.** (*Πλαστικός*, fit for moulding.) Expectoration of tubular or solid moulds of a greater or less extent of the bronchial tubes, consisting of plastic lymph; the casts may also be composed of diphtheritic membrane or of coagulated blood.

**E., plum-juice.** Same as *E., prune-juice*.

**E., prune-juice.** Expectoration of a thin mucous or muco-purulent character stained with dark blood; so called from its appearance.

**E., purulent.** (*L. pus*, matter.) Expec-

## EXPECTORATIVE—EXPLORATION.

toration containing a greater or lesser quantity of pus, such as occurs in the later stages of bronchitis and in plithisia.

**E., raw.** Same as *E., conected*.

**E., rusty.** Expectoration of a rust colour, from admixture of blood which has lost its bright redness.

**E., sanguineous.** (*L. sanguis*, blood.) Same as *E., bloody*.

**Expectorative.** Same as *Expectorant*.

**Expellent.** (*L. expello*, to drive out. *F. expulsi*; *G. austreibend, vertreibend, hinauswerfend*.) Driving out; expellent. Applied to medicines having power to drive out or expel pestilential virus from the system.

**Experience.** (*L. experientia*, a proof. *F. experience*; *I. sperienza*; *S. experiencia*; *G. Erfahrung*.) Knowledge obtained by observation and trial.

**Experiment.** (*L. experior*, to try. *F. experientia*; *I. sperimento*; *G. Experiment, Probe, Versuch*.) A trial; an attempt, by changing the conditions of a body or bodies, or a part or parts of them, to discover or to demonstrate something concerning them as to their qualities and actions.

**Experimental.** (*L. experior*.) Relating to, depending upon, ascertained by, or skilled in, *Experiment*.

**Expers nuptiarum.** (*L. expers*, having no part in; *nuptiae*, marriage.) A virgin.

**Expert.** (*F. expert*; from *expertus*, proved; part, of *experior*, to try.) A person skilled in a science, or a profession, or a craft.

**Expiration.** (*L. expiro*, to breathe forth. *F. expiration*; *I. espirazione*; *S. expiration*; *G. Ausathmung*.) The act of breathing out, or expelling air from the lungs.

**E., air of.** The air which is expelled from the lungs in expiration. Its temperature varies; under ordinary circumstances it is higher than that of inspiration, but when the external temperature is high it may be lower; the temperature of the blood and the rate and depth of breathing are important factors. It sinks in pneumonia, capillary bronchitis, and malignant cholera, and rises in the acute stages of febrile diseases which do not affect the lungs. It is generally saturated with watery vapours, but during fasting it is only half saturated. Its quantity is less than that of the inspired air by the amount of nearly 2 per cent. It contains 4 or 5 per cent. less oxygen, and 4 per cent. more carbonic acid; the nitrogen varies little; the relative amounts in disease have not been accurately settled. Ammonia in small quantity is found, and some undetermined organic matters, which are doubtless of a detrimental nature. In disease these organic matters have a special smell; thus, in diabetes there is a smell of hay; in septicæmia a sweetish smell; and in Bright's disease a smell of urine.

**E., force of.** The force exerted in tranquil expiration is only sufficient to support a column of mercury 2 or 3 mm. in height, and is due to the elastic reaction and weight of the ribs and costal cartilages and abdominal muscles; but in forced respiration, when the expiratory muscles are brought into play, Hutchinson found that the force exerted in different persons was sufficient to support a column of mercury, varying from two to ten inches in height.

**E., movements of.** In expiration the thorax contracts, at first quickly, then more slowly. The amount of movement is very slight. The variation of the upper antero-posterior diameter not exceeding 1 mm., and that of the lower about 1·5–2 mm., in tranquil respiration.

**E., muscles of.** Tranquil expiration is effected essentially by the elasticity of the lungs, costal cartilages, and abdominal muscles, as well as by the weight of the chest; but in forced expiration muscular effort is exerted, the muscles engaged being the abdominal muscles, the triangularis sterni, the serratus posticus inferior, the quadratus lumborum, the internal intercostals, so far as they lie between the osseous portions of the ribs and the infracostals.

**E., prolonged.** (*F. prolonger*; from *L. prolongo*, to lengthen out.) An expiration which does not bear its true proportion to the inspiration by reason of its too great length; it may be caused by obstruction to the passage of air out of the chest.

**E. sound.** See under *Respiration*, *sound of*.

**E. type of chest.** The chest of persons who lead a sedentary indoor life. It is flat and narrow, containing little reserve air, and the heart and arteries lie higher than ordinary. It resembles the normal chest at the end of expiration.

**Expiratory.** (*L. expiro*, to breathe out. *F. expiratoire*; *I. espiratore*; *S. expirador*; *G. ausathmend*.) Relating to *Expiration*.

**E. dyspnœa.** See *Dyspnœa*, *expiratory*.

**E. murmur.** The sound heard through the chest-walls in the act of expiration. See *Respiration*, *sounds of*.

**E. muscles.** See *Expiration*, *muscles of*.

**Expire.** (*Old F. expirer*; from *L. expiro*, to breathe out.) To breathe out; to emit air from the lungs. To die.

**Expired.** (*L. expiro*.) Breathed out.

**E. air.** See *Expiration*, *air of*.

**Explanate.** (*L. explanatus*, plain.) Spread out flat.

**Expletive.** (*L. expletivus*, from *expleo*, to fill up. *F. expletif*.) Filling up.

**E. fibre.** (*F. fibre expletive*.) A nerve fibre which passes from one lobe of the brain to another, or from one part of a lobe to another part; a commissural fibre.

**Exploratio.** Same as *Exploration*.

**E. abdominis.** (*L. abdomen*, the belly.) The examination of the abdomen by palpation, percussion, and other methods.

**Exploration.** (*Old F. explorer*; from *L. exploro*, to search diligently. *F. exploration*; *I. esplorazione*; *S. exploration*; *G. Ausforschung, Untersuchung*.) The act of exploring or of closely searching.

In Medicine, the term is applied to the investigation of the physical signs of, or changes from the natural condition attending, disease, as distinguished from the symptoms; it consists of auscultation, inspection, mensuration, palpation, percussion, and other forms of physical investigation.

In Surgery, the term is applied to the careful examination with the fingers, or probe, or other instrument, of penetrating wounds, so as to determine their course and extent, and the presence or absence of a foreign body. Also to the punc-

## EXPLORATOR—EXPULSIVE.

turing of a swelling with a fine trochar to ascertain the nature of its contents, or the extraction of a piece of a tumour to ascertain its character.

In Gynaecology, the term includes the examination of the genital organs by the finger or the sound, inspection by means of the speculum, measurement of the dimensions of the pelvis, and other forms of physical investigation.

**Explorator.** (L. *explorator*, a searcher out; from *exploro*.) He who, or that which, explores.

Also, the same as *Exploring trochar*.

**E., chest.** An exploring needle or trochar used for introduction between the ribs to diagnose the presence of empyema.

**E., electric.** See *Explorer, electrical*.

**Exploratorium.** (L. *explorator*.) A sound, a probe.

**Exploratory.** (L. *explorator*. F. *exploratoire*; I. *esploratore*; G. *ausmittelnd, untersuchend*.) Serving to explore or to examine.

**E. puncture.** (L. *punctura*, a pricking.) The introduction of a fine grooved needle or of a small trochar and cannula into a lump, or an organ, or a structure, in order to ascertain the presence of pus or other morbid matter.

**E. trochar.** See *Exploring trochar*.

**Explorer.** (L. *exploro*, to search diligently.) A long elastic tube.

Also, the same as *Explorator*.

**E., electrical.** An apparatus for detecting a bullet or other metallic substance in the tissues, made on the same principle as the *Electric probe*.

**E., surgical, of Hughes.** An apparatus for the detection of a metallic body in the tissues. It consists of two tubes, each furnished with two superposed coils; the inferior coils, of equal value, receive the same current from a battery in the circuit of which is an interrupter; the upper coils, also of equal value, are traversed by an induced current in the wire of a telephone reduced to silence by the contrary action of two currents of equal intensity. When one of the tubes approaches a metallic body the equilibrium is destroyed and the telephone becomes vocal; and its distance may be estimated by approaching a metallic body of similar estimated size to the other tube, until the instrument again becomes silent.

**Exploring.** (L. *exploro*.) Searching.

**E. needle.** A grooved, sharp-pointed needle, used to push into a tumour or part, for the same purpose as the *E. trochar*.

**E. trochar.** A very fine trochar and cannula used to introduce into the substance of a swelling, so as to ascertain its nature, by examination of what exudes through the cannula after removal of the trochar.

**Explosion.** (L. *explosus*, part. of *explo*, to drive out with noise. F. *explosion*; I. *esplosione, scoppio*; G. *Verspuffung*.) An impetuous movement, accompanied by noise, which takes place on the sudden expansion, or decomposition, or recombination, of a body.

A bursting with noise.

**Explosive.** (L. *explo*. F. *explosif*; G. *platzend, losknallend*.) Bursting with a loud noise; able to cause an explosion.

**E. consonants.** See *Consonants, explosive*.

**E. distance.** The greatest distance at

which the electricities of two oppositely electrified bodies in a non-conducting medium are able to combine with a shock or spark.

**Explosives.** Same as *Consonants, explosive*.

**Exposure.** (F. *exposer*, to exhibit; from Old F. *ex*, out; *poser*, to place.) To lay open to view.

In Medicine, the word generally means the state of being laid open or abandoned to cold and tempestuous weather.

**Expressed.** (L. *expressus*, part. of *ex-primo*, to press out.) Pressed out.

**E. oil.** That which is obtained by expressing powerfully, in fit apparatus, the substance that affords it.

**Expression.** (L. *exprimo*, to press out. F. *expression*; G. *Auspressen*.) A pressing out.

In Pharmacy, the act or process of forcing out oils or juices of seeds or plants by means of a press, and of the last drops of a tincture or infusion from the dregs.

Also, the indication of the feelings, presented in the countenance, attitude, and gesture.

**E. of foetus.** A term first applied by Kristeller in 1867 to a mode of assisting the birth of a child by placing both hands over the fundus of the uterus, one on each side, so as to embrace it, whilst the woman is lying on her back or on her side, and then, when a pain commences, or at intervals of four or five minutes when there is no pain, pressing firmly downwards and backwards in the direction of the axis of the pelvic inlet.

**E. of placenta.** A mode of securing the expulsion of the placenta after the birth of the child. It is accomplished by grasping the fundus of the uterus with the left hand and making firm, strong pressure downwards and backwards in the direction of the pelvic inlet; during this manoeuvre it is generally advised that no traction be made on the umbilical cord, that ten or fifteen minutes be allowed to elapse from the birth of the child before it be attempted, and that if the first effort fail the pressure should be repeated when the uterus again contracts.

**E. of sweat.** See *Sweat, expression of*.

**Expuition.** (L. *expuo*, to spit out. F. *expuition*; G. *Ausspeien*.) Old term for the spitting out of something which comes from the mouth and the throat, as mucus or saliva, and not from the deeper parts.

**Expulsio.** Same as *Expulsion*.

Also, a term for the act of *Excretion*.

**E. faecum.** (L. *faex*, the dregs.) The act of expelling the faeces; defecation.

**E. foetus.** (L. *foetus*, offspring.) The act of parturition; childbirth.

**Expulsion.** (L. *expulsus*, part. of *expello*, to drive out.) The act of driving out. Applied to the act of voiding the bowels or bladder; also to the delivery of the placenta, and the aborting or extrusion of a foetus.

**Expulsive.** (L. *expello*, to drive out, or expel. F. *expulsif*; I. *espulsivo*; G. *ausreibend*.) Driving out.

In Midwifery, applied to those pains occurring in the second stage of childbirth, by which the child is expelled.

In Pharmacy, applied formerly to diaphoretic medicines.

In Surgery, applied to a bandage so adjusted as to exert pressure on parts, and thereby expel pus or other fluid.

**E. band'age.** Same as *Bandage, expelling*.

**E. medicines.** An old term for medicines which were supposed to drive out humours through the skin, as diaphoretics.

Also, medicines which produce contraction of the womb and expulsion of its contents.

**E. pains.** (F. *forces expulsives*.) The later pains of labour, after the completion of the dilatation of the os uteri, which procure the expulsion of the child from the mother.

**Expultrix.** See *Uterus expultrix*.

**Exsanguine.** Same as *Exsanguineous*.

**Exsanguineous.** (L. *ex, neg.*; *sanguis*, blood. F. *exsangne, exsanguine*; G. *blutlos, blutleer*.) Deprived of blood; bloodless.

**Exsanguinity.** (L. *ex*, without; *sanguis*, blood. F. *exsanguinité*.) The state of being without blood, or having greatly suffered its loss; bloodlessness.

**Exsanguinous.** Same as *Exsanguineous*.

Also (L. *ex*, without; *sanguis*, vigour), weak from excessive venery.

**Exsarcoma.** (EG, out; *σάρξ*, flesh.) Same as *Sarcoma*.

**Excind'ed.** (L. *ex*, out of; *scindo*, to cut.) Term applied to a part from the extremity of which an angular notch has been cut out.

**Exscreation.** (L. *exscreantia*, from *exsere*, to hawk up.) Spitting of pharyngeal and laryngeal mucus, by hawking rather than coughing.

**Exsec'tio.** Same as *Exsection*.

**E. virilium.** (L. *virilis*, manly.) Castration.

**Exsec'tion.** (L. *exsec'tio*, from *exseco*, to cut out.) A cutting out.

**Exsec'tus.** (L. *exsec'tus*, part. of *exseco*.) A castrated person.

**Ex'sert.** Same as *Exserted*.

**Exsert'ed.** (L. *exsertus*, part. of *exsere*, to draw out.) Drawn out; standing forth; protruding.

**Exsertion.** (L. *exsertus*, part. of *exsere*. F. *exsertion*.) De Candolle proposed to substitute this for *insertion*, because it is always applied to organs that are separate, or which proceed from a common base, and not such as are implanted on others, or are added to them.

**Exsicca'tion.** (L. *exsiccatus*, part. of *exsicco*, to dry up. F. *exsiccation*; G. *Austrocknung*.) The act or process of drying moist bodies by the application of heat, or of atmospheric air, or by absorbing the moisture by means of soft, spongy, or other substances.

**Exsic'cative.** (L. *exsicco*.) Having the power to dry up.

**Exsiccator.** (L. *exsicco*.) An apparatus for drying a substance without the use of heat. It consists of a vessel containing strong sulphuric acid, quicklime, or other water-absorbing substance, over which is suspended or supported the substance to be dried, and above all a bell-glass. If the air is exhausted from the interior by means of an air-pump the drying goes on more quickly.

**Exsolu'tio.** (L. *exsolutio*, from *exsolvo*, to loose.) Relaxation, faintness.

**Exspira'tio.** Same as *Expiration*.

**Exspu'tion.** (L. *exspu'tio*, from *exspuo*, to spit out. F. *exspuition*; G. *Ausspeien*.) The act of spitting out.

**Ex'stasis.** Same as *Ectasis*.

**Exstilla'tion.** (L. *ex*, out; *stillo*, to drop.) The act of distilling from; the falling from a thing in drops.

**Exstinctio.** (L. *extinctio*, from *extinguo*, to put out.) Death. See *Extinction*.

**Exstipula'ceous.** Same as *Exstipulate*.

**Exstip'ular.** Same as *Exstipulate*.

**Exstip'ulate.** (L. *ex*, from; *stipula*, a leafy appendage. F. *exstipulé*; G. *afterblattlos, nebenblattlos*.) Without stipules.

**Exstirpa'tio.** (L. *exstirpo*, to root out.) Same as *Extirpation*.

**E. lin'guæ.** (L. *lingua*, the tongue.) Removal of the tongue.

**E. mammae.** See *Mamma, amputation of*.

**E. mandibulæ.** See *Maxilla, inferior, removal of*.

**E. maxillæ super'ior.** See *Maxilla, superior, removal of*.

**E. of larynx.** See *Larynx, excision of*.

**E. os'sium car'pi.** (G. *Exstirpation der Handwurzelknochen*.) Resection of the carpus.

**E. os'sium metacar'pi.** (G. *Exstirpation der Mittelhandknochen*.) Resection of the metacarpus.

**E. os'sium tar'si.** (G. *Resection der Fusswurzelknochen*.) Resection of the tarsus.

**E. rect'i.** (G. *Exstirpation des Mastdarms*.) The removal of the lower end of the rectum for disease.

**E. testiculo'rum.** (L. *testiculus*, a testicle.) Castration.

**Exstirpa'tion.** Same as *Extirpation*.

**Exstroph'ia.** See *Exstrophy*.

**Exstrophy.** (EG, out of; *στροφή*, a turning.) A turning inside out of a part. Same as *Extroversion*.

**Exsucca'tio.** (L. *exsucco*, to deprive of juice; from *ex*, out of; *succus*, humour.) A synonym of *Echymosis*.

**Exsuc'cous.** (L. *ex*, out; *succus*, juice.) Having no juice; dry.

**Exsuc'tion.** (L. *exsuctus*, part. of *exsugo*, to suck out.) The act of sucking.

**Exsu'data.** (L. *exsudo*, to sweat out.) Exudative diseases.

**Exsudation.** (L. *exsudatio*, from *exsudo*, to sweat out.) The act of sweating.

Also, the same as *Exudation*.

**Exsuffla'tion.** (L. *exsufflo*, to blow out.) Strong forced expiration.

**Ex'ta.** (L. *exta*.) The viscera of the chest, originally.

Also, occasionally used for the abdominal viscera, especially the bowels.

**Extasis.** Same as *Ectasis*.

**Extempor'aneous.** (L. *ex*, at; *tempus*, time.) Made, or thought of, at the moment.

**E. prescrip'tion.** (F. *medicament extemporané*.) A prescription written at the time for a special purpose, in contradistinction to an official formula.

**Extensibility.** (L. *extendo*, to stretch out. F. *extensibilité*; I. *estensibilita*; S. *extensibilität*; G. *Ausdehnbarkeit*.) The property by which certain bodies are capable of being stretched when subjected to the simultaneous action of two forces opposing each other.

**Extens'ible.** (L. *extendo*, to stretch out. F. *extensible*; I. *estensibile*; S. *extensiv*; G. *extensibel*.)

*ausdehnbar*.) Capable of being lengthened or stretched.

**Extensio.** Same as *Extension*.

Also, a synonym of *Tetanus*.

**Extension.** (L. *extensus*, part. of *extendo*, to stretch out. F. *extension*; I. *estensione*; S. *extension*; G. *Ausdehnung*, Zug.) The pulling of a fractured limb in a direction away from the trunk, in order to obviate retraction of the lower fragments; also applied to similar treatment in dislocations.

Also, the movement of a limb, or of the trunk, in such a manner that its parts are approximated to a straight line.

Also, a mode of treatment of fractures by attaching to the extremity of the limb a weight running over a pulley or an elastic band.

In these cases of extension the weight is secured to the limb by passing the extremity of the cord through a stirrup or square piece of wood. The stirrup is encircled by a sling of strapping, the extremities of which are attached to either side of the leg, and kept in place by passing round strips of strapping.

Extension may also be made by means of the long splint and by various modifications of it, and by elastic bands arranged according to the purpose required.

**E. apparatus.** For fractures it usually consists of a rope weighted with a canister of shot, and running over a pulley screwed into a cross-bar attached to the foot of the bed. For an adult patient with a fractured femur 10 lbs. weight is generally used; for a child from 5 to 7 lbs. For a fractured humerus 2 to 3 lbs. in the case of children with a T-fracture into the joint.

In cases of hip-joint disease extension is employed in the earlier stages to prevent the contact of the two diseased surfaces, and the consequent pain and starting. This is effected by allowing the cord carrying the weight to run through a pulley attached to a piece of wood which is supported between the bars of the cot. In the later stages, when there is much muscular spasm, or when slight fibrous ankylosis has taken place, extension is employed to reduce the lordosis, by means of *Murphy's mast*. This instrument consists of a column of wood screwed into the floor, which supports the pulley on a movable piece; the pulley, and with it the limb, is raised until the lordosis disappears, and the leg is then gradually depressed by daily lowering of the cross piece until it is brought down to a level with the opposite limb.

**E. splint.** See *Splint*, *extension*.

**Extensor.** (L. *extendo*. F. *extenseur*; I. *extensorio*; S. *extensor*; G. *Ausdehner*, *Strecker*.) A stretcher out, or extender; applied to muscles which antagonise the flexors.

**E. brevis digitorum.** The *E. digitorum pedis brevis*.

**E. brevis hallucis.** See *E. hallucis brevis*.

**E. carpi radialis accessorius.** (L. *carpus*, the wrist; *radialis*; *accessorius*, added to.) A muscle found occasionally in man, arising from the humerus below the extensor carpi radialis longior, and inserted most often into the first metacarpal bone, but sometimes into the abductor pollicis, or the first dorsal interosseous muscle.

**E. carpi radialis brevior.** (L. *carpus*, the wrist; *radialis*; *brevis*, short. F. *deuxième radial externe*; G. *der kurze Speichenstrecker*.) Arises from the outer condyle of the humerus by

a tendon common to it and the other extensors, from the intervening fibrous septa, from the fascia covering it, and from the external lateral ligament of the elbow joint; it is inserted into the base of the third metacarpal bone of the middle finger. It extends directly the hand. It is supplied by the posterior interosseous division of the musculo-spiral nerve.

**E. carpi radialis longior.** (L. *longus*, long. F. *premier radial externe*; G. *der lange Speichenstrecker*.) Arises from the lower third of the external supracondylar ridge of the humerus, from the external intermuscular septum, and from the common tendon of the extensors; it is inserted into the base of the second metacarpal bone. It extends the hand, inclining it towards the radial side. It is supplied from the trunk of the musculo-spiral nerve. In most mammals it is united with the *E. carpi radialis brevior*.

**E. carpi ulnaris.** (L. *ulna*. F. *exhibital postérieur*; G. *Ellenbogenstrecker der Hand*.) Arises from the external condyle of the humerus by the common extensor tendon, from the intermuscular septum on the outer side, and from the enclosing fascia; it is inserted into the dorsal tuberosity on the base of the fifth metacarpal bone. It extends the hand, inclining it to the ulnar side. It is supplied by the posterior interosseous division of the musculo-spiral nerve. It has no connection with the humerus in some birds.

**E. coccygis.** The *Sacro-coccygeus posticus*.

**E. communis digitorum.** The *E. digitorum communis*.

**E. cruris.** (L. *crus*, the leg.) The *Quadriceps extensor cruris*.

**E. cruris externus.** (L. *crus*.) The *Vastus externus* muscle.

**E. cruris medius superficialis.** (L. *crus*, the leg; *medius*, in the middle; *superficialis*, belonging to the surface.) The *Rectus femoris* muscle.

**E. cruris vastus.** (L. *crus*.) The *Vastus externus* muscle.

**E. cubiti.** The *Triceps extensor cubiti*.

**E. digiti minimi proprius.** (L. *proprius*, one's own.) The *E. minimi digiti*.

**E. digitorum communis.** (L. *digitus*, a finger; *communis*, common. F. *extenseur commun des doigts*; G. *der gemeinschaftliche Fingerstrecker*.) Arises from the outer condyle of the humerus by the common tendon, from the intermuscular septa, and from the covering fascia; it is inserted by four tendons, which, joining with those of the lumbricales and interossei muscles, form a fibrous expansion, which covers the first phalanx, at the upper part of which it divides into three slips; the middle one of which is inserted into the base of the second phalanx; the other two, uniting further on, cover the second phalanx, and are inserted into the base of the third phalanx. The tendons of the index and little fingers combine with the tendons of the other extensor muscles of those fingers. It is more distinct in man than in other animals.

**E. digitorum manus communis.** (L. *manus*, the hand.) The *E. digitorum communis*.

**E. digitorum pedis brevis.** (L. *digitus*, a toe; *pes*, a foot; *brevis*, short. F. *pedicour*; G. *der kurze gemeinschaftliche Zehenstrecker*.) Arises from the upper and outer surfaces of the os calcis in front of the groove for

## EXTENSOR.

the peroneus brevis muscle, and from the lower slip of the anterior annular ligament. It divides into four slips, from each of which a tendon proceeds, the innermost of which is inserted into the dorsal surface of the tarsal extremity of the first phalanx of the great toe, and the other three into the outer border of the long extensor tendons of the second, third, and fourth toes. It extends the toes to which it is attached. It derives its nerve supply from the anterior tibial nerve. This muscle varies very much in different animals, being absent in some rodents, and consisting of many parts in some lizards.

**E. digito'rum pe'dis commu'nis.** (L. *communis*, common.) The *E. digitorum pedis longus*.

**E. digito'rum pe'dis lon'gus.** (L. *digitus*; *pes*, a foot; *longus*, long. F. *long extenseur commun des orteils*; G. *der lange gemeinschaftliche Zehenstrecker*.) Arises from the external tuberosity of the tibia, from the head of the fibula and from the upper three fourths of its anterior surface, from the upper part of the interosseous membrane, from the intermuscular septa, and from the covering fascia. It is inserted by four tendons, which, joining with those of the lumbricals and interossei muscles, form a fibrous expansion, which covers the first phalanx and divides at its upper part into three slips; the middle one of which is inserted into the base of the second phalanx, while the other two, uniting further on, are inserted into the base of the third phalanx. The three inner tendons are each joined at the outer side, on the first phalanx, by a tendon from the extensor digitorum brevis. It extends the toes and flexes and abducts the foot. It is supplied by the anterior tibial nerve. In some animals, as the pig and horse, it arises from the femur, and the number of tendons is decreased where any of the digits are atrophied.

**E. dorsi commu'nis.** (L. *dorsum*, the back; *communis*, common.) The *Erector spine* muscle.

**E. hal'lucis bre'vis.** (L. *hallux*, the great toe; *brevis*, short. F. *court extenseur du gros orteil*; G. *kurzer Strecker der grossen Zehe*.) The inner section of the *E. digitorum pedis brevis* which is attached to the great toe.

**E. hal'lucis pro'prius.** (L. *hallux*; *proprius*, own's own. F. *extenseur propre du gros orteil*; G. *der lange Strecker der grossen Zehe*.) Arises from the middle two fourths of the narrow anterior surface of the fibula, and from the adjacent interosseous membrane; it is inserted into the base of the last phalanx of the great toe. It extends the great toe, and flexes, while somewhat adducts, the foot. It is supplied by the anterior tibial nerve.

**E. in'dicis.** (L. *index*, a pointer, the first finger. F. *extenseur propre de l'index*; G. *der eigene Strecker des Zeigefingers*.) Arises from the outer part of the posterior surface of the ulna, and from the interosseous membrane; it is inserted into the index finger along with the first tendon of the *E. digitorum communis*. It extends the index. It is supplied by the posterior interosseous division of the musculo-spiral nerve. It is absent in some animals, and in others sends tendons to other digits.

**E. in'dicis pro'prius.** (L. *proprius*, one's own.) The *E. indicis*.

**E. interno'dii os'sis pol'licis.** (L. *internodum*, the space between two joints; *os*, a bone.) The *E. secundi internodii pollicis*.

**E. lon'gus digito'rum pe'dis.** See *E. digitorum pedis longus*.

**E. mini'mi dig'iti.** (L. *minimus*, least; *digitus*, a finger. F. *extenseur propre du petit doigt*; G. *der eigene Strecker des kleinen Fingers*.) Arises by a thin tendon from the outer condyle of the humerus along with the common extensor tendon, and gives origin to a tendon, which splits into two as it crosses the hand; the outer part is joined by the fourth tendon of the extensor communis digitorum; and the two are inserted into the second and third phalanges of the little finger. It extends the little finger. It is supplied by the posterior interosseous division of the musculo-spiral nerve. In other animals it supplies other digits, and so is present sometimes when no fifth digit exists.

**E. mi'nor pol'licis ma'nus.** (L. *minor*, less; *pollex*, the thumb; *manus*, the hand.) The *E. primi internodii pollicis*.

**E. os'sis metacar'pi pol'licis.** (*Metacarpus*; L. *pollex*, the thumb. F. *long abducteur du pouce*; G. *der lange Abzieher des Daumens*.) Arises from a narrow oblique impression on the upper part of the outer division of the posterior surface of the ulna, from the middle third of the posterior surface of the radius, and from the interosseous membrane; it is inserted into the base of the first metacarpal bone. It extends the thumb and abducts it. It is supplied by the posterior interosseous division of the musculo-spiral nerve. In most animals it is large, and it is found in some that have no pollex.

**E. os'sis metatar'si hal'lucis.** (L. *os*, a bone; *metatarsus*; *hallux*, the great toe.) An irregular muscle which sometimes arises near the extensor hallucis proprius, and is inserted into the first metatarsal bone. Sometimes it is an offshoot from the extensor hallucis proprius, sometimes from the tibialis anticus, and sometimes from the extensor digitorum communis.

**E. pe'dis.** (L. *pes*, the foot.) A term for the combined gastrocnemius and solens muscles.

**E. pol'licis bre'vis.** (L. *pollex*, the thumb; *brevis*, short.) The *E. primi internodii pollicis*.

**E. pol'licis lon'gus.** (L. *pollex*; *longus*, long.) The *E. secundi internodii pollicis*.

**E. pol'licis secu'ndus.** (L. *pollex*; *secundus*, the second.) The *E. secundi internodii pollicis*.

**E. primi interno'dii hal'lucis.** (L. *primus*, first; *internodum*, the space between two joints; *hallux*, the great toe.) An irregular muscle which sometimes arises near the extensor hallucis proprius to be inserted with it, but more frequently it is an offshoot from this muscle.

**E. primi interno'dii pol'licis.** (L. *primus*; *internodum*; *pollex*, the thumb. F. *court extenseur du pouce*; G. *der kurze Daumenstrecker*.) Arises from the radius a little below its middle and from the adjacent interosseous ligament, and is inserted into the base of the first phalanx of the thumb. It extends and abducts the thumb. It is supplied by the posterior interosseous branch of the musculo-spiral nerve, when the first metacarpal bone is counted as the first internode of the thumb. It is found only in man.

Also, the *E. ossis metacarpi pollicis*.

**E. primi pol'licis.** (L. *primus*; *pollex*.) The *E. ossis metacarpi pollicis*.

**E. pro'prius hal'lucis.** The *E. hallucis proprius*.

# EXTENUATION—EXTIRPATION.

**E. proprius indicis.** (L. *proprius*, one's own.) The *E. indicis*.

**E. proprius pollicis pedis.** (L. *proprius*, one's own; *pollex*, a thumb; *pes*, the foot.) The *E. hallucis proprius*.

**E. quadriceps cruris.** The *Quadriceps extensor cruris*.

**E. secundii internodii indicis proprius.** (L. *secundus*, second; *internodium*, the part between two joints; *proprius*, one's own.) The *E. indicis*.

**E. secundii internodii pollicis.** (L. *secundus*; *internodium*; *pollex*, the thumb. F. *long extenseur du ponce*; G. *der lange Daumenstrecker*.) Arises from the middle third of the outer division of the posterior surface of the ulna, and from the lower part of the adjoining interosseous ligament, and is inserted into the dorsal surface of the base of the terminal phalanx of the thumb. It extends and somewhat adducts the thumb. It is supplied by the posterior interosseous division of the musculo-spiral nerve. It is often wanting in other animals.

Also, the *E. primi internodii* when the first metacarpal bone is counted as the first internode of the thumb.

**E. spinæ.** The *Erector spinæ*.

**E. tarsi magnus.** (*Tarsus*; L. *magnus*, great.) The combined *Gastrocnemius* and *Soleus* muscles.

**E. tarsi minor.** (L. *minor*, less.) The *Plantaris* muscle.

**E. tarsi suralis.** (L. *sura*, the calf of the leg.) The combined *Gastrocnemius* and *Soleus* muscles.

**E. tendon, common.** A tendon attached to the outer condyle of the humerus, which gives origin in part or entirely to the extensor carpi radialis longior, the extensor carpi radialis brevior, the extensor digitorum communis, the extensor digiti minimi, and the extensor carpi ulnaris muscles.

**E. tertii internodii indicis.** (L. *tertius*; *internodium*; *index*, the first finger.) The first dorsal interosseous muscle or abductor indicis.

**E. tertii internodii minimi digiti.** The *Abductor minimi digiti*.

**E. tertii internodii pollicis.** (L. *tertius*, the third; *internodium*; *pollex*, the thumb.) The *E. secundii internodii*; so called when the first metacarpal bone is counted as the first internode of the thumb.

**E. triceps cubiti.** The *Triceps extensor cubiti*.

**Extenuation.** (L. *extenuatio*, from *extenuo*, to make very thin. F. *extenuation*; G. *Verdünnung*.) Term (Gr. λεπταίωσις and λείπτωσις), used by Galen, in *Comm. iii, Epid. vi, 23*, for a loss of plumpness, or general decay of the flesh of the whole body; leanness.

**Extergentia.** (L. *extergeo*, to wipe out.) The same as *Detergents*.

**Exterior.** (L. *exterior*, comp. of *exter*, on the outside.) Outer, on the outside.

In Botany, sometimes used in the same sense as anterior.

**Exterioriation.** (F. *extérieur*; from L. *exterior*, outward.) The physiological cerebral act by which the sensation produced by an impression on any part of the course of a nerve is referred to its terminal extremity.

**Exteriority.** (L. *exterior*.) The psychological act by which sensations are referred to the

external world, as when an impression on the retina is referred to an object outside and not to the place of sensation.

**Extern.** (F. *externe*, external; also, a day scholar, or non-resident.) Applied to patients of hospitals and dispensaries who are not inmates; to out-patients; also to the assistants and dressers who attend them, or who do not dwell in the institution.

**External.** (L. *externus*, outward. F. *externe*; G. *äusserlich*.) On the outside.

**E. capsule.** (L. *capsula*, a small box. F. *capsule externe*; G. *äussere Kapsel*.) The stratum of white nervous matter lying between the claustrum and the lenticular nucleus; its fibres are partly derived from the anterior commissure, and partly from the ansa of the lenticular nucleus.

**E. diseases.** Diseases which occupy the surface of the body.

**E. peritonitis.** See *Peritonitis, external*.

**E. senses.** (F. *sens externe*.) In Phrenology, those senses by means of which man and animals are brought into communication with the external world; each has two organs, but a single impression is received by the mind from affections of them.

**Externality.** (L. *externus*.) The being outside.

**E., sense of.** The apprehension of the external existence of causes of sensations.

**Externus.** (L. *externus*. F. *externe*; G. *äusserlich*.) Outward; external.

**E. auris.** (L. *auris*, the ear.) The structure called *Laxator tympani*, on account of its origin outside the ear in the Glaserian fissure.

**E. mallei.** (*Malleus*.) The structure called *Laxator tympani*, from its attachment to the malleus.

**Externaeous.** (L. *ex*, out; *terra*, the earth.) Same as *Erotic*.

**Extesticulate.** (L. *ex*, out; *testiculus*, a testicle.) Castrated.

**Extillation.** Same as *Exstillation*.

**Extinctio.** Same as *Extinction*.

**E. hydrargyri.** Same as *E. mercurii*.

**E. mercurii.** (L. *Mercurius*, a name of quicksilver.) The rubbing of mercury with lard, chalk, or other substance, until the metallic particles are no longer visible.

**E. vocis.** (L. *vox*, the voice.) Incomplete loss of voice; imperfect aphonia.

**Extinction.** (L. *extinctus*, part. of *extinguo*, to put out. F. *extinction*; I. *estinzione*; G. *Auslöschung*.) A putting out; a destroying; death.

**E. of mercury.** See *Extinctio mercurii*.

**Exline.** (L. *ex*, out.) The outer membrane or cuticularized layer of a pollen granule.

**Extirpation.** (L. *extirpatus*, part. of *extirpo*, to root out. F. *extirpation*; I. *estirpazione*; G. *Ausröttung*.) The complete removal or eradication of any part by the knife, or the application of caustic.

**E. of lachrymal gland.** An operation undertaken for disease of the gland, and also to relieve or prevent epiphora. It is effected by making a cut parallel to the upper and outer border of the orbit and seizing the gland with a vulsellum, when with a few touches of a scalpel it can be dissected out.

**E. of lachrymal sac.** See *Lachrymal sac, obliteration of*.

**E. of the larynx.** See *Larynx, excision of*.

**E. of the spleen.** The same as *Splenotomy*.

**E. of tongue.** See *Tongue, excision of*.

**E. of tumours.** The complete removal of a tumour by the knife or caustic.

**Extomius.** (Έξ, out; τομή, section.) A castrated person.

**Extozo'a.** Same as *Ectozoa*.

**Extozoar'ia.** Same as *Ectozoa*.

**Extra.** (L. *extra*.) A prefix signifying on the outside.

**Extra-axillary.** (L. *extra*, on the outside; *axilla*, the arm-pit.) Outside the axilla, or outside an axil.

**E. branching.** The growth of an *E. bud*.

**E. bud.** A bud which springs from a part above or below or outside the axil of a leaf.

**Extrabran'chial.** (L. *extra*; *branchie*, the gills.) Outside the branchie or the gills.

**E. cartilage.** A conical cartilage lying outside the first four branchial arches of the embryo of some fishes.

**E. skeleton.** See *Skeleton, extrabran'chial*.

**Extracaps'ular.** (L. *extra*; *capsula*, a bag.) Outside a capsule, having special reference to the articular capsules.

**Extracardial.** (L. *extra*, outside; Gr. *kardia*, the heart.) Outside the heart.

**Extracran'ial.** (L. *extra*; *cranium*, the skull.) Lying or being outside the skull.

**Extract.** (L. *extractus*, part. of *extraho*, to draw out. F. *extrait*; G. *Extract*, *Dick-auszug*.) That which is drawn from something. The product of an aqueous decoction. The soluble parts of vegetable substances, first dissolved in spirit, or ether, or water, or other agent, or obtained by expression, and then reduced to the consistence of a thick syrup or paste by evaporation.

Latterly the term has been used so as to include also the substances obtained from the expressed juices of plants.

**E., alcohol'ic.** An extract obtained by the agency of alcohol.

**E., aqueous.** (L. *aqua*, water.) An extract obtained by the agency of water.

**E., cathart'ic.** The *Extractum colocy-thidis compositum*.

**E., ethe'ral.** An extract obtained by the agency of ether.

**E., extracto-res'inous.** An extract composed chiefly of extractive or colouring matter and a resinous substance.

**E., flu'id.** (L. *fluidus*, flowing, fluid. F. *extrait liquide*; G. *flüssiger Extract*, *dünner Extract*.) An extract in which the evaporation has not been carried so far as to produce a solid.

**E., gelat'inous.** An extract which is composed chiefly of gelatin.

**E., Goulard's.** See *Goulard's extract*.

**E., gum'my.** An extract consisting chiefly of gum.

**E., gum-res'inous.** An extract consisting of gum and resin.

**E., hard.** An extract which has been reduced by evaporation to so hard a consistence that it can be powdered.

**E., hy'dro-alcohol'ic.** (Υδρο, water; *alcohol*.) An extract obtained by the agency of alcohol and water combined.

**E., liq'u'id.** (L. *liquidus*, flowing, liquid.

F. *extrait liquide*; G. *flüssiger Extract*.) Same as *E., flu'id*.

**E., mucilag'inous.** (*Mucilage*.) An extract consisting chiefly of gum, and so of the consistence of mucilage.

**E., mu'cous.** (L. *mucus*, slime.) A soft gummy extract.

**E. of aconite leaves.** The *Extractum aconiti*, B. Ph., and of Fr. Codex.

**E. of aconite root.** The *Extractum aconiti*, U.S. Ph., and of G. Ph.

**E. of almond.** A flavouring extract made by dissolving an ounce of oil of bitter almonds, freed from the prussic acid, in a pint of alcohol.

**E. of American hemp.** See *Extractum cannabis americanae*.

**E. of bael, liq'u'id.** See *Extractum belee liquidum*.

**E. of bark.** The *Extractum cinchonae*.

**E. of bark, precip'itated.** A term for *Quinoidin*.

**E. of bark, res'inous.** The *Extractum cinchonae resinosum*.

**E. of beef.** See *Meat extract*.

**E. of bittersweet.** See *Extractum dulcamare*.

**E. of black'berry, flu'id.** The *Extractum rubi fluidum*.

**E. of black hel'lebo're.** See *Extractum hellebori*.

**E. of but'ternut.** See *Extractum juglandis*.

**E. of Cal'abar bean.** See *Extractum physostigmatis*.

**E. of cham'omile.** See *Extractum anthemidis*.

**E. of cher'ry bark, wild, flu'id.** The *Extractum pruni virginianae fluidum*.

**E. of cincho'na, yel'low, liq'u'id.** The *Extractum cinchonae flavae liquidum*.

**E. of cod-liv'er.** The concentrated watery liquid obtained from the liver of the cod in the process of extracting the oil. It is said to contain 60 per cent. of biliary constituents, and was recommended as a substitute for cod-liver oil.

**E. of cotton root, flu'id.** See *Extractum gossypii radidis fluidum*.

**E. of dan'delion.** See *Extractum taraxaci*.

**E. of dog'wood, flu'id.** The *Extractum cornus fluidum*.

**E. of el'der ber'ries.** See *Succus sambuci inspissatus*.

**E. of el'ecampane.** See *Extractum helenii*.

**E. of flesh.** See *Meat extract*.

**E. of fox'glove.** See *Extractum digitalis*.

**E. of gin'ger, flu'id.** The *Extractum zingiberis fluidum*.

**E. of grass.** The *Extractum graminis*.

**E. of hel'lebo're, American, flu'id.** The *Extractum veratri viridis fluidum*.

**E. of hem'lock.** See *Extractum conii*.

**E. of hemp.** The *Extractum cannabis indica*.

**E. of hen'bane.** See *Extractum hyoscyami*.

**E. of hop.** See *Extractum lupuli*.

**E. of In'dian hemp.** See *Extractum cannabis indica*.

**E. of jas'mine, yel'low.** The *Extractum gelsemii fluidum*.

**E. of juniper berries.** See *Succus juniperi inspissatus*.

**E. of lead, Goulard's.** Same as Goulard's extract.

**E. of lettuce.** See *Extractum lactuce*.

**E. of liquorice.** See *Extractum glycyrrhizæ*.

**E. of logwood.** See *Extractum hamatoxyli*.

**E. of male fern, liquid.** See *Extractum filicis liquidum*.

**E. of malt.** See *Extractum malti*.

**E. of May-apple.** See *Extractum podophylli*.

**E. of meat.** See *Extractum carnis*.

**E. of meat, saponaceous.** (L. *saponaceus*, soapy.) A synonym of the substance called *Osmazone*.

**E. of oak bark.** The *Extractum quercus corticis*.

**E. of pepper, black.** The *Oleoresina piperis*.

**E. of pipsissewa, fluid.** The *Extractum chinaphile fluidum*.

**E. of poppies.** See *Extractum papaveris*.

**E. of rhatany.** The *Extractum krame-riæ*.

**E. of rhu'barb.** See *Extractum rhei*.

**E. of Ru'dius.** The *Extractum Rudii*.

**E. of sarsaparilla, fluid.** See *Extractum sarsæ liquidum*.

**E. of stramonium leaves.** See *Extractum stramonii foliorum*.

**E. of stramonium seeds.** See *Extractum stramonii seminis*.

**E. of wormwood.** The *Extractum absinthii*.

**E. of yellow bark.** The *Extractum cinchonæ*.

**E., resinous.** An extract with the characters of a resin.

**E., saponaceous.** (L. *sapo*, soap.) An extract having the characters of a softish soap.

**E., saponaceous saline.** A soapy-feeling extract containing salts.

**E., soft.** An extract which has been reduced by evaporation to the consistence of honey.

**E., spirituous.** An extract obtained by the agency of spirit of wine.

**E., watery.** An extract obtained by the agency of water.

**Extracta.** (Plural of *extractum*.) See *Extract*.

**E. fluida.** See *Extract, fluid*.

**Extractio.** Same as *Extraction*.

Also, the same as *Extract*.

**Extraction.** (L. *extractus*, part. of *ex-traho*, to draw out. F. *extraction*; G. *Ausziehung*, *Herausziehen*.) The act of drawing out.

Applied to the removal of a tooth or a calculus, or a cataract, or a fetus, and such like.

Also, in Pharmacy, the obtaining of the active principles of a drug by means of the action of water, spirit, or other menstruum, or by a process of squeezing called *Expression*.

**E. by displacement.** The same as *E. by percolation*.

**E. by expres'sion.** The obtaining of the juices of fresh plants or fruits by bruising them in a mortar, and then subjecting to pressure whilst in a linen or canvas bag. The expressed juice is generally then heated to about 71° C. (160° F.)

**E. by percolation.** See *Percolation*.

**E. by solution.** (L. *solvo*, to loosen.) The process of obtaining the active principles of dried vegetables by macerating, or digesting, or infusing, or boiling, or percolating them in water, alcohol, ether, or other menstruum in which they are soluble.

**E. of cataract.** See *Cataract, extraction of*, and subheadings.

**Extractive.** (L. *extractus*. F. *extractif*; I. *estrattivo*; G. *Extraktstoff*.) The substance or mixture of substances which, during the process of evaporation by heat in the preparation of vegetable extracts, assumes gradually a deep brown colour and becomes insoluble. Its composition is unknown, and probably varies in different plants; that from cinchona is said to be chiefly a compound of starch and tannic acid.

The term is also applied to the organic substances present in small quantities in the different tissues of the animal body, and extracted from them by alcohol or other fluids, after the water has been driven off, and the fatty matters removed by ether; as the different principles become, in the course of time, recognised the substances included under this head are year by year less in quantity. By some fat is included.

**E., alcoholic.** An extractive obtained by the action of alcohol.

**E., aqueous.** (L. *aqua*, water.) An extractive obtained by the action of water.

**E. matter.** Same as *Extractive*.

**E. matter, animalised.** A synonym of *Glaurine* or *Barequine*.

**E.s of blood.** These are glucose, kreatin, kreatinin, urea, carbamic acid, xanthin, hypoxanthin, uric acid, and hippuric acid.

**E.s of chyle.** Glucose, urea, and some alkaline lactates.

**E.s of dropsical fluids.** These are urea, uric acid, glucose, and leucin, occasionally cholesterol and bilirubin.

**E.s of faeces.** These are stercorin, excretin, leucin, and several fatty acids.

**E.s of lymph.** These are glucose, urea, leucin, and tyrosin.

**E.s of pus.** Sugar, urea, gelatin, chondrin, chlorrhodinic acid, and a fatty derivative, probably lecithin.

**E., oxidised.** The same as *Apothema*.

**Extracto-resinous.** (L. *extractus*; resin.) Having the appearance of a resin and of an extract.

**Extractor.** (L. *extractus*. F. *extracteur*.) An instrument for seizing and removing a foreign body from the tissues or a cavity of the body.

**Extractum.** (L. *extractus*.) An *Extract*.

**E. absinthii**, G. Ph. (G. *Wermuthextrakt*.) Extract of wormwood. Wormwood herb 20 parts is macerated for 24 hours in spirit 40 parts and water 60; then expressed, and the residue treated for 24 hours more with spirit 20 parts and water 30; the expressed liquors are evaporated to the consistence of an *E. spissum*. Dose, .5–2 grammes daily.

**E. aconiti**, B. Ph. Fresh leaves and flowering tops of aconite 112 lbs. are bruised, the juice expressed, the green colouring matter filtered out, the albumen removed by heat and filtration, the filtrate evaporated till like a thick syrup, the green colouring matter then added

and the evaporation continued till it is the proper consistence for pills. Dose, 1—2 grains.

In U.S. Ph., aconite, which is the tuberous root of *Aconitum napellus*, in No. 60 powder, 100 parts is macerated in a percolator with alcohol 40 parts and tannic acid 1 for 48 hours, and then it is percolated with alcohol till 300 parts have passed; this is evaporated to a proper consistence and 5 per cent of glycerin added. Dose, '5—1 grain.

In Fr. Codex (*Extrait alcoolique d'aconit*), 1000 grammes of aconite leaves are macerated in 1000 grammes of alcohol, and the result evaporated.

In G. Ph. (*Eisenhutextract*), aconite root 20 parts is percolated for six days in spirit 40 parts and water 30, then the residue for three days in spirit 20 parts and water 15; the products are mixed and evaporated to form an *E. spissum*. Dose, '006—'025 gramme daily.

**E. aconiti fluidum**, U.S. Ph. Aconite 100 grammes is macerated with alcohol 40 grammes and tartaric acid 1 gramme, and percolated with alcohol till 90 c.c. are obtained, which are reserved, and then till the aconite is exhausted; it is then evaporated to a soft extract, this is dissolved in the reserved portion, and more alcohol is added till it measures 100 c.c. Dose, '03—'06 c.c.

**E. aconiti siccum**. (L. *siccus*, dry. G. *trockenes Eisenhutextract*.) Dose, '01—'05 daily.

**E. æthericum filicis maris**, Fr. Codex. (F. *extrait éthéré de fougère mâle*.) Powdered rhizomes of *Filix mas* 1000 grammes percolated with 2000 grammes of ether, the percolate filtered and distilled at a low temperature, and the residue preserved.

**E. æthericum gnidii**, Fr. Codex. (F. *extrait éthéré de Garou*.) Bark of *Daphne gnidium* 1000 grammes percolated with 7000 grammes of alcohol; the residue is macerated with agitation for 24 hours in 1000 grammes of ether. Distil off the ether and alcohol from the two products, mix the residues, and evaporate them to the consistence of honey.

**E. agropyri**. (Aγρός, a field; πρῶτος, wheat.) An aqueous extract of *Triticum repens*; the *E. graminis*, G. Ph.

**E. aloës**, G. Ph. (G. *Aloëxtract*.) Aloes 1 part dissolved in boiling water 5 parts, strained and evaporated to an *E. siccum*. Dose, '02—'06.

**E. aloës acido sulphurico correctum**. (L. *correctus*, improved.) An old G. Ph. preparation made by mixing extract of aloes 8 parts with water 32, then gradually adding sulphuric acid 1 part, and evaporating.

**E. aloës aquosum**, U.S. Ph. (L. *aquosus*, watery.) Aloes 100 parts is mixed with boiling distilled water 1000, allowed to stand for 12 hours, the clear liquor poured off, and then evaporated to dryness. Dose, '13—'65 gramme (2—10 grains).

**E. aloës barbadensis**, B. Ph. Barbadoes aloes 1 lb., bruised with 1 gallon of boiling distilled water, decanted, strained, and evaporated to dryness. Dose, 2—6 grains.

**E. aloës purificatum**. (L. *purificatus*, purified.) The *E. aloës aquosum*.

**E. aloës socotrina**, B. Ph. Made as *E. aloës barbadensis*. Dose, 2—6 grains.

**E. angelicæ**. An aqueo-spirituous extract of angelica root. Dose, '3—1 gramme daily.

**E. anthemidis**, B. Ph. Extract of chamomile. Chamomile flowers 1 lb. boiled in distilled water a gallon to one half its bulk, strained, pressed, filtered, evaporated to pill consistence, and 15 minims of oil of chamomile added. Dose, 2—10 grains.

**E. arnicæ alcoholicum**. An alcoholic extract of arnica formerly in the U.S. Ph.

**E. arnicæ florum**. (L. *flor*, a flower.) A watery extract of arnica flowers. Used in nervous deafness. Dose, '1—6 grammes daily.

**E. arnicæ radiceis**, U.S. Ph. (G. *Wohlverleihextrakt*.) Arnica root 100 parts is macerated and percolated with alcohol until 300 parts of tincture are obtained; this is evaporated to a pill consistence and 5 per cent of glycerin added. Dose, 3—5 grains ('2—'33 gramme).

**E. arnicæ radiceis fluidum**, U.S. Ph. (L. *radix*, root.) Arnica root 100 parts macerated and percolated with alcohol unmixed with tartaric acid as *E. aconiti fluidum*. Dose, 5—10 minims ('3—6 c.c.).

**E. aromaticum fluidum**, U.S. Ph. Pulvis aromaticus 100 parts macerated and percolated with alcohol so as to make 100 c.c. Dose, 10—20 minims ('6—1'25 c.c.).

**E. asparagi**. An extract made from the roots of the *Asparagus officinalis*, and recommended as a sedative in cardiac affections.

**E. auranti amari fluidum**, U.S. Ph. Bitter orange peel 100 grammes is percolated with alcohol and water to make 100 c.c. Dose, 15—30 minims ('9—1'9 c.c.).

**E. aurantii corticis**. (G. *Pomeranzenschalenextrakt*.) A former preparation of the G. Ph., made by digesting bitter orange rind in alcohol and water and evaporating the fluid to an *E. spissum*.

**E. baelæ liquidum**, B. Ph. Liquid extract of bael. Bael fruit 1 lb. is macerated for 12 hours in water 4 pints for three successive times, the mare is pressed, the mixed liquids filtered, evaporated to 14 fl. oz., and rectified spirit 2 fl. oz. added. Dose, 1—5 fl. drachms.

**E. belladonnæ**, B. Ph. Made as *E. aconiti*. Dose '25—1 grain.

In G. Ph. (*Tollkirschenextrakt*), belladonna 20 parts is bruised in a mortar with 1 part of water and expressed, water and spirit are separately added to the juice and to the mare, and are afterwards evaporated to an *E. spissum*.

**E. belladonnæ alcoholicum**, U.S. Ph. Belladonna leaves treated with diluted alcohol, the result evaporated to a pill consistence, and 5 per cent of glycerin added. Dose, '25 grain ('016 gramme).

**E. belladonnæ fluidum**, U.S. Ph. Belladonna root 100 grammes treated with alcohol as *E. aconiti fluidum* so as to make 100 c.c. Dose, '06—'12 c.c. (1—2 minims).

**E. belladonnæ radiceis fluidum**. (L. *radix*, a root.) The *E. belladonna fluidum*.

**E. brayæ fluidum**, U.S. Ph. Brayera 100 grammes treated with alcohol as *E. aconiti fluidum* so as to make 100 c.c. Dose, '5—1 fl. oz. (15—30 c.c.).

**E. buchu fluidum**, U.S. Ph. Buchu 100 grammes treated with alcohol as in *E. aconiti fluidum*, so as to make 100 c.c. Dose, '5—1 fl. drachm (1'9—3'8 c.c.).

**E. bynes**. (Bévy, malt.) Same as *E. malti*.

**E. calami**, G. Ph. (G. *Kalmsextract*.) Calamus root 20 parts treated with alcohol 40

and water 60, and then with alcohol 20 and water 30, and the tinctures evaporated to 100 c.c. Dose, .3—1 gramme.

**E. calami fluidum**, U.S. Ph. Calamus root treated with alcohol as in *E. aconiti fluidum* so as to make 100 c.c. Dose, 5—15 minims (.3—1 c.c.).

**E. calumbæ**, B. Ph. Calumba root 1 lb. is macerated for twice with 2 parts of water, the filtered liquids mixed, and evaporated to a pill consistence.

**E. calumbæ fluidum**, U.S. Ph. Calumba 100 parts treated as in *E. aconiti fluidum* so as to make 100 c.c. Dose, 15—30 minims (.9—1.9 c.c.).

**E. can'nabis americana**, A former U.S. Ph. preparation, made with American instead of Indian hemp.

**E. can'nabis indicæ**, B. Ph. Indian hemp 1 lb. is macerated for seven days in rectified spirit 4 pints, pressed, and the product evaporated to a soft extract. Dose, .25—1 grain.

In U.S. Ph., 100 parts of Indian hemp are percolated with alcohol until 300 parts of tincture are obtained, which is evaporated to a pill consistence.

In G. Ph. (*G. Indisch Hanfextract*), 1 part of Indian hemp is macerated for six days with spirit 5 parts, and then for three days with another 5 parts; the products are evaporated to an *E. spissum*.

**E. can'nabis indicæ fluidum**, U.S. Ph. Indian hemp 100 grammes treated with alcohol only, as in *E. aconiti fluidum*, so as to make 100 c.c. Dose, .5—1 minim (.03—0.06 c.c.).

**E. can'nabis purificatum**. An extract prepared by evaporating a tincture of the crude extract of hemp. Formerly in the U.S. Ph.

**E. capsici fluidum**, U.S. Ph. Capsicum 100 grammes treated with alcohol as *E. aconiti fluidum*, so as to make 100 c.c. Dose, .5—1 minim (.03—0.06 c.c.).

**E. cardui benedicti**, G. Ph. (*G. Kardobenediktenextrakt*). *Cardus benedictus* 1 part is digested for six hours with 5 parts of boiling water, and with a second 5 parts for three hours; these are expressed, mixed, and evaporated to an *E. spissum*. Dose, .5—1 gramme.

**E. carnis Liebig**. (*L. caro*, flesh.) A meat extract, formerly in the G. Ph. See *Meat extract*, Liebig's.

**E. cascarillæ**. Cascarilla 1 part macerated in boiling water 5 parts for 24 hours, and then in another 5 parts for 24 hours; the two products are pressed and mixed, a little weak spirit added, and then evaporated to an *E. spissum*.

**E. cascarillæ resinosum**. Same as *E. cascarilla*.

**E. cassiæ**, Fr. Codex. (*F. extrait de casse*.) The fruit of *Cassia fistula* 1000 grammes treated with 1000 grammes of cold water and evaporated to a soft consistence.

**E. castaneæ fluidum**, U.S. Ph. Leaves of *Castanea vesca* treated with alcohol and water as in *E. aconiti fluidum*. Dose, 1—2 fl. drachms (3.75—7.5 c.c.).

**E. catechu**. Same as *Catechu*.

**E. catharticum**. (*Καθαρτικός*, fit for cleansing.) The *E. colocynthis* compositum.

**E. catholicum**. (*Καθολικός*, universal.) The *E. rhei* compositum, also the *E. colocynthis* compositum, and the *Palula alba* cum helleboro, Belg. Ph.

**E. centaurii**. (*G. Tausendgüldenkrant*.) Formerly in G. Ph.; made with centaury, as *E. cardui benedicti*.

**E. chamomillæ**. (*G. Kamillenextrakt*.) An extract formerly in the G. Ph.; similar to *E. anthemidis*.

**E. chamomillæ romana**, The *E. anthemidis*.

**E. chelido'nii**. (*G. Schöllkrautextrakt*.) Formerly in G. Ph.; made as *E. belladonna*.

**E. chimaphilæ fluidum**, U.S. Ph. Chimaphila 100 parts treated with 10 parts of glycerin and with alcohol as *E. aconiti fluidum*, so as to make 100 c.c. Dose, a fluid drachm (3.75 c.c.).

**E. chinæ**. The *E. cinchona*.

**E. chinæ aquosum**, G. Ph. (*L. aquosus*, watery. *G. Chinastrakt*.) Cinchona bark 1 part treated with 10 parts of water, twice over, for 40 hours each; the expressed liquid to be evaporated to an *E. tenue*.

**E. chinæ calisayæ fluidum**. The *E. cinchona fluidum*.

**E. chinæ frigide paratum**. (*L. frigidus*, cold; *paratus*, prepared.) An extract of grey cinchona bark prepared with cold water, formerly in the G. Ph.

**E. chinæ fuscum**. (*L. fuscus*, brown.) A spirituous extract of grey cinchona bark, formerly in the G. Ph.

**E. chinæ spirituosum**, G. Ph. One part of cinchona bark macerated for six days in 5 parts of dilute spirit, and again for three days in other 5 parts; the expressed products are then mixed and evaporated to an *E. sicum*.

**E. chira'tæ fluidum**, U.S. Ph. Chirata 100 grammes treated with alcohol and 10 parts of glycerin as *E. aconiti fluidum*, so as to make 100 c.c. Dose, half a fl. drachm (1.9 c.c.).

**E. cicutæ**, Fr. Codex. (*F. extrait de ciguë*.) Hemlock leaves, taken at the time of flowering, are bruised in a mortar and the juice expressed, the albumen is coagulated by heat and removed by straining, with much of the chlorophyll; the filtrate is evaporated to a third of its volume, is cooled, left for 12 hours to deposit, and the clear liquid is evaporated to a soft extract.

**E. cimicifugæ fluidum**, U.S. Ph. Cimicifuga 100 parts is treated with alcohol only as *E. aconiti fluidum*, to make 100 c.c. Dose, .5—1 fl. drachm (1.9—3.75 c.c.).

**E. cinæ**. (*G. Zitterblüthenextrakt*.) An extract of wormseed, *Flores cinæ*, made by digesting with ether and spirit; formerly in the G. Ph.

**E. cincho'næ**, U.S. Ph. Yellow cinchona, in No. 60 powder, 100 is percolated with diluted alcohol till 400 parts of tincture is obtained, this is evaporated to a pill consistence and 5 per cent. of glycerin added.

In Fr. Codex (*F. extrait de quinquina*), 1000 grammes of grey Huancoco bark is infused for 24 hours in 8000 grammes of boiling water, and strained and evaporated to a syrup; the marc is treated with 4000 grammes of boiling water, then also evaporated to a syrup; the two products are mixed and evaporated to a soft extract. Dose, 10—30 grains (.65—1.95 gramme).

**E. cincho'næ calisayæ**, Fr. Codex. (*F. extrait de quinquina calisaya*.) Calisaya bark 1000 grammes is percolated with alcohol 6000 grammes and the spirit distilled off from the percolate; this is mixed with 1000 grammes of cold

# EXTRACTUM.

water, filtered after 12 hours, and evaporated to a pull consistence.

**E. cinchoñæ flāvæ liquidum**, B. Ph. (*L. flavus*, yellow.) A pound of yellow cinchona bark is macerated in 2 pints of water for 24 hours, and then percolated with water until 12 pints have been collected; this is evaporated to a pint, filtered, again evaporated to 3 fl. oz., or to a sp. gr. of 1.200, and 1 fl. oz. of spirit added. Dose 10—30 minims.

**E. cinchoñæ fluidum**, U.S. Ph. Glycerin 25 grammes is mixed with 75 grammes of alcohol, yellow cinchona, in No. 60 powder, 100 grammes is moistened with 35 grammes of the mixture, packed firmly in a percolator, the remainder of the mixture poured on, and the percolator covered and its lower orifice stopped; after remaining thus for 48 hours, the percolation is allowed to proceed, and continued with a mixture of 3 parts of alcohol and 1 of water until the bark is exhausted. The first 75 c.c. are reserved and the remainder is evaporated to a soft extract, which is then dissolved in the reserved portion, and enough alcohol added to make 100 c.c. Dose, a fl. drachm (3.75 c.c.).

**E. cinchoñæ resinösium**. An extract of red cinchona bark made with both water and spirit.

**E. cinchoñæ rubræ**, Fr. Codex. (*E. extract de quinquina rouge.*) Prepared with red cinchona bark as *E. cinchoñæ calisayæ*.

**E. cinchoñæ siccum**, Fr. Codex. (*E. extract sec de quinquina.*) *E. cinchona* is brought to a syrupy consistence, spread on porcelain plates, dried in an oven, and placed in small, dry, carefully closed bottles.

**E. cocæ fluidum**. Sixteen ounces of coca leaves are percolated with alcohol 3 parts and water 1 to exhaustion; the first 12 oz. are reserved, and the remainder evaporated to 4 oz., and mixed with the former.

**E. colchici**, B. Ph. Fresh colchicum corms are crushed, the juice pressed out, allowed to subside, the clear fluid heated to 212° F., strained, and evaporated to pill consistence. Dose, 5—2 grains.

**E. colchici aceticum**, B. Ph. Made as *E. colchici*, save that acetic acid 6 fl. oz. are added to 7 lbs. of colchicum before pressing. Dose, 5—2 grains.

**E. colchici radicis**, U.S. Ph. (*L. radix*, a root.) Colchicum root 100 parts is percolated with acetic acid 35 parts and water 150 parts, and then with water, till it is exhausted; the product is evaporated to a pill consistence. Dose, 1—2 grains (0.65—0.3 gramme).

**E. colchici radicis fluidum**, U.S. Ph. Colchicum root 100 grammes, in No. 60 powder, is percolated with alcohol 2 parts and water 1 until exhausted; the first 85 parts is reserved, and the remainder evaporated to a soft extract, mixed with the reserved part, and made up to 100 c.c. with menstruum. Dose, 2—8 minims (12—5 c.c.).

**E. colchici seminis fluidum**, U.S. Ph. Made like *E. colchici radicis fluidum*, and substituting colchicum seeds in No. 30 powder for the colchicum root. Dose, 2—8 minims (12—5 c.c.).

**E. colocynthidis**, U.S. Ph. Colocynth 100 parts is macerated for four days in diluted alcohol 250 parts, expressed strongly, and strained; the residue is then percolated with diluted alcohol till with the expressed liquid 500

parts are obtained; this is evaporated, dried, and powdered. Used to make *E. colocynthidis compositum*.

The process of the G. Ph. (*Koloquintenextrakt*) is very similar.

**E. colocynthidis alcoholicum**. The *E. colocynthidis*.

**E. colocynthidis compositum**, B. Ph. Colocynth pulp 6 oz. is macerated for four days in a gallon of proof spirit, it is pressed, the spirit distilled off, and the residue mixed with extract of Socotrine aloes 12 oz., resin of scammony 4 oz., and hard soap 3 oz., and evaporated to a pill consistence, towards the end of which an ounce of powdered cardamom seeds is added. Dose, 3—10 grains.

In U.S. Ph., aloes 50 parts is heated till melted, mixed with alcohol 10 parts and strained; to it soap 14 parts, extract of colocynth 16, and resin of scammony 14, are added, heated until a thread of it when cold is brittle, then mixed with cardamoms in No. 60 powder 6 parts, and powdered. Dose, 5—30 grains (33—1.95 gramme).

A compound extract (*G. zusammengesetztes Koloquintenextrakt*) was formerly in the G. Ph., consisting of extract of colocynth 3 parts, aloes 10, scammony 8, and extract of rhubarb 5.

**E. colombo**. An extract made like *E. aurantii corticis* was formerly in the G. Ph.

Also, the *E. calumbæ*.

**E. conii**, B. Ph. Extract of hemlock. Made like *E. belladonnæ*. Dose, 2—6 grains or more.

**E. conii alcoholicum**, U.S. Ph. Conium 100 parts is macerated in diluted alcohol for 48 hours, and then percolated till 300 parts of tincture are obtained; the first 90 parts are retained, the remainder, with 3 parts of dilute hydrochloric acid, is evaporated to 10 parts, mixed with the reserve, again evaporated to a pill consistence, and 5 per cent. of glycerin added. Dose, 5—1 grain (0.3—0.65 gramme).

**E. conii fluidum**, U.S. Ph. Conium 100 grammes is percolated with diluted alcohol until 90 c.c. are obtained; it is then percolated till exhausted, and diluted hydrochloric acid 3 grammes are added, and the product is evaporated to a soft extract, which is dissolved in the reserve, and made up with diluted alcohol to 100 c.c. Dose, 5 minims (3 c.c.).

**E. conii fructus fluidum**. (*L. fructus*, fruit.) The *E. conii fluidum*.

**E. convolvuli jalapæ**. The *E. jalapæ*.

**E. cornus floridæ fluidum**. The *E. cornus fluidum*.

**E. cornus fluidum**, U.S. Ph. Made like *E. coryatæ fluidum*, but with 20 grammes of glycerin. Dose, 5 fl. drachm (1.9 c.c.).

**E. corticis peruviani**. (*L. cortex*, bark.) The *E. cinchonæ*.

**E. cubæbæ æthereum**. The *E. cubæbarum*, G. Ph., and the *Oleoresina cubebæ*, U.S. Ph.

**E. cubæbæ fluidum**, U.S. Ph. Cubebs 100 grammes treated with alcohol only, as in *E. aconiti fluidum*, so as to make 100 c.c. Dose, 10—40 minims (6—2.5 gramme).

**E. cubebærum**, G. Ph. Cubebs 10 parts are macerated for three days in 15 parts each of ether and alcohol, and for other three days in 10 parts each of ether and alcohol, the two products being mixed and evaporated to an *E. tenue*.

Also, the *Oleoresina cubebæ*, U.S. Ph.

**E. cypripediæ fluidum**, U.S. Ph. Cy-

pripidium 100 grammes treated with alcohol only as in *E. aconiti fluidum*, so as to make 100 c.c., 85 c.c. being reserved. Dose, 15 minims (9 c.c.).

**E. digitalis**, U.S. Ph. Recently dried digitalis 100 parts is macerated for 48 hours in alcohol and water, 2 to 1; it is then percolated till 500 parts of tincture are obtained, evaporated to a pill consistence, and 5 per cent. of glycerin added. Dose, .25 grain (.016 gramme).

In G. Ph. (*G. Fingerhutextrakt*), the fresh flowering digitalis is first beaten with water, then treated with spirit, and evaporated to an *E. spissum*.

In Fr. Codex (*F. extrait de digitale*), the powdered dry leaves of digitalis 1000 grammes are infused for 12 hours in 6000 grammes of boiling water, expressed, and allowed to deposit; the marc is treated in the same manner with 2000 grammes of boiling water; the liquids are concentrated to a syrupy consistence in a water bath, mixed, and evaporated to a soft extract.

**E. digitalis alcoholicum**. Same as *E. digitalis*, U.S. Ph. and G. Ph.

**E. digitalis alcoolé paratum**, Fr. Codex. (*L. paratus*, prepared. *F. extrait alcoolique de digitale*.) Dry powdered leaves are moistened with alcohol, allowed to stand 12 hours in a percolator, and then 6000 parts of alcohol passed through; the resulting tincture is evaporated to a soft extract.

**E. digitalis fluidum**, U.S. Ph. Made as *E. colchici radiceis fluidum*. Dose, 1—2 minims (.06—12 c.c.).

**E. dulcamaræ**. (*G. Bittersüßerextrakt*.) An extract formerly in the U.S. Ph. and G. Ph. Made as *E. cardui benedicti*.

**E. dulcamaræ fluidum**, U.S. Ph. Dulcamara treated with alcohol only as in *E. aconiti fluidum*, so as to make 100 c.c., but reserving 80 c.c. at first. Dose, .5—1 fl. drachm (1.9—3.75 c.c.).

**E. elaterii**. A synonym of *Elaterium*.

**E. ergotæ**, U.S. Ph. Prepared by evaporating *E. ergotæ fluidum*, U.S. Ph., to one fifth of its weight. Dose, 5—30 grains.

**E. ergotæ fluidum**, U.S. Ph. Ergot recently ground 100 grammes macerated in a percolator with alcohol and water, 3 to 4, for 48 hours, and then percolated till the ergot is exhausted; the first 85 c.c. are reserved, the remainder, with the addition of dilute hydrochloric acid 6 grammes, is evaporated to a soft extract, dissolved in the reserve, and made up to 100 c.c. with alcohol and water. Dose, .5—4 fl. drachms (1.9—15 c.c.).

**E. ergotæ liquidum**, B. Ph. Ergot 1 lb. is percolated with ether so as to remove its oil, it is then digested in 3 pints of water at 160° for 12 hours, the liquor is then pressed out, strained, and evaporated to 9 fl. oz.; when cold, spirit 8 fl. oz. are added, and it is filtered. Dose, 10—30 minims.

**E. erigeron'tis canadensis fluidum**. An alcoholic extract, formerly in the U.S. Ph., for the sake of the oil, which is the active principle.

**E. erythroxyl'i fluidum**. Erythroxylin 100 grammes treated with diluted alcohol only as in *E. aconiti fluidum*, to make 100 c.c., 80 c.c. being reserved. Dose, 20—60 minims (1.25—3.75 c.c.).

**E. eucalypt'i fluidum**, U.S. Ph. Eucalyptus 100 parts treated with alcohol only as

in *E. aconiti fluidum*, to make 100 c.c., 85 c.c. being reserved. Dose, 5—10 minims (.3—6 c.c.).

**E. euonymi**, U.S. Ph. *Euonymus* 100 parts macerated in diluted alcohol for 48 hours, then percolated till exhausted, evaporated to pill consistence, and 5 per cent. of glycerin added. Dose, 1—3 grains (.065—2 grammes).

**E. eupatorii fluidum**, U.S. Ph. Eupatorium 100 grammes treated with alcohol only as in *E. aconiti fluidum*, to make 100 c.c., reserving 80 c.c. Dose, 20—60 minims (1.25—3.75 c.c.).

**E. fabæ calabaricæ**. Same as *E. physostigmatis*.

**E. fabæ calabariensis**, Fr. Codex. (*F. extrait de fève de calabar*.) An alcoholic extract of Calabar bean.

**E. fellis bovi'ni**. Same as *Fel bovis purificatum*.

In Fr. Codex (*F. extrait de fiel de bœuf*), ox-gall evaporated in a water bath to a firm consistence.

**E. ferri pomatum**, G. Ph. (*G. äpfelsaures Eisenextrakt*.) Made by heating 50 parts of sour apples with 1 part of iron filings, filtering, and evaporating. Formerly in the G. Ph. Dose, .2—5 gramme.

**E. filicis**, G. Ph. (*Wurmfarnextrakt*.) Root of male fern 5 parts, macerated for three days in ether 15 parts, and then in ether 10 parts; the two products are mixed and evaporated to an *E. tenue*. Dose, 2—10 grammes.

**E. filicis æthereum**. The *E. filicis liquidum*, B. Ph.; and also the *Oleoresina aspidii*, U.S. Ph. See also *E. athericum filicis maris*.

**E. filicis liquidum**, B. Ph. Male fern treated with ether till it passes through colourless, the ether is then evaporated, and the oily extract preserved. Dose, 15 to 30 minims.

**E. fluidum**. See *Extract, fluid*.

**E. foliorum aconitæ**. (*L. folium*, a leaf.) The *E. aconiti*.

**E. frangulæ fluidum**, U.S. Ph. Frangula 100 grammes treated with equal parts of alcohol and water as in *E. aconiti fluidum*, to make 100 c.c., reserving 80 c.c. Dose, 10—20 minims.

**E. gelsemii fluidum**, U.S. Ph. Gelsemium 100, treated with alcohol as in *E. aconiti fluidum*, to make 100 c.c., reserving 90 c.c. Dose, 2—3 minims (.12—18 c.c.).

**E. genistæ cacuminum**. (*L. genista*, the broom; *cacumen*, a top.) A watery extract of the tops of the broom, *Sarothamnus scoparius*.

**E. gentianæ**, B. Ph. Gentian root 1 lb. infused in boiling water 1 gallon, then boiled for 15 minutes, pressed, strained, and evaporated to a pill consistence. Dose 2—10 grains.

In U.S. Ph., and in G. Ph. (*G. Enzianextrakt*), the gentian is macerated in cold water for 24 hours, then percolated till exhausted, and evaporated to a pill consistence.

In Fr. Codex (*F. extrait de gentiane*), gentian root is moistened with cold water for 12 hours, then percolated to exhaustion with cold water; the percolate heated, filtered to remove the coagulum, and evaporated to a soft extract.

**E. gentianæ fluidum**, U.S. Ph. Gentian 100 grammes is treated with diluted alcohol as *E. aconiti fluidum*, to make 100 c.c., reserving 80 c.c. Dose, 10—30 minims (.6—1.9 c.c.).

**E. geranii fluidum**, U.S. Ph. Gentian 100 grammes treated with diluted alcohol and glycerin 10 grammes as *E. aconiti fluidum*, to make 100 c.c., reserving 70 c.c. Dose, 30—60 minims (1.9—3.75 c.c.).

# EXTRACTUM.

**E. glycyrrhizæ**, B. Ph. Licorice root a pound is macerated with two pints of water for 12 hours, and then with other two pints for six hours, the strained products are evaporated to pill-consistence.

In U.S. Ph. it is the commercial licorice extracted from the root of *Glycyrrhiza glabra*.

**E. glycyrrhizæ depuratum**. Same as *E. glycyrrhizæ purum*.

**E. glycyrrhizæ fluidum**, U.S. Ph. Licorice root 100 grammes is moistened with 35 parts of a mixture of 3 parts of water of ammonia and 97 of dilute alcohol, put into a percolator, with a little more of the menstruum, and macerated for 48 hours, it is then percolated with the menstruum until exhausted, the first 75 c.c. are preserved, the remainder evaporated to a soft extract, dissolved in the reserve and made up to 100 c.c.

**E. glycyrrhizæ liq'uidum**, B. Ph. Licorice root a pound is macerated for 12 hours in two pints of water, and again for six hours in other two pints of water, the two products are mixed, heated to boiling, and evaporated to 1/160; to it one eighth of its volume of rectified spirit is added, and it is filtered after standing 12 hours.

**E. glycyrrhizæ purum**, U.S. Ph. Licorice root 100 parts is percolated with distilled water 300 parts mixed with water of ammonia 15 parts, and then with water till exhausted; the product is evaporated to a pill-consistence.

**E. gnidii æthericum**. See *E. athericum guidii*.

**E. gossypii radicis fluidum**, U.S. Ph. Cotton root 100 grammes treated with alcohol mixed with glycerin 35 grammes as in *E. aconiti fluidum*, to make 100 c.c., reserving 70 c.c. Dose, 30—60 minims (1.9—3.75 c.c.).

**E. graminis**, G. Ph. Rhizomes of *Tritium repens* 2 parts, treated with boiling water 10 parts, pressed, strained, and evaporated to an *E. spissum*. Dose, 5—25 grammes daily.

**E. gratiolæ**. (G. *Gottesgnadenkraut* extract.) Formerly in the G. Ph., and made from the *Gratiola officinalis* as *E. belladonnæ*.

**E. grindelizæ fluidum**, U.S. Ph. Grindelia 100 grammes treated with alcohol 3 parts and water one as in *E. aconiti fluidum*, to make 100 c.c., reserving 85 c.c. Dose, 30—60 minims (1.9—3.75 c.c.).

**E. guajacii**. The *Extrait de gayac*, Fr. Codex.

**E. guaranæ fluidum**, U.S. Ph. Guarana 100 grammes treated with 3 parts alcohol and 1 water as in *E. aconiti fluidum*, to make 100 c.c., reserving 80 c.c. Dose, 60—120 minims (3.75—7.5 c.c.).

**E. hæmatoxyli**, B. Ph. Extract of logwood. Logwood a pound infused in a gallon of boiling water for 24 hours, strained, and evaporated to dryness. Dose, 10—30 grains.

In U.S. Ph., logwood 100 parts, macerated for 48 hours in water, boiled to one half, strained, and evaporated to dryness.

**E. hæmostatæum**. (Αἱμοσταγής, a means of stopping blood.) The *E. scalis cornuti*.

**E. hamamelidis fluidum**, U.S. Ph. Hamamelis 100 grammes, treated with a mixture of 1 part of alcohol with 2 of water as in *E. aconiti fluidum*, to make 100 c.c., reserving 85 c.c. Dose, 30 minims (1.9 c.c.).

**E. hele'nil**, G. Ph. (G. *Alantwurzelextrakt*.) An extract obtained by means of diluted alcohol, formerly in G. Ph.

**E. helleb'ori**. An extract obtained from black hellebore by percolation and evaporation, formerly in U.S. Ph. Dose, as an emmenagogue, 3 to 10 grains, as a cathartic, 10 to 20 grains.

**E. helleb'ori nigri**. Same as *E. helleb'ori*.

**E. her'bae aconiti**. The *E. aconiti*.

**E. hu'muli**. Same as *E. lupuli*.

**E. hydrastis fluidum**, U.S. Ph. Hydrastis 100 grammes treated with a mixture of 3 parts of alcohol with 1 of water as in *E. aconiti fluidum*, to make 100 c.c., reserving 85 c.c. Dose, 60—120 minims (3.75—7.5 c.c.).

**E. hyoscyami**, B. Ph. Henbane leaves and young branches treated as *E. aconiti*, B. Ph. Dose, 5—10 grains.

In G. Ph. (G. *Bulsenkraut* extract), it is made like *E. belladonnæ*, G. Ph.

**E. hyoscyami alcoholicum**, U.S. Ph. Recently dried hyoscyamus 100 parts is covered in a percolator with a mixture of 2 parts of alcohol and 1 of water for 48 hours, is percolated till exhausted with a similar mixture, reserving the first 90 parts, the remainder is evaporated to 10 parts, both are then mixed and evaporated to pill consistence. Dose, 1—2 grains (.065—13 gramme).

**E. hyoscyami fluidum**, U.S. Ph. Hyoscyamus 100 grammes is treated with a mixture of 3 parts of alcohol and 1 of water as in *E. aconiti fluidum*, to make 100 c.c., reserving the first 90 c.c. Dose, 5 minims (.3 c.c.).

**E. ignatiæ**. An alcoholic extract of the bean of *Ignatia amara*, formerly in U.S. Ph. Dose, .5 to 1 grain.

**E. ignatiæ alcoholicum**. Same as *E. ignatiæ*.

**E. ipecacuan'hæ fluidum**, U.S. Ph. Powdered ipecacuanha 100 grammes treated with alcohol and water as in *E. aconiti fluidum*, to make 100 c.c., reserving the first 75 c.c. Dose, as an emetic, 15—30 minims (.9—1.9 c.c.).

**E. iridis**, U.S. Ph. Iris is soaked for 48 hours in a mixture of alcohol 225 parts and water 75 parts, is then percolated till exhausted and evaporated to a pilular consistence. Dose, 1—2 grains (.065—13 gramme).

**E. iridis fluidum**, U.S. Ph. Iris 100 grammes heated with alcohol and water, 3 to 1, as in *E. aconiti fluidum*, to make 100 c.c., reserving the first 90 c.c. Dose, 5—10 minims (.3—6 c.c.).

**E. jala'pæ**, B. Ph. Jalap a pound is macerated in rectified spirit 4 parts for seven days, pressed, filtered, and the spirit distilled off; the residual jalap from the water is expressed, strained and evaporated to a soft extract, when it is mixed with the alcoholic extract.

**E. jala'pæ resin'sum**. The *Jalapæ resina*.

**E. juglan'dis**, U.S. Ph. Juglans is macerated in alcohol for 48 hours, percolated till exhausted, evaporated to a pilular consistence, and 5 per cent. of glycerin added. Dose, 5—10 grains (.33—65 c.c.).

**E. junip'eri**. The *Extrait de genièvre*, Fr. Codex.

**E. krame'riæ**, B. Ph. Rhatany root is percolated with water and evaporated to dryness. Dose, 5—20 grains.

The U.S. Ph. process is similar.

# EXTRACTUM.

**E. krame'riæ fluidum**, U.S. Ph. Krameria 100 grammes is treated with diluted alcohol and glycerin 20 grammes as in *E. aconiti fluidum*, to make 100 c.c., reserving 70 c.c. Dose, 10–60 minims ('6–3.75 c.c.).

**E. lactu'cæ**, B. Ph. The flowering herb of lettuce, *Lactuca virosa*, treated in the same manner as *E. aconiti*, B. Ph.

**E. lactu'cæ viro'sæ**. Same as *E. lactu'cæ*.

**E. lactuca'rii fluidum**, U.S. Ph. Lactucarium 100 grammes is macerated with ether 600 c.c. for 24 hours, and then water 300 grammes is added, the ether is now distilled off and alcohol 100 grammes is added, and water to make it weigh 500 grammes; this is macerated 24 hours, and is expressed and filtered; the dregs are macerated 24 hours with 200 grammes of alcohol and water, 1 to 3, two or three times with a fresh amount; the watery and spirituous products are concentrated separately till combined they weigh 60 grammes; they are then mixed, alcohol 40 grammes added, allowed to cool, then made up with alcohol to 100 grammes, and then water added till it measures 100 c.c., allowed to stand, decanted, the precipitate washed several times with alcohol and water, 3 to 4, concentrated to a syrupy consistence, made up to 100 c.c. with the alcohol and water, and, after standing 24 hours, filtered. Dose, 5–30 minims ('3–1.9 c.c.).

**E. leptan'dræ**, U.S. Ph. Leptandra 100 parts is percolated with diluted alcohol, 2 to 1, until exhausted, evaporated to a pill consistence, and 5 per cent. of glycerin added.

**E. leptan'dræ fluidum**, U.S. Ph. Leptandrin 100 grammes treated with alcohol and glycerin 15 grammes as in *E. aconiti fluidum*, to make 100 c.c., reserving 80 c.c. Dose, 20–60 minims (1.25–3.75 c.c.).

**E. lig'ni campechea'ni**. The *E. hæmatoxyli*.

**E. liq'uidum**. (L. *liquidus*, flowing, liquid. F. *extrait liquide*.) Same as *Extract, fluid*.

**E. liquirit'icæ**. The *E. glycyrrhizæ*, U.S. Ph.

**E. liquirit'icæ depuratum**. The *E. glycyrrhizæ purum*, U.S. Ph.

**E. liquirit'icæ radicis**. (L. *radix*, a root.) The *E. glycyrrhizæ*, B. Ph.

**E. lobe'liæ fluidum**, U.S. Ph. Lobelia 100 grammes is treated with diluted alcohol as in *E. aconiti fluidum*, to make 100 c.c., reserving 85 c.c. Dose, 10–20 minims ('6–1.25 c.c.).

**E. lupuli**, B. Ph. Hop 1 lb. is macerated in rectified spirit 1.5 pint for seven days, filtered, and the spirit distilled off; the residue of the hop is boiled with a gallon of water for an hour, pressed, strained, and evaporated to a soft extract, which is mixed with the alcoholic extract, and evaporated to a pill consistence. Dose, 5–15 grains.

**E. lupuli'ni ethereum**. The *Oleo-resina lupulini*, U.S. Ph.

**E. lupuli'ni fluidum**, U.S. Ph. Lupulin 100 grammes is treated with alcohol as in *E. aconiti fluidum*, to make 100 c.c., reserving 70 c.c. Dose, 10–15 minims ('6–9 c.c.).

**E. malti**, U.S. Ph. Malt 100 parts is macerated for six hours in 100 parts of water; then 400 parts of water at 30° C. (86° F.) are added, and it is digested for an hour at not higher than 55° C. (131° F.); the mixture is then strained with strong expression, and evaporated

rapidly at no higher temperature than 55° C. (131° F.) to a consistence of thick honey. Dose, 1–4 drachms.

A formula was formerly in the G. Ph.

**E. malti ferra'tum**. Extract of malt 95 parts mixed with pyrophosphate of iron with citrate of ammonium 2 parts, dissolved in 3 parts of water. Formerly in G. Ph.

**E. martis ace'ticum**. (L. *Mars*, a name for iron.) The *Ferri acetat*.

**E. matico fluidum**, U.S. Ph. Matico 100 grammes is treated with alcohol and water, 3 to 1, and glycerin 10 grammes, as in the *E. aconiti fluidum*, so as to make 100 c.c., reserving 85 c.c. Dose, 30–60 minims (1.9–3.75 c.c.).

**E. menyan'thes**. Same as *E. trifolii fibrui*.

**E. meze'rei**, U.S. Ph. Mezercon treated with alcohol only as in *E. aconiti*, U.S. Ph.

A similar preparation (G. *Scaldbastextrakt*) was formerly in G. Ph. Used to make *Unguentum mezeri*.

**E. meze'rei æthe'reum**, B. Ph. Mezercon 1 lb. is macerated in 6 pints of rectified spirit for three days, strained, and pressed; it is again macerated with other 2 pints of spirit for three days, strained, and pressed. The two liquors are mixed, filtered, and evaporated to a soft extract, which is macerated in a pint of ether for 24 hours, when the ethereal solution is decanted and evaporated to the consistence of a soft extract. Used in *Linimentum sinapis compositum*.

**E. meze'rei fluidum**, U.S. Ph. Mezercon 100 grammes treated with alcohol as in *E. aconiti fluidum*, to make 100 c.c., reserving 90 c.c.

**E. millefolii**. (G. *Schaffgarbenextrakt*.) An alcoholic extract of the tops of *Achillea millefolium*, formerly in the G. Ph.

**E. mone'siæ**. An extract of the bark of *Chrysophyllum glycyphleum*, made in Brazil.

**E. myrr'hæ**. (G. *Myrrhenextrakt*.) An aqueous extract of myrrh, formerly in the G. Ph.

**E. nu'cis vom'icæ**, B. Ph. (G. *Brech-nussextrakt*.) Nux vomica exhausted by rectified spirit, and the tincture evaporated to a soft extract. Dose, 5–2 grains.

In U.S. Ph., the powdered nux vomica is percolated after maceration for 48 hours with a mixture of alcohol and water, 8 to 1, and the tincture evaporated. Dose, 5–2 grains ('03–.13 grm.).

In Fr. Codex, the extract is also obtained by the use of alcohol.

**E. nu'cis vom'icæ fluidum**, B. Ph. Nux vomica treated with alcohol and water, 9 to 1, as *E. aconiti fluidum*, so as to make 100 c.c., reserving 90 c.c. Dose, 3–5 minims (.18–.3 c.c.).

**E. nu'cum vom'icæ spirituosum**. The *E. nucis vomica*, B. Ph.; and also the *E. strychni*, G. Ph.

**E. op'ii**, B. Ph. Opium 1 lb. macerated in 2 pints of water during 24 hours for three successive times, the liquors expressed, mixed, and evaporated to a pill consistence. Dose, 5–2 grains.

In U.S. Ph., the maceration is effected five times, and 5 per cent. of glycerin is added to the extract.

In G. Ph. (*Opiumextrakt*), the maceration is ordered twice, and the evaporation is to result in an *E. siccam*.

In Fr. Codex, 1000 grammes of Smyrna opium is macerated first in 8000 grammes of cold dis-

# EXTRACTUM.

tilled water for 24 hours, and then in 4000 grammes for two hours; the mixed liquids are evaporated after filtering to an extract consistence, which is redissolved in 10 parts of cold water, allowed to settle, filtered, and evaporated to a due consistence.

**E. opii liquidum**, B. Ph. Extract of opium 1 oz. is macerated in water 16 fl. oz. for an hour, rectified spirit 4 fl. oz. added, and filtered. Dose, 10—40 minims.

**E. panchymagógum**. (Πᾶς, all; χυμός, juice; ἄγω, to drive out.) The *E. rhei compositum*.

Also, the *Pilula aloetica cum helleboro*.

**E. papaveris**, B. Ph. Poppy capsules a pound are infused for 24 hours in 2 pints of boiling distilled water, then percolated till about a gallon is obtained; this is evaporated to a pint; when cold rectified spirit 2 oz. is added; after 24 hours it is filtered, and then evaporated to a pill extract. Dose, 2—5 grains.

**E. pareiræ**, B. Ph. An aqueous extract of pareira bark. Dose, 10—20 grains.

**E. pareiræ fluidum**, U.S. Ph. Pareira 100 grammes treated with diluted alcohol and glycerin 20 grammes as in *E. aconiti fluidum*, to make 100 c.c., reserving 85 c.c. Dose, 60—120 minims (3.75—7.5 c.c.).

**E. pareiræ liquidum**, B. Ph. Pareira root 1 lb. is digested in a pint of boiling water for 24 hours, then percolated till it is exhausted, the liquor evaporated to 13 fl. oz., and when cold rectified spirit 3 fl. oz. added, and filtered. Dose, 5—2 fl. drachms.

**E. physostigmatis**, B. Ph. Calabar bean 1 lb. is macerated for 48 hours in a pint of rectified spirit, then percolated with 3 pints more spirit; the residue is pressed, mixed with the percolate, filtered, and evaporated to a soft extract. Dose, 1-16th— $\frac{1}{4}$  grain.

In U.S. Ph., physostigma 100 is treated with alcohol only as in *E. aconiti*, to make 100 c.c., reserving 90 parts.

**E. pilocarpii fluidum**, U.S. Ph. Pilocarpus 100 grammes treated with alcohol as in *E. aconiti fluidum*, to make 100 c.c., reserving 85 c.c. Dose, 15—30 minims (.9—1.9 c.c.).

**E. piperis fluidum**. The *Oleoresina piperis*.

**E. podophylli**, U.S. Ph. Podophyllum 100 parts is macerated for 24 hours in a mixture of alcohol and water, 3 to 1, then percolated till 500 parts of tincture are obtained, which is evaporated to a pill consistence. Dose, 1—3 grains (.06—2 gramme).

**E. podophylli fluidum**, U.S. Ph. Podophyllum 100 parts treated with alcohol and water, 3 to 1, as in *E. aconiti fluidum*, to make 100 c.c., reserving 85 c.c. Dose, 5—15 minims (.3—9 c.c.).

**E. pruni virginiani fluidum**, U.S. Ph. Wild cherry 100 grammes, after soaking for 48 hours in 50 grammes of a mixture of water and glycerin, 2 to 1, is macerated in diluted alcohol for 48 hours, and is then percolated till exhausted; the first 80 c.c. is reserved, the next 120 c.c. is collected and evaporated to a thin syrup, the remainder of the percolate is separately evaporated to a thin syrup; the two are mixed and evaporated to a soft extract, this is dissolved in the reserved portion, and the fluid made up with diluted alcohol to 100 c.c. Dose, 30—60 minims (1.9—3.75 c.c.).

**E. pulsatillæ**. (G. *Küchenschellenex-*

*trakt*.) An extract of the fresh flowering herb of the *Anemone pratensis* and *A. pulsatilla*, made like *E. belladonnæ*, and formerly in the G. Ph. Dose, .06—2 gramme.

**E. puniceæ granatî**, Aust. Ph. G. *Granatirindeneextrakt*.) An alcoholic extract of pomegranate rind. Used against tapeworm. Dose, 10—25 grammes.

**E. purgans**. (L. *purgo*, to purge.) A watery extract made from the leaves of the *Hedera helix*, or ivy.

**E. quasîsæ**, B. Ph. A watery extract of quassia wood evaporated to pill consistence. Dose, 3—5 grains.

In U.S. Ph., 5 per cent. of glycerin is added.

In G. Ph., it is evaporated to an *E. siccum*.

**E. quasîsæ fluidum**, U.S. Ph. Quassia 100 c.c. treated with diluted alcohol as in *E. aconiti fluidum*, so as to make 100 c.c., reserving 90 c.c. Dose, 5—10 minims (.3—6 c.c.).

**E. quebracho**. Ten parts of the bark of *Aspidosperma quebracho* are macerated for eight days in 100 parts of alcohol, filtered, evaporated, dissolved in water, evaporated to dryness, and then dissolved in 20 parts of water. Used in dyspnoea and bronchial catarrh. Dose, 1—2 teaspoonfuls.

**E. quercetani**. The *E. colocynthis compositum*.

**E. quercus corticis**. The *Decoctum quercus* concentrated to the consistence of an extract.

**E. quiniæ**. An impure sulphate of quinine.

**E. ratanhæ**. The *E. kramerie*.

**E. ratanhiæ**, Aust. Ph. A dry watery extract of rhatany root. Dose, 5—1 gramme.

**E. rhamni cathartici**. The *Extrait de baies de nerprun*, Fr. Codex.

**E. rheî**, B. Ph. Rhubarb root 1 lb. is macerated for four days in a mixture of rectified spirit 10 fl. oz. and water 5 pints; after standing to deposit, it is filtered and evaporated to a pill consistence. Dose, 5—15 grains.

In U.S. Ph. the process is similar to that for *E. aconiti*, using alcohol and water only, and reserving the first 100 c.c., which is allowed spontaneously to evaporate to 50 c.c.

In G. P. (G. *Rhabarberextrakt*), the evaporation is carried to an *E. siccum*. Dose, 1—4 gramme as a tonic, 5—2 grammes as a purgative.

In Fr. Codex, 1000 grammes of rhubarb root is macerated for 24 hours in 5000 grammes of cold distilled water, expressed lightly, filtered, and evaporated to a syrupy consistence; the mare is mixed with 3000 grammes of cold water, expressed strongly, filtered, concentrated, mixed with the other product, and evaporated to a soft extract.

**E. rheî alcoholicum**. The *E. rheî*.

**E. rheî compositum**, G. Ph. (G. *zusammengesetztes Rhabarberextrakt*.) Extract of rhubarb 30 parts, e. of aloes 10 parts, resin of jalap 5 parts, and sapo medicatus 20 parts, moistened with spirit, mixed, and evaporated to an *E. siccum*.

**E. rheî fluidum**, U.S. Ph. Rhubarb 100 grammes treated with alcohol and water, 3 to 1, as in *E. aconiti fluidum*, to make 100 c.c., reserving 75 c.c. Dose, 5—30 minims (.3—1.9 c.c.).

**E. rhois glabræ fluidum**, U.S. Ph. *Rhus glabra* 100 grammes treated with alcohol

and glycerin 10 grammes as in *E. aconiti fluidum*, to make 100 c.c., reserving 80 c.c. Used for gargles and mouth washes.

**E. rosæ fluidum**, U.S. Ph. Red rose 100 grammes treated with alcohol and 10 grammes of glycerin as in *E. aconiti fluidum*, to make 100 c.c., reserving 75 c.c. Dose 60–120 minims (3.75–7.5 c.c.).

**E. rubi fluidum**, U.S. Ph. Rubus 100 grammes treated with alcohol and water and 20 grammes of glycerin as in *E. aconiti fluidum*, to make 100 c.c., reserving 70 c.c. Dose 30–60 minims (1.9–3.75 c.c.).

**E. Ruidi**. See *Rudius*, extract of.

**E. rumicis fluidum**, U.S. Ph. Rumex 100 grammes treated with diluted alcohol as in *E. aconiti fluidum*, to make 100 c.c., reserving 80 c.c. Dose, 60 minims (3.75 c.c.).

**E. sabineæ**, G. Ph. (*G. Sadebaumer-trakt.*) Sabine tops 20 parts macerated for 24 hours in a mixture of alcohol and water, 40 to 60, and again in a similar mixture, 20 to 30, the products mixed, and evaporated to an *E. spissum*. Dose, .02–.2 gramme.

**E. sabineæ fluidum**, U.S. Ph. Sabine 100 grammes treated with alcohol as in *E. aconiti fluidum*, to make 100 c.c., reserving 90 c.c. Dose, 3–8 minims (.18–.5 c.c.).

**E. sanguinariae fluidum**, U.S. Ph. Sanguinaria 100 grammes treated with alcohol as in *E. aconiti fluidum*, to make 100 c.c., reserving 85 c.c. Dose, 3–5 minims (.15–.3 c.c.).

**E. sanguinis bovin.** (*L. sanguis*, blood; *bovinus*, belonging to oxen.) The dried blood of the ox; given as a restorative.

**E. sarsæ liquidum**, B. Ph. Jamaica sarsaparilla digested in 7 pints of water at 160° F. for six hours and decanted; the residue digested in other 7 pints of water, 160° F., for the same time; express, mix the two liquids, filter, and evaporate to 7 fl. oz.; when cold add a fl. oz. of rectified spirit.

**E. sarsaparillæ compositum fluidum**, U.S. Ph. Sarsaparilla 75 grammes, glycyrrhiza 12 grammes, sassafras bark 10 grammes, mezereum 3 grammes, treated with alcohol and water, 1 to 2, and glycerin 10 grammes, as in *E. aconiti fluidum*, to make 100 c.c., reserving 80 c.c. Dose, 30–60 minims (1.9–3.75 c.c.).

**E. sarsaparillæ fluidum**. Same as *E. sarsæ liquidum*.

**E. saturni**. (*L. Saturnus*, a name for lead.) The *Liquor plumbi subacetatis*.

**E. scammoniae**. The *Scammonia resin*.

**E. scillæ**, G. Ph. (*G. Meerzwiebel-trakt.*) A spirituous extract of squills reduced to an *E. spissum*. Dose, .02–.1 gramme.

**E. scillæ alcooli paratum**. The *Extrait de scille*, Fr. Codex.

**E. scillæ fluidum**, U.S. Ph. Squill 100 grammes treated with alcohol as in *E. aconiti fluidum*, to make 100 c.c., reserving 75 c.c. Dose, 2–3 minims (.12–.18 c.c.).

**E. scobis hæmatoxyli**. (*L. scobis*, a shaving.) The *E. hæmatoxyli*.

**E. scutellarie fluidum**, U.S. Ph. Scutellaria 100 grammes treated with a mixture of alcohol and water, 2 to 1, as in *E. aconiti fluidum*, to make 100 c.c., reserving 80 c.c. Dose, 30–60 minims (1.9–3.75 c.c.).

**E. secalis cornuti**, G. Ph. (*G. Mutterkornextrakt.*) Ergot of rye 10 parts is twice macerated for six hours in 20 parts of the water;

the resulting liquids are mixed, strained, and evaporated to 5 parts; to it 5 parts of dilute spirit are added, shaken frequently for three days, filtered, and evaporated to an *E. spissum*. Dose, .1–.3 gramme.

**E. senegæ**. A spirito-aqueous extract. Was formerly in both the U.S. Ph. and the G. Ph. Dose, .2–.5 gramme.

**E. senegæ alcoholicum**. The *E. senegæ*.

**E. senegæ fluidum**, U.S. Ph. Senega 100 grammes is treated with alcohol and water, 2 to 1, as in *E. aconiti fluidum*, to make 100 c.c., with the addition of 2 grammes of water of ammonia, the reserve being 85 c.c. Dose, 1–5 minims (.06–.3 c.c.).

**E. senæ fluidum**, U.S. Ph. Senna 100 grammes treated with alcohol and water, 3 to 4, as in *E. aconiti fluidum*, to make 100 c.c., reserving 80 c.c. Dose, 1–4 fl. drachms (3.75–15 c.c.).

**E. serpentinae fluidum**, U.S. Ph. Serpentina 100 grammes treated with alcohol and water, 3 to 1, as in *E. aconiti fluidum*, to make 100 c.c., reserving 90 c.c. Dose, 20–30 minims (1.25–1.9 c.c.).

**E. siccum**, G. Ph. (*L. siccus*, dry.) An extract so hard that it may be powdered.

**E. spigellæ et senæ fluidum**. Fluid extract of spigelia 10 fl. oz., fluid extract of senna 6 fl. oz., oils of anise and caraway of each 20 minims. Formerly in U.S. Ph. Dose, 1 or more fl. drachms at intervals of an hour till it begins to purge.

**E. spigellæ fluidum**, U.S. Ph. Spigelia 100 grammes treated with diluted alcohol as in *E. aconiti fluidum*, to make 100 c.c., reserving 85 c.c. Dose, 60–120 minims (3.75–7.5 c.c.) for an adult; 10–20 minims (.5–1.25 c.c.) for a child of two years.

**E. spissum**, G. Ph. (*L. spissum*, thick.) An extract which when cold cannot be poured out.

**E. stillingie fluidum**, U.S. Ph. Stillingia 100 grammes treated with diluted alcohol as in *E. aconiti fluidum*, so as to make 100 c.c., reserving 85 c.c. Dose, 15–15 minims (.9–2.8 c.c.).

**E. stramonii**, B. Ph. (*G. Stechapfel-trakt.*) Stramonium seeds 1 lb. are treated with ether to free them from oil, then percolated with proof spirit until exhausted, and the percolate evaporated to a pill consistence. Dose, .15–.5 grain.

In U.S. Ph., stramonium is treated with alcohol alone as *E. aconiti*.

The *E. stramonii* formerly in the G. Ph. was made of the leaves. Dose, .01–.1 gramme.

**E. stramonii fluidum**, U.S. Ph. Stramonium seed 100 grammes is treated with alcohol and water, 3 to 1, as in *E. aconiti fluidum*, so as to make 100 c.c., reserving 90 c.c. Dose, 1–2 minims (.06–.12 c.c.).

**E. stramonii foliorum**. (*L. folium*, a leaf.) An alcoholic extract of stramonium leaves was formerly in the U.S. Ph. and in the G. Ph.

**E. stramonii seminis**. (*L. semen*, seed.) The *E. stramonii*.

**E. strychni**, G. Ph. (*G. Krähenaugen-extrakt.*) Nux vomica 10 parts digested for 21 hours in 20 parts of dilute spirit, expressed, and again digested in 15 parts and expressed, the two liquids mixed, and evaporated to an *E. siccum*. Dose, .05 gramme.

**E. strychni aquosum.** (L. *aqua*, water.) An aqueous extract of nux vomica formerly in the G. Ph. Dose, '02 gramme.

**E. strychni spirituosum.** The *E. strychni*, G. Ph.

**E. styrcis.** The *Styrax preparatus*.

**E. suc'ei glycyrrhizæ.** (L. *succus*, juice.) See *Extrait de suc de réglisse*, Fr. Codex.

**E. taraxaci.** B. Ph. The expressed juice of fresh dandelion root is allowed to deposit, the clear liquor heated to 212° F. for ten minutes, strained, and evaporated to a pill consistence. Dose, 5—30 grains.

In U.S. Ph. the fresh root is bruised with a little water, the juice expressed, and then evaporated.

In G. Ph. (G. *Löwenzahnextrakt*), 1 part of the dried plant is macerated for 48 hours in 5 parts of water and expressed, and again for 12 hours in a similar quantity; the two liquids are expressed, and evaporated to an *E. spissum*.

**E. taraxaci fluidum.** U.S. Ph. Taraxacum 100 grammes is treated with a mixture of alcohol and water, 2 to 3, as in *E. aconiti fluidum*, to make 100 c.c., reserving 85 c.c. Dose, 1—3 fl. drachms (3.75—11.25 c.c.).

**E. tenuë.** G. Ph. An extract having the consistence of fresh honey.

**E. theba'ici.** (L. *thebaicus*, of, or belonging to, Thebes, whence opium was procured.) The *E. opi*.

**E. trifolii fibrini.** G. Ph. (G. *Fieberskleeextrakt*.) Folia trifolii fibrini, being the leaves of *Menyanthes trifoliata*, are twice digested in five times their amount of boiling water, the liquors are mixed, and evaporated to an *E. spissum*.

**E. tritici fluidum.** U.S. Ph. Triticum 100 grammes treated with boiling water in a percolator till it is exhausted, the percolate evaporated to 80 c.c., mixed with alcohol 25 c.c., and set aside for 48 hours; the liquor is then filtered and made up to 100 c.c. by alcohol and water, 1 to 4. Dose, 3—6 fl. drachms (11.25—22.5 c.c.).

**E. uvæ ursi fluidum.** U.S. Ph. Uva ursi 100 grammes treated with alcohol and 2 grammes of glycerin as in *E. aconiti fluidum*, to make 100 c.c., reserving 70 c.c. Dose, 30—60 minims (1.9—3.75 c.c.).

**E. valerianæ.** (G. *Baldrianextrakt*.) A spirituous extract formerly in the U.S. Ph. and the G. Ph.

**E. valerianæ fluidum.** U.S. Ph. Valerian 100 grammes treated with alcohol and water, 2 to 1, as in *E. aconiti fluidum*, to make 100 c.c., reserving 85 c.c. Dose a fl. drachm (3.75 c.c.).

**E. vera'tri viridis fluidum.** U.S. Ph. *Veratrum viride* 100 parts treated with alcohol as in *E. aconiti fluidum*, to make 100 c.c., reserving 90 c.c. Dose, 1—2 minims (.06—12 c.c.).

**E. vibur'ni fluidum.** U.S. Ph. Viburnum 100 grammes treated with alcohol and water, 2 to 1, as in *E. aconiti fluidum*, so as to make 100 c.c., reserving 85 c.c. Dose, 30—60 minims (1.9—3.75 c.c.).

**E. xanthoxyl fluidum.** U.S. Ph. Xanthoxylum 100 grammes treated with alcohol as in *E. aconiti fluidum*, to make 100 c.c., reserving 90 c.c. Dose, 30—60 minims (1.9—3.75 c.c.).

**E. zingib'eri's æthe'reum.** The *Oleoresina zingiberis*.

**E. zingib'eri's fluidum.** U.S. Ph.

Ginger 100 grammes treated with alcohol as in *E. aconiti fluidum*, to make 100 c.c., reserving 90 c.c. Dose, 10—20 minims (.6—1.25 c.c.).

**Extra-current.** See *Current, extra*.

**Extrafoliaceus.** (L. *extra*, without; *folium*, a leaf. F. *extrafoliace*.) Without or external to the leaf; on the outside of a leaf. Applied to stipules situated below the foot-stalk.

**Extrafoliate.** Same as *Extrafoliaceus*.

**Extragen'eous.** (L. *extra*; *genus*, a race.) Belonging to another kind or race.

**Extrait.** (F., from L. *extractus*, part. of *extraho*, to draw out.) An *Extract*.

**E. alco'olique de digitale.** Fr. Codex. The *Extractum digitalis alcoole paratum*.

**E. d'absinthe.** Fr. Codex. An extract of the tops of the *Artemisia absinthium*. Made like *E. de digitale*.

**E. d'aconit.** Fr. Codex. See under *Extractum aconiti*.

Also, an extract made as *Extractum cicuta*.

**E. d'ag'arie blanc.** Fr. Codex. An extract of the *Polyporus officinalis*. Prepared as *E. de scille*.

**E. d'an'émone pul'satile.** Fr. Codex. An extract of the leaves of the *Anemone pulsatilla*. Made as *E. alcoolique de digitale*, Fr. Codex.

Also, an extract made as *Extractum cicuta*.

**E. d'ar'moise.** Fr. Codex. An extract of the leaves of *Artemisia vulgaris*. Made like *E. de digitale*.

**E. d'au'née.** Fr. Codex. An extract of the root of *Imula helenium*. Made like *E. de gentiane*.

**E. de baies de ner'prun.** Fr. Codex. (F. *baie*, a berry.) The bruised berries of *Rhamnus catharticus* are allowed to macerate in their juice for 24 hours, and then expressed, allowed to settle, strained, and evaporated to the consistence of honey.

**E. de baies de su'reau.** Fr. Codex. An extract of the berries of *Sambucus nigra*. Made as *E. de baies de nerprun*.

**E. de bardane.** Fr. Codex. An extract of the root of *Lappa tomentosa*. Made like *E. de gentiane*.

**E. de belladone.** Fr. Codex. An extract of the leaves of the *Atropa belladonna*. Prepared as *E. de alcoolique digitale*.

Also, an extract made as *Extractum cicuta*.

**E. de bis'torte.** Fr. Codex. An extract of the root of *Polygonum bistorta*. Made like *E. de gentiane*.

**E. de bour'rache.** Fr. Codex. An extract of the leaves of *Borrago officinalis*. Made like *E. de digitale*.

**E. de brou de noix.** Fr. Codex. An extract made of the green pericarps of the fruit of *Juglans regia*. Made as *Extractum cicuta*.

**E. de can'ca.** Fr. Codex. An extract of the root of the *Chioceeca anguifuga*. Prepared as *E. alcoolique de digitale*.

**E. de cam'omille.** Fr. Codex. An extract of the flowers of *Matricaria chamomilla*. Made like *E. de digitale*.

**E. de canthar'ides.** Fr. Codex. An extract of cantharides. Prepared as *E. de scille*.

**E. de casse.** Fr. Codex. See *Extractum cassia*.

**E. de chamæ'drys.** Fr. Codex. An extract of the tops of *Teucrium chamædrys*. Made like *E. de digitale*.

**E. de char'don be'nit.** Fr. Codex. An

# EXTRAIT.

extract of the leaves of *Cnicus benedictus*. Made as *E. de digitale*.

**E. de chic'orée**, Fr. Codex. An extract of the fresh leaves of *Cichorium intybus*. Made as *Extractum cicuta*.

**E. de chi'endent**, Fr. Codex. An extract of the root of *Triticum repens*. Made as *E. de gentiane*.

**E. de ci'guë**, Fr. Codex. The *Extractum cicuta*.

Also, an extract of the dried leaves of *Conium maculatum*. Made as *E. de digitale*.

**E. de colom'bo**, Fr. Codex. An extract of the root of *Cocculus palmatus*. Prepared as *E. de scille*.

**E. de co'loquinte**, Fr. Codex. An extract of the fruit of *Cucumis colocynthis*. Prepared as *E. de scille*.

**E. d'écorce d'orme**, Fr. Codex. An extract of the bark of *Ulmus campestris*. Prepared as *E. alcoolique de digitale*.

**E. d'écorce de racine de grenadier**, Fr. Codex. An extract of the bark of the root of the *Punica granatum*. Prepared as *E. alcoolique de digitale*.

**E. de digitale**, Fr. Codex. See *Extractum digitalis*, Fr. Codex.

**E. de douce-amère**, Fr. Codex. An extract of the stems of *Solanum dulcamara*. Made as *E. de gentiane*.

**E. de fève de Cal'abar**, Fr. Codex. An extract of the seeds of *Physostigma venenosum*. See *Extractum fabæ calabariensis*.

**E. de fiel de bœuf**, Fr. Codex. See *Extractum fœllis bovinæ*.

**E. de fu'meterre**, Fr. Codex. An extract of the fresh leaves of *Fumaria officinalis*. Made as *Extractum cicuta*.

**E. de gay'ac**, Fr. Codex. 1000 grammes of the rasped wood of *Guaiacum officinale* are boiled for an hour in 9000 grammes of distilled water and strained, and the residue again boiled with another 9000 grammes of distilled water. The mixed liquids are allowed to settle for 12 hours, and then evaporated till it is honey-like, when an eighth of its weight of alcohol is added, and the whole evaporated to the consistence of an extract.

**E. de geniè'vre**, Fr. Codex. 1000 grms. of bruised berries of *Juniperus communis* are macerated for 24 hours in 3000 grammes of distilled water, and strained with slight expression; the marc is macerated with another 3000 grms. of water for 12 hours; the liquids are filtered separately, and evaporated separately to a syrupy consistence, they are then mixed and evaporated to the consistence of a soft extract.

**E. de gentiane**, Fr. Codex. See under *Extractum gentiane*.

**E. de houblon**, Fr. Codex. An extract of the strobiles of *Humulus lupulus*. Prepared as *E. de scille*.

**E. de jus'quiame**, Fr. Codex. An extract of the leaves of *Hyoscyamus niger*. Prepared as *E. alcoolique de digitale*.

Also, an extract made as *Extractum cicuta*.

**E. de lai'tue v'reuse**, Fr. Codex. An extract of the fresh leaves of *Lactuca virosa*. Made as *Extractum cicuta*.

**E. de moné'sia**, Fr. Codex. An extract of the bark of *Chrysophyllum leucophorum*. Made as *E. de gentiane*.

**E. de narc'isse des prés**, Fr. Codex. An extract of the leaves of *Narcissus pseudo-*

*narcissus*. Prepared as *E. alcoolique de digitale*.

**E. de noix vo'mique**, Fr. Codex. See under *Extractum nucis vomice*.

**E. de pa'tience**, Fr. Codex. An extract of the root of *Rumex acutus*. Made as *E. de gentiane*.

**E. de pa'vot blanc**, Fr. Codex. An extract of the capsules of *Papaver somniferum album*. Prepared as *E. de scille*.

**E. de petite centa'urée**, Fr. Codex. An extract of the tops of *Erythraea centaureum*. Made like *E. de digitale*.

**E. de pis'senlit**, Fr. Codex. An extract of the fresh leaves of *Taraxacum dens-leonis*. Made as *Extractum cicuta*.

**E. de poly'ala**, Fr. Codex. An extract of the root of the *Polygala senega*. Prepared as *E. alcoolique de digitale*.

**E. de quass'amer**, Fr. Codex. An extract of the wood of *Quassia amara*. Made like *E. de gentiane*.

**E. de quinqu'ina**, Fr. Codex. See *Extractum cinchona*.

**E. de quinqu'ina calisay'a alcoolique**, Fr. Codex. An extract of the bark of *Cinchona calisaya*. Prepared as *E. alcoolique de digitale*.

**E. de quinqu'ina calisay'a aqueux**, Fr. Codex. See *Extractum cinchona calisaya*.

**E. de quinqu'ina gris huanu'co**, Fr. Codex. An extract of the bark of *Cinchona micrantha*. Prepared as *E. alcoolique de digitale*.

**E. de quinqu'ina rouge alcoolique**, Fr. Codex. An extract of the bark of *Cinchona micrantha* and *C. succinbra*. Prepared as *E. alcoolique de digitale*.

**E. de quinqu'ina rouge aqueux**, Fr. Codex. The *Extractum cinchona rubra*.

**E. de quinqu'ina sec**, Fr. Codex. The *Extractum cinchona siccum*.

**E. de ratan'hia**, Fr. Codex. An extract of the root of *Krameria triandria*. Prepared as *E. de gentiane*.

**E. de reg'lisse**, Fr. Codex. An extract of the root of *Glycyrrhiza glabra*. Made as *E. de gentiane*.

**E. de rhu'barbe**, Fr. Codex. See under *Extractum rhei*.

**E. de rhus radicans**, Fr. Codex. An extract of the fresh leaves. Made as *Extractum cicuta*.

**E. de rue**, Fr. Codex. An extract of the leaves of *Ruta graveolens*. Prepared as *E. alcoolique de digitale*.

**E. de sab'ine**, Fr. Codex. An extract of the leaves of *Juniperus sabina*. Prepared as *E. alcoolique de digitale*.

**E. de sa'fran**, Fr. Codex. An extract of the stigmata of *Crocus officinalis*. Prepared as *E. de scille*.

**E. de sa'pargneille**, Fr. Codex. An extract of the root of *Smilax medica* and *S. sarsaparilla*. Prepared as *E. alcoolique de digitale*.

**E. de sap'onaire**, Fr. Codex. An extract of the root of *Saponaria officinalis*. Made as *E. de gentiane*.

**E. de scille**, Fr. Codex. Dried bruised scales of the bulbs of *Scilla maritima* 1000 grammes are macerated for ten days in 6000 grammes of alcohol and filtered; the marc is then treated with 2000 grammes of alcohol for three days, expressed, and filtered; the two pro-

ducts are mixed and evaporated to the consistence of a soft extract.

**E. de sēmenes de belladone**, Fr. Codex. An extract of the seeds of *Atropa belladonna*. Prepared as *E. de sēmenes de stramoine*.

**E. de sēmenes de ciguë**, Fr. Codex. An extract of the seeds of *Conium maculatum*. Made as *E. de sēmenes de stramoine*.

**E. de sēmenes de colchique**, Fr. Codex. An extract of the seeds of *Colechicum autumnale*. Made as *E. de sēmenes de stramoine*.

**E. de sēmenes de jusquame**, Fr. Codex. An extract of the seeds of the *Hyoscyamus albus*. Prepared as *E. de sēmenes de stramoine*.

**E. de sēmenes de stramoine**, Fr. Codex. 1000 grammes of the seeds of *Datura stramonium* are powdered, digested for some hours, at a gentle heat, with 3000 grammes of alcohol, and then strained with expression; the marc is then digested with another 3000 grammes of alcohol and strained; the products are mixed, filtered, and evaporated; the product is dissolved in four times its weight of cold distilled water, filtered, and evaporated in a water bath to a firm consistence.

**E. de sēné**, Fr. Codex. An extract of the leaves of *Cassia acutifolia*. Made as *E. de digitale*.

**E. de stramoine**, Fr. Codex. An extract of the fresh leaves of *Datura stramonium*. Made as *Extractum cicute*.

**E. de suc de réglisse**, Fr. Codex. Commercial liquorice juice dissolved in water, filtered, and evaporated.

**E. de trêfle d'eau**, Fr. Codex. An extract of the fresh leaves of *Menyanthes trifoliata*. Made as *Extractum cicute*.

**E. de valériane**, Fr. Codex. An extract of the root of *Valeriana officinalis*. Made like *E. alcoolique de digitale*.

**E. d'ipeacacuanha**, Fr. Codex. An extract of the root of *Cephaelis ipeacacuanha*. Prepared as *E. alcoolique de digitale*.

**E. d'opium**, Fr. Codex. See under *Extractum opii*.

**E. éthéré de cantharides**. An extract of cantharides made as *Extractum athericum filicis maris*.

**E. éthéré de fougère mâle**, Fr. Codex. The *Extractum athericum filicis maris*.

**E. éthéré de ga'rou**, Fr. Codex. The *Extractum athericum gaidii*.

**E. éthéré de sēmen-contra**, Fr. Codex. An extract of the heads of *Artemisia contra*. Made as *Extractum athericum filicis maris*.

**Extralobular**. (L. *extra*; *lobulus*, a small lobe.) Situated on the outside of a lobule.

**Extramedullary**. (L. *extra*; *medulla*, marrow.) Outside the spinal cord.

**Extra-muscular**. (L. *extra*; *musculus*, a muscle.) On the outside of a muscle.

**E. stimulation**. Remak's term for Dubouche's indirect muscular faradisation.

**Extraneous**. (L. *extraneus*, that which is without.) Existing outside a thing, not essentially belonging to a thing.

**E. body**. A substance which is unnaturally present in some part of the tissues or in one of the cavities of the body.

**Extraordinary**. (L. *extra*, beyond; *ordinarius*, usual.) Unusual.

**E. ray**. See *Ray*, extraordinary.

**E. refraction**. See *Refraction*, extraordinary.

**E. wave**. See *Wave*, extraordinary.

**Extrapelvic**. (L. *extra*, without; *pelvis*.) Situated or being on the outside of the pelvis.

**Extraperitoneal**. (L. *extra*.) Outside the peritoneum.

**Extrapolar**. (L. *extra*, on the outside; *polus*, the end of an axis.) Outside, or external to, a pole.

**E. currents**. Currents in an electrotonised nerve outside the poles of the battery producing the electrotonus. They have the same direction as the polarising current.

**Extrastapedial cartilage**. (L. *extra*, without; *stapes*, the bone of that name.) The anterior third of the cartilaginous columella of the embryo of some animals, as frogs; it is connected with the fibres of the membrana tympani.

**Extrathoracic**. (L. *extra*; *thorax*, the chest.) On the outside of the chest.

**Extratympanic**. (L. *extra*; *tympanum*, a drum.) Outside the tympanum of the ear.

**Extrauterine**. (L. *extra*; *uterus*, the womb.) Outside the womb.

**E. conception**. (L. *conceptio*, pregnancy.) Same as *Pregnancy*, *extruterine*.

**E. foetation**. (L. *foetus*, offspring.) Same as *Pregnancy*, *extruterine*.

**E. life**. The life of an animal after it has breathed, in contradistinction to its life before birth and before it has performed that act.

**E. pregnancy**. See *Pregnancy*, *extruterine*.

**Extravasated**. (L. *extra*, without; *vas*, a vessel.) Escaped from the inside to the outside of a vessel.

**E. blood**. Blood which has escaped from its natural cavity or channel by rupture of its walls.

**Extravasation**. (L. *extra*, without; *vas*, a vessel. F. *extravasation*; I. *extravasamento*; S. *extravasacion*; G. *Austrutung*.) The escape or effusion of a fluid, normal or abnormal, from its proper vessel or receptacle.

Also, the fluid thus effused.

**E. cyst**. See *Cyst*, *extravasation*.

**E. of blood**. The escape of blood from its containing vessel into the surrounding structures without any communication with the outer surface.

**E. of feces**. The escape of feces from the intestine into the peritoneal cavity from wound, rupture, or ulceration of the walls of the gut.

**E. of urine**. See *Urine*, *extravasation of*.

**Extravasatum**. (L. *extra*; *vas*.) Extravasated blood.

**Extravasation**. Same as *Extravasation*.

**Extravertebrated**. (L. *extra*; *vertebra*, a spine-bone.) A term applied to Articulate in reference to the similarity of the segments of the outer or exo-skeleton to the vertebral rings of the Vertebrata.

**Extremity**. (L. *extremitas*, the end of a thing; from *extremus*, superl. of *exter*, outward. F. *extrémité*; I. *estremità*; S. *extremidad*; G. *Extremität*.) The end or termination of a thing. Term for any one of the four limbs of animals, distinguished from the other divisions

of head and trunk; and farther distinguished in man into upper and lower, in other animals into anterior and posterior.

**E., lower.** The leg of man and monkeys.

**E., upper.** The arm of man and monkeys.

**Extrin'sic.** (Old F. *extrinseque*; from L. *extrinsecus*, from without; from *exter*, on the outside; *secus*, postfix signifying side.) External, outward, not essentially belonging to or connected with.

**E. limb-mus'cles.** Those muscles which are attached in part to the trunk and in part to the limbs.

**Extraction.** (L. *extra*, without; *duco*, to lead, or draw.) A drawing out or extraction.

**Extrophy.** (Ἐκστρέφω, to turn or invert.) Same as *Extrophy*.

**Extrorsal.** Same as *Extrorse*.

**Extrorse.** (L. *extra*, without; *versus*, turned.) Turned outwards, to the outside. A term applied to an anther when its line of dehiscence is turned away from the axis of the flower.

**Extroversion.** (L. *extra*, without; *verto*, to turn. F. *extroversion*.) That kind of malformation in which a part is turned the inside outwards. Applied particularly to such a condition of the urinary bladder, consisting in a congenital defect of the anterior wall of this organ and of the corresponding part of the abdominal parietes, so that the inner or mucous surface of the posterior portion of the bladder projects like a red tumour above the pubes, in which the orifices of the ureters are often seen like two papillae.

**E. of blad'der.** See *Bladder, extroversion of*.

**Extuberance.** (L. *ex*, out; *tuberans*, swelling out.) Same as *Protuberance*.

**Extuberant.** (L. *ex*, out; *tuberans*, swelling out.) Term for a straining of parts or of fluid through the umbilicus.

**Extumes'cence.** (L. *ex*, out; *tumesco*, to swell.) A swelling which projects.

**Extus'sio.** (L. *ex*, out; *tussio*, to cough.) The coughing up of phlegm.

**Exuber.** (L. *ex*, away from; *uber*, a breast that gives suck.) A weaned child.

**Exuberant.** (Old F. *exuberant*; from L. *exuberare*, to be in great abundance; from *ex*, meaning very; *uber*, fruitful.) Abundant; growing in excess.

**E. ul'cer.** See *Ulcer, exuberant*.

**Exudation.** (L. *exudo*, for *exsudo*, to sweat out; from *ex*, out; *sudo*, to sweat. F. *exsudation*; I. *essudazione*; S. *exsudacion*; G. *Ausschwitzung*.) The oozing of a more or less fluid substance through the walls of its natural receptacle.

Also, the material which has been exuded.

**E., active.** Exudation caused by a more or less acute inflammatory action.

**E., albuminous.** (L. *albumen*, white of egg.) A serous exudation containing much albumin.

**E. cells.** Same as *Corpuscles, exudation*.

**E. cor'puscles.** See *Corpuscles, exudation*.

**E., croup'o-hæmorrhag'ic.** (*Croup*; Gr. *αιμορραγία*, violent bleeding.) A croupous exudation containing blood.

**E., croup'ous.** Same as *Croupous membrane*.

**E., croup'ous-diphtherit'ic.** An exu-

dation which partakes in varying proportions of the characters of *E., croupous* and *E., diphtheritic*.

**E. cyst.** See *Cyst, exudation*.

**E., diphtherit'ic.** (Διφθερία, a prepared hide. G. *diphtheritisches Exsudat*.) Same as *Diphtheritic membrane*.

**E., fibrino-hæmorrhag'ic.** (*Fibrin*; Gr. *αιμορραγία*, bleeding.) A fibrinous exudation containing red blood-corpuscles.

**E., fibrinous.** (*Fibrin*. G. *fibrinoses Exsudat*.) Inflammatory exudation containing fibrin or fibrinogen, which coagulates into fibres.

**E., fibro-pu'rulent.** A fibrinous exudation containing many pus globules.

**E., free.** An exudation from a free surface, as that of the skin and the mucous membranes, or from the walls of a natural cavity, as the pleura or peritoneum.

**E., hæmorrhag'ic.** (*Αιμορραγία*, violent bleeding.) An inflammatory effusion containing red blood-corpuscles, with little serum and few leucocytes.

**E., inflam'matory.** The fluid which oozes from the blood-vessels of an inflamed part into its tissues and from its free surface. It consists largely of the serum of the blood, containing albumin, fibrin or fibrinogen, mucin, leucocytes, and sometimes red blood-corpuscles.

**E., interstitial.** (L. *interstito*, to stand between.) Exudation into the substance of an organ or tissue. This form is by some called *E., parenchymatous*, and the term *E., interstitial*, is confined to the exudation which separates tissues or layers of tissues from each other.

**E., mu'cinous.** (*Mucin*.) The exudation from an inflamed mucous surface in its early stages, which contains mucin.

**E., mu'co-hæmorrhag'ic.** (L. *mucus*, slime; Gr. *αιμορραγία*, violent bleeding.) A mucous exudation tinged with blood.

**E., mu'co-pu'rulent.** A mucous exudation containing a variable quantity of pus.

**E., mucous.** (L. *mucus*, slime. G. *schleimiges Exsudat*.) The exudation from the surface of an inflamed mucous membrane. It consists of an increased secretion of the ordinary mucus mixed with the inflammatory exudation.

**E., parenchymatous.** (Παράγχυμα, that which is poured in beside.) Exudation into the structure of an organ or tissue.

**E., pas'sive.** (F. *passif*; from L. *passivus*, part of *putior*, to suffer.) A non-inflammatory exudation due to feebleness of vessel-walls, to a dependent position, and such like.

**E., plastic.** (Πλαστικός, fit for moulding.) A term applied sometimes to *E., fibrinous*, and sometimes to *E., croupous*.

**E., pu'ro-hæmorrhag'ic.** (L. *pus*, matter; Gr. *αιμορραγία*, violent bleeding.) A purulent exudation stained with blood.

**E., pu'rulent.** (L. *pus*, matter. G. *eitriges Exsudat*.) The formation of pus on a free surface.

**E., se'ro-fi'brinous.** A fibrinous exudation which contains an excessive amount of serum.

**E., se'ro-pu'rulent.** A serous exudation containing some pus.

**E., se'rous.** (L. *serum*, the watery part of blood. G. *seröses Exsudat*.) A watery exudation, either inflammatory or non-inflammatory.

**Exu'dative.** (L. *exudo*, to sweat or drop

out.) That which is the product of exudation, or which has been exuded.

**E. softening.** A term for the form in which the transudate from the liquor sanguinis coagulates in parenchymatous tissues and organs in inflammation constituting what has been called inflammatory softening.

**Exulceratio.** Same as *Exulceration*.

Also, a synonym of *Echthima*.

**E. ani.** (*L. anus*, the fundament.) Ulceration about the anus.

**E. intestino-rum.** (*L. intestina*, the bowels.) Ulceration of the bowels.

**E. recti.** (*L. rectum*, the bowel of that name.) Ulceration of the rectum.

**E. ventriculi.** (*L. ventriculus*, the stomach.) Ulceration of the stomach.

**Exulceration.** (*L. exulcero*, to make sore. *F. exulceration*; *G. Verschränkung*.) A soreness. Applied generally to the early state or commencement of ulceration; a slight and superficial ulceration.

**Exunguiculate.** (*L. ex*, neg.; *unguis*, a nail. *F. exunguiculi*.) Having no nails.

**Exungulate.** (*L. exungulo*, to loose the hoof; from *ex*, out; *unguis*, a nail.) To remove or cut down superfluous nails.

**Exustio.** (*L. exustus*, part. of *exuro*, to burn up.) A synonym of *Cauterisation*.

**Exutive.** (*L. exutus*, from *exuo*, to shake off.) Applied to a seed or plant which does not possess the usual integument.

**Exutorium.** (*L. exutus*, part. of *exuo*, to draw out.) An issue.

**Exutory.** Same as *Exutorium*.

**Exuviability.** (*L. exuvia*, things cast off. *F. exuviabilité*.) The faculty enjoyed by certain animals of changing the skin periodically by casting it off.

**Exuviae.** (*L. exuvia*, from *exuo*, to put off.) Things cast off.

A term applied to the cast-off epidermis of certain animals, such as caterpillars, lizards, and snakes.

**Exuviation.** (*L. exuvia*.) The act of casting off; as the skins of caterpillars and serpents at stated intervals, or the deciduous teeth.

**Exuvium.** See *Exuvia*.

**Eye.** (*Sax. edge*; *Dut. oog*; *Dan. öie*; *Swed. öga*; *G. Auge*; *L. oculus*, dim. of an old *oculus*; *Gr. ōkos, ōkos*; *Sans. aksha*; from Aryan root *ak*, to see; *F. œil*, from *L. oculus*; *I. occhio*; *S. ojo*.) The organ of sight.

In Botany, an undeveloped bud, especially applied to those in a potato tuber.

The name eye has been applied to the pink and other species of *Dianthus*, from the eye-shaped marking of the corolla.

**E., accommodation of.** See *Accommodation of eye*.

**E., anaemic protrusion of.** (*'Avai-uos*, bloodless; *L. protrudo*, to thrust forth.) A term for *Graves' disease*.

**E., appendages of.** (*L. appendix*, an appendage.) These include the eyelids, eyebrows, and lachrymal apparatus.

**E., apple.** A prominent eye.

**E., apple of.** Originally probably applied to the globe of the eye, from its shape; but very generally applied to the pupil alone.

**E., artificial.** (*L. artificialis*, of art.) A thin shell or concavo-convex piece of glass or enamel, coloured in imitation of a natural eye, which

is introduced beneath the lid when an eye has been enucleated. It may be placed in position by inserting the upper edge of the shell beneath the upper lid, and then drawing down the lower lid till the lower edge slips beneath it. It should be removed and cleaned at night. If the stump be a good one the artificial eye follows to a considerable extent the movements of the sound one.

**E.-ball.** See *Eyeball*.

**E. balm.** The *Hydrastis canadensis*.

**E., black.** Ecchymosis of the parts around the eye.

**E.-bright.** The *Euphrasia officinalis*.

**E.-brow.** See *Eye-brow*.

**E.s. buck.** The seeds of *Pavia rubra*, used to poison fish.

**E. capsule.** The same as *Tenon, capsule of*.

**E., cat's, amaurotic.** See *Amaurosis, cat's-eye*.

**E., comparative anatomy of.** The Sponges, Polycystineæ, and the whole series of Rhizopoda are destitute of any organ of vision, though it is not improbable, from their behaviour in regard to light, that they possess a diffused perception of light.

The Infusoria present in many instances a red or black stigma, usually regarded as an eyespot, at the anterior part of the body.

No organ of vision has been found in Polyyps, but in the *Medusæ* marginal ocelli, often coloured, are frequently present.

Amongst the Echinodermata the Asteroidea exhibit red points on gangliotic swellings at the termination of the ambulacral nerves, which are protected by pedicels, and consist of 80 to 200 ocelli, each of which is connected with a nerve fibre. The ocelli consist of a cone of red pigment cells, with a lens, which is embedded in them, and there is a cornea or transparent cuticular investment common to all. In the Echinidae five plates, placed symmetrically round the body, are each perforated by a hole, beneath which is a collection of pigment surrounded by a chain of nerve fibres and ganglia in the form of a circle, but there is no lens.

Amongst the Arthropoda all Crustaceans, with the exception of the Oniscoidea, and all fully-developed winged insects, have compound eyes, but they are absent in many wingless insects and in most larvae. The compound eyes of insects are always immovable, but those of many Crustacea are movable, and are supported on stalks. A few insects, as *Claviger* and *Braula*, are blind. Usually there are only two compound eyes, but in some Ephemerida, as in *Ascalaphus*, there are four; and in a few Hymenoptera and Diptera the two compound eyes are fused into one. Besides the compound eyes, which are subordinate to locomotion, most insects have eyes of simple construction, named ocelli. In structure the compound eyes present a nerve—the optic nerve—which expands into a gangliotic mass, or ganglion opticum, on which an immense number of nerve rods are placed side by side, surrounded and separated by pigment; at the outer extremity the nerve fibres expand into a body known as the crystalline cone, and over this is a cornea of considerable thickness, but this is often absent in the lower Crustacea. Muscular fibres sometimes run parallel to the crystalline cones, and hairs are sometimes found between the facettes of the cornea. The number of these facettes is about

25,000 in *Mordella*, 12,500 in *Libellula*, 17,300 in *Papilio*, 4000 in the *Musca domestica*, 50 in *Formica*, 1000 in *Limulus*, 2500 in *Cancer*.

In Branchiopoda eyes exist in the larva in the form of pigment spots, but these disappear in the adult stage.

In Lamellibranchiata the larvæ have pigment spots. In the adult these are lost, but, as in the siphonal eyes of *Solen*, secondary eyes, consisting of pigment specks, with neither nerves nor crystal cones, may develop, or true eyes may appear along the mantle edge, sessile or stalked, consisting of cornea, lens, and crystal cones embedded in pigment, and an iris with movable pupil. In *Pecten* and *Spondylus* there is a tapetum cellulosum; in *Pecten* each eye receives two branches from the circum-pallial nerve, and the number may vary from 8 to 90; they are often brightly coloured.

In Pteropods the eyes are rudimentary, being mere pigment specks on the visceral sac in *Hyalea*, but occasionally, as in *Cleodora*, these are pediculated and provided with lens-like bodies.

In Gasteropods the eyes are sessile or supported on stalks named ommatophores. They are globular or oval, have a cuticular cornea, a firm sclerotic with pigmented choroid prolonged anteriorly to form an iris. There is a lens resting on a vitreous, and the retina is bilaminar, consisting of crystal cones, fibres, and granules.

In Cephalopods the two eyes are of great size in *Decapoda*, less in the *Octopoda*. They occupy a cavity in the cephalic cartilage, from the margin of which springs a sclerotic, and then again becomes transparent anteriorly to form the cornea. Investing the eyeball externally is a silvery layer, the lamina argentea externa, and internally to the sclerotic is the argentea interna and a retina. The front of the choroid is thickened into a corpus ciliare, and there is an iris. Behind the lens there is a fluid vitreous humour. The retina consists of two layers. In *Nautilus* there is neither lens nor cornea, and the eye chamber is an open cup. In *Loligo* the cornea is perforated, and the sea-water bathes the front of the lens.

In Fishes the general form and structure of the eye is the same as in man. The chief differences are that the globe is much flattened anteriorly. The sclerotic is often cartilaginous, as in sharks and ganoid fishes. The ciliary processes are feebly marked, or, as in most Teleostei, altogether absent. The tapetum lucidum is a spot on the choroid of bluish-green colour and metallic lustre, which in *Selachii* is produced by groups of spicular crystals contained within the cells of the tapetum. Between the choroid and the sclerotic is a vascular plexus named the choroid gland. A remarkable vascular pigmented organ, non-continuous with the choroid, named the processus falciformis, projects into the vitreous near the entrance of the optic nerve. The free extremity enlarges, forming the campanula Halleri, and is attached to the posterior part of the capsule of the lens. It contains smooth muscular fibres. The lens is large and spherical.

In Amphibia the bulb is flattened anteriorly. The sclerotic is cartilaginous. The musculation of the iris and ciliary region is unstriated. The lens is spherical.

In Reptiles the general conformation of the eye is the same as in fishes, though the cornea is more curved. In Saurians and Chelonians there

is a sclerotic ring of bony plates near the cornea. The musculation of the ciliary region and iris is transversely striated. There is a rudimentary falciform process.

In Birds the characteristic features are that the bulb is divided into an anterior and posterior segment. The cornea is very convex. The anterior part of the sclerotic is supported by a circle of flat pieces of bone, forming the sclerotic ring. The muscular fibres of the iris and ciliary muscle are striated. In birds, the falciform process, noted above as appearing in fishes, is plaited, and is termed the pecten; it sometimes reaches as far as the capsule of the lens. In Struthionæ it is widened out into a pouch or marsupium.

In Mammals the eye is a nearly spherical body, occupying the fore part of the orbit on each side, posteriorly it rests on a bed of adipose tissue, and in front it is partially covered by the conjunctiva. In man it is moved by six muscles, the four recti and two oblique. In many mammals there is an additional muscle named the retractor. In birds and in reptiles other muscles, named the pyramidalis and quadratus, which move the nictatory membrane, arise from it. When removed from the body it presents three coats and three humours. The coats or tunics are the *Sclerotic* and *Cornea*, which confer strength and power of resistance upon it, the latter being transparent; the *Choroid*, which is the vascular coat, and which is placed in front to form the ciliary processes; and the *Retina*, which is the percipient surface on which the images formed by the refractive media are thrown, and which is continuous with the optic nerve. The three humours are the *Aqueous*, the *Crystalline lens*, and the *Vitreous*. The choroid is prolonged anteriorly, and forms a thin curtain—the *Iris*—which hangs vertically in the aqueous humour, and is pierced by a hole in the centre. At the point of junction of the cornea and sclerotic, and of the choroid and iris, is the ciliary muscle.

**E., concussion of.** (*L. concussio*, a shaking.) A sudden and violent shaking of the eye without obvious wound. There is temporary or permanent impairment or loss of vision; if this be permanent some lesion of the optic nerve or retina may be suspected.

**E., contusion of.** (*L. contusio*, to bruise.) A bruise of the eye, or the condition produced by a blow from some blunt instrument, not accompanied by obvious wound. There may be rupture of the vessels of the conjunctiva, causing subconjunctival ecchymosis, which may even advance upon the cornea. Blood may also be effused into the vitreous, or upon or beneath the retina. There may also be detachment of the retina. Loss of the power of accommodation and more or less amblyopia are usually observable.

**E., cylindrical.** An eye requiring to be corrected for astigmatism.

**E., development of.** The essential portions are epiblastic in origin. The organ commences as an outgrowth from the first cerebral vesicle, which afterwards becomes attached to the base of the midbrain. The outgrowth is at first of the nature of a vesicle supported upon a stalk. The superficial portion of the vesicle becomes thickened and invaginated to such an extent that the front wall comes into close contact with the posterior wall. A cup is thus formed—the optic cup. The inner or anterior

of these two walls is converted into the retina, whilst the posterior one becomes that pigment layer of the retina which was formerly known as the choroidal pigment layer. From the peculiar method in which this invagination is effected the cup is incomplete along its under surface, where a slit is left—the choroidal fissure; this slit afterwards closes up. At the mouth of the optic cup the epiblast thickens, and a portion becomes separated; this is the rudiment of the lens; it lies as a mass of cells in the mouth of the optic cup, with a layer of epiblastic cells in front of it and a space which separates it from the invaginated anterior wall behind. The anterior layer of epiblastic cells forms at a later period the anterior corneal epithelium. The mesoblast surrounding the optic vesicle forms a distinct investment, the internal layers becoming the choroid and the external the sclerotic. An outgrowth also passes into the cup, one portion extending between the lens and the epiblastic epithelium to form the cornea, the iris, and the capsular ligament, whilst another portion passing behind the lens forms the hyaloid and vitreous. The stalk of the vesicle becomes narrowed, and subsequently solid, to form the optic nerve.

**E., dimensions of.** The antero-posterior diameter of the globe of the eye varies from 23·7—24·8 mm. The length of the optic axis is about 22·8 mm. The horizontal transverse diameter is about the same as the optic axis, and the vertical diameter 0·23—0·75 mm. shorter. The internal axis of the eye, from surface to surface, is from 21·2—22·6 mm. The weight of the eye varies from 6·3—7·8 grammes. The sp. gr. 1·0302—1·091.

**E. drop.** A term for a tear.

**E., entozo'a in.** The entozoa that have been found in the eye are *Cysticercus cellulosæ*, *Echinococcus*, *Filaria lentis*, *Dracunculus loa*, and *Distoma*.

**E.-glass.** A hollow cup-shaped glass for applying lotions to the eye.

Also, see *Eyeglass*.

**E.-lash.** See *Eyelash*.

**E.-lid.** See *Eyelid*.

**E., luminous.** (*L. lumen*, light.) The appearance presented by an eye when the light entering it from behind the observer is reflected to him from the retina choroid.

Also, the appearance presented when the vitreous is filled with scales of cholesterol.

**E., mel'on.** A prominent eye.

**E. of Typhon.** (*L. Typhon*, same as Typhons, a giant, struck by Jupiter with his lightning and buried under Mount Etna.) The *Scilla maritima*.

**E. piece.** See *Eyepiece*.

**E.-probe.** Same as *Eyed probe*.

**E. protectors.** Instruments placed before the eye to shield it from excessive light, heat, dust, or other injurious agent. They may consist of plain transparent glass, or of glass coloured brown, green, yellow, grey, or neutral tint. They are also made of gauze, muslin, or crape, or they may be pieces of wood, horn, or other material, with a vertical or horizontal slit, or with a minute round hole. See *Stenopæic glasses*.

**E. root.** The *Bignonia ophthalmica*.

**E., sight of.** The pupil.

**E. stone.** A lachrymal calculus.

**E. tooth.** (*F. dent oculière*; *I. dente*

*occhieile*.) A term for a canine tooth, in consequence of the fang reaching towards the eye.

**E. vine.** The *Bignonia ophthalmica*.

**E. wa'ter.** A *Collyrium*.

**E., wa'tery.** A term for *Epiphora*.

**E., white of.** The sclerotic coat of the eye.

**E., wounds of.** These vary greatly in severity from slight cuts or scratches of the conjunctiva to extensive rupture of the cornea, sclerotic, and subjacent tissues. Punctured wounds are especially dangerous, on account of the likelihood of the occurrence of sympathetic ophthalmia, and this danger is greatest when the injury is in the ciliary region and when a portion of the iris or choroid is engaged in the wound. The presence of a foreign body can generally be recognised by taking into consideration the mode in which the wound has been inflicted, the existence of a wound in the coats, laceration of the iris, traumatic cataract, and blood in the anterior chamber. Small fragments may sometimes be recognised by the ophthalmoscope.

**Eye ball.** (*E. eye*; *ball*. *F. prunelle de l'œil*; *I. bulbo del oocchio*; *S. niña del ojo*; *G. Augapfel*.) The globe of the eye.

**E., dislocation of.** The change in position of the globe of the eye, resulting from one or other of the causes named under *E., protrusion of*, and preventing the affected eye from working harmoniously with the normal one.

**E., luxation of.** (*L. luxatio*, a pulling out of joint.) See *E., dislocation of*.

**E., muscles of.** In man the extrinsic muscles are the four *recti* and the two *obliqui*; the intrinsic are the *sphincter* and *dilatator pupillæ*, and the *ciliary* muscle.

**E., rupture of.** Term applied to lesion of the cornea or the sclerotic, with laceration of the super- and subjacent tissues, allowing the aqueous or vitreous, or both, to escape. If extensive, hemorrhage takes place into the interior of the eye, the iris is torn, the lens rendered opaque, and the eye is usually lost.

**E., protrusion of.** The thrusting forward of the globe of the eye, rendering it more prominent than natural. It may arise either from intraocular or extraocular disease. The chief causes have been thus given by Poland:—Congenital causes, including real protrusion, and apparent protrusion from shortening of levator palpebræ and lids; intraocular causes, including inflammation of the globe, phlebitic ophthalmitis, hydrophthalmus, tumours in the eye, which may be scrofulous, encephaloid, melanotic, osseous degeneration, or hydatid; intraorbital causes, including idiopathic and traumatic inflammation of connective tissue; suppurative and abscess, erysipelas and phlegmonous inflammation, foreign bodies, excessive development of fat, effusions of blood, venous congestion, paralysis of muscles of eyeball, or ophthalmoplegia, spasm of muscles of eyeball, as in tetanus, tumours, which may be encysted, hydatid, encephaloid, osseous, or aneurysmal; and lastly, extraorbital causes, such as nodes, and tumours, hydrocephalus, fungus of dura mater, polypi in frontal cells and diseases thereof, tumours of brain, diseases of the antrum, nasal polypi, exostosis, contraction of lids and eye slipping through, constituting hernia oculi.

**Eyebright.** The *Euphrasia officinalis*.

**Eyebrow.** (*Icel. auga-brun*. *F. sourcil*; *I. aglio, sopraciglio*; *S. ceja*; *G. Augenbraue*,

**Augenbraune.** A cushion of dense connective tissue covered with short, stiff hairs, which are directed outwards, and have an average length of 7–16 mm. The eyebrows are situated above the eyelids, and upon the superior margin of the orbit. They contain some fat and beneath the skin are the outermost rings of the *Orbicularis palpebrarum* muscle, and near the inner margin of the orbit is the *Corrugator supercilii*. The sensory nerves are branches of the frontal and lachrymal nerves. The eyelids fulfil the double purpose of protecting the eye from injury and of preventing the sweat of the brow from entering the eye.

**Eyed.** (*E. eye.*) Having an eye, or a hole called an eye.

**E. probe.** A probe with an eye-hole in one end of it.

**Eyedouche.** An instrument by means of which a stream of water or medicated fluid can be applied to the surface of the eye. In some forms a syringe is the impelling force; in others the force of gravity is utilised.

**Eye-glass.** (*F. loupe, lunette; I. occhiali.*) A concave or convex glass usually of discoid form worn in one eye, and intended to correct any error of refraction that may exist.

Also (*G. Collecting-glass, Collectivlinse*), the lens of an eyepiece of a compound microscope nearest to the eye of the observer; in the simplest form of compound microscope the eyepiece consists of the eyeglass only, there being no field-glass.

**Eye-irrigator.** (*L. irriquo, to conduct water.*) A coil of narrow lead tubing which can be readily bent to fit the orbit and the surface of the lids, and through which a constant current of warm or cold fluid is maintained.

**Eyelash.** (*F. cil; I. pelo del palpebra; G. Augenwimper.*) One of the hairs fringing the eyelids. These hairs are stiff and slightly curved; there are from 100–150 in the upper lid, and from 50–75 in the lower lid; the length varies from one fourth to half an inch, the upper ones being longer and thicker than the lower. The rate of growth is about one sixth of an inch in three weeks, and the total duration of life is from 100–150 days. Sebaceous glands of moderate size open into their follicles.

**E.s., evulsion of.** The act of pulling out an eyelash. It is usually effected with a broad-bladed, and very accurately ground and adjusted, pair of forceps. Only one lash should be extracted at a time, and it should be seized near the base, and pulled in a straight direction from the root, so that it is not broken and converted into a rigid bristle, which may occasion infinitely more irritation than the eyelash in its original condition.

**E.s., removal of.** The same as *E., evulsion of*.

**E.s., transposition of.** See *Cilia, transposition of*. In addition to the method mentioned under this head, the position of the eyelashes may be changed by cutting out a long strip of the edge of the lid containing the hair-bulbs and shifting it bodily to another position; and also by passing one, two, three, or more needles, armed with silk or carbolised gut, vertically between the skin and mucous membrane from the border of the lid to a distance of about half an inch, and tying the two ends together over the skin, which is thus thrown into wrinkles. The cicatrization which follows effects the eversion of the lashes.

**Eye'let.** (*F. œillet, a little eye; dim. of œil, an eye.*) A small hole to receive a lace or hook, as in a boot.

**E., Politzer's.** A small metallic eyelet for insertion into the membrana tympani to preserve an opening in cases where perforation of the membrane is considered advisable; the proceeding is not generally looked on with favour.

**Eyelid.** (*F. paupière; I. palpebra; S. palpebra; G. Augenlid.*) The movable cover of the eye. The eyelids are folds of the integument which act as a protective apparatus to the eye. They are rudimentary in fishes, and but slightly movable even in sharks. In Amphibia there are two, of which the lower and more movable is thin, and acts as a nictitating membrane. In Reptilia and Aves there is usually an upper and lower lid, with a nictitating membrane, but in some Saurians and in Ophidia, the eyelids form an annular fold, which is continued as a transparent membrane over the cornea, and is thrown off in the ecdysis of the skin. In Mammals the upper and lower lids become more developed, and the nictitating membrane degenerates in the higher classes, appearing in man and the primates only in the form of the plica semilunaris. In man the successive structures from without inwards are skin, with a few hairs, sebaceous glands, and sweat glands; subcutaneous connective tissue; ciliary portion of the orbicularis palpebrarum muscle, a detached portion of which near the margin of the lid is termed the muscle of Riolanus; the expanded tendon of the levator palpebræ muscle, which is attached to a dense layer of connective tissue named the tarsus; and mucous membrane, in which are imbedded the Meibomian follicles. The margins of the lids are flattened, and present near their anterior border a row of stiff, curved hairs, the cilia or eyelashes, and near their posterior border the openings of the Meibomian follicles; near their inner extremity the borders present a slight eminence, at the apex of which is the punctum lacrymale. The length of the fissure between the lids is in man about 30 mm., and the distance of the external canthus from the margin of the orbit 5–7 mm.

Also, a term for the spines round the ocellus of the Echinoidea.

**E., coloboma of.** (*Κολόβωμα*, the part taken away in mutilation.) A condition in which the upper or lower lid of one or both eyes is divided by a vertical fissure into two lateral halves. The division may be partial or complete. It may be congenital or result from accident.

**E.s., emphysema of.** The presence of air or gas in the connective tissue of the lids. It is recognised by the peculiar resilience given on palpation, attended with crepitation. It is generally the result of fracture of the bony walls of the nasal fossa, with laceration of the mucous membrane; or it may arise from rupture of the mucous membrane from violent sneezing or blowing of the nose.

**E., ever'ted.** (*L. e, out; verto, to turn.*) Same as *Ectropium*.

**E., inver'ted.** (*L. in, in; verto.*) Same as *Entropium*.

**E.s., twitching of.** See *Blepharospasm*.

**Eye'piece.** (*F. oculaire; G. Ocular.*) A lens or combination of lenses forming the ocular end of a compound microscope or a telescope. In the combination the lens nearest the eye is

the eyeglass, that furthest from the eye is the field-glass, and a diaphragm or annular stop is placed between them.

**E., Campani's.** Same as *E., Huyghenian*, which see.

**E., diaphragm.** (Διάφραγμα, a partition wall.) An eyepiece containing a diaphragm which can be made smaller or larger; this is accomplished by a series of small shutters worked by milled heads.

**E., erecting.** See *Erecting prism*.

**E., holosteric.** (Ὅλος, whole; στερεός, to make solid.) A modification of the *E., Huyghenian*, consisting of a solid cylinder of glass having the required curvatures ground on its ends.

**E., Huyghenian.** (*Huyghens*.) An eyepiece for the microscope or telescope consisting of two plano-convex lenses in a tube, with their plane faces to the eye; the focal length of the field-glass being three times that of the eyeglass, and their distance apart twice the focal length of the latter. The combination cannot, from the shortness of the focus of the eyeglass, be used to view an object directly, the image falling between the lenses; hence it is called a negative eyepiece. The field-glass receives the diverging cone of rays from the principal focus of the eyeglass, and forms on the approximate plane of the diaphragm a second image, which is magnified by the eyeglass. The interposition of the field-glass reduces the size of the image by a half to a third, and thus enables a larger

area of the field to be seen by means of the eyeglass.

Huyghens devised this eyepiece for the telescope, but Campani was the first to apply it to the microscope, and hence it is sometimes called by his name.

**E., Kellner's.** The form in which the field-glass, a doubly-convex lens, is placed in the focus of the eyeglass, which is a combination of a plano-convex of flint glass with a double-convex of crown-glass; it has no diaphragm.

**E., negative.** See under *E., Huyghenian*.

**E., positive.** See under *E., Ramsden's*.

**E., Ramsden's.** An eyepiece for the microscope or telescope, consisting of two plano-convex lenses, as in the *E., Huyghenian*, but differing from it in that the field glass has its convex face upwards and the eyeglass its plane face. As the focus falls outside the lenses this is called a positive eyepiece, and can be used to view an object directly. Its chief employment is in micrometry.

**E., spectroscopic.** See under *Spectroscope* and *Micro-spectroscope*.

**Eyestone.** The operculum of a mollusc, stated by Duglison to be inserted beneath the lids by the inhabitants of Guernsey to remove foreign bodies.

**Eysenhardtia.** A Genus of the Nat. Order *Leguminosae*.

**E., amorphi'des**, De Cand. (A. neg.; μορφή form; εἶδος, likeness.) Hab. Mexico. Root diuretic.

## F.

**F.** The sixth letter of the alphabet; a labio-dental consonant, produced by the apposition of the upper teeth to the lower lip whilst a current of air is expired.

Also, the initial letter of the word *Fiat* or *Fiant*, used in prescriptions, and signifying let it, or let them, be made.

Also, a contraction of *Fahrenheit*, indicating his thermometrical scale.

**F. h.** The initial letters of *Fiat haustus*, let a draught be made.

**F. l. a.** The initial letters of *Fiat lege artis*, let it be made according to the law of art.

**F. m.** The initial letters of *Fiat mistura* or *mixture*, let a mixture be made.

**F. s. a.** The initial letters of *Fiat secundum artem*, let it be made according to art.

**Fa'alin.** A native name, according to Thuret, in Africa for a plant the juice of which is used as an antidote to the bites of poisonous snakes.

**Fa'am.** Same as *Faham*.

**Faba.** (Probably originally *fag-ba*, from the root φάγειν, to eat; because they were used for food. *F. fève*; *I. fava*; *S. haba*; *G. Bohne*.) The bean, or seed, of the plant *Vicia faba*.

Also, a Genus of the Nat. Order *Leguminosae*. Also, a name for the *Oniscus asellus*, from its likeness to a bean when curled up.

**F., ægyptiaca.** (*F. fève d'Egypte*.) The fruit of the Egyptian bean plant, *Nelumbium speciosum*.

The seeds of the white lupin, *Lupinus albus*, are also known by this name.

**F. alba.** See *Faba alba*.

**F. bengalen'sis.** (*F. fève de Bengal*.) An irregular, wrinkled gall, of astringent taste, furnished by the *Terminalia citrina*, Roxb.

**F. calabarica.** (*Calabar*, a country on the West Coast of Africa. *F. fève du Calabar*; *I. fava di Calabar*; *G. Calabarbohne*.) The Calabar bean. See *Physostigmatis faba*.

**F. calabarica longa.** (*L. longus*, long.) The seed of *Physostigma cylindrospermum*.

**F. carica.** The fruit of the fig, *Ficus carica*.

**F. cathartica.** (Καθαρτικός, fit for cleansing.) A name for the seed of the *Jatropha curcas*.

**F. cras'sa.** (*L. crassus*, thick. *F. fève épaisse*.) A name for the *Sedum telephium*, or orpine.

**F. dul'cis.** (*L. dulcis*, sweet.) The *Cassia alata*.

**F. equina.** (*L. equinus*, belonging to the horse. *G. Pferdbohne*.) The horse bean, a variety of *Vicia faba*.

**F. febrifuga.** (*L. febris*, fever; *fugo*, to put to flight. *F. fève febrifuge*.) The same as *Faba Ignatii*. Also, the *Nux vomica*.

**F. ficul'nea.** (*L. ficulneus*, of the fig tree.) The white lupin, *Lupinus albus*.

**F. græ'ca.** The *Diospyros lotus*.

**F. Ignat'ii.** The seed of *Strychnos Sancti Ignatii*, Bergius. See *Ignatia*.

The term is also applied in Brazil to the seed of *Fevillea trilobata*.

**F. in'dica.** The same as *Faba Ignatii*.

**F. inver'sa.** (*L. inversus*, turned bottom upwards.) The orpine, *Sedum telephium*.

**F. ma'jor.** (*L. major*, greater.) A name for the garden bean, a variety of *Vicia faba*.

**F. mari'na.** (*L. marinus*, belonging to the sea.) A name for the *Umbilicus marinus*.

Also, a name of the seeds of *Mimosa scandens*.

**F. mi'nor.** (*L. minor*, less.) The horse bean, a variety of *Vicia faba*.

**F. pechu'rei.** See *Pichurim bean*.

**F. pechurim major.** (*L. major*, greater.) A name for the fruit of the *Nectandra pichurim major*.

**F. pechu'rim mi'nor.** (*L. minor*, less.) The bean of the *Nectandra pichurim minor*.

**F. pichu'rim.** See *Pichurim bean*.

**F. porci'na.** (*L. porcinus*, of a hog.) A name for the henbane, *Hyoscyamus niger*.

**F. purga'trix.** (*L. purgatrix*, cleansing.) A name for the bean of the *Ricinus communis*.

Also, the seed of *Mimosa scandens*.

**F. Sanc'ti Igna'tii.** (*L. sanctus*, holy.) Same as *F. Ignatu*.

**F. suill'a.** (*L. suillus*, of swine.) A name for the henbane, *Hyoscyamus niger*.

**F. ton'co.** The Tonka bean, the seed of *Diptyryx odorata*.

**F. tun'ka.** The Tonka bean, the seed of *Diptyryx odorata*.

**F. vulga'ris.** Münch. (*L. vulgaris*, common.) The *Vicia faba*.

**Faba'cea.** (*L. faba*.) An old term for a food made of the meal of beans.

**Faba'ceæ.** (*L. faba*.) A synonym of *Leguminosæ*.

**Faba'ceous.** (*L. faba*. *G. bohnen-artig*.) Of the nature of, or consisting of, or like to, beans.

Also, relating or belonging to the *Fabaceæ*.

**Faba'cia.** The same as *Fabacium*.

**Faba'cium.** (*L. faba*, a bean.) Old name for a kind of food prepared from beans.

**Fab'æ.** Plural of *Faba*.

**F. alb'æ.** (*L. albus*, white. *G. weisse Bohnen*, *Schminckbohnen*.) The seeds of *Phaseolus vulgaris*.

**F. caca'o.** The seeds of *Theobroma cacao*. Cacao nuts. See *Cocœa*.

**F. coffe'æ.** Coffee beans. See *Coffee*.

**Fabagell'a.** (Dim. of *L. faba*, a bean.) The *Zygophyllum fabago*.

**Fabagin'ea.** (*L. faba*.) The same as *Fabago*.

**Faba'go.** (*L. faba*.) Name for the *Zygophyllum fabago*.

**Fabaria.** (*L. faba*, a bean; from its resemblance.) A name for the *Sedum telephium*, or orpine.

**F. cras'sula.** (*L. dim.* of *crassus*, thick.) The *Sedum telephium*.

**F. teleph'ium.** The *Sedum telephium*.

**Fabell'æ.** (*L. fabella*, for *fabula*, dim. of *faba*, a bean.) A name for the sesamoid bones in the tendon of the gastrocnemius muscle of the dog and other animals.

**Fab'in.** (*L. faba*, a bean.)  $C_{19}H_{15}N$ . An alkaloid said to have been obtained as a product in the distillation of beans.

**Fabrica androg'yna.** (*L. fabrica*, a fabric; *Gr. ἀνδρόγυνος*, common to men and women.) The state of being hermaphrodite.

**Fabric'ius, Jerome,** of the noble family of Aquapendente, or Hieronymus ab Aquapendente. An Italian anatomist and surgeon, born 1537, died 1619. He discovered the valves of the veins.

**Fabric'ius, William,** surnamed Hildanus, from Hilden, a village near Cologne, in Germany, where he was born in 1560, he died at Rome in 1634. He invented and improved a large number of surgical instruments.

**Fabrorum aqua.** (*L. faber*, a workman in any hard matter, or a smith; from *facio*, to make; *aqua*, water.) Water in which iron is quenched; forge water, forming a mild chalybeate.

**Fab'ula.** (*L. fabula*, dim. of *faba*, a bean.) A small bean.

**Facald'ina.** A name given to a form of epidemic syphilis observed by Zecchinelli at the end of the last and the beginning of the present century in Facaldo, a village of the Province of Belluno, in the Austrian Tyrol; it appeared also in the villages of Tassa and Manzoni. It seems to have been introduced there in 1786 by a female beggar who was afflicted with a venereal skin disease, ulcers and condylomata of the vulva, and osteocopic pains, though some have ascribed it to another source. It was propagated by sexual intercourse, by simple contact, and by heredity, it was supposed. The disease began in adults with ulcerating pustules of the genitals, and in children with similar ulcerations of the throat and nose, which latter was often destroyed; serpiginous ulcerations appeared on the skin of the arms, neck, and shoulders, which healed on one side and spread widely on the other; osteocopic pains and gummata were rare, but exostoses were frequent, as well as blennorrhagia, condylomata, and buboes. The mortality was great at first, but the disease gradually died out, probably in consequence of sanitary measures.

**Face.** (*F. face*; from *L. facies*, the face; from the Aryan secondary root *bhas*, to shine; from *bha*, to shine. *L. faccia*; *S. cara*; *G. Gesicht*.) The anterior and lower part of the head of an animal. The human face in popular language extends to the roots of the hair and includes the forehead; but anatomically it ends at the eyebrows. The skin of the face is in parts very thin and moves easily over the subjacent tissues, as in the lids, whilst in others it is thick and firmly adherent to the parts beneath, as in the eyebrows and chin; many muscles terminate in it, by which the expression of the emotions is effected. It is almost everywhere highly vascular and sensitive, and the variations in the quantity of blood its vessels contain are represented by different degrees of pallor and redness. The blood-vessels are to a remarkable degree under the control of the vasomotor system, to the influence of which the phenomena of blushing are due.

Also, the surface of a thing, as an organ of the body.

Also, the variously formed small flat surfaces or planes of a crystal.

Also, the plane surface forming the end of any solid.

In Botany, that side of a seed which is most nearly parallel with the axis of a compound fruit, or the ventral suture or sutural line of a simple fruit. It is opposite to the back.

Also (*G. Fläche*), the surfaces of a leaf.

Also, the surface of an anther opposite to that to which the connective is attached.

**F. ague.** The same as *Tic douloureux*.

**F. ar'teries oi.** These are superficial:—the facial, transverse facial, supraorbital, nasal,

palpebral, and frontal arteries; and deep:—the inferior dental, deep anterior temporal, masseteric, buccal, superior dental, pterygoid, superior palatine, vidian, pterygo-palatine, spheno-palatine, inferior palatine, infraorbital, and other smaller branches of the internal maxillary artery.

**F., atrophy of, progressive.** See *Facial atrophy, progressive*.

**F., atrophy of, unilateral.** (*L. unus*, one; *latus*, the side.) Morris's term for *Facial atrophy, progressive*.

**F., bones of.** These are fourteen in number in man, and are the two nasal, two superior maxillary, two malar, two lachrymal, two inferior orbital, and two palatine bones, the vomer, and the inferior maxillary bone, in which thirty-two teeth are implanted.

In many animals, as in birds, these are premaxillary or intermaxillary bones. The pterygoid bones are separate from the sphenoid. There is a quadratojugal bone, and there may be one or more supraorbital and postorbital ossifications.

**F., capillaries of.** (*L. capillus*, a hair.) In addition to the ordinary capillary blood-vessels intermediate between the veins and the arteries, Pucquet has described short, wide communicating canals of a larger size, which admit a free flow of blood.

**F., commissural.** (*L. commissura*, a bond; from *committo*, to join.) The surfaces which are apposed to each other when two carpi are united.

**F., development of.** The formation of the face is effected by the downward and forward growth from the front and base of the primordial cranium, of the median fronto-nasal, and of the lateral maxillary and mandibular plates, and more deeply by the development of parts in connection with the cranio-facial axis which is formed by the spheno-ethmoid extension of the trabeculae cranii. From these are developed the external nose, lips, and cheeks, the jaws and palate, the nasal fossae, oral and orbital cavities, and the auricle, auditory meatus, and tympano-Eustachian passage, with the various sinuses named sphenoid, ethmoid, frontal, and maxillary. All these parts originate in mesoblastic tissue, and are covered or lined by epiblast, except the tympano-Eustachian tube, which has a hypoblastic lining.

**F., dominant.** (*L. dominans*, part. of *dominor*, to bear rule.) The largest plane surface of a crystal.

**F., dorsal.** (*L. dorsum*, the back.) In a leaf the same as *F., inferior*.

**F., external.** (*L. externus*, outward.) In a leaf the same as *F., inferior*.

**F., inferior.** (*L. inferior*, lower.) The dorsal surface of a leaf; or that surface on which the median nerve projects.

**F., internal.** (*L. internus*, inner.) In a leaf the same as *F., superior*.

**F., lymphatics of.** The superficial lymphatics from the frontal region accompany the frontal vessels, then pass obliquely across the face, running with the facial vein, pass through the buccal glands on the surface of the buccinator muscle, and join the submaxillary lymphatic glands, which also receive the lymphatics from the lips. The deep lymphatics of the face are derived from the mucous membrane of the nose, mouth, and pharynx, and the contents of the

temporal and orbital fossae. They accompany the branches of the internal maxillary artery and terminate in the deep parotid and cervical lymphatic glands.

**F., muscles of.** These are divided into sets, belonging to various named regions, viz. the palpebral region, including the orbicularis palpebrarum, corrugator supercilii, levator palpebrae and tensor tarsi; the orbital region, including the four recti, two obliqui, and levator palpebrae; the nasal region, including the pyramidalis nasi, levator labii superioris alaeque nasi, dilator nasi, anterior and posterior compressor nasi, compressor narium minor, and depressor alae nasi; the superior maxillary region, including the levator labii superioris, levator anguli oris, zygomaticus major and minor; the inferior maxillary region, including the levator labii inferioris, depressor labii inferioris, and the depressor anguli oris; the intermaxillary region, including the orbicularis oris, buccinator, and risorius; the temporo-maxillary region, including the masseter and temporal muscles; and the pterygo-maxillary region, including the internal and external pterygoids.

**F., nerves of, motor.** The third, the fourth, part of the fifth, the sixth, and part of the seventh nerves. The motor nerve of the muscles of expression is the facial; of the muscles of mastication, the third division of the fifth.

**F., nerves of, sensory, general.** Almost the whole of the nerves of general sensibility proceed from the fifth nerve; at the lower and outer part of the face are a few filaments from the cervical plexus, and at the hinder part of the mouth are branches of the glossopharyngeal and the pneumogastric.

**F., nerves of, sensory, special.** The olfactory for smell, the optic for sight, and parts of the lingual, the glossopharyngeal, and the pterygo-palatine, for taste.

**F., nerves of, sympathetic.** These are derived from the superior cervical ganglion, and secondarily from the ophthalmic, otic, spheno-palatine, and submaxillary ganglia.

**F., presentation.** See *Presentation, face*.

**F., subordinate.** (*L. sub*, under; *ordo*, rank.) Term applied to one of the smaller plane surfaces of a crystal.

**F., superior.** (*L. superior*, upper.) The surface of a leaf opposite to that on which the median nerve projects.

**F., veins of.** The superficial veins are the frontal and the angular forming the facial, which receives the infraorbital, the ophthalmic, and the dorsal veins of the nose, as well as further on the alveolar, the labial, the buccal, the anterior masseteric, the submental, and others; and the anterior branch of the superficial temporal, composed of supraorbital, palpebral, and malar branches, the transverse facial, and behind, the auricular and parotid veins. The deep veins are chiefly branches of the internal maxillary, the lingual, and the pharyngeal veins, to which may be added the inferior palatine vein. Each set of veins forms a plexus; the superficial being the alveolar plexus over the tuberosity of the superior maxillary bone; and the deep being the pterygoid plexus formed from the deep temporal, pterygoid, inferior dental, posterior masseteric, and the vidian veins. These plexuses communicate with each other. The veins of the face possess few valves.

**F., ventral.** (L. *venter*, the belly.) In a leaf the same as *F., superior*.

**Face'ache.** See *Tic douloureux*.

**Facet.** (F. *facette*, a small surface, dim. of *face*.) A little face; a small plane surface. A term employed to indicate a small circumscribed articular surface of a bone when more or less flat.

Also, the flat, external surface of each segment of the compound eye of the Arachnida, Crustacea, and Insecta.

Also, the minute planes or faces of a crystal.

Also, the flat surfaces seen on a biliary or a urinary calculus from the pressure or friction of another calculus.

**F., pleural.** (Πλευρά, the side.) A small facet on the anterior surface of the pleuron of Crustacea.

**F., tergal.** (L. *tergum*, the back.) A smooth, convex facet on the anterior surface of the tergum of Crustacea.

**Facette.** Same as *Facet*.

**Fachingen.** Germany, in the Grand Duchy of Nassau, on the left bank of the Lahn, 370 feet above the sea level. The waters are cold, and contain, as their chief salt, sodium bicarbonate, with excess of carbonic acid gas. The springs, of which there are two, the Hauptquelle and the Nebenquelle, rise at the foot of a mountain formed of clay schists. The quantity is 81 hectolitres in 24 hours, sp. gr. 1.0036, temp. 10° C. (50° F.) It acts as an excitant of the digestive and renal functions, and is taken alone or with milk.

**Facial.** (L. *facies*, the face. *F. facial*; G. *zum Gesicht gehörig*.) Of, or belonging to, the face.

**F. anæsthesia.** (Αναesthesia, want of perception.) Loss of cutaneous and mucous sensibility in some part or the whole of the face, depending upon disease or injury of the trunk or of a branch of the fifth nerve supplying the affected parts. Reflex movements of the affected part are consequently abolished, and most of the muscular movements rendered slower. Occasionally disturbances of nutrition follow, the skin may become oedematous, the gums spongy, the mucous surfaces ulcerated, or the cornea clouded and destroyed.

**F. angle.** See *Angle, facial*.

**F. artery.** (F. *artere facialis*, a. *maxillaire externe*, a. *palato-labiale* of Chaussier; G. *aussere Kieferschlagader*, *Antlitzschlagader*.) A branch of the carotid artery arising from that trunk just above, and sometimes in common with, the lingual. It lies beneath the digastric and stylohyoid muscles, makes a sigmoid curve over or beneath the submaxillary gland, and turning over the lower jaw in front of the masseter muscle and beneath the platysma, ascends to the inner angle of the orbit, where it anastomoses with the ophthalmic. In the face it is crossed in front by the zygomaticus major, and lies successively upon the lower jaw, buccinator muscle, elevator of the angle of the mouth, and elevator of the upper lip. Branches below the jaw four, inferior palatine, tonsillar, glandular, and submental; above the jaw five, inferior labial, two coronary, lateral nasal, and angular.

**F. artery, anterior.** The *F. artery*.

**F. artery, deep.** The internal maxillary artery.

**F. artery, external.** The *F. artery*.

**F. artery, posterior.** The *F. artery, transverse*.

**F. artery, transverse.** (L. *transversus*, lying across. *F. artere transversale de la face*; G. *quere Antlitzarterie*.) A branch given off by the temporal artery in the parotid gland, or directly from the external carotid. It passes transversely across the face between Stenon's duct and the lower border of the zygoma, and supplies the parotid gland and masseter muscle. It anastomoses with the facial, masseteric, and infraorbital arteries. It is accompanied by one or two branches of the facial nerve.

**F. atrophy, progressive.** (A. neg.; τροφή, nourishment. *Trophoneurosis facialis* of Romberg; *aphasie lamineuse progressive* of Lande.) A rare disease, the first recorded case being described by Parry in 1825, consisting of a gradual loss of tissue of one side of the face, beginning on the surface and slowly proceeding to the deeper structures. An early symptom, in many cases the earliest, is the presence of one or more pale, slightly depressed spots on the skin of the cheek, these spread out and deepen, the skin becomes thin and glossy, the subcutaneous areolar and adipose tissue waste, the hairs turn white or fall out, the sebaceous glands atrophy, but the secretion of sweat continues, the muscles shrink and are subject to fibrillar contraction, but respond to electric stimulation, and are not degenerated; sometimes the tongue is similarly affected, the eye sinks in its socket, and even the bones have been seen to have lost volume. Sensation is not usually affected, although both anesthesia and hyperesthesia have been noticed. The general health is not usually injured. Females are more subject to the disease than males. It is generally believed to be of nervous origin; according to Bergson, it is a disease of the motor or sensory nerves, or of those which regulate the secretions of the glands; according to Samuel, it is an affection of the trophic system of nerves; according to Eulenburg, the fifth nerve is at fault, according to Hammond, it is an affection of the trophic cells of the nuclei of the facial, hypoglossal, and spinal accessory nerves; Brunner suggests irritation of the sympathetic, producing contraction of the blood-vessels; but most agree that the evidence is not in favour of any lesion of the sympathetic system; and, on the other hand, some, as Lande, believe the disease to be in its origin one of the areolar tissue.

**F. axis.** (L. *axis*, an axle-tree.) Same as *F. line*.

**F. branches of great auricular nerve.** These are distributed to the integument over the parotid gland. Some filaments penetrate the gland, and communicate with the facial nerve.

**F. branches of infraorbital nerve.** These are branches of the superior maxillary nerve of the fifth pair, and are divisible into palpebral, nasal, and labial sets, supplying the lower eyelid, the ala of the nose, and the upper lip.

**F. carbuncle.** See *Carbuncle, facial*.

**F. gland.** A supplementary salivary gland in some Mammalia lying beside Stenon's duct and opening into it.

**F. hemiplegia.** See *Hemiplegia, facial*.

**F. line.** (F. *ligne facialis*.) A line joining the most prominent part of the forehead in the median line with the alveolar process of the upper jaw; the more or less vertical line which assists in forming the facial angle.

**F. nerve.** (F. *nerf facialis*; G. *Gesichts-*

*nerve, Antithese.*) The seventh cerebral nerve or the panto dura of the seventh pair of Willis. It arises from a nucleus in the pons Varolii, in close proximity to the nucleus of the sixth nerve, and to that of the motor root of the fifth nerve. The fibres run upwards in the fasciculus teres, and near their point of emergence make a sharp bend or genu. The nerve appears at the lower border of the pons Varolii, between the olivary and restiform bodies, and internal to the auditory nerve. It runs outwards to the internal auditory meatus, and lies on the auditory nerve, from which it is separated by the *portio intermedia* of Wrisberg. At the bottom of the meatus it enters the aqueductus Fallopii, and emerges at the stylomastoid foramen of that canal. At the first bend of the canal it presents the *geniculate ganglion*. Below the skull it traverses the parotid gland, and is continued downwards and forwards, dividing a little behind the ramus of the jaw into the *pex ansarum*. The branches are communicating filaments with the auditory nerve; the *nervus petrosus superficialis major*; a communicating filament with the small superficial petrosal nerve; the external superficial petrosal nerve, which joins the sympathetic on the middle meningeal artery; a branch to the stapedius muscle; the chorda tympani nerve; a communication with the auricular branch of the pneumogastric nerve; the posterior auricular nerve; the digastric branch; the stylohyoid branch; the temporal, malar and infraorbital branches of the temporo-facial division of the nerve; and the buccal, supramaxillary and inframaxillary branches of the cervico-facial division of the nerve. The seventh nerve contains about four or five thousand fibres. Its function is partly motor, supplying the muscles of the face, and of the external ear, the stylohyoid, the posterior belly of the digastric, the levator palati, the zygus uvulae, the stapedius, and the platysma myoides, whence it has been called the nerve of expression; and partly secretomotor, containing fibres which, when stimulated, occasion increased flow of saliva from the submaxillary and parotid glands. These fibres are contained in the chorda tympani and *nervus petrosus superficialis major* nerves.

**F. nerve, nucleus of.** See *F. nucleus*.

**F. nerve, paralysis of.** The effects are inability to close the eyelids, or lagophthalmos. Epithiora is a common result, and ulceration of the cornea is apt to follow the exposure to which it is subjected, the nostrils do not expand on forcible inspiration, the lips are inactive, and in those mammals which use them largely for prehension, death from inanition may ensue. The lower lip hangs down away from the teeth and gums, and the saliva dribbles from the corners of the mouth. No movements occur in the expression of the emotions. The ears cannot be cocked. The distinctness of articulation is impaired. If one facial nerve be paralysed the face is drawn up and wrinkled on the sound side, but is smooth, motionless, and hanging down on the affected side. See *Paralysis, facial*.

**F. neuralgia.** See *Neuralgia, facial*.

**F. nuclei, internal accessory.** Ross's term for two small nuclei lying close to the inner side of the hypoglossal nucleus and the central spinal canal; fibres pass from them to the fasciculus teres, through which they join the other fibres of the facial nerve. They form

part of the inferior facial nucleus of Lockhart Clarke.

**F. nucleus.** (*L. nucleus*, a kernel. *F. noyau du facial*; *G. Facialis-kern, Gesichtsnervkern*.) If the facial nerve be followed backwards from its point of emergence the fibres may be seen to pass to the middle line near the upper part of the floor of the fourth ventricle; it then descends, after forming the genu of the nerve, and is separated from the floor of the fourth ventricle by the grey nucleus of the auditory nerve. After descending for 5–7 mm. it once more bends, running obliquely outwards to a nucleus described by Stilling as the inferior trigeminal nucleus, and by Henlé as the nucleus olivaris superior. This, the facial nucleus, lies in the reticular formation just dorsal to the superior olivary nucleus at some depth below the floor of the fourth ventricle.

**F. nucleus, external accessory.** Ross's term for a small nucleus lying behind and outside the hypoglossal nucleus, the fibres of which probably join the fasciculus teres.

**F. nucleus, inferior.** (*L. nucleus*, a kernel, *inferior*, lower.) Lockhart Clarke's term for a collection of small masses of grey nervous substance lying to the inner side of the hypoglossal nucleus, close to the middle line, and immediately beneath the ependyma of the fourth ventricle.

**F. pal'sy.** Same as *Paralysis, facial*.

**F. paralysis.** See *Paralysis, facial*.

**F. presentation.** See *Presentation, face*.

**F. respiration.** See *Respiration, facial*.

**F. saliva.** (*L. saliva*, spittle.) Term applied to the thin, limpid saliva which is discharged from the submaxillary gland on stimulation of the chorda tympani or of the facial nerve.

**F. spasm.** (*F. tic convulsif*.) Convulsive attacks of a clonic or tonic character affecting one or more muscles of the face. When severe it interferes with articulation, mastication, and facial expression. The etiology of the affection appears to be either some irritation, direct or reflex, affecting the facial nerve.

**F. suture.** (*L. sutura*, a seam.) The line of division between the glabella and the free cheek on each side in a Trilobite.

**F. trophoneurosis.** (*Τροφή*, nourishment; *νῦρον*, a nerve.) Romberg's term for *F. atrophy, progressive*.

**F. vein.** (*F. vaine faciale*; *G. Gesichtsbilader*.) The facial vein commences at the root of the nose by the angular vein, which is joined by the inferior palpebral, infraorbital, and anterior internal maxillary veins, and subsequently by veins corresponding with the named branches of the artery. It either joins the temporo-maxillary trunk, or joins the internal jugular vein.

**Facialis.** Same as *Facial*.

**F. nucleus.** See *Facial nucleus*.

**Facicula.** (*L. dim. of facies*. *F. facicula*; *G. das kleine Gesicht*.) The same as *Facet*, a little face.

**Facient.** (*L. faciens*, part, of *facio*, to make.) A suffix signifying making.

**Facies.** (*L. facies*, a face; probably from *facio*, to form or make. *F. face*, *visage*; *G. Gesicht, Anseht*.) The face.

Also (*G. Aussefläche*), the outer part or surface of a body.

Also, the general aspect of a body, as presented to a superficial observation.

**F. articularis lateralis calca'nei.** (*L. articularis*, pertaining to a joint; *lateralis*, lateral; *calcaneus*, from *calc*, the heel.) The elongated, convex, articular surface situated at the middle of the dorsal surface of the os calcis.

**F. articularis lateralis ta'li.** (*L. talus*, the ankle.) The median, anterior, flatter, articular surface on the inferior surface of the astragalus.

**F. articularis media'lis ante'rior ta'li.** (*L. articularis*, pertaining to a joint; *medialis*, middle; *ante'rior*, that is before; *talus*, the ankle.) A small, slightly convex, articular surface, forming the lower border of the head of the astragalus.

**F. auricularis os'sis il'li.** (*L. auricularis*, from *auricula*, the outer ear; *os*, a bone; *ilium*, the haunch.) The ear-shaped surface of the ilium which articulates with the auricular surface of the sacrum.

**F. auricularis os'sis sa'cri.** (*L. sacrum*, the sacrum.) The lateral ear-shaped surface of the sacrum which articulates with the similarly shaped surface of the ilium.

**F. cadaverica.** (*L. cadaver*, a corpse.) The same as *F. Hippocratica*.

**F. cancro'sa.** (*Cancer*.) The peculiar facial expression which accompanies the growth of cancer, pale, sallow, anxious, and drawn.

**F. choleric'a.** (*Cholera*. *G. Cholera-gesicht*.) The pinched and livid countenance which characterises malignant cholera.

**F. Hippocratica.** (*F. facie Hippocratica*, *G. Hippocratishes Gesicht*.) The Hippocratic countenance; the peculiar expression which the features assume immediately before death, and where there is great exhaustion, so called because it has been so perfectly described by Hippocrates, *Prænot. ii, 2, Coac. Prænot. 212*. The nose is pinched, the eyes hollow, the temples collapsed, the ears cold, with their lobes turned out, the skin of the forehead rough, tense and dry, and the colour of the face greenish, livid, leaden, or black.

**F. hysterica.** (*L. hystericus*, hysterical.) The peculiar physiognomical expression given by thick lips and a drooping of the upper lids.

**F. infe'rior pe'dis.** (*L. inferior*, lower; *pes*, the foot.) The sole of the foot.

**F. infratempora'lis.** (*L. infra*, below; *temporalis*, belonging to time.) The inferior surface of the lamina triangularis alæ magnæ ossis sphenoidalis.

**F. leopti'na.** (*L. leo*, a lion.) Term applied to the face of those affected with leprosy, in which the forehead and eyebrows are greatly thickened, giving a morose expression to the face.

**F. lepro'sa.** (*L. leprosus*, full of leprosy. *G. Gesicht's-Ausschlag*.) The condition of face in *Elephantiasis græcorum* when it becomes thickened and puckered about the eyebrows, ears, and lips.

**F. media'lis poste'rior ta'li.** (*L. talus*, the ankle.) The posterior articular facet on the under surface of the astragalus.

**F. ru'bra.** (*L. ruber*, red.) A term, according to Nicolaus Threntines, for the first stage of *Gutta serena*, being simple redness.

**F. tetan'ica.** (*F. facie tetanique*.) The

tetanic countenance, or the expression peculiar to tetanus. A term for the state or expression of the face, under spasm of the muscles that support the eyelids, the alæ nasi, superior lip, and lower jaw.

**F. tortua'lis.** (*L. tortus*, twisted.) The same as *F. Hippocratica*.

**F. tubercula'ris.** (*Tubercle*.) The aspect of the face in tuberculosis.

**F. uteri'na.** (*L. uterus*, the womb.) A term for a peculiar cast of features observed in women labouring under chronic uterine disease.

**F. vara.** (*L. varus*, bent. *G. Klump-gesicht*.) Term applied to a more or less marked unilateral inflection of the contour of the lower jaw, due to contraction of the external pterygoid muscle.

**Factitious.** (*L. factitius*, artificial; from *facio*, to make. *F. factice*; *L. fattizio*; *S. facticio*; *G. künstlich, nachgemacht*.) Made by art, or artificial, as opposed to what is natural or produced by nature.

**F. air.** Term applied by Cavendish to the inflammable air derived from dilute acid and zinc, that is, hydrogen.

**F. min'eral wa'ters.** Water to which salts have been added in certain proportions to imitate natural mineral waters.

**Factor.** (*L. factor*, a maker.) An expression, or element, or influence, aiding in the production of a result.

**Facultas.** (*L. facultas*, capability.) An endowment, either of the body or mind, enabling the possessor of it to do something with facility. See *Faculty*.

**F. auc'trix.** (*L. auctrix*, authoress.) The plastic force.

**F. forma'trix.** (*L. formatrix*, one who forms.) The same as *F. auctrix*.

**F. nu'trix.** (*L. nutrix*, a nurse.) The same as *F. auctrix*.

**F. vegetati'va.** (*L. vegeto*, to animate.) The same as *F. auctrix*.

**F. zo'tica.** (*Ζωτικός*, lively.) The vital power.

**Facultates naturales.** (*L. facultas*, capability; *naturalis*, natural.) The natural faculties, as those of reason, memory, imagination.

**Facultative hypermetro'pia.** One of the three subdivisions into which Donders divides manifest hypermetropia. It is applied to those cases of hypermetropia in which objects at an infinite distance can be distinctly seen both with and without convex glasses, the visual lines remaining parallel, i.e. without convergence.

**Faculties.** (Plural of *Faculty*.) The mental faculties were formerly, as by Dugald Stewart, distinguished from the instincts or instinctive operations of man and animals. This author considered the mental faculties to be consciousness, perception, attention, conception, abstraction, association of ideas, memory, imagination, and judgment or reasoning; and to them he added the affections, desires, self-love, and the moral faculty. More recent writers, as Bennett, have held that the mental faculties are of three kinds, the purely intellectual, the sensations, and volition.

The sensations may either be physical or mental. The physical sensations are touch, taste, hearing, smell, sight, and the muscular sense. The mental sensations are hope, fear, grief,

pride, love, hatred, desire, joy, sorrow, despair, courage, and to these may be added vanity and the moral faculty. In regard to volition, if directed to the muscles, it causes voluntary motion; if to sensation, attention; and if to thought, abstraction or concentration of ideas.

**F., affective.** (L. *affectio*, feeling.) Those faculties of the mind which relate to the sentiments, feelings, and passions of man or animals.

**F., germinative.** (L. *germino*, to sprout.) The property by which seeds sprout or germinate.

**F., intellectual.** The intellectual faculties include a general or predominant one—consciousness, which if directed to the present, is perception; if to the past, memory; if it suggests the ideal, it is imagination; if applied to thought synthetically, it is generalisation; if analytically, it is reasoning; whilst if it originates ideas intuitively, it is original conception.

**Faculty.** (F. *faculté*; from L. *facultas*, capability; from *facilis*, easy to do; from *facio*, to make. G. *Fähigkeit*, *Vermögen*.) Ability to do or speak.

A special power, or susceptibility, which the mind possesses through means of particular organs; applied to the feelings as well as to the intellect.

That power or function by which any act is performed.

Also, the general body of a learned profession.

The term is also used to signify a body of persons privileged to perform certain functions.

**F., medical.** The members collectively of the medical profession.

Also, the department of an University devoted to medical science.

**F., moral.** The recognition of right and wrong as guides to action.

**Fæcal.** (L. *fec*, sediment. F. *fecal*; I. *fecale*; S. *fecal*; G. *kothig*.) Belonging to, or of the nature of, *Feces*.

**F. abscess.** See *Abscess*, *fæcal*.

**F. discharge.** The escape of feces from a natural opening, as from the urethra, when a fecal abscess has opened into the bladder; or from an artificial opening, as in perforating wounds of the abdomen.

**F. evacuation.** (L. *evacuo*, to empty out.) The discharge from the natural or some artificial outlet of the contents of the intestines.

**F. fistula.** See *Fistula*, *fæcal*.

**F. impaction.** (L. *impactus*, part. of *impingo*, to thrust into.) The accumulation of hardened feces in the large intestine to such an extent that their expulsion by the natural efforts is impossible.

**F. odour.** (L. *odor*, a smell.) Having the smell of excrement.

**F. vomiting.** (F. *vomissement fæcaloïde*.) The discharge by the mouth of the contents of the lower part of the intestines, having the aspect and smell of feces.

**Fæcation.** (L. *fecatus*, pressed from the dregs. F. *fecation*.) A term in the olden chemistry for the separation of a deposit from a fluid.

**Fæces.** (L. *fec*, sediment. F. *feces*; G. *Bodensatz*.) The dregs or sediment of wine, beer, or other fermented liquor.

Also (G. *Darmkoth*, *Stuhlgaug*), a term for the alvine excretions; consisting of the unab-

sorbed portion of the food and of the secretions of the liver, pancreas, and intestinal glands. The composition of the feces varies with the diet. With ordinary mixed diet they contain muscular fibres, the cells of cartilage and fibrocartilage, elastic tissue, mucin, nuclein and fatty matters, and salts of the fatty acids, crystals of cholesterol when fat is taken in excess, starch cells, chlorophyll, brown colouring matter of the bile, epithelium, hair cells, mucus and salts, and an amylolytic ferment. The quantity varies from 2 to 10 oz., the average being about 5 oz., and is greater when vegetable food is taken than on an animal diet. Ralle's estimate of the feces of a healthy adult is water 77.3, and solids 22.7; the latter containing mucin 2.3, proteids 5.4, extractives 1.8, fats 1.5, salts 1.8, resinous, biliary, and colouring matters 5.2, and insoluble residue of food 4.7. Special substances found in the feces are excretin, excretolic acid, stercorin, stercobian, skatol, and perhaps indol.

**F., evacuation of.** (L. *evacuo*, to empty out.) See under *Defecation*.

**F., extravasation of.** (L. *extra*, out of; *vas*, a vessel.) Escape of the feces into the peritoneal cavity or surrounding connective tissue from rupture of the walls of some part of the intestine, caused by a wound or an ulceration.

**F., incontinence of.** (L. *in*, not; *continco*, to retain.) An involuntary discharge of the feces from relaxation of the sphincter ani, produced by local or general disease; or from excessive pressure from above, produced by increased peristalsis, or sudden or violent contraction of the expiratory muscles.

**F. indurata.** (L. *induro*, to harden.) The same as *Scybala*.

**F., retention of.** (L. *retentio*, a keeping back.) The accumulation of the feces in some part of the large intestine, with inability to expel them, from mechanical obstruction, or from weakness or paralysis of the muscular coat of the intestines, or from loss of reflex sensibility of the rectum, or from dryness of the feces themselves.

**Fæcositas.** (L. *fec*, sediment.) Fæculence.

**Fæcula.** See *Fecula*.

**Fæculence.** See *Fæculence*.

**Fæculent.** See *Fæculent*.

**Faënzä.** Italy, on the bank of the Quar-tolo, on the eastern side of the Apennines. A cold mineral water, from three springs, containing calcium carbonate and sulphate, sodium and magnesium chlorides, and a little iron.

**Fæx.** (L. *fec*, sediment.) The lees, dregs, or sediment of any fermented liquor. See *Feces*.

**F. sac'chari.** (L. *saccharum*, sugar.) A term for treacle, *Theriaca*.

**Fagara.** (L. *fagus*, the beech tree; from its resemblance. F. *fagarier*.) A Genus of the Nat. Order *Xanthorylaceæ*.

**F. avicennæ.** The *Xanthoxylon avicennæ*.

**F. guianensis.** (*Guiana*.) The *Xanthoxylon henniphraditum*.

**F. heterophylla.** Lam. The *Xanthoxylon heterophyllum*.

**F. major.** (L. *major*, greater. F. *Fagara piperita*.) A name for the *Fagara piperita*.

**F. octandra.** Linn. (Οκτώ, eight; άνήρ, a male.) The *Xanthoxylon octandrum*.

**F. piperita**, Linn. (*L. piper*, pepper. *F. fagara poivre*.) Name of a plant found in Japan and the Philippine Islands, the berries of which are called Japan pepper, and have virtues like those of cubeb; they are aromatic, and said to be heating, drying, good for cold weak stomachs, and astringent to the bowels. The *Xanthoxylon piperitum*.

**F. rhetsa**, Roxb. The *Xanthoxylon rhetsa*.

**F. triphylla**, Roxb. The *Xanthoxylon triphyllum*.

**Fagarastrum**. A Genus of the Nat. Order *Xanthoxylaceæ*.

**F. capensis**. (Mod. *L. capensis*, belonging to the Cape of Good Hope.) A plant indigenous in South Africa, the fruit of which is named wild cardamom. It is aromatic, and has been used in cases of flatulence and paralysis.

**Faghureh**. A term employed by Avicenna, applied, it is believed by Lindley, to the seeds and capsules of *Xanthoxylon hastile*, employed to poison fish in Northern India.

**Fagin**. (*L. fagus*, the beech. *F. fagine*; *G. Buchenkerntoff*.) A substance obtained by Buchner from the beechnut, the same, according to some, as pyremetin; according to others, as trimethylamine. It is yellow and sweetish; is soluble in water and alcohol, sparingly in ether.

**Fagitruticum**. Same as *Fagotriticum*.

**Fagopyrum**. (*L. fagus*, the beech tree; *Gr. ποπος*, wheat; because its seeds were supposed to resemble the fruit of the beech.) The buckwheat, *Polygonum fagopyrum*.

**F. esculentum**, Mönch. (*L. esculentus*, edible.) The buckwheat, *Polygonum fagopyrum*.

**F. tartaricum**, Gärtn. (*Tartary*.) A variety of buckwheat growing in Siberia.

**F. vulgare**, Nees. (*L. vulgaris*, common.) The *Polygonum fagopyrum*.

**Fagotriticum**. (*L. fagus*, the beech tree; *tritium*, wheat.) A synonym of *Fagopyrum*.

**Fagræa**. A Genus of the Nat. Order *Loganiaceæ*.

**F. fragrans**, Roxb. (*L. fragrans*, sweet-smelling.) Hab. China, Malay. Bark febrifuge.

**Fagus**. (*L. fagus*, the beech tree; from *Gr. φάγω*, from *φαγών*, to eat; because its fruit was one of the earliest in use by man. *F. hêtre*; *G. Buche*.) A Genus of the Nat. Order *Amentaceæ*.

**F. castanea**, Linn. (*F. châtaignier*; *G. Castanienbaum*.) The chestnut tree, *Castanea vesca*.

**F. castanea pumila**. (*L. castanea*, the chestnut tree; *pumilus*, dwarfish. *F. châtaignier nain*.) A tree indigenous in America, the fruit of which is eaten like the chestnut. An infusion of the bark has been used in intermittent fever, and of the leaves in whooping-cough. The *Castanea pumila*.

**F. purpurea**. (*L. purpureus*, purple.) A synonym of *F. sylvatica*.

**F. sylvatica**, Linn. (*L. sylvaticus*, belonging to the woods. *F. hêtre*; *I. faggio*; *S. haya*; *G. Buche*.) The beech tree. The fruit and inner bark is used medicinally, the former in obstinate headache, the latter in hectic fever; the oil expressed from the nut is supposed to destroy worms, and is used in Silesia by the poor instead

of butter. The seeds are said to be good for gravel.

**F. sylvestris**. (*L. sylvestris*, living in woods.) The same as *F. sylvatica*.

**Faham**. The native name in the Mauritius for the leaves of *Angræcum fragrans*.

**Fahan**. Same as *Faham*.

**Fahon**. Same as *Faham*.

**Fahrenbühlerbad**. Switzerland, near Lucerne. A mineral water, containing lime, magnesia, and iron. Used in gout, paralysis, and skin diseases.

**Fahrenheit**, **Gabriel Daniel**. The celebrated physicist, born at Dantzig in 1686, died in 1736. He wrote treatises on the boiling temperature of different liquids, on the freezing of water in a vacuum, and on the specific gravity of different substances. He invented a barometer and an hydrometer, and he proposed a graduation of the thermometer, which goes by the name of *F.'s scale of temperature*.

**F.'s areometer**. (*Ἀραιός*, thin; *μέτρον*, a measure.) Same as *F.'s hydrometer*.

**F.'s barometer**. (*Βάρος*, weight; *μέτρον*, a measure.) This instrument consists of a tube bent several times: the lower portions contain mercury, the upper portions are filled with water or other liquid. The pressure of the gas to which the mercury at the open extremity of the tube is exposed is balanced by the sum of the differences of level of the columns of mercury, diminished by the sum of the corresponding differences for the columns of water; hence, by bending the tubes many times, the height of the columns may be greatly reduced. It is used for determining great pressures, but is unreliable for small.

**F.'s hydrometer**. (*Υδρομ.*, water; *μέτρον*, a measure.) A cylinder of glass or metal weighted below and having a plate on the top, on which weights are placed sufficient to sink the instrument to a definite mark on the stem.

**F.'s scale of temperature**. Fahrenheit marked the point at which a column of mercury stood in an hermetically closed tube when exposed to a mixture of snow and salt, which he considered to be the greatest cold producible; and then the point at which it stood when plunged into boiling water. The space covered by the expansion of the mercury is divided into 212 equal parts or degrees. When the instrument is placed in a mixture of ice and water it stands at the thirty-second division. 212° of Fahrenheit's thermometer corresponds to 100° of the Centigrade, and 80° of the Reaumur scale.

**Fahum**. Same as *Faham*.

**Faint**. (Old *F. feint*, p. p. of *feindre*, to feign; from *L. fingere*, to feign. *F. faible*, *affaibli*; *I. languido*, *fiecco*; *S. languido*, *extenuado*; *G. schwach*, *watt*.) Weak, languid.

Also (*F. évanouissement*; *I. svenimento*; *S. desmayo*; *G. Ohnmacht*), the loss of power of body and mind, also called *Syncope*.

Also (*F. s'évanouir*; *I. svenire*; *S. desmayarse*; *G. Ohnmächtig werden*), to swoon, to fall into a *Syncope*.

**Fainting**. (*Faint*. *F. évanouissement*; *I. svenimento*; *S. desmayo*; *G. Ohnmacht*.) A temporary failure of the powers of the mind and body, indicated by pallor, cold perspiration, weak or almost imperceptible pulse and feeble respiration, and loss of consciousness. See *Syncope*.

**Faintishness**. (*Faint*.) A tendency to

loss of consciousness from failure of the action of the heart.

**Faintness.** The condition of being, or feeling, *faint*.

**Faints.** (*Faint*.) The weak spirituous liquor obtained after the proof spirit has been distilled off in the rectification of crude spirit of wine; it is a mixture of several alcohols and of the ethers of fatty acids, varying according to the source of the substance distilled.

Also, a term for the minor, imperfect forms of *Epilepsy*.

**Fair.** (Sax. *fæger*.) Beautiful; pleasing to the eye; clear.

**F. maids of February.** The snowdrop, *Galanthus vernalis*.

**F. maids of France.** The double-flowered crowfoot, *Ranunculus aconitifolius*.

**Fairburn.** A village in the County of Ross, Scotland. The waters are sulphureous.

**Fairfeckles.** The same as *Ephelides*.

**Fairtickled.** Having fairfeckles, or *Ephelides*.

**Fairy.** (Old F. *faerie*, enchantment.) A supernatural being in human form, believed to be very lithe and full of pranks.

**F. butter.** A name of the *Tremella alba* and other varieties, because they were supposed to be scattered by fairies in the night.

**F. flax.** The *Linum catharticum*, from its sliminess.

**Falcadina.** Same as *Fucaldina*.

**Falcaldine.** Same as *Fucaldina*.

**Falcanos.** (Arab.) Old term for orpiment. (Kuland.)

**Falcate.** (*L. falcatus*, scythe-shaped. *F. falque*; *G. sichelformig*.) Term applied in Botany to organs that are scythe-shaped; that is, flat, plain, and curved, with the edges parallel.

**F. cartilages.** The semilunar cartilages of the knee-joint.

**Falcated.** Same as *Falcate*.

**Falces.** Plural of *Falx*.

Also, a term for the poison fangs of spiders.

**Falciano.** Italy, in Tuscany, on the left bank of the Ghiora. A chalybeate water of a temp. at 16° C. (61° 88° F.) containing 8.5 grains of calcium carbonate, 6.4 of sodium carbonate, .53 of iron carbonate, and 1.5 of sodium chloride, in 16 oz., with much free carbonic acid. Used in anæmic conditions and urinary deposits.

**Falciferous.** (*L. falcis*, a sickle; *fero*, to bear. *F. falciferi*; *G. sicheltragend*.) Bearing falciform leaves; having some organ like a sickle in shape.

**Falciform.** (*L. falcis*, a sickle; *forma*, resemblance. *F. falciformis*; *G. sichelformig*.) Resembling a sickle in form or shape.

**F. border of saphenous opening.** The *F. expansion of fascia lata*.

**F. cartilages.** The semilunar cartilages of the knee-joint.

**F. corpuscles.** (*L. corpusculum*, a little body.) The long curved corpuscles found in the spore of certain *M. noceystrida* which become Gregarinidia.

**F. expansion of fascia lata.** That portion of the *fascia lata* which, extending downwards and outwards from the spine of the pubes, forms an arched margin above and to the outer side of the saphenous opening.

**F. ligament of liver.** The same as *Ligament, suspensory, of liver*.

**F. lobe of brain.** Term applied by Schwalbe to the mass formed by the limbic lobe of Broca, together with the lamina septi lucidi, fornix, and the dentate convolution, which he regards as an inner convolution encircling the limbic lobe.

**F. process.** (*F. faux de cerveau*; *G. die Siegel des Gehirns*.) A process of the dura mater, arising from the crista galli, separating the hemispheres of the brain, and ending in the tentorium. See *Fale cerebri*.

Also, a process of the great sacro-sciatic ligament which extends forwards along the margin of the ramus of the ischium.

**F. process of fascia lata.** The same as *F. expansion of fascia lata*.

**F. sinus.** A synonym of *Sinus, longitudinal*.

**Falco.** (*L. falco*, a falcon; so called because of the hooked, *falcatus*, form of its digits. *F. faucon*; *G. Falke*.) A Genus of the Family *Diurnæ*, Order *Accipitres*, including the true falcons, eagles, hawks, and kites. Medicinal virtues were formerly attributed to different parts of these birds; thus, the fat and dung of the hawk were used in diseases of the eyes.

**F. buteo.** Linn. The *Buteo vulgaris*.

**F. fulvus.** Grn. (*L. fulvus*, tawny.) The eagle; see under *Aquila*.

**F. milvus.** Linn. The *Milvus regalis*.

**Falcula.** (*L. falcula*, a claw.) A long, flattened, curved, pointed claw.

**Falculata.** (*L. falcula*, a claw.) Term applied by Illiger, in 1811, for the animals included by Cuvier in the Classes *Insectivora* and *Carinivora*.

**Falclulate.** (*L. falcula*.) Possessing, or resembling, a *Falcula*.

**Faldella.** Old term, employed by Jeremiah Martins, in *Observationibus*, according to Velschius, in *Sylloge Observ.* 54, for contorted lint, used for compresses, and other appliances.

**Falkenberg.** Germany, in Upper Silesia. A chalybeate sulphur spring. Used in rheumatic and gouty conditions.

**Falkenstein.** Germany, near Soden, on a declivity of the Tannus, 1700 feet above sea-level. A health resort in phthisis, sheltered from the north and east.

**Fall.** (Mid. E. *fallen*; Old Northumbrian *fallan*; Sax. *feallan*; *G. fallen*; *L. fallo*; *Gr. σπάλλω*, to trip up; from Aryan root *spal*, to fall. *F. tomber*; *I. cadere*; *S. cæren*.) To drop or sink down either suddenly or sudden.

Also (*F. chute*; *I. caduta*; *S. caída*; *G. Fall*), the act of dropping down.

**F. of the leaf.** See *Defoliation*.

**F. poison.** The foliage of the *Amiantum muscivorum*, which poisons cattle in the United States in the autumn, the time of the fall of the leaf. It is also employed to destroy thies.

**F. rheotome.** (Πέω, to flow; τέμνω, to cut.) An instrument for applying one or more electric shocks to a muscle at definite times. It is effected by the fall of a weight, which strikes a lever and completes a circuit of electricity.

**Fallaia.** (*L. fallacia*, deceit; from *fallax*, deceitful.) Hallucination, illusion.

**F. optica.** (ὀπτικός, of, or for, sight.) An optical illusion.

**Fallen.** (*Fall*.) Dropped down.

**F. stars.** Certain species of Fungi, chiefly the *Tremella nostoc*.

**Falling.** (*Fall.*) Dropping down; that which drops, or which has dropped.

**F. bodies, laws of.** The chief laws of falling bodies are that in a vacuum all bodies fall with equal rapidity, and that in a vacuum the motion of all bodies falling to the earth is uniformly accelerated.

**F. down.** A synonym of *Epilepsy*.

**F. off.** See *Defluxum*.

**F. of the womb.** A popular term for *Prolapsus uteri* and for *Procidencia uteri*.

**F. sickness.** (*F. mal caduc*; *I. mal caduco*; *G. Fallsucht*.) Popular term for the disease *Epilepsy*.

**Fallopian.** (*Fallopio.*) Of, or belonging to, the anatomist *Fallopins*. Applied to certain tubes or canals, and a ligament, first pointed out by him.

**F. arch.** (*F. arcade de Fallope*.) A name of Poupert's ligament.

**F. canal.** The aqueduct of Fallopius. See *Aquæductus Fallopii*.

**F. ligament.** (Because discovered by Fallopius, according to some. *F. ligament de Fallope*; *G. Fallopisches Band*.) A term for the round ligament of the uterus; also for Poupert's ligament.

**F. tube.** (*F. trompe de Fallope*, *trompe utérine*; *I. tromba di Falloppio*; *S. trompa de Falopio*; *G. Muttertrompete*.) A tube enclosed in the free margin of the broad ligament, and extending on each side from the superior angle of the uterus to the sides of the pelvis. Its length is from three to four inches, the right one being longest. Its opening into the uterus, ostium uterinum, is very fine, but the lumen of the tube gradually enlarges into a trumpet-shaped cavity externally, which opens by a small orifice, ostium abdominale, into the abdominal cavity; occasionally there is more than one fimbriated opening. The outer opening is surrounded by fimbriae, one of which is attached to the upper surface of the ovary; they grasp the ovary and receive the mature ovum when set free by the rupture of the Graafian follicle. The Fallopian tube is composed of thin tissues: an external serous or peritoneal coat; a middle muscular coat consisting of external longitudinal and internal circular fibres; and an internal mucous coat. The muscular coat is connected with the serous coat by means of connective tissue enclosing numerous blood-vessels; the mucous coat presents many longitudinal folds, and is lined with ciliated columnar epithelium, having a movement towards the uterus; at one time it was supposed to contain mucous glands, but their presence is now denied. The Fallopian tubes are supplied with blood by the ovarian artery; the veins enter the plexus pampiniforme; the nerves come from the ovarian and from the inferior hypogastric plexus, and from the uterine nerves. Several malformations of the Fallopian tubes have been noticed; one or both may be absent or may be impervious, and the single fimbriated opening may be replaced by two or more.

**F. tube, abscess of.** Pus in the Fallopian tube. See *Epyosalpinx*.

**F. tube, anomalies of formation of.** The chief anomalies are the presence of several abdominal openings; closure or constriction of the tubes; and dropsy of the tube or *Hydropsalpinx*.

**F. tube, cancer of.** Cancer is rarely,

if ever, a primary disease, but occurs as an extension of cancer of the womb or the ovaries.

**F. tube, catarrh of.** See *Salpingitis*.

**F. tube, catheterisation of.** (*Katheteris.*, anything let down into.) The introduction of a tube, or of a flexible whalebone probe, through the os uteri into the Fallopian tube, proposed by Tyler Smith, for the purpose of effecting the discharge of fluid retained therein.

**F. tube, cyst of.** True cysts are occasionally found arising from the walls of the Fallopian tube, but more generally they are dilatations of its canal.

**F. tube, development of.** The Fallopian tube is constituted by the upper portion of the Müllerian duct, which opens at its extremity, and then develops the fimbriae. It commences at an early period of embryonic life in the form of a narrow tube, which runs downwards parallel with the excretory duct of the Wolffian body. The two tubes coalesce below at the base of the allantois, where the urinary bladder subsequently forms. In the male the corresponding tubes become the vasa deferentia.

**F. tube, dilatation of.** (*L. dilatatio*, an enlarging.) A condition arising from accumulations of blood, pus, or other fluid, with obstruction at or near the uterine end of the tube, with or without closure of the fimbriated end; the tube may become sacculated and much lengthened.

**F. tube, drop'sy of.** A saccular distension of the Fallopian tube from an effusion of fluid, resulting from inflammation or hæmatoma; the fluid may be serous, mucous, purulent, or bloody.

**F. tube, fibroma of.** (*Fibroma*.) A fibroid tumour is a rare condition in the Fallopian tube; it takes origin in the muscular coat.

**F. tube, gestation in.** (*L. gestatio*, a bearing.) Same as *Pregnancy, extrauterine, tubal*.

**F. tube, hæmorrhage from.** Hæmorrhage may result from tubal pregnancy terminating in rupture, and is then often quickly fatal, or it may occur in connection with hæmatometra, primary hæmorrhage occurring within the canal of the tube, and the blood then escaping through the abdominal orifice and entering the cavity of the abdomen. Hæmorrhage may also occur into the canal of the Fallopian tube during menstruation. Hæmorrhage also may occur after ovariectomy from the cut end of the tube.

**F. tube, hernia of.** Protrusion of the tube into a hernial sac.

**F. tube, inflammation of.** See *Salpingitis*.

**F. tube, neoplasms of.** (*Néos*, new; *πλάσμα*, anything formed.) Amongst these may be enumerated fibroids, lipomata, cysts, carcinoma, and tuberculous.

**F. tube, occlusion of.** (*L. occludo*, to shut up.) Closure of the canal from stricture or adhesion of its walls. It is a cause of sterility.

**F. tube, rupture of.** The walls of the Fallopian tubes may give way from external injury, or from distension within, as of blood or pus.

**F. tube, stricture of.** Partial or complete obliteration of the canal of the Fallopian tube; it may be caused by inflammation, by tubercle, by fibroma, by calcareous deposit, or by senile atrophy.

**F. tube, tuberculo'sis of.** (*Tubercle*.)

A condition in which the Fallopian tube is distended with a soft, semiliquid, or cheesy substance, has been called by this name; it is generally accompanied by tubercular deposit in some other organ, and has been found along with tubercular peritonitis.

**Fallopio, Gabriel.** An Italian anatomist, born at Modena in 1523, died in 1562. His anatomical researches were very distinguished, especially his description of the inner ear, in which he noted for the first time the canal which bears his name and the stapes; and his was the first good account of the tubes known as Fallopian.

**Fallopium.** See *Fallopio, Gabriel*.

**F., aqueduct of.** (*L. aqua, water; duco, to lead.* *F. aqueduc de Fallope; G. Wasserleitung des Fallopius, Fallopischer Kanal.*) A canal in the petrous portion of the temporal bone, formerly supposed to convey a watery fluid. It transmits the facial nerve.

**F., hiatus of.** (*L. hiatus, an opening.*) A narrow groove on the upper surface of the petrous portion of the temporal bone leading to the aqueduct of Fallopium. It transmits the large superficial petrosal nerve.

**Fallorné.** Sweden, near Wexjö. An alkaline water containing free carbonic acid.

**Fallow.** (*Sax. fialu, yellowish.*) Unfilled, in reference to the colour of ploughed land.

**F. wards.** Wards which are at intervals cleared of patients, and thus have alternate periods of use and disuse.

**Falltrank.** (*G. Fall, a fall; Trank, drink.*) Name used in Germany and Switzerland for an infusion of Alpine herbs, said to be of great efficacy in fortifying the body against the effects of falls or blows, and to be of service at the time of cessation of the menses. The composition of falltrank varies, each district, and sometimes each mountaineer has his favourite receipt; the plants generally used are the species of *Arnica*, *Achillea*, *Primula*, *Hypereum*, *Asperula*, *Pyrola*, and others.

**Falmouth.** A health resort on the Coast of Cornwall, England.

**Falsa colorum cognitio.** (*L. falsus, false; color, colour; cognitio, knowledge.*) A false perception of colours; colour blindness.

**False.** (Old *F. fals*; from *L. falsus, part. of fallo, to deceive. F. faux; I. falso; S. falso; G. falsch.*) Untrue; not genuine.

**F. aca'cia.** The *Robinia pseudoacacia*.

**F. am'nion.** See *Anion, false*.

**F. aneurysm.** See *Aneurysm, false*.

**F. angustura bark.** See *Angustura bark, false*.

**F. arillus.** The same as *Arillus microphyllus*.

**F. bark.** The outer layer of the stem of an endogenous plant; it is formed chiefly of the ends of the fibrovascular bundles. Also called *Rind*.

**F. barks.** The barks of various allied trees which have been introduced into commerce as a substitute for, or as an adulterant of, the true cinchona barks. They contain none of the cinchona alkaloids, and may be distinguished by giving off no purple vapour when heated; their microscopic characters are also different.

**F. bitersweet.** The *Plastrus scandens*.

**F. calisay'a bark.** See *Calisaya barks, spurious*.

**F. colum'bo.** The wood of *Cosciniun fenestratum*.

**F. concep'tion.** See *Conception, false*.

**F. corpora lutea.** (*L. corpus, body; luteus, yellow.*) A Graafian follicle from which an ovum has been discharged without subsequent impregnation. False corpora lutea are smaller than the true, are more angular in form, present no cavity in their interior, and have a very thin layer of yellow nuclei. See *Corpus luteum, false*.

**F. cyme.** A biparous cyme or *Diehasium*.

**F. dichot'omy.** See *Dichotomy, false*.

**F. dit'tany.** The *Dictamnus fraxinella*.

**F. im'age.** The image perceived by an eye which squints, that perceived by the other eye, which fixes the object, being termed the true image.

**F. ipecacuan'ha.** The root of *Ipodidum ipecacuanha*.

**F. isinglass.** The dried ovary of a large fish has been imported from Para under this name.

**F. joint.** See *Pseudarthrosis*.

**F. lig'aments of blad'der.** These are five in number, viz. two posterior, which run forwards in the male from the sides of the rectum, and in the female from the sides of the uterus, to the posterior and lateral aspect of the bladder, they contain the obliterated hypogastric arteries and the ureters, with vessels and nerves; two lateral, which are reflections of the peritoneum from the iliac fossæ to the sides of the bladder; and one superior, which is the fold of the peritoneum, extending from the summit of the bladder to the umbilicus, and investing the urachus and the obliterated hypogastric arteries.

**F. Lox'a bark.** The bark of *Cinchona Humboldtiana*, Lamb.; also called *Jaen bark*.

**F. man'nas.** See *Mannas, false*.

**F. mca'sles.** A term which has been applied to those varieties of rosola which resemble measles; and also to *Rotheln*.

**F. mem'brane.** See *Membrane, false*.

**F. myrrh.** A substance of unknown origin found among India myrrh.

Also, a name of Indian bellinum.

**F. nerv'ed.** See *Falsinervate*.

**F. pains.** See *Labour pains, false*.

**F. pal'ate.** See *Palate, false*.

**F. pas'sage.** (*F. faux passage.*) Term applied to a passage formed by the laceration or ulceration of the mucous membrane of the urethra or other duct, from the forcible introduction of instruments in a wrong direction.

**F. pel'vis.** Term applied to the expanded portion of the pelvic cavity which is situated above the linea iliopectinea. It is bounded on each side by the ossa ilii, behind is a deep notch, and in front it is incomplete, presenting a wide interval between the spinous processes of the ilia on either side.

**F. projec'tion of im'ages.** The diplopia consequent on paralysis of one or more of the muscles of the face.

**F. ribs.** (*F. les fausses côtes; G. die falschen, kurzen, or untern Rippen.*) Applied to the five inferior ribs, which, except the last two, or floating ribs, are joined anteriorly to each other and to the cartilage of the last true rib.

**F. saff'ron.** See *Saffron, false*.

**F. sarsaparilla.** The *Aralia nudicaulis*.

**F. sen'ega.** See *Senega, false*.

**F. Solomon's seal.** The *Smilacina racemosa*.

**F. sunflower.** The *Helianthus autumnale*.

**F. unicorn-plant.** The *Helonias divaricata*.

**F. ver'tebra.** See *Vertebra, false*.

**F. vision.** See *Pseudoblepsia*.

**F. wa'ters.** (*F. hydrantia*.) A fluid sometimes found between the amnion and chorion.

**F. Win'ter's bark.** (*F. fausse angusture*.) Common name for the *Canela alba*.

**Falset'to.** (*l. falsetto*; from *L. falsus*, false.) Same as *F. voice*.

**F., double.** A third register of voice in addition to the chest and falsetto voice, probably produced by the vibration of a still smaller length of the vocal cords.

**F. voice.** A peculiar modification of the voice, differing from the chest voice in regard both to its quality and to its higher pitch. By some it is considered that falsetto tones are produced by the vibration of the vocal cords along only the middle part of their length, the rima glottidis being partly closed. Others consider that only the thin border of the glottis vibrates; whilst others, admitting that the vocal cords vibrate along their whole length and breadth, have noticed the pressure of a curved nodal line about one third of the distance from the free to the attached border, the parts of the cords on opposite sides of the nodal line being in opposite phases of vibration.

**Falsification.** (*L. falsus*, false; *facio*, to make. *F. falsification*; *I. falsificazione*; *G. Verfälschung, Fälschung*.) The act of making false; a counterfeiting. The same as *Adulteration*.

**Falsiner'vate.** (*L. falsus*, false; *nervus*, a nerve.) A term applied to the leaves of the cellular Cryptogams in which the nervures enclose no fibro-vascular fasciculus.

**Fal'tranck.** See *Falltranck*.

**Falu-Szlatina.** Hungary, County Marmaros. Two mineral springs are found here; one an alkaline chalybeate, the other a saline chalybeate.

**Falx.** (*L. falx*, a sickle. *F. faux*; *G. Sichel*.) A scythe, or sickle. Applied to parts that have some resemblance to this object in their shape.

**F. cerebell'i.** (*L. cerebellum*, the little brain; dim. of *cerebrum*, the brain. *F. faux de cervelet*; *G. die Sichel des kleinen Gehirns*.) A triangular curved portion of the dura mater, extending from the middle of the posterior border of the tentorium, along the internal occipital crest to the foramen magnum, where it divides; it separates the two lobes of the cerebellum.

**F. cerebri.** (*L. cerebrum*, the brain. *F. faux de cerveau*; *G. die Sichel des Gehirns*.) A process of the dura mater; attached in front to the crista galli of the ethmoid bone, behind to the middle of the upper surface of the tentorium, and between these to the middle line of the inner surface of the cranium; it is broad behind, narrower in front, with a free lower border, which nearly reaches the corpus callosum, and separates the cerebral hemispheres.

**F. ligamento'sa.** (*L. ligamentum*, a band.) The same as *Ligamentum falciiforme*.

**F. ma'jor.** (*L. major*, greater.) The *F. cerebri*.

**F. mi'nor.** (*L. minor*, less.) The *F. cerebelli*.

**F. of the peritone'um, great.** (*L. fals*, a sickle. *F. grande faux du péritoine*.) A reflection of the peritoneum extending from the umbilicus to the inferior surface of the liver.

**F. of the peritone'um, les'ser.** (*F. petites faux du péritoine*.) The reflection of the peritoneum forming the lateral ligaments of the liver.

**F. of the umbil'cal vein.** The same as *F. of the peritoneum, great*.

**Famelica fe'bris.** (*L. famelicus*, famished; *febris*, a fever. *G. Hungerfi'ber*.) Fever in which hunger is a prominent symptom.

**Famelicus.** (*L. famelicus*, suffering from hunger; from *fames*, hunger. *G. hungerleidend*.) Hungry.

**Fames.** (*L. famis*, hunger; for *faumes*, from root of *Gr. φαειν*, to eat. *F. fám*; *G. Hunger*.) An urgent desire for food; hunger.

**F. bov'ina.** (*L. bovinus*, pertaining to oxen.) A term for *Bulimia*.

**F. can'ina.** (*L. caninus*, belonging to a dog. *F. addéphiagie, bonté, fám canine*; *G. Gefrässigkeit, heftiger Hunger, Heissheger, unternatürlicher Hunger*.) Canine hunger. A term for *Bulimia*.

**F. lup'ina.** (*L. lupinus*, wolfish. *F. fám de loup*.) Wolfish hunger. A term applied to the form of *Bulimia*, in which the patient eats voraciously, and almost immediately evacuates the contents of the intestines.

**Famigeratissimum emplastrum.** (*L. famigeratus*, renowned; from *fama*, fame; *gero*, to bear, or carry; *emplastrum*, a plaster; from its excellence.) Old term for a plaster used in intermittent fevers; composed of aromatic, irritating substances, and applied to the wrists.

**Familiar'ica sella.** (*L. familiaricus*, belonging to the household; *sella*, a seat.) A close stool.

**Family.** (*F. famille*; from *L. familia*, a household. *I. famiglia*; *S. familia*; *G. Familie*.) The persons of a household; the children of the same parents.

In Biology, a term applied to a number of genera bearing relations to each other by some organic resemblances.

In Botany, used by some synonymously with *Order*.

**F. disea'ses.** Diseases proceeding from heredity, as gouty or syphilitic diseases occurring in the children of gouty or syphilitic parents.

**Fam'ine.** (*F. famine*; from *L. fames*, hunger. *I. carestia*; *S. hambre, carestia*; *G. Hungersnoth*.) General, severe and continued hunger; continued want or scarcity of food. See *Inanition*.

**F. fe'ver.** A synonym of *Relapsing fever*, from its occurrence during periods of starvation.

The term has also been applied by Merse-mann to the totality of the symptoms produced by protracted hunger, which he calls a fever.

Also, applied to *Typhus fever*, arising during periods of famine.

**F. ty'phus.** Typhus occurring in famine.

**Fan.** (*Sax. fann*; from *L. fanus*, a fan; from Aryan root *wa*, to blow. *F. éventail*; *I. ventaglio*; *S. abanico*; *G. Fächer*.) An instru-

ment for exciting a current of air by the waving to and fro of a broad surface.

**F. like.** (*G. fächerähnlich.*) Resembling an ordinary fan in shape, as the folded leaves of some palms.

**F.-ner'ved.** Having the nerves radiating like a fan from one point, as in some leaves and insects' wings.

**F. palm.** The *Corypha umbraculifera*.

**F.-shaped.** (*G. fächerförmig.*) Resembling an ordinary fan in shape, as the folded leaves of some palms.

**F.-veined.** Same as *F.-ner'ed*.

**Fanculum.** (Probably a contraction of *Faneculum*.) A synonym of *Anethum*.

**Fan cy.** (A contraction of *F. fantasy*; from Old *F. fantasia*; from Low *L. fantasia*; from *Gr. phantasia*, a making visible.) Imagination, caprice, impression.

**F. mark.** A synonym of *Nævus*, in reference to its supposed origin in a mental impression during pregnancy.

**Fan freckles.** A synonym of *Ephelides*.

**Fang.** (*Sax. fangan*, to seize. *F. griffe*; *G. Fang*.) The root of a tooth.

Also, applied to the sharp-pointed, pervers tooth, fixed in the superior maxillary bone of vipers, through which flows into the wound made by it a venomous liquor, which produces effects more or less violent, according to the species of the reptile in which it is secreted.

Also, any sharp-pointed tooth or tusk of an animal.

**Fan'tôme.** (Old *F. fantôme*, *phantôme*; from *L. phantasma*; from *Gr. φάντασμα*, an appearance. *F. fantôme*, a phantom.) Name given by French obstetricians and surgeons to the figure or doll employed in demonstrating the progress of artificial labour, and the application of bandages.

**Far.** (*Sax. fear*; related to *Gr. πῆραι*, beyond; Sans. *para*, distant; from Aryan root *par*, to pass through. *F. loin*; *I. lontano*; *S. lejos*; *G. weit*.) Distant.

**F. point.** The farthest point of distinct vision. In the emmetropic or normal eye it is the object situated at an infinite distance, or from which parallel rays proceed. In the myopic eye it is an object situated at such a distance from the eye that the diverging rays from it are focussed on the retina, when the eye is at rest. In the hypermetropic eye it is an object situated, if the expression may be used, beyond an infinite distance, that is, the rays proceeding from the object must be convergent.

**F.-sight'edness.** Same as *Hypermetropia*.

**Far'ad.** (*Faraday*.) The term used to express the electro-magnetic unit of capacity.

**Farada'ic.** Same as *Faradic*.

**F. contractility.** See *Muscular contractility, faradic*.

**Faraday, Mi'chael.** An English physicist, born at Newington Butts, near London, in 1791, died in Hampton Court Palace in 1867.

**F., quadricar'buret of.** A term for *Butyl hydride*.

**F.'s tube.** A tube of thick, well-annealed glass, bent in the middle and sealed at one end after introduction of its contents. Used for experiments on the liquefaction of gases where great internal pressure has to be withstood.

**Faradayne.** Himly's term for a very

volatile fluid, of a disagreeable ethereal odour, obtained in the dry distillation of caoutchouc.

**Far'adic.** (*Faraday*.) Term applied to induced currents of electricity.

**F. electric'ity.** A term for induced electricity.

**F. excitabil'ity.** The character and amount of the contraction of a muscle under the influence of a faradic current, either applied directly or through a motor nerve; for this purpose the secondary current of an induction apparatus is generally used.

**F. explora'tion.** (*L. explorare*, to search out.) The use of the induced current for purposes of exploration.

**F. irritabil'ity.** Same as *F. excitability*.

**Faradisation.** (*Faraday*.) The application of induced currents of electricity in cases of disease. The term was proposed by Duchenne, of Boulogne, in honour of Faraday. There is little chemical action produced and little pain or burning; but strong muscular contraction is produced, and a powerful impression on both sensory and motor nerves. The faradic or induced current is one of high tension.

**F., cuta'neous.** (*L. cutis*, the skin.) The application of the induced electric current so that it is in large part confined to the skin. To effect this purpose the rheophores are to be dry, and the skin is to be covered with some absorbent powder; a thin metal plate or a metallic brush may be substituted for the rheophore, or the back of the hand of the operator holding one rheophore, the other being applied to some part of the patient's body.

**F., general.** The application of the induced electric current to the whole body. It is accomplished by placing the patient on a sheet of copper connected with one pole of the battery and stroking the surface of his body with one hand while the operator holds in the other hand the other rheophore.

**F., lo'calised.** (*L. locus*, a place.) The application of the induced electric current to some special part or organ, such as the skin, a muscle, or the larynx.

**F., mus'cular, direct'.** The application of the induced current to a muscle either by electro-puncture or by moist rheophores placed over the belly of the muscle, the skin being wetted with salt water.

**F., mus'cular, in'direct.** The application of the induced current to a muscle by means of its motor nerve, for which purpose a large wet rheophore is placed over the belly of the muscle, and a narrow or pointed one over the most superficial part, or motor point, of the nerve.

**F., neu'ro-mus'cular.** (*Νεύρον*, a nerve; *L. musculus*, a muscle.) The application of the induced current to a muscle, or to a motor nerve, or to both; for this purpose the rheophores should be moist and the skin well wetted with salt water, so that the current may penetrate more easily.

**F., percuta'neous.** (*L. per*, through; *cutis*, the skin.) The application of the induced current to the deeper tissues by passing it, by means of a moist rheophore, through the skin, which is to be wetted with salt water.

**Faradism.** (*Faraday*.) A term applied to inductive electricity.

**Farado-puncture.** (*Faradism*; *L. punctura*, a puncture.) The perforation of some

part of the body with a fine needle attached to one pole of a battery, for the purpose of sending an induced current of electricity through the organ.

**F. of heart.** A proposal of Steiner for the purpose of restoring the heart's action in cardiac syncope, such as occurs in death from chloroform. The needle is introduced into the apex of the heart through the middle of the fifth intercostal space, about 3 centimeters from the left border of the sternum.

**Farcimen.** (L. *farcimen*, a sausage; from *farcio*, to stuff.) A synonym of *Farcy*.

**Farcinialis.** (L. *farcimen*, a sausage. G. *wurstformig*.) Of, or belonging to, a sausage, or to *farcy*.

**F. membra'na.** (L. *membrana*, a membrane.) The *Allantois*.

**F. tun'ica.** (L. *tunica*, a tunie.) The *Allantois*.

**Farcinimum.** (L. *farcinimum*, a disease of horses and other animals, perhaps costiveness.) A synonym of *Farcy*.

**Farcino'ma.** (*Farcy*.) A synonym of *Farcy*.

**Farcinous.** (*Farcy*. F. *farcineux*.) Relating to, or being affected by, *Farcy*.

**Farc'tate.** (L. *farcus*, part. of *farcio*. F. *farcit*.) Stuffed; filled; crammed; having the cavity filled up.

**Farctura.** (L. *farcio*, to stuff, or fill.) The act of stuffing. Old term for an operation consisting in stuffing or cramming medicinal substances into the body of an eviscerated animal, or into the empty rind of a fruit.

**Farcy.** (L. *farcio*, to stuff. F. *farcin*; I. *scabbia*, *farcino*, *mal del verme*; S. *lamparones*; G. *Wurm*, *Hautwurm*.) A special manifestation or development of glanders, from which it may be produced by inoculation, or it may arise apparently from simple overcrowding. It presents itself in two forms, acute and chronic.

Also, a cutaneous eruption incident to glanders. It is often only a secondary manifestation, bearing about the same relation to the other phenomena that the erythema and papules do to syphilis. See *Glanders*.

**F., acute.** In this form the symptoms are both constitutional and local. The former consist of a febrile state, with rigors, rise of temperature, staring skin, and general impairment of activity; the latter are local infiltrations, usually, but not always, confined to the extremities. When these have subsided circumscribed swellings, known as *farcy buds*, together with an enlarged and tense condition of the blood-vessels and lymphatics, termed *cords*, are observed. The specific tubercles, or *farcy buds*, appear suddenly, and are situated in the cutis or subcutaneous tissue. They vary in size from a pea to a hazel nut. In a few days central softening, with disintegration and softening of the skin, take place in them, and deep angry-looking ragged ulcers, *farcy ulcers*, appear, which are disposed to extend and discharge a foul, greyish-white, creamy liquid tinged with blood. The adjacent lymph glands become implicated, shown by their enlargement and hardness, and they occasionally suppurate. Death may ultimately result from emaciation and prostration.

**F., acute, in man.** The disease may be propagated by inoculation or by general affection. When it is inoculated there is almost

immediately pain along the course of the lymphatics, proceeding from the wound; they become like knotted cords, the lymphatic glands swell, and the limb becomes oedematous. There is nausea, vomiting, headache, pains in the limbs, shivering, and more or less fever, occasionally of an intermittent type. When the disease is taken by general infection the constitutional symptoms precede the others. After six or seven days multiple abscesses form under the skin, which is hard and discoloured, containing blood and sanies, sometimes pus; inflammation of the lymphatics spreads from them, they burst and discharge, and an unhealthy ulcer succeeds; or an indolent subcutaneous abscess may form leaving the skin pale, soft, and pitting on pressure. In a fortnight or more the characteristic pustular eruption appears, accompanied by profuse sweating and great prostration. At the end of the third or fourth week death may occur, preceded by stupor, delirium, involuntary discharge of feces, and spasmodic muscular contractions.

**F., bud.** The form in which *F. buds* are present in great numbers in different parts of the body, as the head, neck, limbs, and nasal mucous membrane.

**F. buds.** A term applied to the small tumours which occur during the progress of *farcy* in the skin and nasal mucous membrane; they are caused by thickening of the valves of the lymphatic vessels or by inflammation of the lymphatic glands and the areolar tissue, which contain a large quantity of caseous matter; they soften and suppurate, leaving open sores, *F. ulcers*.

**F., button.** The form in which there are lumps caused by inflammation of lymphatic glands without implication of the areolar tissue.

**F. buttons.** Same as *F. buds*, especially applied where there is little thickening of connective tissue.

**F., chron'ic.** In this form the general disturbance of the system is not well marked. The febrile symptoms, if present, are distinctly remittent. The *farcy buds*, passing into ulcers, are the diagnostic features of the disease, one or several weeks being occupied in the process of softening.

**F., chron'ic, in man.** This form is propagated both by inoculation and by general infection. It resembles the acute form in its mode of access, but is slow in progress. When the abscesses appear they are seldom numerous, generally on the limbs, and often near the joints; they seldom contain pus, most often a bloody sanies, which, though generally without smell, is sometimes very fetid. They terminate in ulcers, which have little inclination to spread and none to heal. The lymphatics are not prone to be implicated, neither is there a pustular eruption, but the limb pains are often very severe and permanent. Chronic *farcy* may destroy the patient gradually, or may terminate rapidly in the end by taking on the acute form.

**F. cords.** The hardened lymphatic vessels found in most cases of *farcy*.

**F., pipe.** The form of *farcy* in which the lymphatic vessels are enlarged and thickened, without much implication of the glands.

**F. pipes.** The enlarged and thickened lymphatic vessels in the vicinity of *farcy* sores.

**F. sores.** Same as *F. ulcers*.

**F. ulcers.** The round open sores resulting from the suppuration of *F. buds*. They are

for the most part deeply excavated, and have grey or greyish-red, sloughy, glistening bases with elevated, everted, and usually ragged edges. They discharge an exceedingly foul, sanguinopurulent, irritating fluid. The surrounding connective tissue is swollen and indurated.

**Farfara.** The *Tussilago farfara*.

**F. be'chium.** (Böcz, a cough.) The *Tussilago farfara*, from its use.

**Farfarus.** The *Populus alba*; so called from the river of this name probably.

**Farina.** (L. *farina*, ground corn; from *far*, spelt, the earliest food of the Romans. *F. farve*; I. *farina*; S. *harina*; G. *Mehl*.) Meal; flour. A powder obtained by the grinding of seeds, especially those of graminaceous and leguminous plants, and the separation of the particles of cuticle or the bran.

Also, a synonym of *Pollen*.

**F. amygdalarum.** (L. *amygdala*, an almond. *F. farine d'amandes*; G. *Mandelmehl*.) Meal made by grinding down decorated almonds. Used externally as a powder applied to fissures and excoriations of the skin; and taken internally in the form of almond paste, and almond bread and biscuits. Also used as an addition to pastils.

**F. avenæ.** (L. *avena*, the oat. *F. farine d'avoine*; G. *Hafermehl*.) The flour of the seed of the oat. *Avena sativa*. See *Oatmeal*.

**F. fabæ.** (L. *faba*, a bean. G. *Bohnenmehl*.) Used as food often when mingled with the meal of other leguminous plants, as in *Ervalenta* and various patented foods. Also used as a poultice.

**F. facundans.** (L. *facundo*, to make fruitful.) A term for *Pollen*.

**F. fœni græci.** Meal made from the seeds of *Trigonella fœnum græcum*. Used as a poultice.

**F. hor'dei.** (L. *hordeum*, barley. G. *Gerstenmehl*.) Barley meal. Used for poultices.

**F. hordei præparata.** (L. *preparatus*, prepared. G. *präpariertes Gerstenmehl*.) Barley meal in which, by exposure to moderate heat, the starch has been partially converted into dextrin. An easily digestible food. Used in a similar manner to arrowroot. Formerly in the G. Ph.

**F. lactea in usu infantum.** Nestlé's food for children. Made from condensed milk and wheat meal, the starch of which, by exposure to moderate heat, has been converted into dextrin, and the gluten rendered soluble.

**F. leguminosarum.** (L. *legumen*, pulse.) The same as *F. fabæ*.

**F. lentis.** (L. *lens*, a lentil. G. *Linsenmehl*.) Lentil meal. A nutritious food, constituting the whole or a large part of the preparations called *Ervalenta* and *Kavalenta arabica*.

**F. lini.** See *Lini farina*.

**F. lini placenta'rum.** (L. *linum*, flax; *placenta*, a cake.) Linseed meal made from oil-cake, and retaining the odour of the rancid oil. Used as a poultice. See *Lini farina*.

**F. lini seminis.** (L. *semen*, seed. G. *Linsenmehl*.) Linseed meal. An emollient. Used when reduced to a paste with water as a poultice. See *Lini semina*.

**F. mandiocæ.** (*F. farine de manioc*; Port. *farinha de Pau*.) Cassava or Cassada meal. It contains about 2-3 parts per cent. of proteids.

**F. ory'zæ.** (L. *oryza*, rice. *F. poudre de riz*; G. *Reismehl*.) Ground rice; rice meal. The flour of rice, *Oryza sativa*, used as a food,

recommended by Waring as a useful substitute for linseed as a poultice.

**F. sa'gu.** (Malay *Sagu*, name of the palm, *Saguerus saccharifer*.) Sago.

**F. secalina.** (L. *secale*, rye. *F. farine de blé*; G. *Roggenmehl*.) Rye meal.

**F. secalis.** (L. *secale*.) The same as *F. secalina*.

**F. seminum sinapis.** Aust. Ph. (L. *semen*, seed; *sinapi*, mustard. G. *Senfmehl*.) The freshly prepared powder of the seeds of the mustard plant.

**F. sinapis.** (L. *sinapi*, mustard. G. *Senfmehl*.) Flour of mustard, procured by grinding the seed. See *Sinapis*, B. Ph.

**F. sinapis placenta'rum.** (L. *placenta*, a cake.) Ground mustard cake, or mustard seeds, from which the oil has been expressed.

**F. tritici.** B. Ph. (L. *tritium*, wheat. *F. farine de froment*; I. *farina di frumento*; S. *flor dei trigo*, acimite; G. *Weizenmehl*.) Wheat flour; the grain of wheat, *Triticum vulgare*, ground and sifted. It consists of starch, gluten, albumen, sugar, and gum, in somewhat varying proportions. Flour is used to sprinkle on inflamed surfaces, and is a constituent of *Cataplasma fermenti*.

**F. tritici tost'a.** (L. *tritium*, wheat; *tostus*, toasted.) Baked flour. Used as a food for infants and invalids.

**Farina'cea.** (L. *farina*, flour.) A term applied to the plants which yield the different kinds of eatable flour.

**Farina'ceous.** (L. *farina*, flour, or meal. *F. farineux*, *farineux*; I. *farinaceo*; G. *mehlig*.) Of, or belonging to, containing, consisting of, or affording, farina or flour.

In Medicine, the term is applied to epidermal exfoliations which are pale and very minute, so as to resemble flour.

**F. albumen.** A term applied to the albumen of a seed when it contains much starch, as in wheat.

**F. food.** Term applied to all forms of diet which contain a large proportion of starch in their composition, though they may not be exclusively formed of it. Such are puddings made of rice, sago, tapioca, semolina, arrowroot, and corn flour.

**Farinae.** Plural of *Farina*.

**F. emollient'es.** (L. *emollit*, to soften.) An old name for a mixture of equal parts of the flour of linseed, rye, and barley.

**F. resolut'es.** (L. *resolvo*, to loose, to melt. *F. farines resolutives*.) A name formerly given in the Fr. Codex to a mixture of equal parts of the flour of the seeds of the feunggreek, *Trigonella fœnum-græcum*, the bean, *Vicia faba*, the lentil, *Ervum ervilia*, and the white lupin, *Lupinus albus*; forming a meal of which cataplasms were made.

**Farina'rium.** (L. *farina*, meal.) A synonym of *Aleut*.

**Farinose.** (L. *farina*, starch. G. *mehlartig*.) Mealy; affording meal.

In Botany, applied to leaves or other organs that are covered with a meal-like powder.

**Far'kas-Mezó.** Transylvania, on the left bank of the River Fejér Patak. An earthy mineral water, containing free carbonic acid.

**Farnbühl.** Switzerland, near Lucerne, a climatic health resort, 2300 feet above sea-level, with a cold earthy spring, containing a little iron.

**Farn'tickles.** A synonym of *Ephelides*.  
**Farrants's medium.** Gum arabic 4 parts dissolved in distilled water 4 parts, and mixed with glycerin 2 parts. Used as a medium for preserving delicate animal and vegetable substances.

**Farrea nubes.** (*L. farreus*, made of spelt; *nubes*, a cloud.) Applied formerly, by Serenus Sammonicus, c. iii. as a term for *Porrigi* and *Pityriasis*, in reference to the exfoliation of the epidermis in a mealy state.

**Farreous.** (*L. fer*, corn. *F. teigneux*.) Scurfy; applied to the urine when it deposits a branny sediment.

**Farsight'edness.** The same as *Hypermotropia*.

**Fascia.** (*L. fascia*, a band. *F. fascia*; *I. fascia*; *S. fascia*; *G. Binde*.) A swathe, bandage, fillet, or roller.

In Anatomy, a membranous expansion of reticulated fibrous tissue, of varying thickness and strength, which serves as an investment to organs, especially muscles. Fasciae are divided into superficial and deep, or fibro-areolar and aponeurotic; they are developed from the mesoblast.

**F., abdominal.** (*L. abdomen*, the belly.) This consists of two layers of connective tissue, one superficial, often containing much fat, the other deep, which lie between the skin and the muscles and aponeuroses of the abdomen. The superficial layer is continuous below with the deep layer, and the two layers losing their fat pass into the dartos. The deep layer forms near the middle line the *Suspensory ligament of the penis*, and more externally the *F. of Scarpa*.

**F. adiposa renum.** (*L. adiposus*, fatty; *ren*, the kidney.) The adipose tissue surrounding the kidney.

**F. anal.** (*L. anus*, the anus.) A process of the deep perineal fascia. It is a thin layer of areolar tissue, which extends backwards on the perineal surface of the levator ani muscle.

Also, called the ischio-rectal fascia.

**F., antebrachial.** (*L. ante*, in front; *brachium*, the forearm. *F. aponeurose antebrachiale*; *G. Vorderarmbinde*.) This fascia is continuous with the brachial fascia, commences at the elbow, covers the forearm, and is attached to the lower part of the radius and the inner surface of the ulna. It is closely attached to the subjacent flexor and extensor muscles near their origin, and sends down processes between them. It is perforated by a communicating vein between the superficial and deep veins of the forearm. Below, it is continuous with the fascia of the hand.

**F. aponeurotica.** (*Ἀπνευρωσις*, the end of a muscle where it becomes tendon.) The same as *F., deep*.

**F. aponeurotica femoris.** (*L. fascia*, a band; *Gr. Ἀπνευρωσις*, the end of a muscle; *L. femur*, the thigh.) Same as *F. lata femoris*.

**F., axillary.** (*L. axilla*, the armpit. *F. aponeurose axillaire*; *G. Achselbinde*.) A dense fascia stretched across the axilla. It is continuous in front with the fascia covering the pectoralis major and minor muscles, behind with that covering the latissimus dorsi and teres major muscles, and below and externally with the sheath of the vessels, and the aponeurosis of the arm. It is perforated by many lymphatics.

**F., bicipital.** (*L. biceps*, two-headed.) A strong, flat, thin tendon passing from the inner side of the biceps flexor cubiti to the fascia

covering the muscles of the forearm, which arise from the internal condyle.

**F., brachial.** (*L. brachialis*, belonging to the arm. *F. aponeurose brachiale*; *G. Armbinde*.) This commences at the acromion, and forms a thin investment to the deltoid, at the anterior border of which it is continuous with the coracoclavicular fascia. It then surrounds the tendon of the pectoralis minor and that of the coracobrachialis, and penetrates to the lateral wall of the axilla and the capsule of the shoulder-joint. Finally it descends the arm, constituting an investment for the biceps and triceps muscles, the direction of the fibres being chiefly transverse.

**F., broad.** The *F. lata femoris*.

**F., buccal.** (*L. bucca*, the cheek. *G. Fasse der Backengegend*.) A thin fibrous fascia which, splitting at the side of the face into two layers, covers the superficial and deep muscles.

**F. buccinatoria.** (*L. buccinator*, a trumpeter.) A synonym of *F. buccopharyngeal*.

**F., bucco-pharyngeal.** (*L. bucca*, the cheek; *Gr. φάρυγξ*, the gullet.) The deeper of the two laminae of the buccal fascia. It is covered by the masseter and internal pterygoid muscles. Its middle part is stretched between the hamular process and the posterior extremities of the alveolar processes, behind the upper and lower molar teeth. In front it invests the external surface of the buccinator muscle, joins the parotido-masseteric fascia, and is lost at the angle of the mouth. Posteriorly, where it is thicker, it is continuous with the pterygo-maxillary ligament, and extends over the lateral wall of the pharynx. Above, it is connected with the tensor palati, by which it can be stretched, and with the Eustachian tube. Below, it is continuous with the deep layer of the cervical fascia.

**F. bulbi.** (*L. bulbus*, a bulb.) A synonym of *Tenon's fascia*.

**F. bulbi oculi.** (*L. bulbus*, the eye.) Same as *F. bulbi*.

**F. capitalis.** (*L. capitalis*, belonging to the head.) The *Bandage, capeline*.

**F. capitis.** (*L. caput*, the head.) The superficial fascia of the head; it is thin, and lies between the skin and the aponeurosis of the occipitofrontalis muscle.

Also, a synonym of *Diadema*.

**F., cephalo-pharyngeal.** (*Κεφαλή*, the head; *φάρυγξ*, the gullet.) A portion of the *F. pharyngis interna* which covers the sphenoid and temporal bones and the Eustachian tube, and is gradually lost in the pharyngeal wall.

**F., cervical.** (*L. cervix*, the neck.) A dense fascia covering the muscles of the neck, and for the most part divisible into a superficial and a deep layer. The two layers are fused at the hyoid bone and larynx, but are elsewhere split into many laminae.

**F., cervical, deep.** The deep layer forms the floor of the anterior triangle of the neck, and extends upwards to the linea obliqua interna maxillae inferioris, joins the ligamentum stylo-maxillare, the ligamentum stylohyoideum, and the buccopharyngeal fascia; below, it extends to the first rib, covers the scaleni and the floor of the fossa supraclavicularis, it encloses the posterior belly of the omohyoid, and, closely connected with the intermediate tendon of this muscle, passes to the middle third of the clavicle, and the cartilage of the first rib; internally it passes to

the sternomastoid, runs beneath the sternothyroid, in front of the thyroid gland and trachea, as far as to the manubrium sterni and the cartilage of the first rib, covering the thymus, and losing itself in the pericardium.

**F., cervical, superficial.** The platysma lies on the superficial fascia, which at the anterior border of this muscle spreads over the triangle of the neck, covering the digastric and mylohyoid muscles, the submaxillary gland, and jaw, and is continuous with the parotideo-masseteric fascia. It also may be traced over the outer surface of the sternomastoid, and it extends up to the ear; below, it covers the sternohyoid, sternothyroid, and the anterior belly of the omohyoid. It extends from the sternomastoid to the trapezius, covering the supraclavicular fossa, and terminates at the interclavicular ligament and the upper border of the clavicle.

**F., clavi-pectoral.** (*Clavicle*; *L. pectus*, the breast.) A fascia which is attached above to the clavicle, splits to enclose the pectoralis minor muscle, and unites with the deep pectoral fascia at the anterior fold of the axilla to form the axillary fascia.

**F. coli.** (*L. colon*, the large intestine.) See *Fascia coli*.

**F., Colles'.** (*Colles*, Abraham.) The *F. perineal, superficial*.

**F. colli.** (*L. collum*, the neck.) A synonym of *F. cervical*.

**F. colli profunda.** (*L. collum*, the neck; *profundus*, deep.) The *F. cervical, deep*.

**F. Cooper's.** (*Cooper*, Sir Astley Paston.) Same as *F. of Scarpa*. See *F. propria of Cooper*.

**F., coracoclavicular.** (*Coracoid process*; *clavicle*.) This fascia commences at the clavicle and the first rib, where it is continuous with the cervical fascia. It invests the subclavius muscle and fills the fossa infraclavicularis, where it attains its greatest density. It covers the deep surface of the pectoralis minor, extends to the coracoid process, and descends to the insertions of the pectoralis major and deltoid, where it becomes continuous with the fascia brachialis.

**F., cos'to-coracoid.** (*L. costa*, a rib; *coracoid*.) The same as *Membrana costo-coracoid*.

**F., cranial.** (*Kraniou*, the skull.) The layer of dense, firm fascia immediately underneath the skin of the skull, to which it is closely attached; it is continuous with the superficial fascia of the neck, and with the temporal fascia. It encloses the auricular muscles, and the superficial temporal vessels and nerves.

**F., cremasteric.** (*Κρημαστήρ*, a suspender.) Term applied to the connective tissue in which lie the lower fibres of the inferior oblique muscle of the abdomen, or cremaster muscle, which form loops on the surface of the cord upon the infundibuliform fascia.

**F., cribriform.** (*L. cribrum*, a sieve; *forma*, shape. *F. fascia cribriforme*, *f. criblé*.) The sieve-like fascia. Applied to a small web of cellular substance stretched from the lower edge of Poupart's ligament, across the saphenous opening of the fascia lata, over the inguinal glands; it is perforated by small vessels and lymphatics.

**F. crura lis.** (*L. crus*, the leg.) The same as *F. cruris*.

**F. cru'ris.** (*L. crus*, the leg.) This commences at the knee and covers the muscles of

the lower leg. Anteriorly it is attached to the crista of the tibia and fibula, and forms sheaths for the muscles between the two bones, and for the peronæi. It is absent on the inner surface of the tibia. At the posterior surface of the leg it divides into a superficial and deep layer for the muscles of that part; near the ankle it is strengthened by several stronger bands. See *Ligamentum transversum cruris*, *L. cruciatum tarsi*, *L. laciniatum*, and *Retinaculum tendinum peroneorum*.

**F. cru'ris profunda.** (*L. crus*; *profundus*, deep.) The deep layer of the *F. cruris*.

**F., deep.** A general term applied to the layer of fibrous connective tissue immediately investing the surface of the muscles of the limbs, dipping between them, and affording to them surfaces for attachment.

**F., deep, of pec'toral region.** A thin fascia investing the pectoralis major. It is continuous above with the costo-coracoid membrane.

**F., deep, of the sole.** The same as *F. plantar*.

**F., deep, of the thigh.** The same as *F. lata femoris*.

**F. denta'ta.** (*L. dentatus*, toothed.) A convolution of the brain lying in the dentate fissure, named from the notched appearance of its inferior surface. It is covered by the fimbria. The grey substance of the hippocampus is behind it; it blends in front with the unens. The *Gyrus dentatus*.

**F. denta'ta cinerea.** (*L. dentatus*, toothed; *cinereus*, ashy grey.) The sinuous outline presented on section of the grey matter forming the *Corpus dentatum* of the cerebellum.

**F. digita lis.** (*L. digitalis*, of the finger.) A synonym of *Gantelet*.

**F., diopht'halmic.** (*Δίς*, twice; *ὀφθαλμός*, the eye.) A bandage which covers both eyes.

**F. di'videns.** (*L. divido*, to separate.) Same as *Bandage, dividing*.

**F., dor'sal.** (*L. dorsum*, the back.) That portion of the lumbo-dorsal fascia which covers the muscles of the back in the dorsal region.

**F., dor'sal, of foot.** See *F. dorsalis pedis*.

**F., dor'sal, of hand.** See *F. dorsalis manus*.

**F. dorsalis ma'nus.** (*L. dorsum*, the back; *manus*, the hand.) A thin fascia commencing at the lower border of the ligamentum carpi dorsale and lost on the first phalanges in the expansion of the tendons of the extensores digitorum.

**F. dorsalis pe'dis.** (*L. dorsum*, the back; *pes*, the foot.) A thin fascia extending from the lower border of the retinaculum tendinum peroneorum over the dorsum of the foot to the toes. It is continuous laterally with the fascia plantaris, and is in parts attached to the lateral borders of the tarsus, and to the sides of the first and fifth metatarsal bones.

**F. en'do-abdomina'lis.** (*Ενδον*, within; *L. abdominalis*, abdominal.) A synonym of *F. transversalis*.

**F. en'do-gas'trica.** (*Ενδον*; *γαστήρ*, the stomach.) A synonym of *F. transversalis*.

**F. en'do-thorac'ica.** (*Ενδον*, within; *θώραξ*, the chest.) The fascia connecting the pleura costalis with the ribs and intercostal muscles, according to Sibson.

## FASCIA.

**F., fibro-areolar.** (*L. fibra*, a fibre; *areola*, a small open place.) The same as *F. superficial*.

**F. Heliodori.** (*L. Heliodorus*, an old Roman surgeon.) A T-bandage used to support the breast. Two or three turns were passed round the chest, and the split extremity was carried on either side of the neck.

**F., iliac.** (*L. iliacus*, from *ilia*, the flanks. *G. Darmbeinhalsbinde*.) The iliac fascia lines the back part of the abdominal cavity; it springs from the sacrum and lumbar vertebrae, and as it extends to the internal lip of the crest of the ilium, covers the iliacus and psoas magnus muscles above Poupart's ligament. It terminates below at Poupart's ligament, and at the brim of the pelvis. It is continuous with the fascia transversalis, aids in forming the sheath of the crural vessels, and is attached to the iliopectineal tubercle, the crista, and the ligamentum crista pubis, and the linea arcuata interna; above it blends with the ligamentum arcuatum externum of the diaphragm.

**F., ilio-pectineal.** A process of the fascia iliac which extends between the linea iliopectinea and Poupart's ligament, and then accompanies and surrounds the femoral vessels. It divides the space beneath Poupart's ligament into an internal and smaller space, which is occupied by the vessels, and an external space, occupied by the psoas and iliacus muscles.

**F. infraspina ta.** (*L. infra*, beneath; *spina*, spine.) The fascia covering the infraspinal muscle; a part of the *F. suprascapular*.

**F., infundibuliform.** (*L. infundibulum*, a funnel; *forma*, shape. *F. fascia infundibuliformis*.) A funnel-shaped fascia; a term for a membranous layer which is continuous above with the fascia transversalis and the subperitoneal areolar membrane, and which, lying beneath the cremasteric fascia, completely invests the spermatic cord, and is connected below with the posterior part of the testicle.

**F., inguinal.** (*L. inguinalis*, of the groin.) The fascia of the groin. It is divided into two layers, a superficial and deep, between which are found the superficial vessels and nerves, and the inguinal lymphatic gland.

Also, a synonym of *Spica inguinalis*.

**F., intercolumnar.** (*L. inter*, between; *columna*, a column.) A thin layer of connective tissue, derived from the tendon of the external oblique muscle at the margin of the external abdominal ring, and prolonged downwards upon the cord and testis.

**F., intercostal, external.** (*L. inter*, between; *costa*, a rib.) A thin layer of dense fascia covering the outer surface of the external intercostal muscles.

**F., intercostal, internal.** A thin layer of dense fascia covering the inner surface of the internal intercostal muscles.

**F., intercostal, middle.** A thin layer of delicate fascia lying between the external and internal intercostal muscles.

**F., intermuscular, of arm.** The brachial fascia gives off on either side of the arm an intermuscular septum, which is attached to the external and internal condyloid ridge, and to the corresponding condyle of the humerus. The external intermuscular septum blends with the tendon of the deltoid. It gives attachment to the triceps behind, and to the brachialis anticus, supinator longus, and extensor carpi radialis lon-

gior, in front. It is perforated by the musculospiral nerve and superior profunda artery. The internal intermuscular septum is blended with the tendon of the coraco-brachialis, and also gives attachment to the triceps behind, and to the brachialis anticus in front. It is perforated by the ulnar nerve and by the inferior profunda and anastomosing arteries.

**F., intermuscular, of foot.** Term applied to the strong vertical fibrous septa which separate the middle from the external and internal plantar group of muscles. These vertical septa give off thinner processes, which, running transversely, separate the successive layers of muscles from each other.

**F., ischio-prostatic.** (*Ischium*, the bone of that name; *prostatic* gland.) The same as *Ligamentum pubovesicale medium*.

**F. ischio-rectal.** (*Ischium*, the bone of that name; *L. rectum*, the intestine so called.) A thin layer of fascia continuous with the obturator fascia, which covers the perineal aspect of the levator ani muscle.

Also, a synonym of *F. anal*.

**F. lata.** (*L. latus*, broad. *F. fascia cruralis*; *G. die breite Binde, schuige Schenkelbinde*.) The broad fascia. See *F. lata femoris*.

**F. lata aponeurosis.** (*L. latus*, broad; *Gr. ἀπὸ νεύρωσις*, the end of a muscle.) The same as *F. lata femoris*.

**F. lata, falciiform process of.** See *Falciiform expansion of fascia lata*.

**F. lata femoris.** (*L. latus*, broad; *femur*, thigh.) A strong aponeurotic investment of the muscles of the thigh. It is attached above to the back of the sacrum and coccyx, to the crest of the ilium, to Poupart's ligament, to the body and ramus of the os pubis, to the ramus and tuberosity of the ischium, and to the lower margin of the great sacrospinous ligament. It covers the gluteus medius, and splits at the border of the gluteus maximus into a superficial and deep layer, which reunite below. The tensor vaginæ femoris is attached to it externally. It is thin on the inner side of the thigh, and just below Poupart's ligament presents the saphenous opening. The fascia lata assists below in forming the capsule of the knee-joint, and is attached to the tibia, fibula, and patella, and is continuous in part with the fascia of the leg.

**F. lata, muscle of.** The *Tensor vaginæ femoris*.

**F. levatoris ani.** (*L. levator*, a lifter.) Same as *F. anal*.

**F. lingual.** (*L. lingua*, the tongue.) A layer of connective tissue on the dorsum of the tongue, behind the papillæ circumvallatæ, which intervenes between the mucous membrane and the muscular tissue.

**F. longitudinalis anterior.** (*L. longitudo*, length; *anterior*, that which is in front.) The same as *Ligamentum longitudinale anterius*.

**F. longitudinalis posterior.** (*L. longitudo*; *posterior*, that which is behind.) The same as *Ligamentum longitudinale posterius*.

**F. lumbar.** (*L. lumbus*, the loin. *F. aponeurose de la masse commune*; *G. Lendenbinde*.) This fascia consists of three strong membranous layers ensheathing the erector spine and quadratus lumborum muscles. The superficial or posterior layer is that by means of which the latissimus

dorsi and serratus posterior inferior muscles are attached to the spines of the vertebrae. The middle layer is the posterior aponeurosis of the transversalis; it is situated between the erector spine and quadratus lumborum muscles, and is attached to the tips of the transverse processes of the lumbar vertebrae. The thinner anterior layer lies in front of the quadratus lumborum, and springs from the front part of the transverse processes of the vertebrae.

**F. lumbaris.** (L. *lumbaris*, belonging to the loins.) The *F. lumbor.*

**F. lumbodorsalis.** (L. *lumbus*, a loin; *dorsum*, the back.) The conjoined lumbar and dorsal fasciae.

**F. lumborum.** (L. *lumbus*, a loin.) The *F. lumbor.*

**F. masseteric.** (*Masseter* muscle.) This fascia is a prolongation of the deep fascia of the neck over the masseter muscle. It is attached above to the zygoma, and posteriorly extends over the parotid gland; it sends a strong process, the stylomaxillary ligament, between the parotid and submaxillary glands.

**F. musculi transversii.** (L. *transversus*, turned across.) The same as *F. transversalis*.

**F. nodosa.** (L. *nodosus*, knotted.) The *Bandage, knotted*.

**F. nucae.** (*Nucha*.) A thin fascia situated beneath the trapezius and rhomboidi muscles. It commences at the superior curved line and the external protuberance of the occipital bone, and at the anterior border of the trapezius is continuous with the superficial layer of the cervical fascia, and posteriorly at the middle line joins with that of the opposite side to form the ligamentum nucae.

**F. obturator.** (L. *obturo*, to close. *F. aponeurose obturatrice*; G. *Hüftlochmuskelbinde*.) A fascia covering the inner surface of the obturator internus muscle, and connected with the bone around it. It is attached above to the iliac portion of the ilipectineal line for a short distance, in front to an oblique line on the body of the os pubis extending from the upper and inner part of the tuioid foramen to a little below the symphysis, behind to the anterior margin of the great sciatic notch and great sacrosciatic ligament, and below to the calciform process of that ligament, by which it is connected with the rami of the ischium and os pubis. It partially bounds the canal for the obturator vessels and nerve. It forms the outer wall of the ischio-rectal fossa, and the internal pudic vessels receive a sheath from it.

**F. ocularis simplex.** (L. *ocularis*, ocular; *simplex*, simple.) A bandage employed to close and maintain moderate pressure on the eye. It is three or four yards long, and about one and a half inch wide. The end is placed on the temple and a circular turn made round the head. It is then carried below the occiput and the ear, and brought up across the eye which is to be closed, and finally carried round the forehead as at first.

**F. oculi.** (L. *oculus*, an eye. G. *Augenfelbinde*.) The same as *Tenon's fascia*.

**F. of arm.** The same as *F. brachial*.

**F. of buttock, deep.** See *F. of gluteal region, deep*.

**F. of buttock, superficial.** See *F. of gluteal region, superficial*.

**F. of Colles.** The *F. perineal, superficial*.

**F. of deltoid.** See under *F. of shoulder*.

**F. of dorsum of foot.** See *F. dorsalis pedis*.

**F. of dorsum of hand.** The same as *F. dorsalis manus*.

**F. of foot.** See *F. dorsalis pedis* and *F. plantar*.

**F. of forearm.** The same as *F. antebrachial*.

**F. of gluteal region, deep.** A dense fascia attached above and in the middle line to the crest of the ilium, the sacrum, and the coccyx. It covers the gluteus medius, splits to enclose the gluteus maximus, and joins the fascia lata femoris.

**F. of gluteal region, superficial.** The layer of fascia lying immediately under the skin of the buttock, and containing much fat.

**F. of hand, deep.** The same as *F. palmar*.

**F. of hand, superficial.** (L. *superficus*, surface.) The subcutaneous tissue which here forms a firm connecting medium between the skin and the subjacent palmar fascia. It contains much fat separated into small lobules.

**F. of head, deep.** The same as *Apo-neurosis cranii*.

**F. of head, superficial.** Same as *F. cranial*.

**F. of hip.** The layer of connective tissue between the skin and subjacent parts in the region of the hip. It is very dense over the gluteal region, where it is loaded with fat, but thin in front. It is continuous with the subcutaneous layer of the abdominal fascia over Poupart's ligament, and passes also into the dartos tissue of the scrotum. In the neighbourhood of the groin it is divisible into a superficial and deep layer.

**F. of leg.** The layer of connective tissue which lies beneath the skin of the leg. As in most other parts, it is divisible into a superficial layer containing fat, and a deep layer closely investing the muscles of the leg, but blending with the periosteum of the tibia and fibula where these bones are subcutaneous. It is very thick in front and above, and gives origin to the anterior muscles of the leg, and sends septa between them. Posteriorly, it is continuous with the fascia lata, and is strengthened by processes from the tendons of the biceps, sartorius, gracilis, and semitendinosus muscles. It is perforated in the lower part of the popliteal region by the external saphenous vein; below, it is continuous with the fascia of the foot.

**F. of mamma.** The superficial part of the *F. of pectoral region*.

**F. of neck.** Same as *F. cervical*.

**F. of orbit.** The connective tissue of the orbit, which contains much fat, and invests the muscles, nerves, and other structures traversing or contained in the orbit, and is condensed at certain points into laminae, of which the best marked is the *F. of Tenon*.

**F. of palm.** See *F. palmar*.

**F. of palm of hand.** The *F. palmar*.

**F. of pectoral region.** This is divided into superficial and deep. The superficial is loose and invests the mammary gland, and contains much fat; the deep is thin, and is attached above to the clavicle, internally to the front of the sternum, and externally becomes continuous with the fascia of the shoulder, axilla, and side

of the chest. It forms the costo-coracoid membrane.

**F. of pyriformis.** (*L. pyrus*, a pear; *forma*, shape.) A thin layer of the pelvic fascia formed by extension backwards of the obturator fascia and covering the pyriformis muscle and the sacral plexus; it is perforated by the branches of the internal iliac artery which escape by the great sacro-sciatic foramen.

**F. of scap.** See *F. cranii* and *Aponeurosis cranii*.

**F. of Scarpa.** (*Scarpa*.) Struthers' term for the deeper layer of the superficial fascia of the abdomen in the groin where it is separated from the subcutaneous layer by the superficial inguinal vessels and the lymphatic glands; it is continued over Poupart's ligament externally to become connected with the fascia lata just below, and internally to be prolonged over the spermatic cord to the scrotum to unite with the subcutaneous layer in forming the dartos.

**F. of shoulder.** The superficial fascia is loose and often contains much fat; the deep is dense, closely invests the deltoid muscle, and posteriorly becomes almost tendinous. A strong portion, which is attached to the vertebral and axillary margins of the scapula, covers the subcutaneous portions of the infraspinatus and teres minor muscles, and a process from this extends beneath the deltoid.

**F. of Tenon.** See *Tenon*, *capsule of*.

**F. of thigh.** The superficial fascia is loose and contains much fat; it is continuous with that of the hip, abdomen, and leg. The deep fascia is described under the head of *F. lata femoris*.

**F. of trunk, anterior.** Described under *F. of pectoral region*, and *F. abdominal*.

**F. of trunk, posterior.** The superficial fascia lies immediately beneath the skin, contains fat, and is continuous above with that of the neck above, of the axilla and breast in front, and of the abdomen and hips below. The deep fascia is a dense fibrous layer closely investing the superficial muscles, to which it gives sheaths. It is continuous with the deep fascia of the neck, axilla, breast, and abdomen, and is attached to the skeleton along the spines of the vertebrae, the occipital bone, the spine of the scapula, and the crest of the ilium.

**F. orbitæ.** (*L. orbita*, an orbit.) This, according to Krause, consists of two layers; an external, which is the periosteum of the orbit, and an internal, thinner layer, which is continuous with the dura mater at the optic foramen and the sphenoidal fissure, and with the fascia of the face at the sphenomaxillary fissure. The former contains some smooth muscular tissue. Quain and Sharpey describe it as forming the capsule of Tenon.

**F., palmar.** (*L. palmaris*, belonging to the palm.) This consists of a central strong and dense layer, and two lateral thinner portions. The fibres of the central part are continuous with those of the palmaris longus, and some spring from the annular ligament. The palmar fascia expands anteriorly, and divides into four processes, which pass to the bases of the several fingers and join the digital sheaths, and also give offsets to the transverse metacarpal ligament opposite the heads of the metacarpal bones, by which means a short canal is formed, containing the flexor tendons. Processes are also given off

ensheathing the lumbricales. At the roots of the fingers is a set of transverse fibres, constituting the superficial transverse ligament of the fingers.

**F., parotidæan.** (*Parotid gland*.) The part of the *F. parotideo-masseteric* which covers the parotid gland.

**F., parotidæo-masseteric.** (*Parotid; masseter*.) The superficial layer of the *F. buccal*, which invests the parotid gland and masseter muscle. It is continuous above at the zygomatic arch with the temporal fascia; posteriorly with the tendinous and cartilaginous portions of the external ear; below, at the body and angle of the lower jaw, with the superficial lamina of the cervical fascia; and in front it bends round the anterior border of the masseter, and unites with the deep layer of the buccal fascia.

**F. pectineæ.** (*L. pecten*, a comb.) The portion of the fascia lata which covers the pectineus and adductor longus muscles. It is thin. The crural vessels rest on it. Internally it divides into two layers, which embrace the head of the gracilis; externally it is continuous with the iliopectineal ligament; and above it is attached to the spine and crest of the os pubis.

**F., pectoral, deep.** (*L. pectus*, the breast.) The fascia which covers the pectoralis major muscle.

**F., pelvic.** (*G. Beckenbinde*.) A dense layer of connective tissue lining the muscles of the pelvis. It consists of two parts, the *F. obturator* and the *F. recto-vesical*.

**F., pelvic, internal.** (*L. pelvis*, a basin.) The same as *F. anal*.

**F., pelvic, lateral.** (*L. pelvis*, a basin.) The same as *F. obturator*.

**F., pelvic, superior.** (*L. pelvis*, a basin.) The same as *F. anal*.

**F., pelvic, visceral layer of.** That layer of the pelvic fascia which covers and is intimately adherent to the upper surface of the levator ani muscle.

**F. pelvina.** (*L. pelvis*, the pelvis.) The same as the *F. pelvic*.

**F. pelvis.** The *F. pelvic*.

**F. penis.** (*L. penis*, the male organ.) The fibrous tissue which invests the penis, with the dorsal arteries, veins, and nerves. It is continuous with the dartos, the superficial perineal fascia, and the superficial fascia of the inguinal region and pubes.

**F., perineal.** (*Περικναιον*, the space between the fundament and the scrotum.) See *F., perineal, deep*, and *F., perineal, superficial*.

**F., perineal, deep.** (*F. aponeurose profonde du périnée; G. tiefe Dammbinde*.) A triangular process of connective tissue stretched across the subpubic arch on the deep surface of the crura of the penis and the bulb of the urethra. It consists of two layers. The anterior or inferior, which is attached on each side to the rami of the os pubis and ischium, extending backwards in the middle line to the central point of the perineum, and becoming continuous with the superficial layer between the bone and the central point; anteriorly, it is continued into the angle between the crura of the penis; it is perforated by the urethra about an inch below the symphysis, and anteriorly to this by the pudic artery and the dorsal nerve of the penis on each side. The superior or posterior layer consists of

right and left halves separated by the urethra close to the neck of the prostate, where they are continued into the sheath of that gland; laterally, they join the obturator portion of the pelvic fascia. The anterior fibres of the levator ani muscle intervene between this layer of fascia and the recto-vesical fascia. Between the two layers of the deep perineal fascia lie the membranous portion of the urethra, Cowper's glands, the pudic and bulbar arteries, and the dorsal vein and nerves of the penis.

Also, called the triangular ligament of the urethra.

**F. perineal, superficial.** (*F. aponeurose périnéale superficielle*; *G. oberflächliche Dammbinde*.) A layer of connective tissue continuous with the dartos, situated in the anterior half of the perineum, beneath the subcutaneous fat. It is connected laterally with the rami of the os pubis and ischium as far back as the ischial tuberosity; and posteriorly along a line extending from the ischial tuberosity to the central point of the perineum; it turns round the posterior margin of the transversus perinei to join the deep perineal fascia. Hence fluid or air injected beneath it neither passes to the posterior part of the perineum nor down the thighs, though it may extend forwards to the scrotum.

**F. perineal media.** (*L. perineum; medius*, that is in the middle.) The posterior layer of the *F. perineal, deep*.

**F. perineal profundus.** (*L. perineum; profundus, deep*.) See *F. perineal, deep*.

**F. perineal superficialis.** See *F. perineal, superficial*.

**F. pharyngis elastica.** A process of the *F. pharyngis interna*, which springs from the thyroid cartilage and os hyoides, and extending upwards blends with the pharyngeal wall. It presents several folds, especially near the epiglottis.

**F. pharyngis interna.** (*Φάρυγξ*, the gullet; *L. internus*, inward.) Term applied to the strong, fibro-elastic submucous layer of connective tissue of the pharynx.

**F. pharyngobasilaris.** (*Φάρυγξ*, the gullet; *βάσις*, a base.) The dense layer of connective tissue that extends between the upper border of the superior constrictor of the pharynx and the base of the cranium.

**F. plantar.** (*L. plantaris*, of, or belonging to, the sole. *F. aponeurose plantaire*; *G. Fusssohlenbinde*.) A strong fascia on the sole of the foot, consisting of a central and two lateral portions. The inner part covers the abductor hallucis, and is continuous with the dorsal fascia and internal annular ligament. The outer part covers the abductor minimi digiti, and is continuous with the dorsal fascia. The central part is the thickest of the three portions, it arises by a pointed origin from the inner tubercle of the os calcis, and, after covering the flexor brevis digitorum, divides into five processes for the several toes.

**F. popliteal.** A process of the *F. lata* which, descending along the posterior part of the thigh, forms a strong aponeurosis, closing in the popliteal space behind. It is connected on either side with the condyles of the femur and the tendons of the extensor muscles of the leg. It is continuous below with the aponeurosis of the leg. It is sometimes perforated by the saphena minor vein.

**F. prævertebral.** (*L. præ*, in front of; *vertebra*.) An offset of the deep cervical fascia

which covers the rectus capitis anticus major and longus colli muscles. It terminates in the ligamentum longitudinale anterius of the vertebral column.

**F. profunda abdominis.** (*L. profundus, deep*; *abdomen*, the belly. *G. tiefe Bauchbinde*.) The *F. transversalis*.

**F. profunda brachii.** (*L. profundus, deep*; *brachium*, the arm.) The deep fascia of the upper extremity which is continuous with the costo-coracoid fascia, covers the axillary vessels, and forms an investment for the several muscles of the upper arm. It is attached by means of the external and internal intermuscular septa to the external and internal ridges of the humerus, and is continuous with the fascia anti-brachii below.

**F. profunda colli.** (*L. profundus, deep*; *collum*, neck.) The deep layer of the *F. cervicalis*.

**F. profunda cruris.** (*L. crus*, the thigh.) A synonym of the *F. lata*.

**F. profunda femoris.** (*L. profundus, deep*; *femur*, the thigh-bone.) A synonym of the *F. lata*.

**F. propria femoris.** The same as *F. lata femoris*.

**F. propria of Cooper.** (*L. proprius*, special. *F. fascia proprie*.) The fascia propria of Sir Astley Cooper is formed by the fusion of the subperitoneal tissue with a part of the transversalis fascia.

**F. propria of spermatic cord.** A thin membranous layer of connective tissue loosely investing the spermatic cord. It is a continuation of the infundibuliform fascia.

**F. propria of Velpeau.** The layer of cellular tissue which lies between the peritoneum and the fascia transversalis of the abdomen.

**F. recta abdominis.** (*L. rectus*, straight; *abdomen*, belly. *G. gerade Bauchmuskelscheide*.) The fascia covering the two surfaces of the rectus abdominis. The posterior layer ceases midway between the umbilicus and the os pubis, where it presents an arcuate line, the linea semicircularis Douglasii. Usually called the sheath of the rectus muscle.

**F. recto abdominalis.** The same as *F. recta abdominis*.

**F. rectorum.** (*L. rectus*.) The sheath of the recti muscles.

**F. rectovesical.** (*L. rectum*, the gut of that name; *vesica*, the bladder. *G. Mastdarm-Blasenbinde*.) This fascia forms the deep boundary of the perineal space. It is attached anteriorly to the back of the os pubis above the obturator fascia, from which it is there separated by the origin of the levator ani. Laterally it springs from the obturator fascia, along a curved line between the upper part of the obturator foramen and the ischial spine, and posteriorly it is continuous with the lower part of the fascia of the pyriformis. From these attachments it is directed downwards and inwards in contact with the upper surface of the levator ani, to the prostate gland, bladder, and rectum, blending in front of the bladder and between the bladder and rectum with that of the opposite side.

**F. renum.** (*L. ren*, the kidney.) Term applied to the connective tissue, often containing much fat, surrounding the kidney.

**F. repens.** (*L. repens*, crawling.) A term for the spica bandage.

**F. salpingo-pharynge'a.** (Σάλπιγγ, a trumpet; φάρυγγ, the gullet.) An extension of the *F. buccopharyngea*, which separates the tensor palati from the levator palati muscle.

**F., sarco'ma of.** Sarcoma presenting its usual characters developed from the perimysium of muscles.

**F. scapula'ris.** (L. *scapula*, the shoulder-blades.) The bandage called the *Scapulary*.

**F. Scar'pæ.** See *F. of Scarpa*.

**F. Sculte'ti.** See *Bandage, Scultetus's*.

**F. semicircula'ris.** (L. *semicirculus*, a semicircle.) The *Tenia semicircularis*.

**F. semiluna'ris.** (L. *semi*, half; *luna*, moon.) A synonym of *F. bicipital*.

**F. serra'ta.** (L. *serratus*, toothed.) The same as *F. dentata*.

**F. sola'ris.** (L. *sol*, the sun. G. *Sonnenbinde*.) The *F. nodosa*.

**F., spermatic, exter'nal.** (L. *sperma*, seed; *externus*, outward.) The *F. intercochinnar*.

**F., spermatic, inter'nal.** (L. *internus*, inward.) The *F., infundibuliform*.

**F. spira'lis.** (L. *spira*, a coil. F. *fascia spirale*; G. *Hobelbinde*.) The spiral bandage. A name for the common roller which is wound spirally round a limb.

**F. stella'ta.** (L. *stellatus*, starry.) The bandage called *Stellar*.

Also, the *Bandage, knotted*.

**F., subcuta'neous.** (L. *sub*, beneath; *cutis*, the skin. G. *Unterhautfascie*, *Hautbinde*.) The superficial fascia of the integument situated immediately beneath the skin. It contains the extremities of the sweat glands and much unstriated muscular tissue.

**F., submus'cular.** (L. *sub*, under; *musculus*, a muscle.) A synonym of *F. tenon*, *capsule of*.

**F., subperitonæ'al.** (L. *sub*, under; Gr. *περιτόναιον*, the peritoneum.) The layer of connective tissue attaching the peritoneum to the surfaces it covers.

**F., subpu'bic.** (L. *sub*, under; *os pubis*, the bone of that name.) The deep perineal fascia.

**F., subscap'ular.** (L. *sub*, beneath; *scapula*, the shoulder-blade.) That portion of the *F., brachial* which covers the anterior surface of the subscapularis muscle. At the base of the scapula it is continuous with the posterior lamina of the lumbo-dorsal fascia. Anteriorly it passes to the acromion, the coraco-acromial ligament, the coracoid process and humerus, strengthening the capsule of the shoulder-joint. It invests the muscles of the arm down to the elbow.

**F., superficial.** (L. *superficies*, the upper side of a thing. F. *fascia superficiele*; G. *oberflächliche Muskelbinde*.) The fascia immediately subjacent to the skin. It consists of connective tissue and contains much unstriated muscular tissue, many hair follicles and sweat glands, and in certain parts of the body, as about the mammae, large quantities of fat.

**F., superficial, of inguinal region.** See *F., inguinal*.

**F., superficial, of is'chio-rec'tal re'gion.** The superficial fascia of this region is exposed on removal of the skin. It is loaded with fat, and is supplied by branches of the superficial perineal arteries and by cutaneous branches of the small sciatic nerve.

**F., superficial, of pectoral region.** This fascia encloses the mammary gland, into

which it sends processes. It also sends processes between the skin and glands.

**F., superficial, of thigh.** This layer is continuous with the superficial fascia of the body generally. Internally it passes into the dartos. Near the groin it contains lymphatic glands, and is separated into two layers, of which the deeper is stretched across the saphenous opening of the fascia lata, and constitutes the cribriform fascia.

**F. superficialis.** See *F., abdominal*.

**F. superficialis abdominis.** (L. *superficialis*, superficial; *abdomen*, the paunch.) See *F., abdominal*.

**F. superficialis bra'chii.** (L. *brachium*, the arm.) This fascia is continuous with the superficial fascia of the rest of the body, and contains a moderate quantity of fat. It is thinner on the inner aspect of the limb than on the outer.

**F. superficialis colli.** (L. *superficialis*, belonging to the surface; *collum*, neck.) The superficial layer of the fascia of the neck beneath which the platysma myoides lies.

**F. superficialis cru'ris.** (L. *superficialis*; *crus*, the leg.) See *F., superficial, of thigh*.

**F. superficialis femoris.** The same as *F., superficial, of thigh*.

**F. superficialis inter'na.** Term applied by Velpeau to the layer of connective tissue subjacent to serous membranes.

**F. superficialis pectoris.** The same as *F., superficial, of pectoral region*.

**F. superficialis perine'alis.** The *F., perineal, superficial*.

**F., suprahyoid'an.** (L. *supra*, above; *hyoid bone*.) That portion of the superficial cervical fascia which covers the submaxillary gland, and extends from the inferior maxilla to the hyoid bone.

**F., suprascap'ular.** (L. *supra*, above; *scapula*, the shoulder-blades.) That fascia which, attached to the spine of the scapula, and for the most part covered by the trapezius and latissimus dorsi, lies upon the supraspinatus, infraspinatus, teres major and minor muscles.

**F. supraspina'ta.** (L. *supra*, above; *spina*, spine.) That portion of the *F., suprascapular* which covers the supraspinatus muscle.

**F. T-formis.** (L. *forma*, shape.) Same as *Bandage, T-shaped*.

**F. Tarini.** (*Tarinus*, Italian anatomist.) The same as *F. dentata*.

**F., tempo'ral.** (L. *tempora*, the temples. G. *Schlafenbinde*.) A strong fascia covering the temporal muscle above the zygoma, and giving attachment to some of its fibres of origin. Above, it is attached to the temporal crest of the frontal bone, and to the parietal bone. Below, it divides into two layers separated by fat, which are attached to the inner and outer surfaces of the zygomatic arch. It is separated from the skin by the expansion of the epicranial aponeurosis.

**F. thyreo-larynge'a.** (*Thyroid cartilage*; λάρυγξ, the larynx.) Term applied by Hüter to the fascia which, after investing the thyroid body, is firmly attached to the cricoid cartilage.

**F. tor'tilis.** (L. *tortilis*, winding. F. *fascia tortile*.) The rolled or winding bandage. A name for the tourniquet.

**F. transver'sa.** (L. *transverso*, to direct across.) A synonym of *F. transversalis*.

**F. transvers'al'is.** (L. *transverso*, to

direct across. *G. quere Bauchhinde*.) The fascia lying between the transversalis abdominis muscle and the peritonæum which covers the inner surface of the anterior, posterior, and lateral regions of the abdominal parietes. It is stronger in the lower part. It is attached to the cartilages of the lower ribs, to the bodies of the lumbar vertebrae, and to the crest of the ilium between the iliacus and transversalis muscles. It is continuous with the fascia covering the lower surface of the diaphragm, and lies on the anterior surface of the quadratus lumborum, the inner surface of the transversalis muscle and its aponeurosis, from which it must be distinguished, and the posterior surface of the rectus muscle. It joins with that of the opposite side in the middle line. At the outer part of Poupart's ligament it is continuous with the iliac fascia. Between the middle of Poupart's ligament and Gimbernat's ligament it is prolonged downwards in front of the vessels forming the anterior part of the sheath of the vessels, and this sheath is strengthened by transverse fibres above, to form the deep crural arch. The transversalis fascia is perforated by the spermatic cord or round ligament, to which it gives a covering, the infundibuliform fascia.

**F. triangularis.** (*L. triangularis*, three-angled.) A layer of connective tissue proceeding from and continuous with Gimbernat's ligament and the outer pillar of the ring placed behind the lower part of the external abdominal ring and its inner pillar.

**F. umbilicalis.** (*L. umbilicus*, the navel.) Richet's term for an aponeurotic lamina which is attached to the sheath of the rectus abdominis muscle of one side, and is continued behind the linea alba to join the sheath of the rectus of the opposite side. The remains of the umbilical vessels run vertically upward in a canal formed by this membrane and the linea alba. This fascia may be traced some distance below the umbilicus, or may not extend so low as the umbilicus, or may be altogether absent.

**F. vaginalis bulbi.** (*L. vagina*, a sheath; *bulbus*, a bulb.) Same as *Temon's fascia*.

**F., vertebral.** (*L. vertebra*, a spine bone.) The same as *F. dorsal*.

**F. volaris.** (*L. vola*, the hollow of the hand.) The same as *F. palmar*.

**Fasciæ.** Plural of *Fascia*.

**F. carbolisatae.** Flannel or other bandages which are soaked in carbolised oil.

**F. coli.** (*L. colon*, the intestine of that name.) The thin longitudinal muscular bands which are apparent on the colon.

**F., contracture of.** (*L. contractura*, from *contraho*, to draw together.) Abnormal shortening of a fascia, resulting from chronic inflammatory action, such as sometimes occurs in the palmar fascia and the fascia lata; great deformity may be produced by it.

**F., intercostal.** There are three layers of intercostal fascia, one of which covers the outer surface of the external intercostal muscles, and is most marked between the external intercostal muscles and the sternum; a second, which lies between the external and internal intercostal muscles; and a third, situated on the inner surface of the internal intercostal muscles, which is most marked between them and the spine.

**F. ligamento sæ coli.** (*L. ligamentum*, bandage; *colon*.) The same as *F. coli*.

**Fascial.** (*L. fascia*, a tendinous ex-

pansion of muscles. *F. fasciæ*; *G. bandförmig*, *bandirt*.) Of, or belonging to, a fascia.

**F. reflexes.** See *Reflexes, fascial*.

**Fascialis.** (*L. fascia*, a band.) Same as *Fascial*.

**F. longus.** (*L. longus*, long.) The sartorius muscle, from its shape.

**F. sutorius.** (*L. sutorius*, a shoemaker.) The sartorius muscle, from its use in crossing the leg.

**Fasciarum applicatio.** (*L. fascia*, a band; *applicatio*, a joining one's self to.) Bandaging.

**Fasciate.** (*L. fascia*, a band.) Banded together. Term applied in Botany to monstrous expansions or coalescences of stems, giving the appearance as of several stems adherent to each other side by side.

**Fasciated.** (*L. fascia*.) Bound together. Same as *Fasciate*.

Also, marked by bands of a different colour.

**F. branch.** A short branch which has assumed a flattened or thickened form, either from irregular development of a single bud, or from the coalescence of several contiguous accessory buds.

**Fasciatio.** (*L. fascia*, a bandage. *F. fasciation*.) Term for the binding up of a diseased or wounded part with bandages. See *Fasciation*.

**Fasciation.** (*L. fascia*, a band.) The act of bandaging or binding up.

Also (*L. fascis*, a bundle. *G. Verbänderungen*), the growth of branches or stems to each other, so as to form a flattened bundle.

**Fascicle.** (*L. fascicula*, dim. of *fascia*.) A close cluster or bundle, whether of flowers, stalks, roots, or leaves, or other things.

Also, the bundle of roots of an Endogen growing from one point.

Also, the form of cymose inflorescence in which the flowers are borne on short pedicels of equal length, as in *Dianthus*.

Also, a tuft or bundle of leaves produced by the want of development of the internodes of an axillary branch, as occurs in the berry.

Also, the same as *Fasciculus*.

**F. liber.** (*L. liber*, bark. *F. faisceaux libériens*.) The bundles of sieve-vessels which run in the axis of a plant through its whole length, constituting together the liber of the plant. They are found isolated only in the root.

**F. libero-ligneous.** (*L. liber*; *lignum*, wood. *F. faisceaux libéro-ligneux*.) The bundles of ligneous and liber fascicles, conjoined two and two, and which are found in the stem and nerves of the leaves of a plant.

**F., libero-ligneous, bicollateral.** (*L. bis*, twice; *collateralis*, to admit on both sides.) A libero-ligneous fascicle in which one of the component fascicles has a representative of the other on each side.

**F., libero-ligneous, collateral.** (*L. collatero*.) The ordinary form in which the component fascicles touch each other only on one surface, the remainder being in contact with the neighbouring tissue.

**F., libero-ligneous, concentric.** (*F. concentrer*, to join in one centre.) The form in which one of the component fascicles is surrounded by several of the other kind of fascicles.

**F. ligneous.** (*L. lignum*, wood. *F. faisceaux ligneux*.) The bundles of vascular tissue which run in the axis of a plant through

its whole length, constituting the wood of the plant. They exist separately only in the root.

**Fascicled.** (Same etymon.) Term in Botany applied to organs arranged in a fascicle.

**F. leaves.** Leaves which arise from a shoot which has no internodes, so that all seem to spring from the same place, such as occur in the larch.

**Fascicular.** (L. *fasciculus*, a little bundle. F. *fasciculaire*; I. *fascicolare*; G. *bündelförmig*.) Bundled together; clustered. Applied to roots.

**F. cambium.** (Cambium.) A term applied to that part of a ring of cambium which lies within the fibro-vascular bundles of the stem of a dicotyledonous or a gymnospermous plant.

**F. keratitis.** See *Keratitis, fascicular*.

**F. neuroma.** See *Neuroma, fascicular*.

**F. tis'sue.** A term which includes all the varieties of cellular tissue of plants which are collected into bundles or fascicles.

**F. xylem.** (ξύλον, wood.) The part of the xylem of a plant which, being developed from the fascicular cambium, is within a fibro-vascular bundle.

**Fascicularly.** (L. *fasciculus*.) In the manner of a *Fasciculus*.

**Fasciculate.** (L. *fasciculus*, a little bundle. F. *fasciculé*; G. *büschelartig, büschelförmig, büschelig*.) Bundled together; clustered. Applied to nerves, leaves, and stems of plants.

**Fasciculated.** Same as *Fasciculate*.

**F. bladder.** See *Bladder, fasciculated*.

**F. portion of the peduncle.** (L. *fasciculus*, a small bundle.) The *Crusta cruris cerebri*.

**F. root.** A term applied to such a root as that of the dahlia, which consists of a number of tuberculated rootlets springing from a common point.

**F. sarcoma.** See *Sarcoma, fasciculated*.

**Fasciculately.** (L. *fasciculus*.) In the manner of a *Fasciculus*.

**Fasciculation.** (L. *fasciculus*, a small bundle.) A term applied to the condition of the urinary bladder in which, from hypertrophy of muscular tissue, prominent ridges are observed on its inner surface; it is a result of obstruction to the flow of urine.

**Fasciculate-to-ra'mose.** (L. *fasciculus*; *ramus*, a bough.) Having branches or rootlets lying closely by each other in the same direction.

**Fascicule.** (L. *fasciculus*.) Same as *Fascicle*.

**Fasciculi.** Plural of *Fasciculus*.

**F. acoustici.** (Ἀκοή, to hear. F. *faisceaux acoustiques*.) The *Stria acustica*.

**F. corticales.** (L. *cortex*, bark.) A term for the pyramids of Ferrein.

**F. innomina'ti.** (L. *innominatus*, unnamed.) The intra-medullary parts of the *Fasciculus teres*.

**F. longitudina'les coli.** (L. *longitudo*, length; *colon*, the colon.) The same as *Tenia coli*.

**F., median posterior, of the medulla oblonga'ta.** (L. *fasciculus*, a small bundle.) The funiculi graciles.

**F. medullæ spinalis.** (L. *medulla*, marrow.) The columns of the spinal cord.

**F. musculares.** Same as *F. musculorum*.

**F. musculorum.** (L. *musculus*, a muscle.) The fasciculi of muscular tissue.

**F. pyramida'les.** (L. *pyramis*, a pyramid.) The pyramids of Malpighi.

**F. pyramida'les re'num.** (L. *pyramis*; *ren*, the kidney.) The pyramids of Malpighi.

**F., radicular internal.** (L. dim. of *radix*, a root.) Term applied by Charcot to fibres of the posterior roots of the spinal nerves which run for some distance through the area of the posterior columns before penetrating the posterior cornua of the grey matter; irritation of these fibres gives rise to the lightning-like pains experienced in locomotor ataxy.

**F. ter'etes.** (L. *teres*, round.) See *Fasciculus teres*.

**F. ter'etes cor'dis.** (L. *teres*, round; *cor*, the heart.) The columnæ carneæ of the heart.

**F. tubulo'si.** (L. *tubulus*, dim. of *tubus*, a tube.) The pyramids of Ferrein.

**F. tubulo'si re'num.** (L. *tubulus*, a small pipe; *ren*, the kidney.) The pyramids of Ferrein.

**Fasciculus.** (L. *fasciculus*, dim. of *fascis*, a bundle. F. *faisceau, fascicule*; I. *fascetto*; G. *Bündel, Büschel*.) A little bundle; a handful bound together.

In Anatomy, a bundle of fibres.

In Botany, applied to a parcel or close bundle of flowers on little stalks variously inserted and divided, and level on the top.

In Pharmacy, a handful (F. *fascicule*; I. *fascetto*; G. *Handvoll*), as of flowers, leaves, roots, or the like.

**F. arcua'tus.** (L. *arcuatus*, bent like a bow. F. *faisceau arqué*; G. *Bogenbündel*.) This fasciculus extends from the frontal lobes through the operculum into the occipital lobes, and then forwards and downwards into the temporal lobes. Its middle segment forms the greater part of the medullary substance of the insula, and lies between this and the capsula externa, but separated from the latter by the claustrum.

**F., cerebellar.** A column forming the superficial layer of the posterior part of the lateral column of the spinal cord. It is in connection with the white matter of the cerebellum.

**F. connec'tens.** (L. *connecto*, to fasten together.) Kolliker's name for a fasciculus of the early foetal brain of the higher mammals, which is derived from the lateral fasciculus of the testiform body, and which passes into, and upon, the lateral parts of the pons Varolii. It is also often visible in the adult, when it has relations also with the stria medullares.

**F. cunea'tus.** (L. *cuneatus*, wedge-formed.) The *Funiculus cuneatus*.

**F., cuneiform.** (L. *cuneus*, a wedge; *forma*, shape.) The *Funiculus cuneatus*.

**F. decussans pyramidum.** (L. *decussio*, to divide crosswise; *pyramis*, a pyramid. G. *antere Pyramiden-kreuzung*.) The decussation of the anterior pyramids caused by the crossing of some few fibres of the anterior columns, a large proportion of the deep fibres of the lateral columns, and some fibres of the posterior columns of the spinal cord on the anterior surface of the cord just below the medulla oblongata. Its length is from 7—8 mm.

**F. gracilis.** (L. *gracilis*, thin. G. *zarter Strang*.) A bundle of white fibres, about 1 mm. in breadth, situated between the posterior column and the posterior median fissure of the cervical portion of the spinal cord throughout its whole length. They can be followed microscopically to the lower part of the dorsal region. Above, the fasciculus gracilis becomes broader, and is sepa-

rated from the funiculus euneatus by the sulcus postremus collateralis.

The term is also employed in a more limited manner to the continuation upwards, on each side of the medulla oblongata, of Goll's column. As each ascends it forms a swelling, termed the clava, opposite the calamus scriptorius, and is lost above in the middle region of the corpus restiforme.

**F. longitudinalis.** (L. *longitudo*, length. G. *unteres Längsbündel*.) A fasciculus of white fibres running beneath the fasciculus arcuatus and the external capsule, above the fasciculus uncinatus, through the inferior surface of the frontal, temporal, and occipital lobes; it lies close to the outer wall of the posterior and inferior cornua of the lateral ventricle, and connects the temporo-sphenoidal with the occipital lobe.

**F. longitudinalis inferior.** (L. *longitudo*, length; *inferior*, underneath.) The same as *F. longitudinalis*.

**F. longitudinalis superior.** (L. *longitudo*; *superior*, that is above. G. *Bogenbündel*.) The same as *F. arcuatus*.

**F., muscular.** (L. *musculus*, a muscle.) The first division of a striped muscle, consisting of a collection of the bundles of striped muscular fibres surrounded by fibrous connective tissue.

**F. nucleolus.** (L. *nucleus*, a nut; *oliva*, an olive. G. *Olivenstrang*.) A bundle of fibres continuous with the lateral columns, situated behind the olivary bodies, and slightly arched.

**F. of Goll.** Same as *Column of Goll*.

**F. of reinforcement.** A synonym of *Funiculus euneatus*.

**F. of Türk.** This term is applied to the posterior division of the lateral column of the spinal cord situated to the inner side of the cerebral fasciculus, and just external to the posterior cornu of the grey matter. It is the crossed portion of the pyramidal fasciculus, and is a continuation of the decussated part of the anterior pyramidal tract of the medulla oblongata.

**F. olivary.** Term applied to the upward continuation in the medulla oblongata of the antero-lateral columns of the spinal cord. The strands embrace the olivary body, and then, as they pass upward, divide in the pons Varolii into two bands, one forming the motor tract of the crus cerebri, whilst the other passes to the corpora quadrigemina.

**F., primitive.** (L. *primitivus*, the first of its kind.) Same as *F. muscular*.

**F., pyramidal, crossed.** The *F. decussans pyramidum*.

**F., pyramidal, direct.** The median division of the anterior column of the spinal cord; so called because it does not decussate. It is a continuation of the non-decussating part of the anterior pyramid of the medulla oblongata.

**F., pyramidal, uncrossed.** The *F. pyramidal, direct*.

**F. pyramidalis.** (L. *pyramis*, a pyramid.) The same as *Funiculus pyramidalis*.

**F. teres.** (L. *teres*, round. G. *rundes Bündel*.) A prominent bundle of nerve fibres in the floor of the fourth ventricle, formed by fibres of the lateral tract, which ascend beneath the olivary body to the cerebrum, and are associated with fibres from the restiform body.

**F. teres medullæ oblongatæ.** The *F. teres*.

**F. teres pontis.** (L. *teres*, round; *pons*, bridge.) A flat bundle of white fibres on the

posterior surface of the pons Varolii, situated on either side of the median line, and continuous with the fasciculus teres of the medulla oblongata; it runs vertically upwards beneath the floor of the fourth ventricle, and enters the base of the eminentia quadrigemina.

**F. unciniformis.** The *F. uncinatus*.

**F. uncinatus.** (L. *uncinatus*, hooked. G. *Hakenbündel*.) A bundle of white fibres seen on the lower aspect of the cerebral hemisphere, which crosses the bottom of the Sylvian fissure and connects the frontal with the temporo-sphenoidal lobe. The superficial fibres are sharply curved at each extremity.

**Fascination.** (L. *fascino*, to bewitch. F. *fascination*; I. *fascinazione*; G. *Bezauberung*.) The act of bewitching or enchanting. Term for a power which it was superstitiously supposed magicians and other wicked persons had of inflicting diseases and mischiefs on individuals by a charm, spell, or look, without coming in contact with them, or administering anything to them; against which, many medicines, amulets and ceremonies were used; akin to this is the notion of the evil eye, still to be found among the very ignorant.

**Fascinosus.** (L. *fascinum*, witchcraft, the male organ, because a likeness of it was hung round the necks of children to preserve them from witchcraft.) One who has a large penis.

**Fascinum.** (L. *fascinum*.) The penis; an artificial penis for self-abuse.

**Fasciola.** (L. *fasciola*, dim. of *fascia*, a bandage. F. *fasciole*.) A small band or bandage. Also, a Genus of the Order Trematoda, Class Platyhelmintha.

**F. cinerea.** (L. *cinereus*, ash-coloured.) See *Fasciola cinerea*.

**F. cinerea cinguli.** (L. *cinereus*; *cingulum*, a belt.) A column of grey substance which becomes applied to the stria longitudinalis lateralis corporis callosi, and extends to the fascia dentata hippocampi.

Also, a synonym of *Tenia semicircularis*.

**F. clava ta.** The *Distoma clavata*.

**F. hepatica.** The *Distoma hepaticum*.

**F. heterophyes.** Mog. The *Distoma heterophyes*.

**F. humana.** (L. *humanus*, human.) The *Distoma hepaticum*.

**F. intestinalis.** Montin. (L. *intestinum*, a gut.) An undetermined parasite passed by the anus of a woman. According to Davaine, it was probably a fragment of a *Tenia* or a *Bothriocephalus*.

**F. Jacksoni.** The *Distoma Jacksoni*.

**F. lanceolata.** (L. *lanceolatus*, lanceolate.) The *Distoma hepaticum*. Also, the *Distoma lanceolatum*.

**F. ocularis.** Mog. The *Distoma oculi humani*.

**F. ventricosa.** The *Distoma ventricosum*.

**Fasciolæ.** Plural of *Fasciola*.

**F. cinerea.** (L. *cinereus*, ash. G. *graue Leisten*.) Slender grey stria formed by the grey substance of the lamina cinerea, appearing between the transverse bundles of the stria acustica in the upper part of the fourth ventricle.

**Fasciolate.** (L. *fasciola*, dim. of *fascis*, a bundle. G. *büschelig*.) Collected into, or consisting of, a small bundle.

**Fascioles.** (L. *fasciola*, a small bandage.) The modified spines of some Echinoidea.

**Fase'lus.** (Φάσηλος, the kidney bean.) The *Phaseolus vulgaris*.

**Faskook.** The name in Morocco of the false ammoniacum from *Ferula tingitana* or *F. orientalis*.

**Fas'ogh.** The same as *Fuskook*.

**Fast.** (Sax. *fastan*; G. *fasten*. F. *jeuner*; I. *digunare*; S. *azinar*.) To abstain from food.

**Fastidium** (L. *fastidium*, a loathing.) Same as *Nausea*.

**F. ci'bi.** (L. *cibus*, food. F. *dégout*; G. *der Ekel für Speisen*.) Loathing of food, or want of appetite.

**F. potus.** (L. *potus*, drink.) Loathing of drink, or want of thirst.

**Fastigiate.** (L. *fastigium*, a projecting point, the top. F. *fastigie*; G. *gegipfelt, zugespitzt*.) Tapering-topped; applied to branches when parallel, clustered, and erect, as those of the Lombardy poplar.

Formerly, applied to umbelliferous flowers which rise in a number together to the same height, forming a flat top.

**Fastigiate.** (L. *fastigium*.) In a fastigate manner; pointedly.

**Fastigium.** (L. *fastigium*, a gable, a slope. G. *Giebel*.) The upper and posterior angle of the fourth ventricle lying between the upper border of the posterior medullary velum and the posterior border of the anterior medullary velum.

Also, a term for the highest state of intensity, or the acme, of a disease.

**Fasting.** (Sax. *fastan*, to fast; G. *fasten*. F. *jeûne*; I. *degiunare*; S. *ayano*.) The abstaining from food.

**Fat.** (Sax. *fat*. F. *graisse*; I. *grasso*, *adipe*; G. *Fett*.) A greasy substance consisting of carbon, hydrogen, and a little oxygen, solid at the ordinary temperature, and changed into an oily liquid by heat, but by chemists extended to include all substances of the same nature at whatever temperature they become liquid. Fats are contained in both plants and animals, and are compounds of glycerin with acids, chiefly palmitic, oleic, or stearic. See *Adipose tissue*.

**F., absorp'tion of.** Fat, after being fluidified, emulsified, and in part saponified, by the action of the intestinal fluids, and especially of the pancreatic juice, is believed to be taken up by protoplasmic cells situated between the ciliated cells of the villi, and by these it is conducted to the central lacteal, and then to the plexus of the lacteals in the mesentery, to the mesenteric lymphatic glands, and to the thoracic duct.

**F. cells.** These are round or oval in form, or when compressed polygonal; they vary in size, being usually from 1-300th to 1-600th of an inch, but may be much larger or smaller. They have a thin external transparent and homogeneous membrane, lined, according to some, by a layer of granular protoplasm having a nucleus at one point, and within this, and completely filling the cell, is a large oil drop. The cells are collected into small lobules, separated by a few fibres of connective tissue, and are freely supplied with capillary blood-vessels. The cells often present in mounted specimens a stella of crystals of stearin.

**F., development of.** Fat appears in the human embryo about the middle of the fourth month of intrauterine life. It is first deposited in the form of a fine mist of oil drops in the interior of connective-tissue cells. These droplets gradually increase in number, and coalescing

form a few oil drops, and ultimately one large drop in each cell.

**F., distribution of.** In man fat is found beneath the skin, generally forming the panniculus adiposus. It is particularly abundant about the kidneys and in the layers of the omentum. It fills up the inequalities of the surface of the heart, and is abundant in the neighbourhood of joints. It forms the chief part of the yellow marrow of bones. It is sparingly present or altogether absent in the thin skin of the eyelids and of the penis and scrotum. It is not present in the cranial cavity nor in the lungs, except near their roots.

**F. embolism.** (G. *Fettembolie*.) A condition usually associated with hæmorrhage, in which the capillaries are partially or completely filled with oil globules. It has been noticed in cases of hæmorrhage into the corpus striatum and lungs. See *Embolism, fat*.

**F. emulsion.** (F. *émulsion*; from L. *emulgeo*, to milk out.) A formula of Martindale's. Fifteen oz. of melted lard is mixed with 300 grains of tragacanth, 30 oz. of boiling water is stirred in with a whisk, and 15 minims of essential oil of almonds added. Dose, 1—3 drs. in milk.

**F., forma'tion of.** See *F., development of*.

**F., heat-value of.** According to Favre and Silbermann, 1 kilogramme of butyric acid gives off in combustion 5647 calories, 1 kilogramme of stearic acid 9717 calories. Hermann finds that 1 kilo. of palmitin yields in the body 8883 calories, 1 kilo. of stearin 9035 calories, and 1 kilo. of olein 8958 calories. Frankland estimates that 1 kilo. of butter yields 7264 calories.

**F. hen.** The orpine, *Sedum telephium*. Also the *Chenopodium Bonus Henriens*, and the *Atriplex patula*.

**F., human.** Human fat contains palmitin, stearin, and olein, and is composed of C. 76.62, H. 11.94, and O. 11.44 per cent. It melts at about 63° C. (145.4° F.)

See also *Adeps humanus*.

**F., inunction of.** See *Inunction*.

**F.s, liquid.** The fatty substances commonly known as *Oils*.

**F., Macaw'.** A name applied to the solid palm oil from *Cocos fusiformis*.

**F.s, neu'tral.** A term for *F.s, saponifiable*.

**F., orig'in of.** Fat is formed in plants apparently by the metamorphosis of starch or sugar, the proportion of C. and H. being increased 50—60 per cent., and of O. diminished.

**F.s, saponifiable.** (L. *sapo*, soap; *fio*, to become.) Those fats which, although they do not combine in their entirety with alkalies, are resolved, in contact with them and water, into a fatty acid, which combines with the alkali to form a soapy salt, and a neutral body, glycerin, or a non-saponifiable fat, as cerin.

**F., saponifica'tion of.** (L. *sapo*, soap; *fio*, to become.) When an oily or fatty substance is kept for some hours at a high temperature in emulsion with water and an alkali, it is decomposed with the assimilation of the elements of water, producing a fatty acid and glycerin. The change which takes place is stearin,  $C_{57}H_{115}O_6$  + water,  $3H_2O$  = stearic acid,  $C_{57}H_{103}O_6$  + glycerin,  $C_3H_5O_3$ . The acid produced is stearic, palmitic, or oleic acid, according to the variety of fat used.

**F.s., solid.** Those fatty substances which are solid at ordinary temperatures, such as tallow, wax, and spermaceti.

**F.s., unsaponifiable.** (Sax. *un*, a prefix signifying negation; L. *sapo*, soap; *fit*, to become.) Fats which remain unaltered after prolonged boiling with alkalis, such as paraffin and cholesterolin.

**F. vesicles.** (L. *vesicula*, a small blister.) Same as *F. cells*.

**F. vessels.** The blood-vessels of the adipose tissue.

**Fatigatio.** (L. *fatigo*, to weary.) Same as *Fatigue*.

**Fatigue.** (F. *fatigue*, from *fatiguer*; from L. *fatigo*, to tire. I. *fatiga*; S. *fatiga*, *consancio*; G. *Ermüdung*, *Müdigkeit*.) Weariness, whether of body or of mind, or of a part of either.

**F., muscular.** The sensation of muscular fatigue appears to be due to the accumulation of the products of disintegration in muscle, such, for example, as sarcocollin acid and carbonic anhydride.

**F., muscular, law of.** This law, as laid down by Professor Haughton, is that when the same muscle, or group of muscles, is kept in constant action until fatigue sets in, the total work done multiplied by the rate of work is constant. The rate of work is found by dividing the work done in a given time by the time itself.

**F., retinal.** (F. *fatigue rétinienne*.) The exhaustion of the retina consequent on exposure to bright light, or to rapid alternation of light and darkness.

**Fatty.** (F. *alipex*; G. *fettig*.) Having the characters of fat.

**F. acids.** See *Acids, fatty*.

**F. casts.** See *Renal casts, fatty*.

**F. degeneration.** That condition in which a part or the whole of any tissue or organ is replaced by fat, as when the protoplasm of nerve or muscle becomes loaded with fat globules, in consequence of retrograde changes in its composition. It is said to result from natural disposition to decay; from defective vascular supply, so that too little nutriment and too little oxygen are furnished to the part; from rapid growth; from high temperature; from disease; and from the action of poisons, as phosphorus, antimony, arsenic and mercury, and the ferments of fevers. See *Degeneration, fatty*.

**F. degeneration of arteries.** A condition which may be the result of *Arteritis*, or may be an idiopathic change. In the latter form its most frequent seat is the commencement of the aorta, where it may be confined to the inner coat, affecting the endothelium, or it may involve also the elastic laminae and the muscular fibre-cells of the middle coat.

**F. degeneration of brain.** This condition is found in all the forms of brain softening as a sequel to the coagulation and breaking up of the myelin of the white nerve tissue; the small arteries and the capillaries are also similarly affected.

**F. degeneration of capillaries.** A condition in which protoplasm of the endothelium first becomes charged with oil globules, and then the outer walls; this change is frequently seen in brain degenerations, and in the kidney in some forms of Bright's disease.

**F. degeneration of cells.** Cellular

structures are frequently affected with fatty degeneration; the glandular epithelium of different organs, the epithelium of mucous membranes, and also the epidermis. The protoplasm of the cell is gradually replaced by fatty granules and oil globules.

**F. degeneration of connective tissue.** The connective tissue of any organ may be subject to fatty degeneration, but that of the arteries is the most frequently affected. The cells are the first and chief part attacked; the matrix less frequently.

**F. degeneration of endocardium.** A condition commencing in the connective-tissue cells of the tunica intima, and appearing as a circumscribed patch of an opaque white colour; its common seat is on a valve.

**F. degeneration of heart.** See *Heart, fatty degeneration of*.

**F. degeneration of kidney.** See *Kidney, fatty degeneration of*.

**F. degeneration of liver.** (F. *foie gras*.) A condition of the liver characterised by the accumulation of oil drops of varying size in the hepatic cells, which replace the natural protoplasm. It occurs in those who ingest excess of food, especially food of a fatty nature, and who are of indolent habits. It is frequently associated with pulmonary consumption and other wasting diseases, as with cancerous cachexia, chronic ulceration of bones, and chronic dysentery. It is of common occurrence in habitual drinkers, and it is one of the most prominent manifestations of acute phosphorus poisoning. It is occasionally observed as one of the symptoms of the acute fatty degeneration of the new born, and in cases of cardiac disease. The quantity of fat present may rise from the normal amount of 3 per cent. to 40 or 45 per cent. The excretion of bile is usually more or less interfered with, but it is not accompanied by ascites, swelling of the spleen, or other indications of impeded circulation, nor by jaundice. It is a chronic affection.

**F. degeneration of muscle.** In non-striated muscle the degeneration commences in the muscular fibre-cells, the protoplasm of which becomes converted into fat granules, which gradually fill the whole cell.

In both voluntary and involuntary striated muscle the protoplasm of the muscular fibres is gradually replaced by small fatty granules, which at first obscure the markings, and then gradually replace the natural structure, filling the sarcolemma and running together into oil globules; in the end the sarcolemma may itself undergo the fatty degeneration.

**F. degeneration of nerve tissue.** Fatty changes may occur in the grey as well as in the white nerve tissue, and may affect the ganglionic nerve-cells as well as the neuroglia.

**F. degeneration of pancreas.** See *Pancreas, fatty degeneration of*.

**F. degeneration of placenta.** See *Placenta, fatty degeneration of*.

**F. dyscrasia.** (*Δυσκράσια*, bad temperament.) An unhealthy condition in which the blood-serum contains too much granular fatty matter, rendering it whitish, cloudy, and opalescent. It is a natural condition after a meal, but may become a permanent, and then a morbid, condition by the eating of too rich food; it may be caused by the abuse of alcohol, and it

occurs in persons suffering from pulmonary diseases; and in both cases is caused by defective burning off.

**F., embolism.** See *Fat embolism*.

**F. erosion.** (L. *erodeo*, to gnaw away. G. *fettige Usur* of Virchow.) The wearing away of the endothelium of an artery from fatty degeneration of the cells. It is usually circumscribed, and having worn through the tunica intima, may end in rupture of the vessel, or in a dissecting aneurysm.

**F. granules.** See *Granules, fatty*.

**F. infiltration.** (F. *infiltrer*, to strain in.) A condition in which the quantity of fat in any part or tissue is in excess, but yet in which there is no absolute degeneration of tissue or replacement of it by fat. It is apt to result from abundant supplies of food with insufficient exercise.

**F. kidney.** See *F. degeneration of kidney*.

**F. ligament.** A synonym of the *Mucous ligament of the knee-joint*.

**F. liver.** See *F. degeneration of liver*.

**F. membrane.** (L. *membrana*, the skin covering a part.) The subcutaneous areolar tissue which contains the fat.

**F. metamorphosis.** (Μεταμόρφωσις, a transformation.) Same as *F. degeneration*.

**F. metastasis.** See *Metastasis of fat*.

**F. osteitis.** See *Osteitis, fatty*.

**F. tissue.** See *Adipose tissue*.

**F. tissue, tumour of.** See *Lipoma*.

**F. tumour.** Same as *Lipoma*.

**F. urine.** See *Urine, fatty*.

**Fatuism.** Same as *Fatuity*.

**Fatuitas.** See *Fatuity*.

**F. alpicolarum.** (L. *Alpes*, the Alps; *colo*, to inhabit.) A synonym of *Cretinism*, from its frequency in mountainous districts.

**F. convallina.** (L. *convallia*, a valley enclosed on all sides.) A synonym of *Cretinism*, in reference to the kind of locality in which it is common.

**Fatuity.** (L. *fatuitas*, foolishness; from *fatuus*, silly. F. *fatuité*; G. *Blödsinn*.) Weakness of understanding; foolishness; idiotism, or idioey. A synonym of *Dementia*.

**Fatuous.** (L. *fatuus*.) Foolish, imbecile.

**Faucal.** (L. *fauces*, the upper part of the throat.) Relating to, or arising in connection with, the *Fauces*.

**Fauces.** (L. *fauces*, the upper part of the throat. F. *gosier*; G. *Rachenhohe*, *Rachenmündung*.) The cavity at the back of the mouth, from which the pharynx and larynx proceed.

In Botany, the same as *Fusus*.

**F., isthmus of.** (Ισθμός, a strip of land between two seas. F. *isthme du gosier*; G. *Rachenenge*.) The space at the back of the mouth bounded above by the free margin of the palate, below by the back of the tongue, and on each side by the pillars of the soft palate and the tonsils.

**F. lupinæ.** (L. *lupinus*, of a wolf. G. *Wolfsrachen*.) An old term for cleft palate.

**F., pillar of, anterior.** (F. *pilier antérieur du voile du palais*; G. *vorderer Gaumenbogen*, *Zungengauzenbogen*.) A broad, low, curved fold of mucous membrane running from the base of the uvula and the under surface of the soft palate to the hinder part of the border of the tongue.

**F., pillar of, posterior.** (F. *pilier postérieur du voile du palais*; G. *hinterer Gaumenbogen*, *Schlundgauzenbogen*.) A prominent,

narrow, curved fold of mucous membrane running downwards and backward from the back part of the lower surface of the soft palate, and losing itself in the side wall of the pharynx.

**Faucette voice.** (L. *falsus*, false.) Same as *Falsetto voice*.

**Faucial.** (L. *fauces*, the throat.) Relating to the *Fauces*.

**Faucitis.** (L. *fauces*, the throat.) Inflammation of the *Fauces*.

**Faufel.** (F. *cachou*; G. *Catechou*, *Catechusast*, *Japanische Erde*.) Old name for catechu. (Quincy.)

**Faulenseebad.** Switzerland, on the south-western side of the Lake of Thun, near the small Lake of Goldswyl or the Faulensee. A climatic health resort, 3400 feet above sea-level, with a calcium sulphate spring. Used in rheumatic swellings of the joints.

**Faulex.** (Arab. F. *achir*; G. *Stahl*.) Old name for *Chalybs*, or steel. (Ruland.)

**Fauna.** (L. *Faunus*, the tutelary deity of agriculture.) Term applied to the animals of any particular region or epoch. A complete account of any fauna embraces a description of the abundance or poverty of animal life as a whole, the names of the various species known to exist, the diversity being usually much greater where there are lofty hills and deep valleys, and when the land is penetrated by deep arms of the sea, and an account of the past biological history of the region.

**Faunorum ludibria.** (L. *Faunus*, a Faun; *ludibrium*, sport.) A term applied by some to nightmare, by others to epilepsy.

**Fauquier springs.** United States of America, Virginia State, Fauquier County. A sulphur water, also known as Lee's springs.

**Faure's battery.** An instrument for storing electricity, composed of alternate layers of lead, peroxide of lead, and moistened acidified felt. A current of electricity passed through the instrument deoxidises the peroxide, which during reoxidation originates a current in the inverse direction.

**Faustini pastilli.** (L. *pastillus*, a lozenge.) Faustinus's lozenges, composed of burnt paper, quicklime, arsenic, sandarach, and other substances.

**Faux.** A seldom-used singular of *Fauces*. Also, applied to the mouth or opening of the tube of a gamophyllous corolla or calyx.

**Favaginous.** (L. *favus*, a honeycomb.) Formed like, or resembling, a honeycomb; like to, or allied to, *Favus*.

**Favella.** (L. *favilla*, ashes.) A form of the conceptacular fruit of floridous Algae, in which the spores are collected into spherical masses which lie on the outer surface of the frond, as in *Ceramium*.

**Favellidium.** (Dim. of *Favella*.) A form of the conceptacular part of a floridous Alga, in which the spores are collected into spherical masses, which lie entirely embedded in the substance of the frond, as in *Halymenia*; or project somewhat, as in *Gigartina*.

**Faveolate.** (L. *favus*, a honeycomb. G. *bienenzellig*.) Honeycombed; like to a honeycomb.

**Favi.** Plural of *Favus*.

**Faviform.** (L. *favus*, a honeycomb; *forma*, resemblance.) Like a honeycomb; honeycombed. An epithet formerly applied to abscesses, or putrid ulcers, which exude pus from small cavities on pressure.

**Favilla.** (*L. favilla*, ashes.) The proper spelling, according to Littré, of *Fovilla*.

**Favose.** Same as *Favous*.

**Favous.** (*L. farvus*, a honeycomb. *F. faveux*.) Resembling a honeycomb.

Also, resembling the disease *Favus*.

**Favuli.** (*L. farulus*, dim. of *farus*, a honeycomb.) The alveoli of the gastric mucous membrane.

**Favus.** (*L. farvus*, a honeycomb. *F. teigne faveuse*; *G. Erbarind*, *Wachsgund*.) A contagious disease of the skin, due to the presence of a vegetable parasite named *Achorion Schonleinii*, and characterised by discrete or confluent, split-pea-sized, circular, cup-shaped, pale yellow, friable crusts, generally perforated by hairs, and accompanied by itching. Its usual seat is the scalp, but other parts of the body may be affected. The skin beneath the crusts is depressed, smooth, and shining, or atrophied, sometimes inflamed, or even in a state of suppuration. The diseased parts have a sickly mouldy odour. The hairs at the seat of the affection become lustreless, opaque, dry, and brittle. The crust is almost entirely composed of the fungus, consisting both of mycelium and spores, and both may be traced into the follicles and also the shaft of the hair. Also called *Tinea favosa*. See also *Puccinia favi*.

**F. achatinus.** (*L. achates*, an agate.) The form in which the crusts are thought to resemble an agate.

**F. confertus.** (*L. confertus*, dense.) The form in which the favus crusts are closely crowded together.

**F. crust.** See under *Favus*.

**F. cup.** (*F. godet farvique*.) The cup-shaped crust of favus.

**F. dispersus.** (*L. dispersus*, scattered.) The form in which the favus crusts are distinct and separated from each other.

**F. disseminatus.** (*L. disseminatus*, spread abroad.) The form in which the crusts are distinct and cup-shaped.

**F. epidermic.** (*Ἐπίδερμης*, the cuticle.) Bazin's term for a yellowish furfuration of the hairless skin, like a patch of pityriasis, observed in cases of true favus of the hairy skin; it is produced by inoculation of the spores of the parasite fungus. It may also be found in the intercapillary spaces of the hairy skin.

**F. figuratus.** (*L. figuratus*, shaped.) The form in which, by conjunction of the crusts, a wavy outline of many curves is attained.

**F. fungus.** The *Achorion Schönleinii*.

**F. granula tus.** (*L. granulum*, a small grain.) The form in which the crusts have run together into an irregular, crumbling, dry mass.

**F. lupinus.** (*L. lupinus*, a lupine.) The form in which the crusts resemble a lupine seed.

**F. nummularis.** (*L. nummus*, a coin.) The form in which the crusts are flat and broad, like a coin.

**F. pityriasic.** (*Πιτυρίασις*.) Same as *F. epidermic*, from its likeness to pityriasis.

**F. puccinia of.** See *Puccinia favi*.

**F. scutiformis.** (*L. scutum*, a shield; *forma*, shape.) The form in which the crusts are large, not very prominent, and flattened.

**F. scutula tus.** (*L. scutulatus*, lozenge-shaped.) The form in which the crusts are somewhat diamond-shaped.

**F. scutulum.** (*L. scutulum*, a small shield.) Same as *F. crust*.

**F. spar'sus.** (*L. sparsus*, spread open.) The form in which the crusts are scattered at some distance from each other.

**F. squamo'sus.** (*L. squama*, a scale.) The form in which the favus crusts consist of thin whitish scales.

**F. squarro'sus.** (*L. squarrosus*, scurfy.) The form in which the crusts are more or less elevated and irregular.

**F. suberinus.** (*L. suberinus*, cork-like.) The form in which the crusts are not compact, but cellular and cork-like.

**F. turrisformis.** (*L. turris*, a tower; *forma*, shape.) The form in which the crusts have coalesced and project considerably.

**F. ungual.** (*L. unguis*, a nail.) Favus of the nails, produced by inoculation of the spores of the parasitic fungus from scratching of an affected part; these germinate in the deeper layer of cells and produce yellow spots, which enlarge, produce nodosities, and finally perforate the nail. Called *Onychomycosis favosa*.

**F. urceolaris.** (*L. urceolus*, a little pitcher. *F. farus in godets*.) The form in which the favus crusts are very regularly depressed in the centre, so as to be cup-shaped.

**F. vulgaris.** (*L. vulgaris*, common.) The ordinary cup-shaped form of favus.

**Fax-wax.** The elastic tissue of the ligamentum nuchæ.

**Fayette springs.** United States of America, Pennsylvania State, Fayette County. A chalybeate water, containing a grain of ferrous bicarbonate, with a little manganese bicarbonate, in a gallon.

**Fea berry.** A local name of the gooseberry.

**Fear.** (*Mhd. E. fer*; *Sax. fier*.) Terror.

**F. of closed spaces.** See *Claustrophobia*.

**F. of open spaces.** See *Agoraphobia*.

**Feather.** (*Sax. fæðer*; *G. feder*; *L. penna*; *Gr. πτερόν*; *Sansk. patra*; from Aryan root *pat*, to fly. *F. plume*; *L. penna*; *plume*; *S. pluma*.) Feathers are epidermic structures forming the outer covering of a bird. They are of three kinds:—*Penna*, or contour feather; *Pennipenna* or *Plumula*, or clothing feather; and *Filopluma*; all consisting of a central shaft and lateral barbs, with the exception of the variety of clothing feathers called vibrissæ.

A typical feather consists of a quill or calamus, by which it is inserted into the skin upon its papilla; a shaft or rachis, being the prolongation of the quill to form the central axis of the feather, together forming the stem or scapus; and lateral expansions, or webs, the vane or vexillum; this latter consists of long, slender, tapering plates springing from the rachis, having marginal processes or barbules, which themselves may have lateral offshoots called barbicels or barbules.

**F. alum.** A term applied to native hydrated aluminium sulphate, and to native iron alum, which occur in delicate feathery masses.

**F.s, clo'thing.** Feathers covering the body other than contour feathers, including plumes and vibrissæ.

**F.s, composition of.** Feathers contain, in 100 parts, carbon 52.457, hydrogen 6.958, nitrogen 17.719, and oxygen and sulphur 22.866. The ash contains a considerable quantity of silica; the most is found in the feathers of seed-eating birds; in some, copper is present.

**F. con'tour.** A term for the ordinary feathers of a bird; so called because they lie on

## FEATHERED—FEBRILE.

the surface and determine the contour of the body. Also, called *Pluma*, which see.

**F.s, development of.** Feathers are developed upon a modified skin papilla with a vascular core; see *F., papilla of*. The provisional down, existing at the time of hatching, is formed by the cornification of the longitudinal ridges of the mucous layer of the epidermis of the feather papilla, each ridge forming a barb, and the whole ensheathed in the horny layer of the epidermis until the down feather is fully formed, when it is thrown off. The quill of a permanent feather is formed by a cornification of both layers of the epidermis at the base of the papilla; the vane is formed from thickened ridges of the mucous layer of the epidermis of the feather papilla, the horny layer becoming a provisional sheath.

**F.s, down.** The soft, short, sometimes shaftless feathers of a bird, the barbs of which have no barbules.

**F.-edged.** Having one edge thinner than the other.

**F. follicle.** See under *F., papilla of*.

**F. kymograph.** See *Kymograph, feather*.

**F., papilla of.** (*L. papilla*, a small pimple.) The modified skin papilla from which a feather springs; it presents on one side a deep vertical groove, wide at the base, and diminishing to nothing at the apex; on each side of it shallow, closely-placed, lateral grooves spring, and from each side of these other much finer grooves; on these the feather is moulded. The papilla at an early period becomes enveloped in a sort of follicle, which deepens as the feather grows.

**F.s, primary.** (*L. primus*, first.) The feathers that spring from the bones of the manus of a bird.

**F.s, quill.** The strong feathers of the wings and tail of a bird.

**F., scapular.** (*L. scapula*, the shoulder-blade.) The feathers which cover the humerus and scapula of a bird.

**F.s, secondary.** (*L. secundus*, second.) The feathers which spring from the distal end of the radius and ulna of a bird.

**F.s, tertiary.** (*L. tertius*, third.) The feathers which spring from the proximal end of the radius and ulna of a bird.

**F. tracts.** See *Pterygia*.

**F.-vein'ed.** Said of leaves in which the veins are straight, running direct from the midrib to the margin, and are either connected by many branching venules, as in the oak, or curve round towards the apex of the leaf and are connected with the margin by small venules, as in the lilac.

**Feathered.** (*Sax. fêser*, a plume, or feather.) Covered with, or possessing, feathers.

In Botany, applied to organs or structures which have their parts arranged in the form of a feather; that is, with a central stem and lateral plumule- or vane-like structures.

**Featherfew.** (Probably a corruption of *Feverfew*.) Local name for the *Chrysanthemum parthenium*.

**Feathery.** The same as *Feathered*.

In Botany, applied to structures with hairs which are themselves provided with lateral smaller hairs.

**Febrifuga.** The root of the *Cassia medica*.

**Febres.** (*L.* plural of *febris*, a fever. *F.*

*febres*; *G. Fiebers*.) Fevers; an Order of the Class *Pyrexia*, of Cullen's nosology.

**Febricitant.** (*L. febricitans*, to have a fever.) Term applied to one who is affected with fever.

**Febricitatio.** (*L. febricitatio*, to have a fever.) Feverishness.

**Febricity.** (*L. febris*, a fever.) The state of having a fever, or being feverish.

**Febricose.** (*L. febricosus*, that has a fever. *G. fieberkrank*.) Feverish.

**Febricula.** (*L. febricula*; dim. of *febris*, a fever. *F. fièvre petite*; *I. febricola*; *G. ein kleines Fieber, Fieberchen*.) A slight fever; a little fever. Same as *Fever*, continued, simple.

Manningham used the term to denote cases which would now be called *Enteric fever*.

**Febriculose.** (*L. febriculosus*, feverish. *G. fieberhaft*.) Having a slight fever; relating to a *Febricula*.

**Febriculosity.** (*L. febriculosus*, feverish.) Feverishness.

**Febricus.** (*L. febris*, a fever.) Feverish.

**Febrificient.** (*L. febris*; *facio*, to make.) Inducing fever.

**Febriferous.** (*L. febris*; *fero*, to bear.) Inducing, bearing, or occasioning, fever.

**Febrific.** (*L. febris*, a fever; *facio*, to make.) Producing fever.

Also, the same as *Feverish*.

**Febrifuga.** (*L. febris*, a fever; *fugo*, to drive away.) A name for the *Chrysanthemum parthenium*, motherwort, common fever-few, or febrifuge.

**Febrifugal.** (*L. febris*; *fugo*. *G. fieberwidrig*.) Having the properties of a *Febrifuge*.

**Febrifuge.** (*L. febris*, a fever; *fugo*, to drive away. *F. febrifuge*; *I. febrifugus*; *S. febrifugo*; *G. Fiebermittel, Fieberarznei*.) A medicine which has the property of moderating or abating the violence of fevers, such as quinine, salicylic acid, salicin, aconite, and kairin.

Febrifuges have been classified as those which reduce the heat already developed, such as the cold bath; and those which interfere with or restrain its development, such as quinine, aconite, and salicylic acid.

Also (*G. Fieber vertreibend*), having power to reduce fever.

Also, a common name for the *Chrysanthemum parthenium*, or feverfew.

**Febrifugum.** Neuter of *Febrifugus*.

**F. cretill.** Old term for the regulus of antimony.

**F. lignum.** (*L. lignum*, wood.) A term for quassia wood.

**F. oleum.** (*L. oleum*, oil.) Febrifuge oil. A term for flowers of antimony, made with sal ammoniac and antimony sublimed together and exposed to the air, when they form a liquid.

**Febrifugus.** (*L. febris*, fever; *fugo*, to drive away.) Same as *Febrifuge*.

**F. pulvis.** (*L. pulvis*, dust.) Febrifuge powder. A name for a mixture of ʒss of crab's eyes and gr. ij of tartar emetic. Given in fevers. Dose, gr. iij to gr. iv.

In Germany, a name of the *Pulvis stypticus Helvetii*.

**F. sal.** (*L. sal*, salt.) Febrifuge salt. A name for a potassium chloride.

**Febrile.** (*F. febrile*; from *L. febrilis*; from *febris*, a fever. *I. febrile*; *S. febril*; *G. fieberhaft, fieberisch*.) Of, or belonging to, fever; feverish.

**F. cake.** An enlarged spleen, the result of malarial fever.

**Febbris.** (Probably transposed from *L. ferbus*; from *ferreo*, to be hot. Gr. *πῶρ*; *F. fièvre*; *I. febbre*; *S. fiebre, calentura*; *G. Fieber*.) A fever.

**F. a fa'më.** (*L. fames*, hunger.) A term which has been applied to the fever which follows periods of famine, and so includes both relapsing and enteric fevers, as well as typhus fever.

**F. a putredine orta.** (*L. a*, from; *putredo*, rottenness; *ortus*, arisen.) Tralliani's term for enteric fever.

**F. acmastica.** (*Ἀκμαστικός*, = *ἀκμαῖος*, in full bloom.) A synonym of *Synocha*.

**F. acuta.** (*L. acutus*, sharpened.) A synonym, by Plouquet, of *Synocha*, or simple continued fever, from its supposed inflammatory character.

**F. acuta continua.** (*L. acutus*; *continua*, continuons.) The same as *Synocha*.

**F. acuta intestinalis.** (*L. intestinum*, a gut.) Heister's term for enteric fever, in reference to the bowel disturbance.

**F. acuta sanguinea.** Hoffmann's term for simple continued fever.

**F. acuta simplex.** (*L. simplex*, simple.) Storck's term for simple continued fever.

**F. acuta stomachica.** (*Στόμαχος*, the stomach.) Heister's term for enteric fever, in reference to the gastric disturbance.

**F. adenomeninge'a.** (*Ἀδέν*, a gland; *μῆνιγξ*, membrane. *F. fièvre adeno-meningée*.) Term applied by Pinel as a synonym to mæuens or pituitous fever, because he believed that in it the gastro-intestinal mucous membrane, and especially the crypts of Lieberkühn, were affected.

**F. adenonervosa.** (*Ἀδέν*, a gland; *L. nervosus*, nervous.) A term applied by Pinel to the plague of the Levant, which is characterised by the profound affection of the nervous system with which it is accompanied, together with suppuration of the inguinal, axillary, and sometimes of the parotid glands.

Also, a synonym of *Yellow fever*.

**F. adynamica.** (*Ἄ*, without; *δύναμις*, power. *F. fièvre adynamique*.) A synonym applied by Pinel to typhus or putrid fever. See also *Fever, adynamic*.

**F. adynamo-ataxica.** (*Ἄ*, neg.; *δύναμις*, power; *ἄ*, neg.; *τάξις*, order.) Term applied by Bégis to fevers which are accompanied with depression and are irregular in the occurrence of the symptoms.

**F. africana.** (*Africa*.) A synonym of *Yellow fever*.

**F. agrypnodes.** (*Ἀγρυπνώδης*, without sleep. *F. fièvre agrypnodée*.) Fever which is accompanied by sleeplessness.

**F. alba.** (*L. albus*, white. *F. fièvre blanche, chlorosis*; *I. febbre bianca*; *G. Bleichsucht*.) White fever. A term for chlorosis with hectic fever.

**F. algida.** See *Algid fever*.

**F. amatoria.** (*L. amatorius*, loving.) A synonym of *Chlorosis*.

Also, a synonym of *Hectic fever*.

**F. americana.** (*America*.) A synonym of *Yellow fever*.

**F. amphëmera.** (*Ἀμφήμερος*, quotidian.) A synonym of *F. quotidian*.

**F. amphemerina.** (*Ἀμφημερινός*, daily.

*F. fièvre amphëmerine*.) A name for a quotidian ague.

**F. amphemerina hectica.** (*Ἑκτικός*, hectic.) A synonym of *Hectic fever*.

**F. amphemerina latëa.** (*L. lateo*, to lie hid.) A quotidian fever in which the paroxysms are long and the febrile symptoms inconspicuous or latent.

**F. amphimerina.** See *F. amphemerina*.

**F. ampullo'sa.** (*L. ampulla*, a flask. *I. febbre bulbosa*.) A synonym of *Pemphigus*.

**F. anabatica.** (*Ἀναβαίνω*, to ascend.) A synonym of *Fever, continued*.

**F. angino'sa.** (*L. angina*, quinsy. *F. fièvre angineuse*.) A name for *Angina*.

**F. angiotenica.** (*Ἀγγεῖον*, a blood-vessel; *τείνω*, to stretch. *F. fièvre angioténique*, *G. Entzündungsfeber*.) Pinel applied the term to the inflammatory fevers of Huxham and Stoll, and to continuous non-putrid fever of Boerhaave, attributing it to an irritation of the vascular system.

A synonym of *Synocha*.

**F. annua.** (*L. annuus*, yearly. *F. fièvre annuelle*.) A fever which returns annually.

**F. anomala.** (*Ἀνόμαλος*, irregular. *F. fièvre anormale*.) A fever the course and type of which are irregular.

**F. aphonica.** (*Ἀφώνος*, voiceless. *F. fièvre aphonique*.) A fever during the exacerbation of which there is loss of voice.

**F. aphthosa.** (*Ἀφθαί*, an eruption in the mouth.) A synonym of *Stomatitis*.

**F. apoplectica.** (*Ἀποπληκτικός*, apoplectic. *F. fièvre apoplectique*.) A fever with apoplectic symptoms during the exacerbations; also called *F. comatosa*.

**F. ardens.** (*L. ardeo*, to take fire. *F. fièvre ardente*; *G. Brennfieber, hitziges Fieber*.) A name formerly given to intense gastritis, otherwise termed gastro-inflammatory fever. See also *Fever, ardent*.

**F. artë promo'ta.** (*L. ars*, skill; *promotus*, advanced.) Fever induced artificially.

**F. arthritica.** (*Ἀρθριτικός*, gouty. *F. fièvre arthritique*.) A fever caused by gout; or a fever attended with acute pains of the joints during its paroxysms.

**F. aso'des.** (*Ἀσάδης*, attended with nausea; from *ἄσος*, disgust. *F. and I. asode*.) Term applied by Galen to fever accompanied by nausea. Gendrin applied it as a general term to gastric, bilious, and pituitous fevers.

**F. assid'ua.** (*L. assiduus*, continual.) A synonym of *Fever, continued*.

**F. asthenica.** (*Ἀσθενικός*, weakly. *F. fièvre asthénique*.) See *Fever, asthenic*.

**F. asthmatica.** (*Ἀσθματικός*, hard breathing. *F. fièvre asthmatique*.) A fever characterised by symptoms of asthma, or bronchial spasm.

**F. atact'a.** (*Ἄτακτος*, out of order.) Selle's term, which included cases both of typhus and enteric fevers marked by a tendency to prostration.

**F. atax'o-adynamica.** (*Ἄ*, without; *τάξις*, order; *ἄ*, neg.; *δύναμις*, power.) A synonym of *Yellow fever*, in which there is a combination of absence of regularity in the course of the symptoms and loss of power.

Also, a synonym of *Typhus fever*.

Also, the contagious typhus or charbon of cattle.

Also, see *Fever, ataxo-adynamic*.

# FEBRIS.

**F. aurigino'sa.** (L. *aurum*, gold.) A synonym, by Vogel, of *Jaundice*.

**F. autumnalis.** (L. *autumnalis*, autumnal.) A synonym of *Intermittent fever*.

**F. azo'des.** The same as *F. asodes*.

**F. bilio'sa.** (L. *bilius*, bilious.) The same as *Fever, bilious*.

Also, used to describe enteric fever by Riverius, Stahl, and others.

**F. bilio'sa pernicio'sa.** The form of *Intermittent fever, pernicious*, with pronounced hepatic symptoms.

**F. bilio'sa pu'trida.** (L. *putridus*, decayed.) A synonym of *Cattle plague*.

Also, Selle's term for enteric fever.

**F. bullo'sa.** (L. *bulla*, a bubble. *F. fièvre bulleuse*.) A term for acute pemphigus.

**F. cacochym'ica.** (Κακός, bad; χυμός, juice or humour.) A synonym of *Hectic fever*.

Also, see *Cacochymica febris*.

**F. cacoe'thes.** (Κακοίθης, ill-disposed.) Bellini's term for typhus fever.

**F. cal'ida.** (L. *calidus*, hot. I. *febbre calda*.) A synonym of *Fever, cerebral*, and of *Acute mania*.

**F. campes'tris.** (L. *campestris*, relating to the *campus*, or camp.) A synonym of *Typhus*, from its frequent occurrence in and after the encampments of armies.

**F. carbunculo'sa.** (F. *fièvre charbonneuse*; I. *febbre carbuncolosa*; G. *Milzbrand-feber*.) A synonym of the splenic apoplexy of cattle.

**F. carcera'ria.** (L. *carcerarius*, belonging to a prison.) Burserius's term for the typhus fever of prisons.

**F. car'cerum.** (L. *carcer*, a prison. *F. fièvre des prisons*; I. *febbre carceraria*.) Jail fever.

**F. cardial'gica.** (Καρδία, the heart; ἄλγος, pain. *F. fièvre cardialgique*.) Fever with cardialgy during its paroxysms.

**F. castren'sis.** (L. *castrensis*, pertaining to a camp. *F. fièvre des camps*.) Camp fever. A name for *Typhus fever*, when occurring among soldiers in camp; used by Willis and Haller.

**F. castren'sis petechia'lis epidem'ica.** (L. *castrensis*; Low L. *peticula*, a small spot; Gr. ἐπιδημιος, among the people.) Braudhorst's term for typhus fever.

**F. catarrha'lis.** (Κατάρροος, a flowing down. *F. fièvre catarrhale*; G. *Schnupfenfeber*.) The fever of a *Catarrh*.

Also, a name for the *F. mucosa*.

Also, a term for febrile catarrh of the respiratory passages.

**F. catarrha'lis epidem'ica.** (Κατάρροος, a flowing down; ἐπιδημιος, epidemic.) The same as *Influenza*.

**F. caumat'o'des.** (Καυματώδης, a burning.) A synonym of *Synocha*.

**F. causod'es.** (Καῦσος, burning heat.) A synonym of *Synocha*.

**F. cephalalg'ica.** (Κεφαλή, the head; ἄλγος, pain. *F. fièvre cephalalgique*.) Fever attended by intense pain of the head.

**F. cephal'ica.** (Κεφαλικός, relating to the head.) The same as *Fever, cephalic*.

**F. cerebrospinal'is.** (L. *cerebrum*, the brain; *spinalis*, spinal.) See *Cerebrospinal fever*.

**F. chin'ica.** (China, cinchona.) A cutaneous febrile affection which is said to affect those who are engaged in the preparation of sulphate of quinine.

**F. cholepyret'ica.** (Χολή, bile; πυρετός, fever.) A synonym of *Fever, bilious*.

**F. choleric'a.** (Χολερικός, bilious. *F. fièvre cholérique*.) Fever with vomiting and diarrhoea during its paroxysms.

Also, the same as *Fever, bilio-gastric*.

**F. chron'ica.** (Χρόνος, time. *F. fièvre chronique*.) A fever which is prolonged beyond five or six weeks.

Also, applied by Juncker to what was probably enteric fever.

**F. coälter'na.** (L. *co*, for *con*, for *cum*, together; *alternus*, one after another.) Term applied to a form of intermittent fever in which the patient has paroxysms that follow the type of two intermittents, the paroxysms of one being intermediate to those of the other.

**F. colliquati'va.** (L. *col*, for *cum*; *liquo*, to melt. *F. fièvre colliquative*.) A fever characterised by gradual extenuation, profuse evacuations, and rapid alvine discharges.

Also, a term used by Fortis for cases of enteric fever probably.

**F. colliquati'va essentia'lis.** (L. *essentia*, essence.) Burserius's term for cases of enteric fever.

**F. colliquati'va prima'ria.** (L. *primarius*, of the first rank.) Burserius's term for enteric fever.

**F. comato'des.** (Κοματώδης, lethargic.) Febrile symptoms occurring in association with apoplectic symptoms.

**F. comato'sa.** (Κῶμα, sleep. *F. fièvre comateuse*.) The same as *F. apoplectica*.

**F. communicans.** (L. *communico*, to communicate.) A synonym of *Fever, subintrant*.

**F. compos'ita.** (L. *compositus*, compound.) A term used by Forestus for enteric fever, in reference to its remittent character.

**F. confu'sa.** (L. *confusus*, part. of *confundo*, to mingle together.) An intermittent, the paroxysms of which are irregular or confused.

**F. contagio'sa.** (L. *contagiosus*, contagious. *F. fièvre contagieuse*.) A fever which is communicated by contact with a person sick of the disease.

**F. contagio'sa in carcer'ibus gen'ita** (L. *in*, in; *carcer*, a prison; *genitus*, born.) Huxham's term for the typhus fever of prisons.

**F. continens.** (L. *contineo*, to hold together.) Stahl's term for *Fever, inflammatory*.

Also, the same as *Fever, continued*.

**F. continens inflammato'ria sim'plex.** Selle's term for simple continued fever.

**F. continens non pu'trida.** (L. *non*, not; *putridus*, decayed.) A synonym of *Synocha*.

**F. continens pu'trida.** (L. *putridus*, decayed.) A synonym, by Selle, of *Typhus*.

**F. contin'ua.** (L. *continuus*, uninterrupted. *F. fièvre continuë*.) A fever which is not interrupted in its duration. See *Fever, continued*.

**F. contin'ua continens.** (L. *contineo*, to hold together.) A continued fever which lasts some time, with a high temperature.

**F. contin'ua inflammato'ria.** (L. *continuus*, continuous; *inflammo*, to inflame.) Fever of a continuous character associated with inflammation of any organ.

**F. contin'ua non pu'trida.** (L. *non*, not; *putridus*, putrid.) Lemnius's term for simple continued fever.

**F. contin'ua non pu'tris.** (L. *continuus*, continuous; *non*, not; *putris*, putrid.) A synonym of *Synocha*.

**F. contin'ua putrida.** (L. *putridus*, decayed.) A synonym of *Typhus*, used by Boerhaave and Winttingham.

**F. contin'ua pu'trida ictero'des carolinien'sis.** (Ικτερος, the jaundice; *Carolina*, an American State.) A synonym of *Yellow fever*.

**F. contin'ua remit'tens.** (L. *remitto*, to send back.) A continued fever which yet displays daily or periodical remissions, as enteric fever.

**F. contin'ua sanguin'ea.** (L. *sanguineus*, bloody.) A synonym of *Synocha*.

**F. contin'ua simplex.** (L. *simplex*, simple.) Lieutaud's synonym of *Synocha*, or simple continued fever.

Also, see *Fever*, continued, simple.

**F. convulsiv'a.** (L. *convellere*, to draw violently. F. *fièvre convulsive*.) Continued, remittent, or intermittent fever, that is characterised by convulsive movements.

**F. crymo'des.** (Κρυμός, icy cold.) A synonym of *Algid fever*.

**F. culicula ris.** (L. *culiculus*, a gnat.) A synonym of *Miliary fever*.

**F. cum delir'io.** (L. *cum*, with; *delirium*, madness. F. *fièvre délirante*.) A fever characterised by delirium occurring during its paroxysms.

**F. decima'na.** (L. *decimus*, of the tenth part. F. *fièvre décimane*.) A fever which returns every tenth day, according to Zaeutus Lusitanus.

**F. depurato'ria.** (L. *de*; and *puro*, to purify. F. *fièvre dépuratoire*.) A fever to which is attributed the property of purifying the blood, or which indicates that this supposed purification has occurred.

**F. deu'rens.** (L. *deuro*, to consume.) A synonym of *Synocha*.

**F. diaphore'tica.** (Διαφορητικός, promoting perspiration. F. *fièvre diaphorétique*.) A fever with profuse sweating during its exacerbations.

**F. dia'ria.** (L. *diarium*, a daily thing.) Juncker's term for a short simple continued fever.

**F. diphtheroi'des.** (Diphtheria; είδος, likeness.) Gray's term for a fever of greater or less intensity, observed by him in China, which was accompanied by an exudative inflammation of the mucous membranes having a tendency to become organised; the faucial membrane was the first, and often the chief, seat of the disease; there was albumen in the urine; and subsequent paralysis of some part was not infrequent. It would appear to have been a form of diphtheria.

**F. duodecima'na.** (L. *duodecim*, twelve.) An intermittent fever, the paroxysms of which recur on the twelfth day.

**F. dysenter'ica.** (Δυσεντερικός, dysenteric. F. *fièvre dysentérique*.) A fever characterised by the presence of bloody stools, with sharp colicky pains, such as occur in some remittent fevers.

**F. elo'des.** (Έλος, a marsh.) A synonym of *Marsh fever* or *Intermittent fever*.

**F. elo'des ictero'des.** (Ικτερος, jaundice.) A synonym of *Yellow fever*.

**F. enter'ica.** (Έντερον, the intestines.) See *Enteric fever*.

**F. eu'tero mesenterica.** (Έντερον, the intestines; μεσέντερον, the membrane to which the intestines are attached.) A synonym of *Enteric fever*.

**F. epacmas'tica.** (Έπακμαζω, to grow vigorous.) Term applied to any fever the symptoms of which progressively increase in violence.

**F. epauadidon'tis.** (Έπαναδίδωμι, to increase more and more.) The same as *F. epacmas'tica*.

**F. ephe'mera.** (Εφήμερος, living but a day.) The same as *F. quotidiana*.

Also, see *Ephemeral fever*.

The term was used by Riverius, Sennertus, and Sauvages, to denote cases of simple continued fever of not long duration.

**F. ephe'mera infan'tum.** (L. *infans*, a child.) A term applied to mild cases of what used to be called infantile remittent fever.

**F. epidem'ica.** (Επιδήμιος, among the people.) Burserius's term for typhoid fever, in allusion to its frequent occurrence as an epidemic.

Also, see *Fever*, epidemic.

**F. epidem'ica cum ang'i'na.** (Επιδήμιος, epidemic; L. *angina*, quinsy.) A synonym of *Sore throat*, putrid.

**F. epilep'tica.** (Επιληπτικός, epileptic. F. *fièvre épileptique*.) A fever with epileptic symptoms during its paroxysms.

**F. erot'ica.** (Ερωτικός, caused by love; from έρως, love. F. *fièvre érotique*.) A chronic fever caused by disappointed love.

**F. errat'ica.** (L. *erro*, to wander. F. *fièvre erratique*.) A fever in which the paroxysms are irregular in the period of their return.

**F. erro'nea.** (L. *erroneus*, straying.) Intermittent fever, the paroxysms of which are irregular in the order and time of their recurrence.

**F. erysipela'cea.** (Ερυσίπελας, a red eruption on the skin.) A synonym of *Erysipelas*.

**F. erysipelato'sa.** (Ερυσίπελας, a red eruption on the skin.) A synonym of *Erysipelas*.

**F. erythemato'sa.** (Ερύθημα, redness of the skin.) A febrile condition with a fairly high temperature, with small red patches on the skin and some gastric disturbance.

**F. essentia'lis.** See *Fever*, essential.

**F. essero'sa.** (Essera.) A synonym of *Miliary fever*.

**F. exanthemat'ica.** (Εξάνθημα, an eruption of the skin. F. *fièvre exanthématique*.) A term for acute inflammation of the skin, with accelerated circulation.

Also, see *Fever*, exanthematic.

**F. exanthemat'ica articula'ris.** (L. *articulus*, relating to the joints.) A synonym of *Dengue*, in reference to its symptoms.

**F. exanthemat'ica, malign'a, veneno'sa, et pernicio'sa.** (L. *malignus*, of an evil nature; *venenosus*, poisonous; *et*, and; *perniciosus*, destructive.) A phrase used by Bianchini to describe typhus fever.

**F. exquis'ita.** (L. *exquisitus*, carefully sought out.) Same as *Fever*, regular.

**F. fame'lica.** (L. *famelicus*, famished.) Fever accompanied with intense hunger.

**F. fla'va.** (L. *flavus*, yellow.) A synonym of *Yellow fever*.

**F. fla'va americano'rum.** (L. *flavus*,

yellow; *America*.) A synonym of *Yellow fever*.

**F. gangræno'des.** (Γάγγραινα, an eating sore which ends in mortification; εἶδος, likeness.) Fever associated with gangrene of various parts, especially of the extremities.

**F. gangræno'sæ.** (Γάγγραινα, a gangrene. *F. fièvre gangræneuse*.) A fever with gangrene of the limbs, or of the genital organs.

**F. gas'trica.** Baillon. (Γαστήρ, the belly. *F. fièvre gastrique*; *G. Darmfieber*.) The same as *Fever, gastric*, and *Fever, bilious*.

Also, used by Ballonius for enteric fever.

**F. gas'trica acu'ta.** (*L. acutus*, sharp.) Burser's term for enteric fever.

**F. gas'trico-inflammato'ria.** Frank's term for the form of *F. ardens* in which there is much disturbance of the stomach and intestines.

**F. gas'trico-nervo'sa.** A synonym of *Yellow fever*.

**F. gas'tro-ady'namica.** (Γαστήρ, the belly; ἀδυναμία, power.) Bilious fever accompanied with great prostration.

**F. glutino'sagast'rica.** (*L. glutinosus*, gluey; *Gr. γαστήρ*, the belly.) Sarcene's term for enteric fever, in reference to the character of the gastric discharges.

**F. hæmopto'ica.** (Αἱμοπτοικός, spitting blood.) Intermittent fever in which hæmorrhage occurs with the paroxysms.

**F. hebdomada'na.** (Ἑβδομάς, seven days.) An intermittent fever in which the paroxysms occur once a week.

**F. hebdomada'ria.** The same as *F. hebdomadana*.

**F. hec'tica.** (Ἑκτικός, hectic.) The same as *Hectic fever*.

Also, used by Willis for cases of enteric fever, from their hectic appearance.

**F. hec'tica infan'tum.** (Ἑκτικός, hectic; *L. infans*, infant.) A synonym of *Tubercles mesenterici*.

**F. hec'tica malig'na nervo'sa.** (*L. malignus*, of an evil nature; *nervosus*, nervous.) A synonym of *Typhus minor*, which might be a mild case of typhus fever, but was more probably enteric fever.

**F. helo'des.** (Ἑλος, a swamp.) A marsh or Intermittent fever.

**F. helo'des sudato'ria.** (*L. sudor*, sweat.) The same as *Fever, sweating*.

**F. hemere'sia.** (ἡμερήσιος, of a day.) A synonym of *F., quotidian*.

**F. hemitritæ'a.** (ἡμιτριταῖος, semi-tertian ague. *F. fièvre demi-tierce*.) A type of intermittent fever having the symptoms of a quotidian and a tertian, with a slight paroxysm every second day, and a stronger one on the intermediate days; each alternate paroxysm of like nature.

**F. hepatic'a.** (Ἡπατικός, having liver complaint.) A synonym of *Fever, bilious*.

**F. hepatic'a inflammato'ria.** (*L. inflammo*, to inflame.) A synonym of *Hepatitis*.

**F. hep'i'ala.** Same as *Epi'ala*.

**F. herpet'ica.** See *Fever, herpetic*.

**F. horrida.** (*L. horridus*, horrid.) A synonym of *Algid fever*.

**F. horrif'ica.** (*L. horrificus*, terrible. *F. fièvre horrificue*.) A fever characterised by violent and prolonged shivering; applied to the *Algid fever*.

**F. humora'lis.** (*L. humor*, a liquid. *F.*

*fièvre humorale*.) A former term for fever caused by disturbance of the humours, according to the old theories.

**F. hungar'ica.** (*L. hungaricus*, Hungarian. *F. fièvre Hongroise*, *f. de Hongrie*.) Term for a form of camp fever, or endemic typhus, formerly prevalent in Hungary; also called *Znes Pannoniæ*.

**F. hydrocephalica.** (Υῑδωρ, water; κεφαλή, the head.) A synonym of *Hydrocephalus acutus*.

**F. hydrophob'ica.** (Υῑδωρ, water; φόβος, fear.) A form of intermittent fever in which there is a dread of water.

**F. hystere'tica.** (Υσπερητικός, coming after.) Fever in which there is retardation in the succession of the paroxysms.

**F. hyster'ica.** (Υσπερικός, hysterical.) Hysteria accompanied with fever.

Also, a form of intermittent fever in which each paroxysm is accompanied by hysteria.

**F. ict'er'ica.** (Ικτερικός, jaundiced.) Fever associated with jaundice.

Also, see *Fever, icteric*.

**F. ili'aca inflammato'ria.** (*L. ilia*, the flank; *inflammo*, to inflame.) A synonym of *Enteritis*.

**F. infan'tum remit'tens.** (*L. infans*, an infant; *remittens*, relaxing.) The same as *Fever, remittent, infantile*.

**F. inflammato'ria.** (*L. inflammo*, to inflame.) A synonym of *Synocha*, by Stoll.

**F. inflammato'ria simplex.** (*L. simplex*, simple.) A synonym of *Synocha*, by Huxham and Hildenbrand.

**F. inirritati'va.** (*L. in*, not; *irrito*, to excite.) Darwin's term for typhus fever.

**F. inten'sio.** (*L. intensio*, a stretching out. *F. access febrile*.) The paroxysm or attack of a fever.

**F. intermit'tens.** See *Fever, intermittent*.

**F. intermit'tens cephalica larva'ta.** (*L. intermitto*, to make to go apart; *Gr. κεφαλή*, head; *L. larva*, a mask.) Periodic or intermittent headache of malarial origin.

**F. intermit'tens larva'ta.** (*L. intermitto*; *larva*.) A synonym of *Ague, masked*.

**F. intermit'tens urtica'ta.** (*L. urtica*, a nettle. *F. fièvre intermittente ortive*.) A form of ague in which, during the paroxysm, an eruption of urticaria appears on the skin.

**F. intestina'lis.** (*L. intestinum*, an intestine.) A synonym, by Riedel, of *Enteric fever*.

**F. intestina'lis ulcero'sa.** (*L. ulcerosus*, ulcerous.) A synonym of *Enteric fever*.

**F. intestino'rum.** (*L. intestinum*, an intestine.) A synonym of *Enteritis*.

**F. irregula'ris.** (*L. ir*, for *in*, not; *regula*, a rule.) Term applied to a fever the course of which is anomalous and exceptional.

**F. lactan'tium.** (*L. lactans*, she who gives suck.) The same as *Milk fever*.

**F. lac'tea.** (*L. lacteus*, milky. *F. fièvre lactée*, *fièvre de lait*, *f. lacteuse*.) Milk fever. A term for the febrile state sometimes induced when the milk is first secreted after parturition. See *Milk fever*.

**F. larva'ta.** (*L. larva*, a mask.) Same as *Ague, masked*.

**F. len'ta.** (*L. lentus*, slow, gentle.) The same as *Fever, remittent, infantile*. Also, applied to *Hectic fever*.

Also, a name for mild cases of typhus fever.

Also, used by Forestus, Willis, and others, for *Enteric fever*.

**F. len'ta nervo'sa.** (L. *lentus*, pliant; *nervosus*, nervous.) A synonym of *Enteric fever*.

**F. len'ta nervo'sa malig'na.** (L. *lentus*; *nervosus*; *malignus*, of an evil nature.) Bursarius's term for typhus fever.

**F. lenticula'ris.** (L. *lenticularis*, lentil-shaped. F. *fièvre lenticulaire*.) A term for *Fever, military*.

**F. lethargica.** (Ληθαργικός, drowsy.) The same as *Fever, apoplectic*.

**F. lochia'lis.** (Λόχεια, the discharge after childbirth. F. *fièvre lochiale*.) Term for the accelerated state of the circulation which is said to occur on the occasion of the establishment of the lochial discharge.

**F. lygmo'des.** (Λυγμός, a sobbing.) Fever characterised by sobbing or sighing.

**F. lymphatica.** (Lymph. F. *fièvre lymphatique*.) A term for the *F. mucosa*.

Also, suggested by John Harley as the appropriate scientific definition of scarlet fever, in consideration of the general inflammation of the lymphatic system of glands present in cases of this disease.

**F. lyngo'des.** (Λυγγώδης, attended with hiccup.) Fever, a characteristic symptom of which is hiccup.

**F. maculo'sa.** (L. *maculosus*, spotted.) A synonym of *Typhus fever*.

**F. malig'na.** (L. *malignus*, malignant. F. *fièvre maligne*.) A name for *Typhus fever*.

Also, see *Fever, malignant*.

**F. malig'na bilio'sa americae.** (L. *malignus*, of an evil nature; *biliosus*, bilious; *America*.) A synonym of *Yellow fever*.

**F. malig'na cum sopor'e.** (L. *malignus*; *sopor*, sleep.) A synonym of *Typhus fever* by Riverius.

**F. malig'na fla'va Indiae occidentalis.** (L. *malignus*; *flavus*, yellow; *India*; *occidentalis*, western.) A term for *Yellow fever*.

**F. malig'na pestilens.** (L. *malignus*; *pestilens*, pestilential.) A term used by Riverius, Sennertus, and Willis, for typhoid fever.

**F. maligna pulicula'ris.** (L. *malignus*; *pulex*, a flea.) Petrus a Castro's term for typhus fever, in reference to the flea-bite-like skin spots.

**F. malig'na puncticula'ris.** (L. *malignus*; *punctum*, a point.) Petrus a Castro's name for typhus fever, in allusion to the rash.

**F. marasmo'des.** (Μαρασμόδης, wasting.) A synonym of *Hectic fever*.

**F. meningogastro'sticus.** (Μηνιγγίξ, a membrane; γαστήρ, the belly.) A synonym of *Fever, gastric*.

**F. mesenterica.** (Μεσέντερον, the membrane to which the intestines are attached) Riedel's term for *Enteric fever*.

See also *Fever, mesenteric*.

**F. mesenterica acu'ta.** (L. *acutus*, sharp.) A term, used by Burchard, for enteric fever.

**F. mesenterica malig'na.** (L. *malignus*, of an evil disposition.) A term for enteric fever, used by Baglivi and Hoffmann.

**F. mesenterica.** (Μέσος, middle; ἀραιά, the small intestine.) A term applied to those cases of infantile remittent fever which are really tuberculosis of the mesenteric glands.

Also, Wendt's term for *Enteric fever*.

**F. methemer'ina.** (Μεθημεριώδης, happening by day.) A synonym of *Fever, quotidian*.

**F. milia'ris.** A synonym of *Miliary fever*.

**F. milita'ris.** (L. *militaris*, belonging to a soldier.) Petri's term for typhus fever when occurring in an army. See also *Fever military*.

**F. minu'ta.** (L. *minutus*, small.) Intermittent fever accompanied with syncope in the paroxysms.

**F. monolep'tica.** (Μόνος, alone; ληπτικός, from λαμβάνω, to take.) A fever which presents itself in one attack or paroxysm of longer or shorter duration.

**F. morbillo'sa.** (F. *fièvre morbillieuse*.) Term for measles, which is also called *Morbilli*.

**F. mucosa.** (L. *mucosus*, slimy. F. *fièvre muqueuse*.) A form of continued fever, the *Fièvre muqueuse* of the French. It chiefly attacks those of the lymphatic temperament, and is characterised by irritation of the gastro-enteric mucous membrane, with excessive secretion from this and sometimes from the other mucous membranes. See *Fever, mucous*.

Also, Stelle's term for cases of enteric fever.

**F. mucosa vermino'sa.** (L. *mucosus*, slimy; *verminosus*, full of worms.) The same as *Fever, remittent, infantile*, when supposed to be caused by the irritation of worms.

**F. nautica.** (L. *nauticus*, belonging to ships or sailors. F. *fièvre de vaisseau*.) Bursarius's term for typhus occurring on ship-board.

**F. nautica pestilential'is.** (L. *nauticus*, nautical; *pestilential*, a plague.) A synonym of *Typhus fever* occurring on board ship, by Huxham.

**F. nephritica.** (Νεφρίτις, disease of the kidneys. F. *fièvre nephritique*.) An intermittent fever with sharp pains in the lumbar region during the exacerbations.

**F. nervo'sa.** (L. *nervosus*, nervous. F. *fièvre nerveuse*.) See *Fever, nervous*.

**F. nervo'sa enterica.** (Εντερικός, in the intestines.) A synonym of *Enteric fever*.

**F. nervo'sa epidemica.** (Επίδημιος, epidemic.) A synonym of *Typhus fever*.

**F. nervo'sa exanthematica.** (Εξάνθημα, an eruption.) A synonym of *Typhus fever* with petechiae.

**F. nervo'sa gas'trica.** (Γαστήρ, the belly.) A synonym of *Enteric fever*.

**F. nervo'sa mesenterica.** (Μεσέντερος, the membrane to which the intestines are attached.) A synonym of *Enteric fever*.

**F. nervo'sa petechia'lis.** (L. *petechia*, a flea-bite.) A synonym of *Typhus fever*.

**F. nervo'sa stu'pida.** (L. *stupidus*, dull.) The stage of enteric fever in which the patient lies without any requirements, giving no evidence of distress or pain.

**F. nervo'sa versa'tilis.** (L. *versatilis*, that turns around.) The stage of some forms of enteric fever in which the patient is very restless, tossing about on the bed, talking loudly, and with delirium.

**F. neuro'des.** (Νευρώδης, sinewy.) The same as *Fever, nervous*.

**F. nigra.** (L. *niger*, black.) The same as *Interperal fever, malignant*.

Also, a name given by Lyons to a variety of epidemic cerebrospinal fever characterised by

collapse, extensive purpura, early death, and absence of physical lesion of the nerve centres.

**F. nocturna.** (*L. nocturnus*, nocturnal.) A form of intermittent fever the paroxysms of which occur at night.

**F. nona'ua.** (*L. nonans*, ninth) A form of intermittent fever the paroxysms of which are supposed to recur every ninth day.

**F. non-pestilens.** (*L. non*, not; *pestilens*, pestilential.) Forestus's term for *Enteric fever*.

**F. nosocomia'lis.** (*Νοσοκομείον*, a hospital. *F. fièvre nosocomiale*.) Burserius's term for the typhus fever which used to be prevalent in hospitals.

**F. nosocomio'rum.** (*Νοσοκομείον*, a hospital.) Same as *F. nosocomialis*.

**F. nycter'inus.** (*Νυκτερινός*, nightly.) The same as *F. nocturnus*.

**F. octa'na.** (*L. octo*, eight.) A form of intermittent fever the paroxysms of which occur every eighth day.

**F. os'citans.** (*L. oscito*, to gape.) Fever in which yawning is a characteristic symptom.

**F. paludosa.** (*L. paludosis*, marshy.) A synonym of *Fever, marsh*.

**F. pannon'ica.** (*L. Pannonia*, Hungary.) A form of typhus occurring in the Hungarian army.

**F. pemphigo'des.** (*Πεμφιγώδης*, like blisters.) A synonym of *Pemphigus*.

**F. pemphigo'des.** (Same etymon.) A synonym of *Pemphigus*.

**F. pempt'a.** (*Πέμπτος*, the fifth.) An intermittent fever the paroxysms of which occur every fifth day. It has three days of intermission.

**F. period'ica.** (*L. periodicus*, periodical. *F. fièvre périodique*.) Term for remittent or intermittent fever.

**F. pernicio'sa.** (*L. perniciosus*, destructive.) The same as *Fever, pernicious*.

**F. pestilens.** (*L. pestilens*, unwholesome. *F. fièvre pestilentielle*.) A term for the plague, and also for typhus fever, from their contagious qualities.

**F. pestilens maligna.** (*L. pestilens*, noxious; *malignus*, malignant.) A synonym of *Typhus fever*.

**F. pestilentia'lis.** (*L. pestilentia*, a pestilence.) See *Fever, pestilential*.

**F. pestilentia'lis euro'pæ.** (*L. Europa*, Europe.) A synonym of *Typhus fever*.

**F. pestilentia'lis nau'tica.** (*L. nauticus*, belonging to ships or sailors.) Huxham's term for the typhus fever prevalent on ships.

**F. petechia'lis.** (Low *L. peticula*, a little spot. *F. fièvre pétechiiale*.) Massa's and Sennerius's term for *Typhus fever*, in allusion to the petechiæ.

**F. petechia'lis ve'ra.** (*L. verus*, true.) Hoffmann's term for typhus fever.

**F. petechizans.** (Low *L. peticula*.) Hoffmann's term for enteric fever, from its imperfect rash, not so pronounced as that of petechial or typhus fever.

**F. peticula'ris.** A term used by Roboretus for typhus fever.

**F. phrico'des.** (*Φρικώδης*, attended with shivering.) An old name for an intermittent or a remittent fever in which the patient is greatly oppressed with the cold of the stage of shivering.

**F. phthis'ica.** (*Φθισικός*, consumptive.) A synonym of *Pectic fever*.

**F. pituita'ria.** The same as *F. pituitosa*.

**F. pituito'sa.** (*L. pituita*, slime. *F. fièvre pituiteuse*.) A synonym of *F. mucosa*.

Also, term used for cases of enteric fever by Stoll.

**F. pituito'sa nervo'sa.** (*L. nervosus*, nervous.) Jacobi's term for enteric fever.

**F. plane'tes.** (*Πλανήτης*, a wanderer.) The same as *F. erratica*.

**F. pleurit'ica.** (*Πλευριτικός*, pleuritic.) A synonym of *Pleurisy*.

**F. pneumon'ica.** (*Πνευμονικός*, of the lungs.) A synonym of *Pneumonia*.

**F. podag'rica.** (*Ποδαγρικός*, gouty.) A synonym of *Gout*.

**F. polychol'ica.** (*Πολός*, many; *χολικός*, bilious.) A synonym of *Fever, bilious*.

**F. polylep'tica.** (*Πολός*, many; *ληπτικός*, from *λαμβάνω*, to take.) A fever which occurs in many successive attacks or paroxysms.

**F. prima'ria.** See *Fever, primary*.

**F. puerpera'lis.** (*L. puerpera*, a woman in labour. *F. fièvre puerperale*.) See *Puerperal fever*.

**F. puerpera'lis bilio'sa.** (*L. puerpera*, a lying-in woman; *biliosus*, bilious.) See *Puerperal fever, bilious*.

**F. puerpera'rum.** (*L. puerperu*, a lying-in woman.) Same as *Puerperal fever*.

**F. pulcula'ris.** (*L. pulcx*, a flea. *F. fièvre puliculaire*.) A fever in which the skin becomes covered with spots like flea-bites.

**F. puncticula'ris.** (*L. punco*, to prick.) A term for *Miliary fever*, and for *Typhus fever*, with petechiæ.

**F. purpu'rata ru'bra et al'ba mili'a'ris.** (*L. purpuratus*, clad in purple; *rubrus*, red; *albus*, white; *miliun*, millet.) A synonym, by Hoffmann, of *Miliary fever*.

**F. purpu'rea epidem'ica.** (*L. purpureus*, purple; *Gr. ἐπιδήμιος*, among the people.) Theraeus's name for typhus fever, in reference to the skin eruption.

**F. purpu'rea pestif'era.** (*L. purpureus*, purple; *pestiferus*, pestilential.) A synonym of *Cerebrospinal fever*.

**F. purulen'ta.** (*L. purulentus*, festering.) See *Fever, purulent*.

**F. putrida.** (*L. putridus*, decayed.) See *Fever, putrid*.

An early name for typhus fever.

Also, used by Riverius for enteric fever.

**F. putrida nervo'sa.** (*L. putridus*, decayed; *nervosus*, nervous.) A term for mild cases of *Typhus fever*.

Also, probably used by Wintringham for enteric fever.

**F. quarta'na.** (*L. quartana*, ague occurring every fourth day.) A term for *Fever, quartan*.

**F. quer'quera.** (*L. querquerus*, shivering.) A synonym of *Algid fever*.

**F. quin'ta.** (*L. quintus*, the fifth.) The same as *Fever, quintan*.

**F. quinta'na.** (*L. quintanus*, of the fifth.) The same as *Fever, quintan*.

**F. quotidia'na.** (*L. quotidianus*, daily.) The same as *Fever, quotidian*.

**F. recidi'va.** (*L. recidivus*, recurring.) The same as *Relapsing fever*.

**F. recur'rens.** (*L. recurro*, to run back.) The same as *Relapsing fever*.

**F. regularis.** (L. *regula*, a rule.) Intermittent fever the paroxysms of which occur in due order and course.

**F. remittens.** (L. *remitto*, to send back.) See *Remittent fever*.

**F. remittens infan'tum.** (L. *remitto*, to send back; *infans*, an infant.) The same as *Remittent fever, infantile*.

**F. rheumatica.** Same as *Rheumatism, acute*.

**F. rheumatica inflammato'ria.** (L. *inflammo*, to inflame.) The same as *Rheumatism, acute*.

**F. ru'bra.** (L. *ruber*, red.) A term for *Scarlet fever*.

**F. ru'bra pruriginosa.** (L. *ruber*, red; *pruriginosus*, having the itch.) A synonym of *Urticaria*.

**F. sanguinea.** (L. *sanguineus*, bloody.) A synonym of *Synocha*, used by Avicenna.

**F. sapropy'ra.** (Σαπρός, putrid; πύρ, fire.) A synonym of *Typhus fever*.

**F. scarlatino'sa.** (I. *scarlatto*, a deep red.) The same as *Scarlet fever*.

**F. scarlatino'sa sine exanthematè.** (L. *sine*, without; *exanthema*, an eruption on the skin.) *Scarlet fever* without the cutaneous rash.

**F. scorbu'tica.** See *Fever, scorbutic*.

**F. semitertia'na.** (L. *semi*, half; *tertianus*, tertian.) An intermittent fever the symptoms of which are intermediate between a tertian and a quotidian.

It is probable that the term has been used, as by Forstius and Spigelius, to describe cases of enteric fever.

**F. septa'na.** (L. *septem*, seven.) An intermittent fever the symptoms of which recur every seventh day.

**F. septena'ria.** (L. *septenarius*, containing seven.) Same as *F. septimaria*.

**F. septima'na.** Same as *F. septimaria*.

**F. septimana'ria.** (L. *septimanus*, relating to the number seven.) A term applied by Platerius, and also later by Sprengel, to simple continued fever, in reference to its usual duration of one week.

**F. sesquial'tera.** (L. *sesquialter*, once and a half.) A synonym of *F. semitertiana*.

**F. sexta'na.** (L. *sextus*, the sixth.) An intermittent the paroxysms of which recur every sixth day.

**F. simplex.** (L. *simplex*, simple.) The same as *Fever, simple*.

**F. singultu'sa.** (L. *singultus*, a hic-cough.) See *Fever, singultous*.

**F. soporo'sa.** (L. *sopor*, sleep.) Same as *Fever, apoplectic*.

**F. soporo'sa se'nium.** (L. *sopor*, sleep; *senex*, old.) A form of *ga trix* catarrh occurring in old people, and accompanied with stupor and drowsiness.

**F. spu'ria.** (L. *spurius*, false.) Hoffmann's term for enteric fever, in reference to the fact that the rash is not similar to that of true typhus fever.

**F. stercora'lis.** (L. *stercus*, dung.) Fever caused by intestinal obstruction.

Also, used by Quesnay to describe cases probably of enteric fever.

**F. sthen'ica.** (Σθένος, strength.) Brown's term for *Fever, inflammatory*.

**F. stigmatica.** (L. *stigma*, a mark

burned in.) An old name for typhus fever, in allusion to the skin eruption.

**F. stomachica inflammato'ria.** (L. *stomachus*, the stomach; *inflammo*, to inflame.) A synonym of *Gastritis*.

**F. subcontin'ua.** See *Fever, subcontinuous*.

**F. subin'trans.** (L. *subintro*, to enter by stealth.) Intermittent fever in which the symptoms of one paroxysm have hardly passed off before those of another commence.

**F. sudato'ria.** (L. *sudatorius*, sweating.) An intermittent fever with inordinate sweating. Also, a term for the *Sweating sickness*.

**F. symptomatica.** See *Fever, symptomatic*.

**F. syncopa'lis.** (Συκοπή, a swooning.) See *Fever, syncopal*.

**F. syn'ocha.** See *Synocha*.

**F. synocha'lis.** Same as *Synocha*.

**F. syphilitica.** The same as *Fever, syphilitic*.

**F. ta'bida.** (L. *tabidus*, decaying.) A synonym of *Hectic fever*.

Also, a synonym of *Fever, colliquative*.

**F. tertia'na.** (L. *tertianus*, tertian or third.) Same as *Ague, tertian*.

**F. tonica.** (Τόνος, tone.) A synonym of *Synocha*.

**F. top'ica.** (Τοπικός, local.) A synonym of *Neuralgia, facial*; in reference to its being a local manifestation of a malarious poison.

**F. tor'pida.** (L. *torpidus*, benumbed.) Same as *Fever, asthenic*.

**F. toxica.** (Τοξικόν, poison.) A synonym of *Yellow fever*.

**F. trag'ica.** (L. *tragicus*, terrible.) The same as *Fever, tragic*.

**F. traumatica.** (Τραυματικός, of wounds.) The same as *Fever, traumatic*.

**F. traumatica secunda'ria.** See *Fever, traumatic, secondary*.

**F. tropica'lis.** (L. *tropicus*, tropical.) A term for *Yellow fever*.

**F. tympan'ica.** (Τυμπανικός, tympanitic.) Babbington's term for enteric fever, in reference to the common occurrence of tympanites.

**F. typho'des.** (Τυφώδης, dull, stupid.) The same as *Typhus fever*.

**F. typhoides.** See *Typhoid fever*.

**F. ty'po inver'so.** (Type; L. *inversus*, turned bottom upwards.) A remittent fever in which the temperature is highest in the morning, lowest in the evening.

**F. urethra'lis.** (Ουρήθρα, the urethra.) The same as *Fever, urethral*.

**F. uteri'na.** (L. *uterinus*, uterine.) A term for *Metritis*.

**F. urtica'ta.** (L. *urtica*, a nettle.) A synonym of *Urticaria*.

**F. urtica'ta intermittens.** See *F. intermittens urtica'ta*.

**F. vaga.** (L. *vagus*, wandering.) The same as *F. erratic*.

**F. variolo'sa.** The same as *Variola*.

**F. vermino'sa.** (L. *vermis*, a worm.) A term for the *Fever, remittent, of children*, when supposed to be caused by worms.

Also, used by Selle, to describe cases of enteric fever supposed to be caused by worms.

**F. verna'lis.** (L. *vernalis*, of spring.) The same as *Fever, vernal*.

**F. vesicatoria.** (L. *vesica*, a blister.) A synonym of *Pemphigus*.

**F. vesicula'ris.** (L. *vesicula*, a little blister.) A synonym of *Miliary fever*, and of *Pemphigus*.

**F. vesiculo'sa.** (L. *vesiculosus*, full of blisters.) The vesicular form of erysipelas.

**F. virginum.** (L. *virgo*, a maid.) A synonym of *Chlorosis*.

**Fecai.** See *Fecal*.

**Fecula.** (L. *fecula*, dim. of *fix*, grounds. F. *ficule*; I. *fecola*.) The sediment or lees which subsides from the infusion of many vegetable substances. Especially applied to starch.

**F. green.** The same as *Chlorophyll*.

**Feculence.** (L. *feculentia*, dregs.) Muddiness, lees, sediment.

**Feculent.** (L. *feculentus*, impure.) Having the characters of feces; excrementitious; sedimentous.

**Feculite.** A term given to pulverulent vegetable substances, such as inulin, which are soluble in hot water, and when treated with nitric acid yield oxalic and malic acids, and not mucic acid.

**Fecund.** (L. *fecundus*, fruitful. F. *fecunde*; I. *fecundo*; S. *fecundo*; G. *fruchtbar*.) Capable of reproducing itself; prolific.

**Fecundating.** (L. *fecundus*. F. *fecundant*.) Having power to effect *Fecundation*.

**F. corpuscles.** The spermatozoa.

**F. dust.** The pollen of plants.

**Fecundation.** (L. *fecundus*. F. *fecundatio*; I. *fecundazione*; S. *fecundacion*; G. *Befruchtung*.) The act of making fruitful. See *Fertilisation* and *Impregnation*.

**F., artificial.** The impregnation of the ova or of the female, by artificial application of the spermatic fluid. In fishes, the semen is obtained from the male by pressure, and mixed with the water in which the ova, laid naturally or obtained by expression, are lying. Dogs, rabbits, and other animals have been impregnated by injection of the semen into the uterine cavity; and in 1799 Hunter adopted the same method of procedure in the human female. Since then Mariou Sims, Courty, and others have performed a similar operation with success. The proceeding is very strongly condemned by many as regards any but the lower animals.

**Fecundity.** (F. *fecunditi*; from L. *fecunditas*, fruitfulness. I. *fecundita*; S. *fecundidad*; G. *Fruchtbarkeit*.) The faculty of reproduction; the capacity for bringing forth young.

In Botany, the capacity of a seed for germinating.

**F. of wom'an.** The period of childbearing in woman is, as a rule, coincident with the period ranging from the first menstruation to the last. Many cases have been reported of pregnancy before menstruation had commenced, generally when the latter has been delayed, but sometimes when it has occurred at the usual time; and also pregnancy has been reported to have occurred several years after menstruation had finally ceased.

Rüttel reports a case in which a girl of nine became pregnant, and Beck one in which delivery occurred in a girl a little over ten years of age; Davies reports the case of a woman who bore a child at fifty-five, Capuron one at sixty, and Haller one at sixty-three, and one at seventy years of age.

**Fedia.** (G. *Räpünzchen*.) A Genus of the Nat. Order *Valerianaceæ*.

**F. olitoria**, Vahl. The *Valerianella olitoria*.

**Fee.** (Sax. *fiok*, property.) A payment made for services rendered.

**Fee'ble.** (Old F. *fioble*, weak, for *fioble*; from L. *febilis*, mournful; from *fleo*, to weep. F. *faible*, weak; I. *débole*; S. *débil*; G. *schwach*.) Deficient in strength; weak; infirm.

**Feed.** (Mid. E. *fedēn*; from Sax. *fēdan*.) To take food; to supply food.

**Feeding.** (*Feed*.) The taking or the supplying of food.

**F., artificial.** The introduction of nutriment into the body by artificial means, as by the stomach-pump or the enema apparatus.

Also, the feeding of an infant by other means than by sucking the breast.

**F. bottle.** A bottle or receptacle of glass or other material used in the artificial feeding of children. A common form is a flattened oval glass vessel to receive the milk or other fluid food, having the orifice stopped by a perforated cork, through which runs a glass tube, with an india-rubber tube at each end of it, the one at the lower or inner end nearly reaching the bottom of the bottle, and the one at the upper or outer end capped by an india-rubber teat.

**F. by the nostrils.** A form of forced feeding in which a tube is introduced by the nostril into the pharynx, and liquid food passed down it by means of a syringe, or by hydrostatic pressure through the intervention of a funnel and a length of elastic tubing.

**F. by the peritonæum.** A mode of artificial feeding by the transection of debrinated blood into the peritoneal cavity by means of a sharp pen-pointed cannula, which is pushed through the abdominal wall at the linea alba, and which is connected by means of an elastic tube with a funnel or other reservoir for the blood. It has been employed in several wasting diseases; there appears to be little risk of peritonitis, except when the operation is too frequently repeated.

**F. by the rectum.** The use of nutrient enemata or suppositories.

**F. by the veins.** See *Transfusion*.

**F. cup.** A vessel with a spout for the feeding of a sick person whilst lying down.

Also, an oblong shallow vessel with a tubular end, to which a teat can be affixed for the artificial feeding of young children.

**F., forc'ed.** The administration of food by force, as by means of the stomach-pump, in insane persons who refuse to eat.

**F., for cible.** Same as *F., forced*.

**F., hypoderm'ic.** (Υπό, under; δέρμα, the skin.) Same as *F., subcutaneous*.

**F., subcutaneous.** (L. *sub*, under; *cutis*, the skin.) A mode of artificial feeding consisting in the injection of nutrient materials, such as oil, solutions of sugar, milk, white of egg, and peptones, under the skin by means of a large hypodermic syringe.

**F. tube.** An elastic tube of india rubber or other material which is passed into the stomach, and either connected with a stomach-pump or attached to a funnel, so that food may in the one case be forced, and in the other case allowed to descend by hydrostatic pressure, into the stomach.

**FecI.** (Mid. E. *felen*; Sax. *fēlan*; G. *fühlen*.) To perceive by the touch.

**Feelers.** (*Feel.*) The long bristles about the mouth of some animals.

Also, a term for the antennae of insects and other animals.

**Feeling.** (*Feel.*) The sense of touch. Also, the faculty of perception.

Als., see *Feelings*.

**Feelings.** (*Feel.*) Those modes of mind in which it is occupied with sentient states, divisible into four subclasses—presentative, presentative-representative, representative, and re-representative feelings, according to Herbert Spencer.

**F.s., insanity of the.** The form of insanity in which there is no delusion, but perversion of the affections or feelings; otherwise called moral insanity.

**F.s., presentative.** (*L. presento*, to place before.) Those feelings in which an impression on some part of the body is regarded as pleasure or pain, being sensations.

**F.s., presentative-representative.** (*L. re*, back again.) Those feelings in which a sensation or a group of sensations arouses a large group of represented feelings, being emotions.

**F.s., representative.** (*L. re*, back again.) The ideas of the emotions when they are called up, apart from the appropriate external excitements, such as the emotions excited by a vivid description.

**F.s., re-representative.** Those more complex sentient states which are less the direct results of external excitement than the indirect or reflex results of them, such as the love of property.

**Feet.** Plural of *Foot*.

**F., burning of the.** A neurotic state characterised by a burning sensation in the feet, described by Malcolmson as occurring in India in certain forms of disease. A similar condition of the extremities, both of the hands and feet, has been observed by Mitchell and others, as a symptom of injuries of nerves.

**F., foetid sweating of.** See *Osmidrosis pedum*.

**Fegaritis.** (*F. fegarite*.) A Spanish name given to an ulcerating and gangrenous stomatitis which was prevalent among the French soldiers quartered at Madrid and Toledo in 1810.

**Fegra.** Same as *Fegaritis*.

**Fehling.** A German chemist of the present century.

**F.'s copper solution.** See *F.'s test for sugar*.

**F.'s solution.** See *F.'s test for sugar*.

**F.'s test for sugar.** Crystallised cupric sulphate 40 grammes, dissolved in distilled water 200 c.c., is mixed with neutral potassium tartrate 160 grammes and fused sodium hydrate 130 grammes, dissolved in distilled water 600 c.c., made up to a litre with distilled water, and boiled for a few minutes. When some time made Fehling's solution undergoes change, and it has been suggested that the copper and the alkaline solutions should be kept separate and mixed when needed for use. For this purpose 90.5 grains of copper sulphate may be dissolved in water 3 l. oz. for one solution, and caustic soda 180 grains dissolved with nitrate of potash 364 grains in water 3 l. oz. for the other.

**Feign.** (*F. feindre*; from *l. fingere*, to form to feign. *I. fingere*; *S. fingir*; *G. vorgeben*.) To pretend.

**Feign'ed.** (*Feign*.) Pretended, false.

**F. diseases.** Disease may be simulated when the patient is in perfect health, or some lesion being really present, it may be exaggerated or artificially and intentionally increased, or it may be actually induced. Disease is usually feigned with the object of escaping military or other service; or to obtain compassion and material benefits; or to avoid punishment; or to deceive. The principal diseases or conditions which have been feigned are abdominal tumours, abortion, abstinence, blindness, cachexia, cancer, catalepsy, concretions in bladder or rectum, deafness, deaf mutism, delivery, dropsy, dysentery and diarrhoea, emaciation, epilepsy, incontinence of feces, fainting, fever, gastric disease, hæmorrhoids, cardiac and hepatic disease, hysteria, jaundice, insanity, lunacy, neuralgia, ophthalmic disease, paralysis, polypus of nose, pregnancy, pulmonary disease, rectal disease, rheumatism, sopor, tympanitis and emphysematous affections, urinary and uterine disease, and wounds.

**Feket'ekút.** Hungary. A strong sulphur spring.

**Fel.** (*L. fel*, akin to *bilis*.) Bile.

**F. anguillæ.** (*L. anguilla*, the eel.) The bile of the eel. Formerly believed to facilitate labour.

**F. bovinum.** (*L. bos*, the ox.) Ox bile.

**F. bovinum depuratum.** Aust. Ph. (*L. bovinus*, pertaining to cattle; *depuro*, to purify.) The same as *F. tauri depuratum*.

**F. bovinum purificatum.** B. Ph. (*L. bovinus*; *purificatus*, cleansed. *F. fiel de bœuf purifié*; *G. gereinigte Ochsengalle*.) Fresh ox bile a pint is mixed with rectified spirit two pints, and allowed to settle for twelve hours. The clear solution is decanted and evaporated in a porcelain vessel on a water bath to a pill consistency. A tonic and laxative, especially where the secretion of the liver is defective. Dose, 5 to 10 grains (.33 to .65 gramme).

Bile has been recommended for external use in the reduction of hypertrophies, especially of the mamma and the tonsil, as well as in corneal opacities.

**F. bovis.** U.S. Ph. (*L. bos*, the ox. *F. fiel de bœuf*; *I. fielle di bœue*; *S. hiel de bucy*; *G. Ochsengalle*.) Ox gall. The fresh gall of *Bos taurus*. A brownish-green or dark green, viscid liquid, of sp. gr. 1.018 to 1.028, having a peculiar odour, a bitter taste, and a neutral or faintly alkaline reaction.

**F. bovis inspissatum.** U.S. Ph. (*L. inspisso*, to thicken.) Fresh ox gall 100 parts is heated to a temperature not exceeding 80° C. (176° F.), strained through muslin, and evaporated to fifteen parts. Dose, 5 to 10 grains (.33 to .65 gramme).

**F. bovis purificatum.** U.S. Ph. (*L. bos*; *purificatus*.) Ox gall three parts is evaporated to one part, alcohol one part is added, allowed to settle for twenty-four hours, decanted, the remainder filtered, and the two fluids mixed and evaporated to pill consistency. Dose, 5 to 10 grains (.33 to .65 gramme).

**F. naturæ.** (*l. natura*, nature.) An old term for aloes.

**F. tauri depuratum.** Aust. Ph. (*L. taurus*, a bull; *depuro*, to purify. *G. gereinigte Ochsengalle*.) Fresh ox gall 300 grammes, rectified spirit of wine, of 90 per cent., 500 grms. Mix, let it stand for 12 hours, decant, shake with

# FELDAFING - FELTED TISSUE.

animal charcoal, boil and filter, distil off the spirit to dryness.

**F. terræ.** (L. *terra*, earth. G. *Erdgalle*.) A synonym of *Ludus Helmontii*.

Also, a name of the *Erythræa centaurium*.

**F. ursi.** (L. *ursus*, a bear.) The bile of the bear. Formerly given as a cure for epilepsy.

**F. vitri.** (L. *vitrum*, glass. G. *Glasgalle*.) The scum which floats on the top of liquid glass when it is first made. Used in toothpowders.

**Feldafing.** Bavaria, on the western shore of the Starnberg Lake. A sulphuretted spring containing calcium, magnesium, and sodium carbonates.

**Feld'spar.** (G. *Feld*, field; *Spath*, spar.) See *Felspar*.

**Felines'.** France, in Auvergne. A mineral spring containing sodium and magnesium chlorides with much free carbonic acid.

**Felis.** (L. *felis*, a cat.) A Genus of the Family *Felidae*, Order *Carnivora*.

**F. catus**, Linn. (*Katze*, a cat.) The cat. The flesh and fat were supposed to relieve painful piles and lumbago; the liver was used against stone; and the ashes of the head of a black cat burned in a glazed vessel were put into the eye for the cure of opacities of the cornea.

**F. leo**, Linn. (L. *leo*, a lion.) The lion. The fat was supposed to be alexipharmic, and as an injection was used in dysentery.

**F. leopardus**, Linn. The leopard. The fat was used in paralysis and palpitation, and as an application for ringworm.

**F. lynx**, Linn. (*λύξ*, a lynx.) The lynx. The claws were used in epilepsy, and other nervous affections.

**F. tigris**, Linn. The tiger. Sometimes used as food.

**Felix - des - pallières, Saint.** France, Département du Gard. An athermal, weak chalybeate containing a little carbonic acid.

**Fell.** (Mid. E. *fellan*; Sax. *fellan*.) To cause to fall. Used by Thudichum in the sense of to precipitate.

**Fell's caustic paste.** A remedy formerly in repute as a cure for cancer. It was made with equal parts of chloride of zinc and decoction of *sanguinaria canadensis* made into a paste with flour.

**Fellanic acid.**  $C_{50}H_{30}O_6 \cdot 3H_2O$  An acid, according to Berzelius, which is formed, along with fellinic acid, during the putrefaction of bile. The existence of this body has not been confirmed.

**Felllathal Quellen.** Austria, in Carinthia, 2900 feet above sea-level. A mineral water containing twenty-five grains of sodium carbonate in sixteen ounces, with free carbonic acid.

**Felleous.** (L. *felleus*, like gall. G. *galllicht*.) Biliary, bilious.

**Fellie acid.** Same as *Fellinic acid*.

**Felliducous.** (L. *fel*, bile; *duco*, to lead. G. *gallenführend*.) Term applied to remedies inducing a flow of bile; cholagogue.

**Fellifluous.** (L. *fel*, bile; *fluo*, to flow.) Flowing with bile; having abundant bile.

**Fellineous.** (L. *fel*, bile.) Bilious.

**Fellinic acid.**  $C_{50}H_{30}O_6 \cdot 4H_2O$ . An acid, obtained, according to Berzelius, by treating bile with hydrochloric acid. The existence of this acid has not been confirmed.

**Fellis obstructio.** (L. *fel*, bile; *obstructio*, a shutting up.) A term for jaundice.

**F. suffusio.** (L. *suffusio*, an overspreading.) A term for jaundice.

**F. superfusio.** (L. *superfusio*, a pouring over.) A term for jaundice.

**Fellon.** Same as *Felon*.

**Fellwort.** (Icel. *fell*, a hill.) The plants of the Genus *Gentiana*, especially the *G. lutea*.

**Felo-de-se.** (Low L. *fello*, or *felo*, a traitor; *de*, upon; *se*, himself.) A felon on himself; one who destroys his life while still in possession of his natural faculties.

**Felon.** (Mid. E. *felun*; from Old F. *felon*; from Low L. *fello*, or *felo*, a traitor; probably of Celtic origin.) A wicked person; one guilty of felony.

Also, a name for a severe form of whitlow.

Also, a term synonymous, amongst farmers in several districts of England, with *Madbound*.

**F. grass.** The *H. h. borus fectidus*.

**Felonwort.** The *Salinum dulcamara*, so called because it was used for the cure of whitlow or felon.

**Fel'senegg.** Switzerland, Canton Zug. A climatic cure-place, 3000 feet above sea-level. The whey cure, and the use of artificial mineral and other baths, such as those of salt, sulphur, iron, chamomile, pine leaf, and aromatic herbs, are employed.

**Felső-al'ap.** Hungary. A mineral water containing magnesium sulphate 24 grains, sodium sulphate 43 grains, calcium sulphate 14 grains, sodium chloride 32 grains, and some magnesium iodide in 16 ounces.

**Felső-ap'sa.** Hungary. A mineral spring containing chloride of sodium.

**Felső-bajom.** Hungary, near Mediasch. A mineral spring containing sodium chloride.

**Felső-neresznicze.** Hungary. A chalybeate spring containing alkaline chlorides.

**Felső-peteny.** Hungary, County Neograd. A chalybeate spring.

**Felső-róna.** Hungary, County Maros. A sodium chloride mineral water.

**Felső-ruszbach.** Hungary, County Zips. A mineral water containing calcium and sodium carbonates, calcium sulphate, iron carbonate, and much free carbonic acid.

**Felső-visso.** Hungary. Near this town rise many mineral water springs; two alkaline chalybeates, three alkaline, one chalybeate, one naphtha-holding, and others.

**Felspar.** (G. *Feldspath*; from *Feld*, field; *Spath*, spar; or, according to some, from E. *fell*, a hill; *spar*.) A name of a group of minerals crystallising in the monoclinic and the triclinic systems, and consisting of silicate of alumina, and silicates of the alkalis, with traces of lime, magnesia, and iron.

**Felspath.** Same as *Felspar*.

**Felstead.** Essex. A disused chalybeate water.

**Felt.** (An English word of uncertain origin; G. *Filtz*; Gr. *πίλος*. F. *feutre*; I. *feltro*; S. *feltro*.) A kind of cloth made by the matting together of hair.

**F. moulds.** The fungi called *Antennariet*.

**Felted tissue.** A form of tissue common in the thallus of Lichens, and composed of elongated cylindrical cells called hyphae, united by their extremities into filaments, either

simple or branched, and interwoven irregularly into a kind of felted mass.

**Felting.** (*Felt*.) The matting together of the hairs.

**Female.** (Mid. E. *femelle*; from F. *femella*; from L. *femella*, a young woman. I. *femina*; S. *femenino*; G. *weiblich*.) Of the sex which brings forth the young of the species.

In Surgery, applied to the part of a double-limbed instrument which receives a corresponding part.

In Botany, applied to the flower which bears a pistil, and to a plant with pistil-bearing flowers only.

In Biology, the female sex is often distinguished by the sign ♀.

**F. catheter.** See *Catheter, female*.

**F. fern.** The *Aspidium filix-femina*.

**F. flower.** One with only a pistil or pistils.

**F. holly-rose.** The *Cistus salviifolius*.

**F. nutmeg.** See *Nutmeg, female*.

**F. pronucleus.** See *Pronucleus, female*.

**F. prothallium.** See *Prothallium, female*.

**F. speed'well.** The *Antirrhinum elatine*.

**Femella.** (L. *femella*, a girl; dim. of *femina*, a woman.) A girl.

**Femina.** (L. *femina*, a woman.) A woman.

**Femin'eous.** (L. *femina*. G. *weiblich*.) Having the characteristics of a female.

In Botany, applied to a plant which possesses a pistil, but no stamens.

**Femines'cence.** (L. *femina*.) The possession or acquirement by the female of male characters. (Dunzlison.)

**Feminine.** (L. *femina*, a woman. G. *weiblich*.) Of the appearance, or the sex, of a woman.

**F. disease'.** See *Scythian disease*.

**Femininity.** (L. *femina*.) Bardach's term for the totality of the anatomical conditions and the physiological properties which characterize the female sex.

**Feminism.** (L. *femina*.) The qualities of a female.

Also, Lorain's term for the arrest of development of the male towards the age of puberty, which gives to it somewhat of the attributes of the female.

**Femor'us.** (L. *femur*.) A synonym of *Cru'us*.

**Femoral.** (L. *femur*, the thigh.) Relating to the thigh, or to the femur.

Also, the third segment of the limbs of the Arachnida.

**F. an'eury'sm.** (Ἀνεύρεσμα, a widening.) Aneurysm of the common, or of the superficial, femoral artery.

**F. arch.** The arch formed by Poupart's ligament.

Also, a term for Poupart's ligament itself.

**F. arch, deep.** Same as *Cru'al arch, deep*.

**F. arch, superficial.** Same as *F. arch*.

**F. artery.** (F. *artère femorale*; G. *Oberschenkel Schlagader*.) This artery is the continuation of the external iliac artery and supplies the thigh, leg, and foot. It commences beneath Poupart's ligament, midway between the anterior superior spine of the ilium and the symphysis pubis, and terminates at the opening in the adduc-

tor magnus at the junction of the middle with the lower third of the thigh, where it becomes the popliteal artery. In its upper part it lies in Scarpa's triangle, being covered only by the integument, inguinal glands, and the superficial and deep fascia, with the branch of the anterior crural nerve. Below, it is covered by the sartorius, the long saphenous nerve, and the aponeurotic covering of Hunter's canal. To its inner side it has above the femoral vein, and below the adductor longus and sartorius; to the outer side is the vastus internus, and below the femoral vein; behind, it has in succession the psoas muscle, the profunda vein, the pectineus muscle, the adductor longus, the femoral vein, and, finally, the adductor magnus. A little below Poupart's ligament it gives off the external pudic arteries, the superficial epigastric artery, and the superficial circumflex iliac artery; about 1.5" below the ligament it gives off the deep femoral artery; in Scarpa's triangle some muscular branches; and just before it enters the adductor magnus it gives off the anastomotic artery.

The femoral artery of some lemurs, sloths, and the Echidna breaks up into several small trunks running side by side.

**F. artery, common.** (G. *gemeinsame Oberschenkel Schlagader*.) A name applied to that portion of the femoral artery above the place of origin of the deep femoral artery.

**F. artery, deep.** (F. *artère femorale profonde*; G. *tiefe Schenkel Schlagader*.) The chief branch of the femoral artery arising at its outer and back part about 1.5" below Poupart's ligament. It descends between the femoral attachments of the adductor longus and adductor magnus muscles, and, after giving off muscular branches, the external and internal circumflex, and three or four perforating arteries, it terminates as the lowest perforating artery.

**F. artery, nerve of.** A branch of the anterior crural nerve, or sometimes of the third lumbar nerve; it runs on the upper part of the femoral artery, and gives off the nerve of the femur.

**F. artery, superficial.** (G. *oberflächliche Schenkel Schlagader*.) The part of the femoral artery below the giving off of the deep femoral branch.

**F. bone.** The thigh bone, or femur.

**F. canal.** See *Canal, femoral*.

**F. condyles.** (Κόνδυλος, a knob.) The condyles at the lower extremity of the femur.

**F. coxal'gia.** (L. *coxa*, the hip; Gr. ἄλγος, pain.) Same as *F. hip-disease*.

**F. epiphyses.** See *Femur, epiphyses of*.

**F. fascia.** See *Fascia of thigh*.

**F. glands.** See *Glands, femoral*.

**F. her'nia.** See *Hernia, femoral*.

**F. hip-disease'.** Hip-joint disease commencing in the femur. See *Hip-joint disease, femoral*.

**F. lig'ament.** (L. *ligo*, to bind together.) The same as *Hey's ligament*.

**F. lig'ament of Hey.** See *Hey's ligament*.

**F. mur'mur.** See under *Murmur, venous*.

**F. pores.** (Πόρος, a passage.) The prominent openings on the inner side of the thigh of many lizards, which are the orifices of the excretory ducts of the femoral glands.

**F. ring.** (F. *Anneau crural*; G. *Schenkelring*.) The upper or abdominal end of the

## FEMORALIS—FEMUR.

femoral or crural canal; in a normal condition closed by the crural septum and by peritoneum.

**F. sheath.** A funnel-shaped structure enclosing the upper part of the femoral vessels; its upper extremity is the femoral ring connected in front with the transversalis fascia, and behind with the iliac; its lower end is continuous with the sheath of the femoral vessels. It is divided into three compartments by fibrous septa uniting its anterior and posterior walls; the outer canal gives passage to the femoral artery, the middle one to the femoral vein, and the innermost contains a lymphatic gland, lymphatic vessels, and some fat. This latter transmits a femoral hernia when present, and is called the femoral or crural canal.

**F. vein.** (*F. veine femorale*; *G. Schenkelblutader*.) The femoral vein pursues the same course as the artery, to the inner side of which it lies, and from which it is separated by a thin fibrous septum; below, the vein gets first behind the artery, and then to its outer side.

**F. vein, deep.** (*F. veine femorale profunda*; *G. tiefe Schenkelblutader*.) A vein running the same course as the deep femoral artery.

**Femorialis.** Same as *Femoral*.

**F. muscle.** The conjoined muscles called *Triiceps cruris*, being the cruraus, and the two vasti muscles.

**Femoreus.** (*L. femur*.) The same as *Crureus*.

**Femoro-calcaneus.** (*L. femur, the thigh; calc., the heel. F. femoro-calcaneus.*) The *Plantaris* muscle.

**Femoro-caudal.** (*L. femur; cauda, a tail.*) Relating to the thigh and the tail.

**F. muscle.** A muscle found in Birds, Reptiles, and tailed Batrachia, which arises from the caudal vertebrae, and is inserted into the femur.

**Femoro-coccygeus.** (*Femur; coccyx.*) The *Femoro-caudal* muscle.

**Femoro-cutaneous.** (*L. femur, the thigh; cutis, the skin.*) Relating to the thigh and the skin.

**F. nerve.** (*F. nerv. femoro-cutane.*) The external cutaneous nerve of the thigh.

**Femoro-genital.** (*L. femur; genitalis, belonging to generation.*) Relating to the femur and the genital organs.

**F. nerve.** The *Genito-crural* nerve.

**Femoro-popliteal.** (*L. femur, the thigh; poples, the ham.*) Relating to the thigh and the popliteal space.

**F. aneurysm.** (*Ἀνεύρυσμα, a widening.*) Aneurysm of the femoral artery while in the lower part of Scarpa's triangle, or in Hunter's canal, so that it projects into the popliteal space, as well as on the anterior and inner surface of the thigh.

**F. arteries.** (*F. artires femoro-poplites.*) The perforating arteries of the thigh.

**F. neuralgia.** (*Νευρο-, a nerve; άλγος, pain.*) A synonym of *Sciatica*.

**Femoro-popliteo-tibial.** (*L. femur; poples; tibia, the bone of that name.*) Relating to the femur, the ham, and the tibia.

**F. muscle.** The *Popliteus* muscle.

**Femoro-prætibial.** (*L. femur; præ, in front of; tibia.*) Relating to the anterior part of the thigh and the leg.

**F. nerve.** The largest branch of the in-

ternal saphenous nerve which turns forward over the anterior border of the tibia.

**F. neuralgia.** Neuralgia of the internal saphenous nerve.

**Femoro-tibial.** (*L. femur; tibia.*) Relating to the femur and to the tibia.

**F. articulation.** The knee-joint.

**Femur.** (*L. femur, the thigh. F. femur; I. femore; S. femur; G. Schenkelbein.*) In vertebrate animals the bone of the thigh or pelvic extremity of the hinder limb. The long and strong bone which extends between the pelvis and the tibia. It inclines downwards and inwards, the inclination being greater in the female than in the male. It presents a shaft and two extremities. The upper extremity consists of a head, which is joined to the shaft by a neck. At the line of junction are two trochanters. The head forms rather more than a hemisphere, or from three fifths to two thirds of a sphere of from 45—50 mm. in diameter. It is covered with cartilage, except at a point a little below and behind the centre, which is depressed for the attachment of the ligamentum teres. It articulates with the acetabulum. The neck forms an angle of about 125° with the shaft, and is directed upwards, inwards, and a little forwards in the adult male; in the female and in old age it becomes more nearly horizontal. It is flattened from before backwards, and thicker below than above. It is 2 cm. long at its upper and 4 cm. long in its lower border. The great trochanter is a quadrilateral eminence, the upper extremity of which is about three quarters of an inch lower than the head. The outer surface is marked by a diagonal line, into which the gluteus medius is inserted; the part above the line also gives attachment to this muscle, or is separated from its tendon by a bursa. The part below and behind the line is smooth and separated by a bursa from the gluteus maximus. The inner part of the base situated behind the neck is deeply excavated to form the trochanteric fossa, into which the obturator externus muscle is inserted; above and internal to this is the impression for the obturator internus and gemelli muscles. The upper border of the great trochanter is marked by an impression for the pyriformis. The inferior border corresponds to the junction of the trochanter with the shaft; it is rough, and gives attachment to the upper part of the vastus externus muscle. The anterior border gives attachment to the gluteus minimus. The posterior border forms the back of the digital fossa. The lesser trochanter projects from the lower and back part of the base of the neck; the rounded summit gives attachment to the conjoined tendon of the psoas and iliacus muscles. The posterior intertrochanteric line marks the limit of the neck posteriorly, and near its middle presents a tubercle, to which the upper part of the quadratus femoris muscle is attached. The anterior intertrochanteric line marks the limits of the neck anteriorly, and runs below the lesser trochanter into the linea aspera. It gives attachment to the anterior portion of the capsular ligament of the hip-joint and to the upper part of the vastus internus muscle. The shaft or diaphysis is nearly cylindrical and forms a slight arch with the convexity forwards. Posteriorly is a rough line, the linea aspera, which has near the centre of the femur two lips, an internal and an external, and a rough intermediate space. Above, the linea aspera divides

into three lines, below, it bifurcates. To the inner lip of the linea aspera is attached the vastus internus, to the outer lip the vastus externus, and to the outer lip above and the inner lip below the adductor magnus. Between the vastus externus and the adductor magnus the gluteus maximus is attached above and the short head of the biceps below. Between the adductor magnus and the vastus internus are attached the iliacus and pectineus, the adductor brevis and longus. Above the middle of the linea aspera, and directed upwards, is the nutrient canal of the femur. To the upper three fourths of the front of the femur the cruræus is attached; the lower fourth is covered by the synovial membrane of the knee-joint, and also gives attachment to the subcruræus. The lower extremity of the femur presents two condyles separated by an intercondyloid notch; they articulate with the tibia. The internal condyle is longer and narrower than the external. The two condyles are covered with cartilage, and are continuous with each other in front, forming a smooth trochlear surface, with which the patella articulates. The intercondyloid notch lodges the crucial ligaments. The outer surface of the external condyle presents a tuberosity, to which the external lateral ligament of the knee-joint is attached; below this is a groove for the attachment of the popliteus muscle. The posterior surface of the outer condyle gives attachment to the outer head of the gastrocnemius, and above this to the popliteus. The inner surface of the internal condyle presents a tuberosity for the internal lateral ligament; above this is a tubercle for the tendon of the adductor magnus, and behind and beneath the tubercle a depression for the inner head of the gastrocnemius. The outer side of the inner condyle gives attachment at its anterior part to the posterior crucial ligament.

The femur of man is relatively and, with few exceptions in some very large animals, absolutely longer than that of other animals. This bone is generally absent in fishes, it is a mere rudiment in some whales and reptiles, very diminutive in seals, very short in Ruminantia and Equidae, and very short and thick in the mole; it is very long in many Reptilia and tailed Batrachia, straight in the Lemnidae, Carnivora, and bats, much curved in the tortoises.

Also, in insects (*G. Oberschenkel*), a term applied to the third segment of the leg.

**F., artery, medullary, of.** (*L. medulla*, marrow.) A branch of the second or third perforating artery supplying the medulla and inner part of the shaft of the femur.

A smaller medullary artery is supplied by the first perforating artery.

**F., development of.** The femur is developed from five centres, one for the shaft, one for each extremity, and one for each trochanter. Ossification commences in the shaft about the third week of foetal life; in the lower end of the bone at the ninth month; in the head during the first year after birth; in the great trochanter during the fourth year; and in the lesser trochanter between the thirteenth and fourteenth years. The order in which the epiphyses are joined to the shaft is the reverse of that of their appearance, the condyles only becoming united to the shaft about the twentieth year.

**F., dislocation of.** See *Hip, dislocation of*.

**F., epiphyses of.** (*Ἐπίφυσες*, an ex-

creescence.) The femur possesses four epiphyses: three at the upper end, the head, the greater and the lesser trochanter; and one at the lower end. The ossific centre of the head appears in the first year of life, and becomes united to the diaphysis or shaft about the eighteenth or nineteenth year; that of the great trochanter appears in the fourth year, and becomes united to the shaft in the eighteenth year; that of the small trochanter appears in the thirteenth or fourteenth year, and becomes united to the shaft in the seventeenth year; and that of the lower extremity appears a little before birth, and becomes united to the shaft in the twentieth or twenty-first year.

**F., fracture of.** The femur may be broken across in any part of it, and in any form of fracture. Next to the clavicle it is probably the most commonly broken of any bone in the body, and relatively more frequently in children than in adults. Fractures of the upper end of the femur are of various kinds; the head may be broken off by a separation from the shaft at the epiphysal junction, or by fracture through the neck after complete ossification, and this especially in old age; the line of this fracture may be outside the capsule of the hip-joint, extra-capsular; or within it, intra-capsular; and the head may be driven into the cancellous structure of the upper end of the shaft, so as to be impacted; the trochanter major may be separated as an epiphysis, or may be broken off, according to some, after osseous union.

Fractures of the shaft may occur in any part of it, but they are most frequent in the middle third; they are usually the result of violence, but it seems unquestionable that now and again they may be produced by muscular effort.

Fractures of the lower end may be transverse or diagonal just above the condyles; or the epiphysis may be separated before the time of osseous union; or one or other condyle may be broken off.

**F. moventium septimus.** (*L. movens*, moving; *septimus*, the seventh.) The *Iliacus* muscle.

**F. moventium sextus.** (*L. movens*; *sextus*, the sixth.) The *Isoas* muscle.

**F., nerve of.** A branch given off from the nerve of the femoral artery which accompanies the medullary artery of the femur.

**F. summum.** (*L. summus*, the highest.) The vulva.

**Fen.** (*Sax. fen*; *G. Fehn*.) A marshy ground.

**F. berry.** The *Vaccinium oxycoccus*, from its place of growth.

**F. rue.** The *Thalictrum flavum*.

**Fenestra.** (*L. fenestra*, an opening in the wall to admit the light; probably connected with *φωσ*, root of *φαίω*, to shine; akin to Sansc. *bha*, to shine. *F. fenestre*; *L. finestra*; *G. Fenster*.) A window, an opening.

In Anatomy, a term applied to two openings in the wall of the tympanum, the *F. ovalis* and the *F. rotunda*.

In Midwifery, the name of the open space in the blades of a forceps.

**F. cochleæ.** (*Cochlea*. *G. Schneckenfenster*.) The *F. rotunda*.

**F. cochlearis.** (*Cochlea*.) The *F. rotunda*.

**F. oculi.** (*L. oculus*, the eye.) The pupil of the eye.

# FENESTRAL—FENUGREEK.

**F. ova'lis.** (L. *ovalis*, oval. F. *fenêtre ovale*; G. *eiförmiges Fenster*.) A somewhat kidney-shaped opening in the upper part of the inner wall of the tympanum leading to the cavity of the vestibule. It contains the base of the stapes attached to the margin by its annular ligament. Its longest diameter measures .003 metre, and lies in the long axis of the petrous bone. Its upper margin is formed by the prootic bone, and its lower by the opisthotic bone.

**F. rotun'da.** (L. *rotundus*, round. F. *fenêtre ronde*; G. *rundes Fenster*.) A rounded opening at the extremity of a shallow, funnel-shaped depression in the lower part of the inner wall of the tympanum leading to the scala tympani of the cochlea; it is closed by a thin membrane. Its entire margin is formed by the opisthotic bone.

**F. rotun'da, membrane of.** (L. *rotundus*. G. *Nebentrommelfell*.) The membrane closing in the fenestra rotunda. It consists of two layers, the one on the vestibular side connected with the periosteum of the cochlea; and the other on the tympanic side, containing blood-vessels and covered with epithelium continuous with that of the mucous lining of the tympanum.

**F. semiova'lis.** (L. *semi*, half.) The same as *F. ovalis*.

**F. triquetra.** (L. *triquetrus*, three-cornered.) The *F. rotunda*.

**F. vestibula'ris.** (L. *vestibulum*, a vestibule. G. *Vorhofsfenster*.) The *F. ovalis*.

**F. vestibuli.** (L. *vestibulum*, a vestibule.) The *F. ovalis*.

**Fenest'ral.** (L. *fenestra*, a window.) Like a window, having openings. Same as *Fenestrated*.

**F. band'age.** Same as *Fenestrated bandage*.

**Fenest'rate.** (L. *fenestra*.) Having openings.

**Fenestrated.** (L. *fenestra*, to furnish with openings. F. *fenêtré*; I. *finestrato*; S. *agüerado*; G. *gefenstert, fenstertartig*.) Having openings or windows.

**F. band'age.** A bandage in which there are small apertures for the escape of discharge or of perspiration.

**F. compress.** See *Compress, fenestrated*.

**F. dehis'cence.** (L. *dehisco*, to split open.) The bursting of the capsule of a fruit in such manner that the valves fall off and the placentæ remain and appear like a window-frame.

**F. lay'er of the retina.** A synonym of the external limiting membrane, Leydig uses the term for what is now termed by Lowne the membrana bacillaris, forming the inner limit of the dioptron or optical portion of the compound eye.

**F. leaves.** Leaves in which the interstices between the network of veins is more or less open.

**F. mem'brane.** A membrane consisting of bands of fibrous tissue which divide and reunite with each other and with neighbouring branches, so as to form oval or rounded apertures. Such a structure is seen in the omentum and plenra of man, apes, dogs, and other animals, and in the subarachnoidal tissue of the brain and spinal cord, and in the arteries.

**F. mem'brane of Henlé.** (*Henle*, a German anatomist.) One or more of the layers

of elastic tissue forming the lining membrane of the arteries, which on being stripped off presents more or less numerous round or oval or irregularly shaped perforations.

**F. plaster.** A plaster with small holes for the escape of discharge or to allow of exhalation from the skin.

**F. wings.** (G. *gefensterte Flügel*.) The wings of lepidopterous insects which contain transparent spots consisting of thin hyaline membrane without any covering of scales.

**Fenestration.** (L. *fenestra*, a window.) The process of the formation of openings or fenestration in tissues.

**F. of valves.** (G. *Klappenfensterung*.) A perforation of the aortic valves above their free border. It may be a congenital defect, or it may arise from atrophy of the tissue of the valve.

**Fenest'ula.** (L. *fenestula*, a little window; dim. of *fenestra*.) A term for the spaces enclosed by the inosculating branches of the Polyzoa.

**Fenest'rule.** Same as *Fenest'ula*.

**Fenêu.** France, Département de Maine-et-Loire. Weak athermal, bicarbonated iron waters, with a little free carbonic acid, containing also a trace of arsenic.

**Fen'kil.** The same as *Fennel*.

**Fennel.** (Mid E. *fenel, fenkil*; from Sax. *fuol, fuagle, fünde*; from L. *feniculum*, formed with dim. suffixes from *fenum*, hay. F. *fenoul*; I. *finocchio*; S. *hingo*; G. *Fenchel*.) The *Feniculum dulce*.

**F. asses'.** (F. *f. fenoul d'âne*; I. *finocchio d'asno*.) The *Feniculum piperitum*.

**F. bears'.** (F. *fenoul d'ours*.) The *Mentha athanasium*.

**F. common.** (F. *fenoul vulgaire*.) The *Feniculum vulgare*.

**F. dogs'.** The *Anthemis cotula*.

**F. Florence.** The fruit of *Feniculum dulce*.

**F. flow'.** The *Nigella arvensis* and other species of *Nigella*.

**F. fruit.** See *Feniculi fructus*.

**F. giant.** The *Ferula communis*.

**F. hogs'.** The *Peucedanum officinale*.

**F. Indian.** The fruit of *Feniculum pannorum*.

**F., oil of.** See *Oleum feniculi*.

**F., pep'per.** (F. *fenoul poivre*.) The *Feniculum piperitum*.

**F. root.** The root of *Feniculum vulgare* and *F. dulce*. Used as an aromatic and carminative.

**F., sea.** (F. *fenoul marin*.) The *Crithmum maritimum*.

**F. seed.** See *Feniculi fructus*.

**F., sweet.** (F. *fenoul doux*.) The *Feniculum dulce*.

**F., sweet, larg'er.** (F. *fenoul doux majeur*.) The fruit of *Feniculum dulce*.

**F., sweet, small'er.** (F. *fenoul doux mineur*.) The fruit of *Feniculum mediolanensis*.

**F., twist'ed.** (F. *fenoul tortu*.) The *Seseli tortuosum*.

**F., wa'ter.** (F. *fenoul d'eau*.) The *Phellandrium aquaticum*.

**F. wa'ter.** See *Aqua feniculi*.

**F., wild.** The *Feniculum vulgare*.

**F. wood.** (G. *Fenchelholz*.) Sassafras

**Fenugreek.** The *Trigonella fenum-græcum*.

**Feræ.** (*L. fera*, a wild beast.) A synonym of *Carnivora*; according to Giebel it included also *Insectivora*, and in Linnaeus's classification it embraced also *Marsupiales* and *Lemures*.

**Feral.** (*L. ferus*, savage.) Wild. A term applied to wild animals or plants which have descended from an originally domesticated or cultivated stock.

**Feralis.** (*L. feralis*, belonging to the dead.) Dangerous.

**F. pediculus.** (*L. pediculus*, a louse.) The crab louse, *Pediculus pubis*.

**Feredschik.** Roumelia, near Gallipoli. A hot saline spring.

**Ferenberg.** Austria, in the Tyrol. A weak chalybeate.

**Ferenczvölgy.** Hungary. An alkaline chloride spring.

**Ferguson, Robert.** An English physician, born in India on November 15th, 1799; died at Winkfield, near Windsor, on June 25th, 1865.

**Fergusson, Sir William, Bart.** A Scotch surgeon, born at Prestonpans on March 20th, 1808; died in London, on February 10th, 1877.

**F.'s lion forceps.** Large forceps, with double serrated jaws, for holding firmly the piece of bone which is to be sawn off in excision operations.

**F.'s saw.** A saw with a movable back, so that it may be used for sawing through a bone of great thickness.

**F.'s speculum.** (*L. speculum*, a mirror.) A tube of silvered glass surrounded with vulcanite, or with webbing treated with india rubber, for introduction into the vagina. This instrument is often, but incorrectly, attributed to Dr. Robert Ferguson.

**Ferine.** (*L. ferinus*, belonging to wild beasts.) Savage. Applied to a very malignant, or violent, or offensive disease.

**F. cough.** (*F. toux ferine*.) A dry and obstinate cough.

**Ferment.** (*L. fermentum*, leaven; contracted from *fermentum*, from *ferreo*, to boil. *F. ferment*; *I. fermento*; *S. fermento*; *G. Gährungsstoff, Gahrungsmittel, Gährstoff, Gährteig*.) A body which, under certain conditions, when brought into contact with the molecules of various organic chemical compounds induces decomposition and reconstruction of their elements without itself forming any part of the resulting products; in other words, induces *Fermentation*. Ferments are divided into two groups: the organised, formed, or insoluble, and the unorganised, unformed, or soluble. See *F.s.*, *organised* and *F.s.*, *unorganised*.

Also, a gentle boiling, or bubbling, or internal commotion of a thing or person.

Also, to effervesce, to undergo fermentation.

**F., albumin-forming.** This group includes rennet ferment and analogous ferments from the vegetable kingdom. They convert casein into a substance the reactions of which are identical with coagulated albumen.

**F., ammonia-forming.** The only example of this group, which is perhaps somewhat doubtful, is the ferment contained in the urine, which effects the conversion of urea into ammonium carbonate. See *Fermentation, ammoniacal*.

**F.s. amylolytic.** (*L. amyllum*, starch;

*Gr. λῦω*, to loosen.) Those hydrolytic ferments which have the power of converting starch, glycogen, and such like, into sugar. Such are the salivary, pancreatic, and hepatic ferments.

**F., animal.** A term applied by Hoffmann to the infectious agent of epidemics.

**F., bee.** The ferment which is found in working bees, and which may be extracted by means of glycerin; it inverts cane sugar, and changes starch into dextrin and sugar.

**F., carica.** The substance, obtained from the *Carica papaya*, called *Papain*.

**F., chemical.** (*G. chemische Fermente, Enzyme*.) Same as *F.s.*, *unorganised*.

**F., curdling.** A constituent, according to Roberts, of the gastric juice, which has the special property of curdling milk.

**F., diastatic.** (*Diastase*.) A ferment which, like diastase, effects the transformation of starch and like substances into sugar.

**F.s. digestive.** The ferments of the saliva, the gastric juice, and the pancreatic juice.

**F. diseases.** Same as *Zymotic diseases*.

**F.s. fat-decomposing.** Same as *F.s.*, *piarolytic*.

**F., fibrin.** See *Fibrin-ferment*.

**F.s. formed.** Same as *F.s.*, *organised*.

**F., gastric.** (*Γαστρικ*, the belly.) These are pepsin which, in the presence of an acid, peptonises proteids, and a ferment, curdling ferment, which coagulates the casein of milk.

**F., glycerin-forming.** The only glycerin-forming ferment known is the steapsin of the pancreatic juice and of the intestinal juice.

**F., hepatic.** (*L. hepar*, the liver.) A diastatic ferment capable of converting glycogen into sugar.

**F., Hüfner's.** The sugar-forming ferment of the pancreatic juice, called *Amylopsin*.

**F.s. hydrolytic.** (*Υδωρ*, water; *λῦω*, to loosen.) Those ferments which cause the compounds in which they have produced decomposition to combine in their rearrangement with the elements of water.

**F., hydrophobic.** See *Hydrophobia, ferment of*.

**F.s. insoluble.** (*L. in*, not; *solubilis*, that may be dissolved.) Same as *F.s.*, *organised*.

**F., inverse.** (*L. inverto*, to turn.) The same as *Invertin*.

**F., invert ing, of liver.** (*L. inverto*.) See *Invertin*.

**F.s. morbidic.** (*L. morbus*, disease; *facio*, to make.) The substances, organised or unorganised, which, when introduced into the body, produce infectious disease, or such diseases as septicæmia.

**F. of blood.** The same as *Fibrin-ferment*.

**F. of carnivorous plants.** The substance or substances to which is due the faculty of dissolving animal substances possessed by *Nepenthes*, *Dionæa*, and other plants, and which are still unisolated.

**F.s. of liver.** These have not yet been isolated; one probably effects the transformation of glycogen into sugar, and the other is said to produce butyric acid.

**F.s. of pancreas.** These are three, a peptone-forming ferment, *Trypsin*; a piarolytic ferment, *Steapsin*; and an amylolytic ferment, *Amylopsin*.

## FERMENT.

**F. of sali'va.** The amylolytic ferment called *Ptyalin*.

**F. of small intestine.** Fermentative changes take place in the small intestine, but the special ferment thereof has not been isolated.

**F. of stomach.** See *F.s. gastric*.

**F. of urine.** A ferment said to exist in the urine of persons suffering from cystitis, and capable of precipitation by alcohol; its aqueous solution decomposes urea, with the formation of ammonium carbonate. See *Fermentation, ammoniacal*.

**F.s., or'ganised.** Living structures, chiefly lowly organised plants which, in the act of growth and multiplication, effect the decomposition or fermentation of the fluid, or of some constituent of the fluid, in which they live. The best known are the *Saccharomyces cerevisie*, of which there are several forms, and the *Coryphiza apiculatum*, found in the beer of Obernai, which are capable of establishing vinous fermentation; the *Mycoderma aceti*, which can induce acetous fermentation; the *Bacillus subtilis*, which excites butyric fermentation; the *Bacterium catenula* or *B. termo*, which induces lactic fermentation. The organised ferments are distinguished from the unorganised by the facts that they are easily destroyed; that they are killed by oxygen under increased pressure, and rendered inoperative by salicylic acid and by hydrocyanic acid; that they decompose peroxide of hydrogen; and that small quantities are capable of converting large quantities of the fermentable body. For their growth and consequent power of producing fermentation they require moisture and a certain temperature, one, as a rule, not below 4° C. (39.2° F.) and not above 40° C. (104° F.), though, in one instance at least, that of diastase, 66° C. (150.8° F.) is that at which it begins to act. Organised ferments are rendered inert by chloroform, which has no action on unorganised ferments, and by many chemical substances, such as mercuric oxide, mercuric acid, formic acid, carbolic acid, chloral hydrate, salicylic acid, benzoic acid, thymol, and many others. Organised ferments have been divided by Pasteur into aerobious, or those that require atmospheric air for their growth; and anaerobious, or those that do not require air for their growth, and, indeed, die when they are exposed to its influence.

The action of organised ferments in the production of fermentation is a much disputed question. Some, as Pasteur, regard the changes as directly produced by the cells of the fungus which abstract oxygen from the fermentable matters, and by destroying their molecular equilibrium effect the production of new compounds; others, as Nägeli, look on the changes as caused by a transmission of the molecular motions of the growing cells to the molecules of the fermentable substance, and with the same result; Béchamp goes beyond the fungoid growths, such as those above-named, to certain living molecules, which he calls microzymas, and which he believes to be present in all living organisms, in the earth, and in the air, as the active agents of all fermentative changes in life, and of putrefactive changes after death; and others, as Liebig, continue to look upon the process as a purely chemical change, and the fungoid growth as an accessory.

In addition to the numerous vegetable growths which are now believed to be the moving agents

of the process of fermentation, other low forms of life, which by some are still believed to belong to the animal kingdom, are thought to effect the same purpose.

**F.s., pancreat'ic.** The ferments contained in the pancreatic juice are named trypsin, steapsin, and amyllopsin.

**F., pep'tic.** (Πεπτός, cooked.) The same as *Pepsin*.

**F.s., pep'tone-form'ing.** The ferments which change albuminous bodies into peptones. This includes pepsin, of which some chemists admit several varieties, trypsin, vegetable pepsin, and papain; as well as some unisolated bodies found in vetch seeds, hemp-seeds, and linseed.

**F.s., piarolyt'ic.** (Πίπρ, fat; Λέω, to loosen.) Hydrolytic ferments which cause fats to decompose into fatty acids and glycerin. A ferment of this nature is believed to exist in the pancreatic secretion; but it has not yet been separated.

**F.s., proteolyt'ic.** (Protein; Gr. Λέω, to loosen.) Hydrolytic ferments which cause proteinous bodies to be converted into peptones or other bodies, such as leucin; the pepsin of the gastric juice is one of these.

**F.s., putrid.** The microbes which cause putrefaction.

**F., sali'vary.** (L. saliva, spittle.) This is a form, probably, of diastase, called *Ptyalin*.

**F.s., soluble.** (L. solubilis, soluble.) The same as *F.s. chemical*.

**F., sug'ar-form'ing.** (G. zuckerbildende Fermente.) The amylolytic ferments, including diastase or maltin, ptyalin, myrosin, emulsin, invertin, animal invertin, and amyllopsin.

**F., sug'ar-produc'ing, in blood.** A ferment believed to effect the conversion of the glycogen stored up in the liver into sugar when required.

**F., sulphhy'dric.** The ferment appearing to induce putrefactive decomposition. It is a mobile bacteriform organism, formed of elongated or spheroidal cells, with a diameter of 1  $\mu$ m. These multiply by division. This ferment can live in a medium free from sulphur, and then yields, at the expense of organic matters, carbonic acid and hydrogen. It is capable of eliminating hydrogen sulphide from the different albuminoids, from vulcanised caoutchouc, and free sulphur. It is completely anaerobic. The temperature most suitable to its action is 30°—35° C. (86° F.—95° F.). It is arrested after some hours at 50° C. (122° F.)

**F.s., unform'ed.** Same as *F.s. unorganised*.

**F.s., unorganised.** Those ferments, such as diastase, emulsin, myrosin, the pancreatic ferments, pepsin, and others, which, although derived from the animal or vegetable kingdom, have no organised structure; they are also called unformed, soluble, or chemical ferments, zymases, and enzymes. They are nitrogenous bodies, somewhat similar to the albuminoids, from which they differ in containing no sulphur, but a larger amount of oxygen; and, according to Hüfner, are probably produced by the oxidation of albumin. They may be obtained as solid, amorphous, whitish substances by extraction with glycerin and precipitation by alcohol; when dry they resist a temperature of 100° C. (212° F.) and higher, but are rendered inert when in solution at a much lower degree. Their action is destroyed by many chemical agents, such as borax and

## FERMENTABILITY—FERMENTATION.

hydrogen dioxide, which has no influence on the organised ferments; on the other hand, chloroform, which destroys the action of the organised ferments, has no influence on the unorganised ferments.

They have been, by some, divided into five groups, named respectively sugar-forming, pepton-forming, albumin-forming, glycerin-forming, and ammonia-forming.

**Fermentability.** (*L. fermentum*.) Capability of undergoing fermentation.

**Fermentable.** (*L. fermentum*.) Capable of undergoing fermentation.

**F. gum.** See *Gum, fermentable*.

**Fermental.** (*L. fermentum*.) Having power to produce fermentation.

**Fermentation.** (*L. fermentum*, *leaven*. *F. fermentatione*; *I. fermentazione*; *S. fermentation*; *G. Gährung*.) The apparently spontaneous decomposition of a body, with evolution of gas, and heating of its substance, causing it, if a liquid, to bubble up, and, if a solid, to become spongy and swollen. This, the original signification of the word, has given place to a more definite meaning, which may be expressed as the decomposition or conversion of an organic compound, the fermentable body, under the influence of an unorganised or organised substance, the ferment, into a new compound or compounds, the fermented product; the change consisting in a rearrangement of the elements of the fermentable body, with, it may be, the assimilation of the elements of water, and without any change in the composition of the ferment. This includes the decompositions called putrefactions, and those effected by such agents as emulsin and diastase, also called zymases, as well as the fermentations dependent on the growth of some fungus, such as the *Saccharomyces cerevisiae*.

But the term is also used in a more restricted sense; for there are those who confine the word fermentation to the decompositions thus produced in which no offensive odour is evolved, leaving the word putrefaction to denote those accompanied by an unpleasant smell; and there are those, again, who still further restrict the term to such of these decompositions as are accompanied by an organised growth. See *Ferments, organised*, and *Ferments, unorganised*.

Up to the present time there have been two opposed theories of the cause of the changes produced in fermentation; the one attributing them under all circumstances to the influence of chemical and physical changes, and the other to the influence of organised growths, chiefly vegetable. It may perhaps be said that the latter view is at present the one most widely held, but as yet nothing is known of the exact mode of action either of the organised, or of the unorganised, ferments.

**F., acetic.** (*L. acetum*, vinegar.) A form of fermentation occurring in diluted alcohol under the influence of a Cryptogam named *Mycoderma aceti*, or *Ulvinia aceti*, Kützing. In this fermentation alcohol  $C_2H_5O$  absorbs  $O_2$ , and yields acetic acid and water,  $C_2H_3O_2 + H_2O$ .

Alcohol is also capable of conversion into acetic acid by simple exposure to the air, especially under the influence of platinum black and other finely divided substances which facilitate the action of the oxygen.

**F., acetous.** See *F., acetic*.

**F., acid.** Same as *F., acetic*.

**F., alcoholic.** (*Alcohol*.) The fermentation induced in a saccharine fluid by the growth and development of one or other of the species of a fungus named *Saccharomyces*, constituting yeast; de Bary and others have observed that the alcoholic fermentation is also set up by *Mucor mucedo*, and *M. racemosus*. By the action of this fungus most of the grape-sugar is split up into alcohol and carbonic acid gas; and 4 or 5 per cent. of it into glycerin and succinic acid. The equation for the former is glucose,  $C_6H_{12}O_6$  = alcohol,  $2C_2H_5O$  + carbonic acid gas,  $2CO_2$ ; for the latter, glucose,  $49C_6H_{12}O_6$  + water,  $30H_2O$  = succinic acid,  $12C_4H_6O_4$  +  $72C_3H_8O_3$  + carbonic acid,  $30CO_2$ . The access of air or oxygen is necessary for the occurrence of this decomposition. When the saccharine fluid contains cane-sugar, this first becomes converted into glucose or grape-sugar by the taking up of water, as: cane-sugar,  $C_{12}H_{22}O_{11}$  + water,  $H_2O$  = glucose,  $2(C_6H_{12}O_6)$ .

**F., ammoniacal.** The conversion of urea into ammonium carbonate in the presence of water, under the influence of an organised ferment, at a suitable temperature. The special ferment has been named *Torula ammoniacale* by v. Tieghem, *Micrococcus ureæ* by Cohn, and *Bacillus ureæ* by Miguel. The decomposition is urea,  $CH_3N_2O$  + water,  $2H_2O$  = ammonium carbonate,  $CO(NH_4)_2$ . The most favourable temperature to this fermentation is  $37^\circ C.$  ( $98.6^\circ F.$ ) The micrococcus is killed at  $54^\circ C.$  ( $129.2^\circ F.$ )

**F., amygdalous.** (*L. amygdala*, an almond.) The conversion of amygdalin into oil of bitter almonds, hydrocyanic acid, and glucose, under the influence of emulsin or synaptase; thus: amygdalin,  $C_{20}H_{27}NO_{11}$  + water,  $2H_2O$  = bitter almond oil,  $C_7H_6O$  + hydrocyanic acid,  $CNH$  + glucose,  $2C_6H_{12}O_6$ .

**F., amyllic.** (*L. amylo*, starch.) Same as *F., saccharine*.

**F., benzoic.** The same as *F., amygdalous*.

**F., butyric.** (*L. butyrum*, butter.) This fermentation occurs in all forms of putrid decomposition. Sugars, starches, and albuminoids are capable of undergoing butyric fermentation, either directly or after antecedent lactic fermentation. The following equation shows the decomposition of glucose into lactic, and then into butyric acid: glucose,  $C_6H_{12}O_6$  = lactic acid,  $2C_3H_5O_3$  = butyric acid,  $C_4H_7O_2$  + carbonic acid gas,  $2CO_2$  + hydrogen,  $2H_2$ . In the fermentation of the more complex albuminoids acetic, propionic, valeric, and succinic acids are amongst other secondary products developed.

The ferment which induces butyric fermentation, and which Cohn has named *Bacillus subtilis*, is the same as the *Vibrio subtilis* of Ehrenberg. The bacilli are cylindrical, rounded at their extremities. Their length is from 2–20 mm. They move actively and reproduce by fissiparity. They can resist a temperature of  $105^\circ C.$  At one time it was thought that *Penicillium glaucum* was the active agent of this fermentation.

**F., butyrous.** Same as *F., butyric*.

**F., caseous.** A term which has been applied to the change of the casein in cheese, which results in the production of ammonia and fatty matters.

**F., cellulosic.** (*Cellulose*.) Durin's term for the conversion of cane-sugar or saccharose into

## FERMENTATION.

cellulose and glucose by means of a substance closely allied to diastase, as well as by the influence of certain oily seeds. He believes that the formation of cellulose in living plants is thus accomplished, and is represented by the formula  $\text{saccharose, } C_{12}H_{22}O_{11} = \text{cellulose, } C_6H_{10}O_5 + \text{glucose, } C_6H_{12}O_6$ .

**F., dextrinic.** The same as *F., glucosic*.

**F., false.** A term applied by some to those fermentations which are caused by an unorganised ferment, such as pepsin, in contradistinction to the true fermentations caused by an organised ferment, such as *Saccharomyces*.

**F., fever.** See *Fever, fermentation*.

**F., fungus.** (*G. Gährungspilz*.) The vegetable growth, *Saccharomyces*, *Mycoderma*, *Bacillus*, or other, which accompanies or causes fermentation.

**F., gallic.** (*L. galla*, a gall.) The transformation of a tannin into gallic acid and glucose, with fixation of water. It is effected, according to some, by the pectase of the gall nuts; according to Van Tieghem, by the fungi named *Penicillium glaucum* and *Aspergillus niger*. The decomposition is, according to Stas, tannin,  $C_{27}H_{22}O_{17} + \text{water, } 4H_2O = \text{gallic acid, } 3C_7H_5O_3 + \text{glucose, } C_6H_{12}O_6$ . Ordinary tannin does not give sugar.

**F., glairy.** The same as *F., mannitic*, of sugars.

**F., glucosic.** (*Γλυκός*, sweet.) Same as *F., saccharine*.

**F., gummic.** Pasteur's term for a form of the *F., mannitic*, of sugars, in which the product is gum. The ferment consists of irregular cells of the size of those of *Saccharomyces cerevisiæ*.

**F., gummo-mannitic.** Pasteur's term for a form of the *F., mannitic*, of sugars, in which both gum and mannite are formed. The ferment consists of chains of small granules.

**F., lactic.** (*L. lac*, milk.) A process of fermentation in which sugar, in company with almost any azotised body, as in milk, infusion of hay, infusion of malt, is decomposed with formation of lactic acid. Bouteux considers the lactic ferment and the *Mycoderma ueti* as identical; Pasteur has named it the *Fibrion lacti*, and Davaine the *Bacterium catenula* or *B. termo*. Lactic acid and glucose having the same percentage composition, the action of the ferment consists in producing in the molecule of glucose a simple isomeric change: glucose,  $C_6H_{12}O_6 = \text{lactic acid, } 2C_3H_5O_3$ . A little butyric acid is usually formed in addition, with disengagement of hydrogen and carbonic acid gases. Up to 44° C. (111.2° F.) the activity of the fermentation increases; from 44°–52° C. (111.2° F.—125.6° F.) it remains stationary; beyond 52° C. (125.6° F.) it diminishes; at 130° C. (266° F.) the ferment is killed.

**F., lactous.** See *F., lactic*.

**F., mannitic, of sugars.** A fermentation which takes place in certain white wines and in the juice of the beetroot and other plants, rendering the liquid viscous, and consisting in the conversion of cane-sugar into mancus, a gum, and mannite, by means of some proteinous ferment consisting of very minute spherules. The equation, according to Schützenberger, is cane-sugar,  $25(C_{12}H_{22}O_{11}) + \text{water, } 25H_2O = \text{gum, } 12C_{12}H_{20}O_{10} + \text{mannite, } 24C_6H_{14}O_6 + 12CO_2 + 12H_2O$ . Pasteur believes that the mannitic fermenta-

tion of sugars may be divided into the *F., gummo-mannitic* and the *F., gummic*.

**F., mucic.** (*L. mucus*, slime.) A fermentation effected in fluids containing mucic acid by a vibrio not hitherto named; mucic acid,  $C_6H_{10}O_8 = 2C_2H_4O_2 + 2CO_2 + H_2$ .

Also, the same as *F., mannitic*, of sugars.

**F., mucous.** (*L. mucus*, mucus.) The same as *F., mannitic*, of sugars.

**F., nitric.** (*F. fermentation nitrique*.) This term is applied to the formation of nitric acid in nitrogenous food, by the agency of minute brilliant bodies resembling the germs of bacteria, which multiply by gemmation. They are rendered inert by desiccation and a temperature of 90°. The most favourable temperature is 37° C. Their development is favoured by slight alkalinity of the fluid, such as may be produced by alkaline carbonates.

**F., of albuminoids.** (*L. albumen*, white of egg.) Many products result from the fermentation of albuminoid bodies which cannot be followed accurately, owing to the imperfect knowledge of the composition of the fermentescible body at present possessed, and to the multiplicity of ferments inducing a multiplicity of reactions.

**F., of cellulose.** This fermentation is believed to occur when sections of potatoes are allowed to remain for some days in water at an appropriate temperature. The cellulose breaks down and the starch granules are set free. This appears to be due to the action of a ferment named the *Amylobacter* or *Bacillus amylobacter*, which is capable of resisting a temperature of 100° C. (212° F.). Pragmowski and v. Tieghem believe this to be identical with the butyric vibrio of Pasteur.

**F., of fruits.** All fruits and tubers, as well as seeds, undergo fermentation under the influence of a fungus, of which many have been observed, chiefly forms of *Saccharomyces* and *Mycoderma*. The chief products are alcohol, acetic acid, and carbon dioxide.

**F., of glycerin.** Glycerin is split up by the agency of a hitherto unnamed schizomycetous fungus into carbonic acid and hydrogen gases, butyric and caproic acids, ethylic and butylic alcohol, which after a few days by oxidation yields butyric acid.

**F., of mannite.** Mannite is capable of fermentation, and yields butylic and ethylic alcohols, a small quantity of the superior alcohols, volatile acids, succinic acid, and a syrupy acid.

**F., of urine.** See *F., ammoniacal*.

**F.s., pathological.** The fermentations which occur in the living body, and which produce an unnatural condition or disease. They are all effected by organised ferments.

**F., pectic.** (*Πηκτός*, congealed.) The conversion of the insoluble pectose of unripe fruits and other parts of plants into soluble pectin, parapectin, and pectic acid, by means of the ferment pectase.

**F., pectous.** Same as *F., pectic*.

**F.s., physiological.** The fermentations which occur in the living body during the performance of the natural physiological process. They are all effected by unorganised ferments.

**F., putrefactive.** (*L. putridus*, putrid; *facio*, to make.) A decomposition taking place in albuminous and albuminoid substances under the influence of various microbia, such as bac-

## FERMENTATIVE—FERMENTUM.

teria, monads, vibrios, with access of air. The products of decomposition are partly gaseous, and include nitrogen, carburetted hydrogen, hydrogen sulphide and hydrogen phosphide, ammonia, and ammonium carbonate, whilst in the mass are found volatile fatty acids, such as formic, acetic, formic propionic, butyric, valeric, and caproic; lactic acid, ammonia, and compound ammonias, as ethylamine, propylamine, amylamine, and trimethylamine. At certain stages of decomposition alkaloids, named ptomaines, are formed, and under certain conditions adipocere appears. Putrefactive fermentation can be arrested by sugar, alcohol, salt, phenic and cresylic acids, tar, asphalt, the alkaline sulphites and hyposulphites, the salts of alum, zinc, and mercury, and the persalts of iron, arsenious acid, sulphurous acid, silicate and borate of soda, tannin, chloral, and many other substances.

**F., saccharine.** (L. *saccharum*, sugar.) The conversion of starch into dextrin and the sugar into dextrose by means of the ferment diastase, thus: starch,  $3C_6H_{10}O_5 + \text{water}, H_2O = \text{dextrin}, 2C_6H_{10}O_5 + \text{dextrose}, C_6H_{12}O_6$ .

**F., saccharous.** Same as *F., saccharine*.

**F., sina'pic.** (L. *sinapis*, mustard.) The conversion of the myronic acid of black mustard seed, existing there as potassium myronate, into volatile oil of mustard, glucose and sulphuric acid, by means of myrosin, thus: potassium myronate,  $C_{10}H_{15}KNS_2O_{10} = \text{volatile oil of mustard or allyl sulphocyanate}, C_3H_5.CNS + \text{glucose}, C_6H_{12}O_6 + \text{potassium sulphate}, SO_4HK$ .

**F., sina'peus.** Same as *F., sinapic*.

**F., succinic.** (L. *succinum*, amber.) A fermentation which takes place in asparagus, and in malic, maleic, fumaric, acetic, and aspartic acids, under the influence of *Bacterium commune*. Thus, malic acid yields succinic, acetic, and carbonic acids and water, thus: malic acid,  $3C_4H_6O_5 = \text{succinic acid}, 2C_4H_6O_4 + \text{acetic acid}, C_2H_4O_2 + \text{carbonic acid}, 2CO_2 + \text{water}, H_2O$ .

**F., tan'nic.** Same as *F., gallic*.

**F., tan'nous.** Same as *F., tannic*.

**F., test for sugar in urine.** A test for the presence of sugar in urine. The urine, mixed with a little brewer's yeast or some German yeast, is put into a test tube nearly filled with urine, and a similar quantity of the yeast into a similar test tube nearly filled with water; the tubes are both then filled, the thumb or an india-rubber pad placed on the top of them, and inverted into a small cup of mercury; both tubes are exposed for a few hours to a temperature of  $27^\circ C.$  ( $80.6^\circ F.$ ) to  $32^\circ C.$  ( $89.6^\circ F.$ ), when, if any sugar be present in the urine, carbonic acid gas will be formed and the bubble of gas in the urine tube will be sensibly larger than that in the water tube. If the tubes be graduated the test may be used as a quantitative one, a cubic inch of carbonic acid representing about one grain of sugar.

W. Robert's plan is to put four ounces of urine into a twelve-ounce bottle with a piece of German yeast, the size of the point of the forefinger, cut into small pieces; the bottle is to be corked with a grooved cork to allow of the escape of gas. A similar bottle is filled full of urine and tightly corked. The two bottles are set aside in a warm place for twenty-four hours, and the specific gravity of the two urines carefully taken; the sugar-holding urine will have lost weight, each degree of loss representing a grain of sugar to the ounce of urine.

**F., true.** A term applied to those fermentations which are determined by the presence of organised growths, such as the *Saccharomyces cerevisia*.

**F., u'rinous.** (L. *urina*, the urine.) The conversion of urea into ammonium carbonate by means of the proteinous substances contained in the urine, or by means of the ferment yeast. See *F., ammoniacal*.

**F., vinous.** (L. *vinum*, wine.) Same as *F., alcoholic*.

**F., viscos.** (L. *viscus*, the mistletoe, birdlime.) The same as *F., mannitic*, of sugars.

**Fermentative.** (L. *fermentum*.) Having power to produce fermentation; produced by fermentation.

**Fermented.** (L. *fermentum*. *F. fermenté*; *G. gegahrt*.) Having undergone fermentation.

**F., drinks.** A term for beer, wines, and similar fluids produced by fermentation; their essential constituent is more or less alcohol.

**Fermentesc.** (L. *fermentesco*, to ferment.) Having power to produce fermentation.

**Fermentescible.** (L. *fermentesco*, to ferment. *G. gährungsfähig*.) Capable of undergoing fermentation.

**F. bodies.** (*F. corps fermentescibles*.) Those that are directly fermentescible are such as glucose, levulose, maltose, and lactose. Those that are indirectly fermentescible are such as saccharose, melitose, trehalose, melezitose, lactine, starch, dextrin, gums, and glycogen.

**Fermentogen.** (*Ferment*; *Gr. γεννάω*, to produce.) A term applied by some writers to the substance originally secreted by a gland, from which its special ferment is subsequently separated.

**Fermentoleum.** (L. *fermentum*, leaven; *oleum*, oil. *G. Fermentöl*.) Term applied to the volatile oils which make their appearance during the fermentation of vegetable substances, but are not originally present in them. Examples of such oils are found after the fermentation of the stems and leaves of *Erythraea centaurium*, and *Charophyllum sylvestre*; of the roots of *Chelidonium majus*; the leaves of *Tussilago farfara*, *Marrubium album*, *Quercus robur*, and *Vitis vitifera*; the whole plant of *Achillea multifolium* and *Salvia pratensis*; and the different parts of many other plants.

**F. solani.** (L. *solanum*, the potato.) A term for *Fusel* oil.

**Fermentum.** (L. *fermentum*. *F. levure*, *levure de bière*; *I. fermento di cervogia*; *S. espuma de cerveza*; *G. Bierhefen*, *Oberhefe*.) A term for yeast.

Also, the same as *Ferment*.

**F. butyricum.** A term by Pasteur for the organised structure causing butyric fermentation.

**F. cerevisia.** (L. *cerevisia*, beer.) The ferment of malt liquor; yeast.

**F. morbi.** (L. *morbus*, a sickness.) The germs or active agents in the propagation of disease.

**F. pres'sum.** (L. *presso*, to press. *G. Press*, *Pfundhefe*.) Malt 1 part, rye flour 10 parts; add of water, at a temperature of  $60^\circ$ – $63^\circ C.$ , 75 parts, set aside for three or four hours; then add to the mixture, cooled down to  $25^\circ C.$ , the scum of yeast, and as the foam rises

receive it on a hair sieve, and mix with a large quantity of water, and set aside for twelve hours. To the ferment thus obtained add a tenth part of its weight of calcarea phosphoric.

**F. ventriculi.** (*L. ventriculus*, the belly. *G. Magenshaft*.) The gastric juice, or its active principle pepsin.

**Fern.** (Mid. E. *ferne*; Sax. *fearn*; *G. Farrenkraut*; Sans. *parna*, a feather. *F. fougère*; L. *felse*; S. *helecho*.) The name of the plants of the Nat. Order *Filices*.

**F., bladder.** The Genus *Cystopteris*, from the shape of the spore cases.

**F., bladder, brittle.** The *Cystopteris fragilis*.

**F., bladder, tooth'ed.** The *Cystopteris dentata*.

**F. bush.** The *Comptonia asplenifolia*.

**F., cin'namon.** The *Osmunda cinnamomea*.

**F., cup, brit'tle.** The *Cystopteris fragilis*.

**F., ea'gle.** The *Pteris aquilina*.

**F., fe'male.** The *Asplenium filix femina*. Also, formerly the *Pteris aquilina*.

**F., finger.** The *Ceterach officinalis*.

**F., flow'ring.** The *Osmunda regalis*.

**F. gale.** The *Comptonia asplenifolia*.

**F., hard.** The *Blechnum boreale*.

**F., hard, north'ern.** The *Blechnum boreale*.

**F., la'dy.** The *Asplenium filix femina*.

**F., maid'en hair.** The *Adiantum capillus veneris*.

**F., male.** The *Aspidium filix mas*, and in the U.S. Ph., the *Aspidium marginale* also.

**F., mead'ow.** The *Comptonia asplenifolia*.

**F., mule's.** The *Asplenium hemionitis*.

**F., oak.** The *Polypodium dryopteris*.

The *Asplenium adiantum nigrum* has been called by this name, and the *Polypodium vulgare* by the old herbalists when it grew at the roots of the oak.

**F., oak, small.** The *Polypodium dryopteris*.

**F., oak, white.** The *Cystopteris dentata*.

**F., oil of.** The *Oleum filicis maris*.

**F., rock.** The *Adiantum pedatum*.

**F. seed.** The spores of a fern, formerly supposed to possess the property of rendering a person invisible.

**F., shield, blunt.** The *Nephrodium filix mas*.

**F., sweet.** The *Adiantum pedatum*.

Also, applied to the *Comptonia asplenifolia*.

**F., sweet, shrubby.** The *Comptonia asplenifolia*.

**Fernambu'co wood.** The wood of the *Casalpinia echinata*.

**Fernfreckled.** Affected with *Ephelides*.

**Fern'root.** The root of the *Polypodium vulgare*.

**Fern'tickles.** Same as *Ephelides*, and so called from their likeness to the fructification of a fern.

**Feroher.** (*F. férœr*.) Term applied in the philosophy of Zoroaster to divine form, which constitutes the type or perfect representation of each created being.

**Féron.** France, Département du Nord, near Trélon. A weak earthy spring, containing a little iron.

**Feron'ia.** (*Feronia*, an old Italian deity,

the patroness of plants.) A Genus of the Nat. Order *Aurantiacæ*.

**F. asinifolius.** Rumph. (*L. asinus*, an ass; *folium*, a leaf) The *F. elephantum*.

**F. elephantum.** (*L. elephas*, the elephant.) Hab. India. Elephant apple. A tree yielding a gum resembling gum arabic, which is used in dysentery and diarrhoea. The leaves are aromatic, and are used in India as a carminative. The fruit is esculent.

**F. pellucida.** (*L. pellucidus*, transparent.) Hab. East Indies. The bark is used as a tonic. The *Egle marmelos*.

**Ferr'alum.** A compound used as a deodoriser and disinfectant, consisting of ferrous and aluminic sulphates, turpentine, and carbolic acid.

**Ferramentum.** (*L. ferramentum*, a thing made of iron.) A surgical instrument made of iron or steel, especially one used in delivery.

**Ferranche.** See *La Ferranche*.

**Ferra'ria.** (*L. ferraria*, the plant ver-vain.) A synonym of *Scrophularia aquatica*.

Also (*Ferrari*, an Italian botanist), a Genus of the Nat. Order *Iridacæ*.

**F. cathartica.** Mart. (*Kαθαρτικός*, fit for cleansing.) A Brazilian Irid, stated by Martius to be purgative.

**F. pur'gans.** Mart. (*L. part. of purgo*, to purge.) A Brazilian Irid having purgative qualities.

**Ferrate.** A salt of *Ferric acid*. The acetates are very unstable.

**Ferrated.** (*L. ferrum*, iron. *F. ferré*; *G. eisenhaltig*.) Chalybeate; charged with or containing iron.

**F. elixir of Calisay'a.** This contains citrate of iron and ammonium 256 grains, Calisaya elixir 16 fl. oz.; 1 fluid drachm contains 2 grains of the ammonio-citrate of iron.

**Ferrein.** A French physician, born at Frespech in 1693, died in Paris in 1769.

**F., canal of.** A triangular channel formed by the bevelled posterior margins of the free border of the eyelids when they are in apposition with each other and the surface of the globe. Its constant existence is doubtful, but it has been thought to conduct the tears to the nose.

**F., pyramids of.** Term formerly applied to the fasciculus of renal tubules which was supposed to result from the branching of a straight tube as it passes from the papilla towards the cortex of the kidney. Many pyramids of Ferrein are included in one pyramid of Malpighi.

**F., tubes of.** The cortical portion of the uriniferous tubes.

**Ferreira.** A Genus of the Nat. Order *Leguminosæ*.

**F. spectabilis.** Allem. (*L. spectabilis*, remarkable.) A species which furnishes a resinous substance found in large masses, weighing from 20—30 lbs., between the wood and the bark. It contains angelin, angelic acid, resin, and colouring matter.

**Ferreira.** Spain, Province of Murcia. An earthy chalybeate spring. Used in anæmia, dyspepsia, menstrual irregularities, and urinary affections.

**Ferreola.** A Genus of the Nat. Order *Ebenacæ*.

**F. buxifo'lia.** Roxb. The *Maba buxifolia*.

**Ferret.** (Old *F. furet*; from Low L.

*fieratus*; from *L. fur*, a thief; or from Bret. *fur*, wise.) A domesticated variety of the polecat, *Putorius f. fatus*. The blood added to wine was used against scorpion stings; the lungs were used in pulmonary diseases; and the liver in epilepsy.

**Ferri.** Genitive singular of *Ferrum*.

**F. acet.** *See Acetate of iron peroxide.*

**F. ærugo.** (*L. ærugo*, verdigris.) The *F. subcarbonas*.

**F. albuminas.** (*L. albumen*, the white of egg.) A preparation made, according to Diclil, by diluting 4 oz. troy of white of egg with 8 fl. oz. of water, to this 50 minims of official solution of iron chloride diluted with 4 fl. oz. of water are added, and the solution filtered. The filtrate is now mixed with 10 fl. oz. of a saturated solution of sodium chloride, washed with 1 vol. of saturated solution of sodium chloride, and 3 vols. of water, until the washings give but a faint reaction for iron. The washed cinnamon-brown albuminate is pressed, dried, and powdered. It contains 5 per cent. of ferric oxide, or 10 per cent. of ferric chloride.

**F. ammonio-chloridum.** The *Ferrum ammoniatum*.

**F. ammonio-citras.** The same as *F. et ammonie citras*.

**F. ammonio-sulphas.** The same as *F. et ammonis sulphas*.

**F. ammonio-tartras.** The same as *F. et ammonis tartras*.

**F. arsenias.** B. Ph. (*F. arseniate de fer*; *G. arsensaures Eisen*.)  $2\text{Fe}_2\text{AsO}_8 \cdot 4\text{FeAsO}_4 \cdot \text{Fe}_2\text{O}_3 \cdot 32\text{H}_2\text{O}$ . Ferrous arseniate, ferroso-ferric arseniate. A greenish amorphous powder, insoluble in water, obtained by dissolving 4 oz. of arseniate of soda dried at  $300^\circ$ , and 3 oz. of acetate of soda, in 2 pints of water, and mixing it with 9 oz. of iron sulphate dissolved in 3 pints of water. The precipitate, which is at first white, is washed and becomes green. Employed in chronic cutaneous affections. Dose, from one tenth to one eighth of a grain.

**F. benzoas.**  $\text{Fe}_2(\text{C}_6\text{H}_5\text{O}_2)_2 \cdot 6\text{H}_2\text{O}$ . Benzoate of iron. An orange-coloured powder obtained by adding a concentrated solution of sodium or ammonium benzoate to a solution of tersulphate of iron, filtering, and washing, pressing and drying the precipitate.

**F. borussias.** (*L. Borussia*, Prussia.) Prussian blue, ferric ferrocyanide.

**F. bromidum.**  $\text{FeBr}_2$ . Ferrous bromide. A brick-red deliquescent salt, very soluble and extremely styptic, obtained by passing bromine vapour over iron heated to dull redness, or by dissolving iron in hydrobromic acid and crystallising. A tonic and alterative. Used in scrofulous tumours, inflammation of glands, erysipelas, and amenorrhœa. Dose of Parrish's solution, in which it is protected by sugar, 20 drops.

**F. carbonas.** (*F. carbonatæ de fer.*) *See F. subcarbonas*.

**F. carbonas cum saccharo.** (*L. cum*, with; *saccharum*, sugar.) The *F. carbonas saccharata*.

**F. carbonas saccharata.** B. Ph. (*L. saccharum*, sugar. *F. saccharure de carbonate ferreux*; *G. zuckerhaltiges kohlen-saures Eisen*.)  $\text{FeOCO}_2$  with  $\text{FeO}_2$  and sugar. A greenish-grey powder, obtained by dissolving 2 oz. of iron sulphate in half a gallon of boiling distilled water, and one and a quarter oz. of carbonate of ammonia in another half gallon; mix, set aside that the

precipitate may subside, and wash it; rub it down with 1 oz. of refined sugar, and dry at a temp. below  $212^\circ$  F. Dose, 5–30 grains (·33–1·95 gramme).

**F. carbonas saccharatus.** U.S. Ph. Sulphate of iron 10 parts is dissolved in hot distilled water 40 parts, filtered, mixed with a filtered solution of sodium bicarbonate 7 parts in warm distilled water 100 parts, and allowed to cool; the precipitate is washed in frequent waters, drained, mixed intimately with sugar 10 parts, evaporated to dryness, and powdered.

**F. carbonatum.** A synonym of *Graphite*.

**F. carburetum.** A synonym of *Graphite*.

**F. chloreum.** The *Ferrum chloratum*.

**F. chloridum.** U.S. Ph. (*F. perchlorure de fer chlorure ferrique*; *G. Eisenchlorid*.)  $\text{Fe}_2\text{Cl}_6 \cdot 12\text{H}_2\text{O}$ . Ferric chloride. An orange-yellow crystalline substance obtained by acting on 15 parts of iron wire with 86 parts of hydrochloric acid, diluted with 25 parts of water, boil and filter, add 27 parts of hydrochloric acid, and pour gradually into 8 parts of nitric acid; heat, test with ferrieyanide of potassium, if a blue colour appears, add more nitric acid. Then add 5 parts of hydrochloric acid and water to make the whole weigh 60 parts, set aside till it forms a white crystalline mass. Chloride of iron is inodorous, has a strong chalybeate and styptic taste, and an acid reaction. It is deliquescent, very soluble in water and in alcohol and ether. It is used as a direct application in hemorrhage after excision of tonsils; and internally in pseudomembranous croup, in doses of from 90 to 200 grains, in divided doses, in 24 hours.

**F. citras.** U.S. Ph. (*F. citrate ferrique*; *G. Eisencitrat*.)  $\text{Fe}_2(\text{C}_6\text{H}_5\text{O}_7)_2 \cdot 6\text{H}_2\text{O}$ . Ferric citrate. A substance obtained by dissolving freshly precipitated ferric hydroxide in citric acid, and evaporating the solution to the consistency of a syrup. The official salt is obtained by evaporating the *Liquor ferri citratis*. It forms transparent garnet-red scales, permanent in the air; odourless, with faint ferruginous taste, and an acid reaction. Dose, 5 grains (·33 gramme) several times daily.

**F. cyanuretum.** Prussian blue, ferric ferrocyanide.

**F. deutocarbonas fuscus.** (*L. fuscus*, dusky.) The *F. subcarbonas*.

**F. deutoxidum nigrum.** (*L. niger*, black.) The black oxide of iron.

**F. et aluminæ sulphas.** Made by treating bicarbonated solution of soft iron and carbonated solution of pure washed alumina with sulphuric acid. It has been recommended as a valuable astringent. Dose, 5–10 grains. (Dun-glison.)

**F. et ammoniac citras.** B. Ph. (*F. citrate ferrique ammoniacal*; *G. citronensaures Eisencydr-ammonium*.)  $\text{Fe}_2(\text{NH}_4)_2(\text{C}_6\text{H}_5\text{O}_7)_2 \cdot 3\text{H}_2\text{O}$ . Solution of persulphate of iron 8 fl. oz.; solution of ammonia 19·5 fl. oz., citric acid 4 oz. avoid., distilled water a sufficiency. By the addition of the ammonia to the solution of iron persulphate ferric hydrate is precipitated, which is digested at  $38^\circ$  C. ( $100^\circ$  F.) with a solution of citric acid, and finally neutralised with ammonia. Dose, 5 grains (·33 gramme).

**F. et ammoniæ urias.** The *Ferrum ammoniatum*.

**F. et ammonii cit'ras**, U.S. Ph. Solution of citrate of iron 3 parts, water of ammonia 1 part; mix and evaporate at a temperature not exceeding 60° C. (140° F.). This salt forms garnet-red scales, which are deliquescent, have a slightly ferruginous taste, and are soluble in water, insoluble in alcohol; when incinerated in air it leaves not less than 27 per cent. of iron peroxide. It may be mixed with the carbonated alkalies without decomposition.

**F. et ammonii sulphas** U.S. Ph. (F. *sulfate de fer et d'ammoniaque*, *abon de fer ammoniacal*; G. *schwefelsaures Eisenoxyd-ammonium*, *ammoniakalischer Eisenaun.*)  $\text{Fe}_2(\text{N H}_4)_2(\text{SO}_4)_4 \cdot 24\text{H}_2\text{O}$ . Ammonio-ferric alum. This salt is an ammonia iron alum, in which the place of the aluminium oxide is occupied by ferric oxide. It is made by heating to the boiling point two pints of solution of sulphate of iron, adding 4.5 oz. of sulphate of ammonium and crystallising. It forms octohedral violet-coloured acid efflorescent crystals. It is used in passive leucorrhœa. Dose, 5–10 grains (.33–.65 gramme) two or three times a day.

**F. et ammonii tar'tras**, U.S. Ph. (F. *tartrate de fer et d'ammoniaque*, *tartrate ferrique ammoniacal*; G. *weinsäures Eisenoxyd-Ammonium*.) Chem. comp. probably  $2(\text{FeO})\text{NH}_4\text{C}_4\text{H}_4\text{O}_6 \cdot 3\text{H}_2\text{O}$ . Ammonio-tartrate of iron. In the preparation of this salt tartrate of ammonium is converted into bitartrate by the addition of tartaric acid, and the excess of acid is combined with hydrated oxide of iron freshly prepared. The solution is filtered and concentrated, when the double salt of tartrate of ammonium and iron is obtained in reddish or yellowish brown scales. It contains about 25 per cent. of iron oxide. It is a mild chalybeate. Dose, 10–30 grains (.65–1.95 gramme).

**F. et chininum citricum**. The F. et quiniæ citras.

**F. et magnesiæ citras**. Freshly precipitated ferric hydrate 2 oz. is dissolved in citric acid 3 oz., and the solution saturated with magnesium carbonate, filtered, evaporated on a water bath to a syrup, and spread on glass to dry in scales. Dose, 5–10 grains.

**F. et potassæ tar'tras**. The same as F. et potassii tar'tras.

**F. et potassii tar'tras**, U.S. Ph. (F. *tartrate de fer et de potasse*, *tartrate ferrico-potassique*, *tartare chalybè*, *tartre martial*; G. *weinsäures Eisenoxyd-Kali*, *Eisenweinstein*.) Tartrate of iron and potassium. Ten parts of water of ammonia, diluted with 20 parts of cold water, are mixed with 12 parts of solution of tersulphate of iron diluted with 900 parts of cold water; strain and mix the precipitate with 120 parts of cold water, and repeat till washings give no precipitate with barium chloride; add to the precipitate 32 parts of distilled water, heat to a temperature not exceeding 60° C. (140° F.), and add the potassium bitartrate, and stir till the hydrated oxide of iron is dissolved. Filter, cool, and add just enough ammonia water to dissolve the precipitate. Then evaporate to a syrup and spread out on plates of glass. It forms red scales. It contains 30 per cent. of iron oxide. Dose, 10–30 grains (.65–1.95 gramme). The *Ferrum tartaratum*, B. Ph.

**F. et quiniæ cit'ras**, B. Ph. Solution of ammonia 8 fl. oz. is mixed with 2 pints of distilled water, and solution of persulphate of iron 4.5 fl. oz. mixed with 2 pints of

distilled water is added. After standing 2 hours it is filtered, and the precipitate of oxide of iron well washed. An ounce of sulphate of quinine is dissolved in dilute sulphuric acid 12 drachms and distilled water 8 fl. oz., treated with an excess of solution of ammonia, and the precipitate of quinia collected and washed. Citric acid 3 oz. is dissolved in distilled water 5 oz., the oxide of iron dissolved in it with gentle heat, and then the quinia; solution of ammonia 12 fl. drachms, mixed with distilled water 2 oz., is added by degrees, allowing the precipitate to redissolve, filtered, evaporated to a thin syrup, and dried on plates. Dose 5–6 grains (.33–.4 gramme).

**F. et quiniæ cit'ras**, U.S. Ph. (F. *citrate de fer et de quinine*; G. *citronensaures Eisen-Chinin*.) Citrate of iron and quinine. Dissolve 88 parts of citrate of iron in 160 parts of distilled water at a temperature not exceeding 60° C. (140° F.). To this solution add 12 parts of quinine dried at 100° C. (212° F.), and stir till it is dissolved. Evaporate and spread on glass that it may dry in scales. These are brownish, slowly deliquescent, nearly insoluble in alcohol. They contain 12 per cent. of quinine. Dose, 5–6 grains (.33–.4 gramme).

**F. et sodæ pyrophosphas**. The *Natrium pyrophosphoricum ferratum*.

**F. et strychniæ citras**. See F. et strychnina citras.

**F. et strychninæ citras**, U.S. Ph. (F. *citrate de fer et de strychnine*; G. *citronensaures Eisenstrychnin*.) Citrate of iron and strychnine. Ninety-eight parts of citrate of iron and ammonium are dissolved in 100 parts of distilled water, and 1 part of strychnia and 1 part of citric acid in 20 parts of distilled water. The solutions are mixed and evaporated to a syrup at a temperature not exceeding 60° C. (140° F.), and spread on glass that scales may be formed. Scales red; they contain 1 per cent. of strychnia. Dose, 3–5 grains (.20–.33 gramme) in solution or pill.

**F. ferrocy'anas**. Prussian blue, ferric ferrocyanide.

**F. ferrocyanidum**. See *Prussian blue*.

**F. ferrocyanure'tum**. The same as F. ferrocyanidum.

**F. filum**. (L. *filum*, a thread.) Iron wire.

**F. hydri'odas**. Same as F. iodidum.

**F. hydrocy'anas**. Same as *Prussian blue*.

**F. hypercarbure'tum**. A synonym of *Graphite*.

**F. hypophosphis**, U.S. Ph. (F. *hypophosphite de fer*; G. *interphosphorisaures Eisenoxyd*.)  $\text{Fe}_2(\text{H}_2\text{PO}_2)_2$ . A white or greyish powder, permanent in the air, odourless, tasteless, only slightly soluble in water, when strongly heated gives off phosphuretted hydrogen, which is spontaneously inflammable. It is made by adding, in solution, 480 grains of crystallised sulphate of iron to 326 grains of calcium hypophosphite. Used in defective nutrition of the nerve centres. Dose, 5–10 grains (.33–.66 gramme).

**F. iodi'dum**, B. Ph. (F. *iodure de fer*; I. *ferro iodato*; G. *Jodeisen*, *Eisenjodur*.)  $\text{FeI}_2$ . Iodide of iron, ferrous iodide. One and a half oz. of iron wire, and 3 oz. of iodine are placed in 15 fl. oz. of water, and gently heated for ten minutes and then boiled. The solution is filtered and

# FERRI.

evaporated till it solidifies on cooling. Iodide of iron is crystalline, deliquescent, greenish black, and has a styptic chalybeate taste. It is reputed to be tonic, alterative, diuretic, and emmenagogue. It is used in scrofulous affections, chlorosis, and obstinate syphilitic conditions. Dose, 1 grain (.065 gramme), increased gradually to 8 grains (.52 gramme) or more.

**F. iodidum saccharatum**, U.S. Ph. The same as *Ferrum iodatum saccharatum*, G. Ph. Dose, 2—5 grains (.13—33 gramme).

**F. iodurum**. The same as *F. iodidum*.

**F. jodurum**. Same as *Ferrum jodatum*.

**F. lactas**, U.S. Ph. (L. *lac*, milk. *F. lactate de fer*, *lactate de protoxyde de fer*, *lactate ferrique*; I. *lattato di ossido di ferro*, *ferru lattico*; G. *milchsaures Eisenoxydul*.)  $\text{Fe}(\text{C}_2\text{H}_3\text{O}_3)_2 \cdot 3\text{H}_2\text{O}$ . Lactate of iron; ferrous lactate. A pale greenish-white, crystalline, granular substance, permanent in air, and with slightly acid reaction, obtained by dissolving half an ounce of iron filings in an ounce of lactic acid and a pint of distilled water, and crystallising. Dose, 12 to 20 grains (.80—1.3 gramme) in the day.

**F. lamina**, Aust. Ph. (L. *lamina*, a plate. G. *Eisenplatte*.) A plate of pure iron.

**F. limatura**. (L. *limatura*, filings.) Same as *Ferrum pulveratum*.

**F. limatura purificata**. (L. *limatura*; *purificatus*, purified. *F. limailles de fer*; I. *limatura de ferro*; S. *limatura de Hierro*; G. *Eisenfeilicht*.) Iron filings purified by means of a magnet.

**F. malas**. A malate of iron formed by digesting iron filings in the juice of sour apples was formerly official in the French Codex. See also *Extractum ferri pomatum*.

**F. nitrates**. See *Ferric nitrate* and *Liquor ferri nitratis*.

**F. oxalas**, U.S. Ph. (F. *oxalate de fer*; G. *oxalsaures Eisenoxydul*.)  $\text{FeC}_2\text{O}_4 \cdot \text{H}_2\text{O}$ . Oxalate of iron. A lemon-yellow crystalline powder, permanent in the air, odourless, and nearly tasteless; made by treating a solution of sulphate of iron 2 oz. in water 30 fl. oz. with a solution of oxalic acid 436 grains in water 15 fl. oz., and allowing it to precipitate. On ignition it leaves a residue of 49.3 per cent. Dose, 2—3 grains (.13—20 gramme).

**F. oxidum fuscum**. (L. *fuscus*, dusky.) The *F. subcarbonas*.

**F. oxidum hydratum**, U.S. Ph. (F. *sousoxyde* or *peroxyde de fer hydraté humide*, *hydrate de peroxyde de fer gélatineux*; G. *feuchtes Eisenoxydhydrat*.)  $\text{Fe}_2(\text{HO})_6$ . Solution of tersulphate of iron 10 parts, water of ammonia 8 parts; mix with the addition of 100 parts of water, strain, and wash the precipitate with 120 parts of water; lastly, mix the precipitate with enough cold water to make the mixture weigh 20 parts. A brown-red magna, used as an antidote to arsenious acid. Same as *Ferric hydroxide*.

**F. oxidum hydratum cum magnesia**, U.S. Ph. Hydrated oxide of iron with magnesia. Solution of tersulphates of iron 1000 grains, magnesia 150 grains; mix the solution of iron with 2000 grains of water and keep in a well-stoppered bottle. Rub the magnesia with 32 fl. oz. of water, and keep in another bottle.

When wanted mix. The resulting mass is used as an antidote for arsenious acid.

**F. oxidum magneticum**, B. Ph. (F. *oxide de fer noir (magnétique)*; G. *Magneteisen*, *Eisenoxyd-Oxydul*.)  $\text{Fe}_3\text{O}_4 = \text{FeO} \cdot \text{Fe}_2\text{O}_3$ . Persulphate of iron 5.5 fl. oz., iron sulphate 2 oz., solution of soda 4 pints, distilled water. Dissolve the sulphate in 2 pints (imp. measure) of water, and add the solution of iron persulphate, mix with the solution of soda, boil, filter, wash the precipitate and dry it. Dose, 5—20 grains (.33—1.3 gramme) several times a day. Same as *Ferroso-ferric oxide*.

**F. oxidum nigrum**. (L. *niger*, black.) The *F. oxidum magneticum*.

**F. oxidum rubrum**. (L. *ruber*, red.) The same as *F. peroxidum hydratum*.

**F. oxidum saccharatum**. (L. *saccharum*, sugar.) A dark brown powder, made by dissolving iron in nitric acid, filtering, evaporating, adding sugar and an excess of sugar in water of ammonia, and precipitating with alcohol. (Dunghison.)

**F. oxydati citras**. The *F. citras*.

**F. oxydatum fuscum**. See *F. oxidum fuscum*.

**F. perchloridum**. The same as *F. chloridum*.

**F. percyanidum**. Same as *Ferric ferrocyanide*.

**F. peroxidum**. The *F. peroxidum hydratum*.

**F. peroxidum humidum**, B. Ph. (L. *humidus*, moist.) Solution of persulphate of iron 4 fl. oz. is mixed with distilled water a pint, and added to solution of soda 33 fl. oz.; after standing two hours it is filtered, the precipitate washed, and kept moist in a well-stoppered bottle. Used as an antidote to arsenious acid. It consists of ferric hydroxide with about 86 per cent. of uncombined water.

**F. peroxidum hydratum**, B. Ph. Moist peroxide of iron dried at a temperature not exceeding 100° C. (212° F.) and reduced to fine powder. It is used for making iron plaster and reduced iron.

**F. persesquinitras**. Same as *Ferric nitrate*.

**F. persulphas**. Same as *Ferric sulphate*.

**F. phosphas**. Same as *Ferric phosphate*.

**F. phosphas**, B. Ph. (F. *phosphate de fer*, *phosphate ferroso-ferrique*; G. *phosphorsaures Eisenoxydul*.) Iron phosphate. This is prepared by dissolving 3 oz. of iron sulphate in 2 pints of boiling distilled water, and 2.5 oz. of sodium phosphate and 1 oz. of sodium acetate in 2 pints of boiling water; mix, filter, and wash the precipitate, dry it at a temperature not exceeding 120°. A bright slate-coloured powder, insoluble in water, soluble in acids. It contains 44.75 per cent. of iron phosphate. Dose, 5—10 grains (.33—65 gramme). See *Ferric phosphate*.

U.S. Ph.—Prepared by taking 5 parts of iron citrate, sodium phosphate 6, distilled water 10; dissolve the citrate in the water and add the phosphate, evaporate, and spread on glass that scales may be obtained. The scales are then bright green and transparent, permanent in air, and odourless. They contain 13.5 parts of metallic iron. It probably consists of sodio-ferric pyrophosphate, sodio-ferric citrate, and free ferric citrate.

# FERRIC.

**F. potas'sio-tar'tras.** The same as *Ferrum tartaratum*, and as *F. et potassii-tar'tras*.

**F. protocarbo'nas.** Same as *Ferrous carbonate*.

**F. protosul'phas vir'idis.** (*L. viridis*, green.) Same as *F. sulphas*.

**F. pul'vis.** (*L. pulvis*, powder.) Same as *Ferrum reductum*.

**F. pyrophos'phas.** U.S. Ph. Pyrophosphate of iron, consisting probably of sodio-ferric pyrophosphate, sodio-ferric citrate, and free ferric citrate. In preparing this the U.S. Ph. directs that 9 parts of iron citrate should be dissolved in 18 parts of hot distilled water. To this solution 10 parts of sodium pyrophosphate are added. The solution is evaporated at a temperature not exceeding 60° C. (140° F.) to the consistence of syrup and spread on glass to form scales. The scales are apple green and transparent, odourless, slightly acid. They contain 11.5 parts per cent. of metallic iron. Dose, 2—5 grains (.13—33 gramme).

**F. ramenta.** (*L. ramenta*, shavings.) Iron filings.

**F. rub'igo.** (*L. rubigo*, rust.) Rust of iron. Formerly a preparation of the Dublin Pharmacopœia. Obtained by exposing moistened iron wire to the air. It consists of iron oxide, with some iron carbonate.

**F. scobs.** (*L. scobs*, filings.) Same as *F. limatura*.

**F. sesquichlori'dum.** Same as *F. chloridum*.

**F. sesquini'tras.** Same as *F. nitras*.

**F. sesquioxidi'dum.** The *F. peroxidum hydratum*.

**F. squamæ.** (*L. squama*, a scale.) The iron scales thrown off when beating red hot iron on an anvil; they were formerly official in the Dublin Pharmacopœia after being washed, separated from impurities by a magnet, and powdered. They consist of a variable mixture of metallic iron and its oxides.

**F. subcarbo'nas.** A reddish-brown powder, formerly official, obtained by dissolving sulphate of iron 8 oz. and sodium carbonate 9 oz. each separately in 4 pints of distilled water, mixing them, washing the precipitate, and drying it. It is a hydrated ferrous oxide, with a little ferric carbonate. A feeble chalybeate. Used specially in neuralgia.

**F. suc'cinas.** (*L. succinum*, amber.) See *Ferric succinate*.

**F. sul'phas.** B. Ph., U.S. Ph. (*F. sulfate* or *protosulfate de fer*, *sulfate ferreux*; *G. schwefelsaures Eisenoxydul*.)  $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$ . Sulphate of iron, ferrous sulphate. This preparation is made by taking 4 oz. of iron wire and pouring on it one pint and a half of distilled water, and then 4 fl. oz. of sulphuric acid, boiling, filtering, and crystallising the salt. The crystals are large, pale bluish-green, monoclinic prisms, efflorescent, absorbing oxygen, with saline, styptic taste and acid reaction, soluble in 1.8 parts of water, insoluble in alcohol. It is dimorphous, occurring also in rhombic prisms. In dose 1—2 grains (.065—.13 gramme) it acts as an astringent chalybeate; in large doses it produces nausea, vomiting, and griping. Useful in anæmia with passive discharges, hæmorrhages, sweats, catarrhal affections. It is used in solution containing 1—10 grains in various ophthalmic affections affecting the conjunctiva, in len-

corrhœa and gleet, and also in erysipelas and eczema.

**F. sul'phas calcina'tum.** (*Calcine*.) The same as *F. sulphas exsiccatus*.

**F. sulphas exsicca'ta.** B. Ph. Sulphate of iron heated at 149° C. (300° F.) until it ceases to lose weight and powdered. Dose, .5—3 grains (.0325—.195 gramme).

**F. sulphas exsiccatus.** U.S. Ph. (*L. ex*, intensive; *siccus*, dry. *F. sulfate de fer disséché*; *G. entwässertes schwefelsaures Eisenoxydul*.) A greyish-white powder obtained by heating ferrous sulphate in an iron dish to a temp. of 212°, gradually raised to 400°. It loses 39 per cent. of water. Three grains are equivalent to five of the dried salt.

**F. sulphas granula'ta.** B. Ph. (*L. granulum*, a small grain.) A crystalline powder obtained by adding 8 fl. oz. of rectified spirit to the solution from which the *F. sulphas* is directed to be prepared. It is well adapted for keeping. Dose, 1—5 grains (.065—.33 gramme).

**F. sul'phas præcipita'tus.** U.S. Ph. (*L. part. of precipito*, to throw down.)  $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$ . Precipitated sulphate of iron. Precipitated ferrous sulphate. A pale bluish-green, crystalline powder, efflorescent in dry air, obtained by adding alcohol to the solution from which *F. sulphas* is directed to be prepared. Same as *F. sulphas granulata*.

**F. sulphi'dum.**  $\text{FeS}$ . Iron monosulphide, protosulphide of iron. Obtained by melting together, in small pieces, iron and sublimed sulphur. It is of yellowish colour and has a metallic lustre. The mixture of sulphides termed magnetic pyrites,  $5\text{FeS} + \text{Fe}_2\text{S}_3$ , is used as a pharmaceutical agent in the production of hydro-sulphuric acid.

**F. sulphure'tum.** The same as *F. sulphidum*.

**F. tar'nas.** A salt of crimson colour, tasteless, insoluble in water, obtained by dissolving 44 parts of precipitated subcarbonate of iron in a boiling solution of 9 parts of pure tannic acid and evaporating at a temperature of 176° F. It is not a definite chemical compound. Dose, 3—10 grains thrice daily.

**F. tar'tarum.** The *Ferrum tartarizatum*.

**F. valeria'nas.** U.S. Ph.  $\text{Fe}_2(\text{C}_2\text{H}_3\text{O}_2)_6$ . Valerianate of iron. A dark brick-red, amorphous powder, insoluble in cold water, but soluble in alcohol, made by treating a solution of persulphate of iron with one of sodium valerianate. It is decomposed by boiling water, which sets free valerianic acid, and leaves ferric hydrate. Used in hysteria with chlorosis. Dose, a grain (.0648 gramme).

**Ferric.** (*L. ferrum*, iron.) Consisting of iron; applied to the salts of iron sesquioxide or ferric oxide.

**F. ac'etate.**  $(\text{C}_2\text{H}_3\text{O}_2)_2\text{Fe}_2$ . Described under *Acetate of iron peroxide*.

**F. ac'etate, solu'tion of.** See *Liquor ferri acetatis*.

**F. ac'etate, tinc'ture of.** See *Tinctura ferri acetatis*.

**F. ac'id.**  $\text{H}_2\text{FeO}_4$ . A compound not known in the free state. A salt of ferric acid is prepared by igniting iron filings or iron oxide with potash nitrate; potassium ferrate dissolves out on the addition of water.

**F. ar'senate, ac'id.**  $2\text{Fe}_2(\text{HASO}_4)_3 + 9\text{H}_2\text{O}$ . A white precipitate obtained by adding

# FERRICO-POTASSIC TARTRATE—FERRICYANIDE.

hydrogen disodium arsenate to a solution of ferric chloride. It dissolves readily in hydrochloric acid, and on evaporation separates as a white powder.

**F. arsenate, basic.**  $\text{Fe}_2(\text{AsP})_2\text{O}_6 + \text{Fe}_2(\text{AsP})\text{O}_4(\text{OH})_3 + 6\text{H}_2\text{O}$ . Pharmacosiderite, which forms green or brownish greenish adamantine crystals.

**F. arsenate, normal.**  $\text{Fe}_2(\text{AsO}_4)_2 + 4\text{H}_2\text{O}$ . Scorodite which forms brown rhombic crystals.

**F. arsenite.**  $\text{Fe}_2\text{O}_3(\text{OH})_2\text{AS}$ . A voluminous brown precipitate obtained by adding an aqueous solution of arsenic trioxide, or an arsenite to ferric acetate. It is formed when a solution of arsenic trioxide is shaken with freshly precipitated ferric oxide, and the latter compound is used as an antidote in arsenical poisoning.

**F. bromide.**  $\text{Fe}_2\text{Br}_6$ . Dark-red crystals obtained by heating iron in an excess of bromine vapour. It is deliquescent.

**F. chloride.**  $\text{Fe}_2\text{Cl}_6$ . The same as *Ferri chloratum*.

**F. chloride, solution of.** The *Liquor ferri chloridi*.

**F. chloride, test solution of.** U.S. Ph. One part of ferric chloride dissolved in 10 of distilled water.

**F. chloride, tincture of.** The *Tinctura ferri chloridi*.

**F. citrate.**  $(\text{C}_6\text{H}_5\text{O}_7)_2\text{Fe}_2 + 6\text{H}_2\text{O}$ . The same as *Ferri citras*.

**F. citrate, solution of.** The *Liquor ferri citratis*.

**F. disulphide.**  $\text{FeS}_2$ . Common or cubic pyrites.

**F. ferrocyanide.** See *Prussian blue*.

**F. hydrate.** The same as *Ferri oxidum hydratum*.

**F. hydroxide.**  $\text{Fe}_2(\text{OH})_6$ . The *Ferri peroxidum hydratum*.

**F. hydroxide, soluble.** The *Ferrum dialysatum*.

**F. hypophosphite.** The same as *Ferri hypophosphis*.

**F. iodate.** See *Iodate of iron*.

**F. lactate.**  $\text{Fe}_2(\text{C}_3\text{H}_5\text{O}_2)_2 \cdot 3\text{H}_2\text{O}$ . A substance obtained in light brown transparent scales, and used instead of ferrous lactate or *F. luctas*.

**F. nitrate.** (*F. azotate* or *pernitrate de fer*; *G. salpetersaure Eisenoxid*.)  $\text{Fe}_2(\text{NO}_3)_6 + 12\text{H}_2\text{O}$ . A deliquescent substance obtained by dissolving iron wire in dilute nitric acid, and thus forming ferrous nitrate, which is converted into ferric nitrate by boiling with an additional quantity of nitric acid and crystallising.

**F. nitrate, solution of.** See *Liquor ferri nitratis*.

**F. oxide.**  $\text{Fe}_2\text{O}_3$ . The same as *Ferri peroxidum hydratum*.

**F. oxide calculus.** A vesical calculus of this composition has been described.

**F. phosphate.**  $\text{Fe}_2(\text{PO}_4)_2 + 4\text{H}_2\text{O}$ . This the normal orthophosphate is a yellowish-white powder obtained by adding phosphate of soda to ferric chloride in solution.

Basic ferric phosphate,  $2\text{Fe}_2(\text{PO}_4)_3$ , is obtained by adding ammonium phosphate to ferric sulphate in solution.

**F. potassium ferrocyanide.**  $\text{Fe}_4\text{K}_2\text{Cy}_{12}$ , or  $\text{K}_2\text{Fe}_2(\text{C}_3\text{N}_3)_4\text{Fe}_2$ . Soluble Prussian blue, a constituent of ordinary Prussian blue, obtained when ferric salts are added to an excess of potas-

sium ferrocyanide or ferricyanide; it is soluble in pure water.

**F. potassium sulphate.**  $\text{Fe}_2(\text{SO}_4)_3 + \text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$ . Iron alum. A salt obtained by adding potassium sulphate to a solution of ferric sulphate; it crystallises in bright violet octohedra, soluble in 5 parts of water.

**F. pyrophosphate.** The same as *Ferri pyrophosphas*.

**F. salts, reactions of.** Caustic, fixed alkalis, and ammonia give foxy-red precipitates, insoluble in excess; their carbonates behave in a similar manner.

Hydrogen sulphide gives a nearly white precipitate.

Ammonium sulphide give a black precipitate, slightly soluble in excess.

Potassium ferrocyanide gives a blue precipitate.

Tincture and infusion of galls give a deep bluish black with most dilute solutions of ferric salts.

**F. sesquisulphide.** See *Iron, sesquisulphide*.

**F. succinate.**  $(\text{C}_4\text{H}_4\text{O}_4)_2\text{Fe}_2(\text{OH})_2$ . A substance obtained by adding ferric chloride to a solution of a succinate; it forms a yellow gelatinous precipitate, which, when dried, is a brick-red powder, soluble in cold, almost insoluble in hot, water.

**F. sulphate.**  $\text{Fe}_2(\text{SO}_4)_3$ . A crystalline salt obtained by the action of nitric acid on a hot solution of ferrous sulphate to which the requisite amount of sulphuric acid has been added, thus:  $6\text{FeSO}_4 + 3\text{H}_2\text{SO}_4 + 2\text{HNO}_3 = 3\text{Fe}_2(\text{SO}_4)_3 + 2\text{NO} + 4\text{H}_2\text{O}$ .

**F. sulphate, basic.** See under *Liquor ferri subsulphatis*.

**F. sulphate, normal.** The *F. sulphate*.

**F. sulphate, solution of basic.** The *Liquor ferri subsulphatis*.

**F. sulphate, solution of normal.** The *Liquor ferri tersulphatis*.

**F. tartaro-alcoetate.** Pavesi's term for a form of iron and aloes, having no unpleasant taste, made by mixing Socotrine aloes two parts, tartaric acid one part, hydrated sesquioxide of iron one part, and iron filings half a part, with water to form a thin paste, heating it at  $50^\circ\text{C}$ .— $60^\circ\text{C}$ . ( $122^\circ\text{F}$ .— $140^\circ\text{F}$ .) for fifteen minutes, allowing it to stand for five or six days, then filtering after the addition of water, concentrating to a syrup, and drying on a slab.

**F. valerianate.** The same as *Ferri valerianas*.

**Ferrico-potassic tartrate.** The *Ferri et potassii tartaras*.

**Ferricus hydras.** The *Ferrum oxydum hydratum*.

**Ferricyanate.** A salt of *Ferricyanic acid*.

**Ferricyanhydride.** A salt of *Ferricyanhydric acid*.

**Ferricyanhydric.** Same as *Hydroferricyanic acid*.

**F. acid.** Same as *Hydroferricyanic acid*.

**Ferricyanic.** (*L. ferrum*; *cyanogen*.) Relating to iron and cyanogen.

**F. acid.**  $\text{H}_2(\text{C}_3\text{N}_3)_4\text{Fe}_2$ . A brown, astringent, acid, crystalline substance obtained by decomposing lead ferricyanide with dilute sulphuric acid.

**Ferricyanide.** A salt of *Ferricyanogen*.

# FERRICYANOGEN—FERROUS.

- F. of potas'sium.** See *Potassium ferricyanide*.
- F., potas'sic.** The *Potassium ferricyanide*.
- Ferricyanogen.**  $Cy_{12}Fe_2$ . A six-valent radical supposed by some to exist in the ferricyanides, which are believed to contain 1 molecule of iron cyanide, and 6 molecules of metallic cyanide,  $Cy_6Fe_2 + 6CyM$ .
- Ferricyanuret.** Same as *Ferricyanide*.
- Ferrière.** See *La Ferrière*.
- Ferrières.** France, Département du Loiret, near Nemours. An earthy chalybeate. Used in dyspepsia, chronic dysentery, and liver disease.
- Ferriferous.** (L. *ferrum*; *ferr*, to bear.) Yielding, or containing, iron.
- Ferrite.** A salt of *Ferric oxide*.
- Ferro-albuminates.** See *Ferri albuminas*, and also *Albuminate of iron and potassium*, and *A. of iron and sodium*.
- Ferro-albuminoids.** (L. *ferrum*, iron; *albumin*; Gr. *éicos*, likeness.) A term applied to certain ill-defined substances which result from the destruction of the used-up red corpuscles of the blood in the white cells of the spleen-pulp, in the marrow of bones, and perhaps in the liver.
- Ferro-ammonia citrica.** The *Ferri et ammoniac citras*.
- Ferro-ammonia hydrochlorata.** The *Ammonium chloratum ferratum*.
- Ferro-ammonium citricum.** The *Ferri et ammoniac citras*.
- Ferrocyanate.** A salt of *Ferrocyanic acid*.
- Ferrocyanhydrate.** A salt of *Ferrocyanhydric acid*.
- Ferrocyanhydric.** Same as *Hydroferrocyanic*.
- F. acid.** Same as *Hydroferrocyanic acid*.
- Ferrocyanic.** (L. *ferrum*, iron; *cyanogen*. F. *ferr*-*cyanique*.) Of, or belonging to, the compound of iron with cyanogen.
- F. acid.**  $H_2(C_2N_3)_2Fe_4$ . Hydrogen ferrocyanide. A white powder obtained by adding pure hydrochloric acid to an equal volume of a cold saturated solution of potassium ferrocyanide. It is soluble in water and alcohol, and crystallises in small needles. It has a strongly acid taste and reaction.
- F. pellets.** Pellets composed of sodic ferrocyanide and citric acid, proposed by Pavy for the detection of albumen in the urine, they produce a turbidity of the fluid proportioned to the amount of albumen present.
- Ferrocyanide.** A salt of *Ferrocyanogen*.
- F. of iron.** Prussian blue.
- F. of potas'sium.** See *Potassa prussias flava*, B. Ph., and also *Potassii ferrocyanidum*, U.S. Ph.
- F. of zinc.**  $Zn_4(C_2N_3)_2Fe_2$ . A white powder obtained by treating a hot solution of potassium ferrocyanide with one of zinc sulphate. Used in epilepsy, chorea, neuralgia, gastralgia, and dysmenorrhœa. Dose, 1—4 grains.
- F., potas'sic.** Same as *F. of potassium*.
- Ferrocyanogen.** (L. *ferrum*, iron; *cyanogen*.)  $Cy_{12}Fe_2$ . A quadrivalent radical supposed by some to exist in the ferricyanides.
- Ferrocyanuret.** (L. *ferrum*, iron.) A salt containing iron and cyanogen. Same as *Ferrocyanide*.
- F. of iron.** Prussian blue.
- F. of zinc.** Same as *Ferrocyanide of zinc*.
- Ferro-ferric hydrate.** Same as *Ferroso-ferric hydrate*.
- Ferro-kali tartaricum.** Same as *Ferrum tartaratum*.
- Ferro-kalium cyana'tum.** Same as *Potassa prussias flava*.
- Ferro-magnetic.** (L. *ferrum*, iron.) Applied to substances which are attracted to a magnet, as iron.
- Ferro-manganese.** A term for spiegel or specular pig-iron when it contains more than 25 per cent. of manganese.
- Ferro-manganic.** Consisting of iron and manganese.
- Ferropus'siate.** A salt of *Ferropus'sic acid*.
- F. of potas'sa.** Same as *Potassii ferrocyanidum*.
- Ferropus'sic.** (L. *ferrum*; E. *prussic acid*.) A synonym of *Ferrocyanic*.
- F. acid.** Same as *Ferrocyanic acid*.
- Ferro-saline' mixture.** See *Mistura ferro-salina*.
- Ferro'so-alumin'ic sulphate.** Same as *Aluminii et ferri sulphas*.
- Ferro'so-ferric.** Relating to ferrous and to ferric oxides.
- F. oxide.**  $Fe_3O_4 = FeO, Fe_2O_3$ . Magnetic oxide of iron. See *Ferri oxidum magneticum*.
- F. phosphate.** The same as *Ferri phosphas*.
- Ferro-tar'trate.** (L. *ferrum*, iron.) Containing iron and tartaric acid.
- F. of potassium.** Same as *Ferrum tartaratum*.
- Ferrous.** (L. *ferrum*, iron.) Consisting of iron; applied to the salts of ferrous oxide.
- F. acetate.**  $(C_2H_3O_2)_2Fe + 4H_2O$ . Obtained by dissolving iron in acetic acid and evaporating the solution with absence of air. It forms greenish-white, monoclinic crystals, very soluble in water.
- F. arseniate.** The same as *Ferri arsenias*.
- F. bromide.**  $FeBr_2$ . The *Ferri bromidum*.
- F. carbonate.**  $FeCO_3$ . The *Ferri protocarbonas*.
- F. chloride.**  $FeCl_2$ . Obtained by passing excess of chlorine or hydrochloric acid gas over iron filings or red-hot iron wire; or by reducing ferric chloride by heating it in a stream of hydrogen. It occurs in colourless, shining, six-sided, very deliquescent scales; easily soluble in water and alcohol, and having a sp. gr. of 2.528.
- The hydrated salt,  $FeCl_2 + 4H_2O$ , was formerly in G. Ph. as *Ferrum chloratum*.
- F. ferricy'anide.** Same as *Turnbull's blue*.
- F. hydrox'ide.**  $Fe(OH)_2$ . A white powder obtained by acting on a ferrous salt with caustic potash or soda in the absence of air. It becomes heated from oxidation to ferric oxide on exposure to air; when moist it also absorbs oxygen, and becomes first of a dirty green, and then of a brown, colour.
- F. iodide.**  $FeI_2$ . The *Ferri iodium*.
- F. lactate.**  $(C_3H_5O_2)_2Fe + 3H_2O$ . Same as *Ferri lactas*.
- F. ni'trate.**  $Fe(NO_3)_2$ . A very unstable

## FERRUGINATED—FERRUM.

salt obtained by decomposing ferrous sulphate with barium nitrate and evaporating the filtrate in a vacuum over sulphuric acid.

**F. oxalate.**  $C_2O_4Fe$ . Same as *Ferri oxalas*. It occurs native in the brown-coal formation, as oxalite or humboldtine.

**F. oxide.**  $FeO$ . Iron monoxide. A black powder obtained by passing hydrogen over ferric oxide heated to 300° C. (572° F.) It oxidises with incandescence when exposed to the air.

**F. phosphate.**  $Fe_3(PO_4)_2 \cdot 8H_2O$ . A white powder, becoming green or blue on exposure to air, obtained by adding phosphate of soda to a solution of ferrous sulphate. It occurs in nature as rivanite, and as blue iron-earth, and in the cavities of fossil bones. The same as *Ferri phosphas*.

**F. salts, reactions of.** Caustic alkalis and ammonia give nearly white precipitates, insoluble in excess, changing to green, and then brown, on exposure.

Ammonium, potassium, and sodium carbonates behave in a similar manner.

Hydrogen sulphide gives no precipitate.

Ammonium sulphide gives a black precipitate, soluble in dilute acids.

Potassium ferrocyanide gives a nearly white precipitate, becoming deep blue on exposure.

Potassium ferricyanide gives a deep blue precipitate.

**F. sulphate.**  $FeSO_4 \cdot 7H_2O$ . The same as *Ferri sulphas*.

**F. sulphate, dried.** The *Ferri sulphas exsiccatus*.

**F. sulphate, precipitated.** The *Ferri sulphas precipitatus*.

**F. sulphate, test solution of,** U.S. Ph. A recently prepared solution of 1 part of clear crystals of ferrous sulphate in 10 parts of distilled water.

**F. sulphide.** The same as *Ferri sulphidum*.

**F. sulphite.**  $FeSO_3$ . Obtained in colourless or greenish crystals when iron is dissolved in aqueous sulphurous acid.

**Ferruginated.** (*L. ferrugo*, iron-rust.) Containing, or having the colour or the properties of, iron-rust.

**Ferruginous.** (*L. ferrugineus*, of the colour of iron-rust.) Consisting of, or containing, iron.

Of the colour of iron-rust.

**F. collo'dion.** A mixture of equal parts of collodion and of tincture of perchloride of iron for painting on erysipelatous inflammations.

**Ferruginous.** (*L. ferrugo*, the rust of iron. *F. ferrugineus*; *G. eisenschu'f, rostfarbig*.) Of, or belonging to, having, or full of, the rust of iron; of a yellowish brown colour, like iron-rust.

**Ferrugo.** (*L. ferrugo*, rust of iron.) The same as *Ferri peroxidum hydratum*; and as *Ferri subcarbonas*.

Also, the disease of plants otherwise called Rust.

**F. martis aperiens.** (*L. Mars*, a name for iron; *aperire*, to open.) The *Ferri peroxidum hydratum*.

**Fer'rum**, B. Ph. (*L. ferrum*, iron. *F. fer*; *L. ferro*; *S. hierro*; *G. Eisen*.) Wrought iron in the form of wire or nails, free from oxide.

In U.S. Ph., metallic iron in the form of fine, bright, and non-elastic wire.

**F. aceticum liquidum.** The same as *F. aceticum solutum*.

**F. aceticum sic'cum.** (*L. siccus*, dry. *G. troekenes essigsau're Eisenoxyd*.) Same as *Acetate of iron peroxide*.

**F. aceticum solutum.** (*L. acetum*, vinegar; *solutus*, dissolved. *G. essigsau're Eisen-flussigkeit*.) Liqueur ferri sulfurici oxydati 10 parts, distilled water 30 parts, dissolve and add liqueur ammonii caustici 8 parts, previously diluted with distilled water 160; wash the precipitate, and press till 5 parts remain, then add acidum aceticum dilutum 6 parts; shake occasionally for several days, set aside in a cold place and filter; add distilled water to the filtered liquid to make 10 parts. Of a red-brown colour. Sp. gr. 1.124—1.138. It contains 8 per cent. of iron. Formerly in G. Ph.; an analogous preparation in the G. Ph. at present is *Liquor ferri acetici*.

**F. albumina'tum.** Same as *Ferri albuminas*.

**F. albumina'tum solu'tum.** (*L. albumen*, white of egg; *solutus*, part. of *solvo*, to dissolve. *G. Eisenalbuminat-flussigkeit*.) A preparation obtained by mixing white of egg with liqueur ferri sesquichloridi, and digesting the washed finely divided precipitate, suspended in water, with very dilute hydrochloric acid. Dose, about a teaspoonful, which is equivalent to half a drop of the liqueur ferri perchloridi.

**F. ammoniacal'e.** Same as *F. ammoniacatum*.

**F. ammoni'aco-cit'ricum.** The same as *Ferri et ammonii citras*.

**F. ammonia'tum.** Subcarbonate of iron 3 oz. is mixed with muriatic acid 10 oz., and digested for two hours; chloride of ammonium 2.5 lbs. dissolved in 4 pints of distilled water is then added; the liquid is filtered and evaporated to dryness; the resultant is powdered. Dose, 3—15 grains.

**F. ammonio-sulphu'ricum.** The same as *Ferri et ammonii sulphas*, U.S. Ph.

**F. arsenia'tum.** Same as *Ferri arsenias*.

**F. arsenic'icum oxydula'tum.** Same as *Ferri arsenias*.

**F. arsenic'icum.** The *Ferri arsenias*.

**F. bornassicum.** (*L. bornassia*, Prussia. *G. Eisencyanur cyanid*.) Prussian blue.

**F. broma'tum**, Belg. Ph.  $FeBr$ . Ferrum pulveratum 4 parts, distilled water 40; to these add bromine 9 parts. Shake gently till the liqueur becomes green, then filter and evaporate rapidly to dryness. Dose, 0.04—0.05 gramme.

**F. candens.** (*L. candens*, glowing hot.) The actual cauteriy.

**F. carbon'icum oxydula'tum.** (*G. kohlen-sau'res Eisen*.) A term for ferrous carbonate. It easily undergoes decomposition, passing into the state of hydrated iron oxide.

**F. carbon'icum sacchara'tum**, G. Ph. (*F. carbonate de fer sucre*; *L. ferro carbonico saccharato*, *carbonato ferroso zuccherato*, *carbonato d'ossidulo di ferro*; *G. zuckerhaltiges kohlen-sau'res Eisen*.) Saccharated carbonate of iron. A greenish-grey, sweetish, and astringent tasting powder, containing 20 per cent. of iron carbonate. It is made like the *Ferri carbonas saccharata*, with the addition of one part of sugar of milk to three of sugar. Dose, 0.5—2 grammes.

## FERRUM.

**Aust. Ph.** (*G. zuckerhaltiges kohlen-saures Eisen*), dissolve 6 parts of crystalline sodium carbonate in 24 parts of water, filter and boil; add of purified honey 1 part, and then gradually 5 parts of crystallised iron sulphate in powder. It contains between one half and one third of iron carbonate. The corresponding preparation in the Swiss Ph. contains 25 per cent., in the Russian 32 per cent., of iron carbonate.

**F. catalyticum.** (*Katalysis*, a dissolving.) A form of dialysed iron, probably usually made by adding freshly precipitated ferric hydrate to solution of chloride of iron till it ceases to be dissolved, and then filtering.

**F. chlora'tum.** (*F. chlorure ferreux, protochlorure de fer*; *I. ferro sottoclorato, cloruro ferroso*; *G. Eisenchlorür.*)  $\text{FeCl}_2 + 4\text{H}_2\text{O}$ . A pale green hygroscopic, and easily soluble, salt quickly oxidising in the air. Dose, 0.01–0.1 gramme. Formerly in the G. Ph. See under *Ferrous chloride*.

**E. chlorure'tum.** The same as *Ferri chloridum*.

**F. citricum.** The same as *Ferri citras*.

**F. citricum ammonia'tum,** *G. Ph.* The same as *Ferri et ammonia citras*.

**F. citricum oxyda'tum,** *G. Ph.* (*F. citrate de fer, citrate ferrique*; *I. citrato di ossido di ferro, ferro citrico ossidato*; *G. citronensaures Eisen.*) Citrate of iron. Same as *Ferri citras*.

**F. cyana'tum.** Prussian blue.

**F. cyanogena'tum.** Prussian blue.

**F. dialysa'tum.** (*Διάλυσις*, the separating from anything.)  $\text{Fe}_2\text{Cl}_6 \cdot 12\text{Fe}_2\text{O}_3$ , varying to  $\text{Fe}_2\text{Cl}_6 \cdot 95\text{Fe}_2\text{O}_3$ . A reddish-brown clear liquid obtained by adding gradually 35 parts of water of ammonia of sp. gr. .923 to 100 parts of solution of iron chloride of sp. gr. 1.26; the precipitate which forms immediately dissolves, the resulting thick liquid is put into a dialyser suspended in water, which is changed until it no longer contains hydrochloric acid. It is a soluble ferric hydroxide, and is by some believed to be almost inert. Dose, 10–30 minims.

**F. equinum como'sum.** (*L. equinus*, belonging to a horse.) The tufted horseshoe vetch, *Hippocrepis comosum*.

**F. et na'trium pyrophosphoricum,** *Aust. Ph.* (*G. pyrophosphorsaures Eisennatrium.*) A whitish, crystalline powder, with mild saline taste; it dissolves more easily in hot than in cold water. The aqueous solution on prolonged boiling becomes cloudy from the formation of iron orthophosphate.

**F. ferrocyna'tum.** Prussian blue.

**F. hæmatites.** See *Hæmatite*.

**F. hydricum.** The same as *Ferri peroxidum hydratum*.

**F. hydricum in a'qua.** (*G. Eisenoxydhydrat Flüssigkeit.*) Sixty parts of solution of iron sulphate, *G. Ph.*, are mingled with 120 parts of water. To this are added 7 parts of magnesia usta, made into a paste with 120 parts of water, and the two solutions are well shaken. A reddish-brown pap is formed, which tastes bitter, and consists of a mixture of hydrated iron oxide, magnesium sulphate, and magnesia usta. It is used as an antidote in arsenic poisoning.

**F. hydrioda'tum.** Same as *Ferri iodidum*.

**F. hy'dro-ace'ticum.** (*G. basischessigsaure Eisenoxyd Flüssigkeit.*) A compound re-

sulting from the admixture of solution of iron acetate containing 8 per cent of iron with solution of hydrated iron oxide. It is used as an antidote in poisoning with arsenic.

**F. hydroge'nio reduc'tum.** Iron reduced by hydrogen. A very fine powder, quite free from iron sulphide, without taste. Dose, 0.05–0.25 gramme, or 1 gramme per diem. Same as *F. reductum*.

**F. hy'dro-oxyda'tum dialysa'tum liq'uidum,** *Aust. Ph.* (*F. solution dialytique d'hydrate de fer*; *G. dialysates flüssiges Eisenoxydhydrat.*) A fluid obtained by the dialysis of basic iron chloride. It tastes sweet and astringent, becomes gelatinous on the addition of a few drops of sulphuric acid; 20 parts of the fluid on evaporation leave one part of solid residue, which is almost pure iron oxide.

**F. hypophosphorusum.** The same as *Ferri hypophosphis*.

**F. in filo trac'tum.** (*L. in, into; filum*, a thread; *tractus*, part. of *traho*, to draw.) An old pharmacopœial name for iron wire.

**F. joda'tum,** *G. Ph.* (*Iodine. G. Eiseniodur, Iodisen.*)  $\text{FeI}_2$ . This preparation is made after the following formula. Ferrum pulveratum 30 parts, water 100, iodine 82. Mix gently together, then add liquor natri caustici 24 parts, natrium bicarbonicum 9, boiling water 600. After mixing, standing, and removing the fluid with a siphon, wash the sediment with hot water 400 parts. Add to the sediment saccharum pulveratum 50 parts, or enough to make up 100 parts. It is a grey, laminated mass, crystallising from its watery solution in bright green crystals,  $\text{FeI}_2 + 4\text{H}_2\text{O}$ .

**F. joda'tum sacchara'tum,** *Aust. Ph.* (*G. zuckerhaltiges Iodisen.*) Saccharated iodide of iron. Saccharated ferrous iodide. Powdered iron 1 part is mixed with 5 of distilled water, and then with 4 of iodine. After standing till the mixture becomes greenish, it is filtered and mixed with 20 parts of sugar, and then rapidly dried. Five parts contain one part of iron iodide. Dose, 2–5 grains.

**F. kalio-tartaricum,** *Aust. Ph.* (*G. weinsaures Eisenkalium.*) The same as *Kalium ferro-tartaricum*.

**F. lacticum,** *G. Ph.* (*L. lac*, milk. *G. milchsäures Eisenoxydul.*) Iron lactate. A yellowish powder of sweetish astringent taste, soluble in 48 parts of cold and 12 of hot water, insoluble in alcohol; obtained by mixing 1 part of sugar and 1 of iron powder with 20 parts of sour milk, and allowing the mixture to stand for 10 days, with frequent agitation and addition of sugar, then boiling, filtering, and setting aside to crystallise. Dose, .5 grain to 5 grains.

**F. lima'tum.** (*G. Eisenfeile.*) Iron filings. Used in the preparation of iron wine.

**F. magnes attracto'rium.** (*L. attraho*, to draw to.) The *Magnet*.

**F. metallicum.** (*L. metallicus*, metallic.) Pure iron. A term for *F. reductum*.

**F. muriaticum oxyda'tum,** *Aust. Ph.* The same as *F. sesquichloratum crystallisatum*.

**F. muriaticum oxydula'tum.** The *F. chloratum*.

**F. ni'tricum oxyda'tum.** (*G. salpetersäures Eisenoxyd.*) Iron nitrate.

**F. olein'icum.** (*G. ölsaures Eisen.*) A domestic remedy prepared in Germany by digesting oleic acid with iron powder and water.

# FERRUM.

**F. o'pū hydrogēnī para'tum.** (L. *ops*, power; *hydrogen*; *paratus*, prepared.) The same as *F. reduction*.

**F. oxalicum.** The same as *Ferri oxalas*.

**F. oxyda-to-oxydula'tum.** Aust. Ph. (G. *Eisenoxyduloxyd*.) A very fine black powder, completely soluble in acids, obtained by dissolving 32 grammes of crystallised iron sulphate in 32 grammes of water and 6 grammes of concentrated sulphuric acid. To the hot solution potash nitrate is added in sufficient quantity to give a red-brown precipitate with ammonia; ten times the quantity of water is added, and more iron sulphate, until ammonia gives no precipitate.

**F. oxyda'tum dialysa'tum solu'tum.** Aust. Ph. The same as *F. hydro-oxydatum dialysatum liquidum*.

**F. oxyda'tum fus'cum.** (L. *fuscus*, brown. F. *sesquioxide de fer hydrate*, *hydroxyde de fer*, *carbonate de peroxyde de fer*, *safran de mars apiritit*; I. *idrato d' ossido di ferro*; G. *Eisenoxydhydrat*.) Hydrated peroxide of iron. A brownish-red powder, insoluble in water. Dose, 1—5 grains. Formerly in G. Ph. Same as *Ferri peroxidum hydratum*.

**F. oxyda'tum hydra'tum.** The same as *F. oxydatum fuscum*.

**F. oxyda'tum magnet'icum.** (L. *magnes*, a magnet.) The same as *Ferri oxidum magneticum*.

**F. oxyda'tum sacchara'tum solu'bile.** G. Ph. (L. *saccharum*, sugar; *solubilis*, soluble. F. *saccharat de fer*; G. *eisenzuckerlosches Eisenoxyd-saccharat*.) Saccharated oxide of iron. A brownish powder with sweet chalybeate taste, readily soluble in water. Sugar 9 parts is dissolved in 9 parts of water and 30 parts of liquor ferri sesquichlorati added first, and then 24 parts of natrium carbonicum dissolved in 48 parts of water; to this is added by degrees liquor natri caustici 24 parts, then 9 parts of natrium bicarbonicum and 600 parts of water. The sediment is washed, collected, and mixed with 50 parts of sugar, dried on a water bath, sugar to make 100 parts added, and powdered. It contains 3 per cent. of iron. Dose, from 7 to 30 grains.

**F. phosphoricum.** Aust. Ph. (G. *phosphorsaures Eisen*.) A fine bluish-black powder, insoluble in water, easily soluble in muriatic acid, obtained by dissolving 24 parts of iron sulphate in 150 parts of water, and adding 32 parts of sodium phosphate and more water. A precipitate falls, which is the salt.

**F. phosphoricum cum ammo'nio-citrico.** Same as *Ferri pyrophosphas*.

**F. potabile Willisii.** (L. *potabilis*, drinkable.) The *F. tartarizatum*.

**F. precipitatum.** (L. *precipito*, to throw down.) Same as *Ferri subcarbonas*.

**F. pulvera'tum.** G. Ph. (L. *pulvero*, to powder. F. *fer pulverise*; I. *ferro metallico, limatura di marte*; G. *Eisenpulver, gepulvertes Eisen*.) Pure iron filings; powdered iron. A heavy impalpable powder of ashen-grey colour. Dose, 1·5—7 grams (30 grammes per diem).

**F. pyrophosphoricum.** (G. *pyrophosphorsaures Eisenoxyd*.) An almost insoluble salt of iron, used by the French as a basis for other preparations of iron, and as an artificial mineral water, 0·05 gramme of the iron pyro-

phosphate being dissolved in 150 grammes of water.

**F. pyrophosphoricum cum ammo'nio citrico.** The same as *Ferri pyrophosphas*.

**F. redac'tum.** B. Ph. (L. *redactus*, part. of *reduco*, to bring back. F. *fer reduit*; G. *reduciertes Eisen*.) A light, tasteless, iron-grey powder, obtained by heating hydrated peroxide of iron in a gun barrel to a red heat and passing a stream of hydrogen gas through it, after the gas has been dried by transmission through sulphuric acid and calcium chloride. It is insoluble in water and in alcohol. Dose, 3—6 grains (·2—·4 gramme).

**F. reduc'tum.** G. Ph. and U.S. Ph. (L. *redactus*, part. of *reduco*, to bring back.) Reduced iron. The same as *F. redac'tum*.

**F. sali'tum.** (L. *salitus*, part. of *salio*, to salt.) Old term for the muriate of iron; salt of iron.

**F. sebaci'num.** (L. *seba*, suet.) The same as *F. oleimicum*.

**F. sesquichlora'tum.** G. Ph. (G. *krystallisirtes Eisenchlorid*.) A yellow, crystalline, dry, deliquescent powder, fluidifying with gentle heat, soluble in water, spirit, and ether. Same as *Ferri chloridum*, U.S. Ph.

**F. sesquichlora'tum basicum solu'tum.** (L. *solutus*, dissolved. G. *basisches Eisenchloridlösung*.) The same as *Liquor ferri sesquichlorate basic*.

**F. sesquichlora'tum crystallisa'tum.** Aust. Ph. (G. *krystallisirtes Eisenchlorid*.) A yellowish crystalline mass, deliquescent in air, and completely soluble in water, alcohol, and ether. It is obtained by adding 500 parts of concentrated muriatic acid to 100 parts of iron wire and 1000 parts of distilled water.

**F. sesquichlora'tum solu'tum.** Aust. Ph. (G. *Eisenchloridlösung*.) Solution of iron chloride. Obtained by mixing equal parts by weight of iron chloride and distilled water.

**F. solu'tum sesquichlora'tum.** Aust. Ph. (G. *Eisenchloridlösung*.) When used as a reagent 1 part of crystallised iron chloride is dissolved in 10 parts of distilled water.

**F. sulfura'tum.** Aust. Ph. (G. *Schwefel-eisen*.) Iron sulphide.

**F. sulfu'ricum.** G. Ph. (G. *schwefelsaures Eisen*.) Iron sulphate. See *Ferri sulphas*.

**F. sulfu'ricum crystallisa'tum.** Aust. Ph. (G. *krystallisirtes schwefelsaures Eisen*.) Crystallised iron sulphate. See *Ferri sulphas*.

**F. sulfu'ricum dehydra'tum.** The same as *F. sulphuricum siccum*.

**F. sulfu'ricum oxyda'tum.** (G. *schwefelsaures Eisenoxyd*.) The same as *Ferrie sulphate*.

**F. sulfu'ricum pu'rum.** (L. *purus*, pure.) The same as *Ferri sulphas*.

**F. sulfu'ricum vena'le.** (L. *venalis*, for sale.) The same as *F. sulfuricum crudum*.

**F. sulphu'ricum cru'dum.** G. Ph. (G. *gemeiner Eisenvitriol*.) Crude iron sulphate.

**F. sulphu'ricum oxyda'tum ammo'nia'tum.** G. Ph. (G. *schwefelsaures Eisenoxyd-Ammonium*, *Ammoniakalische Eisensalze*.) A substance said to act as a styptic and an anthelmintic. Almost identical with the *Ferri et ammonii sulphas*, U.S. Ph.

**F. sulphu'ricum sic'cum.** G. Ph. (L. *siccus*, dry. G. *entässertes schwefelsaures Eisenoxydul*.) The directions given are. ferrum

## FERRUMINATION—FERTILISING.

sulfuricum 100 parts, heat in a water bath till the salt has lost 35 or 36 parts. A white soft powder, soluble in water without residue.

**F. tannicum.** The same as *Ferri tannas*.

**F. tartaratum.** B. Ph. (*F. tartare chalybè, tartrate ferro-potassique*; *G. weinsäures Eisenoxyl-Kali, Eisen Weinstein.*) Solution of ammonia 10 fl. oz. is mixed with 3 pints of distilled water, and solution of persulphate of iron 5.5 fl. oz. mixed with 2 pints of distilled water is gradually added. After standing two hours it is filtered, and the precipitate well washed and drained; with this is mixed acid tartrate of potash 2 oz., and allowed to stand for 24 hours; it is then heated to 140° F., a pint of distilled water added, again heated to 140° F., evaporated at that temperature to syrupy consistence, and dried on glass plates. Dose, 5—10 grains.

**F. tartaricum.** Same as *F. tartaratum*.

**F. tartarizatum.** The same as *F. tartaratum*, and as *Ferri et potassii tartaras*.

**F. valerianicum.** The same as *Ferri valerianas*.

**F. vitriolatum purum.** (*L. purus*, pure.) The same as *Ferri sulphas*.

**F. vitriolatum ustum.** (*L. ustus*, burnt.) Red oxide of iron obtained by calcining sulphate of iron.

**F. zooticum.** (*Zōon*, an animal.) Prussian blue, in reference to its manufacture by the aid of animal structures.

**Ferrumination.** (*L. ferruminatio*, from *ferrumino*, to cement.) The soldering or joining together of metals.

**Fer'sæ.** Old term, used by Forestus, in *Schol. vi. 32*, for rubeola or measles.

**Fertile.** (Old *F. fertile*; from *L. fertilis*, fruitful; from *L. fero*, to bear. *F. fecund*, fertile; *I. fertile*; *S. fertil*; *G. fruchtbar*.) Fruitful.

In Botany, of a plant or an ovary, seed-bearing; of an anther, pollen-bearing.

Applied to flowers possessing a pistil, or those that produce seeds capable of vegetation.

**Fertilisation.** (*L. fertilis*. *F. fertilisation*; *G. B. fruchtung*.) The act or process of making fruitful; especially applied to the impregnating of the female element contained in the vegetable or the animal ovum with the male element, an act which results in the production of the embryo of a new being.

**F., agents of.** Pollen in phanerogamous plants, antherozoids in the lower forms, and spermatozoa in animals. Fertilisation is effected in many plants by the wind, but most frequently by insects. In the former case the plants are termed anemophilous, in the latter entomophilous.

**F., cross.** The fertilisation of a plant ovule by means of pollen derived from another plant of the same species.

The term is also applied to the fertilisation of different species of plants by the application of the pollen of one to the stigma or ovule of the other. The offspring is a hybrid.

**F. of ovule in plants.** In the lowest forms of plants, such as the simpler Algae and Fungi, the fertilisation of the female or embryo-producing structure is not effected, as in all the higher forms, by the introduction into it of an element derived from the male structure; but two apparently similar cells come together, fuse, and out of their fusion produce another body, which is the germinating cell; this is called the

*Zygospore*, and the process which produces it is *Conjugation*.

In all other plant forms fertilisation is effected by the transfer from the male cell of a small portion of matter to the active part of a very different and larger body, the female cell, which produces such changes there that out of it the young plant is developed.

In most Cryptogams the male cell, or *antherozoid*, contained in an *antheridium*, is a small freely-moving mass of protoplasm without a cell-wall; and the female cell, or *oosphere*, contained in an *archegonium*, is also a naked primordial cell, but not endowed with powers of motion. The antherozoid penetrates the oosphere, coalesces with it, and sets up in it new actions, a cell wall is developed and the new plant takes origin, either directly or through a resting spore. In many Thallophytes, such as the Peronosporæ, there is no differentiation of antherozoids, but the protoplasm of the male organs penetrates the oosphere, by a species of conjugation. In Lichenes and Floridæ the antherozoids have a cell wall, and are not motile, while the oosphere is not differentiated.

In Phanerogams fertilisation takes place after the conveyance of the pollen grains to the stigma of Angiosperms, or to the nucellus of Gymnosperms; or, the pollen is still retained in the anther as in *Helianthema*, by the growth from it of a pollen-tube which penetrates the intervening structures till it reaches the ovule, and passing through the micropyle touches the embryo sac; the contents of the pollen tube are both protoplasmic and nuclear; the former interfuse with the protoplasm of the oosphere, or embryonal vesicle, and the latter, or male pronucleus, with the nuclear matter, or female pronucleus, of the oosphere; and from this begins, with different detail in different orders, the development of the embryo.

**F. of ovum in animals.** The transference of certain motile spermatic cells, or spermatozoa, of the male animal into the substance of the ovum of the female and their fusion constitutes the essential part of fertilisation. In the centre of an ovum ripe for fertilisation there is to be found by development from the germinal vesicle a clear nucleus, the female pronucleus; on the arrival of a spermatozoon on the surface of the ovum, the head or nuclear part becomes embedded in the outer coat of the ovum opposite to which the protoplasm of the ovum protrudes to receive it, and the whole spermatozoon enters; the head grows, becomes the male pronucleus, and slowly travels, surrounded by striated or radiated protoplasm, till it approaches the female pronucleus, which is surrounded in like manner with radiated protoplasm, and ultimately fuses with it after being embraced by protoplasmic offshoots from the female pronucleus. The combined structure forms the segmentation nucleus, or blastosphere, which it has been proposed to call the oosphere; this speedily divides into the nuclei of the two first segmentation spheres, and from them the embryo is developed. The above account is based on observations of some of the lower animals, and appears to be in harmony with the little that is known of the process of fertilisation in the higher ones.

**F., self.** The fertilisation of a plant ovule by pollen derived from the same plant.

**Fertilising.** (*L. fertilis*.) Rendering fruitful.

**F. tube.** (G. *Befruchtungsschlauche*.) A beak-like protuberance of the antheridium of some fungi, containing the antherozoids, which pierces the wall of the oogonium in the act of fertilisation.

**Fertility.** (L. *fertilitas*; from *fertilis*. *F. fertilitas*; I. *fertilitat*; S. *fertilidad*; G. *Fruchtbarkeit*.) Fruitfulness.

**F., period of.** In the human female the period of fertility is under ordinary circumstances confined to the period during which menstruation is going on. See *Fecundity of woman*.

**Fertit.** The Ethiopian name for the *Draecynthus medinensis*.

**Ferula.** (L. *ferula*, the giant fennel, in the pith of which sparks of fire keep alight; from *ferio*, to strike, because it resembles a rod. *F. ferule*; G. *Ruthenkrant*, *Steckenkrant*.) A Genus of the Nat. Order *Umbelliferae*.

Also, a long splint.

Also, a long-handled spatula of light wood, used for a form of *Massage*.

**F. africana.** The *Bubon galbanum*.

**F. africana galbanifera.** (*Galbanum*; L. *fero*, to bear.) A former name for the galbanum plant.

**F. allia'cea.** Boissier. (L. *allium*, garlic.) The species which supplies the brown variety of assafoetida from Abushaher.

**F. ammonifera.** Lemery. (*Ammoniacum*; L. *fero*, to bear.) The former name of the plant yielding ammoniacum. Now called *Dorema ammoniacum*.

**F. assafoetida.** Linn. The *Narthex assafoetida*.

**F. communis.** Linn. (L. *communis*, common.) Giant fennel. Hab. South Europe. Fruit curmative; pith of stem used in blood-spitting.

**F. erubescens.** Berg. (L. *erubescere*, to grow red.) The *F. rubricaulis*.

**F. femina.** (L. *femina*, a female.) The *F. communis*.

**F. ferula'go.** Linn. A plant growing on the Eastern coast of Africa, formerly supposed to yield galbanum.

**F. galbanifera.** Lobel. (*Galbanum*; L. *fero*, to bear.) A plant formerly supposed to yield galbanum. Perhaps the same as *F. erubescens*.

**F. galbaniflua.** Boissier and Buhse. (*Galbanum*; L. *fluo*, to flow.) A plant indigenous in Persia, which yields much of the gum-resin galbanum.

**F. galbaniflua, var. Aucheri.** Boissier. The *F. gummosa*.

**F. graveolens.** The *Anethum graveolens*.

**F. gummosa.** Boissier. (L. *gummosus*, gummy.) A variety of *F. erubescens* which yields some galbanum.

**F. hoo'shee.** Lindl. At one time thought to be a source of opoponax.

**F., minor.** (L. *minor*, less.) Old name for the all-heal of Esculapius, supposed to be the *Heracleum*.

**F. narthex.** Boissier. (Νάρθηξ, the plant in the stalk of which Prometheus carried the spark of fire from heaven to earth.) One of the plants from which assafoetida is obtained. Indigenous in Persia and Afghanistan.

Also, called *Narthex assafoetida*.

**F. nodifera.** (L. *nodus*, a knot; *fero*, to bear.) The *F. nodiflora*.

**F. nodiflora.** Linn. (L. *nodus*; *flos*, a flower.) The *F. communis*.

**F. opopanax.** Spreng. The *Opopanax chironium*.

**F. orientalis.** Linn. (L. *orientalis*, eastern.) This plant, indigenous to Morocco, is believed by Lindley to be the source of the ammoniacum of Dioscorides. It is the *Dorema ammoniacum*.

**F. persica.** Willd. (L. *persicus*, Persian.) The stinking giant fennel, formerly supposed to yield *Sagapenum*, the source of which, however, is still uncertain.

**F. rubricaulis.** Boissier. (L. *ruber*, red; *caulis*, a stem.) A plant from which it is believed that some galbanum is obtained. It is possibly a variety of *F. galbaniflua*.

**F. sagapenum.** The *F. persica*.

**F. schair.** Borsczon. A plant growing between the Sea of Aral and the Caspian Sea, which furnishes a gum like the galbanum of commerce.

**F. scorodosma.** Benthams and Hooker. (Σκρόδοσ, garlic; ὄσμι, odour.) One of the plants from which assafoetida is obtained.

**F. sumbul.** Hooker filius. A plant inhabiting the mountains which separate Russian Turkestan from Bokhara, and from which sumbul is obtained.

**F. Szowitziana.** De Cand. The plant which, according to Oberlin, furnishes sagapenum.

**F. tingita'na.** Falconer. A plant believed by Dr. Falconer to be that from which the ancients obtained the drug named ammoniacum, which came from Africa.

**Ferula'go.** (L. *ferulago*, from *ferula*. G. *Birkwursteckenkrant*.) A Genus of the Nat. Order *Umbelliferae*.

**F. galbanifera.** Koch. (L. *galbanum*; *fero*, to bear.) Hab. South Russia. At one time believed to supply galbanum.

**Ferula'ic.** Relating to *Ferula*.

**F. acid.** C<sub>10</sub>H<sub>10</sub>O<sub>4</sub>. A substance contained in assafoetida resin, and obtained by treating the alcoholic solution with lead acetate and decomposing the precipitate with dilute sulphuric acid. It crystallises in iridescent, four-sided needles, having no taste and an acid reaction.

**Ferulic.** Same as *Ferula'ic*.

**Ferulyl.** C<sub>6</sub>H<sub>11</sub> or C<sub>15</sub>H<sub>22</sub>. A compound radical found in the essential oil of assafoetida in combination with sulphur as a sulphide and as a bisulphide. It is supposed to have a close relationship with allyl.

**Fervor.** (L. *fervor*, a raging heat; from *ferreo*, to be hot.) A fever heat which is more than *Calor* and less than *Ardo*.

**Fese.** The local name of a disease observed in the islands of the South Pacific Ocean, and allied to elephantiasis arabum.

**Fester.** (Etym. unknown; perhaps a variant of *F. foster*.) To rattle, to corrupt.

A term applied to a small suppurating inflammation of a superficial surface which causes the separation of the epidermis in irregularly-shaped blisters or pustules filled with unhealthy, often bloody, pus.

**Festoon.** (F. *feston*, a garland; from Low L. *festu*, a garland.) A garland or chain hanging curved between two points.

**Festooned.** (*Festoon*.) Suspended or arranged as a festoon in depending curves.

## FESTUCA—FEVER.

**F. line of cardia.** The whitish festooned junction of the mucous membrane of the oesophagus with that of the stomach at the cardiac orifice.

**F. rings.** The tendinous rings of the auriculo-ventricular and arterial openings in the heart; their fibrous tissue is continuous with that of the valves on the one side, and with the processes of the cardiac fibro-cartilage on the other; they also give attachment to some of the muscular fasciculi of the ventricle.

**Festuca.** (*L. festuca*, a stalk, straw. *G. Schwingelgras*.) A Genus of the Nat. Order Gramineae, many species of which are of great value as food for sheep and cattle.

**F. suittans.** Linn. The *Glyceria fluitans*.

**F. quadridentata.** H. B. and Kunth. (*L. quatuor*, four; *dentatus*, toothed.) Hab. Quito. Seeds poisonous.

**Festucæ.** (*L. festuca*, a stalk.) Stalks.

**F. caryophyllum.** (*Καρύοφυλλον*, the clove tree. *F. griffe de giraffe*; *G. Nelkenstiele*, *Nelkenholz*.) The branching flower stalks of the *Caryophyllus aromaticus*. They contain four to five per cent. of oil of cloves.

**Festucine.** (*L. festuca*.) Of a straw colour.

**Festucous.** (*L. festuca*. *G. halmartig*.) Made of, or like to, straw.

**Fetal.** Same as *Fœtal*.

**F. circulation.** See *Circulation, fetal*.

**Fœticide.** (*L. fetus*, offspring; *cædo*, to kill.) A term for the murder of the fetus in the womb; otherwise expressed by the term criminal abortion.

**Fœtid.** See *Fœtid*.

**Fetlock.** (Of Scandinavian origin.) The part of the leg of the horse at the pastern-joint, behind which the tuft of hair grows; originally the tuft of hair itself.

**Fetor.** Same as *Fœtor*.

**Fetter.** (*Mid. E. feter*; *Sax. futor, feter*; *G. Fersel*; *L. pedica*; *Gr. πῆν*; *Sans. pāduka*, a shoe; all from Aryan root *pad*, to go, to seize.) A shackle, a restraint.

**Fettered.** (*E. fetter*.) Fettered; tied in. In Biology, applied to the limbs of animals when, by their retention within the integuments, or by their backward stretched position, they are unfit for walking.

**Fetterwort.** The *Helleborus fatidus*.

**Fetus.** (*L. fetus*, offspring.) See *Fœtus*.

**Feuillæa.** A Genus of the Nat. Order Cucurbitaceæ.

**F. cordifolia.** Poiret. (*L. cor*, heart; *folium*, leaf.) A West Indian shrub, the oily seeds of which are intensely bitter, and act violently both as emetics and purgatives. They are used against poisons and venomous bites.

**F. hederacea.** Poiret. (*L. hederæ*, ivy.) The *F. cordifolia*, or the *F. trilobata*.

**F. javilla.** Kunth. Hab. New Granada. Seeds used as a febrifuge.

**F. Marcgravia.** Guib. The *F. trilobata*.

**F. scandens.** Linn. (*L. scando*, to climb.) The *F. trilobata*.

**F. trilobata.** Linn. (*L. trilobatus*, three-lobed.) Hab. Brazil. The seeds of this plant yield a fatty oil. Used as an ointment in pains of the joints, and as an alexipharmic.

**Feuillin.** Peckolt's term for a brown, bitter, uncrystallisable substance obtained from the seeds of *Feuillæa cordifolia*.

**Feurs.** France, Département du Loire. An athermal weak chalybeate water, containing a little free carbonic acid and hydrogen sulphide.

**Fever.** (Old *F. ferre*; from *L. febris*, a fever; probably transposed for *fervis*, from *ferreo*, to be hot. *F. fièvre*; *I. febbre*; *S. fiebre*; *G. Fieber*.) A morbid condition of the whole system, characterised by undue elevation of the temperature of the body and excessive metabolism or disintegration of some or all of the tissues. The mode of invasion of fever varies; it may come on with a violent shiver or with gentle creeping of the skin, or there may be no preliminary symptoms. But usually there is a feeling of general illness and weakness, headache, pains in the limbs or back, some nausea, a little increase of temperature, and a small pulse. After this, in a longer or shorter time, the temperature rises, the breathing is quickened, and the expired air contains an excess of carbonic acid, the pulse becomes rapid, full, and bounding, the tongue is red and coated, there is much thirst, the urine is high-coloured, scanty, and charged with uric acid, urates, urea, and extractives, the skin is hot and dry, and the brain troubled or wandering. This condition may last some time, days or weeks, and then gradually decline, thus terminating by lysis; or it may come to a more or less sudden end coincidently or consequently on the occurrence of some profuse or offensive evacuation by the bowels, or the bladder, or the skin, thus terminating by crisis; or death may occur from intensity of fever and height of temperature, or from implication of some viscus, or from exhaustion.

Not infrequently there is a tendency to an exacerbation once or twice in the twenty-four hours, in which a period of shivering, of heat, and of sweating follow each other, and in some, as in malarial fevers, the interval between each exacerbation is marked by a more or less entire remission of the febrile condition.

The nature and cause of fever are yet unexplained. That the increased heat of the body is, in large part at least, caused by excessive metabolism of the tissues is certain; that the febrile process is largely influenced by that part of the central nervous system which assists in regulating the temperature of the body is more than probable; and that there is a grave alteration of the composition of the blood, especially of the corpuscles, is manifest; but the interdependence of these conditions, their relative causative influence, and their possible origin in some as yet unknown action, is unsettled.

**F., abdominal.** (*L. abdomen*, the belly.)

A synonym of *Enteric fever*. In former times, especially applied to those cases in which the abdominal symptoms, diarrhoea, tympanites, and such like, were predominant.

**F., abdominal typhus.** A synonym of *Enteric fever*.

**F., acclimating.** (*L. ad*, to; *clima*, a climate.) Yellow fever, because it is apt to attack those who have recently arrived in the localities in which it is rife.

**F., adenomeningeal.** (*Ἀδὴν*, a gland; *μῆνις*, a membrane.) A term applied by Pinel to cases of dithienenteritis or enteric fever accompanied with considerable mucous discharge from the glands of the intestine.

**F., adenonervous.** (*Ἀδὴν*, a gland.) A synonym, by Pinel, of *Plague*.

**F., adynamic.** (*Ἄ*, without; *δύναμις*,

# FEVER.

power. *L. febris asthenica*; *F. fièvre adynamique, fièvre ataxique, fièvre putride*; *G. schleichenches Fieber*.) Fever accompanied with great prostration of the vital powers, especially the muscular, a not very high temperature, and a soft pulse.

The term was used by older authors so as to include cases of typhus fever. See *Typhus fever, adynamic*.

The term is also applied to the form of *Enteric fever* in which there is protracted pyrexia and great prostration.

**F., adynamic putrid.** See *F., putrid, adynamic*.

**F., adynamo-ataxic.** Begin's term for a febrile condition presenting the characters both of *F., adynamic* and *F., ataxic*. See *Typhus fever, ataxo-adynamic*.

**F., African.** (*Africa*.) A synonym of *Yellow fever*.

**F., agrypnod.** (*Ἀγρυπνός*, making sleepless.) A fever which is marked by sleeplessness.

**F., algid.** (*L. algidus*, cold.) See *Algid fever*.

**F., algid pernicious.** See *F., pernicious, algid*.

**F., amphimerine.** (*Ἀμφομερινός*, quotidian.) Sauvage's term for a remittent fever having daily paroxysms.

**F. and ague.** The same as *Intermittent fever*.

**F., angelocardiac.** (*Ἀγγεῖον*, a vessel; *καρδία*, the heart.) A fever which causes endocarditis.

**F., angiotenic.** (*Ἀγγεῖον*; *τείνω*, to stretch.) Pinel's term for the inflammatory fever of authors.

**F., anomalous.** (*Ἀνόμαλος*, irregular.) A fever the course of which is irregular.

**F., anomalous remittent.** (*L. remitto*, to send back.) The same as *F., remittent, chronic*.

**F., aphonic.** (*Ἀφωνος*, speechless.) A form of intermittent in which the voice is lost during the paroxysm.

**F., aphthous.** (*Ἀφθα*, an eruption in the mouth.) The aphthous stomatitis of neat cattle.

**F., apoplectic.** (*Ἀποπληκτικός*, apoplectic.) A fever in which there is a tendency to congestion of the head and apoplexy.

**F., ardent.** (*L. ardens*, burning.) A form of fever which attacks only new-comers to an intertropical country, especially America and Africa. In this form the type is continued, or a remission does not occur till after thirty or thirty-six hours. It appears to proceed partly from malaria and partly from vicissitudes of temperature acting upon a European constitution. The febrile phenomena appear with rapidity and regularity. The period of excitement is acute, and attended by greatly increased vascular action. It is the same as *F., continued, simple*. See also *F., continued, ardent*.

The ardent fever of India is a severe and protracted febricula, or simple continued fever.

**F., ardent, continued.** A term which has been used in the same sense as *F., pernicious*, but chiefly applied to severe cases of simple continued fever occurring in the tropics, as by Morehead. See *F., continued, ardent*.

**F., army.** A term for typhus fever, in reference to its frequent outbreak in, or in the

wake of, large armies, especially in earlier times. See *F., military*.

**F., arthritic.** (*Ἀρθρίτις*, gout.) Fever connected with inflammation of the joints, as in acute gout and rheumatism.

**F., articular.** (*L. articulum*, a joint.) A synonym of *Dengue*, on account of the joint-pains.

**F., articular, eruptive.** (*L. articulus*, pertaining to the joints; *erumpo*, to break out.) A synonym of *Dengue*, in reference to the joint-pains and the skin rash.

**F., articular, rheumatic.** (*L. articulus*; *rheumaticus*, rheumatic.) A synonym of *Dengue*, from the joint-pains.

**F., artificial.** (*L. ars*, art; *facio*, to make.) Fever induced by the action of drugs, as of alcohol or other stimulants.

**F., asodic.** See *Febris asodes*.

**F., asthenic.** (*Ἀσθενής*, weak.) Fever accompanied by great exhaustion of the system, such as occurs in typhus; with a not very high temperature and a soft pulse.

**F., asthenic inflammator.** See *F., inflammatory, asthenic*.

**F., asthenic, simple.** Murchison's term for a variety of simple continued fever of much longer duration and of a weaker or more asthenic type than the ordinary form. There is considerable loss of strength, a feeble pulse ranging from 90 to 120, a slightly furred tongue, confined bowels, more or less headache, and disturbed sleep; it may last two or three weeks, but is never fatal. It would appear to follow great mental or bodily fatigue, and may be mistaken for mild cases of enteric fever.

**F., asthmatic.** (*Ἀσθμα*, panting; from *ἄω*, to blow.) A form of intermittent fever in which symptoms of asthma are present.

**F., ataxic.** (*A. neg.*; *ταξίς*, order. *F. fièvre ataxique*.) A febrile condition, also known as the typhoid condition, in which there is great prostration of strength, muttering delirium, stupor, more or less unconsciousness or even coma, muscular tremors, subsultus, involuntary evacuation of urine and feces, tongue dry and brown, mouth covered with sordes, surface pungently hot, but easily cooling, small, soft, sometimes irregular pulse, and weakened cardiac impulse, with indistinct heart sounds.

The term has also been applied to typhus fever, in reference to its great tendency to prostration; and it is also used to denote a variety of this fever. See *Typhus fever, ataxic*.

Some cases of Pinel's *fièvre ataxique* were doubtless cases of *Enteric fever*.

**F., ataxic intermittent.** Same as *Malarial fever, pernicious intermittent*.

**F., ataxo-adynamic.** (*Ἀταξία*, want of order; *ἀδυναμία*, want of strength.) Fever attended with great exhaustion and loss of the power of co-ordinating the muscles.

Also, a synonym of *Typhus fever*, as well as of the special variety of it called by this name.

Also, a term for bovine pest, or *Cattle plague*.

**F., atrabillious, hectic.** (*ἰ. ater*, black; *bilis*, bile; *E. hectic*.) The form of low fever occurring in those who are subject to chronic disorder of the liver and other digestive organs, and in whom the portal circulation is obstructed, the intestinal and biliary secretions disordered, and the digestive canal torpid.

**F., atypic.** See *Atypic fever*.

The term has also been applied to fevers which

## FEVER.

do not run a definite course according to the continued or remittent or other type; such are the fever of syphilis and the fever of trichinosis.

**F., auriginous.** See *Febris auriginosa*.

**F., autumnal.** (*L. autumnalis*, autumnal.) A synonym of *Intermittent fever*.

Also, a synonym of *Remittent fever*.

Also, a term by Flint and other American writers for *Enteric fever*, from its prevalence in the autumn.

**F., ballast.** Fever occurring in those exposed to the emanations from foul ballast on board ship.

**F., Barcelonæ.** (*Barcelona*, a town in Spain.) A synonym of *Yellow fever*.

**F., bas'tard.** (Old *F. bastard*, son of a *bast*, or packsaddle, not of a bed.) A fever whose course is irregular.

**F., Ben'gal.** (*Bengal*, an Indian Presidency.) A remittent fever prevalent in Bengal.

**F., biliary.** (*L. bilis*, bile.) A synonym of *Relapsing fever*.

**F., biliary, remit'tent.** A synonym of *Relapsing fever*.

**F., bilio-gastric**, Copland. (*L. bilis*, bile; *Gr. γαστήρ*, the belly. *F. fièvre mningo-gastrique*, Pinel.) A sporadic endemic or epidemic form of fever in which, with the usual febrile phenomena, there is predominant affection of the biliary functions and of the digestive mucous surface, frequently with yellowness of the skin in the severer cases. It is believed to be caused by exhalations from the soil. Doubtless *Enteric fever*.

**F., bilio-inflam'matory.** (*L. bilis*, bile; *inflammatorius*, inflammatory.) The same as *F. ardent*.

Also, the same as *F. bilio-gastric*.

**F., bilious.** (*L. biliosus*, bilious.) A synonym of *F. remittent*, from the frequent hepatic complications.

Also, a term applied to digestive troubles accompanied with vomiting of bilious matter and with increased temperature.

Also, Pringle's term for *Enteric fever*.

Also, the same as *F. gastric*.

**F., bilious, contin'ued.** The same as *F. bilio-gastric*, that is *Enteric fever*.

**F., bilious, hæmaturic.** (*L. bilis*, bile; *Gr. αἷμα*, blood; *ὀνέω*, to make water.) A severe form of remittent malarial fever, characterised by hæmaturia and more or less intense jaundice.

**F., bilious, pernicious.** Same as *F. pernicious*.

**F., bilious, pu'trid.** A term for *Cattle plague*.

**F., bilious, pu'trid conta'gious.** A term which has been applied by Billet to *Typhus fever*.

**F., bilious, relaps'ing.** Same as *Relapsing fever*; a term used by Steele.

**F., bilious, remittent.** Same as *F. remittent*.

Also, a synonym of *Relapsing fever*.

Also, the same as *F. ardent*.

**F., bilious, remit'ting.** A synonym of *Dengue*, as observed by Rush in Philadelphia in 1780.

Also, the same as *F. bilious, hæmaturic*.

**F., bilious, ty'phoid.** A term applied by Griesinger to cases of *Relapsing fever* in which there is intense jaundice, enlargement of

liver and spleen, a deeply congested countenance, hæmorrhages from the mucous membranes, drowsiness and subsultus, with an imperfect remission rather than an intermission.

**F., bilious typhous malig'nant.** See *F. malignant bilious typhus*.

**F., black.** The same as *F. malignant purpure*.

**F., blad'dery.** A synonym of *Pemphigus*.

**F., blister.** The herpes of the lips which occurs frequently in feverish or catarrhal disturbances of the body.

**F., blood in.** During the febrile process the relative proportion of water is increased by the diminution in quantity of the red corpuscles, the albumen, and the alkaline salts; and the serum is less alkaline than is normal. Fungoid forms have been found, notably a spirillum in relapsing fever.

**F., Bo'a Vis'ta.** A fever resembling yellow fever, which was rife in 1845 in Fernando Po.

**F., Bo'na.** (*Bona*, a town in Algeria.) A malignant intermittent fever prevalent in Bona from 1832 to 1835.

**F., bone.** (*Sax. han.*) Acute cellulitis or thecal abscess occurring in the fingers of the workers in bone.

**F., bou'quet.** A synonym of *Dengue*.

**F., brain.** A synonym of *Meningitis, cerebro-spinal*.

Also, a synonym of *Phrenitis*.

Also, applied by many old authors to cases of *Typhus fever* with much cerebral disturbance.

Also, applied to the ataxic form of *Enteric fever* when there is much delirium.

**F., brain water.** A synonym of *Hydrocephalus*.

**F., break bone.** (*F. fièvre brisant les os*) A synonym of *Dengue*.

**F., buck'et.** A synonym of *Dengue*.

**F., Bukowina.** A form of relapsing or bilious typhoid fever observed in that district.

**F., Bulam.** A synonym of *Yellow fever*.

**F., bul'ious.** (*L. bulla*, a bleb.) A term for *Pemphigus*.

**F., Burd'wan.** See *Burdwan fever*.

**F., cacochym'ic.** See *Febris cacochymica*.

**F. cake.** (*G. Fieberkuchen*.) The chronic enlargement and thickening of the spleen which is caused by exposure to malarial influences. See *Splenitis, chronic*.

**F., camp.** (*G. Kriegspost*.) Fever occurring amongst soldiers in the field. A synonym by Grant of *Typhus fever*.

**F., carbun'cular.** (*F. fièvre charbonneuse*.) The malignant pustule or charbon of ruminants.

**F., cardial'gic.** (*Καρδία*, the heart; *ἀλγος*, pain.) A form of intermittent fever in which pain in the region of the heart is experienced during the paroxysm.

**F., cardit'ic.** (*Καρδία*, the heart.) Intermittent fever accompanied with pain in the region of the heart, violent palpitations, and a tendency to faint.

**F., catar'rh'al.** (*Κατάρρως*, a running from the head.) A synonym of *Bronchitis* and of *Catarrh* with fever.

Also, the same as *Influenza*.

Also, term applied to the milder forms of *Enteric fever*.

**F., catar'rh'al ty'phus.** (*Κατάρρως*.)

## FEVER.

A term for those cases of typhus fever in which bronchitis and hypostatic congestion of the lungs are of early occurrence.

**F., cathe'rine.** (Κατά, about; ημέρα, a day.) A quotidian ague.

Also, a remittent fever with a daily exacerbation.

**F., catheter.** (Καθετήρ, anything put down into.) A term applied by Andrew Clark to a serious and often fatal form of fever of a remittent type, which occasionally follows the commencement of the habitual use of the catheter in persons otherwise without manifest structural defect, and, beyond the cause for the catheter, presenting no evident deviation from healthy life, except in some cases a low density of the urine. From this category is excluded cases distinctly pyæmic or distinctly uræmic. He suggests that the fever is the result of the local irritation which produces disturbance of the nervous system, and that this reacts injuriously, first on the general metabolism of the body, and secondly on the dynamic condition of the secretory organs, especially the kidney; that, in addition, the concurrence of these two conditions is enforced by septic re-absorption of the blood.

**F., cephalalgic.** (Κεφαλή, the head; άλγος, pain.) A form of intermittent fever attended with intense headache.

**F., cephalic.** (Κεφαλή, the head.) Fever occurring chiefly in children, and often premonitory of hydrocephalus.

**F., cerebral.** (L. cerebrum, the brain.) See *Brain fever*.

Also, a term for those ataxic forms of continued fever in which there is considerable irritation and excitement of the brain.

Also, a term for a disease of horses and neat cattle, called *Vertigo, essential*.

**F., cerebro-spinal.** (L. cerebrum, the brain; σπονά, the spine.) Term applied by various authors to *F., petechial*, *F., spotted*, *F., typhus*, and *Purpura*, but now confined to the disease described under the heading *Cerebrospinal fever*.

**F., cess'pool.** A term for *Enteric fever*, in reference to its mode of origin.

**F., Chagres.** An endemic fever prevalent at that place on the isthmus of Panama.

**F., child-bed.** Same as *Puerperal fever*.

**F., chol'eric.** (Χολή, bile.) A variety of pernicious intermittent fever with diarrhoea, cramps, and collapse.

**F., chol'eric, of infants.** The same as *Cholera infantum*.

**F., chronic.** (L. chronicus, long-lasting.) A term sometimes applied to intermittent fever.

Also, a term signifying a long-lasting fever, as the hectic fever of pulmonary phthisis.

**F., chronic remittent.** See *F., remittent, chronic*.

**F., climate.** A fever produced by climatic conditions in new-comers.

**F., colligative.** (L. con, for cum, together; liquo, to melt.) Fever in which, from the violence of the symptoms and the copious evacuations, the powers of the system rapidly fail.

Also, a term for hectic fever, in reference to the profuse sweating.

**F., comatose.** (Κοματώδης, lethargic.) Fever attended with great congestion of the head

and apoplectic symptoms, especially applied to the comatose form of *F., pernicious*.

**F., comatose pernicious.** See *F., pernicious, comatose*.

**F., common continued.** See *F., continued, common*.

**F., congestive.** (L. congero, to carry together.) A synonym of *Meningitis, cerebro-spinal*.

Also, a term applied in America to a fever occurring usually in the autumn, accompanied by great depression. But also applied indifferently to winter typhus and enteric fevers, and to typhoid pneumonia, as well as to intermittents, and to autumnal remittents.

**F., congestive typhus.** See *Typhus fever, congestive*.

**F., contagious.** (L. contagium.) A fever which is propagated by contagion; often specially applied to *Typhus fever*, as by Bateman.

**F., contagious nervous.** See *F., nervous, contagious*.

**F., contagious, of ships.** A term applied to *Typhus fever*, because in earlier times it was of not infrequent occurrence among sailors and persons who were closely packed on board ship and badly fed.

**F., contagious, putrid bilious.** See *F., bilious, putrid contagious*.

**F., continent.** (L. continco, to hold together.) The same as *F., continued*, having neither intermission nor remission.

**F., continent, imputrid.** See *F., imputrid continent*.

**F., continual.** (L. continuo, to connect.) A synonym of *F., continued*.

**F., continual, acute.** (L. acutus, sharp.) A term for *F., continued, simple*, used by Langrish.

**F., continual, putrid.** A term for *Typhus fever*, used by Macbride.

**F., continued.** (L. continuus, continual. *F. fievre continue, fievre synoque; I. febris continua; G. Synochus*.) A class of fevers which with only a slight daily variation of temperature steadily advance to their height or fastigium, and then end fatally, or more or less slowly decline.

According to some, the term is restricted to those fevers in which the daily alteration of temperature does not exceed 5° C. (9° F.)

It was a term under which several forms of fever, typhus, enteric, and relapsing, were formerly described and confused.

**F., continued, ardent.** (L. ardens, burning.) A simple continued fever which occurs in the tropics. It is most common among young and plethoric persons who have recently arrived; it is ushered in with more or less rigor, nausea, and vomiting often after exposure to the sun, the pulse becomes quick and full, the skin dry and burning, the face flushed, the head hot and aching, the tongue covered with a thick yellow fur, the temperature gets high, there is often violent delirium, sometimes coma; between the sixth and the ninth day the fever subsides generally by crisis, or death may occur.

**F., continued, common.** Armstrong's name for *Enteric fever*.

Also, the same as *F., continued, simple*.

**F., continued, imputrid.** See *F., imputrid continued*.

**F., continued, inflammatory.** A term which has been used loosely so as to include

## FEVER.

the inflammatory form of typhus fever, relapsing fever, severe cases of simple continued fever, and the fever resulting from local acute inflammations.

**F., continued, malignant.** A term by which Langrish described cases of *Typhus fever*.

**F., continued, miasmatic, of Colorado.** The same as *F., mountain*.

**F., continued, sanguineous.** See *F., sanguineous continued*.

**F., continued, simple.** A sporadic non-contagious fever with no organic lesion, and lasting two or three days, very rarely eight or nine, sometimes only one, and having no invulnerable cause. According to some, it arises from an undescribed and unrecognised contagion. It generally commences by rigors, with an increase of temperature of 3° F. or 4° F., followed by perspiration; the pulse during the attack is quick and firm, there are pains in the back and the limbs, headache, flushed face, thirst, loaded tongue, scanty and high-coloured urine, and a hot skin; defervescence is accompanied by perspiration, a free discharge of urine, and often an herpetic eruption. It arises from exposure to the sun, over-fatigue, or errors in diet.

This term has often been, and doubtless still is, applied to mild or abortive cases of enteric fever.

**F., convulsive.** (*L. convello*, to draw violently together.) A form of remittent or pernicious intermittent fever accompanied with convulsions.

**F., country.** A synonym much used in the Southern States of America for intermittent fever.

**F., crisis in.** (*Kρίσις*, a separating, the turning point.) The occurrence of profuse sweating, of a copious secretion of urine, or of a free discharge of offensive or liquid fæces, upon which the fever is arrested.

**F., critical.** (*Κρίσις*.) The exacerbation of the febrile state which sometimes precedes and, as it were, forms part of the crisis of a fever.

**F., cutaneous hectic.** See *F., hectic, cutaneous*.

**F., Cyprus.** (*Cyprus*, an island in the Mediterranean Sea.) A form of relapsing or bilious typhoid fever.

**F., dandy.** See *Dandy fever*.

**F., defervescence of.** See *Defervescence*.

**F., delirious.** (*L. delirium*, madness. *F. fièvre délirante*.) Intermittent fever in which the paroxysms are characterised by delirium.

**F., depuratory.** (*Low L. depuro*, to cleanse.) A fever supposed to have the effect of purifying the blood; such as an exanthematous fever, which was supposed to be due to a morbid matter in the blood that is cleared off by the eruption.

**F., destroying tree.** The *Eucalyptus globulus*.

**F., diaphoretic.** (*Διαφορητικός*, promoting perspiration.) A form of intermittent fever attended with copious sweating.

**F., diary.** (*L. dies*, a day.) The same as *F., ephemeral*.

**F., diathetic.** (*Διάθεσις*, a condition.) A fever supposed to depend upon some morbid diathesis.

**F., digestive.** (*L. digero*, to separate.)

The slight febrile disturbance which sometimes accompanies the act of digestion.

**F., diphtheritic.** (*Διφθέρια*, a prepared hide.) The fever which is present in cases of diphtheria. It is not always proportioned to the local mischief, and may of itself cause death before the throat is implicated.

**F., diphtheroid.** See *Febris diphtheroides*.

**F., double.** (*F. fièvre double, f. doublée*.) Intermittent fever in which there are two paroxysms in a given time instead of one.

**F., double quartan.** (*L. quartus*, the fourth.) A form of intermittent fever in which the paroxysms occur two days in succession, and are absent on the third day; the first and fourth paroxysm resemble each other, and the second and fifth.

**F., double quotidian.** (*L. quotidie*, daily.) A form of intermittent fever in which the paroxysms recur twice daily.

**F., double tertian.** A form of intermittent fever in which the paroxysms recur every day; the first and third and the second and fourth days' paroxysms being similar in character.

**F., drops, Warburg's.** See *Warburg's tincture*.

**F., duodecimane.** (*L. duodecim*, twelve.) A form of intermittent fever in which the paroxysms are supposed to recur on the twelfth day.

**F., dynamic.** (*Δύναμις*, power.) A synonym of *F., inflammatory*, or of *Synocha*.

Also, a term by Stoker for *Relapsing fever*.

**F., dysenteric.** A term applied to acute dysentery with much fever.

**F., endemial.** (*Ev. in*; *ὁῖμος*, the people.) The same as *F., remittent*.

**F., endemic.** (*Ev. in*; *ὁῖμος*, the people.) The same as *F., remittent*.

Also, a term applied to *Enteric fever*.

**F., endemical.** (*Ev*; *ὁῖμος*.) The same as *F., remittent*.

**F., endemo-epidemic.** (*Ev*; *ὁῖμος*; *ἐπί*, upon.) A synonym by Thaly of *Dengue*.

**F., enteric.** See *Enteric fever*; the term was first used by Ritchie in 1846.

**F., enteric abdominal.** (*L. abdomen*, the belly.) The form of enteric fever in which the diarrhoea and other abdominal symptoms are well marked.

**F., enteric, abortive.** (*L. abortivus*, born prematurely.) The form of enteric fever in which there is resolution instead of ulceration of the inflamed intestinal glands; the fever is high for the first few days only, the rash does not always appear, and constipation is more common than diarrhoea. These are the cases which have been called mucous fever, or febricula.

**F., enteric, adynamic.** (*Ἄδυναμις*, strength.) The form of enteric fever in which the pyrexia is prolonged and the prostration great.

**F., enteric, ague-like.** The form of enteric fever in which the early stages resemble ague in the regularity and violence of the rigors.

**F., enteric, ataxic.** (*Ἄταξις*, order.) The form of enteric fever in which delirium and other nervous symptoms are accompanied by the typhoid condition.

**F., enteric, hæmorrhagic.** (*Ἄιμορραγία*, violent bleeding.) The form of enteric fever in which there is free bleeding from the mucous surfaces and into the skin.

**F., enteric, insidious.** Same as *F., enteric, latent*.

**F., enteric, latent.** (L. *latens*, to lie hid.) The form of enteric fever in which there is little heat of body or quickness of pulse, little or no rash, little or no diarrhoea; recovery may take place, or after violent delirium death may occur from profuse hemorrhage from the bowels or with symptoms of perforation.

**F., enteric, thoracic.** (Θώραξ, the chest.) The form of enteric fever in which bronchial and pneumonic symptoms are prominent.

**F., enteritic.** (Εντέρον, an intestine.) A term used by Mills for *Enteric fever*.

**F., entero-mesenteric.** (Εντέρον, an intestine, *mesenterion*, the membrane to which the intestines are attached. *F. fièvre entero-mésenterique*.) Petit's term, and also Armstrong's, for *Enteric fever*.

**F., ephemeral.** (Εφίμερος, lasting a day. *F. fièvre phénix*; L. *effimero*; S. *efimera*; G. *das entägige Fieber*.) A form of ardent fever in which the pulse is increased in frequency and strength, the skin is hot, and there are headache, thirst, and white tongue. It generally terminates in sweating in twenty-four hours. Dr. Good recognised a mild and an acute form.

Also, see *Ephemeral fever*.

**F., epidemic.** (Επί, upon; ὄχλος, the people.) The same as *Typhus*.

Also, a synonym of *Pest*.

**F., epidemic, epidemical.** (Επί; ὄχλος.) A term by Rogers for *Typhus fever*.

**F., epidemic gastric.** See *F., gastric, epidemic*.

**F., epidemic remittent.** (L. *remitto*, to send back.) A term for *Relapsing fever*, used by Mackenzie.

**F., epidemic, the.** A term applied to *Relapsing fever*.

**F., epileptic.** (Επίληπτικός, epileptic; from ἐπί, upon; λαμβάνω, to take hold of.) A form of intermittent fever attended with epileptic attacks.

**F., epithelial.** (Epithelium.) Baill'y's term for the constitutional infectious epidemic disease which comprehends the various kinds of fever, all of which have their seat in one or other of the epithelial surfaces.

**F., epithelial, cutaneous.** (L. *cutis*, the skin.) Baill'y's term for the form of epithelial fever which includes the different exanthemata, which are affections of the cutaneous epithelium.

**F., epithelial, mucous.** Baill'y's term for the form of epithelial fever which includes the different catarrhal and mucous fevers, which are affections of the mucous epithelium.

**F., epithelial, serous.** Baill'y's term for the form of epithelial fever which includes the different arthritic, peritoneal, and meningial fevers, which are affections of the serous epithelium.

**F., erotic.** (Ερωτικός, caused by love. *F. fièvre d'amour*.) The fever which occasionally accompanies *Erotomania*.

**F., erratic.** (L. *erro*, to wander.) An intermittent fever which does not conform to any recognised type.

**F., eruptive.** (L. *erumpo*, to break forth.) The fever which accompanies the development of the cutaneous eruption in the exanthemata.

**F., eruptive, articlular.** A synonym of *Dengue*, in reference to the joint-pains and the rash.

**F., eruptive rheumatic.** A synonym of *Dengue*, in reference to the joint-pains and the rash.

**F., erysipelatous.** (Ερυσίπελας.) The feverish condition which constitutes, according to some, the true essence of erysipelas, and which may, under certain conditions, as when erysipelas is epidemic, exhibit itself without any external local manifestation.

**F., essential.** (L. *essentia*, the being or essence of anything; from *sum*, to be.) The same as *F., idiopathic*.

**F., exacerbating.** (L. *exacerbo*, to irritate.) The same as *F., remittent*.

**F., exanthematic typhus.** See *F., typhus, exanthematic*.

**F., exanthematous.** (ΕΞΑΝΘΗΜΑ, an eruption of the skin.) The fever accompanying one of the exanthemata.

**F., fainting, of Persia.** An epidemic observed at Teheran in 1842, and characterised by fainting and choleraic symptoms.

**F., fall.** A synonym in America both of *Enteric fever* and of *Remittent fever*, in consequence of their prevalence in the autumn, the time of the fall of the leaf.

**F., famine.** (L. *fames*, hunger. G. *Hungerpest*.) A synonym of *Relapsing fever*; used in 1826 by Stoker.

Also, applied to the *Typhus fever* which occurs in periods of famine.

**F., fermentation.** (L. *fermentum*, leaven. G. *Fermentationsfieber*.) A term applied by Klebs to the feverish conditions excited by the presence of fibrin-ferment in the blood.

**F., fifteen-day.** A form of continued fever in which relapse occurs at this date.

**F., five-day.** A form of continued fever in which relapse occurs frequently on the fifth day. The fever described under this name was probably in all cases *Relapsing fever*.

**F., gall.** A term applied to those cases of intermittent fever in which the biliary functions are very much disturbed.

**F., gangrenous.** (Γάγγραινα, a cancerous, eating ulcer.) A form of intermittent fever described by Senae, in which gangrene of the extremities occurred.

**F., gaol.** (Old F. *gaiole*, *gaole*; from Low L. *gabola*, dim. of *gabia*, a cage; a corruption of L. *cavea*, a cage; from *carus*, hollow. F. *gaôle*.) A term for a very infectious and fatal fever which at various times and in divers countries has broken out in crowded, dirty prisons, and spread amongst judges, witnesses, and spectators at assizes, killing very many. Several of these epidemics have been recorded in England under the term *Black Assize*. There is no doubt that this was *Typhus fever* generated in the prison out of the filth, and overcrowding, and bad diet and close foul air; it often assumed the petechial form.

**F., Garrick.** Fever of a low form, which was supposed to proceed from overcrowding of theatres when Garrick acted.

**F., gastralgic.** (Γαστήρ, the belly; ἄλγος, a pain.) A form of intermittent fever accompanied with severe pain in the stomach.

**F., gastric.** (Γαστήρ, the belly. F. *fièvre gastrique*; G. *gastrisches Fieber*.) A term which has chiefly been used to denote what is now called *Enteric fever*, and latterly more especially applied to cases of that disease in which the

# FEVER.

rose spots are not present, or in which the disease is in an abortive or latent form.

The term has also, doubtless, not infrequently been employed to designate cases of simple continued fever accompanied by excessive disturbance of the digestive mucous membrane.

Also, a synonym of *Yellow fever*.

Also, a term for the febrile condition which frequently attends gastric disturbances of local origin.

**F., gastric, epidem'ic.** Cheyne's term for *Enteric fever*.

**F., gastric hec'tic.** (Γαστήρ, the belly; ἔξις, habit.) Broussais' term for a form of hectic fever in which anorexia, thirst, and difficult digestion, with the usual concomitants of eructation, flatulence, acidity, and cardialgia are present. In children it presents characters closely resembling those of remittent. It is the form of hectic often observed to follow prolonged lactation.

**F., gastric, infantile.** (Γαστήρ.) Same as *F., remittent, infantile*.

**F., gastric-inflammatory.** (Γαστήρ; inflammation.) The same as *F., bilio-gastric*.

**F., gastric, malarious.** Same as *Remittent fever*.

**F., gastro-adyne'mic.** (Γαστήρ; ἀδυναμία, want of power.) A form of bilious fever attended with great depression.

**F., gastro-angiotenic.** (Γαστήρ; ἀγγείον, a bloodvessel; τέννω, to stretch.) A form of bilious fever attended with much vascular excitement.

**F., gastro-ataxic.** (Γαστήρ; ἀταξία, disorderliness.) Bilious fever in which the symptoms are associated with those of ataxic fever.

**F., gastro-bilious.** (Γαστήρ, the belly; L. biliosus, bilious.) The same as *Enteric fever*.

**F., gastro-enteric.** (Γαστήρ; έντερον, an intestine.) A term for *Enteric fever*, used by Craigie.

**F., gastro-hepatic.** (Γαστήρ; ήπαρ, the liver.) Ritchie's term for *Relapsing fever*.

**F., gastro-splenic.** (Γαστήρ; σπλήν, the spleen.) A term for *Enteric fever*, used by Craigie.

**F., gen'ital hec'tic.** (L. genitalis; hectic.) Hectic fever resulting from excessive sexual indulgence, and occasionally from irritation of the urinary organs.

**F., Gibralt'ar.** A synonym of *Yellow fever* occurring at that place.

**F., gout'y.** The fever accompanying an attack of acute gout.

**F., growing.** (F. fièvre de croissance.) The febrile condition seen in certain children at a period of rapid growth.

**F., hæmaturic bilious.** See *F., bilious, hæmaturic*.

**F., hæmogastic.** (Αἷμα, blood; γαστήρ, the belly.) A synonym of *Yellow fever*.

**F., hæmopto'ic.** (Αἱμοπτοικός, spitting blood.) A form of intermittent fever characterised by periodic attacks of hæmoptysis.

**F., hæmorrhagic.** (Αἱμορραγία, violent bleeding.) The febrile symptoms which occur in the reaction after severe hæmorrhage. It is characterised by a quick, jerking pulse, irregular in rhythm and uneven in heat; the face becomes flushed and then pale; delirium, convulsions, and intense restlessness herald death.

Also, applied to the form of pernicious fever in which there is vomiting of blood.

Also, a term for the form of *Enteric fever* in which there are hæmorrhages into the skin and from the mucous surfaces.

**F., hæmorrhagic hec'tic.** (Αἱμορραγία; ἐκτικός, habitual; from ἔξις, habit of body.) The slow fever consequent upon hæmorrhages from the digestive mucous tracts, or other parts.

**F., hæmorrhagic malarial.** (Αἱμορραγία; malaria.) A severe form of remittent malarial fever, the *Febris remittens hæmorrhagica*. It is characterised by hæmaturia, and more or less intense jaundice.

**F., hæmorrhagic pu'trid.** (Αἱμορραγία; L. putridus, corrupt.) A term applied to those cases of *Enteric fever* in which there is severe bleeding from the mucous surfaces of the mouth and urinary passages, as well as from the intestines and into the skin, combined with the condition called typhoid.

**F., har'vest.** A febrile condition resulting from hard work in the sun and much drinking of alcoholic liquors.

**F., hay.** See *Hay fever*.

**F., hebdom'adal.** (L. hebdomadalis, weekly.) A form of intermittent fever in which the paroxysms occur on the same day in each week.

**F., hec'tic.** (Εκτικός, habitual or constitutional; from ἔξις, habit of body. F. fièvre hectic; L. ctica febris; G. hektisches Fieber.) See *Hectic fever*.

**F., hec'tic, atrabil'ious.** See *F., atrabilious hectic*.

**F., hec'tic, cuta'neous.** (Εκτικός, from ἔξις, habit; L. cutaneus, belonging to the skin.) Broussais' term for a form of hectic fever associated with cutaneous eruptions.

**F., hec'tic, gastric.** See *F., gastric hectic*.

**F., hec'tic, gen'ital.** See *F., genital hectic*.

**F., hec'tic, hæmorrhagic.** See *F., hæmorrhagic hectic*.

**F., hec'tic, in'fantile.** (Εκτικός; L. infans, a child.) A term formerly applied to cases of *Enteric fever* in children.

**F., hec'tic inflam'matory.** See *F., inflammatory, hectic*.

**F., hec'tic, men'tal.** See *F., mental hectic*.

**F., hec'tic, mor'al.** See *F., moral hectic*.

**F., hec'tic, ner'vous.** See *F., nervous hectic*.

**F., hec'tic, pec'toral.** See *F., pectoral hectic*.

**F., hec'tic, pitu'itous.** See *F., pituitous hectic*.

**F., hec'tic puer'peral.** See *F., puerperal, hectic*.

**F., hec'tic, pu'trid.** See *F., putrid hectic*.

**F., hec'tic, ver'minous.** See *F., verminous hectic*.

**F., hepatal'gic.** (Ηπαρ, the liver; ἄλγος, pain.) The same as *F., hepatic*.

**F., hepatic.** (Ηπαρ, the liver.) A pernicious malarial fever attended with pain in the region of the liver.

**F., herpetic.** (Herpes. F. fièvre herpétique.) The form of simple continued fever in which an herpetic eruption of the skin about the

## FEVER.

mouth and nose breaks out towards the end of the attack.

**F., high.** A febrile condition in which the temperature ranges between 103° F. and 106° F.

**F., hill.** A form of remittent fever occurring on the hills in India.

**F., homotonic.** (Ομός, equal; τόνος, tone.) A continued fever, having neither paroxysms nor remission, but always preserving the same intensity.

**F., hospital.** (F. *fièvre des hopitaux*.) A synonym of *Typhus fever* by Pringle; the name was given to express the belief that overcrowding in hospitals, especially army hospitals, produced the contagium of the disease.

Also, a synonym of *Pyæmia*.

**F., hospital, malignant.** See *F., malignant, of hospitals*.

**F., hot.** (F. *fièvre chaude*.) A term applied to meningitis and to acute mania, from the frequent burning heat of the skin.

**F., humoral.** (L. *humor*, a fluid.) Fever formerly supposed to affect the fluids of the body, and especially the blood.

**F., Hungary.** A form of typhus fever affecting the soldiers in Hungary under the Emperor Maximilian in 1556.

**F., hybrid.** (L. *febris composita*.) Fever in which, as in the typho-malarial form, two distinct types are blended together.

**F., hydrophobic.** (Υδροφοβία, hydrophobia.) A form of pernicious malarial fever attended with a dread of liquids.

**F., hyperpyretic.** (Υπέρ, above; πυρετός, fever.) A febrile condition in which the temperature exceeds 106° F.

**F., hysterical.** (Υστερικός, hysterical.) Fever accompanying a severe attack of hysteria. Also, applied to an intermittent fever, in which hysteria accompanies each paroxysm.

Also, a former popular term for *Enteric fever*.

**F., hysterical.** A term for what used to be called *Typhus mitior*, from the great mental languor and dejection which accompanies it. It is *Enteric fever*.

**F., icteric.** (Ικτερικός, jaundiced.) A form of pernicious malarial fever in which the liver is affected, and more or less jaundice occurs.

**F., icteric, remitting.** A synonym of *Relapsing fever*.

**F., idiopathic.** (Ιδιοπάθεια, feeling for oneself alone.) Fever arising from other causes than inflammations of organs or textures; examples of such fevers are the intermittent, remittent, continued, and exanthematous fevers. The term is used in opposition to *F., symptomatic*.

**F., ileo-typhus.** A synonym of *Enteric fever*, in reference to the affection of the ileum.

**F., illegitimate.** Fever, especially of the intermittent type, which does not run its regular course.

**F., impu'rid contin'ed.** (L. *im*, for *in*, not; *putridus*, putrid; *continens*, holding together.) Lommius's term for inflammatory fever.

**F., impu'rid contin'ed.** (L. *im*; *putridus*; *continens*, continual.) Boerhaave's term for inflammatory fever.

**F., infantile, gastric.** (Γαστήρ, the belly.) Same as *F., remittent, infantile*.

**F., infantile, hectic.** See *F., hectic, infantile*.

**F., infantile, remittent.** See *F., remittent, infantile*.

**F., infectious.** (L. *infectio*, to taint.) A fever which is propagated by infection. A term under which Lind described cases of *Typhus fever*.

**F., infectious ship.** (L. *infectio*.) A term under which Blane described cases of *Typhus fever*, in reference to its contagious quality and its place of origin.

**F., infective.** (L. *infectio*, to taint.) A fever resulting from an inflammation, which spreads and endures beyond the direct and primary operation of its cause, and produces similar inflammations in other parts of the body.

**F., inflam'matory.** (L. *inflammo*, to inflame. Gr. *καῦσος*, *αἰνός*; L. *synochus imputris*; F. *fièvre inflammatoire continue*; I. *fièvre inflammatoria*; S. *calentura continua*; G. *synochisches Fieber*, *entzündliches Fieber*.) A simple continued fever characterised by pain in the head, back, and limbs, with high temperature, full, hard, and frequent pulse, great thirst, scanty and high-coloured urine, constipated bowels, and restlessness and anxiety; it generally ends abruptly with free perspiration. The mild form is rarely prolonged beyond seven days. It is the same as *F., continued, simple*.

Also, a term under which Stoker has described cases of *Relapsing fever*.

Also, the fever accompanying inflammation of some organ or tissue; it varies in character and severity according to the nature and amount of the tissues affected; and is described as being sthenic, asthenic, or irritative in form.

**F., inflam'matory, asthenic.** (Ασθενής, without strength.) The form of surgical inflammatory fever which occurs in persons of weak constitution or unhealthy surroundings, or the subject of some dyscrasia, or as a sequel to the sthenic form; the symptoms early become what is called typhoid, there is stupor or muttering delirium, a quick weak pulse, a brown, dry tongue, with much sordes and hicough, subsultus and coma precede death; or recovery takes place often after a critical offensive or bloody discharge from the bowels.

**F., inflam'matory contin'ed.** See *F., continued, inflammatory*.

**F., inflam'matory, hectic.** The form of symptomatic fever often attending chronic inflammation of some internal viscus.

**F., inflam'matory, irritative.** (L. *irrito*, to excite.) The form of surgical inflammatory fever of the asthenic type, in which, from some irritation of the nervous system or anxiety of mind, there is, after much fever, furious delirium and a small quick pulse, with rapid exhaustion and death from coma.

**F., inflam'matory, secondary.** Billroth's term for a fever which may follow the subsidence of traumatic fever, or in the absence of this, may come on late after a wound, in consequence of inflammation in its neighbourhood.

**F., inflam'matory, simple.** A term for *F., continued, simple*, used by Huxham and Fordyce.

**F., inflam'matory, sthenic.** (Σθένος, strength.) The form of surgical inflammatory fever occurring in persons in good health and having a good constitution, in which the pulse is full and strong, the skin burning and dry, and

# FEVER.

the head hot; the fever may decline after some critical evacuation, or death may occur from some visceral congestion or inflammation, or the disorder may degrade into the asthenic form.

**F., inflammatory, surgical.** The form of *F., inflammatory*, where inflammation of some organ or tissue is caused by injury.

**F., inflammatory typhus.** See *Typhus fever, inflammatory*.

**F., insidious.** (L. *insidiosus*, cunning.) Fever in which the symptoms, commencing mildly, gradually increase in intensity, till they assume a severe and dangerous form.

**F., intercurrent.** (L. *inter*, between; *curro*, to run.) A fever which supervenes in the course of another fever of different nature.

**F., intermittent.** (L. *intermittit*, to interrupt.) A fever in which febrile paroxysms occur at periodic intervals, with freedom from fever in the period between two paroxysms; each paroxysm begins with a cold or shivering stage, proceeding to a hot stage, and ending with a sweating stage. See *Ague*.

**F., intermittent ataxic.** (Ἀταξία, want of order.) The same as *Malarial fever, pernicious intermittent*.

**F., intestinal.** (L. *intestinum*, an intestine. G. *Darmtyphus*.) William Budd's term for *Enteric fever*.

**F., intestinal, of cattle.** A term for *Cattle plague*.

**F., intestinal, of horse.** An epidemic of a fever thus named has been described. It was supposed to be really *Enteric fever*, and to have been caused by the emanations from the intestinal discharges of persons suffering from enteric fever.

**F., irritative.** (L. *irrito*, to irritate.) A form of fever resulting from local lesion. See *F., inflammatory, irritative*.

**F., jail.** See *F., gaol*.

**F., jungle.** A synonym of *Remittent fever*, caused by the miasma of a jungle.

**F., Kol'ias.** A pernicious fever common in Abyssinia on the banks of streams after the rainy season.

**F., lake.** Term applied in America to malarial fever engendered by the regions around the great lakes.

**F., laz'aret.** (I. *lazaretto*, a pest-house, a plague hospital.) A low form of fever engendered by overcrowding in a lazaretto or in lodging houses.

**F., lenticular.** (L. *lenticula*, a lentil.) A synonym of *Miliary fever*.

**F., Levant.** (Levant, the eastern extremity of the Mediterranean Sea.) A form of relapsing or bilious typhoid fever common in the Levant.

**F., lipyr'iau.** See *Lipyr'ia*.

**F., lo'cal.** Same as *Febris toxica*.

**F., lo'chial.** (Λοχεία, childbirth.) A febrile condition occurring during the discharge of the lochia.

**F., low.** Fever of a continued type, accompanied with much nervous prostration.

A common term for cases of *Enteric fever*.

**F., low child-bed.** The same as *Puerperal fever*.

**F., low ner'vous.** See *F., nervous, low*.

**F., lung.** A synonym of *Pneumonia*.

**F., ly'sis in.** (Λύσις, a solution.) The slow and gradual decline of a fever without any critical evacuation.

**F., mac'ulated.** (L. *maculatus*, part. of *maculo*, to speckle.) A synonym of *Typhus*.

**F., mala'rial.** (L. *mala aris*, bad air.) See *Malarial fever*.

**F., mala'rious.** See *Malarial fever*.

**F., malign'ant.** (L. *malignus*, from *malus*, bad.) Fever of a grave or serious type, leading rapidly to death, often applied as a synonym to *Typhus fever*, as by Fordyce.

**F., malign'ant bil'ious typhous.** Russeger's term for an endemic fever occurring in Nubia, which does not intermit in its course, and which spreads by contagion.

**F., malign'ant, continu'ed.** See *F., continu'ed malign'ant*.

**F., malign'ant, of hos'pitals.** (F. *fièvre des hopitaux*.) A term used by Pringle for *Typhus fever*, from its prevalence in hospitals.

**F., malign'ant, of ships.** A term for typhus fever occurring in overcrowded and insalubrious ships.

**F., malign'ant, of the tropics.** A synonym of *F., pernicious*.

**F., malign'ant pestilen'tial.** (L. *malignus*; *pestilens*, pestilent.) A synonym of *Yellow fever*.

Also, a synonym of the typhus fever of cattle or cattle plague.

**F., malign'ant purpu'ric.** A synonym of *Cerebrospinal fever*.

**F., malign'ant, pu'trid.** A term for *Typhus fever*, used by Huxham.

**F., marsh.** A synonym of *F., intermittent*, from its common place of origin.

**F., marsh remit'tent.** Same as *Remittent fever*.

**F., mask'ed.** An irregular form of intermittent fever. See *Ague, masked*.

**F., Mediterra'nean.** A synonym of *Remittent fever*.

**F., melanu'ric.** (Μέλας, black; ούρον, urine.) The same as *Malarial fever, hæmorrhagic*.

**F., meningogas'tric.** (Μήνινξ, membrane; γαστήρ, the belly.) A synonym of *Gastric fever*.

**F., menorrhag'ic.** (Μήν, a month; ῥίγνναι, to flow fiercely.) Term applied by Trousseau to febrile conditions coincident with menorrhagia.

**F., men'tal hec'tic.** The slow fever resulting from depressing conditions of the mind, as from loss of relatives, from longing, or regrets.

**F., mesenter'ic.** (Μεσέντερον, the mesentery.) Term applied by Baglivi and other writers to cases of what is now called *Enteric fever*.

**F., miasmatic.** (Μίασμα, defilement.) A synonym of *Malarial fever*.

**F., mil'iary.** See *Miliary fever*.

The term has also been used by Ormerod and Watson to denote cases of *Relapsing fever*, in which sudamina appeared at the period of crisis.

The term has also been applied, as by Pringle, to cases of *Enteric fever* in which sudamina occurred.

**F., mil'itary.** (L. *militaris*, belonging to a soldier. G. *Kriegspest*.) A term applied to *Typhus fever* which has always been a pest of armies in the field and in garrison, especially in earlier times. It was very prevalent in the

## FEVER.

English army in the Crimea during the winter of 1854-5, and in the French army during the following year.

It would appear to be generated in the emanations from the body when numbers of men are overcrowded and ill-fed.

**F., milk.** See *Milk fever*.

**F., mixed.** The same as *F., hybrid*.

**F., moderate.** A febrile condition in which the temperature ranges from 101° F. to 103° F.

**F., mongrel.** The same as *F., hybrid*.

**F., moral hec'tic.** The same as *F., mental hectic*.

**F., mountain.** A pernicious malarial fever endemic on the western slopes of the Rocky Mountains and in some of the Californian valleys.

Also, the febrile condition which occasionally attacks one who lives on the plains when he first goes to a high altitude; the temperature does not rise very high, but the heart is very irritable and the pulse and breathing are much quickened on the slightest exertion.

**F., mucous.** Copland. (*L. mucosus*, slimy. *F. fièvre adénomeningée*, Pinel; *I. febbre glutinosa gastrica*; *G. Schleimfieber*.) A form of fever commencing with slight febrile reaction following chills, with mucous evacuations and pains in the back and limbs, and often with slight remissions. It may occur either sporadically, epidemically, or endemically. It is intermediate between bilious gastric fever and the enteric form of synochoid fever, and may arise from, or pass into, fever of a periodic type.

Also, a term for *Enteritis*.

Also, a term for the lighter forms of *Enteric fever*.

Also, a term for the disemper in dogs.

**F., nephritic.** (*Νεφρός*, the kidneys.) A form of intermittent fever in which renal pain is experienced.

**F., nervous.** (*L. nervosus*, nervous.) A synonym of *Typhus fever*.

Also, a synonym of *Enteric fever*, used by Gilchrist.

Also, applied to all fevers of an ataxic type.

**F., nervous, contagious.** A term by which Hildebrand describes cases of *Enteric fever*.

**F., nervous hectic.** Term applied to the constitutional disturbance observed in those who are labouring under mental affections.

**F., nervous, low.** A term for *Enteric fever*.

**F., nervous, low irregular.** A term by which Fordyce describes cases of *Enteric fever*.

**F., nervous, slight.** Term employed by Macculloch for *F., remittent, chronic*.

**F., nervous, slow.** A term by which Huxham describes cases of *Enteric fever*.

**F., nervous, with exanthematous eruption.** A synonym of *Typhus fever*.

**F., nests.** Localities where, owing to overcrowding and defective sanitary arrangements, fever is generated.

**F., neuralgic.** (*Νεύρον*, a nerve; *άλγος*, a pain.) A synonym of *Dengue*.

**F., neuro-purpuric.** (*Νεύρον*; *πορφύρα*, purple.) A synonym of *Cerebro-spinal fever*.

**F., N'iger.** (*Niger*, a river on the West Coast of Africa.) A form of remittent fever pre-

valent amongst the English in 1841-2 in the expedition to the Niger.

**F., night-soil.** A synonym of *Enteric fever*, used by Brown.

**F., no'nan.** (*L. nonnus*, of the ninth.) An intermittent fever in which the paroxysms are supposed to recur every ninth day.

**F., non-infective.** (*L. non*, not; *infectio*, to taint.) A fever caused by a local inflammation, which is more or less limited in duration and extent by the limits of the injury which caused it.

**F., nosocomial.** See *Febris nosocomialis*.

**F., obscure' remittent.** The same as *F., remittent, chronic*.

**F., ochlotic.** (*Οχλος*, a crowd.) Laycock's term for *Typhus fever*.

**F., octane.** (*L. octo*, eight.) An intermittent fever in which the paroxysms recur every eighth day.

**F., of consump'tion.** A synonym of *Hectic fever*.

**F., of the spirits.** A term for *Typhus fever*, used by Quincey.

**F., paludal.** (*L. palus*, a marsh.) A synonym of *F., intermittent* or *Aque*, from its malarial or marshy origin.

Also, a synonym of *Yellow fever*.

**F., Pan'ama.** (*Panama*, an isthmus connecting North with South America.) An endemic fever prevalent in Panama.

**F., paroxysmal.** (*Παροξυσμός*, the severe fit of a disease.) The same as *F., remittent*.

**F., pec'toral hec'tic.** (*L. pectus*, chest; *ἔξις*, habit.) Broussais' term for the constitutional disorder consequent on inflammation or ulceration of the larynx, on various forms of bronchitis, and on various lesions of the lungs and pleura.

**F., period'ic.** (*Περίοδος*, a going round.) A synonym of *F., intermittent* or *Aque*.

**F., periodical.** (Same etymon.) A synonym of *F., intermittent* or *Aque*.

**F., peritone'al.** (*Περιτόναιον*, the membrane which contains the lower viscera.) A synonym of *Puerperal fever*.

**F., pernicious.** (*F. perniciosus*, from *L. pernicius*, destruction. *F. fièvre pernicieuse*; *I. febbre perniciosa*; *S. fiebre perniciosa*.)

Term applied to those forms of intermittent and remittent fevers which prove dangerous or fatal at an early period, from total prostration of nerve-power, and grave change in the composition of the blood. There is general suppression of urine, often vomiting of black or blue matter, and, in children especially, convulsions. The cases are sometimes grouped as *algide pernicious fever* and *comatose pernicious fever*.

**F., pernicious, algide.** (*L. algidus*, cold.) The form of pernicious fever in which coldness of the surface, commencing at the extremities, is a most marked feature; the face becomes pale and pinched, the lips blue, the eyes hollow, the pupils dilated, the pulse slow and thready, breathing at first slow, then quick, and the breath cold; cold sweats pour out from the surface, the countenance is intensely anxious, the voice is very weak, and the patient often dies in a faint.

**F., pernicious, co'matose.** (*Κῶμα*, drowsiness.) The form of pernicious fever in which the patient speedily or suddenly becomes

## FEVER.

comatose, lies motionless, insensitve, incapable of, or with difficulty, being roused, having fixed pupils, and sometimes convulsions. It is a very fatal form, black vomit often preceding death.

**F., pestilential.** (L. *pestilentialis*, a plague.) Term applied by the olden authors, as Fracastorius, Grant, and Stoker, to *Typhus fever*.

Also, a synonym of *Yellow fever*.

Also, a term for the *Plague*.

**F., pestilential, malignant.** A term for *Typhus fever*.

**F., pestilential, of cattle.** Same as *Cattle plague*.

**F., pestilential, of ships.** A term for typhus fever arising in ships.

**F., petechial.** (L. *petechialis*, spotted.) A synonym of *Cerebrospinal fever*.

Also, a synonym of *Typhus fever*, used by Nicholas Massa.

**F., Peyerian.** A synonym of *Enteric fever*, from the implication of Peyer's patches.

**F., pilitous.** (L. *pilitosus*, full of phlegm.) Fever accompanied with much mucous discharge from the intestine. A term applied to the milder forms of *Enteric fever*.

**F., pilitous hectic.** A modification of *F. gastric*, attended with mucous secretion in excess in the intestines. It is common in children, and is characterised by pallor and torpor, swollen lymphatic glands, and mucous diarrhoea.

**F., pleuritic.** (Πλευριτις, a sharp pain in the side.) Fever of a remittent or intermittent type, accompanied with inflammation of the pleura.

**F., pneumonic.** (Πνευμόν, the lungs.) A synonym of *Pneumonia*.

Also, intermittent fever accompanied with inflammation of the lungs.

**F. poison.** The contagium of fever.

**F. powder, James's.** See *James's powder*.

**F., primary.** (L. *primus*, first.) A fever not depending for origin on inflammation of any organ or texture.

**F., prison.** Same as *F. jail*.

**F., pseudo-.** (Ψευδής, false.) Same as *F., irritative*.

**F., pseudocontinous.** (Ψευδής; L. *continus*, uninterrupted.) A remittent fever in which the remission is not well marked.

**F., puerperal.** (L. *puerpera*, a lying-in woman.) See *Puerperal fever*.

**F., puerperal, adynamic.** A form of *Peritonitis*.

**F., puerperal hectic.** (L. *puerperalis*; Gr. ἔξις, habit.) That form of slow fever which sometimes affects delicate females during or after protracted lactation.

**F., puerperal, malignant.** See *Puerperal fever, malignant*.

**F., puking.** A synonym of *Milk sickness*.

**F., punctulated.** See *Fbris punctularis*.

**F., purple.** (F. *fièvre pourprée*.) The same as *Cerebrospinal fever*.

Also, a synonym of *Military fever*.

**F., purpuric, malignant.** A synonym of *Cerebrospinal fever*.

**F., purulent.** (L. *purulentus*, festering.) Fever which accompanies suppuration.

Also, a synonym of *Pyæmia*.

**F., putrid.** (G. *Faulfieber*.) Hirsch be-

lieves that the term was applied by the older writers to various forms of fever occurring simultaneously, but it appears to be chiefly synonymous with *Adynamic fever* or *Ataxic fever*, when these were accompanied by an apparently commencing putridity of the blood, as exhibited in petechiæ, hæmorrhages, or gangrene.

**F., putrid adynamic.** The same as *Ataxic fever* or *Adynamic fever*.

**F., putrid, bilious.** A term for *Cattle plague*.

**F., putrid contin'ual.** See *F., contin'ual, putrid*.

**F., putrid, hæmorrhagic.** See *F., hæmorrhagic putrid*.

**F., putrid hectic.** The form of slow fever sometimes attending scorbutic affections or gangrenous ulceration, or arising from unwholesome food.

**F., putrid, malignant.** See *F., malignant, putrid*.

**F., putrid, of ships.** A synonym of *Typhus fever* when occurring in vessels.

**F., putro-adynamic typhoid.** See *F., typhoid putro-adynamic*.

**F., pyogenic.** (Πύον, pus; γεννάω, to produce.) A term for *Pyæmia*.

**F., pythogenetic.** Same as *F., pythogenic*.

**F., pythogenic.** (Πήθω, to putrefy; γεννάω, to generate.) Murchison's term for *Enteric fever*.

**F., quartan.** (L. *quartus*, the fourth.) The form of intermittent fever in which the paroxysm returns at the end of seventy-two hours.

**F., quinic.** (Quinine.) A form of fever affecting those engaged in the preparation of quinine.

**F., quin'tan.** (L. *quintanus*, of the fifth.) A form of intermittent fever in which the paroxysms are supposed to recur every fifth day.

**F., quotidian.** (L. *quotidian*, daily.) The form of intermittent fever in which the paroxysm repeats itself in twenty-four hours.

**F., recurrent.** (L. *recurro*, to run back.) See *Recurrent fever*.

**F., red.** A synonym of *Dengue*.

**F., red-tongue.** A term applied in Kentucky to a form of fever which was probably enteric fever.

**F., regular.** Fever following the usual course and succession of symptoms; usually applied to intermittent fevers.

**F., relapsing.** (L. *relabor*, to glide back.) See *Relapsing fever*.

**F., relapsing remittent.** The same as *F., remittent, chronic*.

**F., remittent.** (L. *remitto*, to send back.) The form of fever in which there is a marked recurring abatement of the febrile process for a longer or shorter period and to a greater or less degree, but not exhibiting the complete cessation of an intermittent fever. According to some, the term is only applied to those fevers in which the variations of temperature exceed 1° C. See *Remittent fever*.

**F., remittent, bilious.** (L. *remitto*; bilis, bile.) The same as *F., ardent*.

**F., remittent chronic.** (L. *remitto*; *chronicus*, long-lasting.) Fever characterised by slight febrile exacerbations and remissions, recurring in daily, occasionally in reduplicating,

## FEVER.

paroxysms, continuing for an indefinite period, and giving rise to various disorders of the digestive organs and nervous system.

**F., remittent, infantile.** A fever attacking children from one to twelve years of age, characterised by exacerbations and remissions, with loaded tongue, loss of appetite and flesh, unnatural evacuations, pains in the abdomen and head, and much irritability, generally chronic.

A fever of this nature had often been described under this name, and under those of infantile hectic fever, infantile gastric fever, worm fever, and other terms; and it was not till about 1840 that the disease was recognised as true *Enteric fever*. This is now admitted as to far the greater number of such cases, but it may well be that some of the milder and shorter cases are caused by some fault of digestion; and that in malarious districts some may be cases of true *Remittent fever*.

It has been noted that enteric fever assumes in children a more definitely remittent type than it does in adults, as a rule.

**F., remittent, of children.** See *F., remittent, infantile*.

**F., remittent, yellow.** The same as *F., ardent*.

**F., remitting, icteric.** (Ἰκτερος, the jaundice.) The same as *F., ardent*.

**F., rheumatic.** (Ρευματικός, rheumatic.) See *Rheumatism, acute*.

**F., Ro'man.** A term which has been so loosely used that several forms of fever taken in Rome have been included in it; a feverish cold, an enteric fever, and the malarial fever, to which alone, according to Aitken, the term should be restricted. The period of incubation is probably short, two or three days, after which there is more or less distinct, but not severe, shivering, frontal headache, occasional delirium, a rapidly rising temperature, with irregularly recurring remissions, pulse seldom above 100, much sweating, scanty urine, and generally enlargement of the liver and spleen.

**F., root.** The *Pteraspota andromeda*; also the *Tristeum perfoliatum*.

**F., rube'oloid.** (*Rubola*, measles; Gr. εἶδος, likeness.) A term applied to cases of typhus fever occurring in the Middlesex Hospital in 1838, in which the rash resembled the rash of measles.

**F., sanguineous continued.** Hoffmann's term for inflammatory fever.

**F., scar'let.** See *Scarlet fever*.

**F., scorbutic.** (L. *scorbutus*, scurvy.) Term applied to the febrile symptoms which sometimes accompany scurvy.

**F., seasoning.** A term applied to mild attacks of remittent or of yellow fever in newcomers.

**F., second'ary.** (L. *secundus*, second.) Fever recurring or supervening at some crisis of a disease, as during the maturation of the vesicles of smallpox.

Also, a fever which results from a local inflammation.

**F., semiter'tian.** See *Febris semiter'tiana*.

**F., sep'tan.** (L. *septem*, seven.) An intermittent fever in which the paroxysms occur on the seventh day.

**F., septic.** (Σηπτικός, putrefying.) A form of fever in which, in addition to the symp-

toms of the ataxic form, there are superadded petechiæ, passive hæmorrhages, or gangrene, as if the blood were becoming putrefied.

**F., seven-day.** A form of remittent fever in which the symptoms recurred with violence on the seventh day after the outbreak.

Also, a term by Wardell and others for *Relapsing fever*.

**F., sev'enteen-day.** A form of remittent fever in which relapse occurred on the seventeenth day.

**F., sex'tan.** (L. *sextus*, the sixth.) A form of intermittent fever in which the paroxysms recurred on the sixth day.

**F., ship.** A synonym of *Typhus fever*, on account of its former prevalence on ships; used by Lind.

It was a common disease in the eighteenth century and earlier on board ship, and was doubtless produced by dirt, overcrowding, and deficient diet.

**F., ship, infectious.** See *F., infectious ship*.

**F., short.** A term formerly employed to designate what is now known as *Relapsing fever*.

**F., Si'am.** A synonym of *Yellow fever*.

**F., Sid'dons'.** A form of fever prevailing in Edinburgh at the time of Mrs. Siddons' visit, and supposed to be spread by the overcrowding of theatres at which she performed.

**F., Sier'ra Leone.** A form of remittent fever prevalent at that place.

**F., sim'ple.** A form of continued fever in which the temperature never ranges high, which is not prolonged, and in which there is no local complication.

Also, a synonym of *F., ephemeral*.

**F., sim'ple asthenic.** See *F., asthenic, simple*.

**F., sim'ple contin'ed.** See *F., continued, simple*.

**F., singul'tous.** (L. *singultus*, hiccup.) Fever accompanied by hiccup.

**F., slight.** A febrile condition in which the temperature does not rise above 101° F.

Also, a synonym of *Fibricula*.

**F., slow.** A term used by Strother and Langrish for cases of *Enteric fever*.

**F., Smyr'na.** (*Smyrna*, a city of Asia Minor.) A form of *Relapsing fever*, or *F., bilious typhoid*.

**F., so'lar.** (L. *sol*, the sun.) A synonym of *Dengue*.

**F., specif'ic.** (L. *specificus*, particular.) A fever arising from some definite contagium.

**F., spir'ilum.** A term for *Relapsing fever* caused by the *Spirillum Obermeyer*.

**F., splen'ic.** See *Splenic fever*.

**F., spotted.** (G. *Fleckfieber*.) A synonym of *Typhus fever*, used by Strother and Short.

Also, a synonym of *Cerebrospinal fever*.

**F., spur'ious worm.** The same as *F., remittent, of children*.

**F., ster'coral.** (L. *stercus*, excrement.) Fever occasioned by accumulation of feces in the intestines.

**F., sthen'ic.** (Σθίς, strength.) The form of fever in which the symptoms are those of activity: there is a hard full pulse, a hot, dry, not easily cooled skin, great thirst, scanty and high-coloured urine, moist, furred tongue, and constipation; the face is flushed, the head hot and painful, the senses acute, and the delirium, when present, demonstrative; the blood exhibits

# FEVER.

a buffy coat. It is the fever which accompanies acute inflammations in healthy persons.

**F., stomachic.** (Σπαστικός, the gullet.) A synonym of *F., gastric*.

**F., strangers.** A synonym of *Yellow fever*, because new-comers are very liable to it.

**F., subcontinual.** The same as *F., remittent*.

**F., subcontin'uous.** (L. *sub*, under; *contin'us*, uninterrupted.) A continued fever in which the daily variations of temperature exceed 5° C., but do not exceed 1° C.

**F., subin'trant.** (L. *subintro*, to steal into.) A form of intermittent fever in which there is a very short intermission, the paroxysms passing directly into each other.

**F., sudatory.** (L. *sudor*, sweat.) The *Sweating sickness*.

**F., summer.** A synonym of *Hay fever*.

**F., sun.** A synonym of *Dengue*.

**F., suppuration.** (L. *suppuro*, to gather matter.) The same as *F., inflammatory, secondary*, because it generally accompanies the formation of pus.

**F., suppurative.** (L. *suppuro*, to gather matter.) A synonym of *Erysipias*.

Also, a synonym of *Hectic fever*, from its frequently being caused by suppuration in some part of the body.

**F., surgical.** Fever resulting from lesion of any part. One of the forms of *F., inflammatory*.

**F., sweating.** (F. *la suette, la suette miliaire, la suette epidémique*; G. *der Friesel*.) An infectious and epidemic disease attended with febrile symptoms, which supervene rather suddenly; profuse and continued sweating takes place, frequently followed by the appearance of minute vesicles. See *Sweating sickness*.

**F., sympathetic.** (Συμπάθεια, like-feeling.) The form of fever which follows upon a wound or a local inflammation.

**F., symptomatic.** (Συμπτωμα, anything that has befallen one, a symptom.) Fever dependent on some local inflammation, such as a pneumonia, or the inflammation accompanying a wound.

**F., syn'copal.** (Συγκοπή, a faint.) A form of intermittent fever in which fainting occurs during the paroxysm.

**F., syn'ochal.** Same as *Synocha*.

**F., syn'ochoid.** (Σύνοχος, continued; εἶδος, likeness.) Term employed by Copland as a synonym of *Common continued fever*. It is characterised by languor, lassitude, and chills, followed by vertigo and other febrile symptoms of a continued type and regular course.

**F., syphilitic.** See *Syphilitic fever*.

**F., tertian.** (L. *tertius*, third.) The form of intermittent fever in which the paroxysm returns in forty-eight hours.

**F., tetanic, intermit'tent.** A term applied to a disorder in which tetanic convulsions occurred for about fifteen minutes each day, after long exposure to malarial influences. It was cured by quinine.

**F., tet'anoid.** The same as *Cerebrospinal fever*.

**F., thermic.** (Θέρμη, heat.) A synonym of *Struck*.

Also, a term for a fever of hot climates, supposed to be caused by exposure to the direct rays of the sun, in combination with great exertion.

**F., third day.** A synonym of *Tertian fever*.

**F., three days.** A synonym of *Dengue* in India.

**F., trag'ic.** Fever in which the patient declaims.

**F., traumat'ic.** (Τραῦμα, a wound.) Fever supervening on severe lesions of the body. See *Traumatic fever*.

**F., traumat'ic, sec'ondary.** See *Traumatic fever, secondary*.

**F., tree.** The *Pinckneya pubens*.

**F., tremb'ling.** A synonym of *Ague*, in reference to the shivers.

**F., twig.** The *Celastrus scandens*.

**F., type of.** The nature or course of a fever, such as inflammatory or typhoid, quotidian or tertian.

**F., typh.** King Chambers' generic term for a fever of which typhus fever and typhoid fever are forms.

**F., typhoid.** (Τύφος, stupor; εἶδος, resemblance. F. *fièvre typhoïde*.) A synonym of *Enteric fever*.

Also, the same as *F., ataric*.

**F., typhoid malar'ial.** The same as *F., typho-malar'ial*.

**F., typhoid, of India.** A synonym of *Cholera, malignant*.

**F., typhoid, of tropics.** A term applied to those cases of *F., pernicious*, in which, as is seen after death, Peyer's patches are inflamed or ulcerated.

**F., typhoid, pu'tro-adynam'ic.** (L. *putridus*, rotten; Gr. *ἀ*, neg.; *δύναμις*, power.) Copland's term for *Typhus fever*.

**F., typho-malar'ial.** (Τύφος, stupor; *malaria*.) A fever particularly observed by the Americans during the War of Secession. The symptoms resembled those of enteric fever, but pain in the region of the liver and slight jaundice were more common than in it, and the disease further presented a marked periodicity in its course, especially in the defervescence and at the stage of commencing convalescence. Enlargement of the spleen was often found after death, with deposits of pigment in various tissues. Death was not common. It is not considered a distinct type of disease, but the term is applied to cases in which the contagium of enteric disease affects a person already under malarious influence.

**F., typhous.** (Τύφος, stupor.) A synonym of *Typhus fever*.

**F., typhus.** See *Typhus fever*.

**F., typhus, catarrhal.** See *F., catarrhal typhus*.

**F., typhus, conges'tive.** See *Typhus fever, congestive*.

**F., typhus, exanthemat'ic.** See *Typhus fever, exanthematic*.

**F., uræmic.** (Urea; Gr. *αἷμα*, blood.) A term by Malherbe for those cases of urethral or catarrhal fever in which there is distinct evidence of kidney mischief and consequent uræmia.

**F., ure'thal.** (Ουρήθρα, the urethra; from *οὐρῖον*, to make water.) Fever supervening after the passage of a catheter, and especially after forcible dilatation of a stricture. It consists of a more or less violent rigor, succeeded by a hot, dry skin, and then sweating; the temperature is high and the pulse quick; there is thirst, headache, and pain in the limbs. Often this first paroxysm is not repeated; sometimes a feverish state, intermittent or remittent, continues for a day or two; and now and then death occurs.

apparently from retention of urea, especially when there is some chronic kidney disease. The term has been very loosely used, and doubtless has included cases of acute interstitial nephritis and of pyæmia, as well as those called by Andrew Clark catheter fever.

**F., urine in.** The urine in febrile conditions is scanty, high-coloured, very acid, and of high specific gravity; the urea is much in excess, also the uric acid, the potash salts, the phosphoric, sulphuric, and hippuric acids, and the colouring matters which are included under the head of extractives; but the soda salts, especially the sodium chloride, are reduced in quantity.

**F., urinous.** (*L. urina*, urine.) The same as *F. urethral*.

**F., vaccinal.** (*L. vacca*, a cow.) A synonym of *Vaccinia*.

**F., varicellar.** (Dim. of *variola*, from *varius*, spotted.) A synonym of *Varioloid*.

**F., varioloid.** See *Varioloid*.

**F., variolous.** The fever accompanying *Variola*, or smallpox.

**F., verminous.** (*L. vermis*, a worm.) Same as *Worm fevers*.

**F., verminous hectic.** The same as *F., gastric hectic*, in which worms are present in the intestinal canal.

**F., vernal.** (*L. ver*, spring.) Intermittent fever occurring in the spring.

**F., vesicular.** (*L. vesicula*, a little blister.) A synonym of *Pemphigus*.

**F., Walcheren.** The forms of remittent and intermittent fever which were prevalent among the troops in the expedition to Walcheren in 1809.

**F., water brain.** A synonym of *Hydrocephalus*.

**F., white.** (*F. fièvre blanche*.) Sauvage's term for chlorosis.

**F., winter.** A fever which prevailed in the Western States of America in the winter of 1812-3, which some thought to be enteric fever, others epidemic erysipelas.

**F., wood.** The *Benzoin odoriferum*.

**F., worm.** A term often used to describe cases of *Enteric fever*, which were supposed to depend on worms.

**F., worm, spurious.** See *F., infantile remittent*.

**F., wort.** The *Triosteum perfoliatum*.

**F., wound.** The same as *F., traumatic*.

**F., yellow.** See *Yellow fever*.

**F., yellow, mild.** See *Yellow fever, mild*.

**F., yellow, specific.** Same as *Yellow fever*.

**Feverbush.** The *Benzoin odoriferum*, and also the *Prinos verticillatus*.

**Feveret.** The same as *Fibricula*.

**Feverfew.** (*L. fibris*, a fever; *fugo*, to put to flight. *F. matricaire*; *G. Mutterkraut*.) Common name for the *Matricaria parthenium*, febrifuge, or motherwort.

**F., camphor.** See *Camphor, feverfew*.

**Feverish.** The state of one suffering from fever, when alternate chills and flushes are experienced.

**Feverishness.** The state of one suffering from fever.

Also, a slight febrile attack.

**Feverous.** The same as *Feverish*.

**Feverick.** Same as *Feverish*.

**Févertree.** The *Pinckneya pubens*.

**Févertwig.** The *Celastrus scandens*.

**Féverwood.** The *Benzoin odoriferum*.

**Féverwort.** The *Triosteum perfoliatum*.

**Fevillea.** Same as *Fenillea*.

**Fews.** The *Sempervivum tetorum*.

**Fiber.** (*L. fiber*, the beaver; akin to Old *G. biber*.) See *Castor fiber*.

**F. zibethicus.** Linn. The musk rat. Hab. Canada. The secretion of two pyriform glands, which open under the prepuce, has a strong musky odour, and is used in perfumery under the name *Desman*.

**Fibra.** (*L. fibra*, perhaps akin to *filum*, a thread.) A fibre.

**F. aurea.** (*L. aureus*, golden.) The *Captis trifolia*.

**F. nervea.** (*L. nervus*, a sinew.) A nerve fibre.

**F. primitiva.** (*L. primitivus*, first of its kind.) The cylinder-axis of a medullated nerve fibre.

**F. sanguinis.** (*L. sanguis*, the blood.) The fibrin of the blood.

**Fibræ.** Plural of *Fibra*.

**F. adamantinæ.** (*L. adamantinus*, extremely hard.) The fibres of the enamel of a tooth.

**F. arciformes.** (*L. arcus*, a bow; *forma*, shape. *G. Gurfelfasern*.) See *Fibres, arciform*.

**F. arciformes externæ.** (*L. externus*, that which is outside.) Same as *Fibres, arciform, superficial*.

**F. arciformes internæ.** (*L. internus*, inward.) The *Fibres, arciform, deep*.

**F., arcuatæ.** (*L. arcuatus*, bent like a bow.) The arched fibres which connect the medullary substance of adjoining gyri of the brain.

Also, see *Fibres, arcuate*.

**F., arcuatæ gyro'rum cer'ebri.** (*L. gyrus*, a convolution; *cerebrum*, the brain.) The same as *F. arcuatæ*.

**F. collaterales.** (*L. collateralis*, collateral.) The same as *F. intercolumnares*.

**F. decussatæ.** See *Fibres, decussating*.

**F. dentales.** (*L. dens*, a tooth. *G. Zahnfasern*.) The canals of the *Dentine*.

**F. elasticæ.** (*Elastic*. *G. elastische Fasern*.) The fibres of elastic tissue.

**F. horizontales.** (*L. horizontalis*, horizontal.) The same as the *Raphe of the medulla oblongata*.

**F. intercolumnares.** (*L. inter*, between; *columna*, a column.) The tendinous fibres which cross the upper or outer extremity of the external abdominal ring.

**F. lentis.** (*L. lens*, a lentil, the lens of the eye. *G. Linsenfasern*.) The fibres of the crystalline lens.

**F. musculares.** See *Muscular fibre*.

**F. nerveæ.** See *Nerve-fibre*.

**F. obliquæ ventriculi.** (*L. obliquus*; *ventriculus*, dim. of *venter*, the belly.) The oblique fibres of the stomach. They form the innermost layer of the cardiac portion of the stomach.

**F. pallidæ.** (*L. pallidus*, pale.) The *Ciliary processes*.

**F. propriæ cer'ebri.** The same as *F. arcuatæ*.

**F. propriæ gyro'rum cer'ebri.** (*L.*

## FIBRALBUMIN—FIBRE.

*proprius*, peculiar; *gyrus*, a convolution; *cerebrum*, the brain.) The same as *F. arcuate*.

**F. rectæ.** (*L. rectus*, straight.) The fibres of the septum of the medulla oblongata which run in a dorso-ventral direction; they are continuous in front with the superficial arciform fibres, and behind with fibres from the funiculi teretes above, and the funiculi gracilis below; many become longitudinal in direction.

**F. semicirculares cerebelli.** (*L. semicircularis*, semicircular; *cerebellum*, the cerebellum.) A layer of white fibres, 2—3 mm. in thickness, situated on each side of the cerebellum above each corpus dentatum, between the upper border of this nucleus and the arbor vitæ. They run in the processus cerebelli ad testes, decussate, and mingle with fibres coming from the corpus dentatum.

**F. transversæ.** (*L. transversus*, turned across.) Transverse fibres; a term applied to the white lines crossing the floor of the fourth ventricle of the brain.

**Fibralbumin.** A term by Lecanu for a substance contained in the blood discs; it consists of globulin which has been somewhat changed by the means adopted to extract it.

**Fibraurea.** (*L. fibra*, a fibre; *aureus*, golden.) A Genus of the Nat. Order *Menispermaceæ*.

**F. tinctoria**, Lour. (*L. tinctor*, a dyer.) Hab. Malay. A diuretic, deobstruent, and antiperiodic. The *Cocculus tinctoria*.

**Fibre.** (*F. fibre*; from *L. fibra*, a fibre; perhaps akin to *filum*, a thread. *I. fibra*; *S. fibra*, *hebra*; *G. Faser*.) A long thin filament or thread. The small and very minute threads or filaments which, variously arranged, compose the structure of various organs in animals and vegetables.

By the earlier physiologists, such as Haller, fibres were considered an ultimate element of the animal body, by means of which were built up the other tissues and structures.

**F., albugineous.** (*L. albugo*, whiteness.) See *Albuginous fibre*.

**F.s. arciform.** (*L. arcus*, a bow; *forma*, shape. *G. Gürtelfasern*.) White nerve fibres which run round the lower border of the olivary bodies. They form part of the septum of the medulla oblongata.

**F.s. arciform, deep.** Those arciform fibres which emerge from the raphe of the medulla oblongata, some of which pass through and over the olivary bodies to join the superficial arciform fibres, and others pass to the restiform body, the funiculus cuneatus, and the funiculus gracilis.

**F.s. arciform, external.** The *F. arciform, superficial*.

**F.s. arciform, internal.** The *F. arciform, deep*.

**F.s. arciform, superficial.** Those fibres of the *F. arciform* which bend round the anterior border and the lower end of the olivary body; posteriorly they ascend in the lateral column, and lose themselves in the outer surface of the restiform bodies. When prominent and strongly developed they are named the *Ponticulus*.

**F.s. arcuate.** (*L. arcus*, a bow.) The same as *F. arciform*; also, see *Fibre arcuate*.

**F.s. bone, decussating.** (*L. decusso*, to cross like an X.) Fibres consisting of bun-

dles of fine fibrilla, discovered by Sharpey in the lamellæ of bone, and crossing one another at right or acute angles; they generally run a straight course, but are sometimes curved; they lie in a matrix, which is calcified, but themselves probably contain no bone-salts.

**F.s. bone, perforating.** (*L. perforo*, to bore through.) Fibres, discovered by Sharpey, attached to the lamellæ of bone, or to the periosteum, and penetrating the adjacent lamellæ. They consist of white connective-tissue fibres, and sometimes contain elastic fibres; they are generally calcified; they are abundant in the cement of the teeth.

**F. cell.** See *Fibre-cell*.

**F.s. cell.** A former term for the fibres which proceed from the elongation or splitting up of cells.

**F. cell, contractile.** Same as *Muscular fibre-cell*.

**F. cell, muscular.** See *Muscular fibre-cell*.

**F.s. cellular.** The fibres of the cellular or areolar tissue.

**F.s. cerebral.** See *Nerve-fibres, cerebral*.

**F.s. converging.** (*L. con*, for *cum*, together; *vergo*, turn.) The fibres of the central nervous system which tend to approach each other and form commissures.

**F.s. crystalline.** The fibres of the *Crystalline lens*.

**F.s. dartoïc.** (*Δαρτός*, flayed. *F. fibres dartoïque*.) A term which has been applied to those *Elastic fibres* which are broad, large, twisted on themselves, often spiral, and sometimes bifurcated.

**F.s. decussating.** (*L. decusso*, to cross like an X.) Nerve-fibres which cross from one side of the median line to the other in alternation with their fellows on the opposite side.

See, also, *F.s. bone, decussating*.

**F.s. denticulated.** (*L. denticulus*, a small tooth. *F. fibres denticles*.) The fibres of the *Crystalline lens*.

**F.s. diverging.** (*L. di*, for *dis*, apart; *vergo*, to turn.) The fibres of the central nervous system which tend to separate from each other, as those of the columns of the medulla as they pass to the cerebral convolutions.

**F. double-contour.** A medullated nerve-fibre which, from the presence of the white matter of Schwann, has a fine border-line within the outer one.

**F.s. elastic.** (*F. fibres élastiques*; *G. elastische Fasern*.) Yellowish, transparent, well-defined fibres, usually forming bold curves, and terminating abruptly; sometimes they are free and single, and sometimes they form a network by dividing and anastomosing. Elastic fibres are found isolated or in small fasciculi in white fibrous tissue, and in masses in the ligamenta subflava and elsewhere. See *Elastic fibres*.

**F., elementary.** (*L. elementum*, a first principle.) A term applied in former times to an anatomical structure of a fibrous nature, which was thought to form the basis of all tissues.

**F.s. gelatiniform.** (*Gelatin*; *forma*, likeness.) A term for the *Nerve-fibres, non-medullated*.

**F.s. grey.** A term for the *Nerve-fibres, non-medullated*.

**F., irritable.** A term for muscular fibre.

**F.s. lamellar.** (*L. lamella*, a small plate.)

## FIBRE-BASKET—FIBRILLAR.

The broad, short, often anastomosing form of *Elastic fibres* formed in layers in the ligamenta subflava, and constituting the fenestrated membrane of Henle.

**F.s, lam'inar.** (*L. lamina*, a plate.) The fibres of the laminar or areolar tissue.

**F., medullated.** (*L. medulla*, the marrow.) Term applied to nerve fibres which consist of a cylinder-axis and have the white substance of Schwann as an investment. See *Nerve fibres, medullated*.

**F.s, molec'ular.** (*Molecule*.) The fibrilla of coagulated fibrin.

**F., mus'cular.** See *Muscular fibre*.

**F., mus'cular, of heart.** See *Muscular fibre, cardiac*.

**F.s, nu'clear.** (*Nucleus*.) A former term for the fibres of coagulated liquor sanguinis which were supposed to proceed from nuclei which became elongated.

**F.s, nu'cleated.** (*L. nucleus*, a kernel.) The fibres of the immature crystalline lens, at which time they contain a nucleus.

**F.s, nucleoplas'mic.** (*Nucleus*; *plasma*.) Fine fibres which appear under ordinary circumstances to be irregularly distributed through the nucleus of cells. When cell division is about to occur they assume a definite arrangement. See *Karyokinesis*.

**F.s of Corti.** Same as *Corti, rods of*.

**F.s of heart, un'iting.** Gerdy's term for those muscular fibres of the heart which pass from one ventricle to the other; those on the anterior surface of the right ventricle run to the inner surface of the left ventricle, and those on the posterior surface of the left ventricle pass to the inner surface of the right ventricle.

**F.s of Müller.** (*Heinrich Müller*, a German physiologist.) Radiating fibres, believed to be a modification of connective tissue, which traverse the retina and extend between the membrana limitans externa and interna.

**F.s of Purkinjé.** (*Purkinje*, an Hungarian physiologist.) Thin transversely striated muscular fibres, the central part of which is a continuous mass of protoplasm, with nuclei at regular intervals, as in some of the muscular fibres of insects. They lie in the subendocardial tissue of some mammals and birds, but are not present in man.

**F.s of Re'mak.** (*Remak*, a German physiologist.) A synonym of *Nerve fibres, non-medullated*.

**F.s of Shar'pey.** (*Sharpey*, an English anatomist.) The *F.s, bone, decussating*, and the *F.s, bone, perforating*.

**F.s of Wernické.** (*Wernicke*, a German physiologist.) Fibres extending between the optic thalamus and the cortex of the occipital lobe. Lesion of these fibres on one side produces, according to Dr. Starr, lateral homonymous hemianopsia.

**F., prim'itive.** (*F. primitif*; from *L. primitivus*, earliest of its kind.) A name given by the older anatomists to the fibres of areolar tissue, as the fibres from which all other fibres are derived.

**F.s, ra'diating.** A term applied to certain fine, transparent filaments radiating from the central canal of the early embryonic nervous system, to which the first layers of elementary nuclei appear to be attached.

**F.s, smooth.** A term applied to *Muscular fibre-cells*, but especially to the large form

found in the gravid uterus, and to fibres consisting of fibre-cells apparently joined end to end.

**F.s, spi'ral.** See *Spiral vessels*.

**F.s, striped.** See *Muscular fibres, striped*.

**F.s, ult'imate.** (*L. ultimus*, the last.) An old term for the smallest fibres of any animal structure.

**F.s, white.** Term applied to the delicate filaments, varying from 1-50,000th to 1-25,000th of an inch, which constitute the greater part of the substance of connective tissue.

Also, a term applied to the medullated fibres of nerves.

**F.s, wood'y.** (*G. Holzfasern*.) Isolated fibro-vascular bundles. They may be seen in the stems of monocotyledons, and in the ribs of leaves and other organs. The wood of dicotyledons consists of an aggregation of fibrovascular bundles.

**Fibre-bas'ket.** Schultze's term for the sustentacular tissue of the retina.

**Fibre-cell.** (*L. fibra*, a fibre; *cell*. *G. Faserzelle*.) Kölliker's term for the fusiform, nucleated, cellular structures which form the involuntary muscles. See *Muscular fibre-cell*.

Also, see *Cells, fibre*.

**F., contrac'tile.** (*L. contrahere*, to draw together.) Same as *Muscular fibre-cell*.

**F.s, mus'cular.** See *Muscular fibre-cells*.

**Fibril.** (*L. dim. of fibra*, a filament. *F. fibrille*; *I. fibrilla*; *G. Faserchen*.) A fine thread or filament; a subdivision of a fibre.

**F.s, axis.** A term for the primitive fibrille which collectively form in some medullated nerve-fibres the substance of the cylinder-axis.

**F.s, connective tissue.** The very fine fibres of *Connective tissue*.

**F.s, element'ary.** (*L. elementum*, an element.) Term applied to the finest threads into which various tissues, as that of the nerves and muscles, and connective tissue, can be resolved.

**F.s, mouli'form.** See *Nerve-fibrils, mouli'form*.

**F.s, mus'cular.** (*L. musculus*, a muscle.) One of the delicate longitudinal threads, composed of a row of sarcom elements, into which a muscular fibre can be resolved by teasing. The diameter of each fibre is about 1-10,000th of an inch. See *Muscular fibrils*.

**F.s, nerve.** See *Nerve-fibrils*.

**F.s, prim'itive.** See *Nerve-fibrils, primitive*.

**F.s, protoplas'mic.** (*Πρώτος*, first; *πλάσμα*, anything formed.) The minute fibrils which, according to Flemming, are found in most forms of protoplasm; according to Klein and others, the fibrils of protoplasm form a fine network, and in cross view cause the appearance of granules.

**Fibrilla.** (*L. dim. of fibra*, a fibre. *F. fibrille*; *G. Faserchen*.) Same as *Fibril*.

**F. muscula'ris.** See *Fibril, muscular*.

**Fibrillæ.** Plural of *Fibrilla*.

In Botany, the thread-like filaments of roots.

**F. adamantinæ.** (*L. adamantinus*, extremely hard. *G. Schmelzfaser*.) A synonym of *Enamel prisms*.

**F., element'ary.** (*L. elementum*, an element.) The smallest threads into which the cylinder-axis of a nerve can be resolved.

**Fibrillar.** (*L. fibrilla*, dim. of *fibra*, a fibre. *F. fibrillaire*.) Divisible into, or relating to, fibrils.

## FIBRILLARIA—FIBRIN.

**F. connective tis'sue.** Same as *Fibrous connective tissue*.

**F. neuro'mata.** See *Neuromata, fibrillar*.

**Fibrilla'ria.** (L. *fibrilla*, dim. of *fibra*.) An old name for many mucedinous fungi, and for the mycelium of fungi.

**Fibrillary.** (L. *fibrilla*, dim. of *fibra*.) Consisting of fibrils, or like to, or relating to, a *Fibril*.

**F. contractions.** (L. *contraho*, to draw together.) The rapid and irregular contractions, followed by relaxation, of isolated muscular fasciculi, producing a sort of flickering of the muscle; they may be excited by a sharp blow, or may follow the passage of a galvanic current through the nerve which supplies the affected muscle. No movement of the limb is produced by them, but the contracted fasciculus elevates the skin like a tight thread underneath it. These contractions frequently occur during the course of progressive muscular atrophy, but they may be observed in other disorders where motor nerve-tissue is undergoing destruction, and also in some functional disturbances.

**F. fissura'tion.** (L. *fissura*, a cleft.) An atrophic condition of muscular fibres noted by Charcot and others as occurring in the final stages of degeneration of pseudo-muscular hypertrophy.

**F. twitch'ings.** The same as *F. contractions*.

**Fibrillated.** (L. *fibra*, a fibre. G. *faserig*.) Divided, or capable of division, into or composed of, fibrils.

**Fibrilla'tion.** (L. *fibra*, a fibre.) Term applied to structures which present striae or lines indicative of subdivision into fibrils.

**F., mus'cular.** Same as *Fibrillary contractions*.

**Fibrilliform.** (L. *fibra*; *forma*, shape.) Hair-like.

**F. tis'sue.** The long thread-like cells, simple or branched, which constitute the hyphae of fungi.

**Fibrillose.** (L. *fibrilla*, dim. of *fibra*. G. *faserig*.) In Botany, applied to an organ covered with loose fibres.

**Fibrillous.** (L. *fibrilla*, dim. of *fibra*.) Relating to, or consisting of, fibres.

**Fibrin.** (L. *fibra*, a fibre. F. *fibrine*; I. *fibrina*; S. *fibrina*; G. *Fibrin*, *Faserstoff*.) An albuminous substance or proteid which separates from the blood by coagulation, as well as in like manner from the chyle, lymph, and certain inflammatory exudations; it may also be obtained by agitating newly shed blood with twigs or other substances to which it adheres; when washed and moist it is whitish, filamentous, and elastic; when dry it is greyish white, brittle, and hygroscopic; it is insoluble in water, alcohol, and ether; in cold hydrochloric acid of 1 per cent. it swells up and does not dissolve, but the addition of pepsin causes it to do so. It is insoluble in weak solutions of sodium chloride, but soluble in stronger solutions of this and other salts. It rapidly putrefies when moist, giving out a foetid and ammoniacal smell, and furnishing a coagulable albumin, as well as ammonium butyrate, sulphide, and valerianate. It contains carbon 52.6, hydrogen 7, nitrogen 17.4, sulphur 1.2, and oxygen 21.8 parts in 100, as well as minute portions of salts. The amount in the blood varies;

human blood is estimated to yield from 2.1—2.5 per 1000 parts, arterial blood yielding more than venous; lymph yields .5—6 parts, and chyle 1.5—2.5 parts in 1000. In many diseases the yield is increased; in pneumonia to from 4—10 parts; in acute rheumatism to 6.7; in scurvy to from 4.5—6.5; and in puerperal fever to 4.5—5.1 in 1000 parts. It is decreased after repeated losses of blood, and in severe cases of enteric and typhus and other fevers. Fibrin forms the chief constituent of false membranes and of fibrinous exudations. Fibrin is not found in the blood in the living body. It is now supposed to be formed from paraglobulin and fibrinogen, or from the latter only, under the influence of fibrin-ferment. See *F., formation of*.

**F. calculi.** Concretions found in the urinary passages as the result of hæmaturia. They were first described by Marec, are of a yellowish colour, tough, and elastic, and burn with a yellow flame, giving off an odour of burnt feathers. They give proteid reactions.

**F., coagulated.** Fibrin when deposited in a vessel or a tissue in the solid form. It consists of fine interlacing fibrillæ enclosing granular substance. It is in this form insoluble in water, softening and then dissolving in acetic and dilute mineral acids.

**F., fer'ment.** See *Fibrin-ferment*.

**F., forma'tion of.** The mode of origin of fibrin has for long been a disputed point. Until lately it was considered to be a natural constituent of the blood retained in its fluid state by the constant movement of the blood, or by its vital properties, or by those of the blood-vessels. Andrew Buchanan suggested, as a result of his experiments, that fibrin was developed in the act of coagulation by the influence of the colourless corpuscles of the blood on some soluble constituent of the serum. Denis gave the name plasmin to a substance which he obtained from the blood, and which he believed to yield fibrin and a soluble substance, which he called soluble fibrin, as a product of decomposition in the act of coagulation of the blood. Schmidt believed that paraglobulin and fibrinogen were held in solution in the blood, and that by the influence of the former, which he called fibrinoplastic substance, on the latter fibrin was produced; subsequently, he held the opinion that these two substances only combine to produce fibrin except under the influence of a third body, which he separated from blood in an impure condition and called fibrin-ferment, and some salt. Hammarsten has continued these researches, and while he believes that paraglobulin is not essential to the production of fibrin, he shows that fibrinogen is converted into fibrin by the body called fibrin-ferment, which may or may not be of the nature suggested by its name ferment. Schmidt's view, or Hammarsten's modification, is the most commonly accepted explanation now; but other views are still held by some, such as that of Mathieu and Urbain, that the carbonic acid, which during life is fixed by the blood-discs, determines the appearance of the fibrin; and that of Bechamp and Estor, that the fibrin is produced by the microzymes of the blood.

**F., mus'cle.** A synonym of *Myosin*.

**F., sol'uble.** A form of fibrin obtained by Eichwald from the blood of the horse by an elaborate treatment with saline solutions; it is an albuminous body, probably not fibrin.

## FIBRIN-FERMENT—FIBRO-AREOLAR.

Also, according to Denis, the albuminous substance left in solution when plasmin becomes decomposed into it and ordinary fibrin.

**F., vegetable.** Same as *Gluten-fibrin*.

**Fibrin ferment.** (*Fibrin*; L. *fermentum*, leaven. G. *Gährungsfäulung*.) An uncertain substance supposed by Schmidt to exist in blood-serum and other spontaneously coagulable fluids. It may be obtained in an impure condition by mixing serum of blood with fifteen or twenty times its volume of alcohol, allowing it to stand for six or eight weeks or more, collecting the coagulated matters in a filter, drying it over sulphuric acid, powdering it, and then digesting with cold water, which takes up the fibrin-ferment. On the addition of some of this solution to blood-plasma which has been kept liquid by cold or by the addition of a saline solution, it rapidly coagulates. Schmidt supposes that this ferment is developed from, or liberated by, the breaking up of the white corpuscles which occurs on the liberation of the blood from its vessels. According to some, the bodies described as hemato blasts by Ilayem, and blood plates by Bizzozero, produce the fibrin-forming agent or agents.

**Fibrin peptone.** The peptone resulting from the digestion in gastric juice of fibrin.

**Fibrina'tion.** The act or process of adding fibrin to the blood.

**Fibrinogen.** (*Fibrin*; Gr. *γεννώω*, to beget.) A whitish precipitate obtained by mixing blood plasma with one third of its volume of a saturated solution of magnesium sulphate, filtering, coagulating the filtrate with an equal volume of a saturated solution of sodium chloride, and washing frequently the precipitate in saline solutions. Fibrinogen is insoluble in pure water, but soluble in dilute solution of sodium chloride, from which it is precipitated by excess of chloride of sodium. The addition of solution of fibrin-ferment coagulates its solutions. It is contained in the serum of chyle and in serous effusions, especially in those of hydrocele, of the pericardium and of the peritonæum. It is insoluble in water and strong solutions of sodium and magnesium chlorides, but soluble in dilute solutions of these salts, and of alkalies and alkaline carbonates.

Also, a term by Denis for his *Plasmin*.

**F. ferment.** Same as *Fibrin-ferment*.

**Fibrinogen'ic.** Same as *Fibrinogenous*.

**Fibrinogen'ous.** (*Fibrin*; Gr. *γεννώω*, to beget.) Capable of forming fibrin.

**F. matter.** A synonym of *Fibrinogen*.

**Fibrinoplastic.** (*Fibrin*; Gr. *πλάσσω*, to form.) Having power to form fibrin.

**F. substance.** Term applied by Schmidt to a form of proteid supposed to be contained in the white corpuscles of the blood, which aids in the formation of fibrin by combining with fibrinogenous substance. See further under its other name *Paraglobulin*.

**Fibrinoplas'tin.** (*Fibrin*; Gr. *πλάσσω*, to form.) The same as *Fibrinoplastic substance*.

**Fibrinous.** (*Fibrin*. F. *fibrineux*; I. *fibrinoso*; G. *fibrinös*.) Having a stringy character; relating to, or composed of, or containing, fibrin.

**F. block.** A wedge-shaped mass of yellowish or reddish colour occurring in an organ, such as the spleen or kidney or lung, and being

a mass of extravasated blood which has become partially decolorised.

**F. bronchitis.** Same as *Bronchitis, plastic*.

**F. cal'culus.** See *Calculus, fibrinous*.

**F. casts.** Casts of a tube or canal consisting chiefly of fibrin, such as are expectorated in plastic bronchitis, and are found in urine in certain forms of chronic nephritis.

See *Urinary casts, fibrinous, and Bronchitis, plastic*.

**F. clot.** A blood clot containing very few or no red blood-corpuscles. See under *Thrombus, Embolism, and Cardiac concretions*.

The solid mass resulting from the coagulation of pure fibrin.

**F. concre'tions in heart.** See *Cardiac concretions, fibrinous*.

**F. concretions in veins.** See *Veins, fibrinous clots in, and Thrombus*.

**F. deposit.** (F. *depositer*; from L. *deponit*, part. of *depono*, to lay down. F. *dépôt fibrineux*; G. *Faserstoffablagierung, fibrinöse Ablagerung*.) A mass of coagulated fibrin in the substance of an organ, such as the spleen; or attached to its surface, as that on a vascular valve; or in its cavity, as in an auricle or ventricle of the heart.

**F. dropsy.** See *Dropsy, fibrinous*.

**F. dyscras'ia.** (*Δυσκράσια*, a bad temperament of the body.) The morbid conditions of the system which tend to excess of fibrin in the blood, or to fibrinous deposits.

**F. exuda'tion.** See *Exudation, fibrinous*.

**F. foods.** Foods containing flesh or muscle.

**F. glob'ule.** A *Leucocyte*.

**F. infarc'tion.** See *Infarction, fibrinous*.

**F. inflamma'tion.** See *Inflammation, fibrinous*.

**F. lymph.** See *Lymph, fibrinous*.

**F. necro'sis.** Same as *Necrosis, coagulative*.

**F. pneumo'nia.** See *Pneumonia, fibrinous*.

**F. polypus.** See *Polypus, fibrinous*.

**F. synovi'tis.** See *Synovitis, fibrinous*.

**F. tumour.** A term formerly applied to several kinds of tumour of fibrillar aspect, which were believed to arise from an effusion of fibrin, which coagulated and became organised.

Also, a term, for a decolorised blood-clot in an organ.

**F. vegeta'tions.** Deposits or fringes of fibrin on the valves or chordæ tendineæ, or other interior surfaces of the heart.

**Fibrinu'ria.** (*Fibrin*; Gr. *οὔρω*, to make water.) The discharge of fibrin by the urine. Casts of the calyces of the kidney, and of the ureter have been observed in the urine, consisting of fat granules in a homogeneous matrix of fibrin; the casts were insoluble in water, alcohol, ether, alkalies, and acids.

Fibrin also sometimes separates from the urine, in cases of chyluria, as a soft gelatinous clot; and thus the term has been suggested to replace that of *Chyluria* when the morbid mixture is not purulent, inasmuch as there is no proof of the direct passage of chyle into the urine.

**Fibro.** (L. *fibra*, a fibre.) A prefix signifying fibrous, or consisting of, or containing, or resembling, fibrous tissue.

**F. plastic.** See *Fibroplastic*.

**Fibro-are'olar.** (L. *fibra*; *areola*, a

## FIBROBLAST—FIBRO-CARTILAGE.

small open place.) A term applied to *Connective tissue*.

**Fibroblast.** (L. *fibra*; Gr. *βλαστός*, a sprout.) A term applied to the cells from which new fibrous tissue is formed. They are variable in size, with a pale granular protoplasm, a large vesicular nucleus, and one or more nucleoli; they multiply by subdivision, and when young they are more or less spherical, but gradually become club-shaped, or spindle-shaped, or stellate, or assume other irregular forms; the fibres of the tissue are derived from the cell-wall and the protoplasm, and some become the connective-tissue corpuscles of the new structure. The fibroblasts take origin partly from the original connective-tissue corpuscles, and partly from leucocytes escaped from the vessels. Under this term are included the structures frequently described as epithelioid cells.

**Fibro-bronchitis.** (L. *fibra*; Gr. *βρογχίτις*, the bronchial tubes.) Inflammation of the fibrous structures of the bronchial tubes.

Also, the same as *Bronchitis, fibrinous*.

**Fibro-calcareous.** (L. *fibra*; *calx*, lime.) Relating to, or consisting of, fibrous tissue and calcareous matter.

**F. tumour.** A fibrous tumour which has undergone calcareous degeneration.

**Fibrocarcinoma.** (L. *fibra*; *carcinoma*, cancer.) A term which has been applied to a scirrhous tumour which is supposed to have been originally developed in a fibroma.

Also, applied to the more fibrous forms of scirrhous cancer.

**F. cysticum.** (*Κύστις*, a bladder.) Waldeyer's term for a form of cancer of the breast in which the connective-tissue is infiltrated with columns of cancer cells.

**Fibro-cartilage.** (L. *fibra*; *cartilago*, gristle. F. *fibro-cartilage*; G. *Faserknorpel*.) A firm, elastic, tough substance partaking of the structure and the characters of fibrous tissue and of cartilage. It consists of bundles of fibrous tissue lying in strata, between which are found rows of oval, flattened, nucleated cartilage cells, each in a capsule, and all embedded in a matrix; the relative proportions of fibres and of cells varying in the different structures. It forms the intervertebral discs, the interarticular cartilages, the sesamoid cartilages, the cartilages at the base of the ventricles of the heart, and those which form the margin of an articulating socket. Except when in large masses it contains no blood-vessels, and no nerves have been traced into it. It consists of gelatine as well as chondrin. Also, called connective-tissue cartilage.

**F., acromio-clavicular.** Same as *F., scapulo-clavicular*.

**F., basilar.** (L. *basis*, a base.) The tissue which occupies the foramen lacerum anterius basis crauii, and forms part of the floor of the carotid canal.

**F., circumferential.** (L. *circum*, around; *fero*, to bear.) The fibro-cartilage attached to the rim of an articulating cavity to deepen it.

**F.s, connecting.** Those fibro-cartilages which, as that of the symphysis pubis and the intervertebral discs, connect the surfaces of those bones between which there is no gliding motion.

**F., falxiform.** See *Fibro-cartilaginee falciformes*.

**F.s, interarticular.** (L. *inter*, between; *articulus*, a joint. G. *Zwischenfaserknorpel*.) Discs or plates of fibro-cartilage with free surfaces

and attached edges situated between the joint ends of bones, as in the joints of the knee, wrist, and clavicle.

**F.s, interarticular of knee.** Two cartilages of semilunar form situated between the articular surfaces of the femur and tibia. See *F., semilunar*, *external* and *F., semilunar, internal*.

**F.s, intercoccygean.** (L. *inter*, between; *coccyx*, the bone of that name.) The modified intervertebral discs which lie between the several bones forming the coccyx; they are thin and annular. They become ossified in middle life, later in the female than in the male.

**F., intermedial.** See *Fibro-cartilago intermedia triangularis carpi*.

**F.s, interosseous.** (L. *inter*, between; *os*, a bone.) Same as *F.s, connecting*.

**F.s, intervertebral.** (L. *inter*, between; *vertebra*.) The intervertebral discs.

**F.s, marginal.** Same as *F.s, circumferential*.

**F., navicular.** (L. *naviculus*, dim. of *navis*, a boat.) A fibro-cartilage lying between the os calcis and the os scaphoides or navicular bone of the foot. It is 15 mm. broad, and 5 mm. thick. It sometimes develops into a sesamoid bone. It is in relation with the tibialis posterior tendon internally. The concave internal surface articulates with the head of the astragalus.

**F. of heart, central.** A fibro-cartilage which forms part of the right wall of the aortic vestibule and, according to Sibson, constitutes a firm bond of connection between the tendinous rings of the mitral and tricuspid orifices, the central or inner angles of the mitral and tricuspid valves, the right posterior sinus of the aorta, and the aortic vestibule. It also gives insertion to muscular fibres from the right ventricles which, sweeping round from the left and the right respectively, blend together towards the base of the posterior longitudinal furrow, so as to form short central bands of fibres, which, dipping forwards at right angles to the circular fibres, and deepening as they advance, enter and go to form the septum, and end in the fibro-cartilage.

In many animals, as the ox, this fibro-cartilage becomes ossified.

**F. of knee-joint.** The external and internal semilunar fibro-cartilages.

**F. of lower jaw.** A fibro-cartilage situated between each condyle of the lower jaw and the temporal bone. It is oval in form, and is sometimes perforated. The external pterygoid muscle is partly inserted into it. It is covered on both sides with a synovial membrane, the two sacs sometimes, owing to the perforation, communicating with each other.

**F. of tongue.** A small fibro-cartilage, about a quarter of an inch deep and long, situated in the septum of the tongue of some animals.

**F. of Wrisberg.** See *Wrisberg, cartilages of*.

**F. of wrist.** See *Fibro-cartilago intermedia triangularis carpi*.

**F.s, pubic.** See *Interpubic disc*.

**F., radio-ulnar.** (*Radius*; *ulna*.) A fibro-cartilage of triangular form, attached by its base to the border separating the carpal from the ulnar articular surface of the radius, and by its apex to the depression on the inner side of the styloid process of the ulna. Its upper surface is covered with the membrana saciformis of the inferior radio-ulnar articulation, and the lower with the synovial membrane of the wrist-joint.

**F., sacro-coccygean.** (*Sacrum*; *coccyx*.) The modified intervertebral disc which lies between the bodies of the sacrum and coccyx; it is thinner and firmer than these, and is thicker in front and behind than at the sides. When the coccyx is freely movable on the sacrum the fibro-cartilage possesses a distinct cavity in its centre, lined, according to some, by a synovial membrane. It is ossified about middle life.

**F., scapulo clavicular.** (*L. scapula*, the shoulder-blade; *clavicle*.) A wedge-shaped fibro-cartilage, attached by its base to the superior acromio-clavicular ligament, and extending in general only for a short distance between the articulating surfaces; sometimes it is more extensive, and completely divides the joint into two cavities.

**F.s., semilunar.** See *F., semilunar*, external and *F., semilunar*, internal.

**F., semilunar, external.** (*L. semilunaris*, half-moon-shaped; *externus*, external.) This fibro-cartilage is broader than the internal, and forms a more complete circle. The anterior and posterior extremities are respectively attached immediately in front of and behind the spine of the tibia. The outer border is in contact behind with the tendon of the popliteus. From the posterior extremity a band ascends to join the posterior cruciate ligament.

**F., semilunar, internal.** (*L. internus*, internal.) This fibro-cartilage is semicircular in form. Its anterior extremity is inserted into an impression at the fore and inner part of the depression in front of the spine of the tibia. The posterior extremity is attached to the inner edge of the depression behind the spine, in front of the posterior cruciate ligament.

**F.s., sesamoid.** (*Σεσάμω*, an Indian bean; *είδος*, likeness.) The nodules of fibro-cartilage developed in the tendons of muscles, such as the peroneus longus.

**F., sternoclavicular.** (*L. sternum*, the breast-bone; *clavicle*.) A fibro-cartilage of circular form, situated between the articular surfaces of the sternum and clavicle. Above, it is attached to the upper part of the inner extremity of the clavicle, and below, to the cartilage of the first rib. Each side is lined by a separate synovial membrane, which however communicate with each other when, as sometimes happens, the disc is wanting in the centre.

**F.s., stratiform.** (*L. stratum*, a layer; *forma*, shape.) The fibro-cartilages which form a thin layer on the osseous grooves through which certain tendons pass.

**F.s., tarsal.** See *Tarsal cartilages*.

**F., triangular.** See *Fibrocartilago intermedia triangularis carpi*.

**F., white.** The substance described under the chief heading.

**Fibrocartilagines.** Plural of *Fibrocartilago*.

**F. falciformes.** (*L. falcis*, a sickle; *forma*, shape.) The semilunar cartilages of the knee-joint.

**F. interarticulares.** (*L. inter*, between; *articulus*, a little joint. *G. Bandscheiben*.) Fibro-cartilages situated between the joint ends of bone. They usually present the form of menisci. The chief in man are those of the lower jaw, the clavicle, the wrist, and the knee-joint.

**F.intervertebrales.** See *Intervertebral discs*.

**Fibrocartilaginous.** Relating to, or consisting of, *Fibrocartilage*.

**F. degeneration.** A transformation of structure especially occurring in the heart, in which the connective tissue becomes thickened and much indurated, perhaps from chronic inflammation. No true cartilage is formed.

**Fibrocartilago.** Same as *Fibrocartilage*.

**F., intermedia triangularis carpi.** (*L. medius*, middle; *triangularis*, three angled; *carpus*, the wrist.) The meniscus of fibrocartilage which intervenes between the inferior extremity of the ulna and the os semilunare. The apex is attached to the styloid process of the ulna and the base to the ridge, which separates the ulnar from the carpal articulating surface of the radius.

**Fibrocell.** Same as *Fibre-cell*.

**Fibrocellular.** (*L. fibra*; *cellula*, a small space.) Relating to, or consisting of, fibres and cells or areolae.

**F. ankylosis.** Same as *Ankylosis*, incomplete.

**F. annulus of leg.** See *Annulus of leg*.

**F. tissue.** In Anatomy, tissue consisting both of fibrous and areolar tissue.

In Botany, the form of parenchyma of plants in which the cells become thickened so as to form fibres.

**F. tumour.** An old name for a tumour of the character of a mucous polypus, and consisting of loose fibrous connective tissue. The term included many tumours of the formation now known as *Sarcoma*, and of the softer forms of *Fibroma*, as well as those known as *Myxoma*.

Paget gives the name to cutaneous fibromata, chiefly of the skin about the external organs of generation, which consist of a soft connective tissue, and are encapsulated.

**Fibrocellule.** Same as *Fibre-cell*.

**Fibrochondritis.** (*L. fibra*, a fibre; *Gr. χόνδρος*, cartilage.) Inflammation of a fibrocartilage.

**Fibrochondrossteal.** (*L. fibra*; *Gr. χόνδρος*, cartilage; *ὀστέον*, a bone.) Relating to, or consisting of, fibres, cartilage, and bone.

**F. apparatus.** A term applied to the animal skeleton in reference to its structure.

**Fibrocystic.** (*L. fibra*; *Gr. κύστις*, the bladder.) Consisting of fibres and cysts.

**F. tumour.** A term which has been applied to a fibrous or similar tumour which contains cysts whether originating in a natural formation, such as a distended, shut-off portion of a galactophorous duct, or in a mucous softening of the structure of the tumour in the form of a cyst.

**Fibro-fatty.** Relating to fibrous tissue and to fat.

**F. tumour.** A term which has been applied to the nodules of elephantiasis arabum, which consist of loose connective tissue enclosing some fat.

**Fibrogen.** A synonym of *Fibrinogen*.

**Fibroid.** (*L. fibra*, a fibre; *Gr. είδος*, likeness. *F. fibroide*; *G. fibroid*.) Resembling a fibre, or fibrous tissue. Applied to structures which present straight or wavy lines parallel to, or joining, each other; looking like, but not absolutely separable into, fibres.

Also, used as a noun substantive to denote a fibroid tumour or fibroma.

**F. degeneration.** The transformation

# FIBROIN—FIBROMA.

of a tissue into one having a fibrous appearance, in contradistinction to *F. substitution*.

**F. degeneration of heart.** See *Heart, fibrosis of*.

**F. degeneration of lung.** See *Lung, fibrosis of*.

**F. infiltration of stomach.** See *Linitis*.

**F. patch of heart.** See *Heart, fibroid patch of*.

**F. phthisis.** See *Phthisis, fibroid*.

**F. substitution.** (*L. substituo*, to put instead of.) The result of chronic inflammatory action in a structure, whereby the effused fluid undergoes solidification and fibrillation and takes the place of the natural tissue of the affected organ, such as occurs in cirrhosis of the liver.

By some the term is used to signify the replacement of some natural structure by fibrous connective tissue.

**F. tumour.** (*L. tumor*, a swelling.) A term sometimes used in the same sense as *Fibroma*, sometimes as *Myoma*, and sometimes as *Fibromyoma*.

**F. tumour, recurrent.** (*L. recurro*, to come back.) A term often applied to tumours now known as small spindle-celled sarcoma.

**F., uterine.** A fibroid tumour of the womb is sometimes a true fibroma, but generally a myoma, of the variety called fibromyoma, and sometimes of that called leiomyoma.

**Fibroin.** (*Fibrin*, *G. Seidenfibrin*.)  $C_{12}H_{23}N_3O_5$ . Mulder's term for a substance obtained from silk by boiling it in concentrated acetic acid, and washing the residue in water. It is a white, shining substance, easily torn, soluble in strong acids, from which it is precipitated by water in filaments like fibrin.

**Fibro-intestinal layer.** (*L. fibra; intestinum*, a gut.) The innermost of the two layers into which the mesoderm of some Invertebrata divides.

**Fibro-lipoma.** (*L. fibra*, a fibre; *Gr. λίπος*, fat.) A fatty tumour containing a large amount of fibrous tissue.

**Fibroma.** (*L. fibra*, a fibre.) A name first proposed by Verneuil to replace that of fibrous tumour. Fibromata consist of interlaced bands of fibrous connective tissue interspersed with more or less intermediate substance consisting of nucleated cells having only a small amount of protoplasm. On section they are white and glistening, or are greyish, or reddish, or yellowish, and translucent; hard with prominent fibrous bands, or softish and succulent, from excess of cells. Fibromata grow wherever connective tissue is found: they occur in connection with periosteum, fascia, bone, skin, and nerves, in the ovary, the uterus, the mamma and the alimentary canal; sometimes, but seldom, they contain large dilated blood-vessels, and occasionally distended lymphatics, but their vascular supply is generally small and scanty. They may grow to a large size, or they may undergo degenerative changes, fatty, mucous, or calcareous.

**F., adult.** Lancereaux's term for the tumour described under the chief heading.

**F., amorphous.** (*Gr. ἀμορφῆ*, form.) The form in which the intercellular substance is in a very slight degree fibrillated.

**F., areolar.** (*L. areola*, a small space.) The form of soft fibroma in which the loose fibrous connective tissue is arranged so as to form spaces filled with semiliquid substance.

**F., corneous.** (*L. cornu*, horn.) Rindfleisch's term for a fibroma with a glistening, tendinous, non-fibrillated section.

**F., cystic.** (*Κύστις*, a bladder.) A fibroma which has undergone mucous degeneration in circumscribed spots.

**F., densum.** (*L. densus*, thick.) Same as *F., hard*.

**F., desmoid.** (*Δεσμός*, a band; *εἶδος*, likeness.) A term applied to those hard fibromas in which the bands of fibrous tissue are very prominent.

**F., embryonal.** (*Ἐμβρυον*, the embryo. *F. fibrome embryonaire*.) A term applied by Lancereaux to a sarcoma, which he looks upon as an incompletely developed connective-tissue tumour, the tissue having become arrested at an early stage of its evolution.

**F., embryonal, fusio-cellular.** (*L. fusus*, a spindle; *cellula*, a small cell. *F. fibrome embryonaire fusio-cellulaire*.) Lancereaux's term for a spindle-celled sarcoma.

**F., embryonal, globo-cellular.** (*L. globus*, a ball; *cellula*. *F. fibrome embryonaire globo-cellulaire*.) Lancereaux's term for a round-celled sarcoma.

**F., fascicular.** (*L. fasciculus*, a small bundle.) A lobulated fibroma in which the intercellular substance consists of interlacing fibres enclosing cells.

**F., fatty.** A fibroma which has undergone partial fatty degeneration.

Also, an areolar fibroma enclosing fat.

**F., firm.** Same as *F., hard*.

**F., fungoides.** (*L. fungus*, a fungus; *Gr. εἶδος*, likeness.) Tilbury Fox's term for the form of fibroma molluseum which is characterised by its vascularity, its rapid growth, and its tendency to ulcerate.

**F., glandular.** A fibroid tumour arising from the capsule or other connective tissue of a gland, such as the breast gland.

**F., hard.** (*F. fibrome dur*; *G. festes Fibrom*.) The form of fibroid tumour which is firm and dense, which cracks on section, which shows a white or reddish glistening surface, with frequently a regular, concentric arrangement of the fibres probably from being formed around blood-vessels; the cells are few and scattered. This form is often encapsuled, and is sometimes cavernous. It occurs in the antrum, on bones, in the parotid region, as nasal polypus, as false neuroma, or as a painful subcutaneous tumour.

**F., laxum.** (*L. laxus*, slack.) A synonym of *F., areolar*.

**F., molluscum.** Virchow's term for *Molluscum fibrosum*.

**F., mucous.** (*L. mucus*, slime.) A fibroma which has begun to undergo mucous degeneration. Also, the same as *F., myxomatous*.

**F., myxomatous.** (*Μύξα*, mucus.) A fibroma in which has been developed a new formation like to that of mucous membrane, such as occurs occasionally in a fibroma of the skin.

**F. of bone.** A fibroid tumour may arise from the periosteum or from the endosteum of bone. In the former case it does not encroach on the osseous structures as does a sarcoma, according to Virchow.

**F. of nerve.** A fibroma developed from the fibrous sheath of a nerve; to be distinguished from a true neuroma, although frequently included in that term.

**F. of skin.** Same as *Molluscum fibrosum*.

## FIBRO-MUCOUS—FIBROUS.

**F., ossific.** (L. *os*, a bone; *fibro*, to become.) A fibroma which has undergone calcareous degeneration.

**F. pendulum.** (L. *pendulus*, hanging.) The form of molluscum fibrosum which has a pedicle by which it hangs.

**F. petrificum.** (L. *petra*, a stone; *fibro*, to become.) A fibroma which has undergone calcareous degeneration.

**F. recidivum.** (L. *recidivus*, returning.) Same as *Fibroid tumour, recurrent*.

**F. simplex.** (L. *simplex*, simple.) Tilbury Fox's term for the form of molluscum fibrosum in which the tubercle is at first softish and sessile, but becomes pedunculated and flabby as it increases in size. It is the ordinary form of *Molluscum fibrosum*.

**F., soft.** (F. *fibrome mou*; G. *weiches Fibrom.*) The form of fibrous tumour which is translucent, greyish, and perhaps succulent on section. It contains more cells than the hard form, many of them being spindle-shaped or candate, and the fibres are in smaller bundles, and much interlaced.

**F., teleangiectatic.** (*Teleangiectasis*.) The form in which large vascular channels are found.

**F. uterine.** A fibroid tumour growing from the connective tissue of the womb. See *Fibroid, uterine*.

**Fibro mucous.** (L. *fibra*; *mucus*, mucus.) Relating to fibres and to mucus.

**F. membrane.** A term applied to those mucous membranes which lie upon a fibrous structure, or the corium of which is strong and fibrous; such as the lining membrane of the maxillary sinuses.

**Fibromuscular.** (L. *fibra*; *musculus*, a muscle.) Relating to fibrous and to muscular tissue.

**F. tumour.** A fibrous tumour containing muscular tissue. Same as *Myoma* and *Fibromyoma*.

**Fibromyoma.** (L. *fibra*; Gr. *μῦς*, a muscle.) A myoma in which the tumour contains a large proportion of fibrous connective tissue. This is the form of myoma which constitutes the greater number of what are generally called fibroid tumours of the uterus.

**F. lipomatoses.** (*Lipoma*; Gr. *λίπος*, likeness.) Term used by Virchow as synonymous with *Xanthoma* of Dühring and the *Xanthelasma* and *Fatilioides* of other authors.

**Fibromyxoma.** (L. *fibra*; Gr. *μύξα*, mucus.) A myxoma which contains much fibrous tissue.

**Fibroneuroma.** (L. *fibra*; Gr. *νεῦρον*, a nerve.) The form of neuroma which consists chiefly of fibrous connective tissue; it is really a fibroma of the sheath of the nerve.

**Fibronucleated.** (L. *fibra*; *nucleus*, a kernel.) Relating to, or consisting of, fibres and nuclei.

**F. tumour.** A tumour in which fibrous connective tissue and oval nuclei are the predominant structures, such as occurs in a sarcoma.

**Fibro-plastic.** (L. *fibra*, a fibre; Gr. *πλασσω*, to form. F. *fibro-plastique*.) Having power to form or make fibres; fibre-making.

**F. bodies.** (F. *corps fibroplastiques*.) Ch. Robin's term for *Connective tissue corpuscles*.

**F. cells.** See *Cells, fibroplastic*.

**F. degeneration.** A term for the disease now called actinomycosis.

**F. lymph.** The lymph which when vascularised takes part in the healing of a wound.

**F. tissue.** The same as *Granulation tissue*.

**F. tumour.** A term formerly applied, as by Lebert, to a tumour containing fibres and fusiform cells, which would now be called a large spindle-celled sarcoma.

**Fibrosarcoma.** A tumour intermediate in character between a fibroma and a spindle-celled sarcoma; it is firm and coarse-grained, the cells are generally deficient in protoplasm, and the intercellular substance may be either scanty, or abundant and fibrillated.

**Fibrose.** (L. *fibra*, a fibre.) A constituent of the wood cells of plants. It is insoluble in ammoniacal copper oxide solution, but is soluble in strong sulphuric acid. Also called *Cellulose*.

**Fibroseous.** (L. *fibra*; *serum*.) Relating to, or composed of, a fibrous or a serous membrane.

**F. membrane.** Term applied to the combination of a fibrous with a serous membrane, as in the case of the outer layer of the pericardium, the inner surface of which is lined by a serous membrane.

**Fibrosis.** (L. *fibra*.) The development and the condition of *Fibroid degeneration*.

**F., arterio-capillary.** (L. *arteria*, an artery; *capillus*, a hair.) A term applied by Gull and Sutton to a hyaline-fibroid deposit in, or transformation of, the coats of the smaller arteries and capillaries of the body in that form of Bright's disease which is accompanied by a small contracted kidney. They look upon the condition of the kidney as the expression of a degeneration affecting the minute blood-vessels of the whole body.

**F., cardiac.** See *Heart, fibrosis of*.

**F. of heart.** See *Heart, fibrosis of*.

**F. of intestines.** See *Intestines, fibrosis of*.

**F. of lung.** See *Lung, fibrosis of*.

**F. of stomach.** See *Stomach, fibrosis of*.

**Fibrospongiae.** (L. *fibra*, a fibre; *spongia*, a sponge. G. *Faserschwämme*.) An Order of the Class *Spongia*, Subkingdom *Cœlentorata*, having a horny or siliceous skeleton.

**Fibrous.** (L. *fibra*, a small thread or fibre. F. *fibreux*; G. *faserig*.) Having, or composed of, fibres; like fibres; full of fibres.

**F. ankylosis.** See under *Ankylosis*.

**F. bronchocele.** See *Goitre, fibrous*.

**F. Carthagea bark.** A kind of cinchona, probably derived from the *Cinchona lancifolia*, Mutis. Quills or half quills, one inch or more in diameter, and variable in length, with yellowish-brown epidermis; bark, when broken, with long, stringy, fibrous splinters; texture loose, soft, and spongy under the teeth.

**F. cartilage.** Same as *Fibro-cartilage*.

**F. cellular tissue.** A plant-tissue composed both of cells and fibres.

**F. cone.** Term applied by Mayo to the system of radiating fibres, known as the *Corona radiata*, in the brain.

**F. connective tissue.** (G. *Fasergerewebe*.) The fine, transparent, undivided, homogeneous filaments, 1-50,000th" to 1-25,000" in diameter, which constitute the greater part of the fibrous tissues found in tendon and ligament. The fibres are arranged in bundles, which run

longitudinally, with a slightly wavy course, and are interspersed with a few elastic fibres. They are separated and, to a large extent, invested by cells. This tissue contains but few blood-vessels, and these form large, oblong meshes. The lymphatics are large, numerous, and irregular in form, occasionally widening out into lymph spaces. A few nerves are distributed to the fasciculi, and terminate in special end-organs. Fibrous tissue is very resistant, and is employed where strength is required. Each filament is doubly refracting. White fibrous tissue is resolved into gelatin by boiling in water, and swells up when treated with acetic acid.

**F. growth.** See *F. tumour*.

**F. hyperplasia.** See *Hyperplasia, fibrous*.

**F. matter of the brain.** The *Nerve-fibres*.

**F. membranes.** Membranes which, like those of the periosteum and dura mater, are chiefly composed of fibrous tissue.

**F. myxoma.** See *Myxoma, fibrous*.

**F. nervous matter.** The *Nerve-fibres*.

**F. polypus.** See *Polypus, fibrous*.

**F. rheumatism.** See *Rheumatism, fibrous*.

**F. rings of heart.** See *Heart, fibrous rings of*.

**F. root.** A root which consists of a considerable number of filiform lateral offshoots.

**F. system.** A generic term by Bichat which includes such structures as the periosteum, the perichondrium, the ligamentous tissues, the tendons, the dura mater, the pericardium, the sclerotic, and other structures of like nature.

**F. tissue, accidental.** (*L. accido*, to happen. *F. tissu fibreux accidentel*.) The fibrous tissue of a morbid growth.

**F. tissue, white.** The same as *F. connective tissue*.

**F. tissue, yellow.** Same as *Elastic fibres*.

**F. tumour.** Same as *Fibroma*.

**F. tumour, recurrent.** Same as *Fibroid tumour, recurrent*.

**Fibro-vascular.** (*L. fibra*; *vasculum*, a little vessel.) Relating to, or consisting of, fibres and vessels.

**F. bundles.** (*F. faisceaux fibrovasculaires*; *G. Fibrovasalstränge, Gefässbündel*.) The constituent elements of wood. They are bundles or strands of tissue consisting of woody fibres and of ducts running throughout the axis and appendages of the higher plants. Each bundle consisting usually of xylem internally and phloem externally, separated by cambium or meristem, the whole lying in parenchyma. If the bundles are destitute of cambium they are termed closed; if, on the other hand, they contain cambium, they are called open.

They constitute the chief organ of support in plants; when lignified they form the harder parts, the axis, and the venation of leaves, and they remain as the skeleton when the soft parenchyma is removed.

**F. fasciculi.** (*L. fasciculus*, a bundle.) See *F. bundles*.

**F. system.** The part of plant tissue consisting of cords or bundles of woody tissue and of vessels running vertically. See *F. bundles*.

**F. tissue.** The tissue of plants which consists of vessels with spiral fibres.

**F. tumour, recurrent.** Same as *Fibroid tumour, recurrent*.

**Fibula.** (*L. fibula*, a brooch; from *figo*, to fasten. *Gr. πῑρῶν*; *F. peroné*; *l. peroneo*; *S. perone*; *G. Wadenbein*.) The splint bone; so called because it fastens or fixes the tibia and relative muscles. A very long and slender bone. It presents a shaft and two extremities. The upper extremity or head articulates with the external tuberosity of the femur, and is prolonged posteriorly into a point, the styloid process, to which the biceps cruris tendon and the external lateral ligament are attached. The rest of the head gives attachment to the anterior and posterior tibio-fibular ligaments, and to the soleus behind and the peroneus longus in front. The lower extremity forms the external malleolus. It articulates by its inner surface with the astragalus, to which it is firmly connected by two fasciculi of the external lateral ligament, and with the lower and outer surface of the tibia. The shaft presents four surfaces, named the anterior, external, antero-internal, and postero-internal, and four ridges, named the anterior, interosseous, posterior, and oblique. To the anterior surface are attached the extensor longus digitorum, peroneus tertius, and extensor proprius pollicis muscles. To the external surface are attached the peroneus longus and brevis muscles. To the antero-internal surface the tibialis posticus muscle, and to the postero-internal surface the soleus and the flexor longus pollicis.

The fibula may be absent, as in some whales and in the Boa constrictor; it is small in birds; in bats its upper end is very small; in ruminants and in Equidae it is reduced to a rudiment.

Also, a term used by Celsus for a surgical instrument used to draw together the edges of a gaping wound.

**F., artery of.** The medullary artery of the fibula, which enters it about the middle of the antero-internal surface.

**F., articulations of.** (*L. articulus*, a joint.) The fibula articulates with two bones, the tibia and the astragalus.

**F., development of.** This bone develops from three centres: one for the shaft, which first appears about the sixth week of foetal life; one for the lower end, which appears in the second year; and one for the upper extremity, which appears about the fourth year. The lower epiphysis unites first with the shaft about the twentieth year; the upper is joined about the twenty-fifth year.

**F., dislocation of.** The upper end of the fibula may be dislocated either forwards or backwards or outwards without fracture; it may also be dislocated upwards as the result of an oblique fracture of the tibia and of dislocation of the ankle.

The lower end is rarely displaced except in connection with dislocation of the astragalus or of the ankle-joint; but it may occur backwards without other injury.

**F., fracture of.** The fibula may be broken in any part of its length by direct or by indirect violence; its most common seat is from two to four inches from the tip of the malleolus, and then it is often accompanied by dislocation of the foot.

**F., nerve of.** A small branch derived from the posterior tibial nerve.

**Fibulad.** - A term applied by Dr. Bar-

# FIBULEFORM—FICUS.

elav in the same sense as *Fibular aspect*; used adverbially.

**Fibulæform.** (L. *fibula*, a clasp; *forma*, shape. G. *klammerförmig*.) Shaped like a brooch or clasp.

**Fibulæus.** (*Fibula*.) The *Peronæus longus*.

**Fibular.** Of, or belonging to, the *Fibula*.

**F. artery.** The *Peronæal artery*.

**F. artery, superior.** (L. *superior*, that which is above. G. *obere Wadenbeinarterie*.) A branch either of the anterior, or less frequently of the posterior tibial, or even of the popliteal artery. It crosses the neck of the fibula, perforating the attachment of the soleus, and supplying that muscle, the peroneus longus, and the skin.

**F. aspect.** Applied by Dr. Barclay, of Edinburgh, in his proposed Nomenclature, when treating of the aspects of the særal or lower extremities, as meaning towards the fibula.

**F. communicating nerve.** The *Peronæal communicating nerve*.

**F. nerve.** The *Peronæal nerve*.

**F. region, muscles of.** The peroneus longus and the peroneus brevis muscles.

**Fibulæ os.** (L. *fibula*; *os*, a bone.) A bone of the tarsus which articulates with the fibula in its primitive form; in man it is represented by the os calcis.

**Fibularis.** Belonging to the *Fibula*.

**F. brevis.** The *Peroneus brevis*.

**F. longus.** The *Peroneus longus*.

**F. primus.** (L. *primus*, first.) The *Peroneus longus*.

**Fibulatio.** (L. *fibula*, a clasp.) See *Infibulation*.

**Ficaria.** (L. *ficus*, a fig, from a supposed resemblance. F. *figaire*; G. *Feigenwurzenkraut*.) A Genus of the Nat. Order *Ranunculacææ*.

Also, the lesser celandine or pilewort, *Ranunculus ficaria*.

**F. communis.** (L. *communis*, common.) The *Ranunculus ficaria*.

**F. ranunculoides**, Mönch. The *Ranunculus ficaria*.

**F. verna**, Persoon. (L. *vernus*, belonging to spring.) The *Ranunculus ficaria*.

**Ficarie.** Relating to the *Ranunculus ficaria*.

**F. acid.** St. Martin's term for an acrid, volatile substance found in *Ranunculus ficaria* and other species.

**Ficarin.** A substance obtained by evaporating to dryness the alcoholic solution of an aqueous extract of the *Ranunculus ficaria*. It is a bright yellowish, sweetish, somewhat bitterish substance, soluble in water, insoluble in absolute alcohol. It has been used as a local application, in lotion, ointment, or liniment, to piles.

**Ficatio.** (L. *ficus*, a fig. F. *fiction*.) The growing or development of condylomata of the kind called *Ficus*.

**Fichtelit.** (G. *Fichte*, the pine.) x(C<sub>3</sub> H<sub>3</sub>). A substance crystallising in monoclinic prisms, found by Mollet in the fissures of the stem of *Pinus australis*, and in fossil woods. It is soluble in ether and hot alcohol, and melts at 45° C.

**Ficiform.** (L. *ficus*, a fig; *forma*, shape.) Like to a fig in shape.

**Ficoid.** (L. *ficus*, a fig; Gr. *εἶδος*, likeness. F. *ficoides*.) Belonging to, resembling, or having an arrangement of parts as in, the Genus *Ficus*.

Also, resembling a fig; fig-like.

**Ficoidal.** (L. *ficus*; Gr. *εἶδος*.) Relating to, or resembling, the Genus *Ficus*.

**F. alliance.** Same as *Ficoidales*.

**Ficoidales.** (L. *ficus*; Gr. *εἶδος*, likeness.) An Alliance of perigenous Exogens, according to Lindley, having monodichlamydous flowers, central or axile placentæ, polypetalous corolla if present, and external embryo curved round a small quantity of mealy albumen. It includes *Bas. Ilacææ*, *Mesembryacææ*, *Tetragoniaceæ*, and *Scleranthacææ*.

**Ficoideæ.** (L. *ficus*, a fig; Gr. *εἶδος*.) A synonym of *Mesembryacææ*.

**Ficoids.** (L. *ficus*; Gr. *εἶδος*.) A term for the plants of the Nat. Order *Mesembryacææ*.

**Ficoncella.** Italy, in the Puglia Valley, near Siena. Thermal springs of a temperature of 33° C. (91.4° F.) The solid constituents are small, amongst them being a little iron; the water contains a small quantity of carbonic acid gas and hydrogen sulphide.

**Fico'sa eminentia.** (L. *ficosus*, like the fig; *eminentia*, a projection.) Same as the disease *Ficus*.

**Ficous.** (L. *ficus*, the fig.) Like a fig, or like the disease *Ficus*.

**Ficus.** (L. *ficus*, a fig tree. F. *figuier*; I. *fico*; S. *higuera*; G. *Feigenbaum*.) The fig tree. A Genus of the Nat. Order *Urticacææ*.

Also, B. Ph., the dried fruit of the *Ficus carica*, imported from Smyrna.

In U.S. Ph., the fleshy receptacle of *Ficus carica*, Linnæ, bearing fruit upon its inner surface.

Figs are nutritive and somewhat laxative; they are used as an article of food, as a demulcent in decoction, and as a poultice to indurated parts, such as a gumboil. Billroth found a poultice of dried figs boiled in milk an excellent deodoriser in a case of cancer.

Also (L. *ficus*, a fig; F. *fig*; G. *Feigenwarze*), a name given to a fleshy substance, or kind of condyloma, resembling a fig.

**F. ægyptiaca.** The *F. sycomorus*.

**F. anthelmin'tica.** Mart. (Ἐλμντ, against; Ἐλμντ, a worm.) A Brazilian tree affording caoutchouc. Juice used against tapeworm.

**F. as'pera.** (L. *asper*, rough.) The fruit of this species is edible.

**F. auricul'ata.** (L. *auriculatus*, eared.) The fruit of this species is edible.

**F. bengalen'sis.** Linn. Same as *F. indica*.

**F. benghalen'sis.** Willd. The Jamaica fig-tree. Hab. India. The fruit of this species is edible. The juice forms a kind of gum lac, and is used against the poison of manchineel. Probably the same as *F. indica*.

**F. benjamina.** Linn. The fruit of this species, though of inferior quality, is edible. A decoction of the leaves mixed with oil is applied to ulcers.

**F. carica.** Linn. (L. *Cariacus*, Carian; the best figs came from Caria, a Province of Asia Minor. F. *figuier ordinaire*; G. *Feigenbaum*.) The systematic name of the fig tree, which furnishes the official *Ficus*. The milky juice is said to have digestive powers.

**F. cerif'era.** Blume. (L. *cera*, wax;

*fero*, to bear.) Supplies the vegetable wax of Sumatra.

**F. citrifolia.** (*L. citrus*, a lemon tree; *folium*, a leaf.) Hab. India. The bark is balsamic, diuretic, and astringent. Used in decoction as a bath in leprosy.

**F. communis.** (*L. communis*, common.) The *F. carica*.

**F. conglomerata**, Roxb. (*L. conglomerata*, to heap together.) The *F. cunia*.

**F. cunia**, Buch. Hab. India. Fruit used in aphthæ and constipation; it and the bark used in decoction as a bath for leprosy.

**F. dæmona**, Vahl. (*L. dæmon*, an evil spirit.) The juice is a virulent poison.

**F. dolia**, Mart. Hab. India. Juice a drastic purgative and anthelmintic; specially used against *Anchylostomum duodenale*.

**F. elastica**, Roxb. (*Elastic*.) A native of India, from which the greater part of the india rubber of Continental India is obtained.

**F. elliptica**, Kunth. (*L. ellipsis*, a defect, an ellipsis.) A native of America. India rubber is obtained from its juice.

**F. excelsa**, Vahl. (*L. excelsus*, lofty.) Hab. India. A decoction of the root is used in visceral obstructions, and, as well as the leaves, is applied to wounds and bruises.

**F. granatum.** The fruit of this species is edible.

**F. indice grana.** (*L. granum*, a grain. *F. cochinnilla du nopal*.) A name for the *Coccus cacti*, or cochineal insect.

**F. in dica**, Linn. Banyan tree. The juice of this tree is very rich in caoutchouc; when discharged from parts attacked by the *Coccus lacca* it is resinous, and forms a kind of gum lac. The juice is used for toothache and for excoriations and cracks of the skin. The bark is tonic, and is used in diabetes.

Also (*F. figue d'Inde*), name for the *Cactus opuntia*, or prickly pear; the Indian fig.

The same as *F. bengalensis*, Linn.

Also, a name of the *Musa paradisiaca*.

Also, a name of the *Uvaria triloba*.

**F. infernalis.** (*L. infernalis*, belonging to the infernal regions.) The *Jatropha curcas*.

**F. nitida**, Thunb. (*L. nitidus*, shining.) Root and leaves, boiled in oil, applied to bruises.

**F. oppositifolia**, Willd. (*L. oppositus*, placed over against; *folium*, a leaf.) Hab. India. Fruit, seeds, and bark emetic; bark antiperiodic.

**F. passa.** (*L. passus*, dried.) A dried fig.

**F. polycarpa**, Roxb. (*Πολός*, many; *καρπός*, fruit.) Properties like *F. oppositifolia*.

**F. prinoides**, Willd. (*Πρίνος*, the evergreen oak; *είδος*, likeness.) A native of America. It yields india rubber.

**F. pu'mila.** The fruit of this species, though poor, is edible.

**F. racemosa**, Linn. (*L. racemosus*, clustering.) The country fig tree. Hab. India. Bark astringent, used in hæmaturia, diabetes, and menorrhagia; leaves used in liver complaints; juice of root tonic; powdered bark, mixed with gingeley oil, used as an application to cancers.

**F. radula**, Willd. (*L. radula*, a scraping-iron.) A native of America. It yields india rubber.

**F. religio'sa**, Linn. (*L. religiosus*. *F. figuier des pagodes*.) The pipul or sacred fig of

India. The fruit of this species is edible, but is of inferior quality. Seeds cooling and alterative, leaves and young shoots purgative, bark given in itch.

**F. rubescens**, Vahl. (*L. rubesco*, to grow red.) Hab. India. Juice of root used in colic; juice of leaves in dysentery; bark used as a pectoral.

**F. Rum'phii.** The fruit of this species is edible.

**F. Saussureana.** (*Saussure*, a French naturalist.) The cow tree. The juice is milky, and is used as a substitute for milk.

**F. sep'tica**, Forst. The juice of this tree is acrid, emetic, and vermifuge.

**F. sycamorus**, Linn. (*L. sycomorus*, a mulberry tree. *F. figuier de Pharaon*.) The sycamore fig. Fruit similar to, but not so good as, that of *Ficus carica*.

**F. tinctoria**, Forst. (*L. tinctor*, a dyer.) Juice of the young fruit used in rheumatic pains and phlegmonous inflammation as a local application.

**F. toxica'ria**, Linn. (*L. toxicum*, poison.) The juice of this tree is a virulent poison, and is used to envenom weapons.

**F. tsje'la**, Hamilton. A species from the juice of which a kind of gum lac is obtained. Used as *F. rubescens*.

**F. unguis.** (*L. unguis*, a nail.) An everted, projecting condition of the root caused by a chronic inflammation and thickening of the hinder part of the nail.

**F. venenata.** (*L. venenatus*, furnished with poison.) Hab. Guiana. Used to poison arrows with.

**F. vene'rea.** The disease called *Ficus*.

**F. vulgaris.** (*L. vulgaris*, common.) The common fig. *F. carica*.

**Fida.** (Arab.) Alchemical name for gold or silver. (Ruland.)

**Fiddle.** (Mid. E. *fithel*, *fidel*; Sax. *fithel*; G. *fiedel*; perhaps from Low L. *vidula*, a viol, a fiddle.) A stringed musical instrument.

**F-shaped.** Resembling a fiddle in form; panduriform. Applied to a leaf which is constricted in the middle like a fiddle.

**Fideris.** Switzerland, Canton Graubünden, in the charming Prättigau Valley, about 3400 feet above sea-level. A cold mineral water containing sodium carbonate 15 grains, sodium sulphate 6 grains, and a small quantity of iron, with free carbonic acid, in 16 ounces. It is used in stomach catarrhs, anemia, and threatened tuberculosis.

**Fid'gets.** (Dim. of E. *fidge*, to be continually moving up and down; from Icel. *fika*, to climb up nimbly. *F. crispations*, *agacement des nerfs*; G. *Nervenzuckungen*.) A condition of great restlessness, with pains or disagreeable sensations in the legs.

**Fidicina'les.** (*L. fidicen*, a harper, or one who plays on a stringed instrument; from *fides*, a gut-string; *cano*, to sound.) Applied to the lumbrical muscles of the hand, from their employment by musicians in playing on certain instruments.

**Fidcus.** (*L. fido*, to cleave.) Cleft.

**Fiducia.** (*L. fiducia*, from *fido*, to trust.) Former term for the firm faith of the sick in the medical attendant; of how great value this was towards accomplishing a happy cure, was declared by Hippocrates, in *Prognost. proœm*.

# FIELD—FIGURE.

**Field.** (Mid. E. *fēld*; Sax. *fēld*; G. *Feld*; from an uncertain root. F. *champ*; I. *campo*; S. *campo*.) An open piece of land, surrounded by a fence, for tillage or pasturage.

**F. basil.** The *Calamintha acinos*.

**F. bell-flower.** The *Campanula patula*.

**F. black-weed.** The *Cerastium arvense*.

**F. cy press.** The *Lijua chomocypitys*.

**F. dressing, first.** A part of the kit of a soldier when on active service against an enemy. In the English army it consists of a piece of lint spread with simple ointment and wrapped in waxed paper, a triangular bandage, two safety pins and some ordinary pins, all folded in waxed paper. In the German army it generally consists of a triangular bandage and safety pin, two plugs of subeylated jute in salicylic gauze, and an antiseptic gauze bandage with a safety pin.

**F. garlic, streak'ed.** The *Allium oleraceum*.

**F. gentian.** The *Gentiana campestris*.

**F. glass.** The more distant from the eye of the lenses of an eyepiece for the microscope or telescope.

**F. hos'pital.** See *Hospital, field*.

**F. lark.** The common name for the *Alauda arvensis*.

**F. lens.** Same as *F. glass*.

**F. mad'der, little.** The *Sherardia arvensis*.

**F., magnetic.** See *Magnetic field*.

**F. marygold.** The *Calendula arvensis*.

**F. of force.** See *Force, field of*.

**F. of view.** All the points which are visible through the eyepiece of an optical instrument.

**F. of vision.** The area in space, luminous rays from any point of which can fall on the retina, the eye remaining stationary; the limits of indirect vision; the extent of a plane at right angles to the visual axis, light emanating from any part of which can be distinguished with the eye. The limit of the area of indirect vision extends to 90° from the point of fixation on the outer side; 70° on the inner, in consequence of the projection of the nose; about 70° above, and 60° below.

**F. of vision, tests of.** The principle on which all tests of the area or field of vision are founded is to make the patient fix the eye on some object directly in front of him and to move a source of light from this point outwards in all meridians. On connecting the point at which in each meridian the light is no longer perceived a nearly circular figure is obtained, which represents the field of vision. See *Perimeter* and *Campimeter*.

**F. pink.** The *Holosteum umbellatum*.

**F. scabious.** The *Knautia arvensis*.

**F. scorpion grass.** The *Myosotis arvensis*.

**F. tre'foil.** The *Trifolium caruleum*.

**F. weed.** The *Anthemis cotula*; also the *Erygon philadelphicum*.

**F. woodruß.** The *Asperula arvensis*.

**Fiestel.** Germany, in Westphalia. Earthy, saline, sulphur waters.

**Fifth.** (Sax. *fifta*. F. *cinquième, quinte*; I. *quinto*; S. *quinto*; G. *fünfte*.) The ordinal of five; one of five equal parts into which a thing is divided.

**F. nerve.** The *Trifacial nerve*.

**F. ven'tricle.** (L. *ventriculus*, the belly.) The cavity which lies between the two layers of the septum lucidum. See *Ventricle of brain, fifth*.

**Fig.** (F. *figue*; from L. *ficus*, a fig. I. *fico*; S. *higo*; G. *Feige*.) The fruit of the *Ficus carica*, or fig tree. See *Ficus*.

**F.s., el'cmé.** (Probably Turk. *ellémé*, chosen by hand.) Dried Smyrna figs of the best quality.

**F.s., Greek.** The fruit of *Ficus carica* from Greece. They are smaller than Smyrna figs and have less pulp.

**F., Indian.** The *Ficus indica*; also the *Opuntia ficus indica*.

**F., infer'nal.** The *Argemone mexicana*.

**F.s., Smyrna.** The fruit of the *Ficus carica* from this place. They are the most esteemed.

**F. tree.** The *Ficus carica*.

**F. tree, Indian.** The *Ficus indica*.

**F. tree, Jama'ica.** The *Ficus benghalensis*.

**F. tree, sycamore.** The *Ficus sycamoras*.

**F. wart.** The same as *Terruca acuminata* of Dühring.

**F.-wort.** See *Figwort*.

**Fig'uline.** (L. *figulus*, a potter.) A term for potters' clay.

**Figura veno'sa.** (L. *figura*, a form; *venosus*, veiny.) The *Sinus terminalis*, or marginal vessel surrounding the vascular area of the embryo.

**Figurate.** (L. *figura*. G. *ausgebildet, verziert*.) Having some definite form.

**Figura'tio.** (L. *figuro*, to fashion.) A term for *Imagination*.

**Figure.** (F. *figure*; from L. *figura*, a form. I. *figura*; S. *figura*; G. *Figur*.) The form of a thing; shape.

**F., caryolytic.** (Καρβός, a nucleus; λύω, to loose.) A peculiar figure which appears in the early stage of the development of the egg in some Annelids. The nucleolus, at first amœboid, divides, and simultaneously the wall of the germinal vesicle thins and vanishes, its place being marked by a clear non-granular space, within which a spindle-like body forms, consisting of a central plate of granules, formed from the broken-up nucleus and rays of protoplasm, disposed in two tapering cones fore and aft from this central nuclear plate, as Strasburger has called it. The closterium-like or caraway-seed-like structure lying in the protoplasm of the ovum presents at each extremity a clear space surrounded by an aureole of star-like rays. The material of this spindle or caryolytic figure is derived from the germinal spot, and from some of the original protoplasmic contents of the now indistinguishable germinal vesicle.

**F.s., epithe'lioid.** (*Epithelium*; Gr. *εἶδος*, likeness.) Albert's term for the black lines meeting each other at different angles and enclosing spaces which are seen on the surface of certain articular cartilages and the rings of the trachea after treatment with nitrate of silver. They are believed to indicate an endothelium.

**F.s., ker'atoid.** (Κέρας, a horn; *εἶδος*, likeness.) Albert's term for the black lines meeting each other at various angles and enclosing unstained areas which are seen in the lymph spaces after treatment with nitrate of silver, from their resemblance to the corneal epi-

## FIGWORT—FILARIA.

thelium when so treated. They are believed to indicate an endothelium.

**F.s. magnetic.** See *Magnetic figures*.

**F. of 8.** See *Bandage, figure-of-eight*.

**F.-of-eight bandage.** See *Bandage, figure-of-eight*.

**F.-of-eight suture.** See *Suture, figure-of-eight*.

**Figwort.** The plants of the Genus *Scrophularia*; also the *Ranunculus ficaria*; also the plants of the Nat. Order *Scrophulariaceae*.

**F., great water.** (*F. scrofulaire*; *G. Brauncurz*.) Common name for the *Scrophularia aquatica*, or water betony.

**F., knotted.** The *Scrophularia nodosa*.

**Fila.** Plural of *Filum*.

**F. coronaria.** (*L. corona*, a crown.) Tendinous fibres extending from the nodulus of the mitral valve to the inner surface of the fibrous rings of the atrioventricular orifices.

**F. intermedia nervi acustici.** (*L. intermedius*, situated between; *nervus*, a nerve; *acusticus*, relating to hearing.) Fine nerve filaments connecting the auditory with the facial nerve before they enter the internal auditory foramen.

**F. nervea.** (*L. nervus*, a nerve.) Nerve fibres.

**F. olfactoria.** (*L. olfactorius*, pertaining to smell.) The fibres of the olfactory nerve distributed to the nasal mucous membrane.

**F. spermatica.** (*L. spermaticus*, seminal. *G. Samenfaden*.) The *Spermatozoa*.

**Fila'ceous.** (*L. filum*, a thread.) Thread-like.

**Fila'go.** (*L. filum*, a thread. *G. Fadenkraut*.) Cudweed or cotton weed; from the cottony web connected with every part of the plant. A Genus of the Nat. Order *Compositae*.

**F. arvensis.** Linn. (*L. arvensis*, belonging to the fields.) Root astringent.

**F. cespitosa.** Raf. (*L. cespes*, turf.) The *F. germanica*.

**F. germanica.** Linn. Cudweed. Root astringent.

**F. leontopodium.** Linn. The *Leontopodium alpinum*.

**F. maritima.** Linn. The *Diotis maritima*.

**F. minima.** Vriess. (*L. minimus*, least.) Root astringent.

**F. montana.** Linn. (*L. mons*, a mountain.) Root astringent.

**F. paniculata.** Mönch. (*L. paniculum*, a tuft.) The *F. arvensis*.

**F. pigmæ.** Perhaps the *F. minima*.

**F. rotundata.** Mönch. The *F. germanica*.

**F. vulgaris.** Lamb. The *F. germanica*.

**Filament.** (Old *F. filaments*; from *Low L. filamentum*, a small thread; from *L. filum*, a thread. *F. fibrille, filament*; *G. Faserchen*.) A small delicate thread-like substance; a fibre.

Also, in Botany (*G. Staubfaden*), the stalk of an anther. It is usually hair-like and slender, but it is sometimes expanded like a leaf.

**F., male.** The short, one-celled stalk which bears the antheridium of certain Algae.

**F.s of Müller.** The *Fibres of Müller*.

**F.s of Purkinjé.** See *Fibres of Purkinje*.

**F., sexual.** A term applied to the short, one-celled stalk of the oogonium of some Algae when it also bears an antheridium.

**Filamen'ta.** Plural of *Filamentum*.

**F. nervea Wrisberg'ii.** The *Portia intermedia* of Wrisberg.

**F. pontis lateralia** (*L. pons*, a bridge; *lateralis*, lateral.) The same as *Tenia pontis*.

**Filamen'tary.** (*Low L. filamentum*, a small thread.) Consisting of, or resembling, a filament.

**Filamen'toid.** (*Low L. filamentum*; *Gr. eidos*, likeness.) Resembling a filament.

**Filamen'tosc.** The same as *Filamentous*.

**Filamen'tous.** (*Low L. filamentum*, a small thread. *G. fadenförmig*.) Made up of threads.

**Filamen'tum.** (*Low L. filamentum*; from *L. filum*, a thread.) A filament or thread. Also, a fibrillary or thread-like deposit in the urine.

**Filar.** (*L. filum*, a thread. *G. fadenförmig, fadlich*.) Pertaining to, or resembling, a thread.

**Fila'ria.** (*L. filum*, a thread, or line. *F. filare*; *G. Fadenwurm*.) A Genus of the Order *Nematoda*, Class *Nematelminta*, Subkingdom *Vermes*.

**F. abbrevia'ta.** Rudolphi. (*L. abbrevio*, to shorten.) Found in the abdominal cavity of *Eunarius leucopus* and *F. rufus*, and in *Motacilla melanocephala*.

**F. aculea'ta.** Creplin. (*L. aculeatus*, prickly.) Found in the proventriculus of *Tringa alpina*.

**F. acu'ta.** Diesing. (*L. acutus*, pointed.) Found in the abdomen of *Podiceps cristatus*.

**F. acuticauda.** Molin. (*L. acutus*, pointed; *cauda*, a tail.) Found under the skin of *Dasyptus niger*.

**F. acutiuscula.** Molin. (*L. acutus*, pointed; *osculum*, a little mouth.) Found between the muscles of *Canis Azara*.

**F. æqualis.** Molin. (*L. æqualis*, like.) Found in *Myrmecophaga jubata*.

**F. æthiopica.** Valenciennes. (*L. æthiopicus*, Ethiopian.) Found under the skin of *Cyanurus guttatus*.

**F. affinis.** Rudolphi. (*L. affinis*, associated with.) Found in the abdomen of *Fringilla hispaniolensis*.

**F. ala'ta.** Rudolphi. (*L. alatus*, winged.) Found in the coats of the stomach of *Ardea purpurea*.

**F. alcedonis supercilio'sæ.** Molin. (*L. alcedo*, a kingfisher; *superciliosus*, haughty.) Found in the abdominal cavity of *Alcedo superciliosa*.

**F. amphiu'mæ.** Leidy. Found in the coats of the stomach of *Amphiuma means*.

**F. an'atis.** Rudolphi. (*L. anas*, a duck.) Found in the heart of *Anas boschus domestica*.

**F. annula'ta.** Molin. (*L. annulus*, a ring.) Found in *Logothrix cana*.

**F. anthu'ris.** Rudolphi. Found in the coats of the stomach of *Oriolus galbula*.

**F. anti'cla'va.** Molin. Found in the stomach of *Dasyptus sczincinus*.

**F. ar'dæ.** Molin. (*L. ardea*, a heron.) Found under the tongue of *Ardea exilis*.

**F. ar'dæ nig'ræ.** Rudolphi. (*L. niger*, black.) Found in the mesentery of *Ciconia nigra*.

**F. ar'dæ'rum.** Rudolphi. Found in the stomach of *Ardea leuco*.

**F. arma'ta.** Gscheidt. (*L. armatus*,

armed.) Found in the vitreous humour of the eye in *Buteo lagopus*.

**F. aspera**, Nitzsch. (L. *asper*, rough.) Found under the skin of *Aegolius brachyotus*.

**F. attenuata**, Rudolphi. (L. *attenuatus*, to diminish.) Found in the lungs of *Cassicus paracetus*, and of *Falco peregrinus*. The embryo lives in the blood.

**F. attenuata verrucosa**, Molin. (L. *attenuatus*, to diminish; *verrucosus*, rough.) Found in the abdominal cavity and thorax of *Thaumatophilus canadensis*.

**F. Aubingæ**, Wyman. Found in the tunics of the brain of *Plotus Aubingæ*.

**F. bacillaris**, Molin. (L. *bacillum*, a wand.) Found in the lungs of *Jacarc nigra*.

**F. Bancrofti**, Cobbold. The *F. sanguinis-hominis*, from Bancroft of Brisbane, one of its early describers.

**F. bicolor**, v. Linstow. (L. *bicolor*, two-coloured.) Found on the stomach under the peritoneum of *Silurus glanis*.

**F. bidentata**, Molin. (L. *bidentatus*, two-toothed.) Found in the abdominal cavity of *Cervus rufus*.

**F. bifida**, Molin. (L. *bifidus*, divided into two parts.) Found in the liver of *Dactylobius amblyonix*.

**F. bifurca**, Molin. (L. *bifurca*, two-pronged.) Found in the abdomen of a species of *Muscapra*.

**F. bilabia**, Diesing. (L. *bis*, twice; *labium*, a lip.) Found in the abdominal cavity of *Sterna leucoparva*.

**F. bipapillo**, Molin. (L. *bis*, twice; *papilla*, teat.) Found under the skin of *Strix saunda*.

**F. bispino**, Diesing. (L. *bis*, twice; *spina*, a prickle.) Found in the abdomen and under the skin of *Boa constrictor*.

**F. Bona**, Wordman. Found in the eye of *Tetrao bonasia*.

**F. bronchialis**. (Βρόγχια, the bronchial tubes. G. *Bronchien-Fadenwurm*.) Found in the bronchial tubes of *Homo sapiens*. Kuchenmeister believed it to be the *Strongylus longicaudatus*. Male .6" female 1.1"; oral end furnished with two hooks; caudal appendage of male furnished with a bilobed bursa; tail of female pointed; colour brownish, spotted with white.

**F. buballi**, Molin. (Βούβαλος, the buffalo.) Found in the abdominal cavity of *Bos bubalus*.

**F. calamiformis**, Schneider. (Καλαμῖς, a reed; L. *fornia*, shape.) Found under the skin, between the tendons of the foot, of *Psittacus aestivus*.

**F. calcara**, Molin. (L. *calcara*, a spur.) Found in the abdomen of *Bothrops jararaca*.

**F. campanula**, Molin. (L. *campana*, a bell.) Found in the subcutaneous membrane of *Falco naupiastris*.

**F. canis brachyuri**, Molin. Found in the trachea of *Canis brachyurus*.

**F. canis cordis**, Leidy. (L. *cor*, the heart.) An unsettled species, found by Jones of Philadelphia, in the heart and pulmonary artery of a dog.

**F. capitella**, Schneider. (L. *capitellum*, a small head.) Found in the coats of the stomach of *Coracias garrula*.

**F. carducis**, Rudolphi. (L. *carducis*, a goldfinch.) Found in the thigh of *Fringilla carthacus*.

**F. cas'sici a'tri**, Molin. (L. *ater*, black.) Found in the abdominal cavity of *Cassicus ater*.

**F. caudispina**, Molin. (L. *cauda*, a tail; *spina*, a prickle.) Found in the abdominal cavity of a species of *Simia*.

**F. cchi cara'zæ**, Molin. Found in the abdominal cavity of *Cebus cara'zæ*.

**F. cchi trivirgati**, Molin. (L. *tres*, three; *virgatus*, striped.) Found in the abdominal cavity of *Nyctipithecus trivirgatus*.

**F. chara'drili**, Molin. (Χαραδρίος, the golden plover.) Found under the skin of *Aegialites fluvialis*.

**F. ciconiæ**, Schrank. (L. *ciconia*, a stork.) Found under the skin and in the abdomen of *Ciconia alba*.

**F. cinnin'na'ta**. (L. *cinninus*, a curl of hair. G. *haarlockenförmiger Fadenwurm*.) The *Onchocerca reticulata*.

**F. circumflexa**, Molin. (L. *circumflexus*, to bend about.) Found in the abdominal cavity of *Trogon avarantus*.

**F. cistu'dinis**, Leidy. Found in the heart of *Cistudo carolina*.

**F. cla'va**, Wedl. (L. *clava*, a club.) Found in the intestines of *Columba domestica*.

**F. clava'to verrucosa**, Molin. (L. *clavatus*, pointed; *verrucosus*, rough.) Found in the lungs of *Jacarc sclerops*.

**F. cloe'liæ fascia'tæ**, Molin. (L. *fascia*, a band.) Found in the coats of the stomach, in capsules, in *Oxyphaps fasciatus*.

**F. col'ubri**, Bose. (L. *coluber*, a serpent.) Found in the intestines of *Coluber*.

**F. col'ubri ænei**. (L. *æneus*, brazen.) Found in *Helicops carinicauda*.

**F. conica**, Molin. (Κώνος, a cone.) Found in the abdomen of *Dasypterus aguti*.

**F. convolu'ta**, Molin. (L. *convolutus*, to roll up.) Found in the abdomen of *Leptodactylus sibilatrix*.

**F. corona'ta**, Rudolphi. (L. *corona*, a crown.) Found under the skin and between the muscles of *Coracias garrula*.

**F. crassicauda**, Creplin. (L. *crassus*, thick; *cauda*, a tail.) Found in the corpora cavernosa and penis of *Balana mysticetus*.

**F. crassius'cula**, Nordmann. (L. *crassus*, thick; *osculum*, a little mouth.) Found in the eye of *Gadus aeglefinus*.

**F. cygni**, Rudolphi. (L. *cygnus*, a swan.) Found in the intestines and abdomen of *Cygnus olor domesticus*.

**F. cystica**, Dobson. (Κύστις, a bag.) The *F. sanguinis-hominis*.

**F. dehis'cens**, Schneider. (L. *dehisco*, to gape.) Found in *Strix striata*.

**F. dendrocalap'ti procur'vi**, Molin. Found in the eye of *Dendrocalaptus procurvus*.

**F. denticula'ta**, Rudolphi. (L. *denticulatus*, having small teeth.) Found in the stomach of *Anguilla vulgaris*.

**F. depres'sa**, Schneider. (L. *deprimo*, to press down.) Found in *Corvus cornix*.

**F. dermathe'mica**, Arango. (Δέρμα, the skin.) The name of an uncertain parasite supposed to cause *Craw-Craw*.

**F. dia'can'tha**, Molin. (Δίς, two; ἄκανθα, a thorn.) Found in the pleural cavity, in the subpleural tissue, and in the abdomen of *Cercolabes pucheranalis*.

**F. dipet'ala**, Molin. (Δίς, two; πέταλον, a petal.) Found in the abdominal cavity of *Me-garhynchus pitangua*.

# FILARIA.

**F. dispar**, Polonio. (*L. dispar*, unlike.) Found in the coats of the stomach and the intestines of *Corvus corax*.

**F. dracuncul**, Bremser. The *F. medinensis*.

**F. dubia**, Leidy. (*L. dubius*, doubtful.) Found encysted in the mucous membrane of the stomach of *Diomedea exulans*.

**F. elongata**, Rudolphi. (*L. elongatus*, lengthened.) Found in the coats of the stomach of *Sterna nigra*.

**F. eunectes scy'talis**, Molin. (*Σκυτάλη*, a staff.) Found in the lungs of *Eunectes scytale*.

**F. eupemphigis marmorati**, Molin. (*L. marmoratus*, from *marmora*, marble.) Found in the abdomen of *Eupemphigis marmoratus*.

**F. extenuata**, Deslouchamps. (*L. extenuatus*, thinned.) Found in the abdomen of *Mullus surmuletus*.

**F. felis melliv'oræ**, Molin. (*L. felis*, a cat; *mell*, honey; *vora*, to devour.) Found in the lungs of *Felis mellivora*.

**F. felis on'cæ**, Molin. Found between the muscles of *Felis onca*.

**F. filiformis**, Molin. (*L. filum*, a thread; *forma*, shape.) Found in the abdominal cavity of *Anabatis rufifrons*.

**F. flexuosa**, Wedl. (*L. flexuosus*, full of bends.) Found under the skin of *Cervus elaphus*.

**F. foveata**, Schneider. (*L. fovea*, a small pit.) Found in *Egoliis brachyotus*.

**F. foveolata**, Molin. (*L. dim. of fovea*.) Found in the thoracic cavity and abdomen of *Thamnophtilus stagurus*.

**F. fusiformis**, Molin. (*L. fusus*, a spindle; *forma*, shape.) Found in the thoracic cavity and under the peristom of the sternum in *Momasa tranquilla*.

**F. gracilis**. (*L. gracilis*, slender.) Found in the abdomen, beneath the peritonæum, and in the mesentery of monkeys.

**F. gruis**, Linstow. (*L. grus*, a crane.) Found encapsuled in the intestines of *Grus cinerea*.

**F. guineënsis**. The *F. medinensis*.

**F. guttata**, Schneider. (*L. guttatus*, spotted.) Found in the pneumonic cells of *Faleo borigera*.

**F. hajje**, Wedl. Found in capsules in the cavity of the pleura in *Maja hajje*.

**F. hamata**, Linstow. (*L. hamatus*, hooked.) Found in the stomach of *Astur nicus*.

**F. hebeta'ta**, Cobbold. (*L. hebeta*, to weaken.) Found in the right side of the heart of *Phoca cristata*.

**F. hemicy'cla**, Molin. (*Ημικύκλος*, a semicircle.) Found under the skin of *Pionus menstruus*.

**F. hom'inis**, Rudolphi. (*L. homo*, a man.) Found in the bronchial glands of *Homo sapiens*. The *F. bronchialis*.

**F. hom'inis bronchia'lis**, Rudolphi. The *F. bronchialis*.

**F. hom'inis o'ris**, Leidy. An immature and doubtful form found in the mouth of a child.

**F. horrida**, Diesing. (*L. horridus*, rough.) Found in the thoracic cavity of *Rhea americana*.

**F. hystrix**, Molin. (*Υστρίξ*, a porcupine.) Found in the abdominal cavity of *Strix flammea*.

**F. ic'teri pyrrhop'teri**, Molin. (*Ικτερος*, jaundice; *πυρρός*, yellow; *πτερόν*, a wing.)

Found in the abdominal cavity of *Icterus pyrrhop'terus*.

**F. immi'tis**, Leidy. (*L. immitis*, rough.) Found in the right cavities of the heart of *Canis familiaris*. After a more or less prolonged harmless sojourn, it produces convulsions and death.

**F. incrassa'ta**, Molin. (*L. incrasso*, to make thick.) Found in the axillary cavity, the coats of the stomach, and the diaphragm of *Bradypus tridactylus*.

**F. inflexicauda'ta**, Siebold. (*L. inflexus*, curving; *cauda*, a tail.) Found encysted in the lungs of *Phocaena communis*.

**F. insignis**, Schneider. (*L. insignis*, remarkable.) Found under the skin of *Picus*.

**F. intercosta'lis**, Molin. (*L. inter*, between; *costa*, a rib.) Found in the muscles of *Chrysothrix sciurus*.

**F. labia'lis**, Pame. (*L. labia*, a lip.) Found in the cavity of a pustule of the lip of *Homo sapiens*. A thin cylindrical threadworm, about 30 mm. long, having four papillæ arranged crosswise at the mouth, at the pointed anterior end, and a vaginal outlet 3 mm. from the club-shaped hinder extremity. The female only has been observed.

**F. labia'ta**, Creplin. (*L. labia*, a lip.) Found in the thoracic cavity and œsophagus of *Ciconia nigra*.

**F. labiotrunca'ta**, Molin. (*L. labia*, a lip; *trunca*, to cut off.) Found under the skin of *Tinamus ulsperus*.

**F. lachryma'lis**, Dubini. The *F. Lat.*

**F. lachryma'lis**, Gurlt. (*L. lachryma*, a tear.) Found in the lachrymal duct and under the eyelid of *Bos taurus*.

**F. læ'vis**, Creplin. (*L. levis*, smooth.) Found under the skin of *Tursius spectrum*.

**F. la'ri**, Rudolphi. Found under the skin of *Larus minutus*.

**F. laticauda'ta**, Diesing. (*L. lotus*, broad; *cauda*, a tail.) Found in the coats of the stomach of *Otis tetrax*.

**F. la'ticeps**, Rudolphi. (*L. latus*, broad; *caput*, head.) Found in the œsophagus of *Egoliis brachyotus*.

**F. len'tis**, Diesing. (*L. lens*, the lens of the eye.) Found in the lens of the eye of *Homo sapiens*. A doubtful species.

**F. leo'nis**, Gmelin. (*L. leo*, a lion.) Found under the skin of *Felis leo*.

**F. lep'oris**, Rudolphi. (*L. lepus*, a hare.) Found in the subcutaneous connective tissue of *Lepus timidus*.

**F. leptocceph'ala**, Rudolphi. (*Λεπτός*, small; *κεφαλή*, a head.) Found in the large intestine of *Bradypus tridactylus*.

**F. leptoptera**, Rudolphi. (*Λεπτός*, small; *πτερόν*, a wing.) Found under the conjunctiva of eyelid in *Embariza pectoris*.

**F. Lo'a**, Guyot. Found in the cellular tissue of the eye, and in the conjunctiva of *Homo sapiens*. This parasite has been observed in the negroes of the Angola Coast, the Gaboon, and the Congo, and the West Coast of America. It is about 30 mm. long, whitish, with one blunt and one sharp extremity, and a simple mouth. It is said to evacuate its seat after several years. It has been thought to be a young form of *F. medinensis*, and Cobbold suggests that it may not be a filaria at all.

**F. lolig'inis**, Chiaje. (*L. loligo*, a cuttle fish.) Found in the infundibulum of *Loligo vulgaris*.

**F. lymphatica.** The *Hamularia lymphatica*, Treutler.

**F. macropodis gigantei**, Webster. (*Μακρός*, long; *ποός*, a foot; *L. giganteus*, large.) Found encapsuled in the knee of *Macropus giganteus*.

**F. Mansonii**, Cobbold. Found in the eye of the common fowl; named after Manson its discoverer.

**F. medinensis**, Gmelin. (*F. dragonneaui*, *reine de Midoue*, *ver de Guinée*; *G. Fadenwurm*, *Medinawurm*.) The systematic name of the Guinea worm, common in the southern parts of Asia; it is of a white colour, and about the thickness of a violin string; it is commonly found in the legs, but sometimes in the muscular part of the arms. See *Dracunculus medinensis*.

**F. megalochila**, Diesing. (*Μέγας*, great; *χείλος*, a lip.) Found in the oesophagus of *Coronella austriaca*.

**F. megastoma**, Rudolphi. (*Μέγας*, great; *στόμα*, the mouth.) Found in the stomach, in tubercles, of *Equus caballus*.

**F. meropis**, Molin. (*Μέροψ*, a bee eater.) Found in the mesentery of *Merops apiaster*.

**F. microstoma**, Schneider. (*Μικρός*, small; *στόμα*, a mouth.) Found in the stomach of *Equus caballus*.

**F. mucronata**, Molin. (*L. mucronatus*, pointed.) Found in the vessels of *Boa constrictor*.

**F. mugilis**, Bellingham. (*L. mugil*, a sea fish.) Found in the peritoneum of *Mugil capito*.

**F. multipapilla**, Molin. (*L. multus*, many; *papilla*, a teat.) Found in the abdomen of *Thoricis dracana*.

**F. muscipæ corona**, Molin. (*L. corona*, a crown.) Found in the abdominal cavity of *Muscicapa coronata*.

**F. myotheræ campanisonæ**, Molin. Found in the eye of *Formicivora campanisona*.

**F. myotheræ chrysopygæ**, Molin. (*Χρυσός*, gold; *πυγή*, the rump.) Found under the skin of *Formicivora chrysopyga*.

**F. myotheræ regis**, Molin. (*L. rex*, a king.) Found in the kidneys of *Formicivora rex*.

**F. myotheræ ruficapitis**, Molin. (*L. rufus*, red; *caput*, head.) Found in the abdominal cavity of *Formicivora ruficeps*.

**F. nasuta**, Rudolphi. (*L. nasutus*, large-nosed.) Found in the stomach of *Passer domesticus*.

**F. neglecta**, Diesing. (*L. neglectus*, neglected.) Found under the skin of *Rana esculenta*.

**F. nitida**, Leidy. (*L. nitidus*, shining.) Found in the peritoneum and muscles, in capsules, of *Rana pipiens*.

**F. nitidulans**, Schneider. (*L. nitidulus*, tidy.) Found in the stomach in tubercles of *Tapirus americanus*.

**F. nodispina**, Molin. (*L. nodus*, a knot; *spina*, a thorn.) Found in the thorax of *Falco subulato*.

**F. nodo**, Molin. (*L. nodosus*, knotty.) Found under the skin of *Callithrix personata*.

**F. nodulosa**, Rudolphi. (*L. nodulosus*, covered by little knots.) Found under the skin of *Lanus collurio*.

**F. obtusa**, Rudolphi. (*L. obtusus*, blunt.)

Found in the abdominal cavity of a species of *Xenops*, and by Schneider in the stomach of *Mus decumanus*.

**F. obtusocaudata**, Rudolphi. (*L. obtusus*, blunt; *cauda*, a tail.) Found under the skin and between the muscles of *Picus aurulentus*, and by Schneider in the stomach of *Falco subulato*.

**F. obvelata**, Creplin. (*L. obvelatus*, covered over.) Found in the oesophagus of *Mergus serrator*.

**F. oculi**, van Beneden. (*L. oculus*, the eye.) The *F. Loa*, Guyot.

**F. oculi**, Owen. The *F. lentis*, Diesing.

**F. oculi humani**, v. Nordmann. (*L. humanus*, belonging to man.) The *F. lentis*.

**F. papillicauda**, Molin. (*L. papilla*, a teat; *cauda*, a tail.) Found in the heart and abdomen of *Canis brachyurus*.

**F. papillo**, Rudolphi. (*L. papilla*, a teat.) Found in the abdomen, eye, and intestines of *Bos taurus*, and of the horse and ass.

Also, a term at one time applied to the parasite afterwards named *F. oculi*.

**F. papillo**, *sa hæmática canis domesticus*. (*Αἱματικός*, charged with blood.) A name given by Grube and Delafond to a filaria found in the blood of *Canis domesticus*.

**F. papillo**, *so annulata*, Molin. (*L. papilla*, a teat; *annulus*, a ring.) Found in the cavity of the orbit and between the muscles of *Falco Swainsonii*.

**F. perdicis dentata**, Molin. (*L. perdix*, a partridge; *dens*, a tooth.) Found in the abdominal cavity of *Perdix dentata*.

**F. perforans**, Molin. (*L. perforo*, to pierce.) Found between the pericardium and the heart, in the thoracic cavity and the abdomen, and under the skin of *Muscula foia*.

**F. peritonæi hominis**. (*Περίτονεϊον*; *L. homo*, man.) A parasite observed by Babesin in the gastro-splenic omentum of man. It was contained in a capsule, and was .35 mm. broad, and 14 em. long, with a flat, somewhat blunt head, a small terminal mouth, six, faintly indicated, subcutaneous, dark brown mouth-papillæ, a straight intestine, and an almost terminal anus.

**F. physalura**, Bremser. Found in the thoracic cavity and the abdomen of *Megaceryle torquata*.

**F. pipræ caudata**, Molin. (*L. cauda*, a tail.) Found in the abdominal cavity of *Pipra caudata*.

**F. pistillaris**, Molin. (*L. pistillum*, a pestle.) Found under the skin of *Sciurus ignivivens*.

**F. podine**, *mæ scriptæ*, Molin. (*L. scribo*, to write.) Found in the fat of the abdomen of *Podinema scripta*.

**F. podo**, *æ*, Molin. Found under the skin of *Podon surinamensis*.

**F. pungens**, Schneider. (*L. pungo*, to puncture.) Found in *Turdus cyaneus*.

**F. quadridens**, Molin. (*L. quadri-dens*, four-toothed.) Found in the ears, at the root of the tongue, in the muscles and cellular tissue of *Egoliis brachyotus*.

**F. quadrilabia**, Molin. (*L. quadrilabium*, four-lipped.) Found under the skin of *Tinamus maculosus*.

**F. quadriloba**, Rudolphi. (*L. quadri-loba*, four-lobed.) Found in the intestines of *Dryocopus martius*.

# FILARIA.

**F. quadrispi'na**, Molin. (L. *quadrispi'na*, four-thorued.) Found in the coats of the stomach of *Ibis falcinellus*.

**F. quadriverruco'sa**, Molin. (L. *quadriverrucosus*, having four warts.) Found in the abdominal cavity of *Dendrocalyptus picus*.

**F. quinquetubercula'ta**, Leidy. (L. *quinque*, five; *tuberculum*, a protuberance.) Found in *Anguilla vulgaris*.

**F. radula**, Schneider. (L. *radula*, a scraper.) Found in the stomach of *Paradoxurus philippinensis*.

**F. ra'nae**, Molin. (L. *rana*, a frog.) Found in the intestines of *Hypsibos faber*.

**F. ra'nae esculen'tae**, Valentin. (L. *rana*, a frog; *esculentus*, eatable.) Found in the coats of the stomach, and intestines, and between the muscles, in capsules, of *Rana esculenta*.

**F. rubella**, Rudolphi. (L. *rubellus*, reddish.) Found in the stomach of *Rana temporaria*.

**F. Salisbu'ryi**. A name suggested by Cobbold for the *F. sanguinis hominis*.

**F. sanguinis**, Bancroft. (L. *sanguis*, blood.) The *F. sanguinis hominis*.

**F. sanguinis e'qui**, Sansino. (L. *sanguis*, blood; *equus*, a horse.) A larval form found in the blood of *Equus caballus*; possibly the *F. papillosa*.

**F. sanguinis homi'nis**, Lewis. (L. *sanguis*, blood; *homo*, man.) Found in the blood-vessels, lymphatics, kidneys, urine, and suprarenal glands of *Homo sapiens*. The sexually mature form has only been observed a few times, and of these only once has a male been discovered, and that mutilated, the remainder being females. According to Manson, from whose writings the following account is derived, the adult form inhabits a lymphatic vessel; the larval form is found in the blood. The female is about 3" long and 1-100" broad, of an opaline appearance, and very active; the head is club-like, from it a simple, narrow alimentary canal runs backwards and opens near the tail, and the remainder of the body is occupied by the bifid uterus filled with ova and embryos, and opening about 1-25" below the head. The ova are about 1-500" long by 1-750" broad. As the embryo develops it stretches and lengthens the outer or chorionic envelope of the ovum and retains it as its external covering. The embryo, as found in human blood, is about 1-90" long and 1-3500" broad, possessing extreme activity, perfectly transparent, and apparently structureless. In some specimens a mass of brown granular matter occupies the centre of the body; it is enclosed in a delicate sac, the chorionic envelope of the ovum, which projects beyond one or other end of the body, in its collapsed form, as a sort of lash. It has been conclusively proved that the embryo Filariæ are only to be found during the night, or, if Mackenzie's observation be not accidental, during the time of sleeping. No further development of the embryo occurs in the human body, but it has been ascertained by Manson that the intermediate host is the female of a mosquito of the genus *Culex*; this perforating the skin of a filarious man with her proboscis—the oral organs of the male are not able to accomplish this—sucks in the Filariæ with the blood. Many of them perish in the body of the mosquito, but some survive and undergo development, and on the death of the host, in five or six days, have become shorter and

broader, with transverse striations, the mouth is surmounted by three or four nipple-like papillæ, cell-like bodies develop in the interior, an alimentary canal becomes visible, and the rudiments of generative organs can be traced. From this stage to a fully-developed worm lying in a lymphatic vessel nothing is known; probably it is taken into the alimentary canal along with drinking water and bores its way on to a lymphatic, whence it is carried to its resting place. The ova attain the embryo form chiefly in the uterus of the parent, but not infrequently they are extruded from it before they have undergone this change. Manson believes that the embryos in the blood do no harm, they are no wider than the lymph corpuscles, and easily pass through the glands and the capillaries; but not so the ova, they are much wider than the embryo, and so get blocked in the lymphatic glands, and cause obstruction to the flow of lymph that collects at the distal side of the gland, and if the obstruction be, as is often the case, in the groin or external surface, lymph-scrotum and some forms of elephantiasis result; whilst if the gland be in the loin or pelvis, elypharia may be caused.

**F. sanguinolenta**, Rudolphi. (L. *sanguinolentus*, full of blood.) Found in the stomach and œsophagus, in capsules; and in the embryo form in the blood of *Canis familiaris*.

**F. scuta'ta**. The *Spiroptera scutata*.

**F. sero'tina**, Molin. (L. *serotinus*, late.) Found in the abdominal cavity of *Lichenops perspicillata*.

**F. serpi'cula**, Molin. (L. dim. of *serpens*, a snake.) Found in the abdominal cavity of some species of *Phyllostoma*.

**F. simplici'sima**, Molin. (L. *simplex*, plain.) Found under the skin of *Psittacus macaonanna*.

**F. solita'ria**, Leidy. (L. *solitarius*, solitary.) Found in capsules in the coats of the stomach of *Chelydra serpentina*.

**F. spelæ'a**, Leidy. (Σπηλαιον, a cave.) Found in the abdominal cavity of a wallaby.

**F. sphæroph'ora**, Molin. (Σφαῖρα, a ball; φέρω, to carry.) Found in the liver of *Anabates anthoides*.

**F. spinif'era**, Rudolphi. (L. *spinifer*, thorny.) Found in the œsophagus of *Ascolopax gallinula*.

**F. spinulo'sa**, Molin. (L. *spinula*, a little thorn.) Found in the coats of the stomach of *Glareola anstricua*.

**F. spirocau'da**, Leidy. (L. *spira*, a twist; *cauda*, a tail.) Found in the heart of *Phoca vitulina*.

**F. stomox'eos**, Linstow. Found in the haustellum of *Stomoxys calcitrans*.

**F. stria'ta**, Molin. (L. *stria*, to groove.) Found under the skin of *Felis concolor*.

**F. strig'is**, Linstow. (L. *strix*, a screech-owl.) Found in the peritoneum and pleura, in capsules, of *Egolius otus*.

**F. strig'is torqua'ta**, Molin. (L. *torqueo*, to twist.) Found in the abdomen of *Strix torquata*.

**F. strongyli'na**, Rudolphi. (Στρογγύλος, round.) Found in the stomach of *Sus scrofa*.

**F. strumo'sa**, Rudolphi. (L. *strumosus*, serofulous.) Found in the stomach of *Talpa europea*.

**F. stur'ni**, Rudolphi. (L. *sturnus*, a starling.) Found in the cavity of the pleura and in the lungs of *Sturnus vulgaris*.

**F. subspiral's**, Diesing. (L. *sub*, under; *spira*, a coil.) Found under the skin and in the tendons of *Ardea cinerea*.

**F. subulata**, Deslongchamps. (L. *subula*, an awl.) Found in the abdominal cavity of *Falco auratus*.

**F. sylviae**, Nordmann. Found in the orbital cavity of *Sylvia arbutina*.

**F. tantali cazannen'sis**, Molin. Found in the coats of the stomach of *Ibis cazannensis*.

**F. tendo**, Nitzsch. Found in the pharynx and stomach of *Falco peregrinus*.

**F. ter'ebra**, Diesing. (L. *terebra*, a borer.) Found in the peritoneum of *Cervus elaphus*.

**F. tin'ami variega ti**, Molin. (L. *variegatus*, to variegate.) Found under the eyelid of *Tinamus variegatus*.

**F. tor'ta**, Molin. (L. *torqueo*, to twist.) Found in *Lagotherix cana*.

**F. trachealis**, Bristowe and Rainey. (Τραχίαι, the windpipe.) A young form of a doubtful species found in the air-passages of *Homo sapiens*; it is about .02 of an inch long.

**F. tricornata**, Molin. (L. *ter*, three; *corona*, a crown.) Found in the abdominal cavity of *Papua inornata*.

**F. tricus'pis**, Fedschenko. (L. *tricuspis*, three pointed.) Found in the abdominal cavity of *Corvus cornix*.

**F. tridens**, Molin. (L. *tridens*, three toothed.) Found in the pleura and lungs of *Lanius cellarius*.

**F. tridentata**, Linstow. (L. *tridentatus*, three-toothed.) Found in the intestines of *Columbus arcticus*.

**F. trig'læ**, Bellingham. Found in the peritoneum of *Trigla cernuus*.

**F. triu'gæ**, Diesing. Found under the skin of *Tringa alpina*.

**F. trispinulo'sa**, Diesing. (L. *ter*, three; *spinula*, a little thorn.) Found in the vitreous body of the eye of *Canis familiaris*.

**F. troch'ili amethystini**, Molin. (L. *trochilus*, the gold-crested wren, latterly a humming-bird; *amethystinus*, amethyst color.) Found in the stomach of *Calliphora amethystina*.

**F. trunca'to-cauda'ta**, Deslongchamps. (L. *trunco*, to cut off; *cauda*, a tail.) Found in the abdominal cavity of *Faellus cristatus*.

**F. tubercula'ta**, Linstow. (L. *tuberculum*, a protuberance.) Found in the coats of the stomach of *Hirundo rustica*.

**F. tulos'toma**, Hempel and Ehrenberg. (Τύλος, a knot; στόμα, the mouth.) Found in *Neophron perennopterus*.

**F. tur'di**, Linstow. (L. *urdus*, a thrush.) Found in the coats of the stomach of *Turdus diaues*.

**F. tur'di olivascen'tis**, Molin. Found under the eyelid of *Turdus olivaceus*.

**F. uncinata**, Rudolphi. (L. *uncinatus*, barbed.) Found in tubercles in the oesophagus of *Anser cinereus domesticus*.

**F. unguicula'ta**, Rudolphi. (L. *unguis*, a nail.) Found in the abdomen of *Alauda arvensis*.

**F. verruco'sa**, Molin. (L. *verrucosus*, warty.) Found between the muscles of *Falco Swainsonii*.

**F. vespertilio'nis**, Rudolphi. (L. *vespertilio*, a bat.) Found in the abdomen of *Vesperugo discolor*.

**F. vul'pis**, Rudolphi. (L. *vulpes*, a fox.) Found in the mesenteric glands of *Canis vulpes*.

**F. Websteri**, Cobbold. The *F. macro-podis gigante*.

**F. Wuchere'ri**, Cobbold. The *F. sanguinis hominis*.

**Filarial**. Related to a *Filaria*.

**F. periodicity**. Cobbold's term for the phenomena of the periodical daily appearance, in the blood, of the embryos of the *Filaria sanguinis hominis* during the night or the hours of sleep, and their absence during the daytime or the hours of waking.

**Filariasis**. (*Filaria*.) The diseased conditions caused by the *Filaria sanguinis hominis*.

**Filaroides**. (*Filaria*; εἶδος, likeness.) A genus of nematode worms.

**F. mustela'rum**, Van Beneden. (L. *mustela*, a weasel.) A species found in the lungs, trachea, and frontal sinuses of the ermine; it is usually encapsulated.

**Filaurium**. Old name for the bracken.

**Filbert**. (According to Skeat, the word was formerly spelt *Philibert* or *Philiberd*, and the nut was probably named after *St. Philibert*, whose feast day is on August 22nd (old style), the nutting season. According to Wedgewood, it is a corruption of *Fill-beard*, in reference to the nut just filling the cup made by the beards or fringes of the calyx.) The fruit of cultivated varieties of *Corylus avellana*. Used for eating. It supplies a bland pleasant oil.

**File**. (Sax. *feol*. F. *lime*; I. *lima*; S. *lima*; G. *Feile*.) A steel instrument with roughened surfaces for reducing the size of a thing by rubbing it away.

**F. cut'ters' disease**. A form of phthisis resulting from exposure to the metallic dust floating in the atmosphere around those who make files. See *Pneumonoconiosis*.

**F. dental**. An instrument of various forms used for filing the rough edge of a tooth or the rough surface of the cavity of a tooth.

**Filellum**. (L. *filum*, a thread.) Old name by Fallopius for the frænum of the prepuce. Also, generally a synonym of *Frenum*.

**File'ta**. Italy, near Turin. Mineral waters, containing sodium and calcium chloride, with free carbonic acid.

**File'tum**. (L. *filum*, a thread.) A synonym of *Frenum*.

**Filey**. England, on the Yorkshire coast. A sea-bathing place which possesses a mild chalybeate spring.

**Fil'fil bur'ree**. Indian name for the fruit of *Piper trifoliatum*, wild pepper.

**Filhos, caustic of**, Fr. Codex. (F. *caustique de Filhos*; G. *Filhoschätzmittel*.) Potasse caustique à la chaux of Fr. Codex 50 grammes, quicklime 60 grammes. Used as a caustic paste when mixed with alcohol. See also *Causticum Finnense fusum Filhos*.

**Filical**. (L. *filix*, a fern. G. *farnkraut-artig*.) Belonging to a fern, or to the Order *Filices*.

**F. alliance**. Same as *Filicales*.

**Filicales**. (L. *filix*, a fern.) An Alliance of Aërogens, according to Lindley. They are vascular, with marginal or dorsal spore-cases, one-celled, usually surrounded by an elastic ring, and spores of but one sort. It includes the Orders *Ophioglossacea*, *Polypodiaceæ*, and *Dianaceæ*.

**Filicauline**. (L. *filum*, a thread; *caulis*, a stem.) Having a thread-like stem.

**Filices**. (L. *filix*, a fern. F. *fougères*; G. *Farnie*.) Ferns. A Nat. Order of the Sub-

## FILICIC—FILIXOLIN.

class *Acrogonæ*, Class *Acotyledones*, Subkingdom *Cryptogamia*; or an Order of the Class *Filicinae*, Group *Pteridophyta*. Herbs having a subterranean rhizome, or trees with an unbranched caudex, with more or less divided leaves, circinate in veneration, and all or part bearing isoporous sori upon the under surface, or at the margins, sealed upon branches of the veins. The sori are either naked, or covered with an indusium continuous with the epidermis of the leaf. The sexual germination arising from the spores, consists of independent monoecious prothallia.

**Filicic.** (*L. filix*.) Relating to a fern.

**F. acid.** (*G. Filizsäure*.)  $C_{14}H_{18}O_5$ . An acid which is deposited from the ethereal extract of *Aspidium filix mas*, after long standing. It forms small white laminae of feeble smell and taste, which melt at  $161^{\circ}C$ . It is insoluble in water, but easily soluble in pure alcohol. It is identical with dibutyrylphloroglucin  $C_6H_4(C_4H_7O_2)_2$ . By some this acid is thought to be the active principle of the oil of male fern in its action on the tape worm.

**F. a., red.**  $C_{20}H_{18}O_{12}$ . A colouring matter obtained by boiling a solution of filicitannic acid with dilute sulphuric acid; on exposing it to the action of caustic potash it is resolved into protocatechuic acid and phloroglucin.

**Filiciform.** (*L. filix; forma, shape*.) Shaped like a fern.

**Filicinae.** (*L. filix*.) A Class of the Group *Pteridophyta*, having sporangia generally collected into sori on the edges, or on the under-side, of the frond; the fruit-bearing fronds are restricted to no special portion of the stem.

**Filicitannic acid.** (*G. Filizgerbsäure*.) A hygroscopic body obtained by Malin from the aqueous decoction of male fern by treating it with ether, depositing the acid by means of acetate of lead, and decomposing the resulting salt with hydrogen sulphide. It is soluble in water and in alcohol, when it precipitates gelatin, turns a solution of perchloride of iron an olive green, and reduces an alkaline copper solution. It is a variety of tannic acid; its exact composition has not yet been ascertained.

**Filicoid.** (*L. filix; Gr. εἶδος, likeness*.) Like to a fern.

**Filicology.** (*L. filix; Gr. λόγος, an account*.) An account of the knowledge of ferns.

**Filicula.** (*L. filicula, dim. of filix, a fern*.) The *Nephrodium filix mas*.

**F. dulcis.** (*L. dulcis, sweet*.) The *Poly-podium vulgare*.

**Filiferous.** (*L. filum, a thread; fero, to bear*.) Bearing threads or filaments.

**F. capsule.** (*L. capsula, a small box*.) Oval or linear cells, 1-300rh" or less in length, found in abundance in the tentacles of the Hydrozoa and Actinzoa, and in the filaments of the body cavity of the latter; they contain, coiled up within them, a long thread, which on pressure or under other circumstances is protruded; the threads are of various shapes and various lengths, sometimes as much as thirty times longer than the capsule. The threads are sometimes hairy. Their use is unknown.

**Filiform.** (*L. filum, a thread; forma, shape. F. filiforme; L. filiforme; G. fadenförmig, fädlich*.) Thread-like; long, thin, of even thickness, and flexible.

**F. apparatus.** A term by Schacht for a longitudinal striation of the synergidae of some

phanerogams which, according to Strasburger, is due to the presence of fine canals filled with protoplasm, the intermediate space not possessing any.

**F. appendage.** The striated, slender, tubular prolongation formed by the upper end of the embryonic vesicles in *Santalum* and *Crocus*, and others, which projects beyond the embryo sac into the micropyle.

**F. bougie.** See *Bougie, filiform*.

**F. cells.** Plant-cells which are so prolonged as to resemble hairs; they are seen in cotton grass.

**F. papillæ.** See *Papillæ, filiform*.

**F. pulse.** (*L. pons filiforme*.) Same as *Pulse, thready*.

**F. segments.** Term applied to the hair-like divisions of a supraderm compound leaf.

**Filing.** (*File*.) The act of rubbing down with a file.

**Filipendula.** (*L. filum, a thread; pendu, to hang*.) The *Spiræa filipendula*.

**F. ulmaria.** Berg. The *Spiræa ulmaria*.

**F. vulgaris.** Baubin. (*L. vulgaris, common*.) The *Spiræa filipendula*.

**Filipendulous.** (*L. filum, a thread; pendu, to hang. G. fadenhängend*.) Hanging by a thread.

**F. root.** A root of a plant consisting of thread-like fibres terminating in or carrying a tuberosus swelling.

**Filippo, San.** Italy, at the foot of the Zuccolino Mountains. Earthy saline mineral waters of a temp. of  $38^{\circ}C$ .— $46^{\circ}C$ . ( $100^{\circ}F$ .— $104^{\circ}F$ ), and containing hydrogen sulphide. Several other springs have a lower temperature.

**Filitannic acid.** Same as *Filicitannic acid*.

**Filius antè patrem.** (*L. filius, a son, antè, before; pater, a father*.) An old term applied to a plant which develops flowers before leaves, as the *Tussilago farfara* and the *Colchicum autumnale*; and also to one in which the seed-vessels become conspicuous before the flowers, as in some species of *Lysimachia*.

**Filix.** (*L. filix, a fern*.) A fern.

**F. acid.** Same as *Filicic acid*.

**F. aculeata.** The *Aspidium aculeatum*.

**F. florida.** (*L. floridus, flowering*.) The *Osmunda regalis*.

**F. foeminæa.** (*L. foeminæus, female*.) The *Pteris aquilina*.

**F. mas, B. Ph.** (*L. mas, a male*.) The dried rhizome with the bases of the foot-stalks and portions of the root fibres of *Aspidium filix mas*, Swartz. Collected in summer. It is tufted, scaly, greenish-brown, with a disagreeable odour and a nauseous, sweetish, bitter, astringent taste. It contains volatile oil, fixed oil, resin, starch, gum, albumen, sugar, filicitanic acid, filicic acid, tannaspic acid, and other substances. It is used in the preparation of *Extractum filicis liquidum*, which is employed for the destruction of the several forms of tapeworm.

**F. non-ramosa dentata.** (*L. non, not; ramosus, branched; dentatus, toothed*.) The *Nephrodium filix mas*.

**F. nymphæa.** (*L. nymphea, a nymph*.) The *Pteris aquilina*.

**F. pinna'ta.** (*L. pinnatus, feathered*.) The *Nephrodium filix mas*.

**F. ven'ëris.** (*L. Venus, the goddess of love*.) The *Adiantum pedatum*.

**Filix'olin.** A glyceride which constitutes

the larger proportion of the liquid part of ethereal extract of the root of male fern.

**Filixolinic acid.** A non-volatile substance obtained by Luck from the saponification of filixolin.

**Fil.** (Mid. E. *filen*; Sax. *fyllan*; from *ful*, full. F. *remplir*; L. *implere*; S. *llenar*; G. *füllen*.) To make full.

**Fillæa.** A Genus of the Tribe *Cesalpinieæ*, Nat. Order *Leguminosæ*.

**F. suaveolens**, Guillemin and Perotet. (L. *suaureolens*, sweet smelling.) A synonym of *Erythrophloeum Guineense*.

**Fillet.** (F. *fillet*, dim. of *fil*, a thread; from L. *filum*, a thread. G. *Stirnband*.) A little band round the head.

Also, a bandage attached by a loop to any part for the purpose of fixing it.

Also, in Obstetrics, a loop or noose used from very ancient times for the extraction of the head of the child by slipping it over the occiput or the chin. Originally it was a silken or leathern sheath enclosing a piece of cane or whalebone for facility of introduction, the stick being withdrawn when this was accomplished. It was also used for extraction of the child in breech presentations after being passed over the thighs. The fillet is little used now, and in its modern form consists of a loop of whalebone fixed into a handle either permanently or by means of a screw; the handle may be either entire or made up of two separable parts which can be fixed to each other.

Also, in Anatomy, a tract of obliquely-curved white nerve-fibres seen on the surface of the pons Varolii, and occupying a triangular area at the side of the tegmentum; it is covered by a thin layer of grey nerve-tissue. The fibres are the outer border of the tract of the fillet. See *F.*, tract of the.

**F., lower.** The lateral fibres of the tract of the fillet, called the fillet, which go to the lower corpora quadrigemina.

**F. of corpus callosum.** Mayo's term for the *Cingulum*.

**F., tract of the.** A flattened bundle of longitudinal nerve-fibres within the pons Varolii. At their lower end they are connected with the posterior part of the lateral column of the medulla oblongata, and perhaps with the anterior column: the inner fibres go to the stratum intermedium of the crura; the middle part passes upwards into the formatio reticularis; a portion on the outer side of these, the upper fillet, goes to the upper corpora quadrigemina, and a lateral portion becomes visible as the fillet, and goes to the lower corpora quadrigemina.

**F., upper.** The outer part of the median fibres of the tract of the fillet which join the upper corpora quadrigemina.

**Filling.** (*Fill.*) The operation of stopping a cavity in a tooth with gold or other substance.

**Film.** (Mid. E. *fylme*; Sax. *film*; formed by adding the suffix *m* to the base *fil*, a skin. F. *pellicula*; L. *pellicula*; S. *película*; G. *Häutchen*.) A thin skin or pellicle.

**Filobacteria.** (L. *filum*, a thread; *bacterium*, a staff.) A Group of the *Schizomycetes*, in which the composing cells are slender, united end to end, and not enclosed in a gelatinous envelope; the threads are straight, as in the Genus *Bacillus*, or curved, as in *Vibrio*; in the group is called by Cohn *Desmobacteria*.

**Filopluma.** (L. *filum*, a thread; *pluma*,

a feather.) Clothing-feathers with a very slender axis and only rudimentary barbs.

**Filoplume.** See *Filoplumum*.

**Filose.** (L. *filum*, a thread.) In Botany, having a thread-like termination.

**Filosmylic acid.** A volatile substance obtained by Luck from filixolin after saponification.

**Filter.** (F. *filtrer*, to strain through felt; from Low L. *filtrum*, felt. L. *filtrare*; S. *filtrar*; G. *filtriren*, *seigen*.) To strain a liquid; to purify a fluid by passing it through a filter. Many different porous substances are used for this purpose, such as charcoal, sand, powdered glass, woollen cloth, calico, and paper.

Also (F. *filtrer*; L. *filtru*; S. *filtru*; G. *Seiger*, *Seiher*), the substance or apparatus used for filtering liquids.

**F. pa'per.** See *Filtering paper*.

**Filtering.** (*Filter.*) Straining; passing through a filter.

**F. funnel.** A funnel with a fluted or grooved inner surface, so that when a cone of filtering paper is placed within it the grooves constitute channels, whereby a larger surface is exposed, and the filtered liquid more readily runs off.

**F. pa'per.** (F. *papier pour filtrer*; G. *Filtrirpapier*.) A porous, unsized paper, varying in the closeness of its grain according to the purpose for which it is intended. The requisite porosity is often obtained, as in the Swedish filtering paper, by exposing the wet sheets to a freezing temperature; the expansion of the water as it changes into ice secures great evenness of porosity.

**Filth.** (Sax. *fylð*; from *ful*, foul.) Foul stuff.

**F. dread.** See *Myseophobia*.

**Filtrate.** (*Filter.*) The liquor which has been filtered.

Also, to filter, to strain.

**Filtration.** (*Filter.* F. *filtration*; L. *filtrazione*; S. *filtracion*; G. *Filtrirung*, *Durchseihung*.) The act or process of passing a liquid through a porous substance or filter, so that any solid substance which it contains may be removed and retained by the filter, and the liquid allowed to pass through.

The term is also applied to the filtration of water in such a manner that substances in solution, such as organic matter or metallic salts, may be removed. For this purpose many different materials are employed; charcoal, magnetic oxide of iron, peroxide of manganese, silica and charcoal, and others.

**Filtrum.** (Low L. *filtrum*, felt.) A strainer, a filter.

**Filum.** (L. *filum*, a thread.) A thread; a string or filament like to a thread.

**F. arsenica'lë.** An old term for sublimed arsenic. (Kuland.)

**F. cu'preum.** (L. *cuprum*, copper. F. *fil de cuivre*; G. *Kupferdracht*.) Copper wire; the *Cuprum*, B. Ph.

**F. du'rae ma'tris spina'lis.** (L. *durus*, hard; *mater*, mother; *spinalis*, spinal.) A process of the lower part of the dura mater which surrounds the *Filum terminale medullæ spinalis*.

**F. muscularë.** (L. *musculus*, a muscle.) A muscular fibre.

**F. tæniaformë.** (L. *tænia*, a band; *forma*, shape.) A flat, band-like fibril.

**F. termina'lë.** (L. *terminalis*, belonging

to a boundary.) The *F. terminale medullæ spinalis*.

**F. termina'le exter'num.** (L. *terminalis*, terminal; *exter'num*, on the outside.) The same as *F. dura matris spinalis*.

**F. terminal'is medullæ spinal'is.** (L. *terminalis*; *medulla*, marrow; *spinalis*, spinal. *F. filet terminal*; G. *Markzapfen*, *Endzapfen*.) The tapering termination of the spinal cord in the lumbar region. It is flattened, about 2 mm. thick, and is attached below to the tube of dura mater by which it is invested. It consists of a prolongation of the spinal pia mater enclosing, for about half its length, a continuation of the central canal of the spinal cord; up to its extremity it encloses on each side some small bundles of medullated nerve-cells, with a few ganglion cells. It is surrounded by the long lumbar and sacral nerve-roots, constituting the cauda equina, as well as by the small trunks of the coccygeal nerves.

**Fimbria.** (L. *fimbria*, threads, a fringe. *F. frange*; G. *Franse*.) A border; a fringe.

A synonym of the *Tenia hippocampi*.

**F. cor'nu Ammon'is.** (L. *cornu*, horn; *Ammon*, a name of Jupiter when worshipped under the form of a ram.) The same as *Tenia hippocampi*.

**F. oà'rica.** The same as *F. ovarica*.

**F. ova'rica.** One of the external or longer fimbriae of the Fallopian tube which extends along the *Ligamentum infundibulo-ovarium* till it almost or quite touches the pelvic extremity of the ovary.

**Fimbriæ.** (L. *fimbriae*.) Threads; a fringe.

**F. carno'si co'li.** (L. *carnosus*, fleshy; *colon*, the intestine of that name.) The *Appendices epiploicæ*.

**F. lin'guæ.** (L. *lingua*, a tongue.) A small group of folds of the mucous membrane at the side of the tongue. The borders of the folds are large papillæ fungiformes. The area is sometimes called the *Papillæ foliata*.

**F. of Fallo'pian tube.** (G. *Fransen der Eileiter*.) Processes of the outer extremity of the oviduct, which, when turgid with blood, grasp the ovary.

**F. tuba'rum Fallo'pi.** (L. *tuba*, a trumpet.) See *F. of Fallo'pian tube*.

**Fimbriate.** (L. *fimbriatus*, fringed. *F. fimbriæ*; G. *gefranst*, *fransig*.) Provided with a fringe, or with a border like a fringe.

**Fimbriated.** (L. *fimbriae*, a fringe. *F. fimbriæ*, *frangè*; G. *gebränt*, *gefranset*.) Bordered; fringed.

**Fimbricate.** Same as *Fimbriate*.

**Fimbrilla.** (L. dim. of *fimbriae*, a fringe.) A little fringe.

In Botany (G. *Spreuborste*), Cassini's name for a minute fringe round the receptacle in the Compositæ; it may consist of membranous, laminated, linear, or tubulated filaments.

**Fimbrillif'eros.** (L. *fimbrilla*, dim. of *fimbriae*; *fero*, to bear.) Having small fringes or a fimbrella, as the receptacle of some Compositæ.

**Fimbrillose.** (G. *spreuborstig*.) Bearing a *Fimbrilla*.

**Fimbriocèle.** (L. *fimbriae*; Gr. *κῆλη*, a hernia.) A hernia in which the fimbriated extremity of a Fallopian tube is contained in the sac.

**Fimeta'rious.** (L. *finetum*, a dung-

hill.) In Botany, growing on a dunghill or on excrement.

**Fimus.** (L. *finis*, that which fertilises; dung.) Excrement; feces.

**F. an'soris.** (L. *anser*, a goose.) The dung of a goose. Used as a poultice to the feet in malignant fevers.

**F. equ'inus.** (L. *equus*, a horse.) The dung of a stallion. Used as a poultice in pleurisy.

**F. vac'cæ.** (L. *vacca*, a cow.) The dung of a cow. Used as a poultice in gout, boils, and other external diseases.

**Fin.** (Sax. *fin*; perhaps allied to L. *pinna*, a fin. *F. nageoire*; I. *ala*, *pinna*; S. *alela*; G. *Flosse*, *Schwammflosse*, *Flossfeder*, *Finnie*.) A thin expansion of the integument of fishes, often stiffened by bony rays, and sometimes containing muscular fibre, connective tissue, and fat. Fins serve for progression and guidance. The fins of fishes are of two kinds: paired fins, which represent the limbs; and median, or azygos fins, which are prolongations of the coalesced lateral halves of the body.

Also, a term for the large, symmetrical epipodia developed at the anterior extremity of the *Pteropoda*. They consist of two or more layers of muscular fibre, with firm intervening connective tissue, covered with tessellated epithelium, and sometimes with cilia; they act, by a rapid to-and-fro motion, as swimming organs.

**F.s., abdom'inal.** (L. *abdomen*, the belly. *F. nageoires abdominales*; G. *Bauchflossen*.) A term applied to the ventral fins when they are placed near the posterior extremity of the abdomen.

**F.s., a'nal.** (L. *anus*, the external intestinal opening. *F. nageoires anales*; G. *Afterflossen*.) One or two fins of the median type situated near the anal orifice.

**F.s., azygos.** (Ἀζυγος, unpaired.) Same as *F., median*.

**F., cau'dal.** (L. *cauda*, the tail. *F. nageoires caudales*; G. *Schwanzflossen*.) The tail of a fish.

**F., dor'sal.** (L. *dorsum*, the back. *F. nageoires dorsales*; G. *Rückenflossen*.) One or two fins of the median type situated along the middle line of the back.

**F.-foot'ed.** Having feet with the toes connected by a membrane, as the ducks.

**F.s., im'par.** (L. *impar*, unequal, not paired.) The *F.s., median*.

**F.s., ju'gular.** (L. *jugulum*, the throat.) A term applied to the ventral fins when they are placed on the sides of the neck.

**F.s., median.** (L. *medius*, in the middle.) One of the two types of the fins of fishes. They are expansions of the integument of the median line of the body containing fin-rays. They are variable in number and position.

**F.s., pair'ed.** One of the two types of the fins of fishes; they are placed on each side of the body in pairs, and represent limbs.

**F., pec'toral.** (L. *pectus*, the chest. G. *Brustflossen*.) The anterior limbs of fishes. They vary much in size and characters. The representative of the humerus is rudimentary or wanting; those of the radius and ulna are generally present, and a varying number of carpal bones, on which the fin-rays are planted; but the likeness to the limb-bones of other vertebrata is very obscure, and the basal and radial

supports are spoken of as propterygium, mesopterygium, metapterygium, and radialia.

**F.-rays.** (F. *rayons des nageoires*; G. *Flossenstrahlen*.) Spinous structures, hinged and extensible so as to expand the dermoid substance of the fin. They may be soft, or horny, or bony. They are supported on interspinous bones, or on the terminal bones of the limbs, and are moved by extensor and depressor muscles; they are sometimes jointed. They are developed from the skin.

**F.s, thoracic.** (Θώραξ, the chest.) Term applied to ventral fins when they are placed beneath the pectoral fins on the thorax.

**F.-to'ed.** Having the toes connected by a membrane; web-footed.

**F.s, ventral.** (L. *venter*, the belly.) The hind limbs of fishes. They vary in position, are frequently absent, and consist only of metatarsus and phalanges bearing the fin-rays and attached directly to the pelvic arch. This arch is not directly united to the vertebral column; but, where the ventral fins are abdominal, is suspended among the muscles; and where they are thoracic or jugular, is attached to the coracoid bones of the scapular arch.

**Finceschti.** Roumania. A sulphur spring.

**Finckle.** Same as *Fennel*.

**Find.** (Mid. E. *finden*; Sax. *findan*; G. *finden*; L. *peto*, to seek after; Gr. *πύρον*, to fall; Sans. *pat*, to fall; from Aryan root *pat*, to fall, to fly. F. *trouver*; I. *trovare*; S. *hallar*.) To meet with.

**Find'er.** (*Find*.) An apparatus for finding an object on a microscope-slide after it has once been seen, so as to save a new search. There are many forms, the chief being based upon the substitution of a slide with horizontal and vertical lines for the object-slide, and the marking or numbering of the place by this means.

**Fine.** (Old F. *fin*, witty; from L. *finitus*, well-rounded, as of a sentence.) Exquisite; thin.

**F. adjust'ment.** The arrangement for focussing the object-glass of a microscope or telescope by the slow motion produced by the turning on its axis of a very fine screw.

**F.-leav'ed bastard pars'ley.** The *Caucalis daucoides*.

**F.-leav'ed mug'wort.** The *Artemisia campestris*.

**F.-leav'ed water hem'lock.** The *Phellodendrum aquaticum*.

**Finger.** (Sax. *finger*. G. *finger*; F. *doigt*; I. *dito*; S. *dedo*.) One of the terminal digits of the upper limb, exclusive of the thumb.

**F., amputa'tion of.** (L. *amputo*, to cut off.) Removal of a finger, or part of a finger, is accomplished at a joint, or in the interval between two joints.

**F. and toe.** A popular name of a warty diseased condition of the roots of cruciferous plants.

**F., an'nular.** (L. *annulus*, a ring. F. *doigt annulaire*.) The ring or third finger or fourth digit.

**F.s, ar'teries of.** See *Digital arteries of hand*.

**F.s, bones of.** See *Phalanges of fingers*.

**F., club'bed.** See *Clubbed finger*.

**F.s, contrac'ted.** Same as *Dupuytren's contraction*.

In addition to this condition, the fingers,

though rarely, become contracted from shortening of one or more flexor tendons, as also from degeneration and shortening of the muscles of a paralysed arm.

**F. direc'tor.** A metallic cylinder tapering towards the extremity, and open in front; used in the rectangular operation of lithotomy.

**F., disloca'tion of.** The phalanges of the fingers may be dislocated either forwards or backwards, usually in the latter direction.

**F., ear.** (F. *doigt auriculaire*.) See *Ear finger*.

**F.s, exten'sors of.** See *Phalanges of fingers, extensors of*.

**F. ferns.** The ferns of the Genus *Asplenium*.

**F.s, flex'ors of.** See *Phalanges of fingers, flexors of*.

**F. flow'er.** (G. *Fingerhut*.) The *Digitalis purpurea*, from the likeness of its flower to the end of the finger of a glove.

**F.s, fracture of.** This lesion is usually the result of direct violence, but has been seen as a result of muscular action, and is more common in men than in women. The order of frequency is said to be index and middle fingers, the other fingers, and lastly the thumb, which is not often fractured. The distal phalanges are less apt to suffer than the proximal.

**F., Hippocratic.** The condition called clubbed finger, described by Hippocrates as a characteristic of phthisis.

**F., in'dex.** (L. *index*, anything that points out.) The second digit or first finger, from its use as an indicator.

**F.s, lig'a'ment of, trans'verse.** See *Ligament of fingers, transverse*.

**F., little.** The fifth digit or fourth finger, in reference to its being the smallest.

**F., middle.** The third digit or second finger, being the middle one of the five digits.

**F., nerves of.** See *Digital nerves of hand*.

**F.-part'ed.** In Botany, divided into lobes like fingers, as some leaves. Same as *Digitate*.

**F.s, phalan'ges of.** See *Phalanges of fingers*.

**F., pulp of.** The soft, fleshy, palmar extremity of the finger.

**F., ring.** (F. *doigt annulaire*; G. *Ringfinger*.) The fourth digit or third finger, being the one on which the marriage ring is placed.

**F. stall.** (Sax. *steal*, a place, a station. F. *doigtier*; I. *ditale*; S. *dedal*; G. *Fingerling*.) A sheath of leather, or india rubber, or other material, placed upon the end of the finger to protect it when injured or diseased, or to retain dressings.

**F.s, supernu'merary.** (L. *super*, above; *numerus*, a number.) See *Polydactylism*.

**F.s, web'bed.** Adhesion of the fingers to each other by their borders. This condition is most common between the little and ring fingers. It is usually congenital, but may result from neglected cicatrization after a burn.

**Fing'ered.** (*Finger*.) Having leaflets as it were fingers. Same as *Digitate*.

**Finis asperæ arteriæ.** (L. *finis*, the end; *asper*, rough; *arteria*, the windpipe.) The larynx.

**F. sac'cæ lachryma'lis.** The fundus of the lachrymal sac.

**Fin'less.** (*Fin*.) Having no fins.

**Fin'like.** (*Fin*.) Resembling a fin.

**Finn'ed.** (*Fin*.) Possessing fins.

**Fioravan'ti, Leonar'do.** A physician of Bologna, who died about 1558.

**F., bal'sam of.** See *Balsam, Fioravanti's*.

**Fir.** (Sax. *firrh*. F. *sapin*; L. *abete*; S. *abeto*; G. *Tanne*.) A name applied to various species of the Genus *Pinus*.

**F., balm of Gil'ead.** The *Abies balsamea*.

**F., bal'sam.** The *Abies balsamea*.

**F., bal'sam of.** The *Terebinthina canadensis*.

**F. club-moss.** The *Lycopodium selago*.

**F., com'mon.** The *Abies picca*.

**F., hem'lock.** The *Abies canadensis*.

**F. hill.** Scotland. A chalybeate mineral water in Old Aberdeen, now hardly used.

**F., moss, up'right.** The *Lycopodium selago*.

**F.-rapes.** The plants of the Nat. Order *Monotropaceæ*.

**F. res'in.** See *Resin, fir*.

**F., Scotch.** The *Pinus sylvestris*.

**F., sil'ver.** The *Pinus picca*.

**F., spruce.** (G. *sprossen*, a sprout.) The *Abies excelsa*.

**F., spruce, black.** The *Abies nigra*.

**F., spruce, hem'lock.** The *Abies canadensis*.

**F., spruce, Nor'way.** The *Abies excelsa*.

**F. wool.** (G. *Fichtenwolle*.) A fibrous substance, consisting of the veins and woody parts of the leaves of several species of fir, especially those of the *Pinus sylvestris*. It is felted into a kind of wadding, which is applied to rheumatic surfaces, especially when charged with fir wool oil. It is also made into vests and other articles of clothing for rheumatic people, and into chest-preservers for consumptives.

**F. wool extract.** An extract of the leaves of several species of fir, especially of *Pinus sylvestris*. Used in rheumatism, chronic catarrh, and chronic cutaneous affections, both internally and dissolved in a bath.

**F. wool oil.** (G. *Fichtenwollenöl*, *Fichtenwadelöl*.) A pleasant smelling, balsamic, volatile oil, obtained by distillation from the leaves of several firs, especially *Pinus sylvestris*. It varies in sp. gr. from .896—912. It is used both externally and internally in chronic rheumatism, chronic catarrhs, and chronic skin diseases. Dose, 15—20 minims.

**F., yew-lea'ved.** The *Abies excelsa*.

**Fire.** (Mid. E. *fyr*, *fur*; Sax. *fyr*; G. *Feuer*; probably from the Aryan root *pu*, to purify. F. *feu*; I. *fuoco*; S. *fuego*.) The sensible evolution of heat and light during combustion.

**F. damp.** (G. *dampf*, vapour.) CH<sub>4</sub>. Marsh gas, light carburetted hydrogen gas, methane, or methyl hydride.

**F., Pers'ian.** A term for malignant pustule.

**F., St. An'thony's.** A popular term for *Erysipelas*.

**F. weed.** The *Erechtites hieracifolia*.

Also, the *Senecio vulgaris*.

**Fireman.** A man who attends to a fire, such as the stoker of a steam engine.

**F.'s col'ic.** See *Colic, fireman's*.

**Fir'ez.** An Arabic term for oil. (Ruland, Johnson.)

**Fir'fir.** (Arabic.) An old term for a red colour. (Ruland, Johnson.)

**Firing.** (Fire.) A term for the use of the actual cautery.

**F. iron.** The actual cautery.

**Firm.** (Old F. *firmè*; from L. *firmus*, strong. I. *sodo firme*; G. *fest*.) Strong; stable; compact; hard.

**Firmia'na.** A Genus of the Nat. Order *Sterculiaceæ*.

**F. platanifolia, Mar.** The *Sterculia platanifolia*.

**Firmness.** (E. *firm*. F. *fermeté*; G. *Festigkeit*, *Standhaftigkeit*.) Stability; consistency; resolution. A phrenological term for a faculty peculiar to man, having its organ at the posterior part of the coronal region of the head, close upon the middle line, producing determination, constancy, and perseverance.

**Firnisium mineralium.** Old name, used by Paracelsus, *de Metallifoss*, i, 7, for antimony.

**First.** (Sax. *fyrst*. F. *premier*; I. *primo*, *primero*; G. *erst*.) Foremost; the ordinal of one.

**F. inten'tion.** See *Union by first intention*.

**F. nerve.** The olfactory nerve.

**Fiset'ic acid.** Same as *Fisetin*.

**Fiset'in.** C<sub>15</sub>H<sub>10</sub>O<sub>6</sub>. A yellow, crystalline colouring matter obtained from the fustic of the *Rhus cotinus*. Also called *Fustin*.

**Fish.** (Mid. E. *fisch*; G. *Fisch*. F. *poisson*; I. *pesce*; S. *pez*.) The generic term for the animals of the Subkingdom *Pisces*.

**F., an'chor.** The *Loligo vulgaris*.

**F. ber'ries.** (G. *Fischkörner*.) A name of *Cocculus indicus*, the fruit of *Anamirta cocculus*.

**F., cramp.** The *Torpedo Galvanii*.

**F., cuttle.** The *Sepia officinalis*.

**F. glue.** (G. *Fischleim*.) A name for isinglass.

**F.-liv'er oil.** A term applied to the oil obtained from other fish than the cod, such as the white shark, *Squalus carcharias*; the sear, *Cybius comessoni*; and others. It is used for the same purpose as cod-liver oil, especially in India.

**F. poi'son.** (*Ichthysmus*. G. *Fischgift*.) Term applied to various not hitherto isolated compounds producing poisonous effects and generated in fish and some mollusca. In some instances the effects are the result of putrefactive decomposition, to which the soft and watery tissues of fish render them, especially in hot climates, peculiarly liable, and occur after the use of stale mackerel, tunny, and other fishes, and of dead or dying oysters and mussels; but there cannot be a doubt that some fish are poisonous when eaten in the perfectly fresh state. Examples are found in the *Sphyræna barracuda* and *S. becaua*, the *Pogrus vulgaris*, *Sparus erythron*, *S. mæna*, and *Meletta thrissa* or *venenosa*. The symptoms vary in intensity from an attack of erythema or neticaria to one in which violent abdominal pain is felt, with vomiting and purging, cramps of the muscles, especially of the calves, anuria, and collapse. In some instances the effects have appeared to be due to materials ingested by the fish themselves, as where they have been poisoned by the use of *Anamirta cocculus*, and in those cases where fish may be eaten provided the intestines and liver have been removed, organs in which imperfectly assimilated substances are stored. Some fish, as the *Trachi-*

*nus draco* and *T. viperina*, of European seas, are the dread of fishermen, having a sting situated in the dorsal region, consisting of a poison gland and a duct concealed in the groove of an exceedingly hard and sharp spine, which inflicts a wound that is extremely painful, causes swelling of a very persistent character, and has a tendency to induce abscess of the lymphatic glands. The Russian form of fish poisoning lately investigated by Owsjannikow appears to proceed from the consumption of raw but salted sturgeon in which putrefactive processes have taken place. It is characterised by its tardy appearance, one to five hours after a meal, and by the complaints of the patients of pressure in the epigastrium, faintness, dimness of sight, xanthopsia or erythropsia, burning and dryness of the throat, intense thirst with great difficulty of swallowing, cardialgia, gastralgia, and either constipation or diarrhoea. Hutchinson has collected much evidence to show that leprosy is associated with the consumption of salt and unwholesome fish.

**F. skin disease.** (*G. Fischschuppenausschlag*.) A term for *Ichthyosis*.

**F. this'ties.** The *Chamæpnee casabonæ*.

**F. tongue.** The name of an instrument sometimes used for the removal of the wisdom teeth; so called from its shape.

**F., wounds by.** Fishes, such as the sharks, cause severe wounds by the teeth; others, as the swordfish, by their nasal horn; and some, as the *Acanthurus*, by spines in the caudal fin; but in addition to simple weapons such as these, some fishes are said to have hollow spines situated on a poison sac, as the *Synancea*.

**Fishing tube.** Same as *Dipping tube*.

**Fissicostate.** (*L. fissus*, cleft; *costa*, a rib.) Having the ribs or nervures divided.

**Fissiculatio.** (*L. fissicula*, to cut open.) An old term for the gaping skin-wound made by a scalpel.

**Fissile.** (*L. fissilis*, that may be cleft. *G. spaltbar*.) Capable of being, or with a tendency to be, cleft in definite planes.

**Fissiling'ua.** (*L. fissus*, cleft; *lingua*, the tongue.) A Suborder of the Order *Sauria*, Class *Reptilia*. Pleurodontous reptiles with a long, slender, protractile, cleft tongue, possessing eyelids, and having the body scales small and imbricated, those of the tail in transverse bands.

**Fission.** (*L. fissio*, a dividing; from *findo*, to cleave.) The act of cleaving or splitting.

**F. fungi.** The *Schizomyces*.

**F., reproduction by.** See *Generation, fissiparous*.

**Fissiparation.** (*L. fissus*; *pario*.) A form of reproduction consisting in the spontaneous or accidental division of an organ into two or more parts, each of which becomes a perfect being exactly resembling that from which it was derived before its division. See *Generation, fissiparous*.

**Fissiparism.** Same as *Fissiparity*.

**Fissiparity.** (*L. fissus*, part of *findo*, to cleave; *pario*, to bring forth.) The form of asexual reproduction in which the parent divides into two halves, which after separation develop and form two distinct individuals. See *Generation, fissiparous*.

**Fissiparous.** (*L. fissus*, cleft; part of *findo*, to cleave; *pario*, to bring forth.) Reproducing by fission or cleavage.

**F. cell-formation.** The formation of

cells by segmentation. See under *Cytogenesis*.

**F. generation.** See *Generation, fissiparous*.

**Fissipation.** Same as *Fissiparity*.

**Fissipedate.** (*L. fissus*, cleft; *pes*, a foot.) Having separate toes.

**Fissipedia.** (*L. fissus*; *pes*.) A Division of *Carnivora* having the toes divided from each other; such as the dog, *Canis domesticus*.

**Fissirostrate.** (*L. fissus*; *rostrum*, a beak. *F. fissirostris*.) Having a deeply-cleft beak; belonging to the *Fissirostres*.

**Fissirostres.** (*L. fissus*; *rostrum*, a beak.) An Order of the Class *Aves*, having a deeply-cleft beak; such as the goat-sucker, *Caprimulgus europæus*.

**Fissura.** (*L. fissura*, a cleft; from *findo*, to cleave. *F. fissure*; *I. fissura*; *S. fisura*; *G. Spalt*; *Einriss*.) A fissure; any deep extended depression; a fine long crack. See *Fissure*.

**F. abdominalis.** (*L. abdomen*, the lower part of the belly. *G. Bauchspalte*.) Defective closure of the abdominal wall at the umbilicus in the process of development. It usually occurs as a persistence of the condition found at the second month of fetal life. A part of the intestines occupies the commencement of the cord, and is here covered only by the peritoneum and by the amnion.

**F. abdominalis completa.** (*L. abdomen*; *completus*, part of *compleo*, to fill completely.) That condition in which the whole or the greater part of the anterior abdominal wall is deficient. The margins of the opening are continuous with the amnion, and there is no umbilical cord.

**F. ani.** (*L. anus*, a ring, hence the fundament. *G. Aftereinriss*.) An ulcer involving some part of the wall of the anus, sometimes the cause and sometimes the consequence of spasm of the lower part of the large intestine. It is circular or oval, with sharply defined, often hardened borders, and very tender. Its depth is variable, sometimes the epidermis only being defective, at others the muscular coat of the intestine being exposed at the base. It is usually situated near the posterior wall. It is most common in middle life, twenty to forty, though it is not infrequent in children. Acute pain is experienced during, or soon after, the passage of the feces, which may last for many hours, and may occasion convulsions or even symptoms of cerebral mischief in children. It is sometimes attended with dysuria. See also *Anus, fissure of*.

**F. calcarina.** (*L. calcar*, a spur.) Huxley's term for a very constant, deep, and early-developed fissure of the cerebrum, which begins as a forked cleft at the median surface of the posterior extremity of the hemisphere, extends forwards, is joined by the internal parieto-occipital fissure, and terminates beneath the posterior extremity of the corpus callosum, where the gyrus fornicatus separates it from the fissura hippocampi. Its inward projection forms the calcar avis or hippocampus minor.

**F. canalis Fallopii.** (*L. canalis*, a channel.) The *Hiatus Fallopii*.

**F. capillorum.** (*L. capillus*, a hair.) The condition in which the hairs are split at their extremities.

**F. cerebelli longitudinalis.** (*L.*

*cerebellum*, the little brain; *longitudo*, length.) A synonym of the *Fallexula cerebelli*, or depression separating the hemispheres of the cerebellum below.

**F. cerebelli transversa.** (L. *cerebellum*; *transversus*, turned across.) The horizontal groove which separates the upper from the lower part of each hemisphere of the cerebellum. The *Fissure of cerebellum, horizontal*.

**F. cerebri centralis.** The *Sulcus centralis*.

**F. cerebri collateralis.** See *Fissure of cerebellum, collateral*.

**F. cerebri horizontalis.** (L. *cerebrum*, the brain; *horizon*, the horizon.) See *F. horizontalis*.

**F. cerebri inferior.** (L. *cerebrum*, the brain; *inferior*, that which is below.) Term applied to the lower of the two sulci into which the Sylvian fissure divides.

**F. cerebri lateralis.** (L. *cerebrum*; *lateralis*, belonging to the side.) Henle's term for the *Fissure of Sylvius*.

**F. cerebri lateralis anterior.** (L. *cerebrum*; *lateralis*; *anterior*, in front.) A synonym of the *F. fossa Sylvii anterior*.

**F. cerebri lateralis posterior.** (L. *cerebrum*, the brain; *lateralis*; *posterior*, hinder.) A synonym of the *F. fossa Sylvii posterior*.

**F. cerebri longitudinalis.** (L. *cerebrum*; *longitudo*, length.) The fissure separating the hemispheres of the cerebrum.

**F. cerebri magna.** The *Fissure of cerebrum, transverse*.

**F. cerebri parieto-occipitalis.** See *F. parieto-occipitalis*.

**F. cerebri posterior.** (L. *cerebrum*, the brain; *posterior*, that which is behind.) R. Wagner's term for the *Fissura calcarina*. Also, Burdach's term for the internal parieto-occipital fissure of the cerebrum.

**F. cerebri superior.** (L. *cerebrum*, the brain; *superior*, that is above.) The upper of the two sulci into which the Sylvian fissure divides.

**F. cerebri transversa.** (L. *cerebrum*, the brain; *transversus*, turned across. G. *Querpalte des grossen Gehirns*.) The great transverse fissure of the cerebrum. See *Fissure of cerebrum, transverse*.

**F. cerebri transversa anterior.** (L. *cerebrum*, the brain; *transversus*, turned across; *anterior*, that which is in front.) The *Fissure of cerebrum, transverse*.

**F. cerebri transversa magna.** (L. *cerebrum*, the brain; *transversus*, turned across; *magnus*, great.) The *Fissure of cerebrum, transverse*.

**F. cerebri transversa parva.** (L. *transversus*; *parvus*, small.) The *F. cerebelli transversa*.

**F. cerebri transversa posterior.** (L. *cerebrum*; *transversus*; *posterior*, that is behind.) The *F. cerebelli transversa*.

**F. collateralis.** (L. *collatero*, to admit on both sides.) Huxley's term for a fissure which extends for a varying distance on the under surface of the occipital and temporal lobes of the cerebrum. It commences near the posterior end of the occipital lobe and runs forwards, having the gyrus hippocampi and the gyrus occipito-temporalis medialis on its inner edge, and the gyrus occipito-temporalis lateralis on its outer edge. Its anterior termination varies; sometimes it stops short at the fasciculus unci-

natus, at other times it stretches as far as the anterior part of the temporal lobe. Its inner projection into the descending cornu of the lateral ventricle is the eminentia collateralis.

**F. contrajacens.** (L. *contra*, over against; *jacere*, to lie.) A synonym of *Counterfissure*.

**F. endomesognathica.** (Ἐνδορ, within; μέσος, in the middle; γνάθος, the jaw.) The *F. incisura medialis*.

**F. fossæ Sylvii anterior.** (L. *fossa*, a pit; *Sylvius*; *anterior*, in front.) The anterior or ascending limb of the *Fissure of Sylvius*.

**F. fossæ Sylvii ascendens.** (L. *ascendo*, to mount up.) The anterior or ascending limb of the *Fissure of Sylvius*.

**F. fossæ Sylvii horizontalis.** The posterior or horizontal limb of the *Fissure of Sylvius*.

**F. fossæ Sylvii posterior.** (L. *posterior*, hinder.) The posterior or horizontal limb of the *Fissure of Sylvius*.

**F. foveæ rhomboidalis longitudinalis.** (L. *fovea*, a pit; Gr. *ῥόμβος*, a rhombus; *ἔδος*, form.) The median groove of the fourth ventricle.

**F. foveæ rhomboidalis media.** (L. *fovea*, a pit; Gr. *ῥόμβος*, a rhomb; *ἔδος*, form; L. *medius*, that which is in the middle.) The median groove on the floor of the fourth ventricle.

**F. genitalis.** (L. *genitalis*, belonging to birth.) A fissure affecting a part only or the whole of the external genitals. See *Epispadias*, and *Hypospadias*.

**F. Glaseri.** See *Fissure, Glaserian*.

**F. hippocampi.** (ἵπποκαμπος, a sea-monster.) A fissure the inner elevation of which in the floor of the lateral ventricle is the hippocampus major; it commences near the end of the fissura calcarina, from which it is separated by the extremity of the gyrus fornicatus, and extends downwards and forwards to the notch in the gyrus uncinatus.

The fissura hippocampi of Bischoff is the *F. calcarina*.

**F. horizontalis.** Pausch's term for the *F. calcarina*.

**F. incisiva.** (L. *incido*, to cut. G. *Schneidezahnspalte*.) See *Fissure, incisor*.

**F. incisiva facialis.** (L. *facies*, the face.) An extension of the incisive foramen on the outer or facial surface of the alveolar process of the superior maxillary bone.

**F. incisiva intermedia.** (L. *inter*, between; *medius*, middle.) The *F. incisura medialis*.

**F. incisiva lateralis.** (L. *lateralis*, belonging to the side.) The *Fissure, incisor*.

**F. incisiva medialis.** (L. *medius*, in the middle.) The median fissure occasionally seen in the fetus on the facial surface of the upper jaw, between the two bones representing the intermaxillary bones of lower animals.

**F. incisiva palatina.** (L. *palatum*, the palate.) The *Fissure, incisor*.

**F. interinsularis.** The *Sutura interinsularis*.

**F. interlobularē hepatis.** (L. *inter*, in the midst; *lobulus*, a small lobe; *hepar*, the liver.) The fissures between the lobules of the liver.

**F. interparietalis.** The *Sulcus interparietalis*.

# FISSURA.

**F. i'ridis.** Same as *Coloboma iridis*.  
**F. larynge'a pharyng'is.** (Λάρυγξ, the larynx; φάρυγξ, the gullet.) A synonym of *Incisura interarytanoidea*.

**F. longitudinalis cer'e'br'i.** See *Fissure of cerebrum, longitudinal*.

**F. longitudinalis poste'rior.** The *Sulcus medianus* of the fourth ventricle.

**F. mag'na Syl'vii.** (L. *magnus*, great.) The *Fissure of Sylvius*.

**F. mastoi'dea squamo'sa.** (Μαστός, the breast; εἶδος, form; L. *squama*, a scale.) A fissure found by Kirchner to be present 15 times in 300 skulls contained in the museum at Würzburg in place of the *Sutura mastoidea squamosa*.

**F. medullæ oblongatæ media'næ anterior.** See *Fissure of medulla oblongata, anterior*.

**F. medullæ oblongatæ media'næ poste'rior.** See *Fissure of medulla oblongata, posterior*.

**F. medullæ spina'lis longitudina'lis anterior.** (L. *medulla*, marrow; *spinalis*, spinal; *anterior*, that which is in front.) See *Fissure of spinal cord, anterior median*.

**F. medullæ spina'lis longitudina'lis poste'rior.** (L. *posterior*, that which is behind.) See *Fissure of spinal cord, posterior median*.

**F. medullæ spina'lis media'næ ante'rior.** (L. *medulla*, marrow; *spinalis*, spinal; *medianus*, that which is in the middle; *anterior*, that which is in front.) See *Fissure of spinal cord, anterior median*.

**F. medullæ spina'lis media'næ poste'rior.** (L. *medianus*; *posterior*, that which is behind.) See *Fissure of spinal cord, posterior median*.

**F. mesoexognath'ica.** (Μέσος, in the middle; ἐξω, outward; γνάθος, a jaw.) The *F. incisiva lateralis*.

**F. occipitalis.** (L. *occiput*, the back part of the head.) Wagner's term for the internal parieto-occipital fissure of the cerebrum.

**F. occipitalis exter'na.** (L. *externus*, outward.) Pansch's term for the *Sulcus occipitalis transversus*.

**F. occipitalis horizonta'lis.** (L. *occiput*; *horizon*, the horizon.) R. Wagner's term for the *F. calcarina*.

**F. occipitalis inter'na.** (L. *internus*, within.) Pansch's term for the internal and external parieto-occipital fissures of the cerebrum.

**F. occipitalis perpendicula'ris exter'na.** (L. *externus*, outward.) Bischoff's term for the *Sulcus occipitalis transversus*.

**F. occipitalis perpendicula'ris inter'na.** (L. *internus*, within.) Bischoff's term for the external and internal parieto-occipital fissures of the cerebrum.

**F. occipitalis poste'rior.** (L. *occiput*; *posterior*, coming after.) A synonym of *Sulcus calcarinus*.

**F. orbita'lis.** (L. *orbita*, an orbit. G. *Augenbeche Keilbeinspalte*.) The fissure between the posterior border of the great wing of the sphenoid bone and the lesser wing or processus ensiformis.

**F. orbita'lis infe'rior.** (L. *orbita*; *inferior*, that is below. G. *untere Augenhöhlenspalte*.) A synonym of the *Fissure, sphenomaxillary*.

**F. orbita'lis supe'rior.** (L. *orbita*; *superior*, that is above. G. *obere Augenhöhlenspalte*.) The *Fissure, sphenoidal*.

**F. or'is.** (L. *os*, mouth. G. *Mundspalte*.) The outer aperture of the mouth.

**F. os'sium.** (L. *os*, a bone. G. *Knochen-sprung, Spaltbrüche*.) A crack or fissure, but not a complete fracture, of a bone.

**F. palpebra'rum.** (L. *palpebrae*, the eyelids. G. *Augenlidspalte*.) The space between the lids of the eye. See *Fissure, palpebral*.

**F. parallela.** (L. *parallelus*, parallel. F. *seissure parallele* of Gratiolet; G. *Parallelfurche, obere Schläfenfurche*.) A synonym of the *Sulcus temporalis superior*.

**F. pari'eto-occipita'lis.** (Parietal; occipital.) Ecker's term for the whole of the sulcus which divides the occipital from the parietal lobe of the brain, which he subdivides into a median or vertical part, usually called the internal parieto-occipital fissure, and a superior and lateral part, usually called the external occipital fissure.

**F. perpendicula'ris exter'na.** See *F. occipitalis perpendicula'ris exter'na*.

**F. perpendicula'ris inter'na.** See *F. occipitalis perpendicula'ris inter'na*.

**F. petro-basila'ris.** (Πέτρος, a stone; βάσις, a foot.) A synonym of *Sutura petrosobasilaris*.

**F. petro-mastoi'dea.** The *tympanico-mastoidea*.

**F. petro'sa superficia'lis.** (L. *petrosus*, rocky; *superficies*, the upper surface of a thing.) A synonym of the *Hiatus canalis facialis*.

**F. petro'so-angula'ris.** (L. *petrosus*, rocky; *angularis*, having angles.) A synonym of *F. sphenopetrosa*.

**F. petro'so-basila'ris.** (L. *petrosus*, rocky; *basis*, the foot or base.) A synonym of *Foramen lacerum anterius*.

**F. petro'so-mastoi'dea.** (L. *petrosus*, rocky; Gr. *μαστός*, a teat; *εἶδος*, form.) A small fissure situated between the mastoid process and the posterior part of the external auditory canal, in which are two small holes, the exits of the canaliculus mastoideus.

**F. petro'so-squamo'sa.** (L. *petrosus*, rocky; *squama*, a scale.) A narrow fissure at the point of junction of the anterior or upper surface of petrous portion with the squamous portion of the temporal bone, which is the remains of the original separation.

**F. petro-tympan'ica.** (L. *petrosus*, rocky; *tympanum*, a drum.) A synonym of the *F. Glaseri*.

**F. pila'ris.** (L. *pilaris*, hair-like.) Same as *Capillary fissure*.

**F. pterygoi'dea.** (Πτερυγ, a wing; εἶδος, form.) The notch which separates below the internal from the external pterygoid plate of the sphenoid bone.

**F. puden'di.** (L. *pudendum*, the external genital organs. G. *Schamspalte*.) The cleft between the labia pudendi.

**F. Rolan'di.** (Rolando, an Italian anatomist.) A synonym of the *Sulcus centralis*.

**F. sphenoida'lis.** See *Fissure, sphenoidal*.

**F. sphenoida'lis supe'rior.** (Sphenoid bone; L. *superior*, that which is above.) A synonym of *F. orbitalis*.

# FISSURAL—FISSURE.

**F. sphe'no-maxilla'ris.** See *Fissure, sphe'no-maxillary*.

**F. sphe'no-petro'sa.** (*Sphenoid bone; L. petrosus, rocky.*) A fissure existing between the petrous portion of the temporal bone and the triangular plate of the great wing of the sphenoid bone, by which means the spina angularis inserts itself in the angle between this angle and the anterior border of the squamous portion of the temporal bone.

**F. spina'lis.** (*L. spina, the back-bone.*) The same as *Spina bifida*.

**F. splenia'lis.** (*L. splenium, a plaster.*) A sulcus in the brain of Ungulates, which appears to be identical with the *Sulcus præcuneatus*.

**F. ster'ni.** (*L. sternum, the breast-bone.*) A defective formation of the sternum, in consequence of which its two halves are either not united in the middle line, or are altogether absent.

**F. Syl'vii.** See *Fissure of Sylvius*.

**F. tegmen'ti tym'pani.** (*L. tympanum, a covering; tympanum.*) A thin fissure in the part of the upper surface of the petrous portion of the temporal bone called the tegmen tympani.

**F. tempora'lis infe'rior.** (*L. inferior, lower.*) Bischoff's term for the *F. collateralis*.

**F. transve'sa ante'rior.** (*L. transversus, turned across; anterior, in front.*) Pansch's term for the *Sulcus centralis*.

**F. tympan'ico-masto'idea.** (*L. tympanum, a drum; Gr. μαστός, a teat; εἶδος, form.*) A fissure separating the tympanic ring of the temporal bone from the mastoid process.

**F. ure'thræ comple'ta.** Dolbeau. (*L. urethra; completus, perfect.*) A fissure, termed by Bergh *Epispadiasis penis*, which extends along the upper surface of the organ, and may even reach the membranous urethra.

**F. ure'thræ incomple'ta.** Dolbeau. (*L. urethra; incompletus, incomplete.*) A fissure named *Epispadiasis glandis* by Bergh, in which the fissure affects simply the glans penis.

**F. ure'thræ super'ior cum inver'siōe.** Dolbeau. (*L. urethra; superior, upper; cum, with; inversio, a turning upside down.*) The same as *Epispadias*.

**F. ves'ico-genital'is.** (*L. vesica, the bladder; genitalis, belonging to birth. G. Blasen-genital-spalte.*) An abnormal congenital fissure limited to the lower part of the abdominal wall. The rami of the os pubis are more or less separated from each other, and are either wholly ununited or united only by ligament.

**F. vulvæ mag'na.** (*L. vulva; magnus, great.*) The cleft separating the labia of the vulva.

**F. zygomat'ico-sphenoida'lis.** (*Zygomatie process; sphenoid bone.*) A fissure sometimes found at the point of junction of the orbital surface of the great wing of the sphenoid bone and the orbital border of the malar bone.

**Fissural.** (*L. fissura, a cleft.*) Possessing fissures; inclined to form clefts; connected with fissures, or clefts, or orifices.

**F. angeio'ma.** (*Ἀγγεῖον, a blood-vessel.*) Angioma of the natural fissures of the body, those of the eyes, the ears, and the mouth.

**Fissuration.** Same as *Fission*.

**Fissure.** (*F. fissure; from L. fissura, a cleft; from fissus, part. of findo, to cleave; from Aryan root bhid, to cleave. I. fessura; S. fissura; G. Spalt, Spalte, Ritze.*) A cleft, normal

or abnormal, congenital or acquired; especially one that is somewhat long and narrow.

In Botany, the line of cleavage of seed vessels and anthers, and the clefts of a divided leaf.

In Anatomy, a long, narrow aperture in a bone or other structure.

In Pathology, a narrow solution of continuity produced by injury or by ulceration.

**F., auricular.** (*L. auricula, the outer ear.*) A fissure situated between the vaginal and mastoid processes of the temporal bone. It permits the exit of the auricular branch of the pneumogastric nerve.

**F., calcarine.** (*L. calcar, a spur.*) The *Fissura calcarina*.

**F., calloso-mar'ginal.** See *Sulcus, calloso-marginal*.

**F., capillary.** See *Capillary fissure*.

**F.s, cra'nial, congen'ital.** (*L. cranium, the skull; congenitus, born together.*) Fissures or notches of the cranial bones stretching from the margin inwards, and caused by defective ossification; occasionally they are found as gaps in the centre of the bone. They are most frequent in the frontal, the parietal, and the squamous portion of the temporal bones.

**F., den'tate.** (*L. dens, a tooth.*) Huxley's term for the *Fissura hippocampi*.

**F. for gall-blad'der.** See *F. of liver for gall-bladder*.

**F., Glase'rian.** (*Glaser, an anatomist.*) A narrow slit which divides the glenoid fossa into two parts. It extends into the tympanum, opening into its outer wall, lodges the processus gracilis of the malleus, and transmits the laxator tympani muscle and the tympanic branch of the internal maxillary artery.

**F., glen'oid.** (*Γλῆνῃ, a cavity; εἶδος, form.*) The *F. Glaserian*.

**F., hippocamp'al.** The *Fissura hippocampi*.

**F., inci'sor.** (*L. incisus, part. of incido, to cut. G. Schneidezahnspalte.*) A fine fissure on the under surface of the palate process of the superior maxillary bone of young persons, and occasionally of an adult, running outwards from the anterior palatine canal to the alveolar border of the bone in front of the socket for the canine tooth; the fissure is also observable on the upper surface of the process; it marks off a part of the bone which corresponds to the premaxillary bone of lower animals.

**F., infraorb'ital.** (*L. infra, beneath; orbita, the orbit.*) The upper extremity of the infraorbital canal on the orbital plate of the superior maxillary bone.

**F., interlob'ular, great.** (*F. grande scissure interlobulaire of Cbassier.*) The *F. of Sylvius*.

**F., intrapari'etal.** Turner's name for the *Sulcus interparietalis*.

**F., maxill'ary.** (*L. maxilla, the upper jaw.*) A fissure which runs from the lower part of the orifice of the antrum obliquely downwards and forwards. It receives the maxillary process of the palate bone.

**F., nee'dle.** A spiral needle which, when threaded with silk or wire, is thrust into one of the lips of a closely approximated incised wound, and being turned on its axis perforates each lip alternately, and leaves the suture in its track.

**F., occip'ito-pari'etal.** Huxley's term for the external and internal parieto-occipital fissures combined.

## FISSURE.

**F. of a'nus.** (G. *Afereinriss*.) See *Anus*, *fissure of*, and *Fissura ani*.

**F. of Bichat.** (*Bichat*.) The *F. of cere-brum, transverse*.

**F. of bone.** An incomplete fracture, without separation of the parts, of a bone, most frequently of a long bone, from violence.

**F.s of brain.** See *F.s of cerebrum*.

**F. of cerebellum, horizontal.** A fissure which divides the cerebellum into an upper and a lower portion. It commences in front at the pons, and runs horizontally round the free margin of each hemisphere, backwards to the middle line.

**F. of cerebellum, semilunar.** (L. *semi, half*; *luna*, a moon.) The *Falccula*.

**F. of cerebrum, calcarine.** The *Fissura calcarina*.

**F. of cerebrum, central.** (L. *cere-brum*, the brain.) The space forming the whole extent of the ventricles of the brain.

Also, the *Sulcus centralis*.

**F. of cerebrum, collateral.** The *Fissura collateralis*.

**F. of cerebrum, dentate.** The *Fissura hippocampi*.

**F. of cerebrum, hippocampal.** See *Fissura hippocampi*.

**F. of cerebrum, interlobar.** (L. *inter*, between; *lobus*, a lobe.) The *F. of cerebrum, longitudinal*.

**F. of cerebrum, longitudinal.** A fissure which, running from before backwards in the median line, divides the brain into two lateral halves or hemispheres, except in the middle, where its floor is formed by the corpus callosum; the sides of the fissure are the opposed inner surfaces of the hemispheres, and it lodges the falx cerebri. Its length from before backwards is 54 cm.; its depth from above downwards is 41 cm. in front, and 47 cm. behind; in front and above it is 2—5 cm. broad, behind 14 cm. broad.

**F. of cerebrum, longitudinal, great.** The *F. of cerebrum, longitudinal*.

**F. of cerebrum, parieto-occipital, external.** Turner's name for a fissure on the outer surface of the cerebrum of varying length. It commences at the notch on the inner margin of the hemisphere formed by the upper end of the internal parieto-occipital fissure, and is continued transversely outwards for a distance, which varies inversely with the size of the gyrus occipitalis primus, which bounds its outer extremity. It appears about the fourth or fifth month in the fetus.

**F. of cerebrum, parieto-occipital, internal.** A deep and constant sulcus on the internal surface of each hemisphere of the cerebrum, running from the margin forwards and downwards to join at an acute angle the calcarine fissure. It appears at the fourth or fifth month of fetal life.

**F. of cerebrum, transverse.** A fissure through which the pia mater passes into the ventricles to form the velum interpositum and the choroid plexuses. It is an artificial cleft made by tearing away the epithelial lining of the ventricles in the removal of the choroid plexuses. It is bounded above by the corpus callosum and fornix in the middle, and on each side by the fascia dentata and the fimbria of the corpus callosum; below, it is bounded in the middle by the corpora quadrigemina, and on each side by the posterior part of the optic thalamus.

**F. of cheek.** A congenital condition, rarely seen, in which the angle of the mouth is extended backwards or upwards beyond the natural; and the ear of that side is imperfectly developed.

**F. of Gla'ser.** See *F., Glaserian*.

**F. of Glaserius.** See *F., Glaserian*.

**F. of helix.** A small cleft in the helix of the auricle above the insertion of the attrahens aurem.

**F. of iris.** Same as *Coloboma iridis*.

**F.s of leaf.** The intervals between the lobes of a cleft or fissured leaf.

**F. of lip.** See *Hardip*.

**F. of liver for ductus venosus.** The posterior part of the longitudinal fissure of the liver. In the fetus the ductus venosus is lodged in it, and in the adult the remains of this duct appear in the form of a slender fibrous cord.

**F. of liver for gall-bladder.** A groove on the under surface of the right lobe of the liver, which runs parallel to the longitudinal fissure, and extends from the free border of the liver in front to near the right extremity of the transverse fissure.

**F. of liver for vena cava.** A short deep fissure extending obliquely from a little behind the right extremity of the transverse fissure to the posterior border of the liver, where it joins the fissure for the ductus venosus. It contains the inferior vena cava.

**F. of liver, longitudinal.** A fissure separating the two lobes of the liver. It is divided by its junction with the transverse fissure into two parts; the front portion being the *F. of liver, umbilical*, the hinder part being the *F. of liver for ductus venosus*.

**F. of liver, portal.** The *F. of liver, transverse*; so called because it lodges the portal vein.

**F. of liver, transverse.** A fissure, about two inches in length, crossing the right lobe of the liver transversely. It joins the longitudinal fissure at right angles. It contains the portal vein, hepatic artery and nerves, the hepatic duct and lymphatics.

**F. of liver, umbilical.** (L. *umbilicus*, the navel. *F. fissure umbilicale*.) The anterior half of the longitudinal fissure of the liver. It lodges the umbilical vein in the fetus, and its remains, the round ligament, in the adult.

**F.s of lung.** The chief fissure of the right lung and the only fissure of the left extends from the upper part of the posterior border of the lung, about three inches from its apex, downwards and forwards to the lower part of the anterior border of the lung, which it divides into an upper and a lower lobe. In the right lung the upper lobe is partially divided by a second fissure, which extends from the middle of the chief fissure, forwards and upwards, to the anterior margin of the lung, marking off the middle lobe.

**F. of medulla oblongata, anterior.** (L. *anterior*, in front.) A continuation of the anterior median fissure of the spinal cord. It terminates at the pons in the foramen cecum of Vieq d'Azyr; at its lower part it contains the decussation of the pyramids.

**F. of medulla oblongata, posterior.** (L. *posterior*, hinder.) A continuation of the posterior median fissure of the spinal cord. Its upper termination is the fourth ventricle.

**F. of nipple.** See *Nipple, cracked*.

**F. of palate.** See *Palate, fissure of*.

**F. of Rolando.** (*Rolando.*) The *Sulcus centralis*.

**F.s of Santorini.** (*Santorini.*) The irregular clefts which, to the number of one or two, divide transversely the cartilaginous part of the external auditory canal.

**F.s of spinal cord.** These are two in number, viz. the anterior median and the posterior median. The fissures sometimes called lateral or anterior and posterior lateral fissures do not exist, but merely indicate the points where the roots of the nerves emerge.

**F. of spinal cord, anterior lateral.** A line of neuroglia at the point of exit of the anterior roots of the spinal nerves.

**F. of spinal cord, anterior median.** A wide fissure dipping into the cord for about one-third of its antero-posterior diameter. It contains a prolongation of the pia mater. It terminates at the white anterior commissure, and is from 2—4 mm. deep at the middle of the cord, but shallower above and below.

**F. of spinal cord, posterior lateral.** A line of neuroglia at the point of exit of the posterior roots of the spinal nerves.

**F. of spinal cord, posterior median.** A narrow but deep fissure, from 4 to 6 mm. deep, dipping into the substance of the cord about one half of its antero-posterior diameter, as far as the posterior gray commissure; it is nearly filled up with delicate neuroglia, which joins the lateral halves of the cord.

**F. of spleen.** (*F. fissure de la rate.*) The vertical notch or groove on the anterior surface of the spleen where the splenic vessels enter; it lodges some fat.

**F. of Sylvius.** (*Sylvius.* *F. scissure de Sylvius*; *G. Sylvische Furche.*) A large, deep fissure which begins at the base of the cerebrum, behind the origin of the olfactory nerves, in the anterior perforated space; it passes transversely outwards to the lateral surface of the hemisphere, where it divides into two branches, a short, anterior, ascending branch, which runs upwards and forwards into the frontal lobe, and a much longer, posterior, horizontal branch, which runs backwards between the parietal and the temporo-sphenoidal lobes, through about the middle third of the hemisphere. The terminations of both branches are sometimes simple, sometimes forked. The convolutions enclosed by the two arms at their angle of origin is the operculum of the island of Reil. The fissure of Sylvius arises about the third month of foetal life by an infolding of the whole thickness of the hemisphere of the rudimentary cerebrum. It cuts off the anterior lobe from the remainder of the brain.

**F. of tongue.** See *Tongue, fissure of.*

**F. of tragus.** (*Tragus.*) A fissure on the anterior surface of the tragus of the auricle of the ear.

**F. of uterus.** See *Uterus, fissure of.*

**F., orbital, anterior.** (*L. orbita*, the orbit; *anterior*, in front.) The *F., sphenomaxillary*.

**F., orbital, posterior.** The *F., sphenoidal*.

**F., palpebral.** (*L. palpebra*, the eyelids. *F. fente palpebrale*; *G. Augenhidspalte*.) The oval space between the margins of the eyelids. Its length is about 1.25", its breadth varies with the extent to which the eyes are opened; the lower margin is less arched than the upper border.

der, and the fissure is usually a little lower at its inner end than at the outer end.

**F., parieto-occipital, external.** See *F. of cerebrum, parieto-occipital, external*.

**F., parieto-occipital, internal.** See *F. of cerebrum, parieto-occipital, internal*.

**F., perpendicular, external.** (*F. scissure perpendiculaire externe* of Gratiolet.) Marshall's term for the external parieto-occipital fissure of the cerebrum.

**F., perpendicular, internal.** (*F. scissure perpendiculaire interne* of Gratiolet.) Marshall's term for the internal parieto-occipital fissure of the cerebrum.

**F., portal.** See *F. of liver, portal*.

**F., pterygo-maxillary.** (*Pterygoid process*; *maxillary bone*.) A vertical fissure leading above into the sphenomaxillary fossa; it is closed internally by the vertical plate of the palate bone.

**F., sphenoidal.** (*Σφήν*, a wedge; *εἶδος*, form.) A triangular fissure through which a connection is established between the cavities of the cranium and orbit. It is bounded internally by the body of the sphenoid, above by the lesser wing, below by the internal margin of the orbital surface of the great wing, and is completed by the frontal. It transmits the third, the fourth, the first branch of the fifth, and the sixth nerves, some filaments of the sympathetic, the ophthalmic vein, and a recurrent branch of the ophthalmic artery.

**F., sphenomaxillary.** A fissure lying between the lower surface of the great wing of the sphenoid and the external border of the orbital surface of the superior maxillary bone, and a small part of the palate bone. It is completed anteriorly by the malar bone, and is situated at the outer and back part of the orbit. It transmits the superior maxillary nerve and its orbital branch, the infraorbital artery, and ascending branches from Meckel's ganglion.

**F., Sylvian.** See *F. of Sylvius*.

**F., umbilical.** See *F. of liver, umbilical*.

**Fissured.** (*L. fissura*, a cleft.) Cleft.

**F. calyx.** (*Κάλυξ*, the cup of a flower.) A calyx the sepals of which are separate to about half way from the base.

**F. fracture.** See *Fracture, fissured*.

**F. leaf.** A leaf deeply divided by narrow clefts.

**Fissus.** (*L. fissus*, part. of *findo*, to cleave. *F. fendu*; *G. gespalten*.) Divided; cleft; cloven.

**Fist.** (*Sax. fyst*; *G. Faust*; *L. pugnus*; *Gr. πυγμή*; *F. poing*; *I. pugno*; *S. puño*.) The clenched hand.

**F. balls.** The plants of the Genus *Lyco-perdon*.

**Fistula.** (*L. fistula*, anything tubular; from *findo*, to cleave. *F. fistule*; *I. fistola*; *G. Rohre*.) A pipe.

In Surgery (*F. fistule*; *I. fistola*; *S. fistola*; *G. Fistel*), a long, narrow, suppurating canal of morbid origin in some part of the body, either leading from the outer surface to one of the natural cavities of the body; or leading from the outer surface inwards, but not reaching a cavity or viscus; or leading from a viscus or cavity into another viscus or cavity; or leading from a viscus, but not opening outwardly. A fistulous canal leading to a suppurating cavity, or to a necrosed structure, is called a *Sinus*.

A fistula may be a simple or branched canal,

## FISTULA.

tortuous or straight, of even bore, or with dilated intervals. Its walls when recent are soft, lined with easily bleeding granulations, and secreting an unhealthy pus, unless they are healing; when old they become hard and callous from increased growth of connective tissue, lined with an almost smooth surface, and secreting frequently a watery or flocculent pus. It may arise from an abscess, from a wound, or from an ulceration in a viscus, with suppuration on the outer side, or extravasation of its contents.

**F., abdominal.** (*L. abdomen*, the belly.) A fistulous opening in the abdominal wall communicating with some viscus.

**F., aërial.** (*L. air*, air.) A fistulous opening into the larynx or trachea, often the result of a wound.

**F., anal.** (*G. Afterfistel.*) See *Anus*, *fistula of*.

**F. auris congenita.** (*L. auris*, the ear; *congenitus*, born together.) A small opening situated about 1 centimeter above the tragus in man, and most frequently 1—2 millimeters in front of the helix. It is the entrance of a canal, running from without inwards and forwards for a depth of several millimeters. The outer extremity of the fistula is usually situated at the point where the upper border of the helix is continuous with the skin of the face. It has not been shown that the inner extremity ever opens into either the external auditory meatus or into the tympanic cavity. It occurs with about equal frequency in both sexes, and is as often symmetrical on the two sides as single. Urbantschitsch met with it twelve times in 2000 cases; eight times in males, and four in females. It is the remains of the first branchial fissure in man.

**F. Bellinia'na.** (*Bellini.*) The uriniferous tubules.

**F., bi-mucous.** (*L. bis*, twice; *mucus*, slime.) A fistula both orifices of which are on a mucous surface, as a vesico-vaginal fistula.

**F., bi-mucous, cutaneous.** (*L. cutis*, skin.) A fistula with two orifices of discharge, as well as one of origin, such as a fistula with openings into the bladder and rectum, as well as on the skin.

**F., bil'iary.** (*L. bilis*, bile. *F. fistule biliaire*; *G. Gallenfistel.*) An abnormal passage opening at one end into one of the biliary ducts or the gall-bladder, and at the other upon the skin or into the peritoneal cavity. Biliary fistulae are rare. They may result from injury or from the occlusion of the duct by gall-stones.

**F., blind.** (*F. fistule borgne*; *G. blinde Fistel.*) A fistula with one opening only.

**F., blind, external.** (*F. fistule borgne externe.*) A blind anal fistula opening on to the surface, but with no communication with the bowel.

**F., blind, internal.** (*F. fistule borgne interne.*) A blind anal fistula having an opening into the intestine, but not on to the skin surface.

**F., branchial.** (*Ῥόγχια*, the gills of a fish.) See *Branchial fistula*, *F. auris congenita*, and *F. colli congenita*.

**F. branchialis primæ congenitæ.** (*L. primus*, first; *congenitus*, born together.) The same as *F. auris congenita*.

**F., bronchial.** (*Ῥόγχια*, the bronchial tubes. *G. Bronchialfistel.*) A passage extending from the skin surface to a bronchial tube.

**F. canaliculi lachrymalis.** See under *Lachrymal fistula*.

**F., canaliform.** (*L. canalis*, a channel; *forma*, shape.) A long, narrow, tubular fistula.

**F. cibalis.** (*L. cibum*, food. *G. Speiseröhre.*) A term for the esophagus.

**F., cicatric'ial.** (*L. cicatrix*, a scar.) A fistula which is lined with a smooth, cicatricial membrane.

**F. colli congenita.** (*L. collis*, the neck; *congenitus*, born together with. *G. angeborene Halsfistel.*) A fistulous passage extending from the side or middle of the surface of the neck to the trachea or pharynx. It is the remains of the incompletely closed second or third branchial fissure.

**F. colli congenita cystica.** (*L. collis*, the neck; *congenitus*, congenital; *Gr. κύστις*, a bladder. *G. Kiemenangangeyste.*) A passage extending from the surface of the neck into a cyst, usually lying along the sternomastoid, and containing pavement and sometimes ciliated epithelium in a mucous fluid.

**F., complete.** (*F. fistule complète*; *G. vollkommene Fistel.*) A fistula with two openings, one communicating with an internal cavity, such as the rectum, the other opening outwardly.

**F., congenital.** (*L. congenitus*, born together.) A fistula which is present at birth; as, for instance, a fistula in ano which occasionally occurs in a foetus with an imperforate anus.

Also, the fistula which result from the persistence of some fetal condition. See *F. of neck*, and *F. umbilical*.

**F. cor'neæ.** See *Cornea*, *fistula of*.

**F. cru'ris.** (*L. crus*, the leg.) The *Fibula*.

**F., cutaneo-pharyngeal.** (*L. cutis*, the skin; *pharynx*.) A fistulous communication between the pharynx and the outer surface of the neck.

**F., cystico-cutaneous.** (*Κύστις*, a bladder; *L. cutis*, the skin.) A biliary fistula.

**F., diabet'ic.** A fistula occurring in a diabetic person, and by some believed to be caused by that disorder.

**F. ductus Stenonia'ni.** *Fistula of Stenon's duct.* See under *F., salivary*.

**F. duræ mat'ris.** (*L. durus*, hard; *mater*, mother.) A term for the sinuses of the dura mater.

**F., entero-vagi'nal.** (*Ἐντέρον*, an intestine; *vagina*.) A fistulous opening between some part of the intestine above the rectum and the vagina; it is not frequently observed.

**F., exter'nal.** (*L. externus*, outward.) A blind fistula having its single opening on the outer surface.

**F., fæ'cal.** (*L. feces*, excrement.) An abdominal fistula opening into an intestine, so as to give unnatural passage to the feces. The term is applied to those cases in which some of the intestinal contents passes by the natural opening of the anus; in contradistinction to those in which none passes by the anus, which are called cases of artificial anus.

Also, a fistula of any part of the intestine, usually the rectum, opening into one of the natural cavities, such as the vagina.

**F., gas'tric.** (*Γαστήρ*, the belly.) A fistula in the epigastric region communicating with the cavity of the stomach. See *Gastric fistula*.

**F., gas'tric, exter'nal.** Same as *F., gastro-cutaneous*.

**F., gas'tro-col'ic.** (*Γαστήρ*, the belly; *κόλον*, the colon.) A fistulous communication

## FISTULA.

between the cavities of the stomach and of the colon.

**F., gas'tro-cuta'neous.** (Γαστήρ, the belly; *L. cutis*, skin.) A gastric fistula with an external opening.

**F., gas'tro-duode'nal.** (Γαστήρ, the belly; *duodenum*.) A fistulous communication between the cavities of the stomach and the duodenum.

**F., gas'tro-pul'monary.** (Γαστήρ, the stomach; *L. pulmo*, the lung.) A fistulous communication between the stomach and the lung; originating, in the cases observed, in a perforating gastric ulcer with suppuration implicating the diaphragm.

**F., hepat'ico-bronch'ial.** (ἥπαρ, the liver; βρόγχια, the bronchial tubes.) A fistulous communication between some part of the liver or the bile canals and the bronchial tubes, so that bile is expectorated.

**F., horse-shoe.** An anal fistula which courses round the bowel so that it gets an opening in the skin on the opposite side of the median line.

**F. in a'no.** (Ἔ. *Afterfistel*.) See *Anus, fistula of*.

**F., incomplete'.** (*F. fistule incomplete*; *G. unvollkommene Fistel*.) Same as *F., blind*.

**F., inter'nal.** A blind fistula having its single orifice opening into an internal cavity, such as the rectum.

**F., intesti'no-vagi'nal.** (*L. intestinum*; *vagina*.) A fistulous opening between the vagina and some part of the intestinal canal.

**F., intesti'no-vesi'cal.** (*L. intestinum*, a gut; *vesica*, the bladder.) A fistulous opening between the bladder and some part of the intestines.

**F., la'biform.** (*L. labium*, a lip; *forma*, shape.) Same as *F., ostial*.

**F., lach'rymal.** (*L. lachryma*, a tear. *G. Fistel des Thränenorgans*.) See *Lachrymal fistula*.

**F., lacte'al.** (*L. lac*, milk.) Same as *F., mammary*.

**F., laryng'eal.** (Λάρυγξ, the larynx.) A communication between the interior of the larynx and the exterior of the neck, which has been observed after perichondritis of the larynx, and after wounds perforating the larynx.

**F., lip'ped.** A fistula with an opening which has prominent, protruding edges or lips. Same as *F., ostial*.

**F., lymphat'ic.** See *Lymphatic fistula*.

**F., lymphat'ic.** See *Lymphatic fistula*.

**F., mam'mary.** (*L. mamma*, the breast.)

An external fistulous communication with one or more of the milk ducts.

**F., mas'toid.** (*Mastoid* process.) A fistulous communication between the skin over the mastoid process and the mastoid cells; the result of inflammation and suppuration there. The fistula may communicate with the tympanum, and by means of the Eustachian tube with the throat.

**F., me'tro-peritonæ'al.** (Μήτρα, the womb.) Same as *F., utero-peritonæal*.

**F., milk.** Same as *F., mammary*.

**F., mu'co-cuta'neous.** (*L. mucos*, slime; *cutis*, the skin.) A fistula with one orifice on a mucous membrane and another on the skin, such as a complete fistula in ano.

**F., neph'ro-gas'tric.** (Νεφρός, the kidney; γαστήρ, the stomach.) A communica-

tion between the left kidney and the cardiac end of the stomach following inflammation and adhesion of the contiguous parts of the viscera and diaphragm.

**F., nervo'rum.** (*L. nervus*, a nerve.) The sheath or pipe of a nerve; the *Neurilemma*.

**F. of eye, ante'rior cham'ber of.** Same as *Cornea, fistula of*.

**F. of gall-bladder.** A biliary fistula opening into the gall-bladder.

**F. of lach'rymal duct.** See under *Lachrymal fistula*.

**F. of lach'rymal sac.** See under *Lachrymal fistula*.

**F. of neck.** A fistulous aperture in the neck, probably the relic of a branchial fissure. See *F. auris congenita*, and *F. colli congenita*.

**F., ostial.** (*L. ostium*, a mouth.) A very shallow fistula with protruding lips.

**F., pari'etal.** (*L. paries*, a wall.) A fistula in the chest walls communicating with a bronchial tube or the cavity of the pleura.

**F., pe'nile.** (*L. penis*, the male organ.) A urinary fistula of that part of the urethra which is in the penis.

**F., pericard'ial.** (Περί, around; καρδία, the heart.) An external fistulous opening into the pericardium, of which a doubtful case, the result of a wound, has been recorded.

**F., perina'æ'al.** (Περίναος, the perineum.) A fistula in the perineum. It may have a rectal, or a urethral, or a vaginal connection.

**F., perina'æ'o-vagi'nal.** (Περίναος, the perineum; *L. vagina*.) A fistulous opening in the perineum communicating with the vagina; it may be caused by partial closure of a ruptured perineum; or by protrusion of the fetus through an aperture in the perineum, without complete rupture of the part.

**F., peritonæ'o-vagi'nal.** (Peritonæum; *vagina*.) A fistulous communication between the cavity of the peritoneum and the vagina; a condition which has very seldom been met with.

**F., phthi'sical.** See *Phthisis, fistula in*.

**F., pulmona'lis.** (*L. pulmo*, the lung.)

Old term for the trachea.

**F., pulmonary.** See *Pulmonary fistula*.

**F., pu'rulent.** (*L. pus*, matter.) A fistula which discharges only pus; usually called a sinus.

**F., rec'tal.** (*L. rectum*, the gnt of that name.) A fistula of the anus which communicates with the intestine.

Also, the same as *F., rectal, internal*.

**F., rec'tal, inter'nal.** A fistulous canal originating in an ulcer of the rectum, and traversing the neighbouring connective-tissue without obtaining a skin opening.

**F., rec'to-la'bial.** (*L. rectum*, the intestine of that name; *labium*, a lip.) A fistulous communication between the rectum and a labium of the vulva.

**F., rec'to-ure'thral.** (*L. rectum*; *urethra*.) A fistulous communication between the rectum and the urethra.

**F., rec'to-vagi'nal.** (*L. rectum*; *vagina*.) A fistulous communication between the rectum and the vagina. It is occasionally congenital, and accompanied by an imperforate anus.

**F., rec'to-vesi'cal.** (*L. rectum*, straight; *vesica*, the bladder.) A fistulous passage extending between the rectum and the bladder.

# FISTULA.

It is occasionally congenital, and accompanied by an imperforate anus.

**F., rec'to-vulvar.** (L. *rectum*; *vulva*.) A fistulous passage extending from the rectum to the vulva.

**F. sa'cra.** (L. *sacer*, sacred.) A synonym of the *Spinal cord*.

Also, a term for the vertebral column.

Also, a synonym of the *Aqueductus Sylvii*.

**F., salivary.** (L. *saliva*, spittle. G. *Speichel*/fistel.) An abnormal passage communicating at one end with one of the salivary ducts, or with a salivary gland, and at the other opening either on the skin or on the mucous membrane of the mouth. It may arise from a wound or other lesion, or may result from the closure of the duct by inflammation, or by the formation of a stone.

**F. salivo'sa.** Same as *F. salivary*.

**F. salivo'sa exter'na.** A salivary fistula with an external opening.

**F., scro'tal.** (L. *scrotum*, the bag or skin containing the testicles.) A urinary fistula opening into some part of the scrotum.

**F. spiritua'lis.** (L. *spiritualis*, belonging to breathing.) The windpipe.

**F. stercora'lis.** (L. *stercus*, excrement.) The same as *Anal fistula*.

Also, a term for an artificial anus.

**F. stercoro'sa.** (L. *stercorosus*, for *stercus*, excrement.) A term for an artificial anus.

**F., trache'al.** (*Trachea*.) A communication between the outer skin surface and the canal of the trachea; an occasional result of an unhealed wound of the neck.

**F., true.** A fistula which serves to discharge the natural products of a secretion, as a lachrymal fistula.

**F., umbili'cal.** (L. *umbilicus*, the navel.) A fistulous opening through the umbilicus. It may be caused by the canal of the urachus remaining open so that urine is discharged by it; or it may have a connection with the intestine through a patent ductus vitello-intestinalis, so that feces pass; or it may be connected with the gall-bladder or gall-duct so that bile escapes.

**F., ure'tero-u'terine.** (ὀυρητήρες, the urinary ducts; L. *uterus*, the womb.) A fistulous communication between one of the ureters and the womb; rarely seen.

**F., ure'tero-vagi'nal.** (*Vagina*.) A fistulous communication between one of the ureters and the vagina.

**F. ure'terum re'num.** (ὀυρητήρες, the urinary ducts; L. *ren*, the kidney.) A term for the calyces of the kidney.

**F. ure'thræ mulie'bris.** (L. *urethra*; *mulier*, a woman.) A fistulous opening between the urethra and the vagina.

**F., ure'thral.** (ὀυρήθρα, the urethra.) A urinary fistula communicating with the urethra.

**F., ure'thro-pe'nile.** Same as *F. penile*.

**F., ure'thro-perina'e'al.** (L. *urethra*; *perineum*.) A urinary fistula opening into the perineum.

**F., ure'thro-rec'tal.** (L. *urethra*; *rectum*.) A fistulous communication between the urethra and the rectum. It occurs sometimes as a result of stricture, or of an abscess, or of a wound as in lithotomy. It may also be congenital, and accompanied with an imperforate anus.

**F., ure'thro-scro'tal.** (L. *urethra*;

*scrotum*, the bag containing the testicles.) A urinary fistula opening into the scrotum.

**F., ure'thro-vagi'nal.** (ὀυρήθρα, the urethra; L. *vagina*.) A fistulous communication between the urethra and the vagina.

**F. urina'e.** (ὀύρον, urine.) A fistulous communication with some part of the urinary apparatus. See *Urinary fistula*.

**F. urinal'is.** Same as *F. urina'e*.

**F. urina'ria.** (L. *urina*, urine.) A term for the urethra.

Also, the same as *Urinary fistula*.

**F., u'ri'ary.** See *Urinary fistula*.

**F., u'ri'ary, hypo'ga'stric.** See *F., urinary, umbilical*.

**F., u'ri'ary, ingui'nal.** See *Urinary fistula, inguinal*.

**F., u'ri'ary, intesti'nal.** See *Urinary fistula, intestinal*.

**F., u'ri'ary, lumbar.** See *Urinary fistula, lumbar*.

**F., u'ri'ary, umbili'cal.** (G. *Urachus*-fistel.) A passage opening internally into the bladder, and externally at the umbilicus. It results from the patency of the urachus.

**F., u'tero-peritona'e'al.** (L. *uterus*, the womb; *peritoneum*.) A passage of communication between the uterine cavity and the peritoneum. It is usually found to be a wide Fallopian tube.

**F., vagi'nal.** A fistulous communication between the vagina and some other organ.

**F., vagi'nal, blind.** A fistulous canal having an opening into the vagina, generally leading to an abscess or the remains of one. More properly a sinus.

**F., vagi'no-intesti'nal.** (L. *vagina*; *intestinum*, a gut.) A fistulous communication between the vagina and some part of the intestinal canal.

**F. ventric'u'li.** (L. *ventriculus*, the belly.) Same as *F., gastric*.

Also, a term for the œsophagus.

**F., vesico-intesti'nal.** (L. *vesica*, the bladder; *intestinum*, an intestine.) A fistulous communication between the bladder and an intestine. It may be caused by abdominal cancer.

**F., vesico-perina'e'al.** (L. *vesica*; Gr. *περίνατος*, the perineum.) A urinary fistula connected with the bladder and opening into the perineum.

**F., vesico-rec'tal.** (L. *vesica*; *rectum*, the intestine of that name.) A fistulous communication between the rectum and the bladder.

**F., vesico-u'terine.** (L. *vesica*, the bladder; *uterus*, the womb.) A fistulous communication between the bladder and the womb.

**F., vesico-u'tero-vagi'nal.** (L. *vesica*; *uterus*, the womb; *vagina*.) A fistulous communication between the bladder, the womb, and the vagina.

**F., vesico-vagi'nal.** (L. *vesica*, the bladder; *vagina*. G. *Blasenscheidenfistel*.) A fistulous communication between the bladder and the vagina.

**F., vul'var.** (L. *vulva*.) A fistulous communication between the vulva and some viscus, as the rectum or bladder.

**F., vul'vo-rec'tal.** (L. *fistula vulvo-rec'tale*; G. *vulvo-rec'tal Fistel*.) A fistulous passage between the vulva and the rectum, believed by some to be generally due to abscess of the gland of Bartholin.

**Fistular.** (L. *fistula*, a pipe. G. *röhrenförmig*, *röhricht*.) Tubular; pipe-like.

**F. stems.** (F. *tiges fistuleuses*.) The stems of plants which are hollow, as in the case of the grasses, many Umbelliferae, and the horse-tails.

**Fistularia.** (L. *fistula*, a pipe.) A name for the *Doliphonium staphisagria*, or stavesacre, from the hollowness of its stalk.

**Fistule.** Same as *Fistula*.

**Fistulina.** (L. *fistula*, a pipe. F. *fistuline*.) A Genus of the Family *Polyporei*, Suborder *Hymenomyces*, Order *Basidiomycetes*, Class *Carposporei*.

**F. hepatica.** Fr. (Ἡπαρ, the liver. F. *foie de bœuf*, *langue de chataignier*; G. *Leberpilz*, *Fleischschwamm*, *Rindszunge*.) Bull's liver, bull's tongue. Grows near the ground on the stems of trees, especially the oak. Good to eat.

**Fistulose.** Same as *Fistulous*.

**Fistulous.** (L. *fistula*, a pipe. F. *fistulene*; G. *röhrig*.) Of, or belonging to, a pipe or tube; resembling a pipe or tube; fistular; of the nature of the disease fistula.

In Botany, having many pipes or tubes; applied to flowers that have many long hollow florets.

**F. stems.** See *Fistular stems*.

**Fit.** (Sax. *fit*, a song; a struggle. According to Skeat, the original meaning of the word was a step, then it meant a part of a poem, then a bout of fighting, and lastly, a sudden attack of pain.) A sudden attack or paroxysm of a disease, especially applied to an attack of apoplexy, paralysis, or epilepsy; also to a paroxysm of ague, or to an acute attack of gout.

**F., apoplectic.** Same as *Apoplexy*.

**F., epileptic.** The paroxysm or attack of fully developed *Epilepsy*.

**F., hysterical.** A paroxysm of acute *Hysteria*.

**F.s, nine-day.** A term used in the West Indies and South America for *Trismus nascentium*.

**F. root.** The *Monotropa uniflora*.

**F. weed.** The *Eryngium fatidum*.

**Fite'ro.** Spain, in the Province of Pampalona, 190 m. above the sea-level. Here are warm mineral springs. The temperature of the old bath is 47.5° C. (117.5° F.) The solids of the water amount to 2.2 in 1000 parts, the chief of which are calcium chloride and other lime and magnesium salts, with a little iron. Chiefly recommended for the rheumatic and paralytic. The vapours of the waters are inhaled in tracheal and bronchial affections.

**Fiumorbo.** Corsica. A sulphur spring, having a temperature of 53° C. (127.4° F.) Used in chronic rheumatism and skin diseases.

**Five.** (Mid. E. *ff*; Sax. *fif*, *fife*; G. *fünf*; L. *quinque*; Gr. *πέντε*, *πέντε*; from an Aryan form *pankan*, *kankan*, *kwanakan*. F. *cinq*; I. *cinq*; S. *cineo*.) The half of ten.

**F. capillary herbs.** See *Herbæ quinque capillares*.

**F.-cleft.** Divided into five sections, as some leaves.

**F. emollient herbs.** See *Herbæ quinque emollientes*.

**F. finger.** (G. *Fünffingerkraut*.) The *Potentilla reptans*.

**F. finger root.** The *Oenanthe crocata*.

**F. fingers.** The *Panax quinquefolium*.

Also, a term applied to some of the star-fishes.

**F.-leaf.** The *Potentilla reptans*, from its five leaflets.

**F.-leafed grass.** The *Potentilla reptans*.

**F.-part'ed.** Divided into five segments or parts, as some leaves.

**F.-rank'ed.** Same as *Pentastichous*.

**F.-rib'bed.** Same as *Quinquecostate*.

**Fix.** (Old F. *fixe*; from L. *fixus*, part. of *figo*, to fasten.) To make firm; to establish permanently; to produce *Fixation*.

**Fixatio mononœa.** (L. *figo*, to fix; Gr. *μόνος*, alone; *νόος*, thought.) Melancholy.

**Fixation.** (L. *fixus*, part. of *figo*, to fasten. F. *fixation*; G. *Befestigung*.) An old term for the reduction of a fluid body into a fixed one, as mercury by being mixed with lead; and the rendering of volatile bodies fixed so as not to be affected by exposure to heat.

Also, the making a gaseous body fixed by combining it chemically with some other body so as to make a solid.

**Fixa'tor.** (L. *fixus*, part. *figo*, to fasten.) A fastener, a fixer.

**F. ba'sis sta'pedis.** (L. *basis*, a base; *stapes*, the bone of that name.) A dense yellowish tissue attached to the base of the stapes and its cartilaginous investment. It has by some been thought to consist of unstripped muscular fibre, but at present this is not admitted.

**Fix'ed.** (L. *fixus*. F. *fixé*; I. *fisso*; S. *fixo*; G. *fest*.) Firm, fast, stable.

Applied to such substances as cannot be made to pass by rarefaction from the state of an elastic fluid.

**F. air.** A term for carbonic acid gas, being the air fixed in chalk.

**F. alkali.** See *Alkali, fixed*.

**F. bodies.** Substances which are not dissipated by a high temperature.

**F. embryo.** See *Embryo, fixed*.

**F. nit're.** An old term for potassium carbonate.

**F. oils.** See *Oils, fixed*.

**Fixi dentes.** (L. *fixus*, fixed; *dens*, a tooth.) The permanent teeth.

**Fix'ity.** (F. *fixité*; I. *fissatezza*; S. *fijeza*; G. *Feuerbeständigkeit*.) A property by which bodies withstand the action of heat, so that they are not volatilised.

**Fixu'ræ.** (L. *fixura*, a fastening.) The minute fibrils on the under surface of the thallus of some lichens, by which they are attached to the surface on which they grow.

**Flabby.** (A variant of *flappy*, hanging about. F. *flasque*; I. *flascio*; S. *flajo*; G. *schlaff*, *schlapp*.) Soft; easily bent; yielding to the touch.

**Flabellate.** (L. *flabellum*, a small fan; dim. of *flabrum*, a breeze. F. *flabellé*; G. *fächerförmig*.) Fan-shaped.

**Flabella'tion.** (L. *flabellum*, from *flabrum*, a blast of wind. F. *flabellation*; I. *flabellazione*; G. *Anfächeln*.) The act of fanning, employed to keep injured parts and the dressings covering them cool.

Ambrose Paré used the term to describe the refreshment which is secured to a fractured limb by lifting it and changing its place, so as to renew the air underneath it.

**Flabella'tio et ventila'brum cor'dis.** (L. *ventilabrum*, a winnowing machine; *cor*, the heart.) An old term for the lungs.

**Flabellifo'liate.** (L. *flabellum*; fo-

# FLABELLIFORM—FLAME.

*lium*, a leaf. *F. flabellifolius*; *G. fächerblättrig*.) Having leaves which fold like a fan, as those of *Orealis actaeola*.

**Flabelliform.** (*L. flabellum*; *forma*, shape. *F. flabelliforme*; *G. fächerförmig*.) Fan-like, as the leaves of some palms.

**Flabellinerved.** (*L. flabellum*, a fan; *nervus*, a sinew.) Fan-nerved. Having straight nerves radiating from the apex of the petiole, as in the leaf of the fan palms.

**Flabellum.** (*L. flabellum*, a fan. *G. Fächer*.) A fan.

**Flac'id.** (*L. flaccidus*, flabby. *F. flasque*; *L. flacido*; *S. flacido*; *G. schlaff*.) Weak, soft, and drooping; not turgid; wanting in stiffness.

**Flaccidity.** (*Flaccidus*.) Relaxation and softening of a tissue or structure.

**Flacourtia.** (*Flacourt*, a French writer on Madagascar.) A Genus of the Nat. Order *Flacourtiaceæ*.

**F. cataphracta**, Roxb. (*Κατάφρακτος*, covered.) The young shoots and leaves taste like rhubarb, without its bitterness. They are considered to be astringent and stomachic, and are prescribed in cases of diarrhoea, consumption, and debility, and a cold infusion is used as a remedy for hoarseness.

**F. inermis**, Roxb. (*L. inermis*, unarmed.) Hab. India. Fruit eatable.

**F. ramontchi**, L'hér. (*F. prunier de Madagascar*.) A Madagascar species, the fruit of which resembles a black plum.

**F. rhamnoides**, Eckl. (*Ράμος*, buckthorn; *είδος*, likeness.) Hab. South Africa. Fruit eatable; juice made into a fermented liquor.

**F. sapida**, Roxb. (*L. sapidus*, savoury.) A species the fruit of which has a refreshing subacid taste.

**F. sepia'ria**, Roxb. (*L. sepia*, ink.) A species the fruit of which resembles that of *F. sapida*. The infusion of the plant is regarded as an alexipharmic, and the bark, rubbed with oil and made into a liniment, is employed against gout on the Malabar coast.

**Flacourtiaceæ.** A Nat. Order of plants, belonging to the Violal alliance, and characterised by scattered apetalous or polypetalous flowers, hypogynous petals and stamens, and dotless, or round, dotted leaves. Also called *Bixaceæ*.

**Flag.** (*Dan. flag*; *Sw. flagg*; *Dut. vlag*; *G. Flagge*; from a base, meaning to flutter.) An ensign; applied to the iris and other plants, in reference to their waving in the wind.

**F. annat'o.** See under *Anatto*.

**F., blue.** The *Iris versicolor*.

**F., blue, slender.** The *Iris virginica*.

**F., corn.** The *Gladiolus communis*.

**F., dwarf.** The *Iris lacustris*.

**F. feather.** A feather of a bird's wing near the body.

**F., myrtle.** The *Acorus calamus*.

**F. root.** The root of the *Acorus calamus*.

**F., sweet.** The *Acorus calamus*.

**F., sweet-scent'ed.** The *Acorus calamus*.

**F., white.** The *Iris florentina*.

**F., yellow.** The *Iris pseudocorus*.

**F., yellow water.** (*G. Wasserscheitlinie*.) The *Iris pseudocorus*.

**Flagellants.** (*L. flagello*, to scourge. *G. Geissler*.) Those who scourge themselves as a

religious rite. A sect of fanatics founded in Italy A.D. 1126. Men, women, and children ran naked about the streets striking themselves with whips and scourges, as a religious rite, to avert the anger of God; especially in the times of public calamities, as during the plague epidemics of the thirteenth and fourteenth centuries.

**Flagellaria.** (*L. flagellum*, a whip.) A Genus of the Nat. Order *Commelinaceæ*.

**F. indica.** (*L. indicus*, Indian.) The leaves of this plant are said to be astringent and vulnerary.

**Flagellarie'æ.** Endlicher's term for the *Commelinaceæ*.

**Flagellata.** (*L. flagellum*, a whip. *G. Geisselträger*.) An Order of the Class *Infusoria*. Single-celled organisms with one or more flagella at the anterior end; they are reproduced by fission. Examples: *Cercomonas*, *Trichomonas*.

**Flagellate.** (*L. flagellum*.) Possessing a *Flagellum*.

In Botany, having runners or runner-like branches.

**Flagella'tion.** (*L. flagellum*, a scourge. *F. flagellation*; *L. flagellatio*; *G. Geisselung*.) The act of whipping. Employed by the ancients as a remedy in various circumstances, such as to promote thinning of the body, and to restore motion and sensation. They used a rod of small twigs, with which the parts were beaten until a slight swelling was produced.

**F. mania.** (*L. mania*, madness.) The self-scourging practised during the twelfth and succeeding centuries as an act of private and public penitence. The subjects were called *Flagellants*.

**F. with net tles.** (*F. flagellation articlæ*.) The beating of the skin with nettles, so as to produce a local erythema, in order that it may act as a counter-irritant or a stimulant.

**Flagelliform.** (*L. flagellum*, a little whip; *forma*, shape. *F. flagelliforme*; *G. peitschförmig*, *ausläuferartig*.) Whip-like; having the form of a flagellum, or a runner.

**Flagellum.** (*L. flagellum*, dim. of *flagrum*, a whip. *G. Geissel*, *Peitsche*.) A long, slender, mobile filament, which is the organ of locomotion of many Infusoria; it is situated at the anterior end of the animal, and may be single or many; only its extremity is vibratile.

Also, a tubular appendage of the sheath of the penis in the snail and other cephaloporous molluscs in which the spermatophore is developed.

Also, the same as *Scaphognathite*.

In Botany, a runner, or creeping branch, such as is seen in the strawberry plant; also, a tendril; also, a barren twig.

Also, a motile terminal filament in the embryonic forms of some myxomycetous fungi.

**Flagrate.** (*L. flagro*, to burn.) To burn.

**Flagrum.** (*L. flagrum*, a whip.) A name by Savigny for a kind of long palpus, like a whip armed with its leather thong, at the outer side of the base of each of the six external jaws of crabs.

**Flake.** (Of Scandinavian origin; *Sw. flaga*.) A thin film or scale-like piece.

**F. manna.** See *Manna*, *flake*.

**Flaky.** (*Flake*.) Consisting of thin pieces or flakes.

**Flame.** (*F. flamme*; from *L. flamma*, a

## FLAMED—FLAP.

flame. *I. flamma*; *S. flama*; *G. Flamme*.) A blaze of burning matter; being gas raised to incandescence by chemical action, usually an oxidation, which, if very sudden and rapid, causes an explosion.

**F., electric properties of.** When one electrode of a delicate electrometer is placed outside a flame and the other inside, the outside one is positive and the inside one is negative. When one electrode is placed at the tip and the other at the base the tip is usually, but not always, electrically negative. The potential with various flames varies from about 1.5 to 1.75 that of the Daniell's cell, but the current is small, owing to the enormous internal resistance of the flames themselves. The flame appears, at first sight, to act like the acids between the poles of a battery cell, the action, therefore, being an electrolytic one; but late experiments of Elster and Geitel on the heated currents which ascend from white-hot platinum wire seem to show that it is a thermo-electric phenomenon.

**F. length, specific.** The length of flame of a combustible gas, burning in a normal atmosphere at a standard rate through a simple circular orifice, so that it may produce a symmetrical, vertical, steady flame. It is the distance travelled by a gas in obtaining oxygen for its combustion.

**F., luminosity of.** (*L. lumen*, light.) The luminosity of a flame is largely caused by solid matters raised to incandescence, so that when the oxidation is perfect the illuminating power of a flame is very small. But there may be a very bright flame with a complete absence of solid particles, as when a mixture of nitrogen dioxide and carbon bisulphide is burned; and in this case the luminosity is the greater the higher the vapour-densities of its constituent gases.

**F.s., manometric.** See *Manometric flames*.

**F.s., musical.** Sounds produced by flames over which glass or other tubes are held, or which are made to pass through a disc of wire gauze enclosed in a tube.

**F., polarity of.** Ross has shown that the blue flame-cone produced by the blowpipe from an ordinary gas-burner possesses polarity, the point attracting the north pole of a compass and repelling the south pole.

**F., sensitive.** Flames which respond by sudden shortening and elongation to musical notes. This phenomenon is probably due to the fact that a column of any fluid escaping from an orifice in a tranquil stream consists of a continuous and a discontinuous region, and is subject to a play of opposing forces which excite pulsations in the jet, the number of which is directly proportional to the velocity of the issuing stream and inversely as the diameter of the orifice. When a note is sounded approximately in unison with the vibration number of these pulsations the jet, whether gaseous or liquid, is thrown into more vigorous vibration.

**F., spectrum.** See *Spectrum, flame*.

**F., structure of.** A flame burning in the air consists of three principal zones: an outer zone, feebly luminous, of high temperature, and in which combustion or oxidation is almost perfect; a middle zone, highly luminous, composing the greater part of the flame, and in which combustion is imperfect; and a central dark cone, of low temperature where no combustion is going on. In ordinary cases it is by the action

of atmospheric oxygen on the hydrogen and carbon of the burning body that flame is produced; the hydrogen has a greater attraction for oxygen than carbon has, and so to a great extent excludes the carbon from the outer zone, where perfect combustion takes place, with disengagement of great heat and but little light; less perfect combustion goes on in the middle zone, much of the carbon is not oxidised, but its particles are raised to incandescence, and so the luminosity of the flame is produced; and the central cone is formed by the unoxidised and only slightly heated gas.

**F., vital.** The vital principle.

**Flamed.** The same as *Inflamed*.

**Flamingo.** (*S. flammea*, from *flama*, flame, in reference to its colour.) The birds of the Genus *Phaenicopterus*. The flesh is eatable, but somewhat fish-like. The tongue is large and thick, with a rose-coloured fat; it was much esteemed by the Roman epicures.

**Flamma.** (*L. flamma*, a flame.) A flame; also, a beam, from its shape, as of the flame of a candle.

**F. cordis.** (*L. cor*, the heart.) An old term for a supposed innate fire of the heart, which was the cause of the animal heat and the movement of the blood.

**F. vitalis.** (*L. vitalis*, vital.) Animal heat. Same as *F. cordis*.

**Flammeous.** (*L. flamma*.) Flame-like; flame-coloured.

**Flammon.** The *Lachesis rhombata*, a poisonous serpent of Peru.

**Flammula.** (*L. dim. of flamma*, a flame. *G. Flammchen*.) A small flame; also, a beam, from its shape, as of the flame of a candle.

Also, the *Clematis flammula*, and the *Ranunculus flammula*.

**F. cordis.** (*L. cor*, the heart.) See *Flamma cordis*.

**F. jovis.** (*Jupiter*.) The *Clematis recta*, because of the irritating properties of its juice.

**F. vitalis.** (*L. flammula*; *vitalis*, vital.) A synonym of *Animal heat*.

Also, the same as *Flamma cordis*.

**Flamy.** The *Viola tricolor*, pansy, or heartsease.

**Flank.** (*F. flanc*; from *L. flaccus*, soft. *I. fianco*; *S. fianco*; *G. Seite*.) The side of the body; that part which extends between the lower ribs and the crista ili.

**Flannel.** (*Welsh gwlanen*, from *gwlan*, wool. *F. flanelle*; *I. flanello*; *S. flanela*; *G. Flanell*.) A loosely woven material of fine wool, used for clothing and for bandages.

**Flap.** (*Mid. E. flappen*; a variant of *flack*, to beat.) To beat as with wings.

Also, a portion of the skin or other soft part of the body partially detached from its natural position, but still adherent by a part called its base. Also, anything broad and hanging loosely.

Also, sometimes applied to a portion entirely detached from the subjacent parts.

**F. amputation.** See *Amputation, flap, method of*.

**F. dock.** A synonym of *Digitalis purpurea*.

**F. ear.** An hereditary condition in which the auricle of the ear is broad, loose, and down-hanging.

**F. extraction.** See *Cataract, extraction of, by flap*.

**F. operation.** (*F. operation à lambeau*.)

A method of amputation in which a variously shaped, but usually more or less oval or rectangular, portion of the skin is reflected from the subjacent soft parts before these and the bone are divided. See *Amputation, flap, method of*.

**F. operation of amputation.** See *Amputation, flap, method of*.

**F. wound.** See *Wound, flap*.

**Fläsch.** Switzerland. Canton Graubünden. An alkaline saline mineral water spring on the right bank of the Rhine, 1800 feet above sea-level.

**Flash.** (Of Scandinavian origin; allied to Sw. *flasa*, to burn violently.) To blaze suddenly.

**Flash'ing.** (*Flash*.) The act of blazing violently.

**F. point.** The temperature at which the vapour given off from such a substance as petroleum is combustible.

**Flask.** (Sax. *flase*; possibly from Low L. *flasca*. F. *flacon*; I. *flasco*; S. *frasco*; G. *Flasche*.) A small bottle of glass or other material.

**F., specific grav'ity.** See *Specific gravity bottle*.

**Flat.** (A Scandinavian word; see L. *flatr*; Sw. *flat*; F. *plat*; I. *piatto*; S. *llano*; G. *flach*.) Level, even.

**F. bones.** See under *Bone*.

**F. chest.** See *Chest, flat*.

**F. fish.** A term for the *Peroneoctide*, in reference to their shape, as the sole.

**F. foot.** See *Flat-foot*.

**F. top.** A synonym of the *Vernonia noveboracensis*.

**F. worms.** The animals of the Class *Platyhelmintha*.

**Flat-foot.** A condition of the foot in which the tarsus does not possess, or loses altogether, its usual arch; the foot is generally pointed outwards, and its outer border raised. It is caused by too much standing, which fatigues and lengthens the peroneus longus, and ultimately the plantar ligaments, especially the inferior calcaneo-scapoid ligament.

**Flatuarius.** (L. *flatura*, a blowing; from *flo*, to blow.) An old name for an alchemist, in reference to his assiduous labour at the furnace.

**Flatulence.** (*Flatulent*. F. *flatulence*; I. *flatuosita*; S. *flatulencia*; G. *Blähung*, *Windsucht*, *Windblähung*.) The production or presence of gas in the alimentary tube. Its most frequent cause is fermentation or putrefaction of the gastric or intestinal contents, or it may, it is said, be diffused from the blood. It produces pain and arrest of function from over-distension, and dyspnoea, palpitation, faintness, or giddiness from obstruction to the respiratory and circulatory functions by means of the pressure on the diaphragm.

**Flatulent.** (F. *flatulent*; from Low L. *flatulentus*; from L. *flatus*, a blowing. F. *flatulent*; I. *flatuoso*; S. *flatulento*; G. *blähend*.) Full of wind; capable of causing wind in the digestive canal.

**F. colic.** See *Colic, flatulent*.

**Flatulentia.** (L. *flatulentia*, from *flatus*, a blowing.) Flatulence.

**Flatuosity.** (L. *flatus*, a blowing.) Flatulence; the development of gas in the interior of the body.

**Flatus.** (L. *flatus*, a breath; from *flo*, to

flow.) Wind, especially wind in the stomach or bowels; flatulence.

**F. furio'sus.** (L. *furiosus*, raging.) Same as *Ambulo*.

**F. spinæ.** (L. *spina*, a thorn.) A synonym of *Spina ventosa*.

**Flave'do.** (L. *flaveo*, to be golden yellow.) Yellowness.

A term formerly applied in Pharmacy to the yellow rind of oranges and lemons, as well as to the yellow discs of flowers, such as the chamomile.

In Botany, the diseased condition of a plant when its leaves turn yellow.

**F. aurant'it.** (L. *aurantium*, an orange.) The yellow part of orange peel.

**F. corticem citri.** (L. *cortex*, bark; *citrus*, the citron tree.) The outer rind of the *Citrus aurantium*.

**F. cutis.** (L. *cutis*, skin.) Yellow coloration of the skin.

**Flavequise'tin.** (L. *flavus*, yellow; *equus*, horse; *seta*, hair.) A substance crystallising in yellow crystals from its alcoholic solution. It is contained in the juice of *Lycopodium fluviale*.

**Flaveria.** A Genus of the Nat. Order *Compositæ*.

**F. contrayer'ba.** Pers. Used in Peru as an antidote to snake bites.

**Flaves'cent.** (L. *flavescere*, to become golden yellow.) Yellowish; a pale whitish yellow.

**Fla'vicant.** (L. *flavus*.) Yellowish.

**Flavin'din.** (L. *flavus*, yellow; *indin*.) A yellow substance, probably an isomer of indigotin, obtained by acting on indin with potassium.

**Fla'vour.** (Low L. *flavor*, yellow gold.) That quality of any substance which affects the sense of taste, or the senses of taste and smell.

It would appear that the word was first used by Milton, in speaking of wine, as distinct from taste and smell, and probably had reference to the hue.

**Flavous.** (L. *flavus*, yellow.) Yellow.

**Flavovirens.** (L. *flavus*, yellow; *viridis*, to be green.) Of a yellowish-green colour.

**Flavum reg'ium.** (L. *flavus*, golden yellow; *rex*, a king.) Same as *King's yellow*.

**Flaw flower.** (Sax. *flaw*, a gust of wind.) The *Anemone pulsatilla*.

**Flax.** (Sax. *flax*; G. *Flachs*; perhaps from Aryan root *plak*, to weave.) The plants of the Genus *Linum*.

Also, the fibres obtained from the stems of plants of the Genus *Linum*.

**F., com'mon.** The *Linum usitatissimum*.

**F.-dres'sers' phthi'sis.** See *Phthisis, flax-dressers'*.

**F., dwarf.** The *Linum catharticum*.

**F., dwarf wild.** See *Linum catharticum*.

**F., fair'y.** The *Linum catharticum*.

**F.-leav'ed daph'né.** The *Daphne gnidium*.

**F., purg'ing.** The *Linum catharticum*.

**F. seed.** Same as linsced, *Linum semina*, B. Ph., *Linum*, U.S. Ph.

**F. seed.** The fruit of *Linum usitatissimum*.

**F. seed, ground.** Linsced meal, *Linum farina*.

**F. seed meal.** The same as linseed meal, *Lini farina*.

**F. seed, oil of.** Linseed oil, *Oleum lini*.

**F. seed tea.** The same as *Linseed tea*.

**F., spurge.** The *Daphne gnidium*.

**F., toad.** The *Linaria vulgaris*, and the *L. elatine*.

**F., toad, bastard.** The *Thesium linophyllum*.

**F., toad, ivy-leaved.** The *Linaria cymbalaria*.

**F., toad, lesser.** The *Linaria minor*.

**F., toad, small.** The *Linaria minor*.

**F., toad, yellow.** The *Linaria vulgaris*.

**F. weed.** The *Linaria vulgaris*, from the resemblance of its leaves to those of *Linum*.

**F. workers, diseases of.** The atmosphere in which flax operatives work is loaded with a fine dust composed partly of siliceous and partly of woody particles. The irritation of these causes cough, bronchial catarrh, pains in the chest, debility, emaciation, and anæmia. The respiratory murmur is diminished, and there is general dullness over the chest. In the later stages the expectoration is thick and yellow, and contains portions of degenerated lung tissue. Diarrhoea, with sweating, and ascites or hydrothorax, and the general features of phthisis are the precursors of death, which is the usual result.

**Flaxseed.** Same as linseed, *Lini semina*.

**F. meal.** Linseed meal, *Lini farina*.

**Flaxworts.** The plants of the Nat. Order *Linacæ*.

**Flea.** (Sax. *fled*, *fleó*; G. *floh*; from Aryan root *plu*, to fly, to jump. F. *puce*; I. *pulce*; S. *pulga*; G. *Floh*.) A name given to the animals of the Genus *Pulex*.

**F.-bane.** See *Fleabane*.

**F.-bite.** The puncture made by the prothoracic of a flea results in a small circumscribed hæmorrhage with an inflamed areola of .15"–.3" in diameter; in most persons there is a great deal of irritation, and in some urticaria results. Flea-bites have been mistaken for purpuric spots, the rash of typhoid, and other appearances.

**F., common.** The *Pulex irritans*.

**F., sand.** The *Chigoe*.

**F.-wort.** See *Fleawort*.

**Fleabane.** (E. *flea*; bane, a poison.) A name given to several plants of the Nat. Order *Compositæ*, from their supposed power of killing or driving away fleas.

**F., blue.** The *Erigeron acer*.

**F., Canada.** The *Erigeron canadense*.

**F., Canadian.** The *Erigeron canadense*.

**F., common.** The *Pulicaria dysenterica*; also, the *Erigeron canadense*.

**F., greater.** The *Conyza squarrosa*.

**F., lesser.** The *Inula dysenterica*.

**F., middle-sized.** The *Inula dysenterica*.

**F., narrow-leaved.** The *Erigeron philadelphicum*.

**F., oil of.** See *Oleum erigerontis*.

**F., Philadelphia.** The *Erigeron philadelphicum*.

**F., skevish.** The *Erigeron philadelphicum*.

**F., small.** The *Inula graveolens*; and also, the *Pulicaria dentata*.

**F., various-leaved.** The *Erigeron heterophyllum*.

**Flea-bite.** The bite of a flea. See *Flea-bite*.

**Flea-wort.** The *Inula conyza*, from its keeping off fleas.

Also, the *Plantago psyllium*.

**Fleam.** (Dut. *vlijm*; F. *flumme*, *flammette*, from Low L. *fluvotomum*; from Gr. *φλεβοτόμος*, a lancet; from *φλέψ*, a vein; *τέμνω*, to cut. G. *Lasseisen*; I. *saetta*.) A gum lancet.

Also, a spring lancet, used for bleeding cattle.

**Fleamy.** Bloody, clotted.

**Fleck.** (Mid. E. *flek*; Icel. *flekr*; G. *Fleck*; from Teut. base *flak*, to strike; from Aryan root *plag*, to strike.) A spot or stain.

**Flectens par lumborum.** (L. *flectens*, part. of *flecto*, to bend; *par*, a pair; *lumbus*, a loin.) The *Quadratus lumborum*.

**Flection.** Same as *Flexion*.

**Flector.** Same as *Flexor*.

**Flegm.** See *Phlegm*.

**Flegmen.** (Φλεγμονή, a burning heat under the skin.) Same as *Flemen*.

**Fleischmann.** A German anatomist, born in 1777, died in 1855.

**F.'s bursa.** (L. *bursa*, a bag.) A synonym of *Ranula*.

**Fleitmann's test for arsenic.** A modification of Marsh's test, in which the development of nascent hydrogen is brought about by the use of caustic potash or caustic soda.

**Flema salada.** (S. *flema*, phlegm; *salado*, salty.) A term used, according to Costallat, in the North of Spain for a disorder which exhibits many of the symptoms of acrodynia, and is believed to be caused by eating diseased grain. It was at one time supposed to be a form of pellagra.

**Flemen.** (Φλεγμονή.) An old term for swelling of the ankles from over-exercise.

Also, callous furrows in the hands or feet according to Heuchenijs, *ad Q. Seren.*, p. 280.

**Fleming, Alexander.** A Scotch physician, born in Edinburgh in 1824, died at Buxton in 1875.

**F.'s tincture of acónite.** Aconite root 16 oz. is macerated for four days in alcohol 16 fl. oz., percolated with more alcohol till 24 oz. are obtained. It is stronger than the official tincture. Commencing dose, 2 minims.

**Flercsin.** An old name, used by Stephanus Blancardus, *de Scorbuto*, c. xx, for gout.

**Flesh.** (Mid. E. *flesch*, *fleisch*; Sax. *flesc*; G. *Fleisch*. F. *chair*; I. *carne*; S. *carne*.) The soft parts of an animal; more especially applied to the muscles. Falck finds that the flesh of 47 species of animals, 105 birds, 7 amphibia, 110 fish, and 58 invertebrate animals, are consumed by Europeans. The chief varieties of flesh are red, white, and black. Red flesh is afforded by several adult mammals; white, by young mammals, many birds, and fish, with the exception of the tunny; and black, by the hare, goat, and wild boar, and by various birds, as the wild duck. Beef contains 75 per cent. of water, about 20 per cent. of proteids, and 5 per cent. of fat, the amount of fat varying greatly. The average amount of nitrogen in flesh is 3.4 per cent. Fish and birds have little fat, 1 per cent. or less. The flesh of animals dying from disease of internal organs is, as a general rule, unwholesome, as well as those affected with contagious disease, such as foot-and-mouth disease, splenic fever,

tuberculous, and trichinosis. The antiseptic properties of the gastric juice enable high and putrid food to be taken in moderation, but it is unwholesome and dangerous when consumed in quantity.

In Botany, the succulent part of a fruit.

**F. brush.** (F. *brosse à friction*; G. *Erttrbürste*.) A brush used to the skin to excite the circulation.

**F. eating plants.** See *Insectivorous plants*.

**F. extract.** See *Liebig's extractum carnis*.

**F. fly.** The *Sarcophaga carnaria*.

**F. formers.** Term applied by Liebig to the class of nitrogenous compounds now termed proteids.

**F. germ.** A synonym of *Sarcophyte*.

**F. juice.** The reddish, acid liquid which is contained in dead muscle; it contains albumin, casein, creatin, creatinin, sarcin, lactic acid, inosic acid, formic acid, acetic acid, butyric acid, a red colouring matter similar to that of the blood, and salts, chiefly alkaline chlorides and phosphates.

**F. of diseased animals.** See *F. poison*.

**F. poi'son.** (G. *Fleischgift*.) A term for the hypothetical agent or agents which render the flesh of some kinds of animals poisonous. Many of the cases formerly reported are probably referable to trichinosis, but some are due to other causes. Thus, hares and rabbits that have fed on belladonna leaves, which they can consume with impunity, become poisonous to man, by storing up the active principle of that plant in their tissues. Snails that have fed on box leaves, or on the leaves of *Coriaria myrtifolia*, have proved poisonous. The flesh of oxen infected with splenic fever has produced gastroenteritis and malignant pustule. Symptoms of poisoning have been observed after the use of tinned meats, due, perhaps, to solution of the solder, or to some chemical change in the meat itself. See *Sausage poisoning*.

**F. poisoning.** (G. *Fleischgift*.) The morbid state produced by *F. poison*.

**F., proud.** (F. *chair barbeuse*; I. *carne fougosa*; G. *wildes Fleisch*.) The soft, large, excessive granulations which spring up on a wound.

**F. worm.** The *Trichina spiralis*.

Also, any larva that feeds on animal substances, living or dead.

Also, a common name for the casts of sebaceous follicles that can be made to exude from the skin when diseased or uncleanly.

**F.-worm disease.** A synonym of *Trichinosis*.

**F. wound.** A somewhat superficial wound, a wound that does not extend beyond the flesh.

**Fleshless.** Having little flesh, lean.

**Fleshy.** (Flesh. F. *charnu*; I. *carnoso*; S. *carnoso*; G. *fleischig*.) Having much flesh; resembling flesh.

**F. albumen.** A term applied to the albumen of a seed when it is soft and thick, as in the *Viola*.

**F. columns of heart.** (F. *colonnes charnues de cœur*.) The *Columnæ carneæ*.

**F. cotyledons.** A term applied to the cotyledons or seed leaves of a plant when they are thick and softish, as in *Papa*.

**F. fruit.** (F. *fruit charnu*.) A fruit of a

plant which has a thick and succulent sarco-carp.

**F. leaf.** (F. *feuille charnue*.) A thick, juicy leaf, as that of a *Sedum*.

**F. pannicle.** The *Paniculus carnosus*.

**F. piles.** See *Hæmorrhoids*, fleshy.

**F. polypus.** See *Polypus*, fleshy.

**F. pterygium.** See *Pterygium*, fleshy.

**Fletif'erous.** (L. *fletus*, a weeping; *fero*, to produce.) Producing tears.

**Fletus.** (L. *fletus*, from *fleo*, to weep.) Weeping, lachrymation.

**Fleur-de-lys.** See *Flower de luce*.

**Fleur de Lys.** France, Département de l'Aisne, near Chateau-Thierry. A chalybeate water, containing traces of sulphur.

**Flex.** (L. *flexus*, part. of *flecto*, to bend.) To bend at a joint.

**Flex'ed.** (L. *flexus*.) Bent at a joint.

**Flexibilitas.** (L. *flexibilitas*, from *flexus*, part. of *flecto*, to bend.) Flexibility, capacity for bending.

**F. cerea.** (L. *cereus*, waxen. G. *wächserne Biegsamkeit*.) The peculiar semi-rigidity of the muscles in catalepsy, which allows the limb to be moved into any position, and which enables it to remain fixed there.

**Flexibility.** (Flexible. F. *flexibilité*; I. *flessibilità*; S. *flexibilität*; G. *Biegsamkeit*.) The capacity or property of a body for bending without breaking, and then returning to its natural shape.

**F. waxen.** See *Flexibilitas cerea*.

**Flexible.** (F. *flexible*; from L. *flexibilis*, easily bent; from *flecto*, to bend; G. *beugsam*.) Capable of being bent without breaking, and then of resuming the original condition.

**F. cath'eter.** (Καθετήρ, anything passed down into.) A catheter made with india rubber and webbing, or other elastic substance.

**F. collodion.** See *Collodium flexible*.

**F. lens.** See *Lens*, flexible.

**Flexicostate.** (L. *flexus*, bent; *costa*, a rib.) Having bent ribs.

**Flexile.** (L. *flexilis*, pliant; from *flecto*, to bend. F. *flexible*; G. *biegsam*, beugsam.) Easily bent, pliable.

**Flexio.** (L. *flexio*, a bending; from *flecto*, to bend.) See *Flexion*.

**Flexion.** (L. *flexio*, a bending; from *flecto*. F. *flexion*; I. *flessione*; G. *Biegung*.) The state of that which is bent; the action of bending.

**F., forcible.** A mode of treating aneurysm so as to compress the affected artery by forcibly and acutely flexing a limb, or part of a limb; such as the knee, to produce pressure on the popliteal artery.

The proceeding is also adopted for the restraint of hæmorrhage.

**F.s of womb.** See *Uterus*, flexions of.

**F. treatment of aneurysm.** See *F., forcible*.

**Flex'or.** (L. *flecto*, to bend. F. *fléchisseur*; I. *flessore*; S. *flexor*; G. *Beuger*.) A bender.

**F. accessor'ius.** (L. *accessio*, an addition. F. *accessoire du long fléchisseur*; G. *vier-eckiger Sohlenmuskel*.) A muscle of the sole of the foot which arises by two heads, an inner larger and muscular slip from the inner surface of the calcaneum, and an outer tendinous one from the part of the calcaneum in front of the external tubercle and the long plantar ligament. The

## FLEXOR.

distal end is attached to the outer border and upper surface of the dexter longus digitorum, on which it acts like a guy. It is supplied by the external plantar nerve. This muscle is wanting in some animals, as the lemur and the Equidae; in others, as some sloths, it is very large, or, as in some monkeys, it may constitute the chief part of the flexor tendons; occasionally, it is inserted by means of muscular slips into the tendons of the dexter digitorum manus sublimis.

**F. accessorius longus.** (L. *longus*, long.) The *F. digitorum pedis longus accessorius*.

**F. accessorius plantæ.** (L. *planta*, the sole of the foot.) The *F. accessorius*.

**F. antibrachii radialis.** (L. *antibrachium*, the forearm; *radius*.) The *Biceps flexor cubiti*.

**F. antibrachii ulnaris.** (G. *Vorderarmstrecker*.) The *Triceps extensor cubiti*.

**F. bicornis.** (L. *bicornis*, having two horns.) A synonym of the *F. carpi radialis*.

**F. brachii longus.** (L. *longus*, long.) A muscle of the forearm in Solipeds, situated in front of the humerus, running obliquely downwards and backwards. It arises above from the base of the coracoid process, and is inserted below into the superior and internal tuberosity of the radius, becoming connected with the capsular ligament of the elbow-joint, and passing beneath the internal ligament. It is a flexor of the forearm, and a tensor of the antibrachial aponeurosis. It receives its arterial supply from the humeral artery, and its nervous supply from the anterior brachial or musculocutaneous nerve.

**F. brevis antibrachialis.** (L. *brevis*, short; *antibrachium*, the forearm. F. *court fléchisseur de l'avant bras*, brachial anterior, humero-cubital oblique, humero-radial; I. *flessore corto dell' antibraccio*; G. *Arm-vorarm-beugemuskel*, kurzer Beuger des Vorarms, gerundeter Beuger.) A muscle of the fore limb in Solipeds corresponding to the brachialis anticus of man. It arises from the posterior surface of the humerus and terminates in two short fasciculi, one of which is inserted into the radius, the other into the olecranon.

**F. brevis capitis.** See *F. capitis brevis*.

**F. brevis digitorum.** See *F. digitorum pedis brevis*.

**F. brevis digitorum pedis.** The *F. digitorum pedis brevis*.

**F. brevis hallucis.** See *F. hallucis brevis*.

**F. brevis manus.** See *F. manus brevis*.

**F. brevis minimi digiti manus.** See *F. digiti minimi manus brevis*.

**F. brevis minimi digiti pedis.** See *F. digiti minimi pedis brevis*.

**F. brevis pollicis.** See *F. pollicis manus brevis*.

**F. brevis pollicis manus.** See *F. pollicis manus brevis*.

**F. brevis pollicis pedis.** See *F. pollicis pedis brevis*.

**F. capitis.** (L. *caput*, the head.) A synonym of the *Rectus capitis anticus major* muscle.

**F. capitis brevis.** (L. *caput*, head; *brevis*, short. I. *flessore corto della testa*.) A synonym of the *Rectus capitis anticus minor*. A muscle found in Solipeds.

**F. carpi exterior.** (L. *exterior*, outward.) A synonym of the *F. carpi radialis*.

**F. carpi interior.** (L. *interior*, inner.) A synonym of the *F. carpi ulnaris*.

**F. carpi radialis.** (L. *carpus*, the wrist; *radius*, the bone of that name. F. *grand-palmair*; G. *innerer Speichermuskel*.) A muscle of the forearm arising from the inner condyle of the humerus, the fascia covering it, and the intermuscular septa between it and the pronator teres, palmaris longus, and dexter sublimis. The tendon runs in a special compartment of the annular ligament of the wrist, grooves the trapezium, and is inserted into the base of the second metacarpal bone, with sometimes a slip to the third. It flexes the hand on the forearm, inclining it to the radial side; in addition it helps to flex the forearm on the arm. It is supplied by a branch from the median nerve. This muscle has frequently auxiliary heads from the neighbouring parts, and may be additionally inserted into the annular ligament, the trapezium, or the fourth or the first metacarpal bones. In birds it arises from the ulna only.

**F. carpi radialis brevis.** (L. *brevis*, short.) A small muscle of the forearm arising from the fore part of the radius above the pronator quadratus, and variably inserted below into the annular ligament, or into one of the carpal or metacarpal bones. It is not always present.

**F. carpi radialis profundus.** (L. *profundus*, deep.) The *F. carpi radialis brevis*.

**F. carpi ulnaris.** (Ulna. F. *cubital antérieur*; G. *innerer Ellenbogenmuskel*.) A muscle of the forearm arising by two heads: one forming part of the common tendon of the flexor muscles from the inner condyle of the humerus; the other from the inner side of the olecranon and two thirds of the posterior border of the ulna. The tendon is inserted below into the pisiform bone, a process being continued to the fifth metacarpal and unciform bones and to the annular ligament. It is supplied by the ulnar nerve. It flexes the hand on the forearm, inclining it to the ulnar side; and then flexes the forearm on the arm. This muscle may, in addition, have insertion into the superficial part of the anterior carpal ligament, or into the superficial palmar fascia, or into the fourth metacarpal bone. It becomes very large and complex in some ant-eaters.

**F. carpi ulnaris brevis.** (L. *brevis*, short.) An occasional muscle arising from the ulna and inserted into the unciform bone. It is probably a homologue of the peroneus longus.

**F. cruris.** (L. *crus*, the leg. I. *flessore della coscia*.) A synonym of the conjoined psoas magnus and iliacus muscles.

**F. cruris biceps.** The *Biceps flexor cruris*.

**F. cruris externus.** (L. *externus*, outer.) The *Biceps flexor cruris*.

**F. cruris fibularis.** (Fibula.) The *Biceps flexor cruris*.

**F. cubiti.** (L. *cubitus*, the forearm. I. *flessore del cubito*.) A synonym of the *Biceps flexor cubiti*.

**F. digiti minimi brevis accessorius.** (L. *accessus*, an addition.) A muscular slip lying under the flexor digiti minimi manus brevis, which is occasionally present.

**F. digiti minimi manus brevis.**

(*L. brevis*, short; *minimus*, sup. *parvus*, small; *digitus*, a finger; *manus*, the hand. *F. fléchisseur court du petit doigt*, *uncio-phalangium*; *I. flessore corto del mignolo*, *uncio-falangiano del mignolo*; *G. kurzer Beuger des kleinen Fingers*.) This muscle arises from the fore part of the annular ligament and from the tip of the unciform process of the unciform bone. It is inserted into the base of the first phalanx of the little finger, which it flexes. It is supplied by the ulnar nerve. This muscle is not infrequently absent; sometimes it is conjoined with the abductor minimi digiti; and sometimes it has an additional head from the ulna or the antibrachial fascia. In the lower animals it is not often present.

**F. dig'iti min'imi pe'dis accesso'rius.** (*L. accessio*, an addition.) An occasional muscular slip arising from the under surface of the tendon of the flexor digitorum pedis longus behind its point of division, and inserted into the little toe.

**F. dig'iti min'imi pe'dis bre'vis.** (*L. pes*, the foot. *F. court fléchisseur du petit orteil*; *G. kurzer Beuger der kleinen Zehe*.) This muscle arises from the base of the fifth metatarsal bone, and from the sheath of the peroneus longus, and ends in a tendon inserted into the base and outer border of the first phalanx of the little toe, which it flexes. It is supplied by a branch of the external plantar nerve. It is not seldom united with the opponens digiti minimi; and in many animals is absent.

**F. dig'iti par'vi min'imi.** (*L. parvus*, little; *minimus*, sup. of *parvus*.) A synonym of the *Abductor minimi digiti manus*.

**F. dig'iti secun'di pe'dis.** (*L. secundus*, second; *pes*, the foot.) See *F. digiti secundi pedis proprius*.

**F. dig'iti secun'di pe'dis pro'prius.** (*L. proprius*, one's own; *digitus*, a finger; *secundus*, second.) A muscle occasionally present at the back of the leg. It has been seen to arise from the posterior surface of the tibia, and to be inserted into the second toe.

**F. digito'rum bre'vis.** (*L. digitus*, a finger; *brevis*, short.) The same as *F. digitorum pedis brevis*.

**F. digito'rum fibula'ris.** (*G. langer Beuger der grossen Zehe*.) A synonym of the *F. hallucis longus*.

**F. digito'rum ma'nus commu'nis profundus.** (*L. communis*, common.) The *F. digitorum manus profundus*.

**F. digito'rum ma'nus per'forans.** (*L. manus*, the hand.) A synonym of *F. digitorum manus profundus*; so called because its tendons perforate the tendons of the *F. digitorum manus sublimis*.

**F. digito'rum ma'nus perfora'tus.** (*L. manus*, the hand.) A synonym of the *F. digitorum manus sublimis*; because its tendons are perforated by those of the *F. digitorum manus profundus*.

**F. digito'rum ma'nus profun'dus.** (*L. digitus*, a finger; *manus*, the hand; *profundus*, deep. *F. fléchisseur profond des doigts*; *G. tiefer Fingerbeuger*.) A muscle of the forearm arising from the upper two thirds of the inner and anterior surfaces of the ulna, from the contiguous half of the interosseous membrane, and from the aponeurosis attaching the flexor carpi ulnaris to the ulna; the fleshy fibres soon divide into two fasciculi, from the outer of which arises the ten-

don for the index finger, and from the inner spring the tendons for the other three fingers, which are connected to each other by fibrous bridges as far as the palm. The tendons run in the common sheath over the first and second phalanges; opposite the first phalanx they perforate the tendons of the flexor digitorum sublimis and are inserted into the base of the last phalanx of each finger. It flexes the fingers, and is supplied by branches from the median and from the ulnar nerves. It occasionally has an origin also from the radius, the coronoid process of the ulna, or the inner condyle of the humerus; its tendon may be connected with those of the flexor digitorum manus sublimis and the flexor pollicis manus longus. This muscle is most distinct in man, in birds there is commonly one tendon only.

**F. digito'rum ma'nus profun'dus accesso'rius.** (*L. accessio*, an addition.) An occasional muscle arising from the coronoid process of the ulna and joining one of the tendons of the flexor digitorum manus profundus.

**F. digito'rum ma'nus subli'mis.** (*L. digitus*, a finger; *manus*, the hand; *sublimis*, high. *F. fléchisseur superficiel des doigts*; *G. oberflächlicher Fingerbeuger*.) The superficial flexor of the fingers. A muscle of the forearm. It arises by one head from the inner condyle of the humerus by the common tendon and the fibrous septa between it and the adjoining muscles, from the internal lateral ligament, and from the inner margin of the coronoid process; and by a second head from the oblique line and part of the anterior border of the radius. It divides below into four tendons, which pass beneath the annular ligament in pairs, those for the middle and ring fingers being in front. The tendons traverse the palm, accompanied by the corresponding tendons of the flexor profundus, and opposite the first phalanx each presents an opening, through which the tendon of the profundus passes, and then divides into two slips, which are inserted into the sides of the second phalanx. It flexes the two first phalanges of the fingers, and is supplied by branches from the median and ulnar nerves. The muscle has sometimes no radial origin; occasionally it is so subdivided that each tendon has a separate muscular belly; the tendon for the little finger is sometimes absent; the part for the little finger is sometimes a distinct muscle; muscular, and sometimes tendinous, slips join the flexor digitorum manus profundus and the flexor pollicis manus longus.

**F. digito'rum ma'nus superficia'lis.** (*L. superficialis*, belonging to the surface.) The *F. digitorum manus sublimis*.

**F. digito'rum pe'dis bre'vis.** (*L. pes*, the foot; *brevis*, short. *F. court fléchisseur commun des orteils*; *I. flessore comune corto delle dita del piede*; *G. kurzer gemeinschaftliche Zehenbeuger*.) A muscle of the foot arising from the inner tubercle of the calcaneum, the deep surface of the plantar fascia, and the intermuscular septa. Anteriorly, it terminates in four tendons, each of which is perforated by the corresponding tendon of the long flexor, and is inserted beyond this point into the second phalanges of the four outer toes. It flexes the second phalanges of the four outer toes, and is supplied by a branch of the internal plantar nerve. The slip to the little toe is frequently wanting. This muscle may be replaced by the plantaris, as in the pig; or it may arise entirely

from the tendon of the flexor digitorum pedis longus; only in man, of the higher mammals, does it take origin from the calcaneum.

**F. digitorum pedis communis longus.** (L. *communis*, common.) The *F. digitorum pedis longus*.

**F. digitorum pedis longus.** (L. *digitus*; *pes*; *longus*, long. *F. fléchisseur long commun des orteils*; I. *flessore commune lungo delle dita del piede*, *calcaneo-sotto falangino comune*; G. *langer gemeinschaftliche Zehenbeuger*.) This muscle arises from the middle two fourths of the posterior surface of the tibia, from the inner border of the fibula, and from the aponeurosis covering the tibialis posticus. The tendon passes behind the internal malleolus in a distinct synovial sheath, then runs forwards and outwards in the sole of the foot below the tendon of the flexor longus pollicis, with which it is connected by a tendinous process, and divides into four tendons, which pass to be inserted into the base of the ungual phalanx of each of the four outer toes. Each tendon perforates the corresponding tendon of the flexor brevis, opposite the first phalanx. It is supplied by the branches from the posterior tibial nerve. It flexes the toes and extends the foot. In some apes and bats it takes its origin also from the femur, in the armadillo it arises chiefly from the fibula; in the horse the tendon is single.

**F. digitorum pedis longus accessorius.** (L. *digitus*; *pes*; *longus*, long; *accessio*, an addition.) An occasional fleshy slip which, when present, arises from either the fibula, the tibia, or the deep fascia, and ends in a tendon, which, after passing beneath the annular ligament, joins the tendon of the long flexor or the accessorius, which last muscle it sometimes replaces.

**F. digitorum pedis perforans.** (L. *digitus*; *pes*; *perforans*, piercing through.) The *F. digitorum pedis longus*.

**F. digitorum pedis perforatus.** (L. *perforatus*, pierced; from *perforo*, to pierce.) The *F. digitorum pedis brevis*.

**F. digitorum pedis profundus.** (L. *profundus*, deep.) The *F. digitorum pedis longus*.

**F. digitorum pedis profundus perforans longus.** (L. *perforans*, piercing.) A synonym of the *F. digitorum pedis longus*.

**F. digitorum pedis sublimis.** (L. *sublimis*, high.) The *F. digitorum pedis brevis*.

**F. digitorum pedis tertius.** (L. *digitus*; *pes*; *tertius*, third.) The part of the flexor digitorum pedis longus which takes origin from the femur, as in the chameleon, and forms a separate muscle.

**F. digitorum profundus.** The *F. digitorum manus profundus*.

**F. digitorum tibialis.** (L. *tibia*, the bone of that name.) The *F. digitorum pedis longus*.

**F. femoris.** (L. *femur*, the thigh.) The conjoined psoas and iliacus muscles.

**F. hallucis.** (L. *hallux*, a corruption of *hallex*, the great toe.) A synonym of the *F. hallucis longus*.

**F. hallucis brevis.** (L. *hallux*, the great toe; *brevis*, short. *F. fléchisseur court du gros orteil*; I. *flessore corto dell' alluce*, *tarsio-falangiano dell' alluce*; G. *kurzer Beuger der grossen Zehe*.) This muscle arises from the inner border of the cuboid and from the process of the tendon of the

tibialis posticus which runs to the outer and middle cuneiform bones. It divides below into two portions, one of which is inserted into the inner border of the base of the first phalanx, in company with the abductor pollicis, the other into the outer border, in union with the adductor. It flexes the first phalanx of the great toe, and is supplied by a branch of the internal plantar nerve. Each of its heads of origin contains a sesamoid bone; it often springs from the os calcis, or from the sheath of the flexor hallucis longus, or from that of the tibialis posticus; it is sometimes inserted also into the second toe. In some animals it is absent.

**F. hallucis longus.** (L. *hallux*, the great toe; *longus*, long. *F. fléchisseur long du gros orteil*; I. *flessore lungo dell' alluce*, *perone-sotto-falangino dell' alluce*; G. *langer Beuger der grossen Zehe*.) A muscle of the leg arising from the lower two thirds of the posterior surface of the fibula, from the intermuscular septum between it and the peronei, and from the aponeurosis common to it and to the flexor longus digitorum, and covering the tibialis posticus. The tendon grooves the tibia, the back of the astragalus, and the under surface of the sustentaculum tali. Gaining the sole of the foot, it changes its direction, is attached by a slip to the tendon of the flexor digitorum, and passes on to be inserted into the base of the ungual phalanx of the great toe. It flexes the great toe and extends the foot. It is supplied by branches of the posterior tibial nerve. The muscle varies much in the mode of attachment of its tendon. In the lower animals it varies greatly in size and position.

**F. internodii primi digitorum.** (L. *internodium*, the space between two joints; *primus*, first; *digitus*, a finger.) A synonym of the several *Lumbricales*.

**F. internodii primi et secundi pollicis.** (L. *primus*, first; *secundus*, second; *pollex*, the thumb.) A synonym of the *F. hallucis longus*.

**F. internodii primi pollicis manus.** (L. *manus*, the hand.) A muscle said to arise from the annular ligament of the carpus, and inserted into the first bone of the thumb, and therefore probably the abductor pollicis.

**F. internodii secundi digitorum manus.** (L. *internodium*, the space between two joints; *secundus*, second; *digitus*, a finger; *manus*, the hand.) A synonym of the *F. digitorum manus sublimis*.

**F. internodii secundi pollicis manus.** (L. *internodium*, the space between two joints; *secundus*, second; *pollex*, the thumb.) A synonym of the *F. pollicis manus brevis*.

**F. internodii tertii digitorum manus.** (L. *internodium*; *tertius*, third; *digitus*, a finger; *manus*, the hand.) A synonym of the *F. digitorum manus profundus*.

**F. internodii tertii pollicis.** (L. *internodium*; *tertius*; *pollex*, the thumb.) A synonym of the *F. pollicis manus longus*.

**F. longus digitorum pedis.** See *F. digitorum pedis longus*.

**F. longus hallucis.** See *F. hallucis longus*.

**F. longus pollicis.** See *F. pollicis manus longus*.

**F. longus pollicis pedis.** (L. *pollex*, the great toe; *pes*, the foot.) The *F. hallucis longus*.

**F. ma'nus bre'vis.** (L. *manus*, the hand; *brevis*, short.) An accessory of the flexor digitorum manus sublimis, arising from the palmar fascia. Found in the hyrax.

**F. ma'nus me'dius.** (L. *manus*, the hand; *medius*, in the middle.) The *Pulmaris longus*.

**F. ma'nus radia'lis.** (L. *manus*.) The *F. carpi radialis*.

**F. ma'nus ulna'ris.** (L. *manus*; *ulna*.) A synonym of the *F. carpi ulnaris*.

**F. mini'mi dig'iti par'vus.** The *F. digiti minimi pedis brevis*.

**F. os'sis metacar'pi pol'licis.** (L. *os*, a bone; *metacarpus*; *pollex*, the thumb.) The *Opponens pollicis*.

**F. perforans.** (L. *perforo*, to pierce.) A synonym of *F. digitorum manus profundus*.

Also, a synonym of *F. digitorum pedis longus*.

**F. perforans digito'rum ma'nus.**

The *F. digitorum manus profundus*.

**F. perforans digito'rum pe'dis.** (L. *pes*, the foot.) The *F. digitorum pedis longus*.

**F. perforatus.** (L. *perforatus*, part. of *perforo*, to bore through.) The *F. digitorum manus sublimis*.

Also, a synonym of *F. digitorum pedis brevis*.

**F. perforatus digito'rum ma'nus.** The *F. digitorum manus sublimis*.

**F. perforatus digito'rum pe'dis.** The *F. digitorum pedis brevis*.

**F. perforatus pe'dis.** The *F. digitorum pedis brevis*.

**F. plan'te accesso'rius.** (L. *planta*, the sole of the foot.) The *F. accessorius*.

**F. pol'licis bre'vis.** The *F. pollicis manus brevis*.

**F. pol'licis longis'simus.** (L. *longissimus*, sup. of *longus*, long; *pollex*, the thumb.) A synonym of the *F. pollicis manus longus*.

**F. pol'licis lon'gus.** The *F. pollicis manus longus*.

**F. pol'licis ma'nus bre'vis.** (L. *pollex*, the thumb; *manus*, the hand; *brevis*, short.) *F. fléchisseur court du ponce*; *L. flessore corto del pollice*, *carpo-falangiano del pollice*; *G. kurzer Daumenbeuger*.) This muscle arises by two heads: a superficial, attached to the outer two thirds of the annular ligament at its lower border; and a deep, attached to the trapezium, the sheath of the flexor carpi radialis, the os magnum, and to the bases of the second and third metacarpal bones. The fibres form two masses, which end in the tendons that are attached to the outer and inner sides of the base of the first phalanx of the thumb. The outer head assists the action of the abductor pollicis, and the inner head that of the adductor pollicis. The outer head is supplied by the median nerve; the inner by the ulnar nerve. This muscle is occasionally absent; its inner head is sometimes fused with the adductor pollicis. It is seldom present in the lower animals.

**F. pol'licis ma'nus lon'gus.** (L. *longus*, long; *pollex*, the thumb; *manus*, the hand.) *F. fléchisseur long du ponce*; *L. flessore lungo del pollice*, *radio-falangio del pollice*; *G. langer Daumenbeuger*.) This muscle of the forearm and hand arises from the depressed anterior surface of the radius, which extends from the oblique line to the upper border of the pronator quadratus, and from the adjacent part of the interosseous membrane. It has a second head in many instances, which arises from the inner

condyle, or from the coronoid process. It runs beneath the annular ligament, grooving the trapezium, then passes between the two heads of the flexor brevis pollicis, and is inserted into the base of the second phalanx of the thumb, which it flexes. It is supplied by the median nerve. The muscle is very seldom absent; its tendon is sometimes connected with those of the superficial or deep flexors of the fingers, and occasionally with the first lumbricalis muscle; now and then a part of the tendon passes to the index finger. In many animals it is united with the *F. digitorum manus profundus*.

**F. pol'licis pe'dis bre'vis.** (L. *pollex*, the great toe; *pes*, the foot; *brevis*, short.) The same as *F. hallucis brevis*.

**F. pol'licis pe'dis lon'gus.** The *F. hallucis longus*.

**F. primi et secun'di os'sis pol'licis.** (L. *primus*, first; *et*, and; *secundus*, second; *os*, a bone; *pollex*, the thumb.) The *F. pollicis manus brevis*.

**F. primi interno'dii.** (L. *primus*, first; *internodium*, the space between two joints.) The *Opponens pollicis*.

**F. primi interno'dii digito'rum ma'nus.** The *Lumbricalis manus*.

**F. profun'dus digito'rum ma'nus.** The *F. digitorum manus profundus*.

**F. profun'dus perforans.** (L. *profundus*, deep; *perforans*, part. of *perforo*, to penetrate.) A synonym of the *F. digitorum pedis longus*.

**F. rad'ii.** The *Biceps flexor cubiti*.

**F. secun'di interno'dii digito'rum pe'dis.** (L. *secundus*, second; *internodium*, the space between two joints; *digitus*, a finger; *pes*, the foot.) A synonym of the *F. digitorum pedis perforatus*.

**F. subli'mis.** (L. *sublimis*, high.) The *F. digitorum pedis perforatus*.

**F. subli'mis digito'rum.** The *F. digitorum manus sublimis*.

**F. subli'mis perforatus.** (L. *sublimis*; *perforatus*, perforated.) The *F. digitorum pedis brevis*.

**F. ter'tii interno'dii.** (L. *tertius*, third; *internodium*.) The *F. pollicis manus longus*.

**F. ter'tii interno'dii digito'rum ma'nus.** (L. *tertius*; *internodium*; *digitus*, a finger; *manus*, the hand.) The *F. digitorum profundus*.

**F. ter'tii interno'dii digito'rum pe'dis.** (L. *pes*, a foot.) The *F. digitorum pedis longus*.

**Flex'uose.** (L. *flexuosus*, full of turns. *F. flexuosus*; *G. kniebeugig*, *gevunden*.) Having many alternating bendings; zigzag.

**Flex'uus.** Same as *Flexuose*.

**Flexu'ra.** (L. *flexura*, a bending.) A curvature.

The bend of the knee in quadrupeds, being the bend of the radio-carpal articulation.

**F. coli dex'tra.** (L. *colon*; *dexter*, on the right side.) The *F. coli hepatica*.

**F. coli hepatica.** The bend at the junction of the ascending and transverse colon, from its position under the liver.

**F. coli ill'aca.** (*Iliac bone*.) The *Colon, sigmoid flexure of*, from its position.

**F. coli infe'rior.** (L. *inferior*, lower.) The *Colon, sigmoid flexure of*.

**F. coli pri'ma.** (L. *colon*; *primus*, first.) The *F. coli hepatica*.

## FLEXURE—FLOCCUS.

**F. coli S roma'num.** The sigmoid flexure of colon, from its resemblance to the Roman capital letter S.

**F. coli secund'a.** (L. *secundus*, second.) The *F. coli splenica*.

**F. coli sigmo'idea.** See *Colon*, sigmoid flexure of.

**F. coli sinis'tra.** (L. *sinister*, on the left side.) The *F. coli splenica*.

**F. coli splen'ica.** The bend at the junction of the transverse and descending colon, from its position under the spleen.

**F. ili'aca.** (L. *ilia*, the flank.) The sigmoid flexure of the colon, from its position.

**F. os'sis.** (L. *os*, a bone.) Bending or greenstick fracture of a bone.

**F. sigmo'idea.** The sigmoid flexure of the colon.

**Flex'ure.** (L. *flexura*, a bending. G. *Biegung*.) A bending; a curvature; a joint.

**F., elastic'ity of.** The tendency of a thin plate of a solid substance to return to its original position after being bent. This is the property which is applied in watch-springs to produce motion.

**Flight.** (Sax. *flyht*; from *fléogan*, to fly. F. *vol*; I. *volo*; S. *vuelo*; G. *Flug*.) The mode of locomotion in the air resulting from the motion of wings or wing-like organs.

**Flinsberg.** Germany, in Silesia. A very weak chalybeate water in a pleasant climate 1550 feet above sea-level.

**Flint.** (Sax. *flint*, a rock; akin to Sw. *flinta*; and Gr. *πλίνθος*, a brick.) A species of quartz found in irregular nodules embedded in chalk formations. It contains about 98 per cent. of silica, the remainder being lime, alumina, oxide of iron, and water.

**F. glass.** See *Glass*, *flint*.

**Flitwick.** Bedfordshire, near Ampthill. Chalybeate water, said by White to contain oxide and carbonate of iron 144 grains, magnesium and sodium sulphate 59.2, calcium carbonate 11.54, magnesium chloride 15.16, silica 3.4, magnesium carbonate 5.42, and ulmic, malic, and other acids 13.32 grains in one gallon. Used in anaemia, dyspepsia, asthma, rheumatic gout, and some skin diseases.

**Flixweed.** The *Sisymbrium sophia*; so called from its supposed power of curing flix, a corruption of flux or dysentery.

**Floa't.** (Mid. E. *floten*, *flotten*; Sax. *fléotan*. F. *flotter*; I. *gallegiare*; S. *flotar*; G. *flossen*.) To swim or rest on the surface of a liquid.

Also, that which rests on the surface of a liquid.

**F. grass.** The *Poa fluitans*.

**Floa'ting.** (Floa't.) Swimming, borne on the surface of water.

**F. af'ter drown'ing.** The dead body after drowning develops large quantities of sulphuretted hydrogen, carburetted hydrogen, ammonia, and other gases, in a time varying according to the warmth of the water; and when there has been generated such an amount as diminishes sufficiently the specific gravity of the body, it floats; after doing this the gases may escape, the body may sink again, and again float, from reproduction of gas, for several times.

**F. bod'ies.** A floating body displaces a volume of the liquid in which it floats equal in weight to its own weight, and so to be at rest its

centre of gravity must be in the same vertical line as that of the liquid which it has displaced.

The equilibrium of a floating body is stable when the metacentre is above, and unstable when it is below, the centre of gravity.

**F. kid'ney.** See *Kidney*, floating.

**F. liv'er.** See *Liver*, floating.

**F. ribs.** See *Ribs*, floating.

**F. tu'mour.** See *Tumour*, floating.

**Floc'ci.** (L. *floccus*, a flock or lock of wool.) Plural of *Floccus*.

The villi of mucous membranes.

In Botany, a term for woolly hairs in tufts.

**F. volitan'tes.** Same as *Musca volitan'tes*.

**Floccila'tion.** (L. *floccus*; *lego*, to gather.) The picking at the bedclothes by a sick person; also called *Carpology*.

**Floccile'gium.** (L. *floccus*, a flock of wool; *lego*, to collect. G. *Flockenlesen*.) Same as *Floccilation*.

**Floccitation.** (L. *floccus*, a flock of wool.) Same as *Floccilation*.

**Flocco'rum vena'tio.** (L. *floccus*, a flock of wool; *venatio*, hunting; from *venor*, to hunt.) Same as *Floccilation*.

**Floccose.** (L. *floccus*.) Covered with tufts of woolly hairs.

**Floccosely.** (L. *floccus*.) In a floccose or woolly-tufted manner.

**Floccular.** (L. *flocculus*, dim. of *floccus*, a lock of wool.) Like, or relating to, a lock of wool, or a flake; pertaining to the lobule of the cerebellum called *Flocculus*.

**F. fos'sa.** See *Fossa*, *floccular*.

**F. pro'cess.** The lobule of the cerebellum called *Flocculus*.

**Flocculence.** (L. *flocculus*.) The state of being flocculent, or of containing flocculi.

**Flocculent.** (L. *flocculus*.) Containing flakes or flocculi.

**F. spu'ta.** See *Sputa*, *flocculent*.

**Flocculi.** Plural of *Flocculus*.

Also, the same as *Flocci*.

**F. secunda'rii.** (L. *secundarius*, of the second class. G. *Nebenflochen*.) One or more small elevations near the flocculus, directly placed on the middle peduncle of the cerebellum.

**F. succenturia'ti.** (L. *succenturio*, to put in the place of.) Same as *F. secundarii*.

**Flocculose.** (L. *flocculus*, dim. of *floccus*, a lock of wool.) Woolly, resembling wool.

**Flocculus.** (L. *flocculus*, dim. of *floccus*, a flock or lock of wool. G. *Flockchen*.) A flake, a light mass in a liquid like a small flock of wool.

In Anatomy (*F. lobule du pneumogastrique*; G. *Flocke*), a small lobule of the cerebellum attached by a narrow pedicle to the space between the middle peduncle of the cerebellum, its biventral lobe, and the restiform body. The flocculus is partially covered by the biventral lobe.

In the lower animals the flocculus becomes prominent in consequence of the decrease in size of the lateral lobes of the cerebellum; in many it occupies a distinct depression in the petrous bone, the floccular fossa.

**Floccus.** (L. *floccus*, a lock of wool. F. *flöcon*; G. *Flocke*.) A lock or flock of wool; a substance having the character of a lock of wool.

In Zoology, the tuft of hair at the end of the tail of certain mammals, as in the guan.

## FLORES.

*Achillea ptarmica*. Used as a poultice and fomentation, and as a stomachic and emetic. Same as *Anthemidis flores*, B. Ph.

**F. chamomillæ vulgaris.** See *F. chamomilla*, G. Ph.

**F. chardon benoit.** (*F. chardon*, a thistle; *benoit*, for *béni*, blessed.) The flowers of *Carduus lanuginosus*.

**F. cheiri.** (G. Goldlack.) The flowers of *Cheiranthus cheiri*, L. Indigenous. Taste bitter, cress-like. Laxative.

**F. cinæ.** G. Ph. (*F. semence sainte*, *semence contra*; I. *fiore di cina*, *seme santo*; G. *Zittwerblüthen*.) The unexpanded flowers of the *Artemisia cina*, Willd. Indigenous in Persia and Turkestan. They are 3 mm. in length, with an involucre of 12 imbricated scales beset with resinous glands enclosing 3—6 tubular, hermaphrodite flowers; styles short and thick, also beset with resin cells. Taste and smell aromatic, bitter. Contain 2 per cent. of santonin, one per cent. of ethereal oil, resin and sugar. Liable to adulteration with tansy flowers and with flowers of *Artemisia campestris*. A vermifuge.

**F. cinæ Barbarici.** Flowers obtained from *Artemisia ramosa*, Smith. A vermifuge.

**F. cinæ Indici.** The produce of *Artemisia pauciflora*, Stechm., and of *Artemisia monogyne*, Kit., B. *microcephala*, and the same as *F. artemisia pauciflora*, Stechm. Heads smaller than those of *F. cinæ levantici*, brown, woolly. A vermifuge.

**F. cinæ levantici.** The florets of *Artemisia cina* and of *A. maritima*, var. *a*, *Stechmanniana*, Besser, the *A. lercheana*, Karel, the *A. maritima*, var. *a*, *pauciflora*, Weber. A plant indigenous on the shores of the Don and Volga. A vermifuge.

**F. cinæ Ros'sici.** Flowers obtained from the same species of artemisia as *F. cinæ Indici*. Indigenous in North-west Africa. Flower-heads smaller, club-shaped, covered with thick white wool. A vermifuge.

**F. clematidis.** The flowers of *Clematis erecta*, vitalba, and *flammula*. Sepals 4, valvate or induplicate, petals 0. Aerial.

**F. consolidæ regalis.** (G. *Rittersporneblümen*.) The flowers of *Delphinium consolida*. Same as *Calceatropa flores*.

**F. convallariæ majalis.** (*F. fleurs de perce-neige*, *f. de muguet*; G. *Maiglöckchenblüthen*, *Maidlilienblüthen*, *Maiblumen*.) Flowers of the lily of the valley, *Convallaria majalis*. Flowers racemose, terminal; sepals and petals nearly separated, but forming a bell by their junction; stigma obtuse, three-cornered. The powdered flowers are acrid, and are used as a sternutatory; their distilled water is fragrant, and is known as *Eau d'or*. See *Convallaria*.

**F. cos'so.** The same as *F. kouso*.

**F. cupri.** (L. *cuprum*, copper. *F. fleurs de cuivre*; G. *Kupferblumen*.) See *Cupri flores*.

**F. cus'so.** The same as *F. kouso*.

**F. cyani.** (*F. fleurs de bleu*, G. *Kornblumen*.) Corncockle flowers. The flowers of *Centaurea cyanus*, L. Said to be diuretic.

**F. dianthi caryophylli.** (*F. fleurs d'aïlle romp*; G. *Gartenmaiglöckchen*.) The flowers of the clove pink, *Dianthus caryophyllus*. Calyx tubular, 5-toothed, imbricated at the base; petals with long claws; stamens 10; styles 2; flowers solitary. Used as a cardiac and stomachic.

**F. elichrysi.** (*Elichrysum*.) The same as *F. gnaphalii*.

**F. farfarae.** (*F. fleurs de pas d'âne*; G. *Hufzettelblüthen*.) The flowers of coltsfoot, *Tussilago farfara*. Pappus hairy; florets of the ray female, in many rows, ligulate; of the disc male; colour yellow. Indigenous. Emollient, demulcent, tonic.

**F. genistæ.** (L. *genista*, the broom.) The flowers of broom, *Sarothamnus scoparius*. Same as *F. spartii scoparii*.

**F. guaphalii.** The same as *F. stachados citrine*.

**F. granati.** (*F. fleurs de grenadier*; G. *Granatblüthen*.) The flowers of *Punica granatum*. Calyx coriaceous, tubular, 5—7-cleft, valvate; petals 5—7, crumpled. Indigenous in South Europe. Astringent. Contains coloring matter and tannic acid. Used as a *Teniacide*.

**F. hispidulæ.** (L. *hispidulus*, dim. of *hispidus*, bristly.) The flowers of *Gnaphalium dioica*, called *Hispidula herba*, from the roughness of its stem.

**F. jaceæ nigrae.** (L. *niger*, black. G. *wilder Safforblüthen*.) The flowers of *Centaurea jacea*. Used both externally and internally in scrofulous diseases.

**F. jaceæ vulgaris.** (L. *vulgaris*, common.) The same as *F. jaceæ nigrae*.

**F. jasmini.** The flowers of *Jasminum officinale*, L. A native of Southern China. The flowers are aromatic, and contain an ethereal oil.

**F. jun'ci.** (G. *Binsenblüthen*.) The flowers of *Juncus effusus* and *J. conglomeratus*. Used in bladder troubles.

**F. ko'so.** G. Ph. (*F. coussotier d'Abyssinie*; I. *fiore di kosso*; G. *Kossoblüthen*.) Kouso. The flowers of *Hagenia abyssinica*, W., or of *Brayera anthelmintica*.

**F. kos'so.** The *F. koso*, G. Ph.

**F. kous'so.** See *F. koso*.

**F. la'mii.** (*F. fleurs d'ortie blanche*, *f. d'ortie morte*; G. *Bienenangblüthen*, *Taubnesselblüthen*.) The flowers of dead nettle, *Lamium album*. Indigenous. The flower without the calyx white, 2.5 cm. long, lower part tubular, curved, expanded towards the throat; upper lip arched; lower lip 3-lobed; lateral lobes small; stamens didynamous. Taste and smell sweetish. Used as a purifier of the blood.

**F. lavandulæ.** G. Ph. (*F. fleurs de lavande commune*; I. *fiore di lavendula*; G. *Lavendelblüthen*, *Spickblüthen*.) Lavender flowers. The flowers of the *Lavandula angustifolia*, Chaix, *L. vera*, D.C., and *L. spica*. Indigenous in Southern Europe. Stamens declinate, 4, included; corolla bilabiate. Extremely fragrant. Used in hysteria and headache and as a perfume, due to an ethereal oil, of which the French-grown plants contain 3 per cent.

**F. lilii al'bi.** (*F. fleurs de lis blanc*; G. *weisse Lilienblüthen*.) The flowers of *Lilium candidum*. Perianth composed of six leaves, pure white, becoming brown on drying, with a nectar gland. Smell fragrant, disappearing on drying. Taste mucous, bitter. Used as an application to wounds.

**F. lilii'rum albo'rum.** The same as *F. lilii albi*.

**F. lilii'rum convall'ium.** (G. *Mai-glöcken*, *Maidlilien*, *Maiblumen*.) The same as *F. convallariæ majalis*.

**F. lonic'erae brachyp'odæ.** The

## FLORES.

flowers of *Lonicera brachypoda*. Used in China against syphilis, and in dropsy as a diuretic; in large doses they are cathartic.

**F. lonic'erae caprifoliae.** (F. *fleurs de chèvre-feuille*; G. *Geissblattblüthen*.) The flowers of the honeysuckle, *Lonicera caprifolium*. Used as a demulcent.

**F. ma'cidis.** Mace, the arillus of the fruit of the *Myristica moschata*.

**F. ma'cis.** Same as *F. macidis*.

**F. mal'vae.** G. Ph. (F. *fleurs de grande mauve*, f. *de mauve sauvage*; G. *gemeine Malvenblüthen*, *Kasopappelblüthen*.) The flowers of *Malva sylvestris*. Outer calyx 3-leaved, ciliated at the margin; internal 5-divided, with scattered stellate hairs; corolla leaves rose red, with darker veins, drying blue, four times as long as the calyx; stamens numerous, coalesced. Used internally as a demulcent, and externally as a cataplasm, and in decoction as a fomentation, an injection, and a gargle.

**F. mal'vae arbores.** (F. *fleurs de passe-rose*; I. *fiori di malva*; G. *Stockrosenblüthen*, *Pappelrosenblüthen*, *Baummalvenblüthen*.) The flowers of *Althæa rosea*, var. *floribus purpureis*. From the East. External calyx 6—9; internal 5-partite, obcordate, hairs stellate; stamens numerous, united into a tube; stigma single, 20—40-partite. Taste mucous, herbaceous. Used as a demulcent, and in decoction as a gargle.

**F. mal'vae hortens'is.** (L. *hortensis*, belonging to a garden. G. *Stockrosen*, *Pappelrosen*, *Baummalve*.) The same as *F. mal'vae arbores*.

**F. mal'vae silves'tris.** Same as *F. mal'vae*.

**F. mal'vae vulga'ris.** (L. *vulgaris*, common.) Same as *F. mal'vae*.

**F. martia'les.** (L. *Mars*, an old name for iron.) The *Ferrum ammoniacum* when prepared by sublimation; it was the official name of the salt in the Lond. Ph., 1746.

**F. melio'ti.** (G. *Steinkleeblüthen*.) The flowering tops of *Melilotus officinalis*. They contain coumarin, and are used as a sternutatory and as a sedative poultice.

**F. millefo'lii.** (F. *fleurs de millefeuille*; I. *fiori di millefoglio*; G. *Schaffgarbenblüthen*.) The flowers of milfoil, *Achillea millefolium*. Pappus 0; florets of the ray male; of the disc female, with a flattened winged tube. They contain a blue ethereal oil, a bitter resin, tannin, gum, acetic and malic acids, and salts. Used as a carminative enema and in baths.

**F. mimo'sae cochliocar'pos.** The flowers of *Mimosa cochliocarpos*. Used as an astringent in Brazil.

**F. nag-kas'sar.** The flowers of *Caly-saccion chinense*. Indigenous to China. They have a pleasant odour, and are used for the stuffing of pillows.

**F. na'phæ.** (G. *Pomeranzenblüthen*.) The same as *F. auranti*.

**F. narcis'si major'is.** (L. *major*, greater.) Same as *F. narcissi pseudonarcissi*.

**F. narcis'si pseudonarcis'si.** (F. *fleurs de narcisses des prés*; G. *Wiesennarcissenblüthen*.) The flowers of the daffodil, *Narcissus pseudonarcissus*, L. Flower solitary; corone campanulate, erect, crisp, as long as the yellow perianth. A native of Europe. Acriid, poisonous.

**F. nenup'haris.** Same as *F. nymphaeæ*.

**F. nymphaeæ.** (F. *fleurs de nenuphar*

*blanc*; G. *weisse Scerosenblüthen*.) The flowers of the white water-lily, *Nymphaea alba*. Used as a demulcent and astringent in diarrhoea and bronchial catarrh.

**F. pæoni'æ.** (F. *fleurs de pivoine*; G. *Pfingstrosenblüthen*, *Gichtrosenblüthen*.) The flowers of the peony, *Pæonia officinalis*, Retz. Petals of a fine red colour, and used as a colouring agent, and as an antispasmodic.

**F. papav'ris erratici.** (L. *papaver*, a poppy; *erraticus*, wandering. G. *Klatschrosen*.) The same as *F. rhæados*.

**F. paralys'eos.** (I. *παράλυσις*.) The same as *F. primulae*.

**F. pēdis ca'ti.** (L. *pes*, a foot; *catus*, a cat.) The same as *F. gnaphalii dioici*.

**F. persicæ.** (F. *fleurs de pêcher*; G. *Pfirsichblüthen*.) The flowers of the peach, *Persica vulgaris*. Used as a sedative in coughs.

**F. pilosellæ albūm.** Same as *F. gnaphalii*.

**F. plum'bi.** (L. *plumbum*, lead. F. *fleurs de plomb*; G. *Bleiblüthen*.) Oxide of lead.

**F. prim'ulae.** (F. *fleurs de primevère*; G. *Schlüsselblumen*, *Himmelschlüssel*.) The flowers of the cowslip, *Primula officinalis*. Corolla hypocrateriform, dilated at the orifice; filaments very short. Sedative. Smell aromatic, taste sweetish. Used in the manufacture of a wine. Liable to adulteration with the flowers of *Primula elatior*. Employed as a diaphoretic.

**F. prūni pad'i.** (G. *Ahlkirschenblüthen*.) The flowers of the bird cherry, *Prunus padus*. Used in lung diseases.

**F. prūni spinosæ.** (G. *Schlehenblüthen*, *Schwarzdornblüthen*.) The flowers of the haw, *Prunus spinosa*, an indigenous plant. Same as *F. acaciæ nostratis*.

**F. pseudonarcis'si.** Same as *F. narcissi pseudonarcissi*.

**F. pyre'thri ro'sei.** (F. *fleurs de pyréthre de Caucase*; G. *rothe Fieberkrautblüthen*.) Feverfew flowers. The flowers of *Pyrethrum roseum*, M. B., and *Pyrethrum carneum*, M. B. Both plants are indigenous in South-eastern Caucasus. Flower heads about 3 cent. broad, with imbricated, brown-edged, involueral leaves, and 20—30 pale-red florets with yellow resinous glands. No pappus. Bitter tonic. Forms the so called Persian insect powder.

**F. rhœ'ados.** (F. *fleurs de coqueliquot*; G. *Klatschrosenblüthen*.) Flowers of *Papaver rhæas*, or corn poppy. Indigenous. The petals are roundish, about 5 cent. broad, scarlet when fresh, violet when dried. Used as a colouring ingredient. Liable to be adulterated with the petals of *Papaver dubium*, which are about 2 cm. broad, and with those of *Papaver argemone*, which are about 1 cm. wide. Used as a demulcent and for colouring purposes.

**F. ro'sæ.** G. Ph. (F. *petales de rose*; G. *Rosenblätter*, *Centifolienblätter*.) The flowers of *Rosa centifolia*, cabbage or Provence rose. Flower nodding; calyxes viscid; fragrant. Petals are slightly astringent, and form syrup of roses; they also yield rose water.

**F. ro'sæ benedic'tæ.** (L. *benedictus*, blessed.) The same as *F. pæonia*.

**F. rosa'rum incarnata'rum.** (L. *incarnatus*, in the flesh.) The *F. roseæ*, G. Ph.

**F. rosa'rum rubra'rum.** (G. *Französische Rosenblätter*, *Essigrosenblätter*.) The flowers of *Rosa gallica*, L. Flowers erect; sepals ovate; petals obovate or obcordate, purple

# FLORESCENCE—FLORET, SAINT.

red. The flowers are mildly astringent and tonic. They contain an ethereal and a fatty oil, gallo-tannic acid, salts.

**F. rosmarini.** (F. *fleurs de rosmarin*; G. *Rosmarinblüthen*.) Rosemary flowers, from *Rosmarinus officinalis*. Hab. Southern Europe. Aromatic.

**F. salis ammoniaci.** Same as *Sal ammoniac*.

Also, a term for ammonium carbonate.

**F. salis ammoniaci martialis.** (L. *Mars*, an old name of iron.) Basil Valentine's name for *Ferri ammonio-chloridum*. It was the official name of the salt in the Lond. Ph., 1721.

**F. salis ammoniaci simplicis.** (L. *simplex*, simple.) The same as *Ammonium chloratum*.

**F. sambuci.** G. Ph. (F. *fleurs de sureau*; I. *fiori di sambuci*; G. *Fliederblüthen*, *Hollunderblüthen*.) The flowers of the elder, *Sambucus niger*. Flowers pentamerous; corolla rotate; stigmas 3, sessile. An ointment and a distilled water are made from them. They contain ethereal oil, resin, mucin, and tannin. They are stimulant and sudorific. They are liable to adulteration with the flowers of the *Sambucus ebulus* and *S. racemosa*. In popular use as a diaphoretic, and for fomentations and gargles.

**F. siliginis.** (L. *siligo*, a kind of wheat.) The anthers of a species of *Tritium*. Used in Hungary in intermittent fever, and as a substitute for ergot.

**F. sophoræ.** The flowers of *Sophora japonica*, L., a papilionaceous plant. Hab. China and Japan. The buds are 4—10 mm. long, greenish or yellowish; stamens didelphous. Aromatic. They contain cathartin and rutin. Used in China to colour silks; in Europe to adulterate beer.

**F. spartii scoparii.** (F. *fleurs de genêt*; G. *Besenginsternblüthen*.) The flowers of the broom, *Sarothamnus scoparius*, Wimm. Large gold-coloured flowers; axillary, solitary, stalked. Used as a diuretic.

**F. spicæ.** (L. *spica*, a point.) The *F. lavandula*.

**F. spilanthis.** (G. *Para-Kresse*.) The flowers of *Spilanthis oleracea*. Hab. South America. Flowers with long peduncles, conical, without ray-florets, with yellow, tubular, hermaphrodite flowers. Aromatic. Contain an ethereal oil and tannin.

**F. stachados arabicæ.** The flowers of *Lavandula stachas*, L. A labiate plant. Indigenous in North Africa and the Greek Archipelago. The flowers are small, dark blue. Aromatic.

**F. stachados citrinæ.** (F. *fleurs de pied de chat*; G. *Gelbe Katzenpfötchen*, *Immortellen*, *Harnblüthen*.) The flowers of *Gnaphalium arenarium*, L., *Helichrysum arvenarium*, D.C. A composite plant. Bracts of involucre imbricated, dry, yellow; the flowers are yellowish and hermaphrodite; pappus hairy. Small aromatic, taste bitter. They contain an ethereal oil and bitter extractive. Used in atonic bladder troubles.

**F. stachados purpureæ.** (L. *purpureus*, purple.) Same as *F. stachados arabicæ*.

**F. stanii.** (L. *stannum*, tin. F. *fleurs d'étain*; G. *Zinnblüthen*.) Oxide of tin.

**F. sulfuris.** (F. *fleurs de soufre*; G. *Schwefelblüthen*.) The same as *Sulphur sublimatum*.

**F. sulfuris loti.** (L. *lotus*, washed.) The *Sulphur precipitatum*.

**F. tanacetii.** (F. *fleurs de tanaïs*; G. *Rainfarndblüthen*.) Tansy flowers, from *Tanacetum vulgare*. The pappus forms a slight membranous border. The florets, all tubular, of the ray male, of the disc female, bracts forming a hemispherical flower head. Aromatic, bitter tonic, antelmintic. They contain tannic acid, ethereal oil, resin, and tannin.

**F. tillicæ.** G. Ph. (F. *fleurs de tilleul*; I. *fiori di tiglio*; G. *Lindenblüthen*.) Flowers of the lime or linden tree, *Tilia grandifolia*, Ehrh. or *T. platyphyllos*, Scop., the *T. parvifolia*, Ehrh. or *T. ulmifolia*, Scop., and the *T. vulgaris*, Hayne. They grow from a thin membranous bract. Sepals 5, deciduous. The infusion of the flowers is given in vertigo and spasms, and against cough; they are mildly diaphoretic. They contain ethereal oil, tannin and mucin.

**F. trifolii albi.** (G. *weisser Kleeblüthen*.) The flowers of *Trifolium album*. Used as a stomachic.

**F. tussilaginis.** (L. *tussilago*, the colts-foot.) The same as *F. farfara*.

**F. ulmaricæ.** (F. *fleurs d'ulmaire*; G. *Spierstaudenblüthen*.) The flowers of meadow sweet, *Spiraea ulmaria*. Used in hæmorrhages, diarrhoea, and intestinal worms; externally as an application to wounds.

**F. ungulum.** (L. *unguis*, a nail.) The white spots seen on the nails of man.

**F. urticæ.** (F. *fleurs d'ortie blanche*; G. *Nesselblüthen*.) The flowers of the nettle, *Urtica dioica* and *U. urens*. Used as a diuretic, antihæmorrhagic, and antiperiodic; given in ague, skin diseases, hæmoptysis, and menorrhagia.

**F. urticæ mortuæ.** (L. *urticus*, a nettle; *mortuus*, dead. G. *Taubnesselblüthen*.) The same as *F. lanii albi*.

**F. verbasci.** G. Ph. (F. *fleurs de bouillon blanc*, *f. de molène*; G. *Wollblüthen*, *Wollkrautblüthen*, *Königskeizerblüthen*.) The flowers of *Verbascum thapsiforme* and *V. phlomoides*. Corolla rotate, stamens 5, very unequal. They are said to be poisonous. Used in enema as a mild aperient.

**F. violarum.** (F. *fleurs de violette odorante*; G. *Veilchenblüthen*.) The flowers of the violet. Colour dark blue or purple. Aromatic; said to be anodyne. They contain violin, a bitter acid alkaloid.

**F. viridis æris.** (L. *viridis*, green; æs, brass.) The crystals of acetate of copper obtained by dissolving verdigris in hot acetic acid and crystallising out.

**F. wyfaa.** The same as *F. sophoræ*.

**F. zinici.** (F. *fleurs de zinc*; G. *Zinkblüthen*.) Oxide of zinc.

**Florescence.** (L. *floresco*, to begin to blossom. F. *fleuraison*; G. *Blumentragung*.) The act of flowering of plants.

Also (G. *Blüthezeit*), the time during which a plant flowers.

**Floret.** (L. *flos*, a flower. F. *fleuron*, *fleurite*; I. *fioretto*; G. *Blümchen*.) A small flower, such as those which collectively form the capitulum of a composite plant.

**F.s of the disc.** The inner florets of the capitulum of a composite plant.

**F.s of the ray.** The outer row of florets of the capitulum of a composite plant.

**Floret, Saint.** France, Département

du Puy-de-Dôme. A weak chalybeate water, containing a small quantity of sodium carbonate and some free carbonic acid.

**Floribundous.** (*L. flos*, a flower; *abundare*, to abound. *G. blühend, reich blühend*.) Bearing very many flowers.

**Florid.** (*L. floridus*, abounding in flowers. *G. blühend, blumenreich*.) Rich in flowers; blooming; bright red in colour.

**Florida.** One of the United States of America.

**F. anise tree.** The *Illicium floridanum*.

**F. arrowroot.** See *Arrowroot, Florida*.

**F. spring.** United States of America, Montgomery Co., New York. A mineral water, containing sodium sulphide, 2 grams, sodium hyposulphite 7, sodium bicarbonate 22, calcium bicarbonate 8.3, magnesium bicarbonate 6.9, and sodium chloride 5.8 grains, in a gallon, with 3.7 cubic inches of hydrogen sulphide and 32 of carbonic acid gas.

**F. water.** An American-made perfume of the character of Eau de Cologne, said to be antiseptic. Used in vapour in the sick room, and as an invigorating addition to a bath.

**Floridæ.** (*L. floridus*, blooming.) A Subclass of the Class *Monocotyledones*, being those with distinct flowers.

**Floridææ.** (*L. floridus*, blooming. *G. Blüthenalgen*.) An Order of the chlorophyllous Section of the Class *Carposporeæ*, Group *Thallophyta*; or a Suborder of the Order *Algae*; or an Order of the Class *Algae*. Reddish-purple, or rose-coloured, or violet sea-weeds, very few living in fresh water, having a branched, filamentous, or foliaceous thallus, a multicellular carpoponium, and non-motile antherozoids; these latter attach themselves to the trichogon of the carpoponium, and from it a cystocarp grows, which either directly or indirectly produce carpospores.

**Floriferous.** (*L. flos*, a flower; *ferre*, to bear. *F. florifere*; *G. blüthentragend*.) Flower-bearing, in reference either to an organ or to a plant.

**Florification.** (*L. flos*; *facio*, to make.) The act or process of flowering of plants; the time of flowering.

**Flo'riform.** (*L. flos*; *forma*, shape.) Having the shape of a flower.

**Florins - Saint - André.** France, Département des Hautes-Alpes, near Embrun. A weakly mineralised water, containing some carbonic acid and hydrogen sulphide.

**Florip'arous.** (*L. flos*; *pario*, to bring forth. *F. floripare*; *G. blüthensprossend*.) Producing flowers, as certain buds.

**Florula.** (*L. dim. of Flora*.) The flora of a limited area.

**Flo'ru'lent.** (*L. florulentus*, abounding in flowers. *G. blumenreich*.) Flowering; full of flowers.

**Flos.** (*L. flos*, a flower; akin to Sans. *phul*, to come out into flower.) A flower, a blossom; the crown, or ornament, or best, of anything; youthful innocence; virginity.

**F. abortiens.** See *Flower, abortive*.

**F. aëris.** (*F. aer*, air.) An old name for a species of *Epidendrum*. (Quincy.)

**F. æruginis.** (*L. ærugo*, verdigris.) Crystallised acetate of copper.

**F. amoris.** (*L. amor*, love.) The *Amaranthus caudatus*.

**F. cu'culi.** (*L. cuculus*, the cuckoo.) The cuckoo-flower, *Cardamine pratensis*.

**F. februa'ril.** The snowdrop, *Leucojum vernum*, from its time of flowering.

**F. ferri.** (*L. ferrum*, iron.) A form of arragonite, of a corallora form, which occurs in beds of iron ore.

**F. fœmin'us.** (*L. fœmineus*, female.) See *Flower, female*.

**F. jo'vis.** (*L. Jovis*, Jupiter.) An old name of saffron.

**F. lac'tis.** (*L. lac*, milk.) Cream.

**F. mas'culus.** (*L. masculus*, male.) See *Flower, male*.

**F. plênus.** (*L. plenus*, full.) A double flower.

**F. sa'lis.** (*L. sal*, salt.) Sodium carbonate.

**F. sanguin'us monard'i.** (*L. sanguineus*, bloody.) The *Tropæolum majus*.

**F. stamin'us.** See *Flower, staminate*.

**F. ster'ilis.** See *Flower, sterile*.

**F. trinita'tis.** (*L. trinitas*, the Trinity.) The *Viola odorata*.

**F. virginita'tis.** (*L. virginitas*, virginity.) The hymen.

**Floscellus.** (*L. floscellus*, dim. of *flos*, a flower. *G. Blüthenchen*.) A floret; a small flower.

**Flos'cule.** (*L. flosculus*. *F. floscule*; *G. Blüthenchen, Blümchen*.) A little flower; a floret. Also, the flower-like ciliated anterior extremity of some Infusoria.

**Flos'culose.** Same as *Flosculous*.

**Flos'culous.** (*L. flosculus*, dim. of *flos*, a flower. *F. flosculeux*; *G. blümchenartig*.) Having florets, or composed of florets.

**Flos'culus.** Same as *Floscule*.

**Floss.** (*L. floscio*, flaccid, soft; from *L. fluxus*, fluid.) The silky down found on or around the seeds of some plants.

**F. silk card'ers.** These operatives suffer severely from their occupation, as they work in ill-ventilated rooms, the air of which is charged with dust and offensive animal odours. They are affected with oedema of the limbs, dull pains in the arms, shoulders, and thorax, ophthalmia, cough, asthma, hæmoptysis, and phthisis. They rarely continue their work beyond the age of fifty. See *Potter's disease*.

**Flossbrunnen.** Switzerland, Canton Wallis. A mineral water, containing sodium chloride and sulphate, magnesium sulphate, and calcium sulphate, in small quantities.

**Flote grass.** Same as *Float grass*.

**Flound'er.** (Sw. *flundra*; perhaps from a Teutonic base *flud*, to flutter, from its flapping about. *F. caridet*; *G. Flunder*.) The *Pleuronectes flesus*, an esculent sea and freshwater fish.

**F., liv'er.** The liver fluke, *Distoma hepaticum*.

**Flour.** (Mid. E. *flowre*, *flower*; from *F. fleur*, flower. *F. farine*, *fleur de farine*; *I. farina*; *S. harina*; *G. Mehl*.) The fine meal of corn or other seeds; specially wheat meal.

Also, any fine powder.

**F., adultera'tion of.** Wheat flour is occasionally adulterated with rice or Indian meal, both of which can be detected by washing with water. Rice and cornflour, being heavier, sink to the bottom, and can be distinguished with the aid of a microscope.

**F., bak'ed.** Wheat flour baked in a jar placed in a moderately hot oven, or in water kept boiling, until it is a light-yellowish colour,

so that the starch grains are broken up. It is used as a food for infants and invalids, especially when there is diarrhoea.

**F., boiled.** Wheat flour tightly tied in a bag and then put into boiling water for some hours; all but the outer crust may be used. From it is made a food for infants and invalids, which is easily digestible because of the breaking up of the starch granules by the heat employed.

**F., cold.** Same as *Pinoli*.

**F., meat.** See *Meat flour*.

**F., mustard.** The meal of mustard seeds. See *Sinapis*.

**F., pota'to.** Same as *Starch, potato*.

**F., wheat.** (F. *farine de froment*; G. *Weizenmehl*.) See *Farina tritici*.

**Flourens, Jean Pierre Marie.** A French physiologist, born at Thézan in 1794, died at Mongeron, near Paris, in 1867.

**Flow.** (Mid. E. *flouren*; Sax. *flōwan*; Old H. G. *flauen*; L. *pluv*, to rain; Gr. *πλῖω*, to swim; Sans. *plu*, to swim; from Aryan root *plu*, to swim.) To stream.

Also, a free discharge, as of blood.

**Flower.** (Mid. E. *flour*; Old F. *flour*, *flor*; L. *flos*, a flower. F. *fleur*; I. *fiore*; S. *flor*; G. *Blume*.) A blossom of a plant. A complete typical flower consists of the male and female organs of reproduction, surrounded by the floral envelopes; or, in other words, of an androecium and gynoecium, surrounded by a corolla and a calyx; each of the parts forming a single whorl, each whorl containing the same number of members or a multiple of the same number, the members of each successive whorl alternating in position with each other, equal in size and form, and distinct from those of the neighbouring whorls. In an imperfect flower the envelopes may, one or both, be absent, or one, but not both, of the reproductive organs. It is a shoot the leaves of which are modified so as to produce the organs of reproduction and their appendages.

Also, in Chemistry, in the plural, the higher or the finer form obtained by sublimation from a heavier or a cruder substance.

Also, in the plural, the menses.

**F., abortive.** (L. *abortivus*, from *abortio*, to miscarry.) A flower the essential parts of which, the organs of reproduction, are suppressed or degenerated.

**F., acy'cllic.** (A, neg.; κύκλος, a circle.) A flower the constituent leaves of which are not arranged in whorls, but in a more or less distinct spiral.

**F., anisom'erus.** (A, neg.; ἴσος, equal; μέρος, a part.) A symmetrical flower consisting of whorls the parts of which are not alike in number, but some are multiples of each other.

**F., apetalous.** (A, neg.; πέταλον, a flower leaf.) A flower which possesses no petals.

**F.s, artific'ial, ma'kers of.** The makers of artificial flowers sometimes exhibit the effects of arsenical, cupric, and picric acid poisoning. They complain of nervous debility and paralysis, vesicular and pustular eruptions on the hands and scrotum, proceeding to syphilitic-like sores. Picric acid stains the fingers yellow, the arsenical salts stain them green.

**F., axillary.** (L. *axilla*, the armpit.) A flower produced in the axil of a leaf.

**F., bar'ren.** Same as *F., sterile*.

**F.-bud.** An unexpanded flower.

**F.s, cas'sia.** Same as *Cassia buds*.

**F.s, cham'omile.** See *Anthemidis flores*.

**F., complete'.** A flower which possesses all its four normal whorls, calyx, corolla, androecium, and gynoecium.

**F., cy'cllic.** (Κύκλος, a circle.) Flowers the constituent leaves of which are arranged in whorls.

**F. de luce.** (F. *fleur*, flower; *de*, of; *lys*, a lily; or *fleur de Louis*, from the flower having been assumed as his device by Louis the seventh of France.) The orris plant, *Iris germanica*.

**F., dím'erous.** (Δίς, two; μέρος, a part.) A flower in which each whorl consists of two parts.

**F., doub'le.** A flower with an unnatural number of petals, produced by a more or less complete arrest, or retrogression, of development of parts which should have become stamens and pistils.

**F.s, el'der.** See *Sambuci flores*.

**F.s, ency'cllic.** (Εὖ, well; κύκλος, a circle.) Cyclic flowers the alternating whorls of which consist of the same number of members.

**F., fe'male.** A flower which possesses only female organs.

**F.s, four carmin'ative.** The *Flores carminative*.

**F.s, four cor'dial.** The flowers of borage, bugloss, rose, and violet.

**F., hermaph'rodite.** (Ἑρμαφρόδιτος, a person partaking of the attributes of both sexes.) A flower possessing both male and female organs.

**F., in'complete.** A flower in which one or more of the normal whorls are absent.

**F., irreg'ular.** A flower of which the parts of the whorls are not uniform either in size, or in shape, or in both.

**F., isom'erus.** (ἴσος, equal; μέρος, a part.) A symmetrical flower in which the number of the parts of each whorl is alike.

**F. leaf.** A petal.

**F., male.** A flower possessing only male organs.

**F., na'ked.** A flower which has no perianth.

**F.s of arsenic.** (F. *fleurs d'arsenic*.) An old name of arsenious acid, as it is condensed in the form of a white powder when roasting iron pyrites or other ores containing arsenic.

**F.s of ben'jamin.** Same as *Benzoin, flowers of*.

**F.s of ben'zoïn.** See *Benzoin, flowers of*.

**F.s of lead.** An old term for oxide of lead.

**F.s of sul'phur.** See *Sulphur, flowers of*.

**F. of wine.** (F. *fleur de vin*.) A name of the *Saccharomyces mycoderma*.

**F.s of zinc.** An old name for oxide of zinc prepared by combustion.

**F., pentam'erus.** (Πέντε, five; μέρος, a part.) A symmetrical flower in which the parts of the whorl are five.

**F., perfect.** A flower which contains both male and female organs of reproduction, the androecium and the gynoecium.

**F., perian'thous.** (Περί, around; ἄνθος, a flower.) A flower which possesses a perianth, either sepals or petals, or both.

## FLOWERET—FLUID.

**F., regular.** A flower of which the parts of the whorls are uniform in size and shape.

**F.s. resin. of.** Clamor-Marguatt's name for the substance otherwise called *Xanthogen*.

**F.s. spiral.** Acyclic flowers the constituent leaves of which are arranged in a spiral form.

**F.-stalk.** The stalk which bears a flower. When it is single and carries a solitary flower, or several sessile flowers, it is called a *Peduncle*; when it splits into branches, each of which carries a flower, its main trunk is called a *Peduncle*, and each branch a *Pedicle*.

**F., staminateous.** (*Stamen.*) A flower, like that of the bistort, having stamens and no petals.

**F., sterile.** (*L. sterilis, barren.*) A flower possessing no female organs, so that it cannot produce fruit.

**F., symmetrical.** (*Συμμετρία, due proportion.*) A flower in which each whorl has the same number of parts as the other whorls, or a multiple of that number.

**F., terminal.** (*L. terminalis, relating to a boundary.*) One which is placed at the extremity of an axis.

**F., tetramerous.** (*Τετράς, four; μέρος, a part.*) A symmetrical flower in which the parts of the whorl are four.

**F., trimerous.** (*Τρεῖς, three; μέρος, a part.*) A symmetrical flower the parts of the whorl of which are three in number.

**F., unisexual.** (*L. unus, one; sexus, sex.*) A flower which possesses one set of organs only, male or female.

**F., unsymmetrical.** (*L. un, neg.; symmetria, due proportion.*) A flower the whorl of which does not contain either the same number of parts as the others, or a multiple of that number.

**F.s. white.** (*F. fleurs blanches.*) A term for *Leucorrhœa*.

**Floweret.** (*F. fleurette, dim. of fleur, a flower.*) A small flower; a floret.

**Flowering.** (*Flower.*) Producing, or bearing, flowers.

**F. ash.** The *Fraxinus ornus*.

**F. fern.** The *Osmunda regalis*.

**F. plants.** The plants which bear flowers. See *Phanerogamia*.

**F. rush.** The *Butomus umbellatus*.

**Flowerless.** Not producing or bearing flowers.

**F. plants.** Plants which bear no flowers. See *Cryptogamia*.

**Flowk.** Same as *Fluke*.

**F. wort.** The *Hydrocotyle vulgaris*, because it was supposed to be the cause of the liver fluke in sheep.

**Fluate.** A salt of *Fluoric acid*.

**Fluavil.**  $C_{20}H_{32}O_4$ . A yellow resinous substance found by Oudemans in gutta percha, to the amount of 4–6 per cent.; it fuses at 42° C. (107.6° F.), and is soluble in cold alcohol, ether, benzene, sulphide of carbon, chloroform, and turpentine.

**Fluctuate.** (*L. fluctuatus, part. of fluctuo, to float about; from fluctus, a wave. F. floter.*) To rise and fall as a wave; to give the sensation of *Fluctuation*.

**Fluctuatio.** See *Fluctuation*.

**F. aurium.** Same as *Tinnitus aurium*.

**Fluctuation.** (*L. fluctuatio, a wavering motion. F. fluctuation; I. fluttuazione; S.*

*fluctuacion; G. Schwappen, Schwankung.*) A rising and falling, as of waves.

In Medicine and Surgery, applied to the wave-impulse which is recognised by the tips of one or more fingers firmly placed on the surface of an elastic-walled cavity containing fluid when a smart flip is given to some other part of it. When the fluid-containing cavity is small the fluctuation of its contents cannot be recognised in this manner, but by the upward pressure transmitted to one finger placed on its surface when pressure is made by another finger.

Also, a frequent up-and-down change in rhythm or number, as in the pulse or the temperature.

**F. by succussion.** The fluctuation of a fluid in the cavity of the thorax, or other cavity, in the presence of air by *Succussion*.

**F., false.** The resilience which may be recognised by the finger when soft solid substances are examined by the mode of detecting fluctuation. It may be detected in some soft cancers and sarcomas, and in healthy muscles which, from inaction, have become very soft.

**F., pericardial.** (*Περικάρδιος, around the heart.*) A wave-impulse, propagated by the heart's contractions, which may sometimes be seen and felt over the cardiac region when the pericardium is much distended with fluid.

**F., peripheric.** (*Περιφέρεια, the line round a circular body.*) The wave-impulse felt by one finger placed on a bag containing fluid when a smart flip is given to some other part of it, as may be observed in an ascitic abdomen.

**F., pleural.** (*Πλευρά, the side.*) A wave-impulse in an intercostal space when the pleural cavity is greatly distended with fluid. The impulse may be generated by palpation or by the heart's action.

**F., rhonchal.** (*Ρόγχος, a snoring sound.*) The vibration felt in a chest containing fluid by propagation of a wave generated by a cavernous rhonchus.

**F., simple.** The fluctuation or impulse which is felt by one finger placed on a fluid-containing cyst when another finger is rapidly pressed for a short time on a different part of the same cyst.

**F., visible.** The wave which may sometimes be seen passing over a tightly distended cyst or cavity filled with fluid when some part of its surface is smartly tapped with the finger.

**Fluëllen.** Same as *Fluëlin*.

**Fluëlin.** (*Dut. fluëlen, downy.*) A name of the *Antirrhinum elatine*.

Also, a name for the *Veronica officinalis*.

**F., female.** The *Veronica chamaedrys*.

**F., male.** The *Linaria spuria*.

**F., sharp-pointed.** The *Antirrhinum elatine*.

**F., smallest.** The *Veronica spicata*.

**Fluid.** (*F. fluide; from L. fluidus, flowing; from fluo, to flow. I. fluído; S. fluído; G. flüssig.*) Composed of molecules freely moving on one another, without separation from each other.

Also (*G. Flüssigkeit*), a body whose molecules are movable upon each other while retaining their cohesion, as contradistinguished from a solid. Fluids are divided into *Liquids* and *Gases*.

Also, used in the plural, to denote the juices and liquids of the body, to some acid or morbid

condition or state of which all disorders and diseases were attributed.

**F., aëriform.** (L. *aër*, air; *forma*, shape.) A term for a gas.

**F. catarract.** See *Catarract, fluid*.

**F., cephalorhachid ian.** (Κεφαλή, the head; ῥάχης, the spine.) The *Cerebrospinal fluid*.

**F., cephalospinal.** (Κεφαλή; L. *spina*, the spine.) The *Cerebrospinal fluid*.

**F., chylous.** (Χολός, juice.) An opaque, whitish fluid or secretion resembling chyle.

**F.s, compressible.** (L. *comprimo*, to press together.) Gases, because they can be so much reduced in volume by pressure.

**F., Cotunninus's.** (*Cotugno*.) The perilymph of the internal ear.

**F. drachm.** See *Drachm, fluid*.

**F., elastic.** A term formerly applied to gases, because after being reduced in volume by pressure they return to their original size on its removal.

**F., electric.** See *Electric fluid*.

**F., enteric.** The *Succus entericus*.

**F.s, expansion of.** See *Gases, expansion of*, and *Liquids, expansion of*.

**F. extract.** A concentrated solution of a vegetable drug prepared by maceration and percolation in vacuo, with subsequent evaporation when necessary, so that one fluid ounce of the fluid extract contains the soluble constituents of one ounce of the drug.

**F. extract of American hellebore.** The *Extractum veratri viridis fluidum*, U.S. Ph.

**F. extract of baël.** The *Extractum bele liquidum*, B. Ph.

**F. extract of bitter orange peel.** The *Extractum aurantii amari fluidum*, U.S. Ph.

**F. extract of bittersweet.** The *Extractum dulcamare fluidum*, U.S. Ph.

**F. extract of blackberry.** The *Extractum rubi fluidum*, U.S. Ph.

**F. extract of black haw.** The *Extractum viburni fluidum*, U.S. Ph.

**F. extract of black pepper.** The *Oleoresina piperis*, U.S. Ph.

**F. extract of blood-root.** The *Extractum sanguinaria fluidum*, U.S. Ph.

**F. extract of blue flag.** The *Extractum iridis fluidum*, U.S. Ph.

**F. extract of Canada flea-bane.** The *Extractum erigerontis canadensis fluidum*, U.S. Ph.

**F. extract of chestnut leaves.** The *Extractum castanei fluidum*, U.S. Ph.

**F. extract of cotton root.** The *Extractum gossypii radiceis fluidum*, U.S. Ph.

**F. extract of couch-grass root.** The *Extractum tritice fluidum*, U.S. Ph.

**F. extract of Culver's root.** The *Extractum leptandree fluidum*, U.S. Ph.

**F. extract of dandelion.** The *Extractum taraxaci fluidum*, U.S. Ph.

**F. extract of dogwood.** The *Extractum cornus fluidum*, U.S. Ph.

**F. extract of ginger.** The *Extractum zingiberis fluidum*, U.S. Ph.

**F. extract of hemlock.** The *Extractum conii fluidum*, U.S. Ph.

**F. extract of hemlock fruit.** The *Extractum conii fluidum*, U.S. Ph.

**F. extract of Indian hemp.** The *Extractum cannabis indicæ fluidum*, U.S. Ph.

**F. extract of liquorice root.** The *Extractum glycyrrhizæ fluidum*, B. Ph., U.S. Ph.

**F. extract of male fern.** The *Extractum filicis liquidum*, B. Ph., and the *Oleoresina aspidii*, U.S. Ph.

**F. extract of pink-root.** The *Extractum spigeli fluidum*, U.S. Ph.

**F. extract of pipsis'sewa.** The *Extractum chinaphile fluidum*, U.S. Ph.

**F. extract of prickly ash.** The *Extractum xanthoxyli fluidum*, U.S. Ph.

**F. extract of savine.** The *Extractum sabina fluidum*, U.S. Ph.

**F. extract of skull'cap.** The *Extractum scutellariae fluidum*, U.S. Ph.

**F. extract of squill.** The *Extractum scille fluidum*, U.S. Ph.

**F. extract of Virgin'ia snake'root.** The *Extractum serpentariae fluidum*, U.S. Ph.

**F. extract of wild cherry.** The *Extractum pruni virginianæ fluidum*, U.S. Ph.

**F. extract of yellow cinchona bark.** The *Extractum cinchonæ flavæ liquidum*, B. Ph.

**F. extract of yellow dock.** The *Extractum rumicis fluidum*, U.S. Ph.

**F. extract of yellow jasmine.** The *Extractum gelsemii fluidum*, U.S. Ph.

**F.s, imponderable.** (L. *in*, neg.; *pondus*, weight.) A term formerly applied to the supposed fluids causing the phenomena of heat, light, electricity, and such like, but now generally restricted to the ether which is supposed to pervade the universe, the various motions of which produce the several forces.

**F.s, incompressible.** (L. *in*, neg.; *comprimo*, to press together.) Liquids, because they are very little capable of reduction in size by pressure.

**F.s, inelastic.** A term formerly applied to liquids, in contradistinction to gases, which were called elastic fluids.

**F., intestinal.** (L. *intestinum*, a bowel.) The *Succus entericus*.

**F. lens.** See *Lens, fluid*.

**F. magnesia.** The *Liquor magnesiæ carbonatis*, B. Ph.

**F., magnetic.** See *Magnetic fluid*.

**F., nervous.** A supposed fluid to which the nerves are indebted for the power to perform their functions.

**F. ounce.** See *Ounce, fluid*.

**F. pressure, law of.** The pressure exerted by a fluid on any part of the containing vessel or on any part of a body immersed in it, varies in proportion to the density of the fluid, and to the vertical depth of the part or body below the surface, and it is exerted in every direction.

**F., Scarpa's.** (*Scarpa*.) The *Endolymph*.

**F., subarachnoid.** (L. *sub*, under; *arachnoid* membrane.) The *Cerebrospinal fluid*.

**F. vein.** A term for a jet of fluid flowing swiftly through a narrow orifice into a wider space.

**Fluidifi'ant.** (L. *fluidus*, flowing; *facio*, to make.) Having power to make fluid; applied to medicines which are supposed to have the power of making the blood more liquid, and of softening tumours, so as to render them capable of absorption. Such are the free use of water, alkalies, iodine, and mercury.

**Fluidification.** (L. *fluidus*; *facio*. G.

*Verflüssigung*.) The conversion of a solid into a fluid.

**Fluidify.** (*L. fluidus; facio.*) To become, or cause to become, fluid.

**Fluidity.** (*Fluid. F. fluidité; I. fluidità; S. flidez; G. Flüssigkeit.*) The state of being fluid.

**Fluidrachma.** A fluid drachm; the measure of a drachm of water.

**Fluidum.** (*G. Flüssigkeit.*) A Fluid.

**F. cerebrospinalis.** See *Cerebrospinal fluid*.

**F. nervum.** See *Fluid, nervous*.

**Fluiduncia.** A fluid ounce; the measure of an ounce of water.

**Fluke.** (*Sax. floe.*) A flounder.

Also, a name of the Entozoa of the Genus *Distoma*, in reference to their shape, which is somewhat like that of the fish.

Also, applied to each of the two triangular segments of the tail of the whale.

**F. liver.** The *Distoma hepaticum*.

**F. worms.** The Entozoa of the Genus *Distoma*.

**Flumen.** (*L. flumen, a stream.*) A copious discharge.

**F. dysentericum.** A dysenteric discharge from the bowels.

**Fluoboric.** Relating to *Fluorine* and *Boron*.

**F. acid.**  $\text{HBF}_4$ . A monobasic acid formed when aqueous hydrofluoric acid is saturated with boric acid.

**Fluor.** (*L. fluor, a flowing, a flow; from fluo, to flow. G. Ausfluss.*) A flow, a discharge. Also, the same as *Fluorine*.

**F. albus.** (*L. albus, white. F. fluxus blanches; I. fluore bianco; G. weisser Fluss.*) Leucorrhœa.

**F. albus anterior.** (*L. anterior, in front.*) Mucous discharge from the vagina, or leucorrhœa, in contradistinction to *F. albus posterior*.

**F. albus benignus.** (*L. albus, white; benignus, mild.*) Leucorrhœa.

**F. albus intestinum.** (*L. albus; intestina, the bowels.*) The same as *Cœliac flux*.

**F. albus malignus.** (*L. malignus, of an evil nature.*) Severe gonorrhœa in the female.

**F. albus posterior.** (*L. posterior, hinder.*) Mucous discharge from the rectum, in contradistinction to *F. albus anterior*.

**F. metricalis.** (*Μήτρα, the womb.*) Leucorrhœa of uterine origin.

**F. muliebris.** (*L. muliebris, belonging to a woman.*) Leucorrhœa.

**F. muliebris non-gallicus.** (*L. muliebris; non, not; gallicus, French.*) A non-venereal leucorrhœa, in contradistinction to *Morbus gallicus*.

**F. sanguinis pulmonum.** (*L. sanguis, blood; pulmo, the lung.*) Expectoration of blood; hæmoptysis.

**F. sanguinis vesicalis.** (*L. sanguis; vesica, the bladder.*) Hæmorrhage from the bladder.

**F. spar.** (*G. Fluss-spath.*) A mineral which occurs largely in Derbyshire, where it is known as Blue John; it consists of calcium fluoride crystallised in cubes and octohedra. It is sometimes colourless, but it generally has a blue, violet, red, green, yellow, or brown tint,

which does not seem to depend on admixture of either inorganic or organic matter, but on variations of its molecular structure.

**F. uterinus.** (*L. uterus, the womb.*) Leucorrhœa.

**Fluorene.**  $\text{C}_{13}\text{H}_{10}$ . A fluorescent substance obtained by Berthollet from the portion of coal tar which boils between  $300^{\circ}\text{C}$ . and  $340^{\circ}\text{C}$ . ( $572^{\circ}\text{F}$ . and  $644^{\circ}\text{F}$ .)

**Fluoresce.** To exhibit the phenomena of *Fluorescence*.

**Fluorescein.** The same as *Resorcin-phthalein*.

**Fluorescence.** (*L. fluo, to flow.*) A name given by Stokes to a phenomenon first observed by Brewster in a solution of chlorophyll, and subsequently by Herschel in a solution of sulphate of quinine, consisting in the apparent emission of coloured light by the substance from within, and caused by a change produced by the medium in the retransmissibility of the light as it is passing through it; this phenomenon is only observed during the actual passage of the light through the medium.

Many other substances are fluorescent: fluor spar, barium and calcium sulphide, eosin, resorcin, fluorescein, and the cornea, crystalline lens, and rods and cones of the retina.

**Fluorescent.** Exhibiting the property of *Fluorescence*.

**Fluorhydric.** Same as *Hydrofluoric*.

**Fluoric.** Relating to *Fluorine*.

**F. acid.** An old name for hydrofluoric acid when it was believed to contain oxygen.

**Fluoride.** (*Fluorine.*) A compound of fluorine with a metal. The fluorides are decomposed by concentrated sulphuric acid, hydrofluoric acid being liberated and recognised by its action on glass; they resemble in many respects the chlorides, and they combine with each other to form double salts.

The fluorides have been administered in the treatment of diseases, especially the potassium salt in acute rheumatism, but they all produce much gastric disturbance. Da Costa recommends the potassium fluoride as a prompt emetic.

Formerly the term was restricted to a compound of fluorine and a body less electro-negative than itself.

**F. of hydrogen.** Same as *Hydrofluoric acid*.

**Fluorine.** (*L. fluo, to flow. F. fluor; I. fluore; G. Fluor.*) Symb.  $\text{F}$ ., at. weight 19.1. A non-metallic element occurring in fluor spar and other minerals, especially in combination with calcium, but not yet isolated, in consequence of its very powerful affinity especially for hydrogen, silicon, and other metals; it has not yet been combined with oxygen. Traces of it are found in sea-water and some mineral waters, in the enamel of the teeth, in bone, as well as in the brain, in blood, and in milk. Fluorine is found in a large number of plants, especially in the siliceous stems of Gramineæ and Equisetaceæ.

**Fluoruret.** Same as *Fluoride*, being a combination of fluorine with a simple body.

**Fluosilicate.** A salt of *Fluosilicic acid*.

**Fluosilicic acid.** Same as *Hydrofluosilicic acid*.

**Flush.** (*Mid. E. fluschen.*) To flow suddenly; to become suddenly red or hot.

Also, a sudden flow of blood into the cheeks; a sudden wave of heat spreading over part, or the whole, of the outside of the body.

**F., hectic.** See *Hectic flush*.

**Flutter.** (Mid. E. *floteren*, to float about; from Sax. *flotorian*; from *flot*, the sea.) To move the wings rapidly and irregularly; to move irregularly.

**Fluttering.** (*Flutter*.) Flapping the wings; moving rapidly and irregularly.

**F. of heart.** A form of palpitation of the heart, when the movements are soft and feeble and uneven.

**Fluviatile.** (L. *fluvialis*, belonging to a stream; from *fluvium*, a stream. F. *fluviale*; I. *fluviale*; S. *fluvialil*; G. *fluvial*.) Living in a stream or river.

**Flux.** (F. *flux*, a flowing; from L. *fluxus*, a flow, a flowing; from *fluo*, to flow. I. *flusso*; S. *flujo*; G. *Flussströmung*.) The act of flowing; the motion of a fluid; a flow of matter.

In Medicine, an abnormal, abundant flow of natural or morbid humours from, or into, some part of the body. By some, a hæmorrhage or a serous effusion is included under this heading; by others, the term is restricted to the increased secretions of a glandular membrane or an excretory gland, such as mucous diarrhœa, free bronchial discharge, and excessive perspiration.

Also, a synonym of *Dysentery*.

Also, in Metallurgy, a substance mixed with a metal or mineral to facilitate its fusion by heat.

**F., active.** A flux which is caused by an inflammatory or sudden and temporary congestion of the blood-vessels of the part from whence the discharge flows, as in nasal catarrh.

**F., bilious.** (L. *bilis*, bile.) A copious discharge of bile by the bowels.

**F., black.** (F. *flux noir*.) Two parts of cream of tartar deflagrated with one part of nitre; the carbon is not entirely oxidised, but much remains as a black powder mixed with carbonate of potash.

**F., bloody.** (F. *flux de sangue*.) An old term for those cases of dysentery in which there was blood in the motions.

**F., bronchial.** Same as *Bronchorrhœa*.

**F., cardiac.** (*Kardia*, the heart.) A discharge of watery fluid from some organ consequent on heart disease; such as the watery diarrhœa occasionally dependent on cardiac dilatation and tricuspid inefficiency, or temporary albuminuria from the same cause.

**F., catamenial.** (*Katâ*, according to; *men*, a month.) The menses.

**F., cœliac.** See *Celiac flux*.

**F., crude.** (L. *crudus*, raw.) A mixture of nitre and cream of tartar, which is put into the crucible with the mineral to be fused.

**F., gas'tric.** See *Gastrorrhœa*.

**F., hæmorrhoidal.** The discharge of blood which accompanies bleeding piles or *Hæmorrhoids*.

**F., hepatic.** Same as *Hepatorrhœa*.

**F., menstrual.** (L. *menstrualis*, monthly.) The menses.

**F., mu'cous.** (L. *mucus*, slime. F. *flux muqueux*.) A diarrhœa consisting chiefly of mucus.

**F. of belly.** A term for diarrhœa.

**F., pas'sive.** A flux which is dependent on a relaxed condition of the blood-vessels of the part from whence the discharge flows, or on an

obstruction to the flow of blood through them, or on some change in the constitution of the blood itself.

**F. root.** The *Asclepias tuberosa*, from its use in dysentery and catarrhs.

**F., sebaceous.** (L. *seba*, suet.) Same as *Stearrhœa*.

**F. weed.** The *Sisymbrium sophia*.

**F., white.** A mixture of equal parts of nitre and cream of tartar heated in an ignited crucible until it becomes white; it contains potassium nitrite and nitrate.

**Fluxio.** Same as *Fluxion*.

**F. alba.** (L. *alba*, white.) Leucorrhœa.

**F. arthritica.** (*Ἀρθριτικός*, diseased in the joints.) Gout.

**F. vulvæ.** (L. *vulva*, the female external genitals.) Leucorrhœa.

**Fluxion.** (L. *fluxio*, a flowing, from *fluo*, to flow. G. *Fliesen*.) The act of flowing.

The term fluxion has been from early times used by writers, and is now by some, to denote the impulse or influence which causes local congestions of blood or of other fluids; the element of a flux which precedes the flux, as illustrated in the numerous morbid sensations included under the term menstrual molimen, which precede actual menstruation; or in the general disturbance of the functions which precede the discharge from the nostrils, which constitutes a coryza. This theory of fluxion is the basis of the revulsive mode of treatment which, on the production of a flux by therapeutic means, such as a purging or a sweating, induces a therapeutic fluxion, which tends to healthy action in the body generally.

By Virchow the term is used in the same sense as active congestion.

A transitory flow of blood.

**Fluxus.** (L. *fluxus*, a flow; from *fluo*, to flow.) A discharge.

**F. alvinus.** (L. *alvinus*, pertaining to the belly.) Diarrhœa.

**F. capillorum.** (L. *capillus*, the hair.) Baldness.

**F. chylo'sus.** (*Χολός*, chyle.) Same as *Celiac flux*.

**F. cœli'acus per re'nes.** (L. *cœliacus*, pertaining to the belly; *per*, through; *ren*, the kidney.) Chyluria.

**F. colliquat'ivus.** Same as *Diarrhœa*, *colliquative*.

**F. cruent'us cum tenes'mo.** (L. *cruentus*, bloody; *cum*, with; *tenesmos*, a straining at stool.) Dysentery.

**F. dysenter'icus.** Dysentery.

**F. hepatic'us.** Same as *Hepatorrhœa*.

**F. lienter'icus.** Same as *Lientery*.

**F. lunaris.** (L. *luna*, a month.) The menses.

**F. matrix'is.** (L. *matrix*, the womb.) A term for leucorrhœa.

**F. menstrua'lis.** (L. *menstrualis*, belonging to a month.) Menstruation.

**F. mens'truus.** (L. *menstruus*, monthly.) The menses.

**F. mulie'bris.** (L. *muliebris*, belonging to a woman.) Leucorrhœa.

**F. pilo'rum.** (L. *pilus*, the hair.) Baldness.

**F. sali'nus.** (L. *sal*, salt.) A term applied to eczema of the legs.

**F. sali'væ.** (L. *saliva*, spittle.) Salivation.

**F. scab'ceus.** (*L. sebium*, tallow.) A term for *Stearrhœa*.

**F. splen'icus.** (*L. splen*, the spleen.) A term for *Melœna* from its supposed source.

**F. vene'reus.** (*L. venereus*, belonging to sexual love.) Gonorrhœa.

**F. ventric'ull.** (*L. ventriculus*, the stomach.) A term for *Gastrorrhœa*.

**Fly.** (*Mid. E. flegen*; *Sax. fleogan*; *G. fliegen*; from a base, *flag*, related to the Aryan root *plu*, to swim. *F. volar*; *I. volare*; *S. volar*.) To move in the air.

Also (*F. mouche*; *I. mosca*; *S. mosca*; *G. Fliege*.) A winged insect.

**F. ag'arie.** The *Agaricus muscarius*, because its infusion in milk kills flies.

**F. bane.** The *Agaricus muscarius*.

**F. fun'gus.** The *Agaricus muscarius*.

**F. gold'ing.** The *Coccinella septempunctata*.

**F. mush'room.** The *Agaricus muscarius*.

**F. pa'per.** The porous paper sold as *Papier moure* is used to kill flies; it is put into a saucer with a little water, which the flies suck up; it is charged with arsenate of potash. It has been criminally employed as a poison by dissolving out the arsenic.

**F. poi'son.** The *Anianthium muscatoxium*.

**F. pota'to.** The *Cantharis vittata*.

**F. pow'der.** A dark-grey powder used to poison flies when mixed with sugar. It is metallic arsenic in powder partially oxidised by exposure to the air.

**F., Spanish.** The *Cantharis vesicatoria*.

**F. trap.** The *Apocynum androsæmifolium*.

Also, the *Sarracenia flava*, and other species.

**F. wa'ter.** A solution of arsenious acid, or other arsenical compound, in sweetened water or other sweet menstruum. It has been used criminally as a poisoning agent.

**Fly'stone.** A name sometimes applied to native arsenic.

**Foal-foot.** A popular name of *Tussilago farfara*; also a popular name of *Asarum europæum*; in both instances from the shape of the leaf.

**Fo'cal.** (*L. focus*, a fireplace. *F. focal*.) Relating to the focus of a lens or of a mirror.

**F. adjust'ment.** (*L. ad*, to; *justus*, right.) The arrangement or adjustment of the distance between the lens of a microscope or telescope and the object to be looked at, so that the latter may be in focus, that is, may be distinctly seen. This purpose is effected by a sliding movement of the body of the instrument, or by a screw movement; the latter having a wide thread, the coarse adjustment; or a narrow thread, the fine adjustment.

**F. depth.** The capacity of an object-glass to show with a fair amount of distinctness parts somewhat out of focus.

**F. distance.** (*G. Brennpunktsferne*.) The distance from the centre of a mirror from which rays of light are reflected, or of a lens by which they are refracted, to the focus or point where they are collected.

**F. dis'tance, prin'cipal.** The distance between the centre of a mirror and the principal focus.

**F. illumina'tion.** (*L. illuminatio*, to give

light to *G. focale Beleuchtung*.) A mode of examining the eye or other part of the body, in which the light of a lamp is brought to a focus by means of a convex lens on the precise spot to be investigated. This may be still more carefully examined by means of a second lens.

**F. interval.** (*F. intervalle focal*; *G. Brennstricke*.) The distance between the anterior and posterior focal points.

**F. length.** The distance of the principal focus from the centre of a concave mirror or of a lens respectively.

**F. line, ante'rior.** (*L. anterior*, in front.) The meridian line or long axis of the ellipse of the less refracted light rays at the anterior focal point of an astigmatic eye.

**F. line, poste'rior.** (*L. posterior*, hinder.) The meridian line or long axis of the ellipse of the most refracted light rays at the posterior focal point of an astigmatic eye after crossing at their focus.

**F. plane.** A plane perpendicular to the principal axis of a concave mirror passing through the principal focus, and in which all the secondary foci of the parallel rays are found.

**F. point.** A term for a principal focus.

**F. point, ante'rior.** (*L. anterior*, in front.) The point of meeting, or the focus, of those light rays in an astigmatic eye which are most refracted.

**F. point, poste'rior.** (*L. posterior*, behind.) The point of meeting, or the focus, of those light rays in an astigmatic eye which are least refracted.

**Fo'calise.** (*L. focus*.) To bring to a focus.

**Fo'cile.** Same as *Focill*.

**Fo'cilè.** (*Low L. focile*.) A term for the bones of the arm and of the leg, used by the authors of the middle ages.

**F. infe'rius.** (*L. inferior*, lower.) Same as *F. majus*.

**F. majus.** (*L. major*, greater.) An old term for the ulna.

Also, applied to the tibia by Bartholin, *Anat. w.* 20, 21.

**F. mi'nus.** (*L. minor*, less.) An old term for the radius.

Also, applied to the fibula by Bartholin, *Anat. w.* 20, 21.

**F. supe'rius.** (*L. superior*, upper.) Same as *F. minus*.

**Fo'cus.** (*L. focus*, a fireplace. *F. foyer*; *I. focolare*; *G. Brennpunkt*.) The point at which light rays reflected from a concave mirror, or refracted by a lens, meet or tend to meet.

Also, a similar point of conjunction of heat rays when reflected from a concave mirror.

Also, a similar point of concentration of sound waves.

Also, any point of concentration.

In Medicine, the term is applied to the chief seat of a disease, or to the part of an organ specially affected.

Also, to bring or adjust to a focus.

**F., acous'tic.** (*Ἀκουστικός*, relating to hearing.) The point of meeting of sound rays or waves reflected from a concave surface.

**F. apoplec'ticus.** See *Apoplectic focus*.

**F., approx'imate.** (*L. appropinquo*, to draw near to.) This term is applied to the apex, or rather to the apices, of the caustics from which the rays of a wave front appear to have diverged after being refracted or reflected

from a plane or curved surface. See *F.*, *geometric*.

**F., calorific.** (*L. calor*, heat; *fio*, to become.) The point of meeting of heat rays reflected from a convex surface.

**F., conjugate.** (*L. conjungo*, to join together. *F. super conjugat.*) See *Conjugate focus*.

**F., geometric.** (*Γθ*, the earth; *μέτρον*, a measure.) When a pencil of rays falls directly on a plane or spherical reflecting or refracting surface the reflected or refracted rays do not in general all meet in a single point or focus; their successive points of intersection lie on a curve with a cusp or apex, which curve is called a caustic. The rays meeting in the cusp or apex correspond to incident rays, which are near to the central ray or axis of the pencil, and the cusp in which these rays meet is called the geometric focus of the pencil.

**F., luminous.** (*L. lumen*, light.) A focus of light rays.

**F., negative.** Same as *F.*, *virtual*.

**F. of, lens, double concave.** A virtual focus only can occur in a double concave lens, as rays of light passing through it diverge at their point of emergence.

**F. of, lens, double convex.** The point where the refracted rays of light actually meet, being the real focus; or the point where their prolongations would meet, the virtual focus, if the luminous object were placed between the lens and the principal focus.

**F. of, mirror, concave.** The point where reflected rays of light meet or tend to meet if produced either forwards or backwards; in the former case producing the real focus, and in the latter the virtual focus.

**F. of, mirror, convex.** A virtual focus only can occur in a convex mirror, as rays of light falling on it diverge after reflection.

**F., primary.** (*L. primus*, first.) Same as *F.*, *principal*.

**F., principal.** The point at which parallel rays reflected from a concave mirror, or refracted through a lens, cross each other.

**F., real.** The focus which is actually formed in front of a concave mirror by reflection of the rays which fall upon it.

**F., secondary.** (*L. secundus*, second.) The point of the secondary axis of a lens where rays parallel to that axis or emitted from some point on that axis meet.

**F., virtual.** (*E. virtual*, not actually present, but there in essence.) The place where light rays proceeding from a point placed between a concave mirror and its focus would cross if after reflection they were supposed to be prolonged to the other side of the mirror. The virtual focus of a convex mirror is that point at which the reflected rays would cross each other if they were prolonged backwards.

**Fodina.** (*L. fodina*, a pit.) Old name used by Bartholin *Anat. w.* 6, p. 714, for the labyrinth of the ear.

**Fo'dray.** France, Département de la Haute-Saône. A mild chalybeate water.

**Fœcundatio.** Same as *Fecundation*.

**Fœcundity.** Same as *Fecundity*.

**Fœcundus.** Same as *Fecund*.

**Fœdicolores.** (*L. fœdus*, foul, ugly, color, colour.) A synonym of *Chlorosis*.

**Fœdia olitoria.** (*L. fœdus*.) The *Valerianella olitoria*.

**Fœ'men.** Same as *Femen*.

Also, a term for the perineum.

**Fœminescencia.** Same as *Feminescence*.

**Fœnicula'ceous.** (*L. fœniculum*, fennel. *G. fenchelartig*.) Like, in form or smell, to the plants of the Genus *Fœniculum*.

**Fœniculate.** (*L. fœniculum*. *G. fenchelhaltig*.) Containing, or like to, fennel.

**Fœnicula'tum lignum.** (*L. fœniculum*, fennel; *lignum*, wood.) An old name for sassafras wood.

**Fœniculi fructus**, B. Ph. (*L. fœniculum*; *fructus*, fruit. *F. semences de fenouil*; *I. fennocchio*; *S. hinojo*; *G. Fenchelsamen*.) Fennel fruit. The fruit of *Fœniculum dulce*, De Cand. Fennel seeds, or half-fruits, are about three lines long and one broad, flat on one side, convex on the other, elliptical, slightly curved, having eight pale-brown longitudinal ridges, the two lateral ones double; and one oil-bearing vitta between each pair of ridges, and two on the flat face. They have a fragrant odour and a warm, sweet, aromatic taste. Used as a carminative. Dose, 20 to 30 grains (1·3 to 1·95 gramme).

**Fœniculum.** (*L. fœniculum*, fennel; dim. of *fennum*, fenugreek. *F. fenouil*; *G. Fenchel*.) A Genus of the Nat. Order *Umbellifere*.

Also, the official name, U.S. Ph., of the fruit of *Fœniculum vulgare*. See also *Fœniculi fructus*.

**F. alpinum.** (*L. alpinus*, belonging to the Alps.) The *Meum athamanticum*.

**F. anethum.** The *Anethum graveolens*, Linn.

**F. aquaticum.** The *Phellandrium aquaticum*.

**F. capen'së.** Hab. Cape of Good Hope. Used as a vegetable food.

**F. capilla'ceum**, Gilib. (*L. capillus*, a hair.) The *F. vulgare*.

**F. dulcè**, De Cand. (*L. dulcis*, sweet. *F. fenouil doux*.) Hab. Italy, Portugal. Sweet fennel. The official species of the B. Ph. It is thought by many to be a variety only of *F. vulgare*.

**F. erraticum.** (*L. erro*, to wander.) The *Pucedanum silanus*.

**F. germanicum.** The *F. dulce*.

**F. lusitanicum.** The *Anni majus*.

**F. marinum.** The *Crithmum maritimum*.

**F. maritimum.** The *Crithmum maritimum*.

**F. mediolanen'së**, C. B. The species which supplies the small sweet fennel seeds of Italy.

**F. officinalë**, Allioni. The *F. vulgare*, Gärt.

**F. officinalë**, Merat. The *Fœniculum dulce*, or sweet fennel, or, according to some, a variety.

**F. orientalë.** The *Cuminum cyminum*, or cumin plant.

**F. panmo'rium**, De Cand. Hab. India. Used as a carminative in flatulent colic. Probably a variety of *F. vulgare*.

**F. piperitum**, De Cand. (*L. piper*, pepper.) A variety of *F. vulgare*.

**F. porcinum.** The *Pucedanum officinale*, or hog's fennel.

**F. sati'vum**, Bertol. (*L. sativus*, sown.) A variety of *F. vulgare*.

**F. sinen'sü.** (*L. sinensis*, Chinese.) The *Illicium anisatum*, or yellow-flowered aniseed tree.

**F. sylves'trè.** (*L. syvestris*, belonging to a wood.) The *Seseli tortuosum*.

**F. tortuosum.** The *Seseli tortuosum*, or hart-wort of Marseilles.

**F. vulgàre.** De Cand. The common or wild fennel; a variety only of *F. vulgare*, Gärt.

**F. vulgàre.** Gärt. (*L. vulgaris*, common. *F. fenouil*; *G. Fenchel*.) The species which supplies *Fœniculum*, U.S. Ph. It includes the *F. dulce* and *F. vulgare* of De Candolle.

**Fœnugreek.** The *Trigonella fœnugræcum*.

**Fœnum.** (*L. fœnum*, hay. *F. foin*; *I. fieno*; *S. heno*; *G. Heu*.) Hay.

**F. camelorum.** (*L. camectus*, a camel.) The *Andropogon citratus*.

**F. græcum.** (*F. fœnugree*; *G. Griechisches Heu*.) The *Trigonella fœnugræcum*.

**Fœtæbulum.** (*L. fœtæ*, to have an ill smell.) Old name, used by Marcus Aurel. Severinus, *de Abscessibus anomalis*, for an encysted abscess.

**Fœtal.** (*L. fœtus*, offspring. *F. fœtal*; *I. fœtale*.) Relating to the *Fœtus*.

**F. abortion.** See *Abortion, fœtal*.

**F. age.** A term applied to that part of the intra-uterine life of a child which extends from the middle or end of the third month to the end of pregnancy.

**F. circulation.** See *Circulation, fœtal*.

**F. coat.** (*F. enduit fœtal*.) The *Vernix caseosa*.

**F. cotylædons.** (*Κοτυληδών*, a cavity.) The tufts of villi of a cotyledonous placenta.

**F. disea'ses.** Amongst the diseases to which the fœtus is liable may be mentioned; first, those which depend upon the retention of earlier embryonic characters, such, for example, as harelip, ectopia cordis, and spina bifida, or upon the fusion of parts naturally separate. Förster has included these affections under the three groups of monstra per excessum, per defectum, and per fabricam. Secondly, surgical affections, such as fractures, luxations, and spontaneous amputations. Thirdly, idiopathic affections, as congenital rachitis, pericarditis, cystic tumours, like ranula, renal and ovarian cysts, epithelioma, chondroma, sarcoma, calculi, lipoma and angioma, leucæmia, dropsy and anasarca, elephantiasis, pemphigus, ulceration of intestines, abscess of thymus gland and its remains, disease of mammary gland and the like; and lastly, diseases derived from the mother, such, for example, as the acute exanthemata, variola, vaccinia, scarlet fever, measles, puerperal, typhoid, and intermittent fevers, cholera, syphilis and its consequences.

**F. en'velopes.** (*F. enveloper*, to cover.) The decidua reflexa, the chorion, and the amnion.

**F. expres'sion.** See *Expression of fœtus*.

**F. head.** See *Head, fœtal*.

**F. heart.** See *Heart, fœtal*.

**F. heart, sounds of.** See *Fœtus, heart-sounds of*.

**F. inclu'sions.** (*L. inclusus*, part. of *includo*, to shut in.) A term applied to teratoid tumours which are contained in the interior of the body. See *Inclusion, fœtal*.

**F. mem'branes.** The amnion, the allan-

tois, and the chorion; the latter is found in mammals only.

**F. marmar.** A soft continuous murmur said to be heard by the stethoscope over the pregnant uterus, distinct from the cardiac and uterine murmurs, and supposed to be produced in the umbilical cord.

**F. pregnancy.** See *Pregnancy, fœtal*.

**F. rachitis.** See *Rachitis, fœtal*.

**F. type of development.** The type in which the young animal undergoes the whole or nearly the whole of its development in the egg or within the body of the parent, so that when produced it closely resembles the parent.

**Fœtation.** (*L. fœtus*, filled with young.) A term for pregnancy, the formation of a fœtus.

**Fœticide.** (*L. fœtus*, offspring; *cædo*, to kill.) The killing of the fœtus in the womb by the production of abortion.

**Fœtid.** (*L. fœtus*, to become putrid. *F. fœtids*; *I. fœtido*; *S. fœtudo*; *G. stinkend*.) Having a bad smell; stinking.

**Fœtiferous.** (*L. fœtus*, offspring; *fero*, to bear.) Bearing young.

**Fœtiparous.** (*L. fœtus*; *pario*, to bring forth.) Producing premature offspring, such as occurs in the *Marsupialia*.

**Fœtor.** (*L. fœtor*, an offensive smell. *G. Gestank*.) A bad smell or stink; applied to the breath when offensive from foulness of the teeth or other cause; and to other offensive things.

**F. alarum.** (*L. ala*, the armpit.) The fœtor which sometimes arises from the secretion of the sweat glands of the axilla.

**F. oris.** (*L. os*, the mouth.) Offensively smelling breath.

**Fœtus.** (*L. fœtus*, offspring. *F. fœtus*; *I. fœto*; *S. fœto*; *G. Fœtus, Leibesfrucht*.) The fruit of the womb, the unborn young of an animal. By many the term fœtus is applied to the later stage, and the term embryo to the earlier stage, of the product of a conception whilst in the womb, but the dividing age is variously stated; by some it is placed at the end of the second month, by others at the end of the third month, and by others at the time of occurrence of quickening. By many the two terms are used synonymously.

**F. attach'ed.** A twin fœtus, or a part of one, adherent by some part of it to its fellow.

**F. attitude of, in womb.** The fœtus in utero, and all its parts, lie flexed and curled up, especially in the later months, so that it forms a more or less ovoid mass of 12" or 13" in length. The body is convex posteriorly, the head is bowed on the chest, the arms lie by the side, the forearms are flexed and crossed upon the chest; the thighs are drawn up on the abdomen, and the legs often crossed in front.

**F. bile of.** The secretion of bile by the fœtal liver does not commence till about the fifth month; about the seventh month the gall-bladder becomes distended and discharges its contents into the intestine.

**F. blood of.** The blood of the fœtus is characterised by possessing a relatively small proportion of hæmoglobin. The red corpuscles are larger than those of the adult, and many are nucleated. The blood of the chick begins to be capable of coagulating about the twelfth to fourteenth day of brooding.

**F. brain of.** The chief difference between the fœtal brain and that of an adult is the greater proportion of water in the former.

## FÆTUS.

**F., characters of.** The fœtus remains in the body of the mother, in man, 280 days, or 40 weeks, or 10 months. The characters of the human fœtus change with its development from week to week, and are given by Kleinwächter as follows:

First month.—At the close of the fourteenth day the ovum is 6·5 mm. and the fœtus 2·5 mm. long. The amnion is formed, but not the allantois. In the third week the ovum is 13 mm. and the fœtus 4·5 in diameter. Yolk-sac large. Allantois extends over the ovum, but not into the villi of the chorion. At the close of the fourth week the ovum is the size of a pigeon's egg and 2 cm. long. The fœtus weighs 2·5 grammes and has a length of 8–10 mm. Embryo, strongly curved, possesses branchial arches and a distinct tail. Extremities scarcely perceptible. The umbilical cord has its proper vessels, but is short and broad. The amnion begins to fill with fluid, but is not as yet applied to the chorion.

Second month.—The amnion is distended with fluid, and is applied to the chorion. At the close of this month the ovum measures 3–4 cm., the fœtus about 2 cm., and weighs on an average 4 grammes. The placenta begins to form at the sixth week. The umbilical ring is narrower, but still contains loops of intestine. The lower jaw and the clavicle exhibit points of ossification. The head is better defined. The eyes appear as points. The mouth and nose are visible. The three segments of the extremities appear. The primordial kidneys present a urinary and a sexual part.

Third month.—At the twelfth week the ovum is 9–11 cm. and the fœtus 7–9 cm. long. It weighs from 20–30 grammes. The decidua laminae have coalesced. The chorionic villi are beginning to atrophy. The placenta has a diameter of 5–8 cm. and is about 1 cm. thick. The umbilical cord is longer than the fœtus, and begins to twist. The gut is withdrawn from the umbilical aperture. Most of the bones exhibit points of ossification. The ribs are recognisable. The gums are formed, and the rudiments of the teeth are perceptible. The mouth is closed by the lips. The fingers and toes begin to be differentiated; the nails just perceptible. The penis and clitoris closely resembling each other in aspect.

Fourth month.—Fœtus 10–17 cm. long, weight 120 grammes. Decidua thinning. Placenta correspondingly enlarged. Villi of chorionic surface atrophied. Length of head a fourth of that of the body, its bones ossified, but still far apart. Face with the future features clearly marked out. Hairs visible. Sex distinguishable. On removal from body inspiratory movements perceptible.

Fifth month.—Length of fœtus 18–27 cm., weight 280 grammes. Skin with hairs and vernix caseosa. Head still large. Face has a senile aspect. Eyelids separable. Meconium begins to appear in the intestines. First movements of child perceptible to mother, called quickening.

Sixth month.—Length of fœtus 28–34 cm., weight 670 grms. Chest prominent. Head still large. Cord attached in the middle third of a line drawn between the symphysis pubis and ensiform process. Subcutaneous fat appears. Hair of head more developed. Testes approximate to the abdominal ring. The nymphæ project beyond the labia. Fœtus doubtfully viable.

Seventh month.—Length of fœtus 35–38 cm., weight 1200 grms. The Sylvian fissure still uncovered. Skin red and wrinkled. Head more compact, but very large. Body covered with woolly hair, especially over face and shoulders; hairs of head darker, and their length 0·5 cm. Testes have descended to the abdominal ring. Fœtus viable with care.

Eighth month.—Fœtus 39–41 cm. long, weight about 1570 grammes. Surface red. Aspect aged, owing to the small amount of subcutaneous fat. The lanugo on face disappearing. Nails longer, but do not extend beyond the finger-tips. One testis usually in the scrotum. The labia do not project beyond the nymphæ. Vagina exuding much mucus. The pupillary membrane vanished. The lower epiphysis of the femur begins to ossify. Fœtus still requires much care after birth. Voice weak. Sleeps much. Breathes and sucks feebly. Moves but little. Temperature 36°–37° C. (96·8°–98·6° F.) Some time elapses before the first urine and feces are evacuated. Remains of cord fall away late, about the seventh or eighth day.

Ninth month.—Fœtus weighs from 1950–2000 grammes, and is 42–44 cm. long. Contour of body rounder; face fuller. The lanugo is thrown off. Hairs of head 1 cm. long. Skin very red only about the genitals. The Sylvian fissure of the brain covered by the temporal and frontal lobes. Up to the end of this month only the main sulci recognisable in the cerebrum, but the secondary sulci soon develop. Mortality after birth still high.

Tenth month.—During the first weeks of this month the fœtus weighs about 2330 grms., and is 45–47 cm. long. Lanugo still on shoulders and cheeks. The nails project beyond the fingers. The ears and nose cartilages feel membranous, and the fœtus gradually acquires the characters of maturity. A child weighing less than 2800 grammes and more than 1680 grammes can in general be kept alive if due care be taken.

**F., circulation in the.** See *Circulation, fœtal*.

**F. compressus.** (L. *compressus*, part. of *comprimo*, to press together.) Same as *F. papyraceus*.

**F., dimensions of.** Many tables of the length and weight of the human fœtus at different ages have been compiled; they vary much, but probably the most useful and accurate is the following by Carl Schröder:

Number of observations.	Weeks of age.	Length in centimetres.	Weight in grammes.
18	12	7 to 9	5 to 20
51	16	10 „ 17	120
76	20	18 „ 27	284
51	24	28 „ 34	634
52	28	35 „ 38	1218
64	32	39 „ 41	1569
81	36	42 „ 44	1971
93	40	46	2528

**F., harlequin.** A term applied to cases in which from congenital ichthyosis the skin is marked with lozenge-shaped patches.

**F., heart of.** See *Heart, fœtal*.

**F., heart-sounds of.** The sounds caused by the action of the heart of the fœtus may be heard by the stethoscope applied to the mother's abdomen at, or a little before, the fifth month; they are double, a systolic and a diastolic sound,

and recur from 130 to 160 times in a minute. They may be most frequently heard a little to the left of the middle part of a line between the umbilicus and the pubes, inasmuch as in the most frequent position of the fetus in utero the back will be in this place.

**F. in fœtu.** (*L. in, in; fœtus.*) A monstrosity consisting of one fetus containing an imperfectly developed fetus within its substance.

**F. included.** Same as *F. in fœtu*.

**F., intestinal contents of.** See *Meconium*.

**F., liver of.** The fetal liver is proportionately large. In the early months it is soft and pulpy; it begins to form bile about the fifth month. It serves to store up glycogen and to purify the blood from various substances which form part of the meconium. Bile pigment and bile salts are found in the meconium about the third month, but glycogen does not appear in any quantity till the fifth month.

**F., nutrition of.** The fetus is at first nourished and receives its supply of oxygen by direct diffusion, first from the contents of the Fallopian tube, and subsequently from the decidua. After the extension of the allantoic vessels into the cavities of the uterine walls to form the placenta, the pabulum and oxygen are derived more directly from the blood of the mother through the walls of the fetal and maternal vessels, with the remains of the lining membrane of the uterus and the delicate tissue of the placenta still intervening.

**F. ovarius.** (*Ovary.*) A fetus contained in the ovary, resulting from the retention and development there of an impregnated ovum.

**F. papyraceus.** (*L. papyraceus*, made of papyrus or paper.) A term applied to a fetus which, after its death, has, by the pressure of the growth of another and healthy fetus, become mummified and reduced to a thin plate.

**F., position of, in womb.** The fetus, arranged as described under *F., attitude of, in womb*, lies, during the first six months of pregnancy, in the larger number of cases, with the cephalic extremity in the fundus of the uterus; but during the last three months of pregnancy the head occupies the lower segment of the womb.

**F., respiration of.** The respiratory changes in the blood of the fetus are accomplished in the placenta, where the blood conveyed by the umbilical arteries loses carbonic acid and other excretory substances, and, obtaining oxygen, is carried to the child by the umbilical veins.

The ovum of the bird's egg presents no appreciable metabolism, and therefore no exchange of gases at ordinary temperatures, but when kept at brooding temperature absorption of oxygen and elimination of carbon dioxide soon take place. Baumgarten found that in the twenty-one days of brooding the egg of the domestic fowl absorbed altogether 1753.3 cc. of oxygen, and eliminated 1626.2 cc. of CO<sub>2</sub>. In mammals, the fetus respires through the placenta. The blood of the umbilical vein is brighter, and contains more oxygen than that of the umbilical arteries.

**F. sanguinolentus.** (*L. sanguinolentus*, bloody.) Martin's term for a dead fetus which, although not putrid, is soft and macerated, having the epidermis raised into vesicles containing a bloody serum, the corium often like brown parchment, the internal viscera stained

with blood, and the cavities of the body containing a red serous effusion.

**F., secretions of.** These are bile, the urine, the meconium, and the verux caseosa.

**F. septimes'tris.** (*L. septum*, seven; *mensis*, a month.) A child born at the end of seven months of pregnancy.

**F. syreniformis.** (*E. Syren*, or *Siren*, a mermaid; *L. forma*, shape.) A monstrosity in which the lower limbs are united to each other.

**F., temperature of.** According to Gussierow, the temperature of the fetus immediately after birth is from 100°—103° C. (180°—214° F.) higher than the maternal structures.

**F. tubarius.** (*L. tuba*, a tube.) A fetus contained in the Fallopian tube, resulting from the arrest and retention there of an impregnated ovum.

**F., urine of.** The urine begins to be secreted at an early period of fetal life. Urea is excreted by the fetus. The urine contains relatively more allantoin and other nitrogenous compounds than after birth.

**F. ventralis.** (*L. venter*, the belly.) A fetus which is contained in the abdominal cavity, outside the cavities of the uterus and Fallopian tube.

**F., viability of.** (*F. viable*, likely to live; from *vie*, life.) The capacity of a child to live when born. This capacity is influenced not only by the condition of the fetus as to healthy structure, but also by the period of gestation at which it has been expelled. It is generally believed that a child is not viable before the 200th day after conception, and that a further period of thirty or forty days is a period of very doubtful viability.

**F. zephyrius.** (*L. zephyrius*, belonging to a Zephyr, or the west wind; wind-eggs or added eggs were called *Zephyria ova*.) A term for a false conception or mole.

**Fogna.** Italy, between Florence and Pisa. An alkaline earthy spring.

**Föhn.** A name in Switzerland for a south wind with wet and cold.

**Foil.** (*Old F. feuille*, a leaf; from *L. folium*, a leaf.) A thin leaf of beaten-out metal.

**F., copper.** See *Copper foil*.

**F., platinum.** See *Platinum foil*.

**Fold.** (*Mid. E. folden*; *Sax. fealdan*; *G. falten*; from Aryan root *plak*, to weave. *F. plier*; *I. piegare*; *S. plegar*.) To double together.

Also (*F. pli*; *I. piega*; *S. plieque*; *G. Falte*), a doubling together of a membrane or structure between other structures.

**F., arytaeno-epiglottidean.** See *Arytaeno-epiglottidean fold*.

**F.s., cerebral.** (*L. cerebrum*, the brain.) A term applied to the secondary convolutions or gyri of the brain.

**F., curved.** (*F. pli courbe*.) Gratiolet's term for the *Gyrus parietalis inferior*.

**F.s., genital.** See *Genital folds*.

**F., gluteal.** (*Γλουτός*, the buttock.) The projecting edge of the buttock below, corresponding to the lower border of the gluteus maximus.

**F., marginal, inferior.** The *Gyrus marginalis inferior*.

**F., marginal, superior.** The *Gyrus marginalis superior*.

**F. of buttock.** Same as *F., gluteal*.

**F.s., palmar.** (*L. palma*, the palm.) The thenar and hypothenar eminences.

**F.s. recto-u'terine.** (L. *rectum*, the intestine of that name; *uterus*, the womb.) Two semilunar folds of peritoneum formed by its reflection from the uterus to the rectum.

**F.s. recto-vesical.** (L. *rectum*; *vesica*, the bladder.) The folds of peritoneum formed by its reflection from the sides of the bladder to the rectum.

**F.s. synovial.** See *Synovial folds*.

**F.s. vesico-u'terine.** (L. *vesica*, the bladder; *uterus*, the womb.) Two semilunar folds of peritoneum formed by its reflection from the uterus to the bladder.

**Folded.** (Fold.) Doubled together.

**F. leaf.** A leaf which is doubled upon itself in veneration.

**Folia.** Plural of *Folium*.

**F. acanthi.** (G. *Bärenklaublätter*.) The leaves of *Acanthus mollis*, L. They are about half of a metre in length, one fifth of a metre broad, shining, glabrous, and lobed.

**F. aconiti.** See *Aconiti folia*.

**F. adiant'albi.** (A*di*ant'os, not wetted, alluding to the leaves of the maidenhair fern; L. *albus*, white. G. *weisses Frauenhaar-Blätter*.) The leaves of *Asplenium ruta muraria*.

**F. adiant'i canadensis.** The fronds of one of the Polypodiaceæ. Indigenous in North America.

**F. adiant'i nigri.** (L. *niger*, black. G. *schwarzes Frauenhaar-Blätter*.) The fronds of *Asplenium adiantum nigrum*, L.

**F. adiant'i rubri.** (L. *ruber*, red.) The same as *F. trichomanes*.

**F. althææ.** G. Ph. (F. *feuilles de guimauve*; G. *Eibischblätter*.) The leaves of *Althæa officinalis*. Marshmallow leaves. The form of these leaves varies from rounded or elliptical to a 3- or 5-lobed outline, the former shape being characteristic of the basal leaves. Diameter about 8 centimeters. Both sides hairy. The infusion is used as a demulcent.

**F. anthos.** (A*nth*os, a flower, especially that of the rosemary.) The leaves of the rosemary, *Rosmarinus officinalis*.

**F. apalachinæ.** (Apalachian mountains.) The leaves of *Ilex paraguensis*.

**F. apalagines.** The same as *F. apalachinæ*.

**F. arbuti.** The leaves of *Arbutus unedo*, or strawberry tree; they are oblong-lanceolate, bluntly serrated, smooth, shining. Astringent.

**F. arnicæ.** (G. *Wohlfurcheblätter*.) The leaves of *Arnica montana*, L. Basal leaves in rosettes, elongated, attenuated towards the base, 5–10 cm. long, 1½–3 cm. broad, entire, 5-nerved, upper surface with short, stiff hairs, lower surface villous. Acid, emetic.

**F. asari.** (F. *feuilles de cabaret*; G. *Hazelnurblätter*.) The leaves of *asarabacca*, *Asarum europæum*. They are reniform, obtuse, hairy, in pairs. Quality, acid and emetic. Sometimes used as snuff.

**F. aurantii.** (F. *feuilles d'orange*; G. *Pomeranzenblätter*.) Orange leaves. The leaves of *Citrus vulgaris*, Risso, *C. bigaradia*, Duham. They are dotted, ovate-oblong, acute; petiole more or less winged; on section they present oil-spaces and large cells containing crystals of calcium oxalate. Their taste is bitter; 100 lbs. yield 180 grms. of a greenish ethereal oil, which subsequently becomes yellow, and is known as *Huile de petit grain*.

**F. azadirachtæ indicæ.** The leaves

of *Melua indica*. They are simply pinnate, which distinguishes them from those of *Melia azadirachta*, which are bipinnate. The bitterness of the whole plant has led to the leaves being employed as a tonic, they are said to have been found useful in smallpox.

**F. barosmæ.** (B*ar*os, heavy; *osmê*, a smell.) Buchu leaves. See *Buchu*.

**F. belladonnæ.** G. Ph. See *Belladonna folia*.

**F. betonicæ.** The leaves of *Stachys betonica*, Hooker, *Betonica officinalis*, L. Wood betony. They are petioled, oblong-cordate, obtuse, deeply crenate.

**F. boldo.** The leaves of *Peumus boldus*, Molina. *Ruzia fragrans*, Pav., *Boldoa fragrans*, Gay. A monmiad growing in Chili. They have a powerfully aromatic smell and taste, and contain an alkaloid, boldin.

**F. boraginis.** (F. *fleurs de bourrache*; G. *Boretschblätter*.) The leaves of *Borago officinalis*. Lower leaves elliptical, obtuse, tapering to base. Demulcent. Used as a flavouring ingredient in cool beverages.

**F. bras'sicæ.** The leaves of the wild cabbage, *Brassica oleracea*, are obovate, lobed, or sinuate below, glaucous, glabrous; upper sessile, oblong, dilated at the base. Those of the cultivated variety are large and fleshy. Used as food, and as a vehicle for poultices.

**F. bucc'o.** (G. *Buccoblätter*.) Same as *Buchu*.

**F. bu'chu.** See *Buchu*.

**F. bugloss'i.** (F. *fleurs de vipérine*; G. *Natterkopfbblätter*.) The leaves of *Echium vulgare*, viper's bugloss; they are alternate, entire, or sinuate; nerves usually strong, sunk above, very prominent below; exstipulate.

**F. buxi sempervirentis.** Linn. (F. *fleurs de buis*; G. *Buchsbaumblätter*.) Leaves of the common box, *Buxus sempervirens*. Used to adulterate those of *Ura ursi*. They are easily distinguished by the facility with which the layer of lower superficial cells can be stripped off.

**F. capilli ven'eri.** (F. *feuilles de capillaire*; G. *Frauenhaarblätter*, *Venushaarblätter*.) The fronds of *Adiantum capillus veneris*. An indigenous fern. The leaves are from 15–30 cm. long, with bright, blackish-brown petiole, bipinnate; the pinnae with short stalks, wedge-shaped, about 8 mm. long.

**F. cardui benedic'ti.** See *Carduus benedictus*.

**F. carpi'ni bet'uli.** (F. *feuilles de charme*; G. *Hainbuchenblätter*.) The leaves of the hornbeam, *Carpinus betulus*. Used as a mild astringent.

**F. castan'æ.** (F. *feuilles de châtaignier*; G. *Kastanienblätter*.) The leaves of *Castanea vesca*. Used in hooping cough. See *Castanea*, U.S. Ph.

**F. cet'erach.** (F. *feuilles de doradille*; G. *Milzfarnblätter*.) The fronds of *Ceterach officinarum*, W. A polypodium indigenous to Southern Europe. The fronds are pinnate, 5–10 cm. long.

**F. chamæleag'ni.** The leaves of *Myrica gale*.

**F. chiray'tæ.** The leaves of *Ophelia chirata*, Grisebach, or *Gentiana chirayta*, Roxb. They are ovate-acuminate, cordate at the base, entire, sessile, the largest one inch or more in length, 3–5- or 7-nerved, the midrib being strongest. A bitter tonic.

**F. citri vulg'ris.** The same as *F. aurantii*.

**F. co'ca.** (G. Cocablätter.) See *Coca*.

**F. cochlea'riæ.** (*F. feuilles de raifort*; G. Meerrettigblätter.) Horseradish leaves; the leaves of *Cochlearia officinalis*. The radical leaves are cordate at the base, orbicular or reniform, cauline, amplexicauline, angled, toothed, or lobed.

**F. con'il.** See *Conii folia*.

**F. cotyle'dinis umbell'cæ.** (*F. feuilles de cotylet*; G. Nabelkrautblätter.) The leaves of *Venus's navel-wort*, *Cotyledon umbilicus*. They are peltate, orbicular, crenate.

**F. daturæ albæ.** (*L. albus*, white.) The leaves of the white-flowered datura, *Datura alba*; they are from six to ten inches in length, with long stalks, ovate-acuminate, coarsely dentate; odour disagreeable. Used in the form of poultice as an anodyne.

**F. digital'is.** G. Ph. (*F. feuilles de digitale*; G. Fingerhutblätter.) The leaves of *Digitalis purpurea*. See *Digitalis folia*.

**F. dios'mæ.** Same as *Buchu folia*.

**F. eucalyp'ti globuli.** See *Eucalyp'tus globulus*.

**F. fa'ham.** (*F. thé de Bourbon*; G. Fahambblätter.) The leaves of *Angracum fragrans*.

**F. far'faræ.** G. Ph. (*F. feuilles de tussilage*, *feuilles de pas d'âne*; I. *foglia di tossilagine*; G. *Hufattichblätter*.) The basal leaves of *Tussilago farfara*. Coltsfoot leaves. Used in decoction as a demulcent.

**F. fraga'riæ.** (*F. feuilles de fraisier*; G. Erdbeerstrauchblätter.) Strawberry leaves; the leaves of *Fragaria vesca*. Radical leaves petioled, trifoliate, rarely pinnate, or simple; leaflets obliquely ovate or oblong, toothed or serrated, plaited; stipules aduate to the petiole, scarious. Used as an astringent.

**F. fraxini.** (*F. feuilles de frêne*; G. Eschenblätter.) The leaves of *Fraxinus excelsior*. Used in decoction as an antirheumatic and an antiarthritic.

**F. gauth'eriæ.** (G. *Kanadischer Thee*, *Thee von Labrador*.) The leaves of *Gaultheria procumbens*. They are leathery, rounded or obovate, shortly petiolated, interruptedly serrate, prickly above, at first green, then bluish green, and ultimately brownish.

**F. gongon'ha.** The leaves of *Cassim gongonha*, Mart. They are lancet-shaped, rounded at the base, and interruptedly dentate.

**F. gua'co.** See *Guaco*.

**F. hed'eræ.** (*F. feuilles de lierre*; G. Epheublätter.) The leaves of the ivy, *Hedera helix*. Leaves very variable in form, 1-3 inches broad, cordate, 5-lobed; lobes deep or shallow, acute or obtuse; those of flowering branches ovate or lanceolate.

**F. hyoscy'ami.** See *Hyoscyami folia*.

**F. ilicis aquifol'ii.** (*F. feuilles de houx*; G. *Steckpalmenblätter*.) The leaves of the holly, *Ilex aquifolium*. They are alternate, petiolated, oval, leathery, glabrous, borders undulating, with coarse and spiny teeth.

**F. ilicis paraguayensis.** (G. *Paraguaythee*.) The leaves of *Ilex paraguayensis*.

**F. in'di.** A term formerly applied to the leaves of the *Cinnamomum chinense*.

**F. jaborandi.** G. Ph. (*F. feuilles de*

*jaborandi*; I. *foglie di jaborandi*; G. *Jaborandiblätter*.) The leaves of *Pilocarpus pennatifolius*. The leaves are 18 inches long; the pinnae are stalked, entire, leathery, glabrous, with numerous oil spaces.

For their medicinal properties see *Jaborandi*.

**F. juglan'dis.** G. Ph. (*F. feuilles de noix*, *feuilles de noyer*; I. *foglie di noce*; G. *Walnussblätter*.) The leaves of the walnut, *Juglans regia*. They are unequally pinnate; leaflets sessile, entire, ovate, smooth, and of an acid taste. Used internally against scrofula, externally in malignant pustule, scrofulous sores, and in decoction as an eye-water in scrofulous conjunctivitis, and as an injection in blennorrhagia and fistula.

**F. lauri.** (*F. feuilles de laurier*; G. *Lorbeerblätter*.) The leaves of *Laurus nobilis*.

**F. laurocerasi.** (*F. feuilles de Laurier-cerise*; G. *Kirschlorbeerblätter*.) The leaves of the common or cherry laurel, *Prunus laurocerasus*. These are leathery, glabrous, 21 cm. long, 7 cm. broad, oblong, with short footstalks; margin serrate; near base of lamina 2-4 shallow glands. Infusion of leaves, which smell of hydrocyanic acid, used as a lotion.

**F. ling'uae cervinæ.** (*L. lingua*, the tongue; *cervus*, a deer.) The same as *F. scolopendrii*.

**F. lu'næ regalis.** (G. *Königsfarnkraut*.) The fronds of the *Osmunda regalis*.

**F. malabath'ri.** (*Malabathoor*, the aromatic leaf of an Indian plant sold in rolls or balls, probably betel.) A drug, in use formerly, consisting of the leaves of various species of *Cinnamomum*, especially the *C. tamala*, Nees, and *C. nitidum*.

**F. malvæ.** G. Ph. (*F. feuilles de mauve*; I. *foglie di malva*; G. *Malvenblätter*.) The leaves of the mallow, *Malva vulgaris* and *M. sylvestris*. Used as a demulcent.

**F. mati'co.** See *Matiæ folia*.

**F. melis'sæ.** G. Ph. (*F. feuilles de citronnelle*; G. *melissenblätter*.) The leaves of balm, *Melissa officinalis*. They are opposite, shortly petiolated, oval-cordiform, dentated, rugose, bright green in colour. Odour agreeable, taste slightly hot and bitter. Slight antispasmodic and restorative. Used as a vulnerary. The French use it in infusion in the proportion of 10 parts to 1000, also to form a distilled water, an alcoholic distillate, and a compound alcoholic distillate, when it is named *Eau de mélisse des carmes*.

**F. melis'sæ officina'lis.** Tournef. Balm leaves. See *F. Melissa*.

**F. men'thæ crispæ.** G. Ph. (*F. feuilles de menthe crépue*; G. *Krauseminzblätter*.) The leaves of *Mentha crispata*. An aromatic; used both internally and externally.

**F. men'thæ piperitæ.** G. Ph. (*F. feuilles de menthe poivrée*; G. *Pfefferminzblätter*.) The leaves of mint, *Mentha piperita*. They are opposite, decussating, shortly petiolated, expanded, oval lanceolate, acute, serrated, slightly pubescent, with transparent dots or lacunæ, 6 cm. long, 3 cm. broad. A source of peppermint.

**F. men'thæ pule'gii.** (*F. feuilles de pouliot*; G. *Poleiblätter*.) Pennyroyal leaves. Leaves of *Mentha pulegium*. They are elliptical, obtuse, nearly entire. They are aromatic, emmenagogue, and antispasmodic.

**F. men'thæ vir'idis.** (*F. feuilles de*

*menthe verte*; *G. Römischemintzblätter*.) Spearmint leaves, from *Mentha viridis*. Leaves glabrous, sessile, lanceolate, acutely serrate. Aromatic and stimulant.

**F. millefolii.** (*L. mille*, a thousand; *folium*, leaf. *F. feuilles de millefeuille*; *G. Schafgarbenblätter*.) The leaves of yarrow or milfoil, *Achillea millefolium*. They are 3-pinnatifid, linear-oblong, radical petioled; leaflets and linear-acute segments very close placed. They are reputed astringent.

**F. myrti Brabanticae.** (*G. Gagelkrautblätter*.) The leaves of *Myrica gale*.

**F. nicotianaæ, G. Ph.** The leaves of *Nicotiana tabacum*. See *Tabaci folia*.

**F. nicotianaæ rusticæ.** (*G. Bauern-tabakblätter*.) See *Nicotiana folia*.

**F. of cerebellum.** The laminae of the cerebellum.

**F. paraguæ.** (*Paraguay*.) The leaves of *Ilex paraguensis*.

**F. petasitidis.** The leaves of *Petasites vulgaris*. Butterbur leaves. Leaves large and broad, white or cobwebby beneath, and, when young, above also; petiole long, stout.

**F. petroselinii.** (*F. feuilles de persil*; *G. Petersilienblätter*.) Parsley leaves. They are pinnate or 2-3 pinnate.

**F. rhododendri chrysanthi.** (*G. Sibirische Alpenrosenblätter, Gichtrosenblätter, gelbe Schneerosenblätter*.) The leaves of *Rhododendron chrysanthum*, *L.* Leathery, glabrous, non-glandular leaves, petiolate, 5-8 cm. long, venate on both sides, rolled back at the edges. Taste and smell disagreeable, like rhubarb.

**F. rosis-marinis.** Same as *F. rosmari-ni*.

**F. rosmari-ni.** (*F. feuilles de rosmarin*; *G. Rosmarinblätter*.) The leaves of rosemary, *Rosmarinus officinalis*. They are opposite, alternately in the form of a cross, sessile, narrow, slightly pointed, numerous, coriaceous, persistent, green and rough above, whitish and cottony beneath, the edges rolled downwards.

**F. rutæ murariæ.** (*G. Mauerraute, weisses Frauenhaarblätter*.) The fronds of *Asplenium ruta muraria*, *L.* An indigenous fern.

**F. salviæ, G. Ph.** (*F. feuilles de sauge*; *G. Salveblätter*.) The leaves of sage, *Salvia officinalis*. They are opposite, of a greenish-white colour. Used as a tooth-powder, and in infusion as a mouth-wash and gargle.

**F. scolopendrii.** (*G. Horschzungeblätter*.) The leaves of *Scolopendrium officinarum*, *Sw.*, a fern indigenous to middle Europe. Frond simple, lanceolate-shaped, growing to the length of 32 cm.

**F. senæ.** See *Senna alexandrina* and *S. indica*.

**F. senæ, G. Ph.** The leaves of *Cassia angustifolia* and *C. acutifolia*. See *Senna folia*.

**F. senæ alexandrinæ.** See *Senna alexandrina*.

**F. sola-ni nigri.** (*G. Nachtschattenblätter*.) Black nightshade leaves, from *Solanum nigrum*. They are sinuate, toothed, downy.

**F. stramonii, G. Ph.** See *Stramonii folia*.

**F. tabaci.** See *Tabaci folia*.

**F. taraxaci.** Dandelion leaves, from *Taraxacum dens-leonis*. They are all radicle, entire or pinnatifid.

**F. theæ.** (*G. Theebblätter*.) Tea. Tea leaves. The leaves of *Thea chinensis*, *S.*, the varieties of which are named *Thea bohea*, *L.*, *T. viridis*, *L.*, and *T. stricta*, Hayne. They are leathery, obovate or oval, 6 cm. long and 3 cm. broad, with serrated borders and glands on the under surface. Their use known anciently in China. Introduced into Europe about the close of the sixteenth century. Tea grows between 27° and 40° N. lat. in all provinces of China. Black teas include Pekoe, Padre Souchong or Carvantha, Linki sam, Campoe Souchong, Bohea, and Congo or Congfu. Green teas include Songlo or Singlo, Bing, Soulang, Alfajar or gunpowder, Tehi or Pearl tea, and Hyson. The composition of black and green tea leaves is as follows, the green preceding the black:—Ethereal oil, 0.79 and 0.60; chlorophyll, 2.22 and 1.84; wax and resin, 2.50 and 3.64; thein, 0.43 and 0.46; tannin, 17.80 and 12.88; extractive soluble in water, 31.36 and 28.64; extract obtained with hydrochloric acid, 23.60 and 19.12; albumen, 3 and 2.8; fibre, 17.08 and 25.32.

**F. thymi.** (*G. Thymianblätter*.) Thyme leaves, from *Thymus vulgaris*. Leaves small, entire, margins often revolute. Carminative and aromatic.

**F. trichomanes.** (*G. rother Widerthombblätter*.) The fronds of *Asplenium trichomanes*, a fern indigenous in Northern and Middle Europe. The fronds are pinnate, the leaflets ovate rhombic.

**F. trifolii fibrini, G. Ph.** (*F. trifol des marais*; *L. foglie di trifoglio fibrino*; *G. Fieberkleebblätter*.) The leaves of *Menyanthes trifoliata*. Buckbean, marsh trefoil, or bogbean leaves. They are tripartite, leaflets ovate; bitter to taste. Used as a stomachic and in injections.

**F. tylophoræ.** The leaves of country or Indian ipeacuanha, *Tylophora asthmatica*. The leaves are opposite, entire, from 2-5 inches in length,  $\frac{1}{2}$ -2 $\frac{1}{2}$  inches broad, ovate, cordate at base, mucronate at apex, rather leathery, glabrous above, downy beneath. A concentrated infusion is used as a substitute for ipeacuanha.

**F. uvar ursi, G. Ph.** (*L. uva*, a berry; *ursus*, a bear. *F. feuille de busserole*; *G. Bärentraubenblätter, Jakaslapak*.) The leaves of bearberry, *Arctostaphylos uva ursi*, Spreng. They are leathery, simple, non-glandular, obovate,  $1\frac{1}{2}$ -3 cm. long, 4-6 mm. broad, glabrous, veined, dark green above, lighter below, bright on both sides, not rolled at the edges, without smell, taste bitterish. Liable to adulteration with the leaves of *Vaccinium uliginosum*, *V. vitis idæi*, and *Buxus sempervirens*. They contain in 100 parts 1.20 gallic acid; 36.4 tannic acid; 4.4 resin; 6.35 chlorophyll; 21.78 extracts with lime malate and citrate, pectic acid, and sodium chloride; 15.7 gum.

**F. vaccinii uliginosi.** The leaves of *Vaccinium uliginosum*. They are used to adulterate those of *Uva ursi*, from which they are distinguished by being dull and not shiny, as well as by being of a bluish-green colour on the under surface.

**F. vaccinii vitis idææ.** The leaves of *Vaccinium vitis idææ*. They are used to adulterate those of *Uva ursi*, from which they are distinguished by being rolled back at the edges, dull beneath, not veined, with small, brown, glandular points, and covered with short, thick, simple hairs.

# FOLIACEOUS—FOLLICLE.

**F. vin'cæ majoris.** Periwinkle leaves, from *Vinca major*. Leaves ovate or cordate at the base, ciliate.

**Foliaceous.** (L. *foliaceus*, leafy. F. *foliace*; I. *fogliaceo*; S. *foliaceo*; G. *blattartig*, *blättrig*.) Full of leaves; leafy; having the form or structure of a leaf.

Also, consisting of thin plates or leaves, as mica.

**F. lichens.** The lichens in which the thallus develops into a leaf-like structure, such as *Peltigera*.

**Folia'ceum ornamen'tum.** (L. *foliaceus*; *ornamentum*, decoration.) Old term for the fringe-like extremity of the Fallopiian tube. (Quincy.)

**Foliage.** (Old F. *fuellage*, branched work; from *fuille*, a leaf; from L. *folium*, a leaf.) The collection of leaves of a tree or plant.

**F. leaves.** (G. *Laubblätter*.) The ordinary leaves of a plant.

**Folial.** (L. *folium*, a leaf.) Relating to a leaf or leaves.

**F. cycle.** (Κύκλος, a circle.) The mode of arrangement of leaves on an axis. See *Phyllotaxy*.

**Foliar.** (L. *folium*, a leaf. F. *foliaire*; S. *foliar*; G. *blattständig*.) Belonging to a leaf, or growing from it, or produced by it.

**Foliata terra.** (L. *foliatus*, leafed; *terra*, earth.) Old term for prepared sulphur. Also, a term for the acetate of potash.

**Foliate.** (L. *foliatus*.) Clothed, or furnished, with leaves; leafy.

**Foliated.** (L. *foliatus*, leafed. F. *folié*; I. *fogliato*; S. *foliato*; G. *geblättert*, *beblättert*.) Having leaves, or the appearance of leaves or plates.

**F. earth of tartar.** An old name of potassium acetate.

**Folia'tion.** (L. *foliatus*, leafed. F. *foliation*; I. *fogliazione*; S. *foliacion*; G. *Belaubung*.) The formation or arrangement of leaves in the bud.

Also, in Geology, the property or condition of splitting into leaves or plates.

**Folie.** (F. *folie*, from *fon*, mad; from Low L. *folius*, foolish.) Madness.

**F. circulaire.** (F. *circulaire*, circular.) Falret's term for a form of insanity characterised by successive alternate periods of maniacal excitement and melancholic depression; each stage may last several weeks.

**Foliferous.** See *Foliferous*.

**Follicolous.** (L. *folium*, a leaf; *colo*, to inhabit. G. *blattbewohnend*.) Living in, or growing on, leaves.

**Foliferous.** (L. *folium*, a leaf; *fero*, to bear. G. *blättertragend*.) Leaf-bearing.

**F. bud.** A bud which bears leaves only.

**Foliform.** (L. *folium*; *forma*, shape.) F. *foliforme*; G. *blattförmig*.) Having the shape or appearance of a leaf.

**Foliparous.** (L. *folium*; *pario*, to bring forth. F. *folipare*.) Bringing forth leaves. Applied to a bud which produces leaves only.

**Foliola.** Same as *Foliola*.

**Folliar.** (L. dim. of *folium*. F. *foliolaire*.) Like to, or connected with, a leaflet; applied to stipules placed on the common petiole at the base of the folioles, as in *Phaseolus*.

**Folliolate.** (L. dim. of *folium*. F.

*foliolé*.) Consisting of folioles; applied to leaves formed of folioles on a common petiole.

**Folliole.** (L. dim. of *folium*. F. *folirole*; I. *fogliolina*; S. *hojuela*; G. *Blättchen*.) A small leaf, a leaflet; the portions of a compound leaf.

**F.s of cerebellum.** The subdivisions of the convolutions of the cerebellum which have the form of leaflets.

**F.s or diaphragm.** The three sections or leaflets of the central tendon of the diaphragm.

**Folliolel.** Same as *Folliolellum*.

**Folliolellule.** Same as *Folliolellum*.

**Folliolellum.** (L. dim. of *folium*. F. *foliollule*; G. *Blättleichen*.) The foliule of a tripinnate leaf.

**Folliolellum.** (L. dim. of *folium*. F. *foliollette*; G. *Blättlein*.) The foliule of a bipinnate leaf.

**Follioliferous.** (L. *foliolum*, dim. of *folium*; *fero*, to bear. F. *foliolifère*; G. *Blättchentragend*.) Bearing folioles.

**Folliolose.** (L. *foliolum*. F. *folioloux*.) Having leaves composed of small folioles; consisting of small leaf-like scales.

**Folliolum.** (Dim. of L. *folium*, a leaf. F. *folirole*; G. *Blättchen*.) A little leaf; a leaflet. Same as *Folliole*.

**Folliopedate.** (L. *folium*, a leaf; *pes*, a foot.) Having membranous expansions on the feet, as in the coat, *Fulica atra*.

**Folliose.** (L. *folium*, a leaf. G. *blattreich*, *beblättert*.) Having many leaves; leafy.

**F. hepaticæ.** A term applied to the *Jungermanniaceæ*.

**Follious.** Same as *Folliose*.

**Folium.** (L. *folium*, a leaf; akin to Gr. φύλλον, a leaf. F. *feuille*; G. *Blatt*.) A leaf. Anciently, a name for the anterior fontanel.

In Pathology, formerly applied to the relaxed uvula.

Old name for the philosopher's stone.

**F. cacuminis.** (L. *cacumen*, the extreme end of a thing. G. *Wipfelblatt*.) The single lamina of the posterior superior lobe of the cerebellum on the worm; the *Vermis superior posterior*.

**F. orienta'le.** An old name for the *Cassia senna*.

**Follicarium.** (L. *folliculus*, a small bag. F. *follicaire*.) A fruit composed of two follicles, or of one only by abortion, as in the *Asclepiadaceæ*.

**Follicetum.** (L. *folliculus*, a small bag.) In Botany, Dumortier's term for an aggregation of follicles.

**Follicle.** (L. *folliculus*, a small bag; dim. of *follix*, a pair of bellows, an air-bag. F. *follicule*; G. *Balg*, *Schlauch*.) A small bag.

In Anatomy (G. *Balgdrüse*), a simple lymphatic gland, consisting of lymphoid tissue arranged in the form of a sac.

The term has also been extended so as to include tubular glands.

In Botany (F. *follicule*; G. *Balgkapsel*, *Balgfrucht*), a membranous, dehiscient, one-celled, single-valved pericarp opening longitudinally by a ventral suture, to which is attached a placenta bearing the seeds, and having no dorsal suture, as in the *Columbine*.

Also, a small bag or vesicle distended with air, as those on the leaves of *Utricularia*.

Also, formerly used for any kind of capsular fruit.

# FOLLICULAR--FOLLICULITIS.

**F.s, ag'minated.** Same as *Glands, agminated.*

**F.s, ciliary.** (*L. cilium*, an eyelash.) The Meibomian glands.

**F.s, closed.** (*F. follicles clos.*) Collections of lymphoid tissue having no orifice, such as the solitary glands of the intestine.

**F., double.** Mirbel's term for the double conceptacle of the Asclepiads.

**F.s, gastric.** The *Gastric glands.*

**F.s, glandular, of urethra.** Simple or bilobed or trilobed follicles occurring in the mucous membrane of the urethra, 60—250 mm. long, and 30—90 mm. broad; at the bottom of the sac the epithelium is polyhedral.

**F.s, glomerular.** (*L. glomerulus*, a little heap. *F. follicles glomerul.*) A long, simple follicle with a convoluted extremity, such as a sweat gland.

**F.s, Graaf'ian.** See *Graafian follicles.*

**F.s, hair.** See *Hair follicles.*

**F.s, lymph.** See *Lymph follicles.*

**F.s, lymphoid.** See *Lymphoid follicles.*

**F.s, mucous.** (*L. mucus*, slime.) The simple glands of a mucous membrane.

**F., nail.** The duplicature of the matrix of the nail which encloses its base.

**F.s of De Graaf.** See *Graafian follicles.*

**F.s of intestine.** Same as *Lieberkühn, crypts of.*

**F.s of Lieberkühn.** Same as *Lieberkühn, crypts of.*

**F.s of Littré.** Same as *Littre, glands of.*

**F.s of Pey'er.** Same as *Peyer's glands.*

**F. of senna.** A term improperly applied to the seed vessel of senna, which is really a silique.

**F.s, palpebral.** (*L. palpebra*, the eyelid.) The Meibomian glands.

**F.s, sebaceous.** The *Sebaceous glands.*

**F., simple.** Same as *Gland, simple.*

**F.s, solitary.** Same as *Glands, solitary.*

**F.s, spiral.** A term applied to the sudoriparous glands, in reference to the spiral character of their duct.

**F.s, sudoriparous.** Same as *Sudoriparous glands.*

**F., synovial.** (*Synovia*.) A *Bursa mucosa.*

**F.s, thymus.** See *Thymus gland, follicles of.*

**F., tooth.** Same as *Dental follicle.*

**Follicular.** (*L. folliculus.* *F. folliculace.*) Relating to, or composed of, a follicle or follicles.

**F. abscess.** A collection of pus in a follicle from inflammation. It occurs in the urethra during gonorrhoea, in the vaginal mucous membrane during vulvitis, and in the tonsil.

**F. body.** The vulvo-vaginal gland, or gland of Bartholin.

**F. catarrh.** The inflamed condition of mucous membrane which leads to *F. ulceration.*

**F. cyst.** See *Cyst, follicular.*

**F. degeneration of cervix uteri.** (*L. cervix*, the neck.) An inflammation of the mucous follicles of the vaginal surface of the neck of the womb. The follicles become distended and form small cysts, then they burst, and from the cavity spring frequently red, bleeding granulations.

**F., drop'sy of o'vary.** See *Hydrops folliculorum.*

**F. elevations.** The small white masses, consisting of the retained secretion of the sebaceous glands, often seen in the thin skin of the eyelids; the term was used first by Rayer.

**F. enteritis.** See *Enteritis, follicular.*

**F. gastritis.** See *Gastritis, follicular.*

**F. glands.** See *Glands, follicular.*

**F. hyperæmia.** (*Υπερ*, over; *αἷμα*, blood.) Tilbury Fox's term for a condition in which red papules are formed in the skin by erection and turgescence of the walls of the hair follicles. It is often produced by the irritation of scratching, and complicates many skin diseases, such as eczema and urticaria.

**F. malnutrition.** Same as *Cacotrophia folliculorum.*

**F. pharyngitis.** See *Pharyngitis, follicular.*

**F. suppuration.** A collection of pus in a mucous follicle such as those of the intestine.

**F. tumour.** A synonym of *Sebaceous cyst.*

**F. ulceration.** (*G. Follikulargeschwüre.*) Small circumscribed ulcers on a mucous surface resulting from inflammation of the mucous follicles, which become swollen and distended with secretion, and then break down and ulcerate.

The term has been specially applied to a condition in which the gastric mucous membrane is studded with minute points of ulceration, which appear to originate at the apertures of the gastric follicles. The ulcers are by some believed to be formed shortly before death.

**F. vulvitis.** See *Vulvitis, follicular.*

**Folliculated.** (*L. folliculus.*) Having follicles.

**Folliculi.** Plural of *Folliculus.*

**F. ciliares.** (*L. cilium*, an eyelash.) The Meibomian glands.

**F. dentium.** (*L. dens*, a tooth.) See *Dental follicle.*

**F. Graaf'ani.** The *Graafian follicles.*

**F. ovarii.** The follicles of the ovary, or *Graafian follicles.*

**F. pilorum.** (*L. pilus*, a hair.) See *Hair follicles.*

**F. rotundi et oblongi cervicis uteri.** (*L. rotundus*, round; *et*, and; *oblongus*, oblong; *cervix*, the neck; *uterus*, the womb.) The *Oculta Nabothi.*

**F. sanguinis.** (*L. sanguis*, blood.) The red blood-dises.

**F. sebacei.** The *Sebaceous glands.*

**F. sebacei coronæ glandis.** (*L. seba*, suet; *corona*, a crown; *glands*, the head of the penis.) The same as *Tyson's glands.*

**F. sporades.** (*Σποράς*, scattered.) The solitary glands of the intestine.

**Folliculitis.** (*L. folliculus.*) Inflammation of a *Follicle.*

**F. barbæ.** (*L. barba*, the beard.) See *F. of the beard.*

**F. chancreous.** (*Chancre.*) A form of soft chancre commencing in a hair follicle, especially to be found on the external surface of the labia majora.

**F. of the beard.** A term by Köbner for the non-parasitic form of *syosis.*

**F. sebacea.** (*L. sebum*, suet.) Weisse's name for the various forms of *Acne.*

**F., vulvar.** Same as *Vulvitis, follicular.*

**Folliculod'ium.** (*L. folliculus*. *F. folliculode*; *G. Bulgkapsel*.) Agardh's term for a fruit composed of many follicles.

**Folliculose.** (*L. folliculus*.) Full of, or containing, follicles; or of the nature or appearance of a follicle.

**F. gland.** A simple gland or *Follicle*.

**Follic'ulous.** (*L. folliculus*.) Having, or consisting of, follicles. Same as *Folliculer*.

**Follic'ulus.** (*L. folliculus*, a small bag; dim. of *follics*, an air-bag.) Same as *Follicle*.

**F. a'ëris.** (*L. aer*, air.) The *Air chamber of egg*.

**F. den'tis.** (*L. dens*, a tooth.) See *Dental follicle*.

**F. fell'is.** (*L. fel*, gall. *F. cholecyste*. *G. Gallenblase*.) The gall-bladder.

**F. genita'lis.** (*L. genitalis*, belonging to generation.) The scrotum.

**F. muc'o'sus.** See *Mucous follicle*.

**F. pil'i.** (*L. pilus*, the hair.) See *Hair follicle*.

**Foment'.** (*F. fomentor*; from *L. fomentum*, a warm application; from *foreo*, to warm. *I. fomentare*; *S. fomentar*; *G. bahen*.) To bathe with warm water; to apply a fomentation.

**Fomentation.** (*L. fomentatio*, from *fomento*, to foment. *F. fomentationi*; *I. fomentazione*; *S. fomentation*; *G. Bähung*.) The application of flannels soaked in hot medicated decoctions or in warm water, or of any other warm, wet, soft, medicinal substance to some part of the body, by which the vessels are relaxed and pain reduced.

Also, a warm, but dry, application.

Also (*G. Bähungsmittel*), a term for the liquid employed in fomenting.

**F., dry.** (*F. fomentation sèche*.) A warm dry application to a part, such as hot salt or hot chamomile flowers in a bag.

**F. herb's.** See *Herbæ pro fotu*.

**Fomentum.** (*L. fomentum*, a warm application.) Same as *Fomentation*.

**F. sic'cum.** (*L. siccus*, dry.) See *Fomentation, dry*.

**Fo'mes.** (*L. fomes*, chips for firewood; from *foreo*, to warm.) Fuel; touchwood.

Applied to any porous substance capable of absorbing and retaining particles of contagium, and so capable of propagating disease by conveyance of its cause.

Also, formerly used to denote the internal or antecedent cause by which a disease is developed and sustained.

**F. mor'bi.** (*L. morbus*, disease.) Old application of the term *Fomes* to the internal or antecedent cause by which a disease is fostered and continued; the exciting cause.

Also, the focus or chief seat of a disease.

**F. ventricu'li.** (*L. ventriculus*, the stomach.) A synonym of *Hypochondriasis*.

Also, a term for the *Spleen*.

**Fo'mites.** Plural of *Fomes*.

**Fon'caude.** France, Département de l'Hérault, near Montpellier. An earthy mineral water of a temp. of 25° C. (77° F.) The water is diuretic. It is used for drinking and as a bath in sciatica, neuralgia, chronic rheumatism, and uterine irritations.

**Foncir'gue.** France, Département de l'Ariège, 304 metres above sea-level. A weak chalybeate water with calcium carbonate. Used in dyspeptic conditions and in some skin diseases.

**Fon'frède.** France, Département du Lot-et-Garonne. An indifferent cold, earthy mineral water. Used in catarrhal affections of the urinary organs, in gravel, gall-stone, and diabetes.

**Fons.** (*L. fons*, a spring; from *fundo*, to pour out. *F. fontaine*; *G. Quell*.) A fountain, well, or water-spring.

Also, a synonym of *Fontanelle*.

**F. lachryma'rum.** (*L. lachryma*, a tear.) The inner canthus of the eye.

**F. medica'tus.** (*L. medicatus*, healing.) A mineral water-spring.

**F. philoso'phorum.** (*Φιλόσοφος*, a lover of knowledge.) The water bath of seawater used in chemical operations.

**F. pull'ans.** (*L. pulla*, to put forth sprouts.) The same as *F. pulsatilis*.

**F. pul'sans.** (*L. pulsans*, part. of *pulso*, to beat.) Same as *F. pulsatilis*.

**F. pulsa'tilis.** (*L. pulso*, to beat.) The anterior fontanel, because for two or three years after birth the arterial pulsation of the brain may be perceived at this place, between the parietal and frontal bones.

**F. saluta'ris.** (*L. salutaris*, healthful.) A mineral water spring.

**F. soter'is.** (*L. soter*; from *Gr. σωτήρ*, a giver of health.) A mineral water spring.

**F. vital'is.** (*L. vitalis*, from *vita*, life.) The same as *Vital point*.

**Fon'sainte.** France, Département du Cantal, near Cahors. A chalybeate spring.

**Fonsala'da.** France, Département du Puy-de-Dôme. A mineral water containing sodium and calcium chloride, with free carbonic acid.

**Fonsanche.** Same as *Fonsange*.

**Fonsange.** France, Département du Gard. Mild sulphur waters, having a temperature of 25.5° C. (77.9° F.) Used in chronic rheumatism, chronic catarrhal affections, and skin diseases.

**Fonsrou'illeuse.** A name of the mineral spring of *Chamont*.

**Font d'also'fre.** France, Département du Pyrénées Orientales, near Perpignan. A sulphuretted mineral water. A name of the mineral spring of *Vinça*.

**Font d'a'ram.** France, Département des Pyrénées Orientales. A mineral spring at La Roque, containing iron.

**Font de la puda.** Spain, in Catalonia. A sulphuretted mineral water at Olesa.

**Fontaccia.** Italy, in Tuscany. A sulphur water containing sodium chloride.

**Fonta'gre.** France, Département du Pyrénées Orientales. A mild chalybeate water containing a little manganese.

**Fontaine - bon'neleau.** France, Département de l'Oise. An atthermal weak chalybeate water.

**Fontaine de jou'vence.** France, Département du Seine-Inferieure, near Rouen. A weak, earthy, chalybeate water.

**Fontaine de St. Mar'guerite.** France, Département du Puy-de-Dôme. A chalybeate water.

**Fontaine des sar'sazins.** France, Département de la Marne. A mineral water containing iron carbonate 4 grains, magnesium chloride 20 grains, and magnesium sulphate 40 grains, in 16 ounces.

**Fontaine marin.** A name of the mineral spring of *Saint Dizier*.

**Fontaine rouge.** France, Département de l'Arrége. A mild chalybeate water.

**Fontaine rouillée.** A name of the mineral spring of Chaumont.

**Fontainea.** (In honour of C. Fontaine, a Professor in the French Naval School of Medicine.) A Genus of the Nat. Order *Euphorbiaceæ*.

**F. Panche'ri.** Heekel. (After Pancher, a French botanist.) Hab. New Caledonia. Seeds contain an oil, which is a drastic purgative, more powerful, more constant, and less likely to produce sickness than ereton oil; it also rapidly produces a pustular eruption when applied to the skin.

**Fontal'é aceto'sum.** (L. *fons*, a fountain; *acutum*, sour wine.) Paracelsus's term for the acidulous mineral waters.

**Fontana dell' a'ro.** Italy, in Piedmont. A sulphuretted mineral spring at Vignale, containing sodium chloride.

**Fontana, Felix.** An Italian anatomist, born at Pomerole, in the Tyrol, in 1730, died at Montpellier in 1805.

**F., canal' of.** In Ruminants, a canal contained in the ligamentum pectinatum, which is probably a lymph space, and which has been erroneously described as existing in man.

Also, the same as *Schlemm, canal' of*.

**F., space of.** The same as *F., canal' of*.

**F., spaces of.** Cavernous spaces of the ligamentum pectinatum iridis lying between the festoon-like processes which pass between the iris and the posterior part of the cornea at its junction with the sclerotic; they are situated behind the canal of Schlemm, and are lined with epithelium, continuous with that of Descemet's membrane, and with that of the anterior surface of the iris.

**F., stri'æ of.** (L. *stria*, a furrow.) The fine transverse folds seen on the surface of a flaccid nerve.

**Fontanel.** See *Fontanelle*.

**Fontanella.** Same as *Fontanelle*.

**Fontanelle.** (F. *fontanelle*, from L. dim. of *fontana*, a spring. I. *fontanella*; S. *fontanella*; G. *Fontanelle*.) A small fountain.

A term applied to the several membranous spaces in the head of an infant which lie at the adjacent angles of the cranial bones; and so called from the pulsation or welling-up sensation which may be seen and felt there. They are due to the tardy ossification of the membranous bones of the cranium, and afford room for the rapid development of the brain, and probably also for the differences in volume consequent on variations in the blood supply. Especially applied to the *F., anterior*.

Also, a term for an issue.

**F., ante'rior.** (L. *anterior*, in front. F. *fontanelle antérieure*; G. *vordere Fontanelle*.) The lozenge-shaped membranous interspace in the infant skull at the point of junction of the frontal and sagittal with the coronal suture. It is obliterated by the advancing ossification of the surrounding bones between the second and third year, the extremes being from ten to fifteen months and three and a half years. The anterior fontanelle is permanent in some sharks.

**F. bone.** The *Os fonticuli frontalis*.

**F., bregmatic.** (Gr. *βρεγμα*, the top of the head.) The *F., posterior*.

**F., great.** (F. *grande fontanelle*; G. *grosse Fontanelle*.) The *F., anterior*.

**F., lat'eral, ante'rior.** (L. *lateralis*, belonging to the side; *anterior*, in front. G. *vordere Seitenfontanelle*.) The *F., sphenoidal*, from its position.

**F., lat'eral, poste'rior.** (L. *posterior*, hinder. G. *hintere Seitenfontanelle*.) The *F., mastoid*, from its position.

**F., mas'toid.** (*Mastoid* process.) The membranous interspace in the infant skull at the point of junction of the mastoid portion of the parietal bone, the squamous portion of the occipital bone, and the mastoid portion of the temporal bone.

**F., me'dian, ante'rior.** (L. *medius*, in the middle; *anterior*, in front. G. *vordere Medianfontanelle*.) The *F., anterior*.

**F., me'dian, poste'rior.** (L. *posterior*, hinder. G. *hintere Medianfontanelle*.) The *F., posterior*.

**F., næ'vus of.** (L. *nævus*, a mole.) Nævus occasionally occurs in the skin covering the anterior fontanelle of a young child. It may get to a considerable size, is of a dark bluish-red colour, pulsating as the fontanelle beats, and becoming tense on any exertion.

**F., occip'ital.** (L. *occiput*, the back of the head. G. *Hinterhauptsfontanelle*.) The *F., posterior*.

**F. of Casse'rius.** (G. *Casser'sche Fontanelle*.) The *F., mastoid*.

**F.s, pe'riod of clo'sure of.** The anterior fontanelle becomes closed by bone at various periods between two and three years of age; it is closed occasionally as early as ten months after birth, and sometimes it remains open until three years and a half of age.

The posterior fontanelle is usually closed a few months after birth.

The sphenoidal and mastoid fontanelles become closed very soon after birth.

**F., poste'rior.** (F. *fontanelle postérieure*; G. *hintere Fontanelle*.) The small, triangular, membranous interspace in the infant skull at the point of junction of the apex of the lambdoidal suture with the sagittal suture. It is obliterated by the advancing ossification of the bones, and often by the growth of a Wormian bone.

**F.s, pul'satile.** (L. *pulso*, to beat.) The cranial fontanelles, because of the pulsations which may be seen and felt in them.

**F., sincip'ital.** (L. *sineiput*, the fore part of the head. G. *Stirnfontanelle*.) Same as *F., anterior*.

**F., small.** (F. *petite fontanelle*; G. *kleine Fontanelle*.) The *F., posterior*.

**F., sphenoid'al.** (*Sphenoid* bone.) The membranous interspace in the infant skull at the point of junction of the coronal suture with the squamous suture; it is bounded by the sphenoidal angle of the parietal bone, the squamous portion of the temporal bone, the great wing of the sphenoid bone, and the outer and anterior lower angle of the frontal bone. It often contains a Wormian bone.

**Fontanes.** France, Département du Cantal. A weak chalybeate spring.

**Font'ancyre.** France, Département du Cantal. A weak chalybeate spring.

**Fontenelle.** France, Département de la Vendée. A weak chalybeate spring.

**Fontenelles.** France, Département de la Vienne. A weak sulphur water.

**Fontes.** Plural of *Fons*.

**F. medica'ti.** (L. *medicatus*, medicinal.) Mineral water springs.

**F. medica'ti Plumba'rii.** The mineral waters of Plombières.

**F. sulphu'rei cal'idi.** (L. *calidus*, hot.) Term applied to warm sulphuretted mineral waters.

**Fontfort.** One of the springs at St. Galmier on the Loire.

**Fonticulus.** (L. *fonticulus*, dim. of *fons*, a fountain. F. *fonticule*; I. *fonticolo*; S. *fonticulo*; G. *Fontanell*.) A little fountain or spring. A synonym of *Fontanelle*.

In Surgery, an issue or artificial ulcer.

**F. Casse'rii.** Same as *Fontanelle* of *Casseri*.

**F. fronta'lis.** (L. *frons*, the forehead.) The *Fontanelle, anterior*.

**F. mastoi'deus.** Same as *Fontanelle, mastoid*.

**F. occipita'lis.** (L. *occiput*, the back of the head.) The *Fontanelle, posterior*.

**F. quadrangula'ris.** (L. *quadrangulus*, four-cornered.) The *Fontanelle, anterior*, from its shape.

**Fontina'lis.** (L. *fontinalis*, belonging to a spring.) A Genus of the Order *Stegocarpæ*, Class *Musci*.

**F. antipyret'ica.** Linn. (Ἀντι, against; πυρετός, fever.) A fresh-water moss living in wet places. Formerly used in chest affections internally and in pedifuvia. It has an extensive use in Lapland for stopping up holes in the huts, on account of its great incombustibility.

**Food.** (Mid. E. *fode*; Sax. *fōda*; an extension of Aryan root, *pa*, to nourish. F. *nourriture*, aliment; I. *cibo*, alimento; S. *alimento*, comida; G. *Futter*.) That which nourishes, nutriment.

In Physiology, whatever is capable of repairing tissue waste, or of supplying heat by its oxidation, is regarded as food; some also, as Voit, include substances which prevent the removal from the body of any of its necessary constituents.

**F.s, ac'cessory.** (L. *accessio*, an approach.) A term applied to such substances as salts, condiments, tea, coffee, and alcohol.

**F., av'erage quan'tity of.** The quantity of food required varies greatly with age, size, sex, and amount of work done. An adult man of average weight, occupied with moderate work, should be supplied with  $4\frac{1}{2}$  oz. proteids, 3 oz. fats, 14 oz. carbohydrates, and 1 oz. salts. The food must contain about 300 grains of nitrogen and 4500 grains of carbon.

**F., classifica'tion of.** Food is usually divided into inorganic and organic. The former includes water and salts, the latter is subdivided into albuminous, carbohydrates, and hydrocarbons. The albuminous constituents are characterised by the presence of nitrogen in their composition, and are hence often termed nitrogenous or azotised food. The carbohydrates, which include starches, sugars, and their congeners, and the hydrocarbons, which embrace all oils and fats, are destitute of nitrogen, and are hence called non-azotised or non-nitrogenous foods.

**F.s, combust'ible.** (L. *combustio*, a burning.) Same as *F., respiratory*, inasmuch as these are burnt up in the body.

**F., daily quan'tity of.** According to Moleschott, the average standard daily diet of an

adult male European of average height, say 5'5" to 5'9", and average weight, 140 to 160 lbs. avoirdupois (60 to 72·7 kilos.), in moderate work, is 648 grammes (22·866 oz. av.), composed of albuminous substances 130 grammes (4·587 oz. av.), fatty substances 84 grammes (2·964 oz. av.), carbo-hydrates 404 grammes (14·257 oz. av.), and salts 30 grammes (1·058 oz. av.). Other observers have given other figures, but varying only a little either above or below these.

**F.s, dynamog'enous.** (Δυναμς, power; γεννάω, to produce.) The plastic or nitrogenous foods, on the supposition that they were the sole generators of movements.

**F.s, flesh-form'ing.** Term employed by Liebig to denote the proteinous or albuminous foods which he believed were devoted to the nutrition of muscle, nerve, and the other tissues.

**F.s, inorganic.** Those inorganic substances, such as water, alkaline phosphates and chlorides, and other salts, such as those of lime, iron, and silica, which are necessary constituents of one or other of the tissues of the body.

**F.s, kinesog'enous.** (Κίνησις, movement; γεννάω, to produce.) Same as *F.s, dynamogenous*.

**F., mixed.** Food containing nitrogenous and non-nitrogenous proximate principles.

**F.s, nitrog'enous.** See under *Food*.

**F.s, non-nitrog'enous.** See under *Food*.

**F. of the gods.** A term for *Assafetida*.

**F.s, organic.** The albuminous, collagueous, fats, and carbo-hydrates.

**F.s, plastic.** Food believed to be devoted to the constructive processes of the body.

**F., poten'tial value of.** The amount of heat which can be obtained from different kinds of food is mainly dependent on the relative amount of carbon and hydrogen they contain uncombined with oxygen. One kilog. of hydrogen yields when burned in oxygen 34,462 calories, and one kilog. of carbon 8080 calories. If the combustion in the body were complete much larger quantities of heat would be produced than are actually generated. Thus, one kilog. of beef freed from fat burned in oxygen yields 5103 calories, and one kilog. of albumen dried at 100° C. yields 4998 calories, but the urea that is eliminated as a product of the disintegration of one kilog. of albumen in the economy has itself a heat value of 735 calories, which must be deducted from 4998, leaving 4263 calories. If the normal diet of man be taken as given by Ranke, then 100 grammes of albumen yield 426·3 calories, 100 grammes of fat yield 906·9 calories, and 240 grammes of starch yield 938·88 calories, or, in round numbers, 2272 calories, which corresponds to amount of work equal to 1,000,000 kilog.

**F.s, respira'tory.** Term employed by Liebig to denote non-azotised food, such as starch and sugar, which he believed were solely devoted to the production of heat by oxidation.

**F.s, thermog'enous.** (Θέρμω, heat; γεννάω, to produce.) Fats, starches, and sugars, non-nitrogenous foods, on the supposition that they were the sole generators of heat.

**F. vacu'ole.** (Vacuole, from dim. of L. *vacuum*, an empty space.) A term applied to the appearance produced when food is ingested at the oral region of the Flagellata, and is surrounded by a film of water taken in at the same time.

**F.-yolk.** See *Yolk, food*.

**Fool.** (Old *F. fol*; from *L. follis*, a wind-bag. *F. fou*; *I. sciocco*; *S. bobo*; *G. Thor*, *Narr.*) A silly person.

**F.s parsley.** The *Ethusa cynapium*, so called, it is said, because only fools could mistake it for parsley.

**F.s stones, male.** The *Orchis mascula*.

**Foot.** (Mid. *E. fot*; Sax. *fot*; *G. Fuss*; *L. pes*; Gr. *πους*; Sans. *pad*; from Aryan root *pad*; to go. *F. pied*; *I. piede*; *S. pie*.) The lowest section or segment of the leg of an animal.

Also, the lowest part or base of a thing.

Also, a measure of length consisting of twelve inches and equal to 30.47972651 centimetres.

Also, in Botany, the base of the seta of the sporogonium of Mosses and Hepaticæ.

Also, a term for the lateral outgrowth of the tissue of the sporophore below the archegonium of Ferns, Equisetaceæ, and Rhizocarps, which draws from the prothallium the first nourishment for the young plant.

The term is applied to the caudal process of the free-swimming Rotifera.

The foot of Molluscs is a strong muscular organ developed on the ventral surface of the body; except when rudimentary it serves for locomotion. In some it is provided with a byssus gland.

The foot in Fishes, or the representative of the feet, consists of the numerous radial or phalangeal cartilages or bones, which are attached by their proximal extremities to the pro- and meta-ptyergoid, as in Selachians, or to the meta-ptyergoid alone, as in Ganoids and Teleostei. In Amphibia the foot may be absent, as in Siren. In Urodeles the tarsus is often cartilaginous. There is an astragalus and a calcaneus, which constitute a first row, then four separate cartilaginous pieces, which constitute a second row, with fibrous rudiments of a fifth and sixth tarsal bone. There are from 2—5 toes, joined in some by a natatory membrane. Amongst Reptilia, the Ophidia are destitute of hind limbs. In the other groups the tarsus is ossified. In Rays there are six tarsal bones, of which the large proximal one, articulating with the tibia and fibula, is formed of the coalesced fibulare, tibiale, and centrale, and perhaps intermedium. The five others form a second row. There are five toes. In Saurians the large proximal bone of the tarsus represents the tibiale, fibulare, intermedium, and centrale. In the second tarsal row there are five discrete ossicles, and there are five toes. In birds the tarsus consists in the embryo of two cartilaginous discs, a proximal and a distal; the former soon coalesces with the distal end of the tibia, the latter with the basis of the metatarsals, so that in the adult there are no discrete tarsal elements. In the ostrich the foot has two toes, in many other birds there are three toes, and in some four. The number of phalanges increases from within outward, the innermost having two, the next three, the third four, and the fourth five phalanges. The tarsus of mammals differs from that of birds, and inclines to that of Urodeles and Chelonians. It consists typically of a tibiale and an intermedium, coalesced to form the astragalus; a fibulare or calcaneus; centrale or navicular; and five tarsalia, of which the first, second, and third form the three cuneiform bones, and the fourth and fifth are coalesced in the cuboid. The first row

of tarsal bones is always composed of two bones, of which the astragalus alone, composed of the tibiale and intermedium, articulates with the distal end of the leg bones. The second bone or fibulare forms the heel. The toes never exceed five in number, but may be reduced to one. In cases of reduction in the number of the toes the internal digit or thumb, composed of two phalanges, first becomes rudimentary, and then disappears, then follow in succession the little or external digit, the second internal digit, and finally the fourth digit, leaving only, as in the Solipeds, the third or central digit, corresponding to the middle finger. According to the mode in which the foot is applied to the ground, the animal is said to be plantigrade, digitigrade, or unguligrade. When the first digit is opposable to the rest the foot is said to be prehensile.

**F., amputations of.** The foot may be removed at the ankle-joint by Syme's, Roux's, Pirogoff's, or other method; part of it may be taken away by the subastragaloid operation or a modification thereof, by Chopart's operation through the mediotalar articulation, by Hey's or Lisfranc's operation through the tarso-metatarsal articulation; or one, or some, or all of the metatarsal bones or of the phalanges may be removed.

**F.-and-mouth disease.** (*F. fièvre aphteuse*; *G. Maulklauenseuche*.) A febrile affection of horned cattle and some other animals, such as pigs, horses, dogs and fowls; communicable also to man. It consists of an aphthous inflammation of the mucous membrane of the mouth, accompanied by a vesicular eruption of the skin near the corona and cleft of the hoof, which is sometimes shed; the udder is not infrequently attacked, and sometimes the ocular, nasal, and genital mucous membranes are affected. Most animals recover in a fortnight, but many young calves die of intestinal inflammation. Micrococci have been found in the vesicles. See also *Aphtha epizootica*.

**F.-and-mouth disease in man.**

The symptoms are a vesicular eruption on the inner surface of the lips and tongue, and sometimes on the pharynx and palate, with copious secretion of saliva; there is often diarrhoea, and generally fever; the vesicular skin eruption is not always present, but when there is an eruption it is most often to be found about the finger-nails. It is usually caused by the drinking of milk from an infected cow.

**F., arches of.** The foot is arched in two directions, in an antero-posterior direction and a transverse direction; the antero-posterior arch rests behind on the extremity of the os calcis, and in front on the metatarso-phalangeal joints; the transverse arch is most marked at the level of the cuneiform bones.

**F., arteries of.** These arteries are the terminal branches of the anterior and posterior tibials, the former giving off internal and external malleolar, articular, tarsal, metatarsal, interosseous, communicating to deep arch, and magna pollicis, supplying one toe and a half; the posterior tibial giving off the tarsal, internal plantar, and the external plantar. The internal plantar divides into muscular and cutaneous. The external plantar divides into the muscular and plantar arch. The plantar arch terminates in muscular, posterior perforating, digital for three toes and a half, and anterior perforating.

**F., articulations of.** The articulation

## FOOT.

of the foot with the tibia and fibula (*articulatio tarso-cruralis, a. talo-cruralis*; G. *Sprunggelenk, Fussgelenk*) is described under *Ankle-joint*, but it may be added that it has a rotation of about 75° both in extreme flexion and in extreme extension, the foot moving through an arc of 33° from the position in which its axis is at right angles to the leg.

**F., artificial.** See *Limbs, artificial*.

**F.-bath.** See *Bath, foot*.

**F., ben-zoin.** See *Benzoin, foot*.

**F., bones of.** These are 26 in number; the tarsus being composed of 7, viz. the os calcis, astragalus, cuboid, scaphoid, and 3 cuneiform bones; the metatarsus, composed of 5 metatarsal bones; and the 14 phalanges of the toes.

**F. clo'nus.** (F. *tripudiation provoquée du pied*; G. *Fussphänomenon, Fussklonus, Achillessehnenreflex*.) A rhythmical contraction of the gastrocnemius and soleus muscles which occurs when the tendo Achillis is put strongly on the stretch by dorsal flexion of the foot. It occurs with abnormal energy in spastic spinal paralysis, so that the contraction of the muscles may even become persistent, whilst in tabes dorsalis it is defective or altogether absent.

**F., digits of.** See *Toes*.

**F., disarticulation of.** (L. *dis, apart*; *articulus, a joint*.) Amputation of the foot, or part of the foot, through the ankle-joint; or through the tarsus, at an articulating surface.

**F., dislocation of.** (Low L. *dislocatus*, removed from its place; from L. *dis, apart*; *loco, to place*.) The foot may be dislocated at the ankle-joint, generally with fracture of the fibula, either backwards, forwards, or to either side; these dislocations are often spoken of as dislocations of the ankle, or as dislocations of the lower ends of the tibia and fibula.

The foot may also be dislocated at the calcaneo-astragaloid and at the scapho-astragaloid joints.

**F., dislocation of, subastragaloid.** A dislocation of the foot at the calcaneo-astragaloid or the scapho-astragaloid articulation.

**F., excision of bones of.** (L. *excisio*, a cutting out.) Removal of the whole, or part, of one or more of the bones of the foot for disease or injury.

**F., fasciæ of.** See *Fascia dorsalis pedis* and *Fascia, plantar*.

**F., flat.** See *Flat-foot*.

**F., fracture of.** (L. *fractura*, a breaking.) Any of the bones of the foot may be broken by direct injury. Of the tarsal bones the astragalus and calcaneum are the most frequently fractured, and next the cuboid; the metatarsal bones and the phalanges of the toes are not infrequently broken.

**F., fungous.** See *Mycetoma*.

**F., gangrene of.** The usual form of *Gangrene, senile*.

**F., Grif'ion's.** See *Gryphus pes*.

**F.-jaws.** (G. *Fusskiemen*.) The anterior limbs of Crustacea, which are modified so as to serve for the purpose of mastication.

Also, the anterior modified limbs of the Chilopoda, the second pair of which is perforated for the discharge of a poison.

**F., ligaments of.** These are the anterior, external, and internal annular of the ankle, the external and the internal lateral of the ankle; the anterior and the posterior tibio-tarsal, the astragalo-scaphoid, the external, and the poste-

rior calcaneo-astragaloid, the inferior and the superior calcaneo-cuboid, the external and the inferior calcaneo-scaphoid, the long plantar, the dorsal and plantar tarso-metatarsal, the dorsal and plantar metatarsal, the lateral phalangeal of the foot; and the interosseous ligaments, between the astragalus and os calcis, between the cuneiform bones, between the scaphoid and cuboid, and between the metatarsal bones.

**F., Madura.** (*Madura*, a district in the southern part of the Madras Presidency.) A synonym of *Mycetoma*.

**F., motions of.** See *Foot, muscles of*.

**F., muscles of.** The foot is flexed by the tibialis anticus, extensor pollicis proprius, extensor digitorum longus, and peroneus tertius muscles; it is extended by the gastrocnemius, plantaris, soleus, flexor digitorum longus, flexor pollicis longus, tibialis posticus, peroneus longus, and peroneus brevis muscles; inwards by the extensor pollicis proprius, flexor digitorum longus, flexor pollicis longus, and tibialis posticus; outwards by the peroneus longus, peroneus brevis, extensor digitorum longus, and peroneus tertius. The toes are flexed by the abductor pollicis, flexor digitorum brevis, abductor minimi digiti, flexor pollicis longus, flexor digitorum longus, flexor accessorius, lumbricales, flexor pollicis brevis, adductor pollicis, flexor minimi digiti brevis, and interossei; they are extended by the extensor digitorum longus, extensor pollicis proprius, extensor digitorum brevis; inwards by the abductor pollicis and interossei; outwards by the adductor pollicis, adductor minimi digiti, and interossei.

**F., nerves of.** These are derived from the external and internal popliteal. The external popliteal gives off the musculo-cutaneous nerve, the cutaneous branches of which pass to the outer toes; a communicating branch to the saphenous; and the anterior tibial nerve, the internal branch of which passes to the toes, and also gives off muscular and articular branches. The internal popliteal gives off a communicating branch to the saphenous nerve, which runs along the outer side of the foot and supplies one toe and a half; and the posterior tibial, which divides into the external plantar, which gives off the cutaneous to the sole, muscular, four digital, communicating and articular; and the external plantar, which gives off superficial and deep branches; the former dividing into muscular, two digital, communicating, and articular branches, and the latter into muscular and articular.

**F., perforating ulcer of.** (L. *perforo*, to bore through.) An ulcer commencing in the sole of the foot, spreading upwards, and destroying the bones and other tissues, till it penetrates through the foot to its dorsum. It is accompanied by anesthesia of the part, which often extends some way up the leg, and by a low temperature of the limb, with offensive perspiration. The sensory nerve fibres supplying the diseased parts are atrophied and their endoneurium thickened. It may arise from suppuration underneath a corn, especially one situated over the metatarso-phalangeal joint, or it may occur in connection with locomotor ataxy, or as a result of peripheral nerve-disease.

**F.-pound.** The work done in raising one pound weight one foot high, which, estimated in British measures, is 32.2 units of work; it is equivalent to .138255 kilogrammetre.

## FOOTLING CASE—FORAMEN.

**F.-pound'al.** The total units of work, in British measures 32:2, in a foot-pound.

**F.-root.** (G. *Fusswurzel*.) The *Tarsus*.

**F.-secretion.** Dana's term for the sclerobasic corallum secreted by the cœnosarc of the sclerobasic *Zoantharia*.

**F.-stalk.** The support of a leaf or of a flower. See *Pediceal*, *Pedicle*, *Peduncle*, and *Petiole*.

Also, a similar support in many lower animals, as the barnacle.

**F., syn'vial membranes of.** The synovial membranes of the foot are: that between the tibia and fibula and the astragalus; that between the astragalus and scaphoid, which is a prolongation of that between the fore part of the astragalus and the os calcis; that between the posterior articulating surfaces of the astragalus and os calcis; that between the os calcis and the cuboid; that between the scaphoid and the three cuneiform, which sends down two processes between the cuneiform bones; that between the first metatarsal and internal cuneiform bone; that for the articulation of the second and third metatarsal bone with the middle and external cuneiform, which is continuous with the membrane between the scaphoid and cuneiform, and is prolonged between the two internal cuneiform bones; and that between the two external metatarsal bones and the cuboid bone. Besides these a separate synovial membrane exists between the several articulations of the phalanges.

**F., tabet'ic.** (L. *tabes*, a wasting.) A peculiar deformity of the foot occurring in tabes dorsalis or progressive locomotor ataxia, described by Charcot, and consisting in an angular projection on the inner side of the foot, caused by growth of the tarsal bones and partial dislocation of the inner tarso-metatarsal joints; the affected bones become spongy, friable, and very light, with erosions of, or vegetations on, their articular surfaces.

**F. ten'don-re'flex.** See *F. clonus*.

**F.-ton.** A term for the amount of work done in lifting a ten weight one foot high.

**F. tubercles.** (L. *tuberculum*, a small lump.) The lateral processes on each segment of some of the Annelida; also called *Parapodium*.

**F., veins of.** The veins correspond for the most part with the arteries; those on the inner part of the dorsal surface form the rootlets of the internal saphena; those on the inner side of the os calcis and the plantar veins, and those on the outer surface of the os calcis, joining with the outer part of the dorsal arch and, together with plantar veins, form the external saphena.

**Footling case.** A presentation of the foot or feet in labour.

**Fora'men.** (L. *foramen*, a hole; from *foro*, to bore. F. *trou*; G. *Öffnung*, *Durchgang*.) A hole or opening.

In Botany, the aperture at the apex of the nucleus in an ovule; also called *Microphyte*.

**F. alveola'rè ante'rius.** (L. *alveolus*, a small hollow; *anterior*, in front.) The incisor foramen or inferior opening of the anterior palatine canal.

**F. alveola'rè infe'rius.** (L. *alveolus*; *inferior*.) The *F. dental*, *inferior*.

**F. alveola'rè poste'rius.** (L. *posterior*, *hinder*.) The lower opening of the posterior palatine canal.

**F. am'plum pel'vis.** (L. *amplus*, spacious; *pelvis*, a basin.) A synonym of the *F. obturatorium*.

**F. anon'ymum Ferrein'i.** (Ἀνώνυμος, without name; *Ferrein*.) The *Hiatus Fallopii*.

**F. aor'ticum.** (G. *Aortenschlitz*.) The aperture in the diaphragm for the transmission of the aorta; called also *Hiatus aorticus*.

**F. aqua'duc'tus Fallo'pii.** (L. *aqua*, water; *duco*, to lead; *Fallopius*.) The stylo-mastoid foramen.

**F. audito'rium exter'nus.** (L. *auditorius*, relating to hearing; *externus*, outer.) The outer opening of the external auditory canal.

**F. audito'rium inter'nus.** (L. *auditorius*; *internus*, inner.) The inner opening of the internal auditory canal.

**F., Bi'chat's.** The opening of the arachnoid canal or canal of Bichat. See *Bichat*, *canal of*.

**F., Bo'tal's.** See *Botalli*, *foramen of*.

**F. cæ'cum.** (L. *cæcus*, blind.) See under the following subheadings.

**F. cæ'cum ante'rius.** (L. *cæcus*, blind; *anterior*, in front.) The depression in the middle line of the under surface of the brain, between the posterior border of the substantia perforata media and the anterior border of the pons Varolii.

**F. cæ'cum lin'guæ.** (L. *cæcus*; *lingua*, a tongue.) The *F. cæcum of tongue*.

**F. cæ'cum Morgagni.** (*Morgagni*; L. *cæcus*.) The same as *F. cæcum lin'guæ*.

**F. cæ'cum of fron'tal bone.** (L. *cæcus*.) A depression at the base of the frontal crest, on the inner surface of the frontal bone, just behind the nasal spine, which often transmits a small vein from the nasal fossa. Through it a communication is established by narrow passages between the cranial cavity and the frontal sinuses, or with the sinuses in the nasal bone.

**F. cæ'cum of medulla oblongata.** (L. *cæcus*.) The *F. cæcum of Vicq d'Azyr*.

**F. cæ'cum of retina.** (L. *cæcus*; *retina*.) The *Forca centralis retinae*.

**F. cæ'cum of supe'rior maxillary bone.** (L. *cæcus*.) The incisive foramen.

**F. cæ'cum of tongue.** (L. *cæcus*.) Morgagni's term for the depression at the posterior end of the raphe of the tongue into which several small glands open.

**F. cæ'cum of Vicq d'Azyr.** (L. *cæcus*; *Vicq d'Azyr*.) The anterior termination of the anterior median fissure of the medulla oblongata behind the pons Varolii.

**F. cæ'cum os'sis fron'talis.** (L. *cæcus*, blind; *os*, bone; *frontalis*, belonging to the forehead.) The *F. cæcum of frontal bone*.

**F. cæ'cum os'sis fron'tis.** (L. *cæcus*; *os*, a bone; *frons*, the forehead.) The *F. cæcum of frontal bone*.

**F. cæ'cum os'sis maxilla'ris supe'rioris.** (L. *cæcus*; *os*, bone; *maxilla*, jaw; *superior*, that which is above.) A synonym of *F. incisurum*.

**F. cæ'cum poste'rius.** (L. *cæcum*; *posterior*, *hinder*.) The *F. cæcum of Vicq d'Azyr*.

**F. cæ'cum retroana'te.** (L. *cæcus*; *retro*, behind; *anus*, the fundament.) The *Furcula coccygea*.

**F. caro'tico-clino'idæum.** (*Carotid*; *clinoid*.) The aperture formed by a bridge connecting the anterior and the middle clinoid processes. Same as *F. clinoidico-caroticum*.

## FORAMEN.

**F. carotico-tympanicum.** See *Foramina carotico-tympanica*.

**F. caroticum.** (*Carotic.*) A synonym of the *F. caroticum externum*.

**F. caroticum externum.** (*L. externus*, outward.) Same as *F. carotid*.

**F. caroticum internum.** (*L. internus*, within.) The internal opening of the carotid canal.

**F. carotid.** (*Carotid.*) The lower aperture of the carotid canal.

**F. caudalē.** (*L. cauda*, a tail.) An aperture in the last segment of a cestoid worm, communicating with the contractile vesicle of the water-vascular system.

**F. cavernosum ossis sphenoidalis.** A hole in the sphenoid bone of rabbits for the transmission of the vena vertebralis mediana.

**F. centralē.** The *Fovea centralis*.

**F. centralē cochleæ.** (*L. centralis*, central; *cochlea*.) The central largest opening of the group of canals called the *Tractus spiralis foraminulentus*.

**F. centralē Sömmering.** (*L. centralis*; *Sömmering*.) The *Fovea centralis*.

**F. centralē retinae.** (*L. centralis*, central; *retina*.) Term formerly applied to the thinnest part of the retina at the centre of the fovea centralis, from a belief that a hole existed there.

**F. clinoido-caroticum.** (*Clinoid*; *carotic*.) A large opening, through which the carotid artery passes, formed by the union of the extremities of the anterior and middle clinoid processes of the sphenoid bone, which occasionally occurs.

**F. communē anterior.** (*L. communis*, common; *anterior*, in front.) The communication between the third ventricle and the two lateral ventricles of the brain, consisting of the two foramina of Munro and their joint prolongation backwards.

Also, a term for the *Vulva*.

**F. communē posterior.** (*L. communis*; *posterior*, hinder.) The anterior opening of the aqueduct of Sylvius.

**F. condyloid, anterior.** (*Κόνδυλος*, a knuckle; *εἶδος*, likeness; *L. anterior*, in front.) A canal running outwards and forwards from just above the foramen magnum, at the base of each condyle, of the occipital bone; it transmits the hypoglossal nerve and the rete venosum condyloideum. It is occasionally double. It is absent in fishes, which have no distinct hypoglossal nerve.

**F. condyloid, posterior.** (*L. posterior*, behind.) A canal in the posterior condyloid fossa which transmits the emissarium occipitale and the vena diploica occipitalis.

**F. cordiforme.** (*L. cor*, the heart; *forma*, shape.) A heart-shaped space in the pelvis of Reptilia, sometimes called the obturator foramen; it is bounded by the os pubis in front and the ischium behind, and is divided by a ligament into the two obturator foramina.

**F. costo-transversarium.** See *F. costo-transverse*.

**F. costo-transverse.** (*L. costa*, a rib; *transversus*, placed across.) The space between the neck of a rib and the transverse process of the vertebra, with which it articulates, bounded externally by the costo-transverse articulation, and internally by the costo-vertebral articulation.

**F. dental.** (*L. dens*, a tooth.) The *F. dental, inferior*.

**F. dental, inferior.** (*L. dens*; *inferior*, lower.) The opening of the dental canal on the inner side of the ramus of the inferior maxillary bone. It transmits the inferior dental artery and vein, and the inferior dental nerve; and gives origin to the internal lateral ligament of the temporo-maxillary articulation.

**F. dextrum.** (*L. dexter*, right.) The aperture in the diaphragm through which the vena cava passes. Also called *F. quadratum*.

**F. ethmoidal, anterior.** The *F. ethmoideum anterius*.

**F. ethmoidal, posterior.** The *F. ethmoideum posterius*.

**F. ethmoideum anterius.** (*Ethmoid*; *L. anterior*, that which is in front.) A foramen sometimes existing separately in the orbital plate of the frontal bone, and at other times formed by the apposition of two notches, one in the frontal bone and the other in the os planum of the ethmoid bone. It transmits the ethmoidal branch of the nasal nerve and the anterior ethmoidal artery.

**F. ethmoideum posterius.** (*Ethmoid*; *L. posterior*, that which is behind.) A foramen situated in the orbital plate of the frontal bone, transmitting the posterior ethmoidal nerve and artery, and the sphenothmoid branch of the sphenopalatine ganglion.

**F. frontale.** (*L. frons*, the forehead.) The *F. supraorbital*.

Also, see *F. frontale*.

**F. frontale.** (*L. frontalis*, frontal.) A hole, but sometimes only a groove, situated to the inner side of the supraorbital foramen, and near the inner end of the supraorbital margin of the frontal bone.

Also, a synonym of the *F. supraorbital*.

**F. incisive.** (*L. incido*, to cut. *F. trou incisif*; *G. Schneidezahnloch*.) A foramen formed by the junction of the superior maxillary bones, situated immediately behind the roots of the incisor teeth, being the commencement of the anterior palatine canal.

See, also *Foramina, incisor*.

**F. incisivum.** See *F. incisive*.

**F. infraorbital.** (*L. infra*, beneath; *orbita*, the orbit. *F. trou sous-orbitaire*; *G. Unteraugenhöhlenloch*.) The aperture in the outer surface of the superior maxillary bone of the canal by which the infraorbital artery issues; it is situated beneath the middle of the lower margin of the orbit and above the canine fossa; it also transmits the inferior palpebral, the lateral nasal, and the superior labial nerves. In apes there are several foramina; in some Rodents there is a very large one transmitting also the masseter muscle.

**F. infraorbitarium.** (*L. infra*, below; *orbita*, an orbit.) A synonym of *F. infraorbital*.

**F. infrapubium.** (*L. infra*, beneath; *os pubis*, the pubic bone.) The obturator foramen.

**F. interclinoidum.** (*L. inter*, between; *clinoid*.) A foramen sometimes formed by the union of the extremities of the middle and posterior clinoid processes of the sphenoid bone.

**F. interclinoidum communē.** (*L. communis*, common.) A foramen sometimes formed by the union of the extremities of the anterior and posterior clinoid processes of the

sphenoid bone, or by the union of these with the middle clinoid process.

**F. irregulàrè.** (*L. irregularis*, not according to rule.) The *F. lacerum posterius*, from its irregular shape.

**F. ischiadicum majus.** (*L. ischium*, the bone of that name; *major*, greater.) The *F. sacro-sciatic*, *great*.

**F. ischiadicum me'dium.** (*L. ischium*, the bone of that name; *medius*, in the middle.) The foramen cut off from the great sacrosciatic foramen when, as sometimes happens, a ligamentum spinosacrum superius, arising from the synchondrosis between the ilium and ischium and inserted into the small sacrosciatic ligament, divides it into two parts.

**F. ischiadicum mi'nus.** (*L. minor*, less.) The *F. sacro-sciatic*, *small*.

**F. ischio pubicum.** (*Ischium*; *os pubis*.) The *F. obturator*.

**F. jugular.** (*Jugular vein*. *G. Drosseladerloch*.) The *F. lacerum posterius*.

**F. jugulàrè spu'rium.** (*L. spurium*, false.) An aperture in the squamous portion of the temporal bone between the meatus auditorius externus and the glenoid cavity, through which the petro-squamous sinus, when present, passes to join the temporal vein.

**F. labia'le.** (*L. labialis*, belonging to the lip.) The *F. mental*.

**F. lac'erum antèrius.** (*L. lacer*, bitten; *anterior*, in front. *F. trou déchiré antérieur*; *G. das vordere zerrissene Loch*.) An irregular aperture at the apex of the petrous bone in the re-entering angle of the body and the great wing of the sphenoid bone. It is closed in the natural state by fibrous tissue, and is partially, and sometimes completely, subdivided by the backward elongation of the lingula, so that the carotid artery passes into the skull by the inner division, and the large superficial petrosal nerve passes by the outer division to the hiatus Fallopii.

The term is sometimes applied to the sphenoidal fissure.

**F. lac'erum ba'sis cra'nii.** See *F. lacerum in basi cranii*.

**F. lac'erum in ba'si cra'nii.** (*L. lacer*; *in*, *in*; *basis*, the base; *cranium*, the skull.) The *F. lacerum posterius*.

**F. lac'erum infèrius.** (*L. lacer*; *inferior*, lower.) The *Fissure, sphenomaxillary*.

**F. lac'erum me'dium.** (*L. lacer*; *medius*, in the middle.) The same as *F. lacerum antèrius*.

**F. lac'erum orbita'le.** (*L. lacer*; *orbita*, in orbit.) The *Fissure, sphenoidal*.

**F. lac'erum poste'rius.** (*L. lacer*; *posterior*, hinder. *F. trou déchiré postérieur*; *G. das hintere zerrissene Loch*.) A pear-shaped aperture formed by the approximation of the jugular notches of the petrous and occipital bones. It is partially divided by two sets of opposing projections from its edges into three compartments, the anterior of which gives passage to the inferior petrosal sinus, the posterior to the lateral sinus, as it becomes the internal jugular vein, and the middle to the glossopharyngeal, pneumogastric, and spinal accessory nerves; it also contains the jugular ganglia of the glossopharyngeal and pneumogastric nerves, and the posterior external meningeal artery. The anterior compartment is sometimes completely cut off from the middle one by bone.

**F. lac'erum supèrius.** (*L. lacer*; *superior*, upper.) The *Fissure, sphenoidal*.

**F. Magendii.** (*Majendie*, a French physiologist.) See *F. of Majendie*.

**F. mag'num.** (*L. magnus*, great. *F. trou occipital*; *G. grosses Hinterhauptloch*.) The oval opening in the occipital bone which forms the communication between the cavities of the skull and the spinal canal. In front it is bounded by the basilar process; behind by the tabular or squamous portion of the bone; and on each side by the condylar processes. In man, the plane of the foramen looks downwards with an upward inclination anteriorly in the European, and posteriorly in the Australian and Negro races; in most other animals the plane looks backwards, except in the anthropoid apes, in which it more nearly approaches the direction of that of man. It is usually 36 mm. from before backwards, and 30 mm. from side to side. It gives issue to, or contains, the occipito-axial ligament, or ligamentum tectorium, the basilar sinus, the circular plexus, the posterior internal meningeal arteries, the anterior and posterior spinal branches of the vertebral artery, the spinal accessory nerves, the roots of the first cervical nerves, and the medulla oblongata.

**F. mag'num is'chii.** (*L. magnus*; *ischium*, the bone of that name.) The *F. obturator*.

**F. mag'num occipita'le.** (*Occipital bone*.) The *F. magnum*.

**F. mandibula'rè.** (*L. mandibula*, a jaw.) The *F. dental, inferior*.

**F., mas'toid.** (*Μαστός*, a breast; *είδος*, likeness. *F. trou mastoïden*; *G. Warzenloch*.) An opening, or it may be more than one, near the posterior border of the mastoid portion of the temporal bone in the groove for the lateral sinus. It transmits the posterior external meningeal artery, and the emissorium mastoïdum artery of the dura mater, and a vein which establishes a communication between the lateral sinus and the veins outside the cranial cavity.

**F. mastoïdeum.** The *F., mastoid*.

**F. maxilla'rè antèrius.** (*L. maxilla*, the jaw; *anterior*, in front.) The *F. mental*.

**F. maxilla'rè infèrius.** (*L. maxilla*; *inferior*, lower.) The *F. dental, inferior*.

**F. maxilla'rè poste'rius.** (*L. maxilla*; *posterior*, hinder.) The *F., dental, inferior*.

**F. medullæ spinalis.** (*L. medulla*, marrow; *spinalis*, spinal.) The canal enclosed by the body and arches of the vertebrae.

**F. meninge'um.** (*Μήνιξ*, a membrane.) An opening near the foramen jugulare spurium, present only in about 8 out of every 1000 skulls, through which a branch of the middle meningeal artery runs from the sulcus meningeus into the temporal fossa.

**F., men'tal.** (*L. mentum*, the chin. *F. trou mentonnier*; *G. Kinnloch*.) An opening on the anterior surface of the inferior maxillary bone, lying midway between its upper and lower borders and just below the interval between the two bicuspid teeth. It transmits the mental vessels and nerve.
